## Welcome

Thank you for choosing the Matrix COSEC Multi-door Access Control System! We are sure you will be able to make optimum use of this feature rich, Integrated Access Control and Time and Attendance system. Please read this document carefully to get acquainted with the product before installing and operating it.

## About this System Manual

This is a common document providing detailed information and instructions for installing and configuring the **COSEC CENTRA** i.e. COSEC on Premise solution and **COSEC VYOM** i.e. COSEC on Cloud Solution. It includes COSEC Access Control System hardware components as well as the software installation and configuration of the COSEC application. This manual includes sufficient information to install and configure all the components of the Matrix COSEC Access Control System.

The COSEC application is a powerful web based multi-user Access Control cum Time and Attendance system that provides all the features required for medium to large size enterprises. A host of modules are available making the COSEC application a comprehensive, menu-driven software application.

This system manual is a common documentation for all variants of COSEC Controllers - PANEL, DOOR Controllers and their variants. This manual also includes sufficient information to install and interconnect the controllers on various network topologies. This manual must be read, and its contents clearly understood, before proceeding with any work relating to the COSEC Web Application.

## Intended Audience

**This System Manual is aimed at:**

- **System Engineers**, who will install, maintain and support the COSEC system. System Engineers are persons who are responsible for configuring the COSEC system to meet the requirements of the organization/users. It is assumed that they are experienced in installing an Access Control System and are familiar with the cabling of such systems. They are expected to be aware of how it works, and the various technical terms and functions associated with it. The SE must have undergone training in the installation and configuration of the COSEC system. No one, other than the System Engineer is permitted to make any alterations to the configuration of the COSEC system.
- **System Administrators**, who are persons who will monitor and control the COSEC system after installation. Generally, an employee of the IT/HR designation in an organization or establishment is selected as the System Administrator. It is assumed that the System Administrator has some previous experience in configuring and deploying a security cum Time and Attendance system. The System Administrators are not expected to setup and install the system hardware, but only the configuration of the

system including its functionalities and features, defining the access levels for various users and the extraction of various reports.

- **Users**, persons/organizations who will use the COSEC system. They may be executives, include personnel of small and medium businesses, large enterprises, front desk and service staff of Hotels/Motels, hospitals, and other commercial and public organizations/institutions.

## Organization of this Document

This system manual contains the following topics:

- **Introduction** - gives an overview of this document, its purpose, intended audience, organization, terms and conventions used to present information and instructions.
- **Know Your COSEC** - describes the system and its design, different network topologies, system architecture, and the interfaces with COSEC web application.
- **Pre-Installing COSEC Devices** - gives step-by-step instructions for pre- installing information for the COSEC devices, selection of installation location, the safety measures for protecting the system and persons handling the installation and maintenance, and packaging contents.
- **Getting Started with COSEC** - provides information about Panel/Panel lite/Panel200 and Door terminals, describes the COSEC modules and provides license information.
- **Launching the COSEC application** - provides a step by step instruction for installing the various components required to run the COSEC application as well as the various components. This section also includes instructions for launching the desktop and the web modules of the COSEC application.
- **Appendix** - Contains additional information related to the document. These include Technical Specifications of the Product, Glossary of terms, Product Warranty Statement, and Contact details.

## How to Read this System Manual

This document is organized in a manner to help you get familiar with the COSEC system, learn how to install it, connect it in various network topologies, connect the external devices, and power up the hardware systems. The manual also covers the installation and configuration of the COSEC application and its dependent components.

This System Manual is presented in a manner that will help you find the information you need easily and quickly.

You may use the table of contents and the Index to navigate through this document to the relevant topic or information you want to look up.

- **Instructions**

The instructions in this document are written in a step-by-step format, as follows. Each step, its outcome and indication/notification, wherever applicable, have been described.

- **Notices**

The following symbols have been used for notices to draw your attention to important items.

**Important:** to indicate something that requires your special attention or to remind you of something you might need to do when you are using the system.

**Caution:** to indicate an action or condition that is likely to result in malfunction or damage to the system or your property.

**Warning:** to indicate a hazard or an action that will cause damage to the system and or cause bodily harm to the user.

**Tip:** to indicate a helpful hint giving you an alternative way to operate the system or carry out a procedure, or use a feature more efficiently.

## Terminology used in this System Manual

The technical terms and Acronyms used in this Manual are standard terms, commonly used in the access control and Time and Attendance industry. However, considering the broad group of intended users of this manual, wherever possible, use of jargon has been avoided.

- **COSEC VYOM** is referred as **COSEC on Cloud**. **COSEC CENTRA** is referred as **COSEC on Premise**. The features which are common to COSEC CENTRA as well as COSEC VYOM are explained in generic way pointing to COSEC CENTRA or COSEC Server. The features which are explicitly available or not available in CENTRA or VYOM; are notified respectively.
- **COSEC Panel**, **COSEC Panel lite** (Vega Panel -Lite) and **COSEC Panel200** (Standalone Panel lite) are all master controllers. The term Panel or Panel lite is used interchangeably. COSEC Panel is supported in COSEC Centra only.

*If you are accessing the COSEC Server GUI, Device Module> Device Configuration > Click Add Button, there are three options related to Panel, namely Panel, Panel Lite and Panel200.*

*The term Panel refers to COSEC Panel200/Panel Lite. The feature access may differ as per the Panel variant.*

*Panel Lite V2 has been renamed as Panel200, hence the screens for Panel Lite V2/Panel200 represent the same.*

- **PANEL DOOR** (Door controller connected through Panel/ Panel lite/ Panel200) and **DIRECT DOOR** (Door controller connected to server directly) are used to refer the **COSEC DOOR** (including their variants) respectively.

The term **device** is a general term referring collectively to any or all of the above controllers.

Using this Manual in conjunction with the **COSEC PANEL Lite** and **Doors** Quick start, we hope, you will be able to set up, configure and make optimum use of this feature packed COSEC access control system.

## Getting Help

Our online help will provide you with immediate and context-related help. Click on the **Help** button, found in all the system windows. A help file will open up which enables the user to navigate to the relevant topic of interest. To get a more focused and context sensitive help click on the “?” symbol located on the upper right half of the web page.

## Technical Support

If you cannot find the answer to your question in this manual or in the Help files, we recommend you to contact your system installer. Your installer is familiar with your system configuration and should be able to answer any of your questions.

If you need additional information or technical assistance with the COSEC system and other Matrix products, contact our Technical Support Help desk, Monday to Saturday 9:00 AM to 6:00 PM (GMT +5:30) except company holidays.

---

Time-Attendance defines the productivity of an organization and Access Control defines security of the valuable assets. These two areas are inherently human-oriented, complex and challenging to automate. Productivity of any organization depends on its effectiveness in putting the right people in the right place at the right time.

For this, Matrix COSEC provides a comprehensive, end-to-end Time-Attendance and Access Control Solution with an adaptive, modular, scalable and function-rich Time-Attendance and Access Control solution designed for Small Office Home Office (SOHO), Small and Medium Businesses (SMB), Small and Medium Enterprises (SME) and Large Enterprises (LE).

**Key features of COSEC Application Software are:**

- Layered Architecture
- Real-Time Processing of Events
- Latest Status View and Reports
- Web-based, Multi-User Application
- Live Monitoring and Supervision
- Remote Views and Reports
- Calender-Based Views
- Automatic Finger Template Distribution
- Past Adjustments of User Records

**The Matrix COSEC is designed to deliver high level of flexibility at various levels such as**

- Physical Interfaces- RS485 and Ethernet
- Door Controller Connectivity with Application Server- Direct or through Panel
- Readers- Card, Finger and PIN in any combination

**Variants of COSEC DOORS**

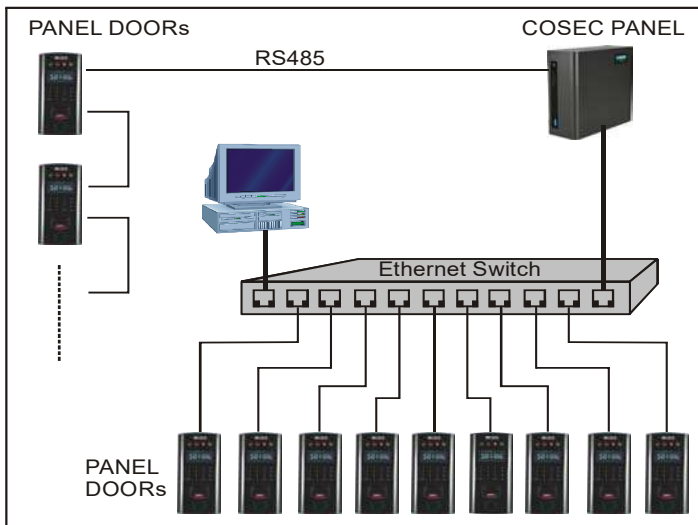

The Matrix COSEC Door is available with the following configurations depending on the firmware resident on the DOORS.

- **PANEL DOOR**
- **DIRECT DOOR**

All COSEC Doors are by default shipped with the DIRECT Door configuration. However, based on the mode set while configuring the COSEC application the appropriate modes will be enabled on the Doors. In the event of the Door being set in Panel mode the COSEC Panel downloads the Panel Door firmware to all the Doors on the network whose MAC addresses have been defined in the Door Controller settings of the COSEC application as explained later in this manual.

**PANEL DOOR**

The PANEL DOOR, as the name suggests connects to the COSEC PANEL which in turn connects to the COSEC Monitor application. A typical setup looks as follows.

### DIRECT DOOR

The DIRECT DOOR, as the name suggests connects directly to the COSEC Monitor application. A typical setup looks as follows.

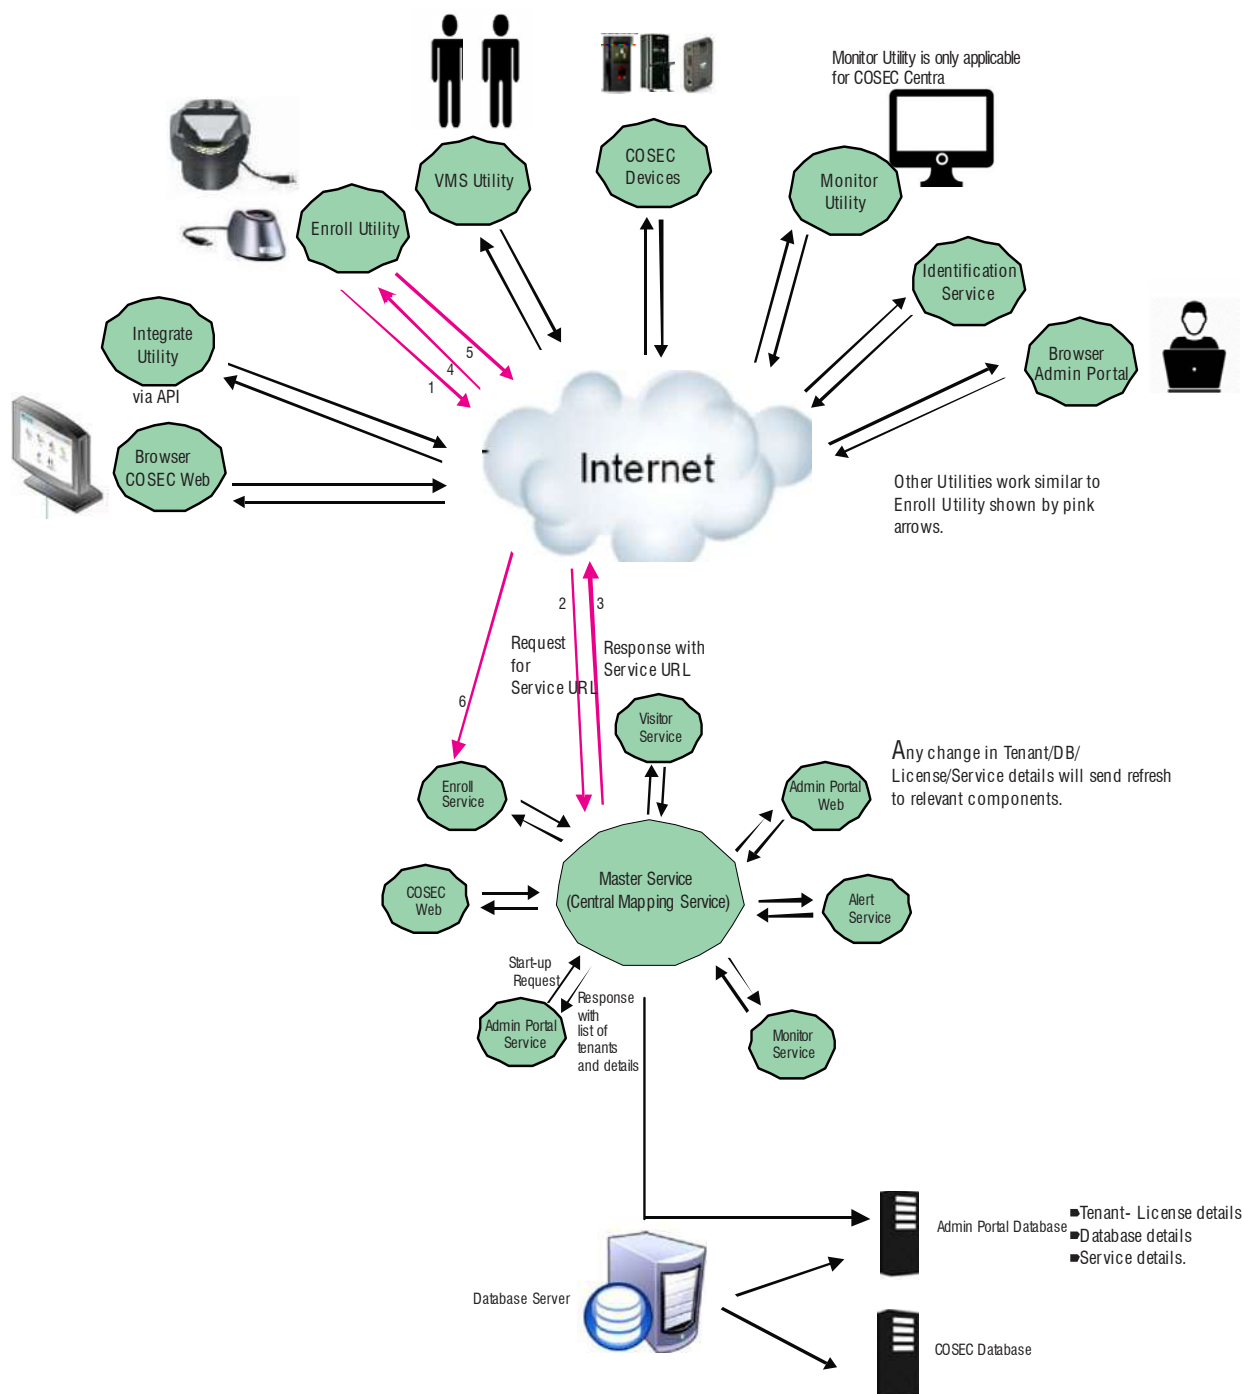

Also DIRECT DOORS have limited functionality as compared to the PANEL DOORS. For a functionality-based comparison of all COSEC devices, [See "Device Features" on page 91.](#)

For installation details on COSEC Doors, refer to COSEC Door Quick Start guides.

# System Architecture CENTRA & VYOM

The COSEC access control system has a layered architecture with intelligent components at each level.

At the top is the **COSEC Utilities** at the user end, **COSEC Services** along with central Master Service and the Database servers hosting **Admin Portal database** and **COSEC database**. This gives the flexibility to install these components at one location or separate locations.

For COSEC on Premise solution; the complete system shown above has to be installed. For COSEC on Cloud solution; only the utilities has to be installed at the client side.

## Database

The **Database Server Layer** involves the installation and management of Admin Portal database and COSEC database.

The **Admin Portal database** consist of:

- Tenants details
- License details
- Services Assignment
- Database backup/Upgrade- maintain records.

For Premise solution, there will be only 1 tenant in Admin Portal.

The **COSEC database** is the client specific database. For COSEC on Cloud solution; the database will be available at the cloud server and managed by the Tenant portal administrator. For COSEC on Premise solution; the database will be locally configured by the client.

## COSEC Services

### Master Service

- Handles request from all other components.
- Provides updated Tenant/DB/license details to all services.
- On Premise- Responsible for license Management for the modes- Dongle on Server, Dongle on Device as well as Virtual License.
- On Premise- Responsible for COSEC DB upgrade as well.
- Responsible for Admin Portal DB Upgrade.

**Monitor Service** is required for communicating with COSEC devices.

**Admin Portal Service** is required for following functions:

- Database upgrade (COSEC DBs)
- Post, Retrieve and Remove records.

*The Admin Portal Web has no dependency on the status of Admin Portal Service. The Admin Portal Web can be accessed even if Admin Portal Service is not running. This service must be running for above mentioned functions.*

**Alert Service** is required for sending notification alert.

**Enroll Service** and **Visitor Service** handles the request of the Enroll Utility and Visitor Utility respectively.

To know about the installation of the above Services, refer the ServicesUserGuide..

## COSEC Utilities

The COSEC Utilities include — COSEC Enroll, COSEC VMS, COSEC Monitor, COSEC Integrate, COSEC Tracker.

To know more about these Utilities refer their respective manuals:

Utilities	User Manuals
COSEC Enroll	EnrollUserGuide

Utilities	User Manuals
COSEC VMS	VisitorUserGuide
COSEC Monitor	MonitorUserGuide
COSEC Integrate	IntegrateUserGuide
COSEC Tracker	Tracker User Guide

*COSEC Monitor and COSEC Tracker are applicable only for Premise solution.*

## COSEC Devices

COSEC Panel/ Panel-lite/Vega Panel-lite manages multiple door controllers and is a local bridge between the door controllers and the COSEC application software.

*See Devices Section for supported devices.*

Door Controllers and their readers are front end terminals, guarding and monitoring the entry and exit points. However, for time-attendance applications, Door Controllers can be connected directly with COSEC application software.

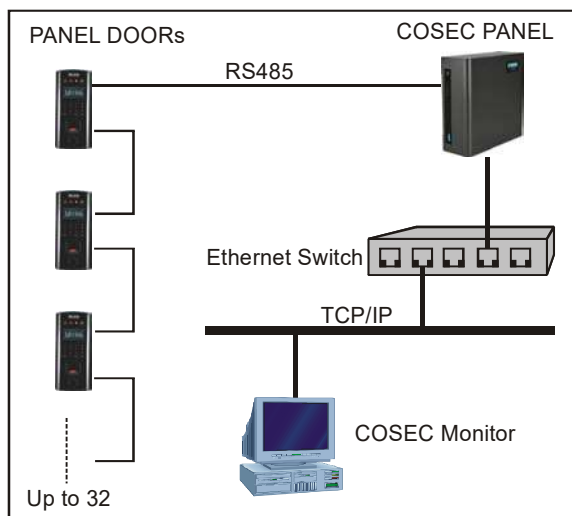

The COSEC Access Control System is based on the **Master-Slave architecture**.

The COSEC Panel/Panel Lite/Vega Panel Lite (Panel200) is the central processing unit which acts as **Master** and Door controllers act as **Slave**.

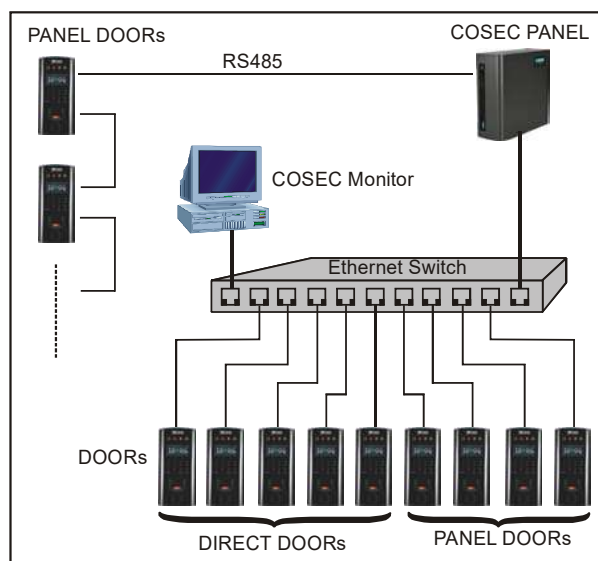

The Panel/Panel Lite/Panel200 stores complete user information, access policies, user events, door controller software and all the connected door controller's configuration settings. The Panel lite is programmed to apply certain access policies on users accessing the facility where the Access Control System (ACS) is installed.

## Various Network Topologies

All PANEL Doors (up to 32) connected to PANEL on a RS-485 Loop

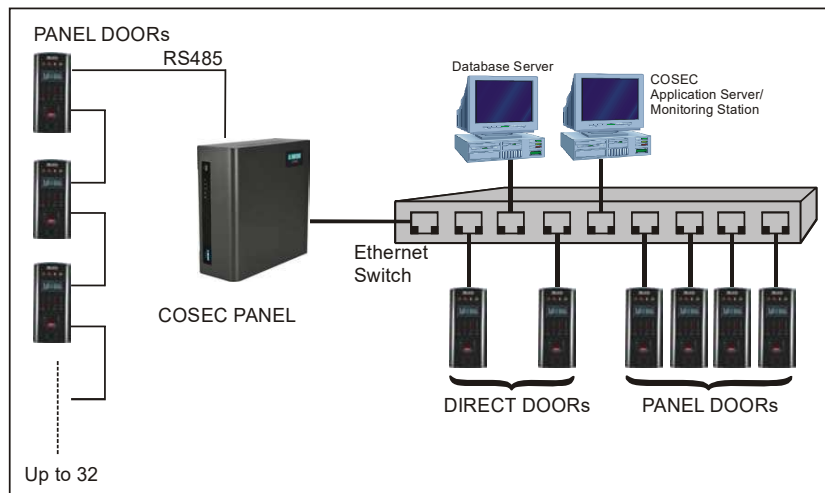

Some PANEL DOORS & DIRECT DOORS connected to the PANEL on the Ethernet and all other PANEL DOORS on the RS-485 loop.

## Connecting remote sites

## Typical Heterogeneous Network Topology

*A maximum of 255 COSEC PANEL DOORS can be connected to a single PANEL in any combination. The MSSQL Database can be installed on the same computer as the application and the monitoring software.*

# Configuring and Using COSEC

---

Follow the below steps to configure new user in COSEC and assign devices and policies to him.

*“Step1”: Create a user from User module.*

*“Step2”: Connect COSEC Device and add to the COSEC Web Server.*

*“Step3”: Assign Devices to User.*

*“Step4”: Enroll Credentials of the user.*

*“Step5”: Create and Assign Shift Schedule to the user.*

*“Step6”: Create and Configure Time Attendance Policies*

*“Step7”: Assigning Groups (Reporting, Leave, Week-Off) to the user.*

## Step1

From “User” module of Web server, add a user and select the type as T&A. Mention the Joining date and other details of the user.

## Step2

Apply Power and Ethernet connection to the COSEC door.

Give available IP address to the door and set Server address and Port as the IP and Port of your computer where COSEC Monitor is installed. You can get the IP and Port from COSEC Monitor Properties.

Eg: 192.168.104.122 is the IP address of your Device and 192.168.104.23 is the Server address and 11000 is the Port.

### Manual Addition

From “Devices” module in Web server, add the desired device by specifying its MAC address. Once the door is connected, it will come Online and IP address will be automatically displayed.

The status of door connection can be viewed from COSEC Monitor and also from Device Status page of Devices Module in Web Server.

### Auto Addition

Enable “Auto add New Devices” from Global Policy of Admin Module. If you have set the server IP address in your device then the device will be automatically added in the server.

## Step3

### **Method1: To a Device Group, assign user/ users**

Create Device Group from Devices> Masters> Device Group. Add devices to the group. Then assign the user to the device group.

If “ Auto Assign new device to Device Group” is enabled from Global Policy then new devices added to the COSEC Server will be added automatically to the device group. And hence the user will be assigned to that device group.

### **Method2: To a Device, assign user**

From Device Configuration> Additional> Assigned Users tab. Select the device from the device list to which the user is to be assigned. Then select the particular user from the picklist and Save.

### **Method3: To a User, assign device or Device Group**

Create User. From User Configuration> Devices, assign Device group or individual device.

## Step4

**Enrolling when new user is created:** Go to User Module> After creating the user, Select Credentials tab. Click Enroll Credentials and select the door on which credential is to be enrolled. From here you can enroll the credential directly on the door which will be later synced with other devices.

**Enrollment of Multiple Users:** When you have a device with you and want to enroll multiple users then go to Users module> Credential Management> Enrollment. Select a Door on which you want to enroll one by one user credential. Now select the user and perform enroll operation on device after selecting the type of enrollment.

Once the credentials are enrolled at one door, it gets automatically synced to other doors of the group. So the user can access other devices installed at the premises.

Depending on the device/door available you can enroll the finger template, palm template or card for the user/employee.

### Finger Enrollment

### Palm Enrollment

### Card Enrollment

**Using COSEC Enroll:** When a person(say Receptionist or HRD person) is assigned the role of enrolling credential of new employees. Then the credentials can be enrolled using COSEC Enroll as the desktop application. Using

desktop application, you can easily enroll the finger/palm/card from the respective enrollment station. See COSEC Enroll Manual for details.

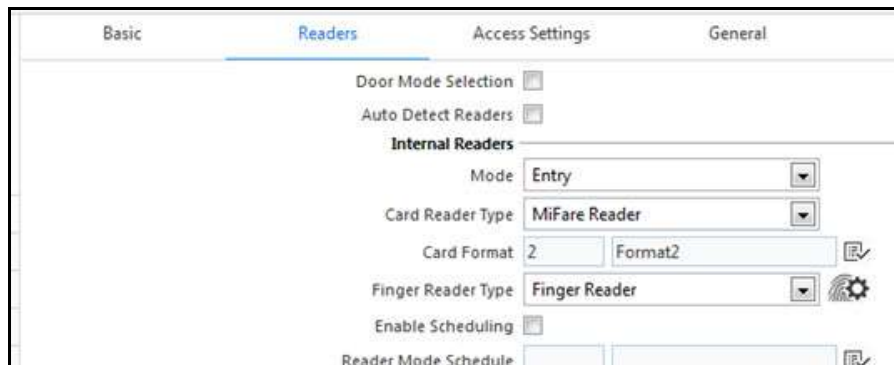

### Enrolling Smart Card for User:

**1: Configure the device with Internal or External Reader:** For Internal reader, connect the reader module inside the device. For External reader, connect the 15 pin connector of door controller (Eg:Vega) with the connector of Reader as shown below:

**2: Configure the device profile for Reader:** Make the configuration changes as per the physical connection of the reader.

If you have connected Mifare reader, then select the **card reader type** as Mifare. Also ensure that you have Mifare card for enrollment.

Similarly make the configuration as per your reader selection.

Then select the **card format** from the picklist as per which the Parity, CSN and FC will be written on the card.

**Note:** Card Personalization works for HID-iclass and Mifare cards only.

**3: Enroll the Smart Card for user:** Select the User> Credentials. Click on Enroll Credentials. Select the Door where enrollment is to be done. For the enrollment type Smart Card, click Enroll and show your card on device. The card will get enrolled after the successful enrollment. The card number will be shown in Access Card field.

**Enrollment of Special Card:** In a factory when workers want to use special function (for eg: Short leave), then they can take the card which is enrolled for that special function and show to the device. In this way worker can activate the short leave function on door using the special function card. Once the function is active, he can access the door using his credential.

To enroll the special function card, Go to Users module> Credential Management> Enrollment> Special Card. Select a door for which special function card is to be enrolled. You can enroll Read only card or Smart card for any of the special functions available from the drop down list.

## Step5

The user is assigned Shift Schedule, not the individual shift.

**Creating Shift:** First you have to create shifts eg: GS(General Shift), NS(Night Shift) etc. Define the timing of the shift. You can specify the working hours required to complete half day and full day.

Break Details and Grace details for the shift can be specified.

If Break deviation is not allowed, then the break Late-in and/or break early-out can be added to total late-in and/or total early-out respectively.

**Create Shift Schedule Group:** Add the required shifts to the created schedule group. You can specify the days for a particular shift to repeat. Eg: a schedule group has GS and NS shifts in which GS shift repeats for 7 days and NS shift repeats for 4 days.

Week-off days can be set in the shift. If both Off Day configuration and Week Off Group are defined for a user, then week off will be given as per the Week Off group. [See “Step6” on page 15.](#)

**Assigning Shift Schedule to User:** Select the User to whom the shift schedule is to be assigned.

Go to User Configuration> Access Control> Basic.

Select “Shift Schedule” to be assigned to the user. Then select “Start Shift” as the shift from which the schedule is to be started.

You can also create holiday schedule from Shifts and Schedule module and assign it to the user.

**Process Schedule:** Finally Go to Shifts and Schedule module> Process> Monthly Schedule. Select the user and the month for which shift-schedule is to be processed. If any existing schedule is available for the user, then you can overwrite the same by current schedule by enabling the respective box.

After processing the schedule, you can view from Shift and Schedule module> Utilities> Monthly Shift Schedule.

## Step6

If you want to assign Time Attendance policies to user then Go to T&A module> Policies. You can configure various policies as per your organization requirement.

**Configure Attendance Policy:** The Attendance Policy is the configuration of rules as per which attendance of the employee is recorded and processed. For details see [“Attendance Policy”](#)

**Configure Network hours Policy and OT Policy:** If you want to pay for the extra work hours of an employee, then you must calculate overtime hours of the employee. For details see [“Net-Work Hours Policy”](#) and [“Overtime Policy”](#)

**Configure Late-IN Policy:** To allow the user for flexibility in late-incoming to the organization, you can configure Late-IN policy and assign to the user. For details see [“Late-IN Policy”](#)

**Configure Early OUT Policy:** To allow the user for flexibility in going out early from the organization, you can configure Early-OUTN policy and assign to the user. For details see [“Early-OUT Policy”](#)

**Configure Absentee Policy:** When the Employee takes leave before or after Week off/Public holiday, then to consider him as absent will depend on the configured Absentee Policy. For details see [“Absentee Policy”](#)

**Configure C-OFF Policy:** If Overtime hours of an employee are to be rewarded by the C-OFF, then the C-OFF policy can be configured and assigned to the user. For details see [“C-OFF Policy”](#)

**Note:** For assigning new policies (other than Attendance Policy) to user, Go to T&A module> Utilities> Change Policy. Select a single user or multiple users and assign the desired policy to the user.

To change Attendance Policy of the user, Go to User> User Configuration> T&A> Policy.

## Step7

Additional to the basic configuration described above, the user can be assigned Reporting Group, Leave Group and Week-Off Group.

**1) Creating Reporting Group:** From User module> Reporting In-charge> Reporting Group, you can create a group with upto 5 in-charges. The users are then assigned this group. The authorization mode for the group can be selected as Any One, All or All Sequential.

Eg: Geeta, Dinesh, Aakash, Shruti and Khushbu are members of reporting group QA. The incharge1 is Shruti and incharge 2 is Khushbu. The authorization mode is All Seand final authority in Incharge2. In this case any application (leave application/ attendance correction/Cafeteria correction application) by user Geeta will require authorization by both incharges. And final verdict will be given by incharge2.

In case of Any One mode, authorization by any of the two incharges will be allowed.

In case of All Sequential mode, first incharge will authorize. Only after the verdict of first incharge or due to auto forward, the application will go to second incharge for the final verdict.

**Assigning Reporting Group:** Select the User to whom the reporting group is to be assigned.

Go to User Configuration> T&A> Group. Select the “Reporting Group” from the pick-list to be assigned to the user.

Eg : The new user Sheetal is assigned the group QA. So Shruti and Khushbu who are in-charges of QA group will become the Reporting In-Charges of Sheetal.

**2) Creating Leave Group:** From Leave Management module> Leave Group

Create a new leave group and add the leaves in the group. But you must configure the leaves first.

If you Enable pro-rata for a leave group, then the leave will be given to the user as per the no. of working days.

**Assigning Leave Group:** Select the User to whom the leave group is to be assigned.

Go to User Configuration> T&A> Group. Select the “Leave Group” from the picklist to be assigned to the user.

### Crediting Leave:

To avail the leave, the user must have leave balance. For this you must credit the leaves to the user. Go to Leave Management> Balance Management> Credit/Debit/Encashment.

You can credit the selected leave to one/more user on monthly or yearly basis.

- For a fixed value of leave, Pro-rata can be applied. This implies that the leave will be given as per the no. of working days.

Eg: The user has joined a company on 21st of month. You are crediting 10 leaves but actually 3.5 leaves will be credited to the user.

The rounding of credited leaves can be configured from Leave Rounding Parameters.

- Using Accrual Policy, you can credit advanced leaves for monthly or yearly period in fixed mode (fixed number of leave) or calculated mode (calculation based on attendance of previous month).

### **3) Creating Week-Off Group:** From Shifts and Schedules module> Week Off Group

You can create week off group with two week-offs. The 2nd week-off can be customized to give off for alternate week or any particular week or all the weeks.

Eg: IT Company gives 2nd week-off as Saturday on all weeks so select Saturday as Off day2 and check all the boxes. Some other company may give Off on second (W2) and fourth Saturday (W4).

#### **WO Rotation:**

The week off group can have one or both week-offs rotating. This implies if Off Day 1 is Sunday and Off Day2 is Friday and rotation count is 10 days. So WO Sunday will become Monday after 10 days. Eg: 1st July is Sunday (WO-1). After 10 days i.e. on 11th July you will have WO on Monday (WO-1). Similarly WO-2 will be rotated.

**Note:** WO Rotation will be disabled for Auto Week off assignment.

**Assigning Week-Off Group:** Select the User to whom the Week Off group is to be assigned.

Go to User Configuration> T&A> Group. Select the "Week Off Group" from the pick-list to be assigned to the user.

---

## Installation Precautions

It is very important for the installer to read and understand all the instructions in this manual before starting the installation process. For each stage in the controllers' installation and commissioning procedures a brief description is given of its purpose, complete with detail drawings, flow diagrams and/or other graphics, wherever possible, to make the instructions easy to follow. Before installing the Matrix COSEC Access Control Units, you must first ensure that the following criteria have been met. Failure to do so may not only result in damage to the equipment, but may also cause problems when commissioning the system and may adversely affect its performance.

### Product Inspection

The COSEC Access Control Units are simple to install and commission if the procedures as described in this System Manual, and the Installation and Commissioning sections of this manual, are followed.

*Follow all installation instructions described in this manual. These instructions must be understood and followed to avoid damage to the controllers and associated equipment.*

### Checking the Controller for Damage

Before attempting to install your Panel/ Panel Lite/ Panel200 you should do the following:

1. Remove the PANEL from its packaging, and check for any damage that may have been caused during transit. Any missing item/part or damaged component should be reported immediately.

*In the unlikely event that the PANEL has been damaged in transit, you **MUST NOT** install it but contact your supplier for their return procedure.*

### What to do if you Suspect the PANEL is Damaged

The procedure described below tells you what to do in the unlikely event that the supplied equipment has been damaged after leaving the factory. However, if you have problems regarding the quality of any supplied order items including the PANEL, its ancillaries or this manual, or items are missing, follow the procedure below.

1. If, after removing the PANEL from its packaging, a visual inspection reveals that it has been damaged, you **MUST NOT** continue with the installation but contact your supplier for advice on what to do next. Similarly, if the product is found to be faulty during installation contact your supplier immediately.

2. To aid your supplier you are requested to note all the details relevant to your complaint, clearly stating details of any technical problems, date of receipt, packaging condition, etc. and forward this to your supplier.
3. Where the product needs to be returned to your supplier, you are requested to use the original packaging wherever possible.

## **Do's and Don'ts:**

Prior to selecting a location for the COSEC PANELs and DOORs, Do make sure that:

- a. The ambient temperature is in the range: +5 deg C to 35 deg C.
- b. The relative humidity is between: 5% and 95% (non-condensing).
- c. The COSEC PANELs and DOORs are wall mounted in a position which allows clear visibility of display and easy access to operating controls. The height above floor level should be chosen such that the middle of the COSEC PANEL is just above normal eye level (approximately 1.5 meters) while that of the COSEC DOOR should be approximately 1.0 meter.
- d. Do not locate the COSEC PANELs and DOORs where they are exposed to high levels of moisture.
- e. Do not locate the COSEC PANELs and DOORs where there are high levels of vibration or shock.
- f. Do not mount the COSEC PANELs where there would be restricted access to the internal equipment and cabling/wiring connections.

## **Safety Instructions**

**NEVER INSTALL THE EQUIPMENT DURING A LIGHTNING STORM!**

The Installer should always take basic safety instructions to reduce the risk of fire, electric shock and injury to personnel and system. The following points need to be taken into account:

1. The COSEC PANEL should be installed and used within a pollution free environment and at a safe and secure indoor location.
2. The equipment is FIXED and PERMANENTLY CONNECTED and is designed to be installed by authorized Service Persons only. The COSEC PANEL comes installed in a metallic cabinet.
3. Do not place the product at a location from where it can fall and cause damage to the product.
4. The product should be operated with appropriate power voltage supply as mentioned in the specification sheet.
5. Cable splices can cause trouble. Make sure you measure your runs and order sufficient cable for unspliced runs. If splicing is required, solder the splices together, rejoin the shielding the best you can, and restore (heat shrink) the cable insulation.
6. Label each cable run and each individual wire. Make sure you don't cross cables at splices or junctions. Color coded cable makes life easier and assures straight through connections.
7. Make sure the site's electrical system is properly grounded.
8. Internal wiring must be routed in a manner that prevents:

- Excessive strain on wire and on terminal connections;
  - Loosening of terminal connections;
  - Damage of conductor insulation.
9. It is the end-user's and/or installer's responsibility to ensure that the disposal of the used batteries is made according to the waste recovery and recycling regulations applicable to the intended market.
10. There are **no serviceable parts within the equipment**. For any issues or queries regarding the equipment please contact your installer.

*Disconnect Power before Servicing.*

## COSEC Software Installation

---

Before commencing the installation, make sure that the computers on which the software will be installed meets the necessary requirements.

*The COSEC setup installation is explained for Premise based solution. For Cloud based solution; setup installation will be done at cloud server.*

### System Requirements

Make sure that the computer on which you are installing the software meets the following requirements:

- **Operating Systems:** Windows7 Professional and above
- **Processor:** Recommended is dual core processor and above
- **RAM:** Minimum available is 4GB
- **Hard disk:** Minimum available is 40 GB
- **Screen resolution:** Minimum Recommended is 1366 x 768
- **DVD/CD-ROM** drive
- **Network Interface card:** 10/100 Base-T network adapter
- Recommended **IIS** ver 6.0 or higher
- **Microsoft .Net Framework** ver 4.5
- **Internet Explorer** 9.0 - 11.0
- Requires **USB2.0** or higher Port for license dongle

*Please ensure that you have installed the IIS ver 6.0 or higher, prior to proceeding with the installation of the application as described in the following section. The user needs to ensure that the .Net Framework 4.5 is installed only after the installation of the IIS component to enable appropriate registration of the asp.net with IIS. To check if IIS is installed on the computer, open the web browser (Internet Explorer) and type in <http://localhost> in the address field. The IIS home page must appear.*

*SQL database is supported for SQL server 2008 R2 and above. Oracle database is supported from version 10g upto version 21c (Basic Authentication).*

## Pre-Requisites for Face Recognition and Face Enrollment

Face Recognition and Face Enrollment System Requirement support for windows application development targets 3 major platforms: x86 (CPU), x64 (CPU) and x64 (NVIDIA GPU).

### Computer Hardware Platform

#### For Windows with CPU:

- 6th and above generation Intel Core processors and Intel Xeon processors.
- Intel Xeon processor E family (formerly code named Sandy Bridge, Ivy Bridge, Haswell and Broadwell)
- 3rd generation Intel Xeon Scalable processor (formerly code named Cooper Lake)
- Intel Xeon Scalable processor (formerly Skylake and Cascade Lake).

#### For Windows with GPU:

- Nvidia GeForce GTX 1050 Ti-4 GB onwards

### Operating System

Microsoft Windows 10 64-bit

### Recommendations for Liveness Verification

Below mentioned recommendations for Liveness Verification is applicable for all Matrix's Cameras.

- Custom ROI of Height ~= 1000 px and Width ~= 700 px.
- Good and evenly distributed light is required on person's face.
- Good lighting is required at setup location facing person's front. Back light degrades acceptance rate of real person.
- Person's distance from camera when marking attendance must be between 1 to 2 ft (For Moderate and Advance Face Anti-Spoofing Mode) and more than 3 ft (For Basic Face Anti-Spoofing Mode).
- Face horizontal shift must be between -30% to 30% which means faces looking more left or right are rejected.
- Face coordinates must not exceed 10% area near left and right edges and 5% area near top and bottom edges of input image.
- Face touching image's border is rejected.
- Face must cover less than 70% area of valid image region. Faces very close to camera are also rejected.

## Recommendations for Face Recognition

- User's distance from camera when marking attendance must be between 1 to 3 ft (i.e. Face Height should be more than 80px).
- Good and evenly distributed light is required on user's face.
- Shadow / Under Exposure / Over Exposure lighting should be avoided.
- Motion Blur / Over Image Compression / Environmental Noise should be avoided.
- Any type of Occlusions like Sunglasses / Mask / Helmet / Cloths covering the face should be avoided.
- Face Angle should not be more than 30 degree horizontal and 10 degree vertical.

## Recommended Camera Settings for Liveness Verification

The below mentioned recommendations are applicable to SATATYA MIDR20FL28CWS or Wall mounted Cogniface Cameras.

Name	Value
Profile No.	4
CODEC	MJPEG
Resolution	720p
Bit Rate Control	VBR (For all Modes)
Bit Rate	1024 kbps
FPS	10
Lens Correction	Off

## Security Setup for COSEC<sup>1</sup>

If you are having any security concerns then make sure you manually configure the changes as per the steps given below along with installation of the COSEC package:

### Step 1:

It is expected that wwwroot folder contains only Cossec Web Applications i.e. COSEC, COSECAdmin, COSECVisitor. If there are any other applications in wwwroot folder then placing/updating web.config file may impact other application too.

If your www.root folder does not have the **web.config**, then follow the steps mentioned below:

- You need to copy the **web.config** file from the COSEC Setup/Prerequisites and place it in the root folder.  
Path of the root folder: C:\inetpub\wwwroot.

---

1. These settings need to be done if COSEC is to undergo security testing via any third party to evaluate that the software is free from security vulnerability. These tests help validate the software's security controls and measures against real world's attacks, for example VAPT.

- Open this file in notepad, and replace the **matrixvyomqa.com** text with the IP or Domain which the user wants to use.

If your www.root folder already has the **web.config**, then follow the steps mentioned below:

- Copy the **web.config** file from the COSEC Setup/Prerequisites and place it on the desktop.
- Open this file in notepad, and replace the **matrixvyomqa.com** text with the IP or Domain which the user wants to use.
- Then copy the content from the dummy file and append it in your web.config file.

### Step 2:

Uncomment the **httpCookies** tag in the following config files of COSEC.

- COSEC Path: C:\inetpub\wwwroot\COSEC\Web.config
- COSEC Admin Path: C:\inetpub\wwwroot\COSECADMIN\Web.config
- COSEC Visitor Web Path: C:\inetpub\wwwroot\COSECVisitor\Web.config

### Step 3:

Enable TLS1.2 in the Server.

## Port Requirement

The Default Ports for running different COSEC services for SSL and Non SSL communication are as follows:

1. **Master Service:** Non-Secure = 15001 & Secure = 15010
2. **Alert Service:** Non-Secure = 13001 & Secure = 13010
3. **Enroll Service:** Non-Secure = 12001 & Secure = 12010
4. **Monitor Service:**
  - Communication with Master Service: Non-Secure = 11001 & Secure = 11010
  - Communication with Device: Non-Secure = 11000 & Secure = 11009
  - Communication with Monitor Utility: 11003
5. **Admin Portal Service:** Non-Secure = 14001 & Secure = 14010
6. **Visitor Service:** Non-Secure = 16001 & Secure = 16010

# Installing Prerequisites

---

The following Prerequisites should be installed (not included in setup) by user who is using Premise based solution (COSEC Centra) before running the COSEC Installation Setup:

1. Install Internet Information Services (IIS).

For Installing Internet Information Services (IIS) click on ["Installing IIS on the Windows Operating System \(Windows10\)"](#)

2. Install .Net Framework ver. 4.5 (mandatory).

For Installing .Net Framework click on [".Net Framework Installation"](#)

3. Microsoft SQL Server 2008 R2 SP2 or above.

For Starting Microsoft SQL Server click on ["Microsoft SQL Server"](#)

4. Oracle database server- from 10g upto version 21c (Basic Authentication). For Starting Oracle click on ["Oracle Installation"](#)

## Installing IIS on the Windows Operating System (Windows10)

To install the IIS on the Windows operating systems, the administrator needs to open the Windows Features dialog by performing the following steps.

**To know about IIS installation procedure in different operating systems, read the Help topic from the installation Setup.**

The following IIS components must be enabled for Windows 10 and above.

"WCF-HTTP-Activation45"  
"IIS-WebServerRole"  
"IIS-WebServer"  
"IIS-ApplicationDevelopment"  
"IIS-NetFxExtensibility46"  
"IIS-ASPNET46"  
"IIS-ISAPIExtensions"  
"IIS-ISAPIFilter"  
"IIS-CommonHttpFeatures"  
"IIS-DefaultDocument"  
"IIS-DirectoryBrowsing"  
"IIS-HttpErrors"  
"IIS-HttpRedirect"  
"IIS-StaticContent"  
"IIS-Performance"  
"IIS-HttpCompressionStatic"  
"IIS-HttpCompressionDynamic"  
"IIS-Security"  
"IIS-RequestFiltering"  
"IIS-WindowsAuthentication"  
"IIS-WebServerManagementTools"  
"IIS-ManagementConsole"  
"IIS-IIS6ManagementCompatibility"  
"IIS-Metabase"  
"IIS-WMICompatibility"

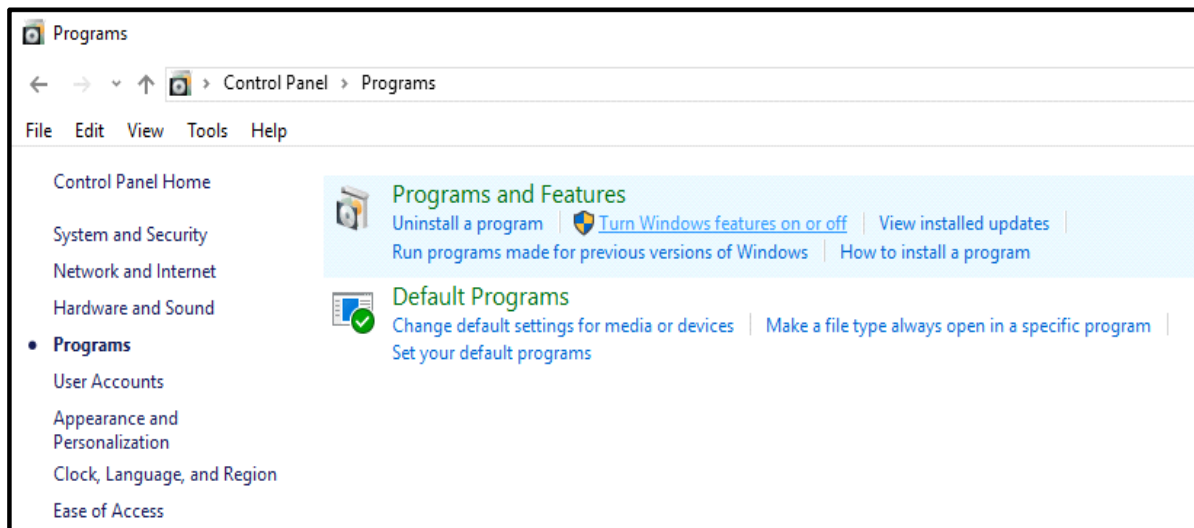

"IIS-LegacyScripts"  
"IIS-LegacySnapIn"

The figures depict the screens as they appear on the **Windows 10** Operating system. However, the same procedure may be followed to activate IIS on other Windows Operating system.

- Navigate to Control Panel by typing it in "Search the Web and Windows" field. The Windows Control Panel appears as shown below. Now click on **Programs** as shown in the figure.

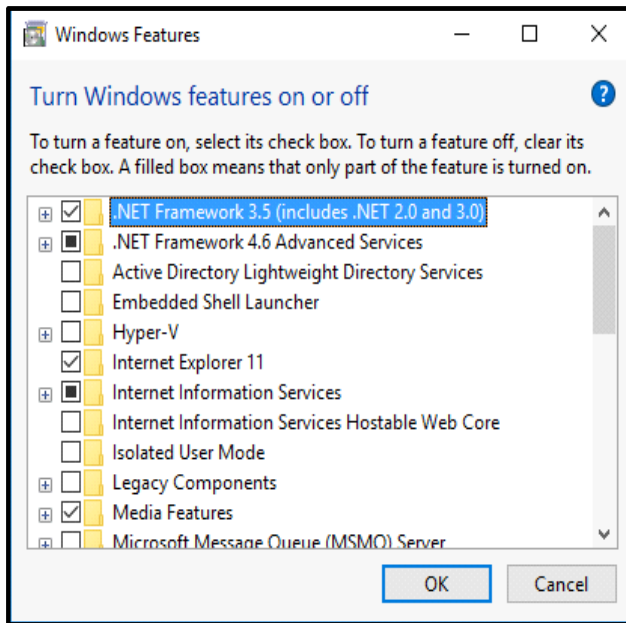

- The Control Panel **Programs and Features** options are displayed.

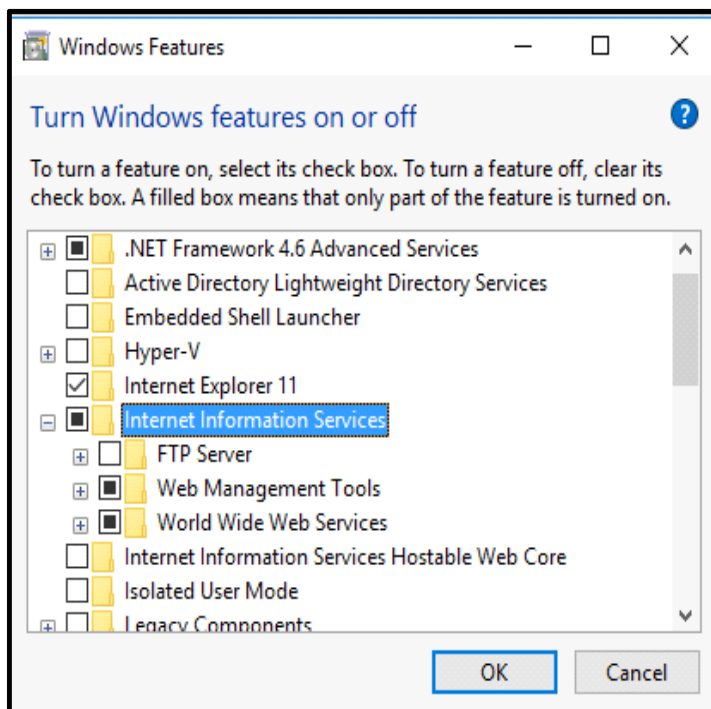

- Click on **Turn Windows features on or off**. You may receive the Windows Security warning at this point. Click **Continue** to continue.

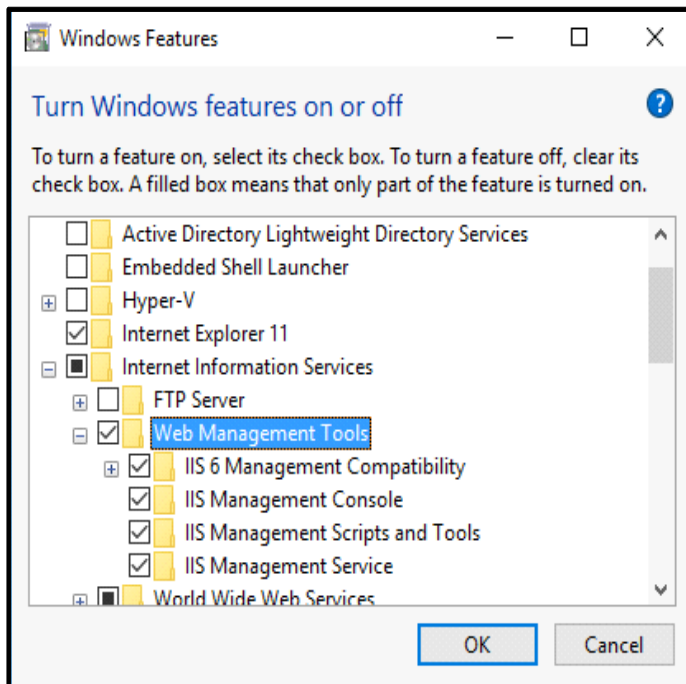

The Turn Windows Features on or off window will be displayed as shown below:

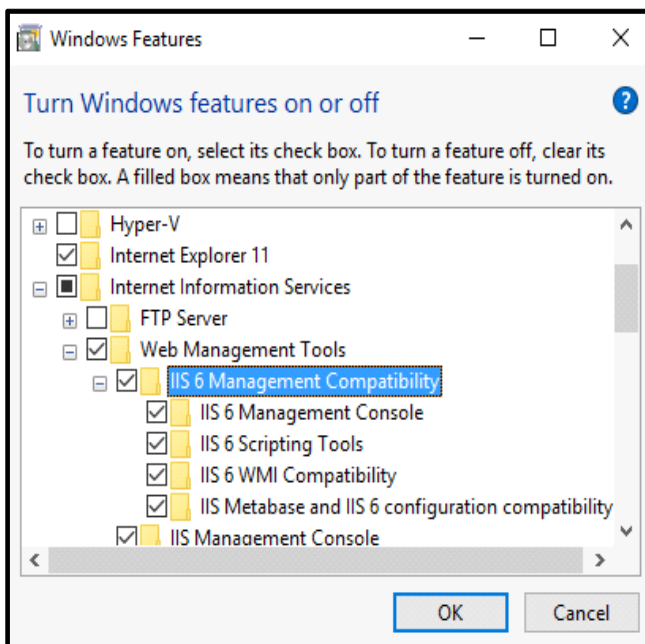

- The IIS default install features are shown as selected. Click on **Internet Information Services**. Additional IIS features will be displayed as shown.

- Click on **Web Management Tools** to view the available features. Check the boxes against the features to be turned on as shown below.

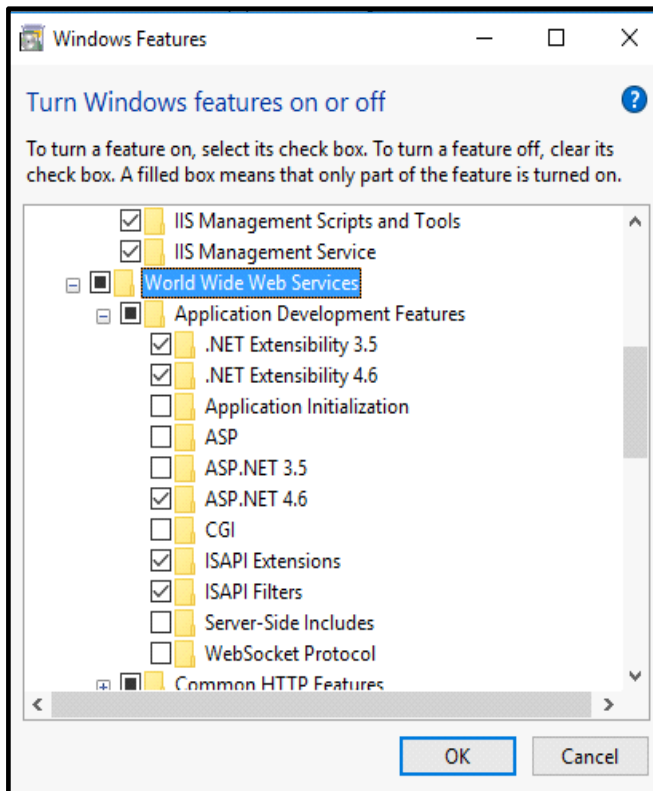

- Click on **the IIS 6 Management Compatibility** (Version depends on OS) and check the boxes against the features as shown.

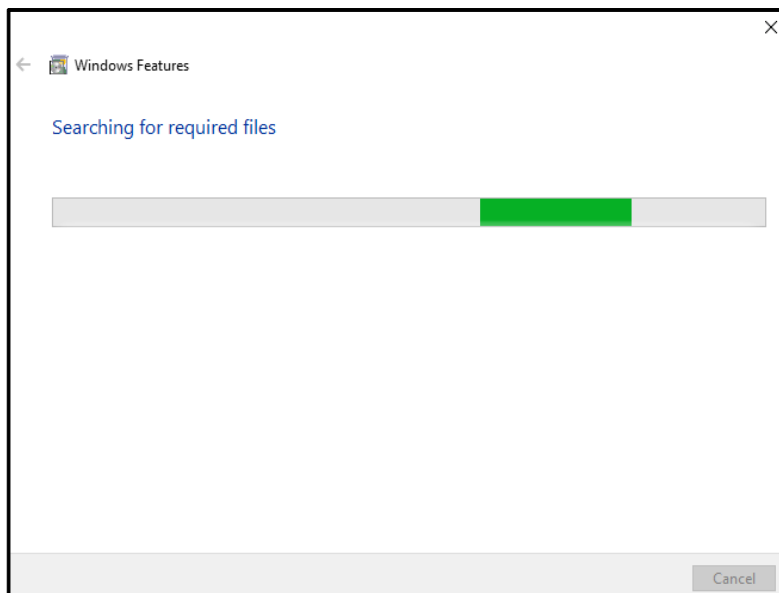

- Now click on **World Wide Web Services** and then on the **Application Development Features** option. Check the boxes against the features as shown.

- After selecting the IIS features as described above, click OK to start installation. The following Progress window will be displayed.

When the installation completes, the Windows Features dialog closes and you are returned to the Control Panel.

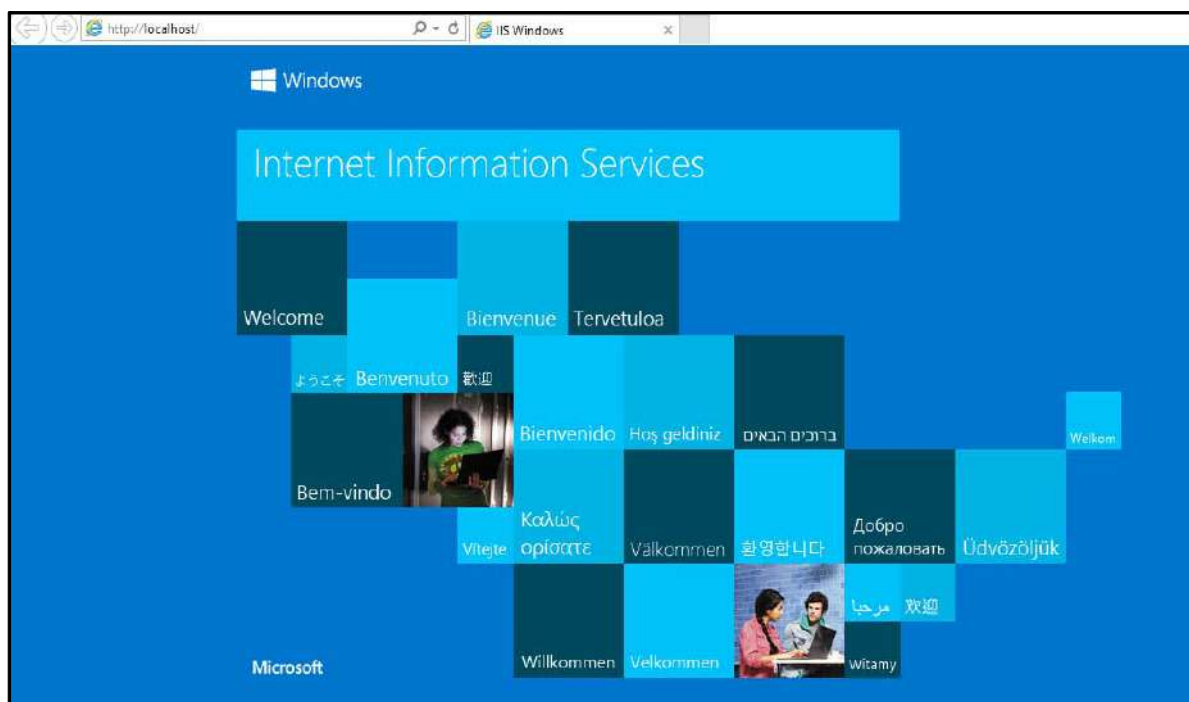

*In order to perform a quick check to verify that IIS is installed:*

*Start Internet Explorer web browser and enter the address <http://localhost/>  
You should see the default IIS “Welcome” page.*

*IIS version may change depending on the software updation and Windows in your Computer.*

## .Net Framework Installation

In the absence of the **.Net Framework**, user must install it before proceeding with COSEC installation.

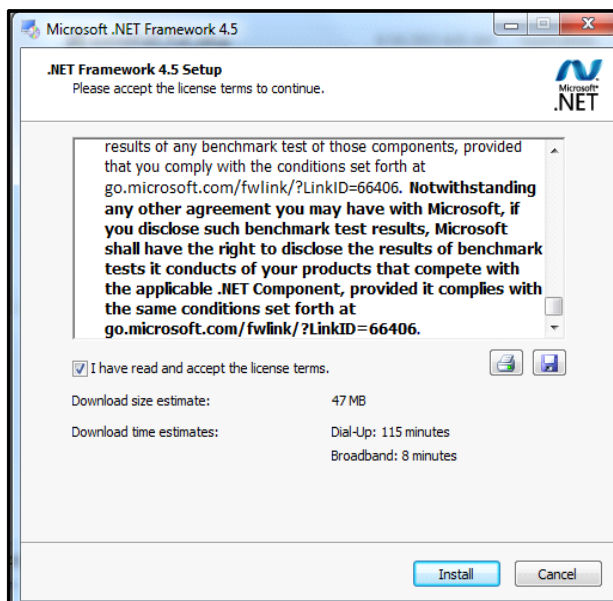

Name	Date modified	Type	Size
dotNetFx45_Full_setup	8/18/2015 4:03 AM	Application	982 KB
NDP452-KB2901907-x86-x64-AIOS-ENU	8/18/2015 4:33 AM	Application	68,359 KB

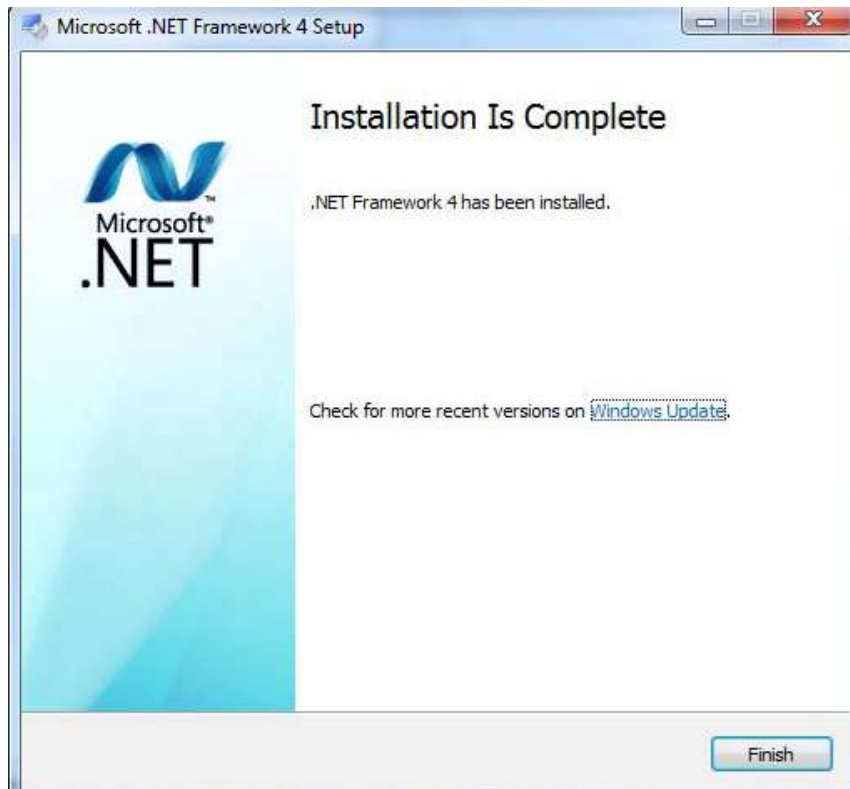

Browse the set and run the application.

Click on **Install** to install Microsoft .NET Framework. The Installation will begin.

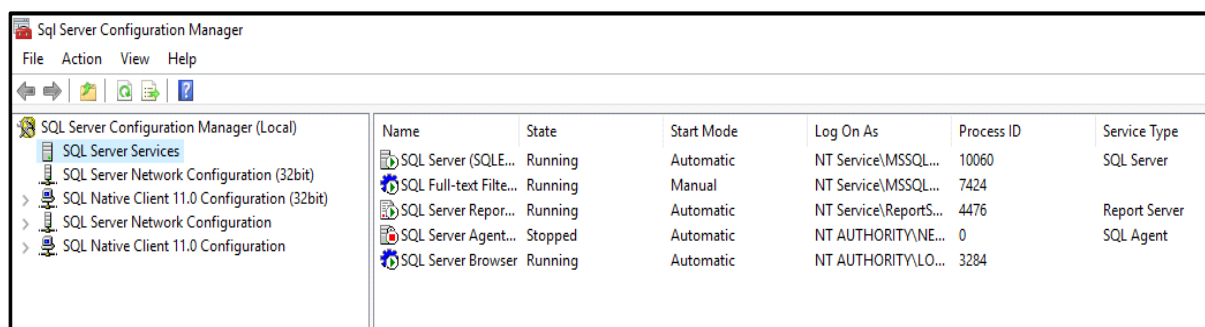

After installation is complete Click on **Finish** to exit the setup.

## Microsoft SQL Server

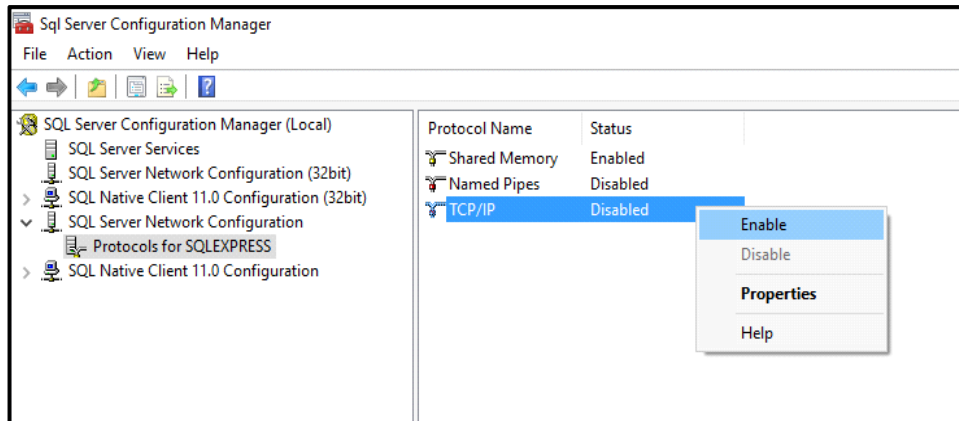

Now the installer needs to enable the appropriate protocols from the **SQL Server Configuration Manager** to allow the connectivity to the SQL server. For example; Navigate to the SQL Server 2014 Configuration Manager by typing it in “Search the web and Windows” option.

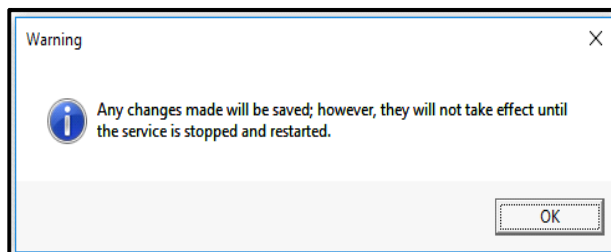

Go to **SQL Server Network Configuration > Protocols for SQLEXPRESS** option as shown in the figure.

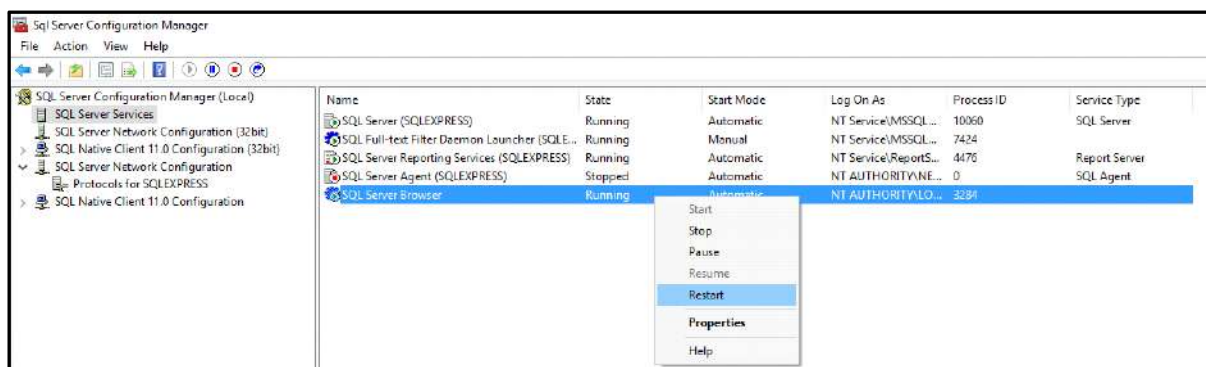

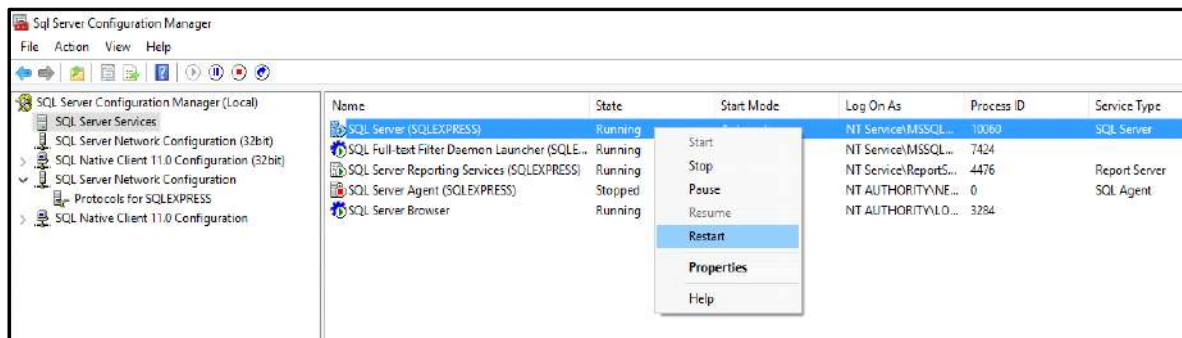

Click on the **Protocols for SQLEXPRESS** option in the left pane. The protocol options appear in the right pane as shown.

Right click on the **TCP/IP** option in the right pane and select the **Enable** option. The System will display the warning that the changes have been saved but it will take effect only after the service is restarted. Click OK to continue.

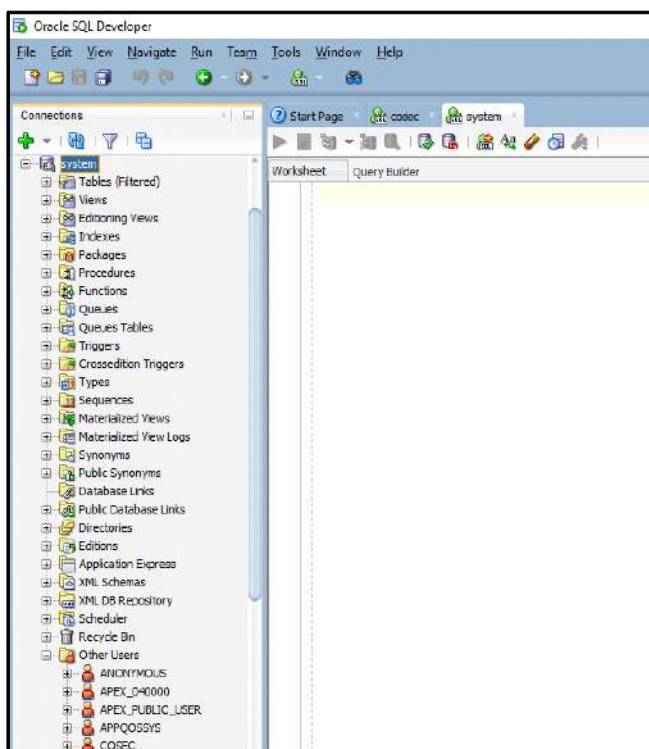

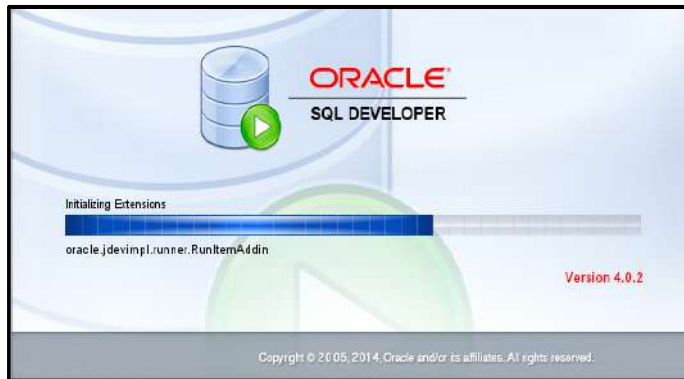

Select the **SQL Server Services** in the left pane. Restart the **SQL Server** and the **SQL Server Browser** services by right clicking on the options and selecting the **Restart** option as shown below:

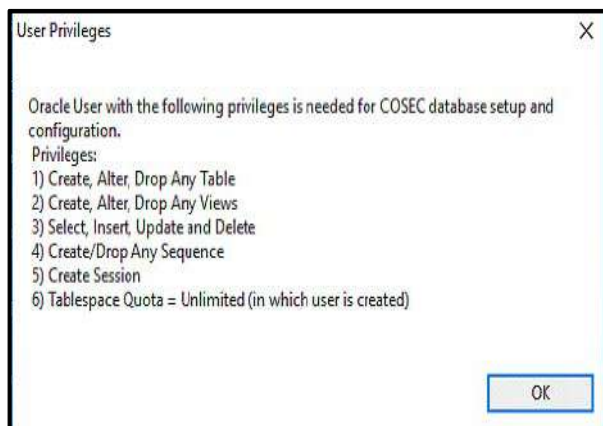

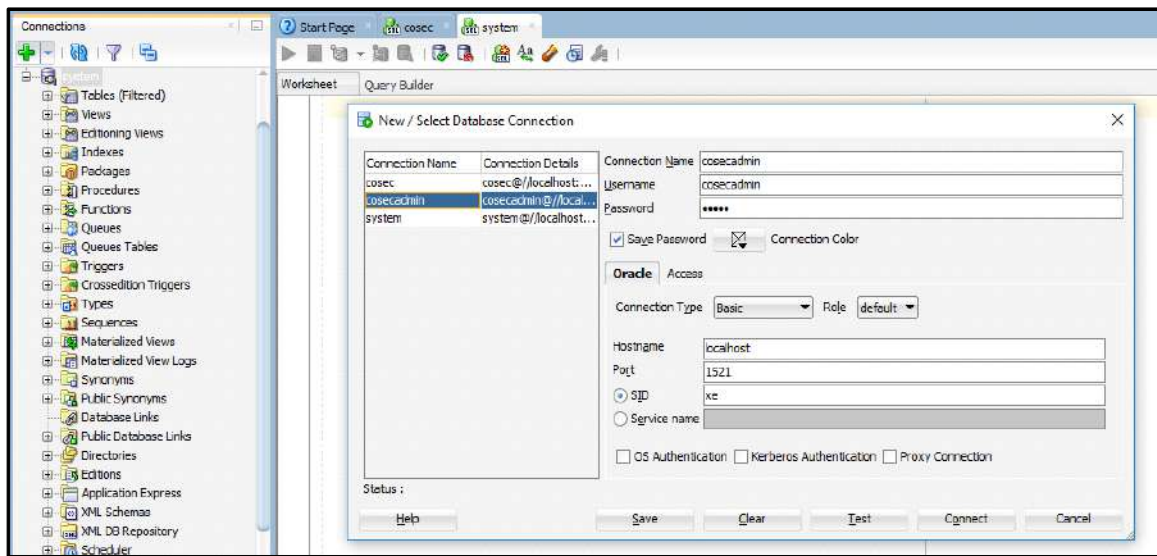

## Oracle Installation

For Oracle database, Oracle setup must be installed as shown below.

Then you must create the user and assign the required privileges as shown below.

 From PC where COSEC Web is installed - Execute msi file available at following path of Setup folder:  
Setup\Prerequisites\SqlLocalDB\x64 OR x86 (as per 64-bit OR 32-bit system respectively)

Now once the Oracle user is created, you can start with the COSEC installation.

## FIPS Algorithm Policy Check

To Install COSEC Component the FIPS Algorithm Flag must be disabled. If the FIPS Algorithm flag is enabled then following pop up will appear while installing the setup.

To disable FIPS Algorithm policy go to Registry Editor by typing regedit from the start menu of your computer.

Then go to the path:

**Computer\HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa\FipsAlgorithmPolicy.**

Now you can disable the FIPS Algorithm policy. Then Reset IIS Server and install the setup.

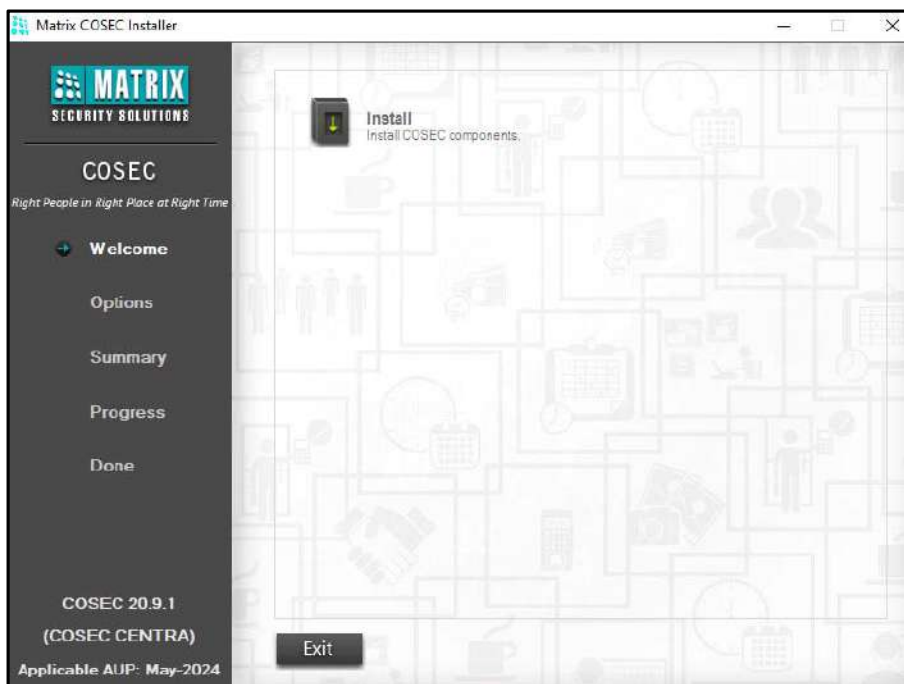

# Installing COSEC

---

In order to install the COSEC application:

- Open the COSEC **Setup** folder in your PC.
- Double-click the COSEC Installer Application.
- The **Matrix COSEC Installer** page opens.

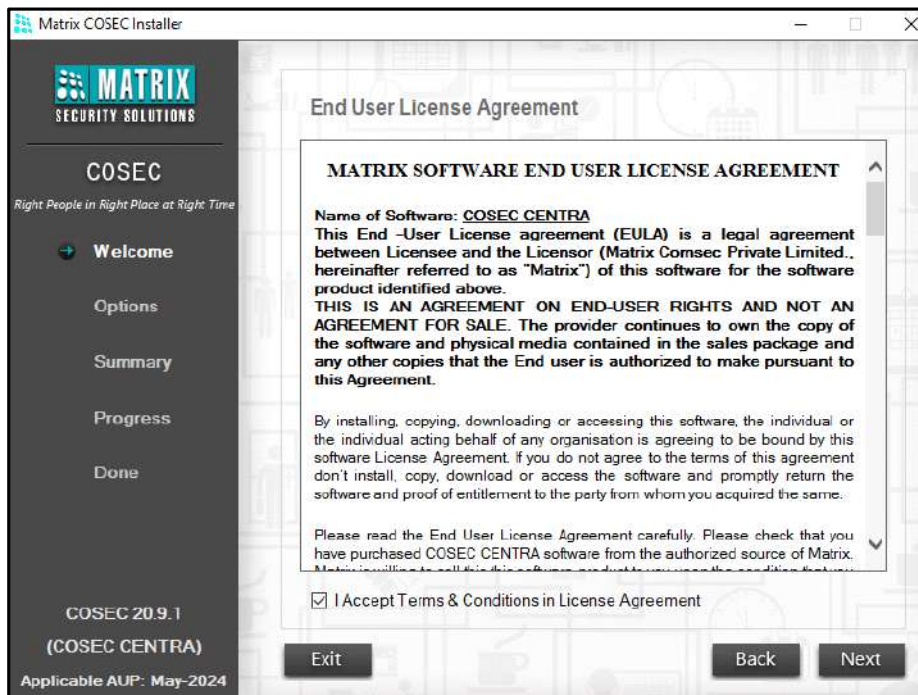

Name	Date modified	Type	Size
Help	09-12-2021 10:33	File folder	
Release Document	29-10-2021 14:54	File folder	
Setup	09-12-2021 10:47	File folder	
autorun.inf	16-08-2010 19:49	Setup Information	1 KB
COSECInstaller.exe	04-08-2017 11:23	Application	1,352 KB

This Installer automatically checks the computer for the prerequisites required for the installation of the applications prior to starting the installation process. Prior to running the Installer utility it is necessary to ensure that the logged in user has administrator rights on the computers where the various COSEC components are to be installed.

The COSEC application requires the Microsoft .Net Framework ver 4.0 to be installed prior to its installation on the application server. The COSEC Installer utility automatically detects the presence or absence of this component and the same must be installed in its absence.

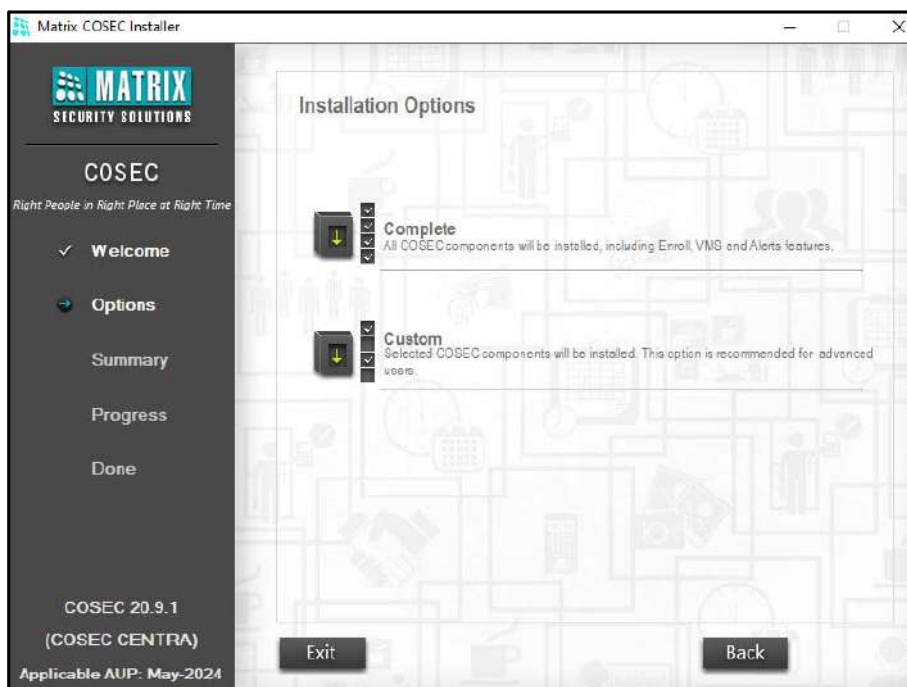

Click on **Install** to initiate the installation process.

*The End User License Agreement page will appear when new installation is done.*

*The **Annual Upgrade Package** for COSEC must be updated. Only then you can access COSEC. When the package gets expired; then you must have to get it upgraded through the Matrix channel partners.*

Click the check box to accept the Terms and Conditions in the License Agreement and click **Next**. The window appears with the following installation options:

**Complete:** Select this option if you wish to install all the components of the COSEC application. For details, refer to ["Complete Installation"](#).

**Custom:** Select this option if you wish to install the components of the COSEC application selectively. For details, refer to [“Custom Installation”](#).

*If you have opted for Virtual License and you are upgrading the system to V20R09 and then if you downgrade the system to any version below V20R09, this will hamper the functioning of the Virtual License and eventually it will stop working (that is, COSEC will be non-functional). To resume the functionality, you will have to contact the Matrix Support Team.*

Select the appropriate installation option to continue.

## Complete Installation

The **Complete Installation** option will install all the COSEC components. Click on **Complete** option. The Database creation page will appear from where you can configure Admin Management Database and COSEC Database.

### COSEC Admin Management Portal DB Details

Enter the details to configure Admin Management Portal Database.

**Database Type:** Select the database type as **MS SQL** or **ORACLE** to configure and connect the Admin Management Portal Database.

## MS SQL Database Type

If you select **MS SQL** as the **Database Type**, configure the following parameters:

Matrix COSEC Installer

**MATRIX**  
SECURITY SOLUTIONS

Note: Do not mention protocol http or https in URL

**Exit** **Back** **Next**

**Server Address:** Enter the Server Address where the database of Admin Management Portal is to be created. For example: 192.168.103.155\SQLEXPRESS.

**Authentication:** Select the desired authentication type — SQL Authentication or Windows Authentication.

- If you select Authentication Type as **SQL Authentication**, configure the following:
  - **User Name:** Specify the user name as created during sql server instance. For example: sa
  - **Password:** Specify the password as created during sql server instance. For example: matrix\_1
- If you select Authentication Type as **Windows Authentication**, you do not need to configure any parameter.

**Database Name:** Enter the name with which Tenant Admin database is to be created in the server.

**Test Connection:** Click Test connection to establish connection with the configured SQL database.

## Oracle Database Type

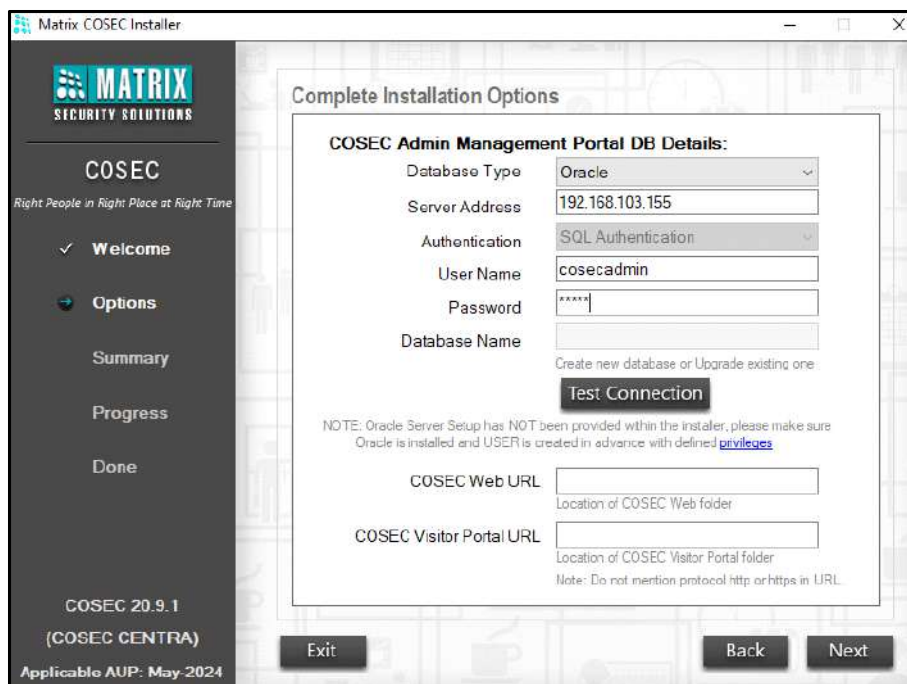

Make sure you have created the user in ORACLE with following privileges.

For details, refer to [“Oracle Installation”](#).

If you select **Oracle** as the **Database Type**, configure the following parameters:

**Server Address:** Enter the Server Address where the database of Admin Management Portal is to be created. For example: 192.168.104.23.

**User Name:** Specify the user name as the name of the user created from Oracle system. For example: cosecadmin

**Password:** Specify the password as created while creating the user in Oracle. For example: admin

**Test Connection:** Click Test connection to establish connection with the configured Oracle database.

If you have selected Database Type as **MS SQL** or **Oracle**, configure the following parameters:

COSEC 20.9.1  
(COSEC CENTRA)  
Applicable AUP: May-2024

### Complete Installation Options

**COSEC Admin Management Portal DB Details:**

Database Type: MS SQL

Server Address: 192.168.103.155/SQLEXPRESS

Authentication: SQL Authentication

User Name: sa

Password: \*\*\*\*\*

Database Name: AdminPortalDB

Create new database or Upgrade existing one

**Test Connection**

COSEC Web URL: localhost/COSEC  
Location of COSEC Web folder

COSEC Visitor Portal URL: localhost/COSECVisitor  
Location of COSEC Visitor Portal folder

Note: Do not mention protocol http or https in URL

**Exit** **Back** **Next**

**COSEC Web URL:** Enter the URL through which COSEC Web is to be accessed. If you are installing COSEC Web in PC2 and accessing from PC1; then give IP of PC2 where Web is installed. If Web is to be accessed locally then IP or localhost can be given in URL.

**COSEC Visitor Portal URL:** Enter the URL through which COSEC Visitor Portal is to be accessed. If you are installing COSEC Visitor Portal in PC2 and accessing from PC1; then give IP of PC2 where Visitor Portal is installed. If Visitor Portal is to be accessed locally then IP or localhost can be given in URL.

Now click on **Next** button.

Virtual License

Exit Back Next

**Name:** Enter the name of the company which will be created by default in the Admin Management Portal. This Name will appear in the Admin Management Portal > Company Configuration > Profile.

**Email ID:** Enter the Email ID of the company. This Email ID will appear in the Admin Management Portal > Company Configuration > Profile > Contact Details.

**Contact No:** Enter the Contact Number of the company. This Contact No. will appear in the Admin Management Portal > Company Configuration > Profile > Contact Details.

**License Verification Mode:** Select the option as **Server Based**, **Device Based** or **Virtual License** for verifying the license.

*The License Verification Mode selected here will be set automatically in **Admin Management Portal > Company Configuration > Profile**.*

- If you select **Server Based**, License will be verified from the Dongle connected to the PC where Master service is installed. For details refer to "[Server Based](#)"
- If you select **Device Based**, License will be verified from the Dongle connected to the COSEC Device. This device will communicate with Master Service so that Master Service can fetch the license key from the Dongle and all of the COSEC services will function. For details refer to "[Device Based](#)"

*For Device Based License Verification, the devices — VEGA, ARGO, ARGO FACE Direct Doors and Panel lite V2/Panel200 in Server Mode — can be used.*

*Make sure you have a **COSEC CENTRA** connection mode and the devices are configured in the same application.*

Once Dongle is connected to the device; enter the License Server URL (Default is 192.168.50.100) and License Server Port (Default is 15025) in Server Settings from the device or its webpage.

- If you select **Virtual License**, the license will be verified thorough the Virtual License Manager Server. For details refer to [“Virtual License”](#).

*You can opt for Virtual License in the following scenarios:*

- *Fresh installation of COSEC CENTRA. For details, refer to [“Virtual License”](#).*
- *You already have a Dongle License but you wish to migrate to Virtual License or vice versa. For details contact Matix Support Team.*

## Server Based

Make sure the License Dongle is connected to the USB port of the computer where the Master Service is running. Master Service checks for the presence of this License Dongle. If the Dongle is available, then the Master Service sends the Refresh command to all other services.

The Dongle only has the Generic Key, you need to purchase other licenses as per your requirement and update the new license key. For details, refer to Admin Management Portal > Company Configuration > **License and Services** and in the Admin Management Portal User Guide, Appendix > **Supported Licenses**.

## Device Based

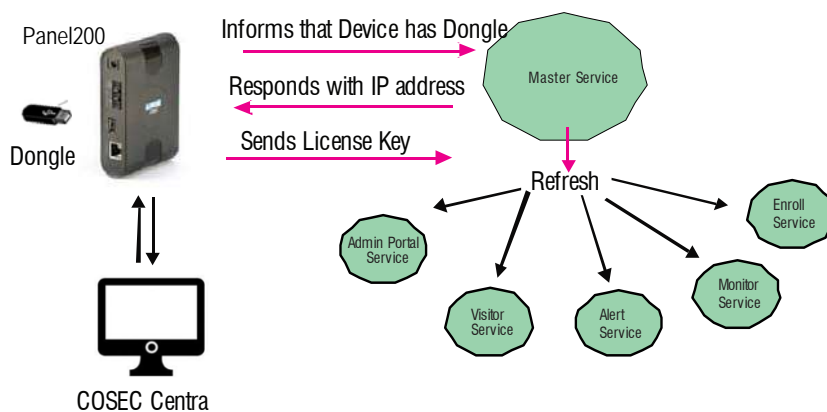

In Device Based licensing VEGA, ARGO, ARGO FACE Direct Doors or Panel200 can be used. Also make sure the Tenant/ Company is configured with License Verification Mode as Device Based.

Make sure the License Dongle is connected to the desired device. The **MAC Address** of this device will be displayed in Admin Management Portal > Company Configuration > **Profile**.

The Dongle only has the Generic Key, you need to purchase other licenses as per your requirement and update the new license key. For details, refer to Admin Management Portal > Company Configuration > **License and Services** and in the Admin Management Portal User Guide, Appendix > **Supported Licenses**.

Now,

- The device (in this case Panel200) sends information to the Master Service that device has the License Dongle.
- The Master Service responds to the device by sending the IP Address of Master service.
- Now device sends License Key to the Master Service. The Master Service gets the License Key and gives the same to the other services.

When Dongle is removed from the device, then immediate information is sent to the Master Service and immediate refresh is sent to other services.

When device goes offline, then Master Service will continue working for a considerable time after which the Master Service and other services will be refreshed.

Any change or updation in License Key will be fetched by the device when it is online. The updated License Key will then be sent to the Master Service and hence other services.

*In the Server Settings of Panel200;*

- enter the URL for COSEC CENTRA Server as the IP Address of the computer where Monitor Service is running.
- enter the License Server URL as the IP Address of the computer where Master Service is running.

## Virtual License

With the introduction of Virtual License, the need of a Dongle is eliminated, but you need to make sure you have:

- Persistent Internet connection with good speed.
- Received the MATRIX VIRTUAL DONGLE300 Key in PDF form.
- Received the COSEC CENTRA PLATFORM Key in PDF form.
- Received the desired module activation License Keys.

The licenses need to be purchased as per your requirement. For details, refer to **Supported Licenses** in the Admin Management Portal User Guide

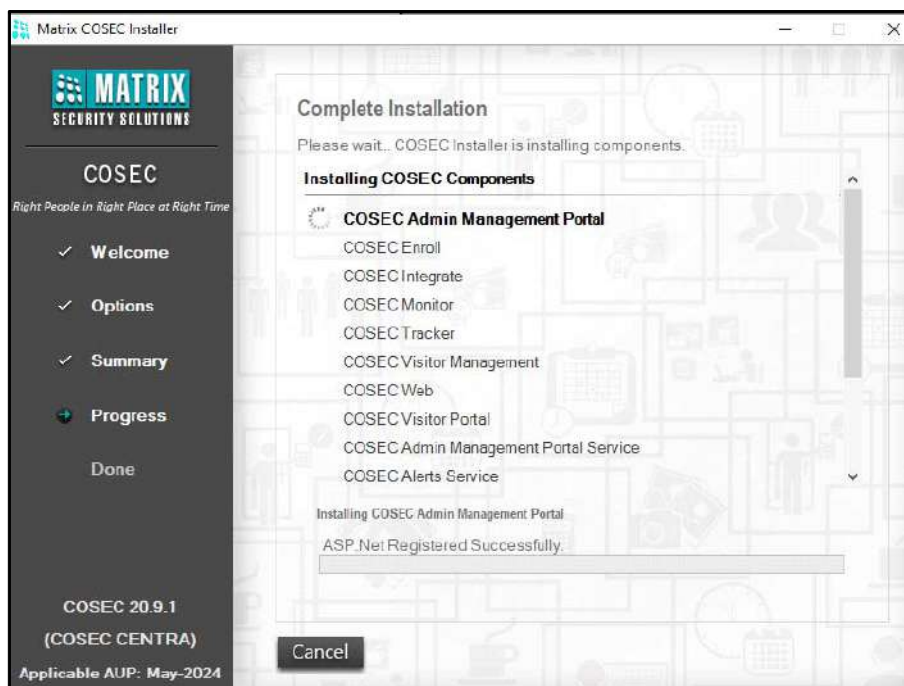

Once the keys are received you need to Register/Update the same. For details, refer to **License and Services** in the Admin Management Portal User Guide.

The registration request is sent to the Virtual License Manager. The Virtual License Manager checks for the authenticity of the key as well as it communicates with the Matrix License Manager. Thereafter the request is served.

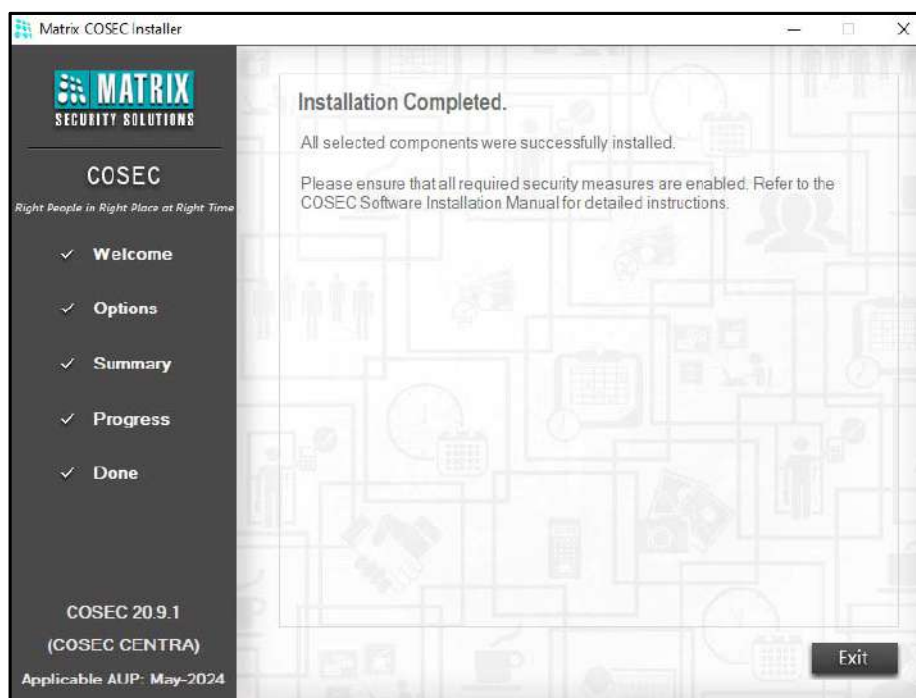

Once the License Verification Mode is selected and test connection is successful, click **Next** to proceed with the installation.

*If you have opted for Virtual License and you are upgrading the system to V20R09 and then if you downgrade the system to any version below V20R09, this will hamper the functioning of the Virtual License and eventually it will stop working (that is, COSEC will be non-functional). To resume the functionality, you will have to contact the Matrix Support Team.*

Once the Installation is complete the following screen appears.

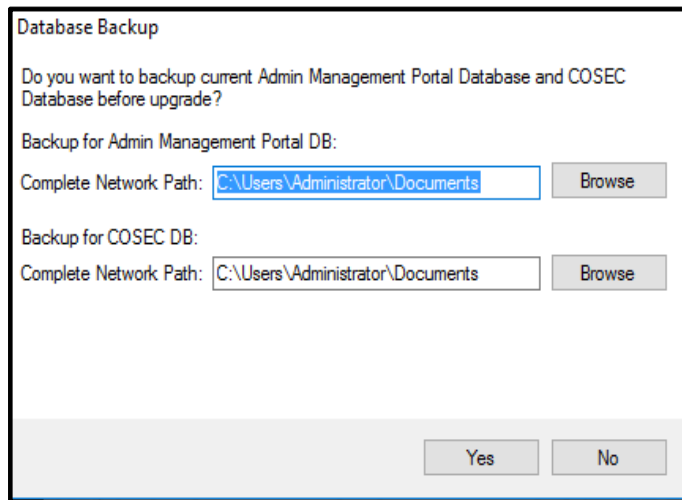

We recommend you to enable certain Security Settings after the Installation is done. To do so, make sure you download and run the Security Configuration Utility.

To download, click [https://drive.google.com/drive/folders/1JsMUCn5mCAS78mOthlrAEi0\\_1R\\_AuXDu](https://drive.google.com/drive/folders/1JsMUCn5mCAS78mOthlrAEi0_1R_AuXDu)

After the Installation is successful, the **Database Backup** pop-up appears.

- You can take the backup of the Admin Portal Database as well as COSEC Database.

- By default, the **Complete Network Path** is set as C:\Users\Administrator\Documents. You can also change this path as per your requirement. To do so,

- Click **Browse** and select the desired path where backup is to be taken.

In case the Backup fails at the time of installation then its log entry will be visible in its backup log file which would be created at the same location as backup.

After taking the backup, the following services will start automatically.

- COSEC Master Service
- COSEC Admin Management Portal Service
- COSEC Alert Service
- COSEC Enroll Service
- COSEC Monitor Service
- COSEC Identification Service
- COSEC VMS Service

Once all the services are running, they appear in the tray.

The Master Service will only function when it gets the relevant license information. Hence, if you have opted for Dongle - Server Based or Device Based, make sure the Dongle is connected and if you have opted for Virtual License, you need to register the license key.

For more details related to License updation or registration of Server Based license or Device Based license or Virtual License, refer to the Admin Management Portal User Guide.

Now you can login into the Admin Portal and COSEC Web.

For more information regarding the above services refer, **COSEC Services User Manual**.

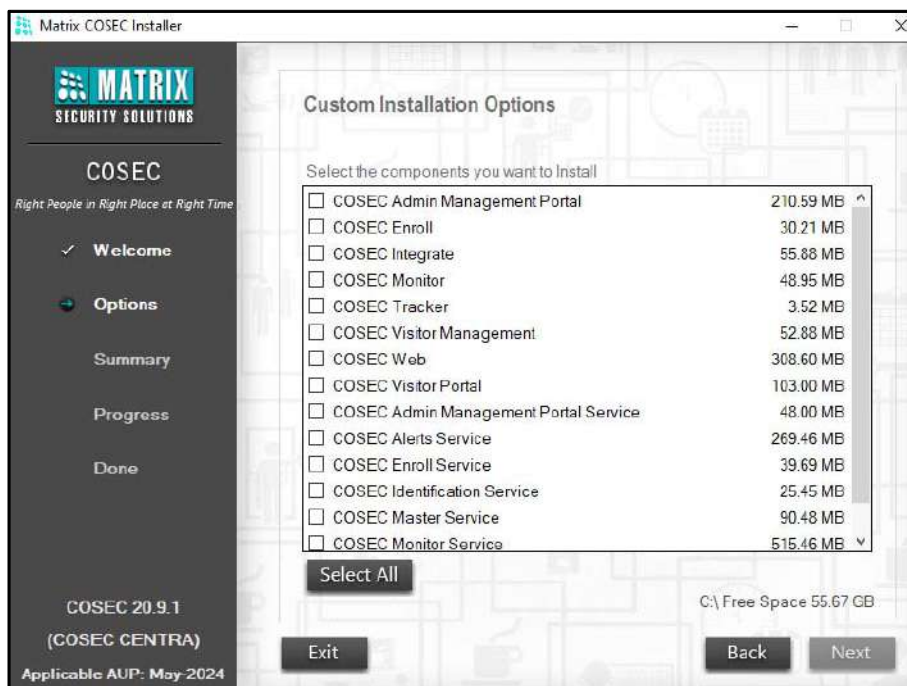

## Custom Installation

The **Custom Installation** option will install the selected COSEC components. Click on **Custom** option.

Make sure you install the following services for basic usage of COSEC Application —COSEC Admin Management Portal, COSEC Web, COSEC Admin Management Portal Service and COSEC Master Service. You can install other components as per your requirement.

- Select check boxes of the desired components from the list that you wish to install.

- Click **Next** to proceed. The remaining steps of installation are similar to **Complete Installation**. For details, refer to "[Complete Installation](#)".

We recommend you to enable certain Security Settings after the Installation is done. To do so, make sure you download and run the Security Configuration Utility.

To download, click [https://drive.google.com/drive/folders/1JsMUCn5mCAS78mOthlrAEi0\\_1R\\_AuXDu](https://drive.google.com/drive/folders/1JsMUCn5mCAS78mOthlrAEi0_1R_AuXDu)

## Login to Admin Portal

To access the Admin Management Portal, type the following link in your browser.

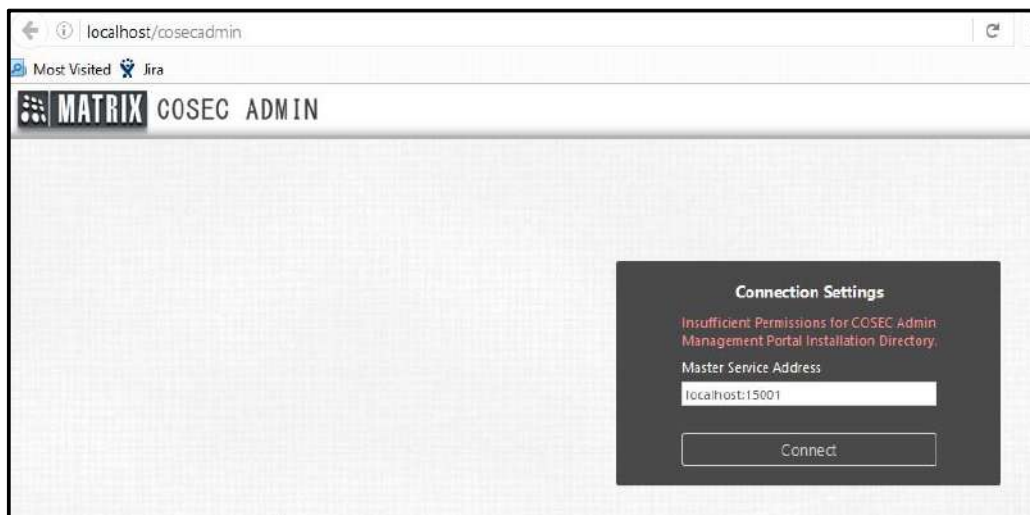

**http://localhost/cosecadmin**

OR click on

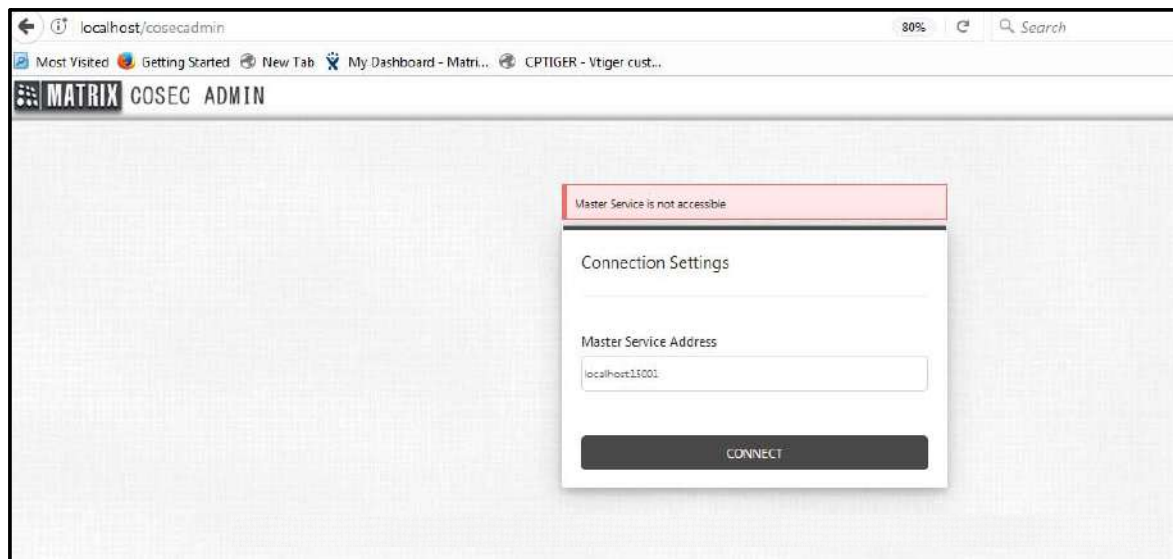

*The COSECADMIN folder in inetpub must have administrator rights to access the Admin Portal.*

Check the rights on COSECADMIN folder. For this go to path C:\inetpub\wwwroot. The IIS user must be given full control rights. So click Edit and enable Full control checkbox. Then apply the changes. Now you can login to Admin Portal.

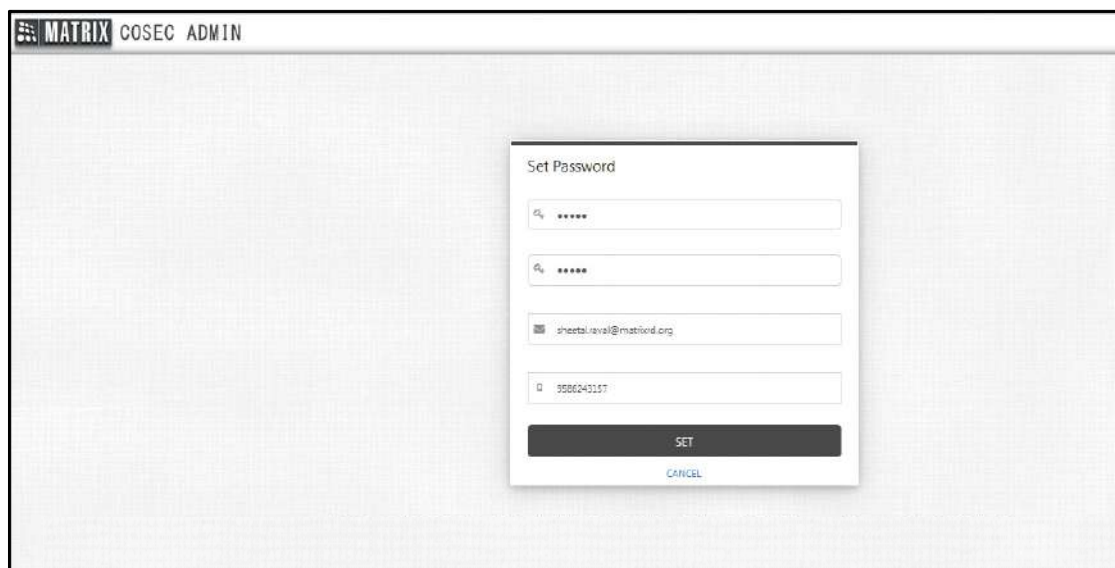

The Connection Settings page will appear as shown below:

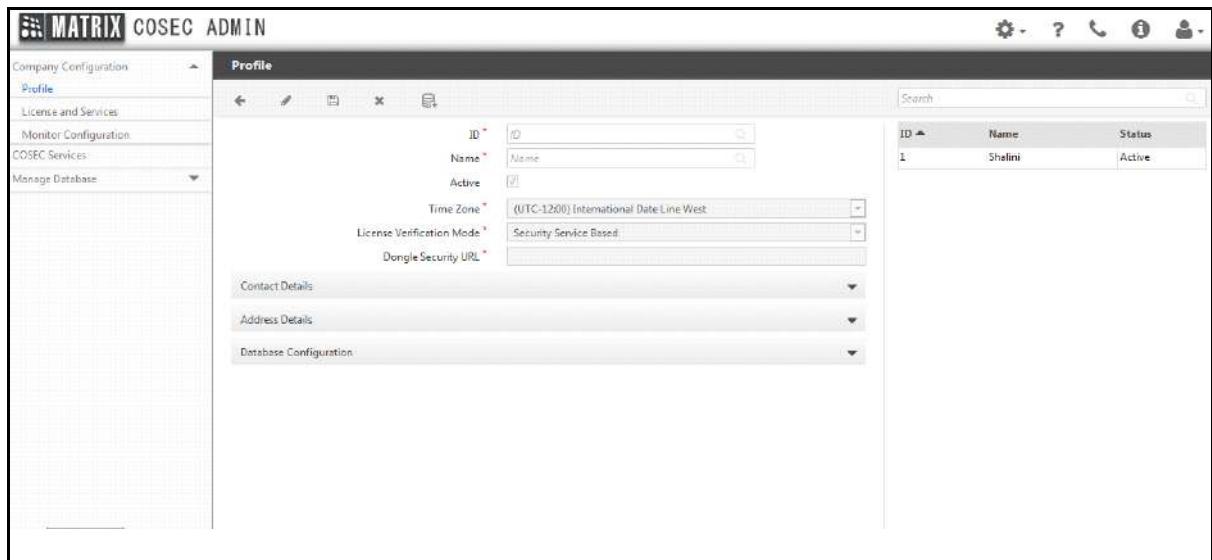

Enter the **Master Service Address** to connect with the database and click **Connect**. The Admin Portal will get connected with its database through the Master service. Ensure that Master service is running.

Then login with default login ID “sa” and set the desired password.

The Admin Portal page will open as shown below.

For detailed information regarding Admin Portal read **Admin Mgt Portal User Guide** from the setup.

## Login to COSEC Web

Now you can login to the COSEC Web using the Web URL say **192.168.104.12/cosec** or **localhost/cosec** in your browser. For login process "[COSEC Web](#)"

For detailed information regarding COSEC Web read **COSEC User Guide** from the setup.

## Launching the COSEC Application

There are three components to start COSEC application.

- **COSEC Master Service**, refer to “[Master Service Connection](#)”.
- **Admin Portal Web Server application** refer to “[Admin Management Portal](#)”.
- **COSEC Web server application** refer to “[COSEC Web](#)”.

### Master Service Connection

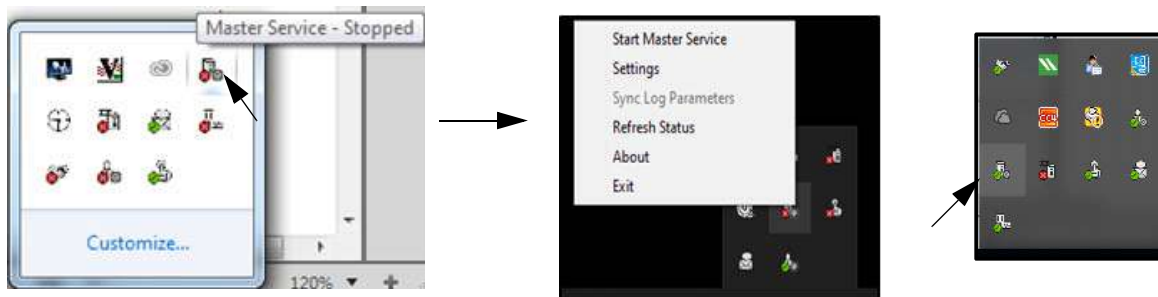

For Tenant Portal connection with Master Service, you must enter the Master Service URL in web configuration file at path **C: > inetpub > wwwroot > COSECADMIN>Web**

```
</system.web>
<appSettings>
<add key="MasterUrl" value="://localhost:15001/MasterService/" />
  <add key="HttpEnable" value="false" />
  <add key="IsSSL" value="false" />
  <add key="webpages:Version" value="3.0.0.0" />
  <add key="webpages:Enabled" value="false" />
  <add key="ClientValidationEnabled" value="true" />
  <add key="UnobtrusiveJavaScriptEnabled" value="true" />
  <add key="DomainName" value=".matrixvyom.com" />
  <add key="WebVirtualDir" value="Vyom" />
  <add key="Identity" value="" />
  <add key="IsInternal" value="true"/>
</appSettings>
```

For COSEC Web connection with Master Service, you must enter the Master Service URL in web configuration file at path **C: > inetpub > wwwroot > COSEC > Web**

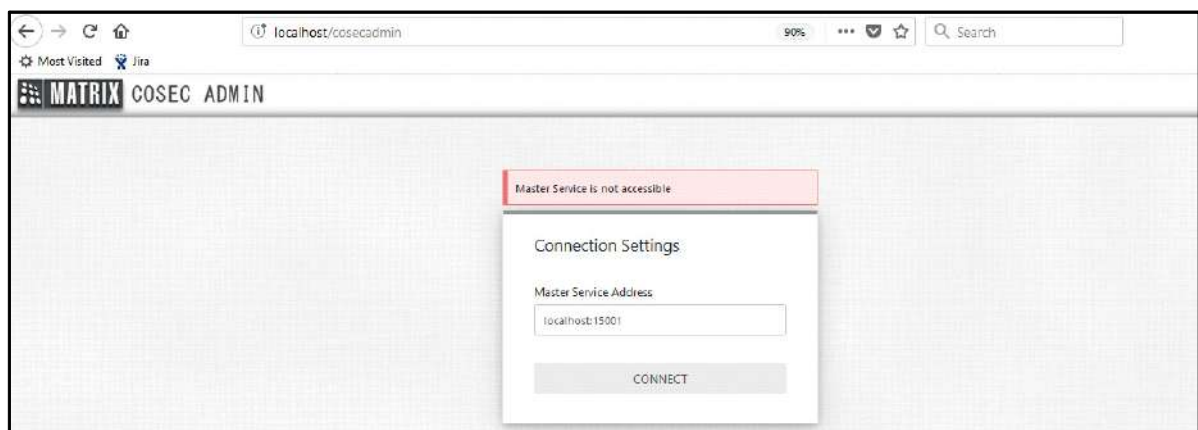

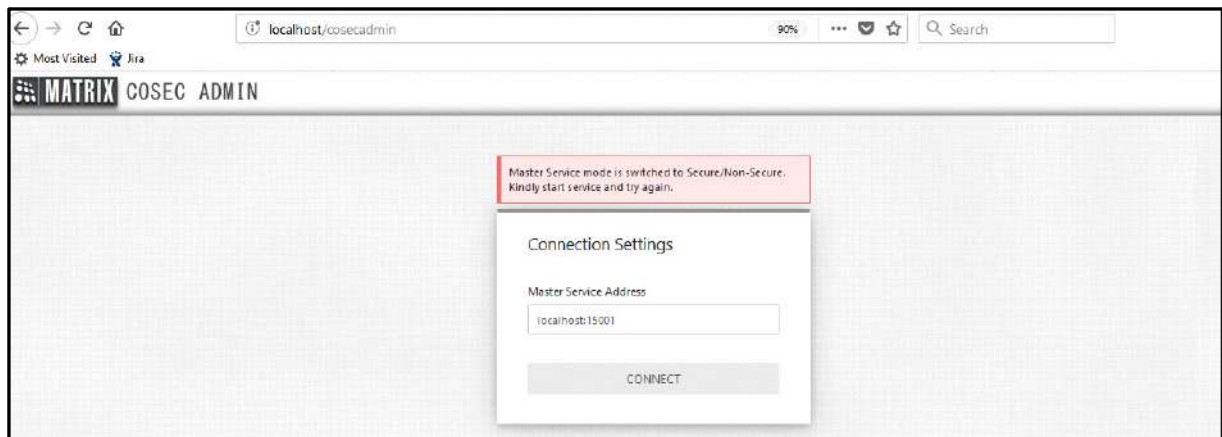

```
<appSettings>
  <add key="CrystalImageCleaner-AutoStart" value="true"/>
  <add key="CrystalImageCleaner-Sleep" value="60000"/>
  <add key="CrystalImageCleaner-Age" value="120000"/>
  <add key="ClientURL" value="www.sheelal.matrixvyom.com" />
  <add key="MasterUrl" value="://192.168.104.12:15001/MasterService/" />
  <add key="HttpEnable" value="false" />
  <add key="IsSSL" value="false" />
  <add key="baseUrl" value="http://192.168.104.12/cosec/" />
  <add key="isCloudApp" value="true" />
  <add key="Identity" value="" />
</appSettings>
```

The Master Service can be started from the Master Service icon from the system tray as shown below.

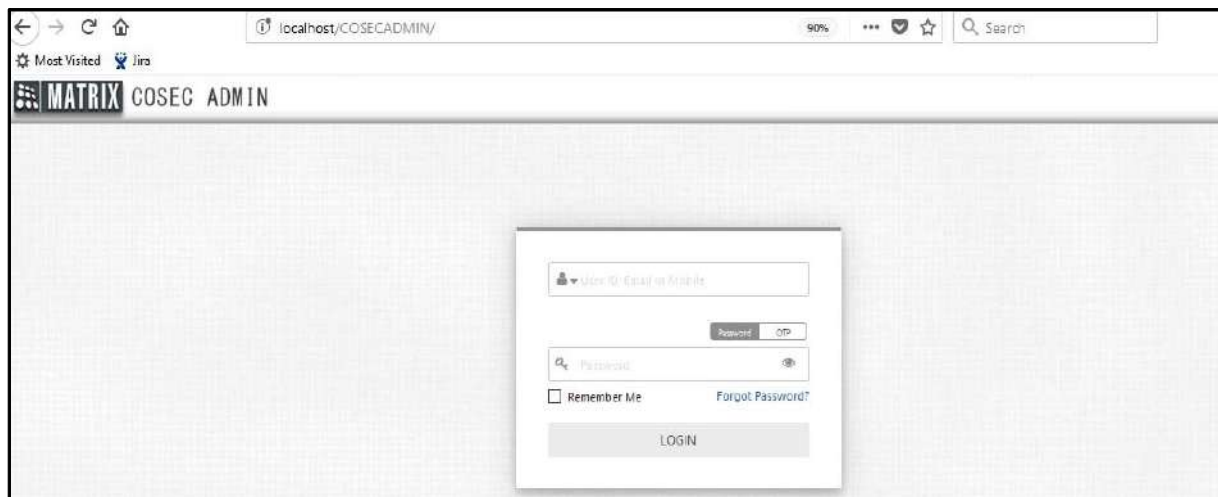

## Admin Management Portal

Now login to the Tenant Admin Portal with URL **localhost/cosecadmin** or say 192.168.104.12/cosecadmin Or click

**Connection Settings:** Enter the Master Service URL to connect Tenant Admin Portal. Ensure that Master Service is running. Then click Connect button.

The Admin Portal login page appears as shown below:

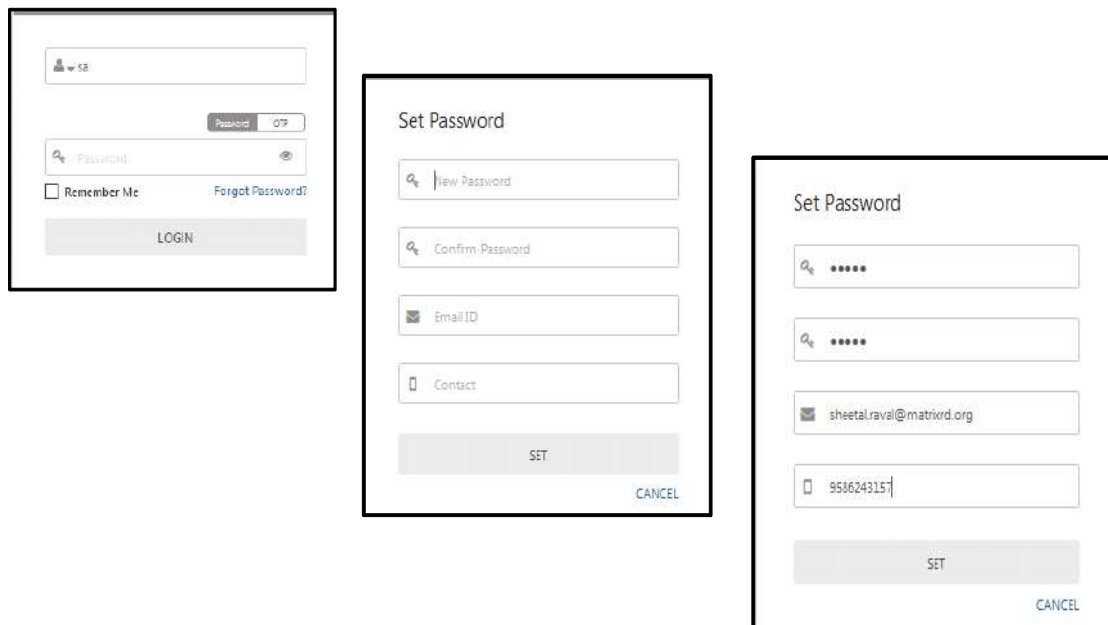

When you are accessing Admin Portal for the first time; then enter the login ID as “sa”. Click Login and set the password for “sa” from the **Set Password** screen.

*For the first login, the Password Policy will be applicable with the default values of the parameters. For details, refer to Password Policy in Admin Management Portal User Guide.*

Enter the **Email ID** and **Contact** number through which you can retrieve your account when you forget your password. Also the OTP can be received on this Email ID and Contact number. Click **Set** to save the details.

Then Enter the **Login ID** and **Password/OTP** to login into Admin Portal. You can use Login ID as **User ID/Mobile Number/Email ID**. The login process is similar to that described in “[COSEC Web](#)” section. The detailed description for login into Admin Portal is given in Admin Management Portal User Guide.

The Admin Portal Profile page appears and the tenant would be created with name as entered in Company details.

ID	Name	Status
1	sheetal	Active

## COSEC Web

Now you can login to the COSEC Web using the Web URL **localhost/cosec** or say **192.168.104.12/cosec** in your browser.

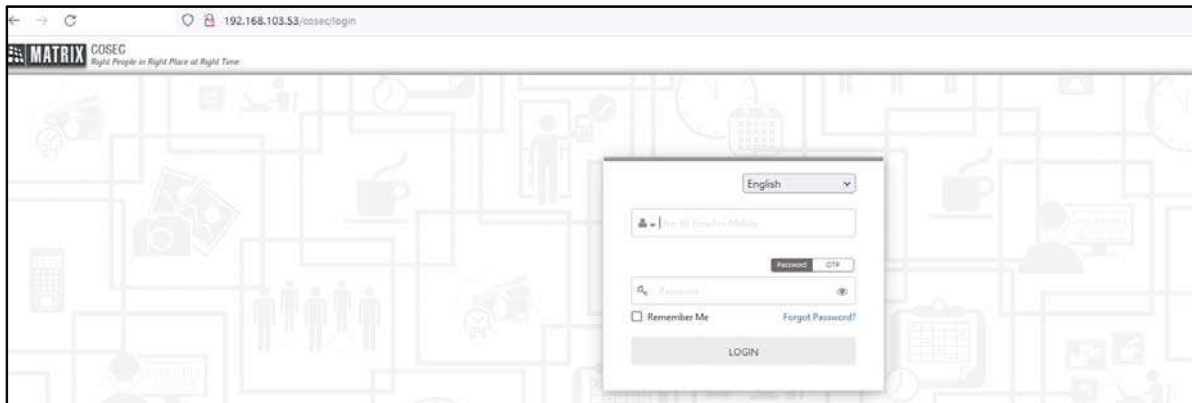

*If Server Based/ Device Based is selected as the License Verification Mode, make sure the Dongle is connected to the USB port of the Application Server or the desired Device and the Database has been upgraded from the Admin Portal, prior to the launching of the COSEC application.*

*If Virtual License is selected as the License Verification Mode, make sure that the license has been registered and the Database has been upgraded from the Admin Portal, prior to the launching of the COSEC application.*

*For details, refer to the Admin Management Portal User Guide.*

The login page appears.

You can select the desired language in which you wish to view the login page. To do so,

- Select the desired language from the dropdown list. The default language is English.

*Language selection on login page is applicable for COSEC CENTRA and OEM only.*

*The options for languages appear as per the language files available in the **Language Resource** folder at the following path: **C:\inetpub\wwwroot\COSEC\Language Resource**.*

*You can add language files to this folder via Language translation using the Multi-Language Utility. To know more, refer to the Multi- Language Utility User Guide.*

*The language set from **Global Language For Login** will be applicable to the login page. For details, refer to **Global Language For Login** in [“Basic Policy”](#). If you wish to view the pages in another language post login, click **Account Settings > Set Language> Preferred Language**. For details, refer to [“Account Setting”](#).*

- The login page will appear in the selected language for the current session.

*Select **Remember Me** checkbox to view the login page in the selected language for subsequent sessions.*

You can login with the default User Names **sa** in the Login ID field.

The **se** and **so** login are inactive by default. You can activate these login account from System Accounts page once you have logged in using **sa** login.

**sa-** System Administrator having unlimited access rights

**se-** System Engineer has access rights limited to access control and back up related pages

**so-** System Operator has the minimum access rights

When any of the system account user logs in for the first time, they need to enter just the Login ID and directly click on Login. The password setting page will appear from where password can be set.

For the first login, the Password Policy will be applicable with the default values of the parameters. For details, refer to [“Password Policy”](#).

Set the **New Password** for System Admin from the login page. You can enter the **security question** and its answer to retrieve the login account in future.

Click **Set**. Then enter the **Login ID** as **User ID/Mobile Number/Email ID** to login into COSEC using the newly created password. You can login using OTP once Alert configurations are done.

The valid characters for Login ID are **"A-Z a-z 0-9 @ \_ \ : . / + -"**

By default the Login Policy will be enabled for **Password or OTP**. So user can login using password or OTP. To enable 2 step verification; the option in login policy must be selected as **Password Then OTP**.

If you configure the Login policy as **Password or OTP** or **Password Then OTP**, make sure that you have linked an ESS user for the **SA** account. Refer **Admin Module > System Accounts > Optional > Linked ESS User**. For more details, refer **Linked ESS User** in [“Optional”](#).

Refer **Maximum OTP Generation Attempts** in [“Password Policy”](#) for generation of OTP.

You can view the password characters by clicking on **View Password**  button.

You can select **Remember Me** checkbox which will remember the password as well the selected language during future login sessions.

You can click on **Forgot password** if you have forgotten your login password which will enable to get new password. For details, refer to [“Forgot Password”](#).

You must ensure that the Login ID being used has the respective correct icon. For details, refer to [“Icon of Login ID”](#).

## Password or OTP

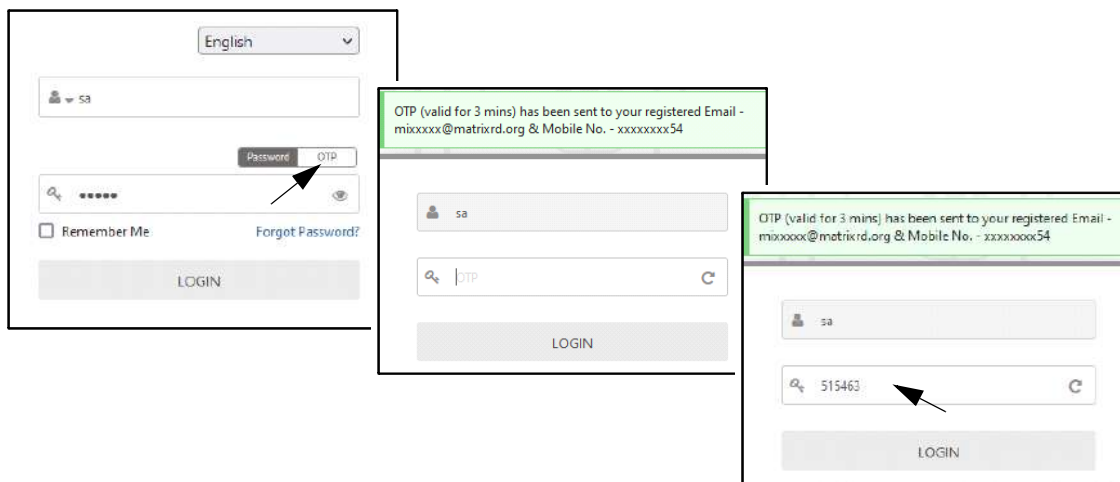

In this authentication mode, you can enter either Password of login ID or OTP for accessing the COSEC Web.

### User ID with Password or OTP

Enter the **User ID** of login user. Then enter the password and click **Login** button to login into COSEC Web.

You can also login using OTP by clicking OTP button once Email/SMS configuration and OTP alert is configured. The OTP is sent to the contact details (Email ID and Mobile number as available in User Configuration) of login user. Enter the OTP and click **Login** button to login into COSEC Web.

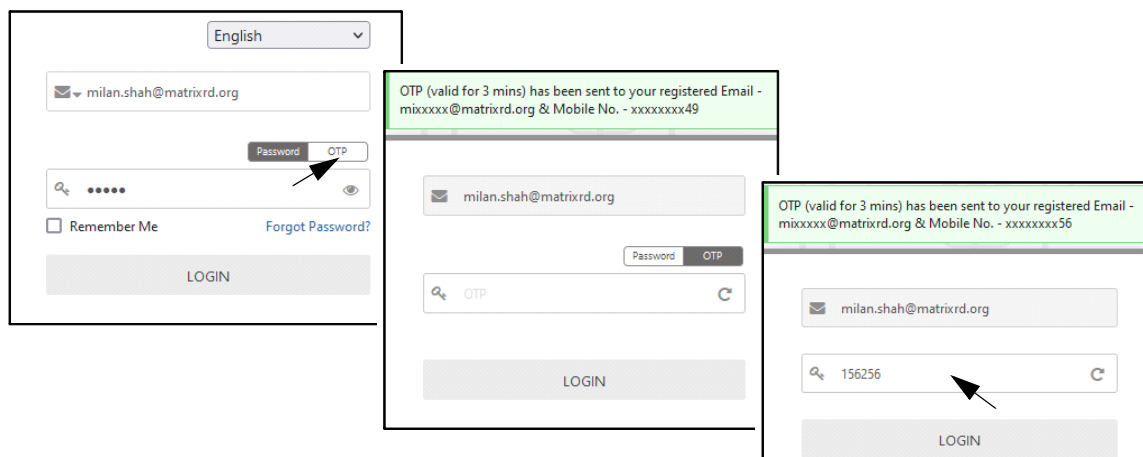

You can click on Resend OTP  button if OTP is to be sent again.

*User entering Active Directory ID cannot login with OTP. They can log in with Password only.*

### Email ID with Password or OTP

Similar to User ID, you can login with your **Email ID**. Then enter the login password or OTP which is sent to the registered contact details. Then click Login to login into COSEC Web.

The login icon will be automatically changed when Email ID is entered.

The Email ID/Mobile No. must be available in the contact details of the System Account/ESS/CSS user.

For system account user; Email ID/Mobile No. of linked ESS user is considered. For eg: System Account user SA is linked to user Aditi having Email ID- aditi.gupta@matrixrd.org and Mobile number- 9667624826 So the user Aditi can login into COSEC using Email ID/Mobile number along with Password or OTP.

**Using Password:** Click on Password button. Enter the password in the field and click login.

**Using OTP:** Click on OTP button. The one time password will be sent to the registered Email ID/Mobile number.

Enter that OTP in the field and click login. You can click on **Resend OTP** button  to send the OTP again.

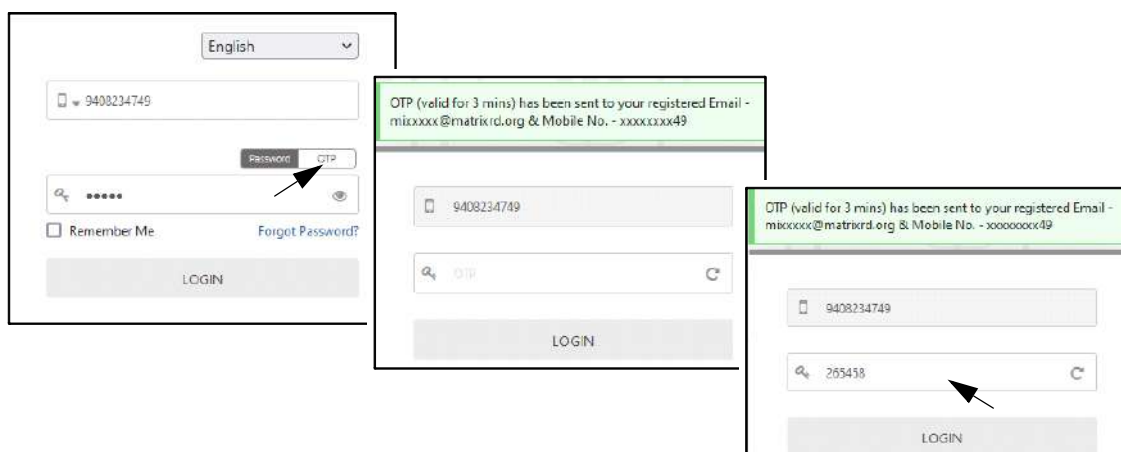

For sending OTP, **OTP Generated** Alert must be configured from Admin> System Configuration> Alert Message Configuration. For details, refer to ["Configuring Alert Messages"](#). Also Email/SMS Configuration must be done from Admin > System Configuration.

### **Mobile Number with Password or OTP**

You can also login into COSEC using Mobile number similar to login using Email ID as described above.

Enter the **Mobile number** of login user. Enter the Password or click OTP to get OTP number. Then enter OTP and click Login.

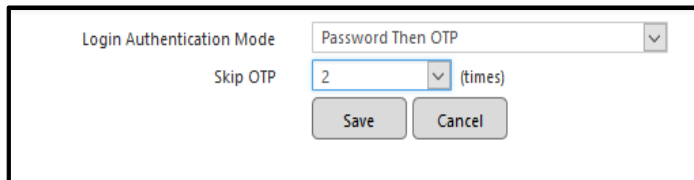

You can click on **Resend OTP** button  to send the OTP again.

## Password Then OTP

If Login Authentication in Global Policy is set as Password Then OTP; then 2 step verification is enabled for login into COSEC. After entering the User ID/Mobile number/Email ID; you will have to enter the password and then OTP.

In case when you cannot enter the OTP in “Password Then OTP”; you can click on **SKIP OTP** which will skip the 2nd step of verification. The SKIP OTP can be done for the number of times defined in Global Policy.

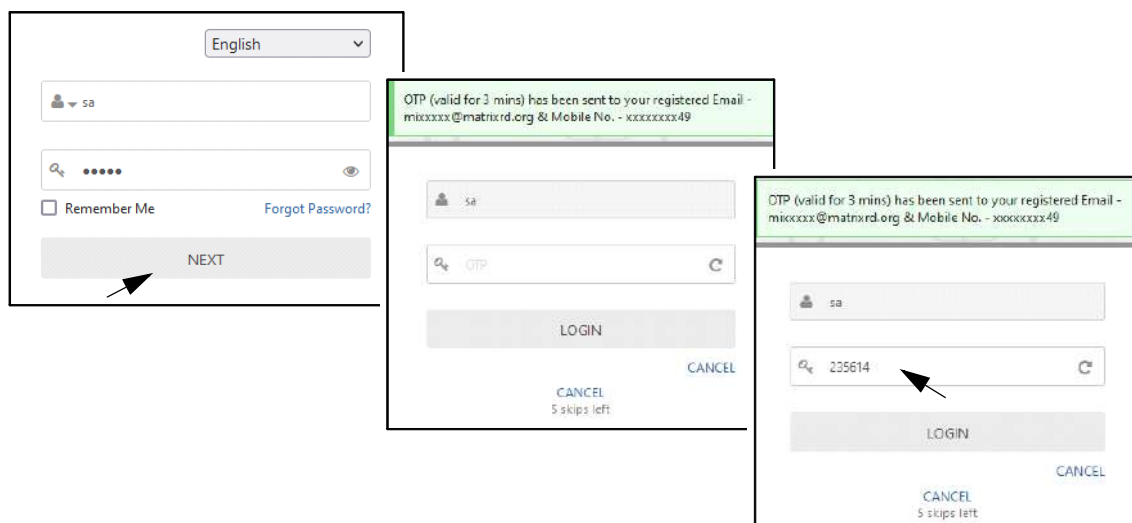

The screenshot shows a configuration window for 'Login Authentication Mode'. It is set to 'Password Then OTP'. Below this, there is a 'Skip OTP' section with a dropdown menu showing the number '2' and the text '(times)'. At the bottom of the window are two buttons: 'Save' and 'Cancel'.

Eg: If Skip OTP is set as 2, the user can click on SKIP OTP for 2 times. When later if SKIP OTP in Global policy is changed to 5; then for 3 more times user can use SKIP OTP.

### User ID with Password Then OTP

Enter the User ID of login user. Then enter the password and click **Next** button.

Now you will have to enter the OTP which is sent to the contact details of login user. After entering OTP click **Login** button to login into COSEC. If you click **Cancel** button; then it will go to the password page. You can also skip entering OTP by clicking on **SKIP OTP** link. This will directly login to COSEC Web without requiring OTP.

The first screenshot shows the initial login screen with a language dropdown set to 'English'. It has input fields for a user ID (containing 'sa') and a password (masked with dots). There is a 'Remember Me' checkbox and a 'Forgot Password?' link. A 'NEXT' button is at the bottom, with an arrow pointing to it.

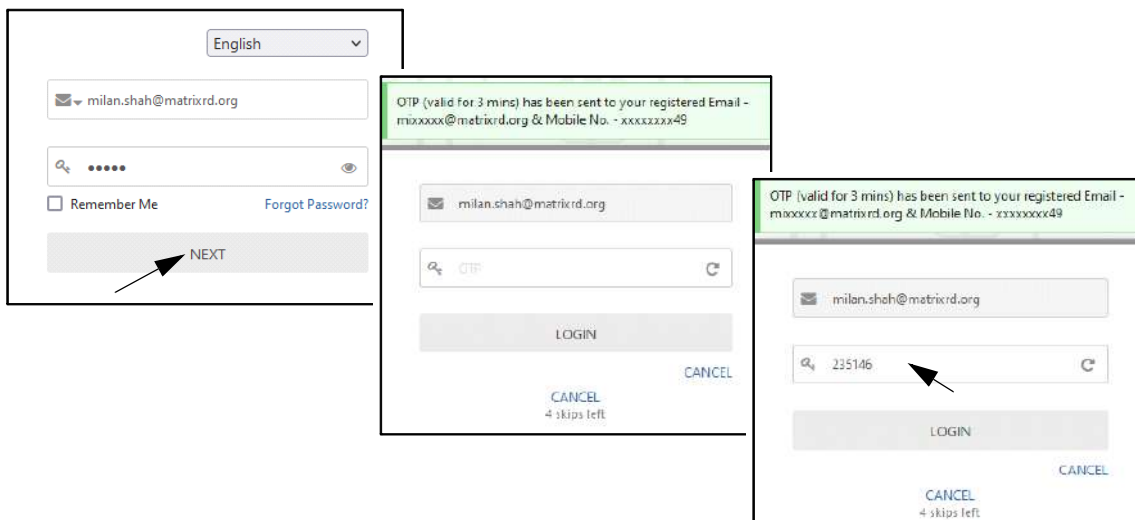

The second screenshot shows a green notification banner at the top stating: 'OTP (valid for 3 mins) has been sent to your registered Email - mxxxxx@matrixrd.org & Mobile No. - xxxxxxxx49'. Below the banner, the user ID field still contains 'sa', and a new 'OTP' field is present. There are 'LOGIN' and 'CANCEL' buttons at the bottom. The 'CANCEL' button is labeled '5 skips left'.

The third screenshot shows the OTP field now containing the value '225614'. An arrow points to this field. The 'LOGIN' and 'CANCEL' buttons are still at the bottom, with 'CANCEL' labeled '5 skips left'.

### Email ID with Password Then OTP

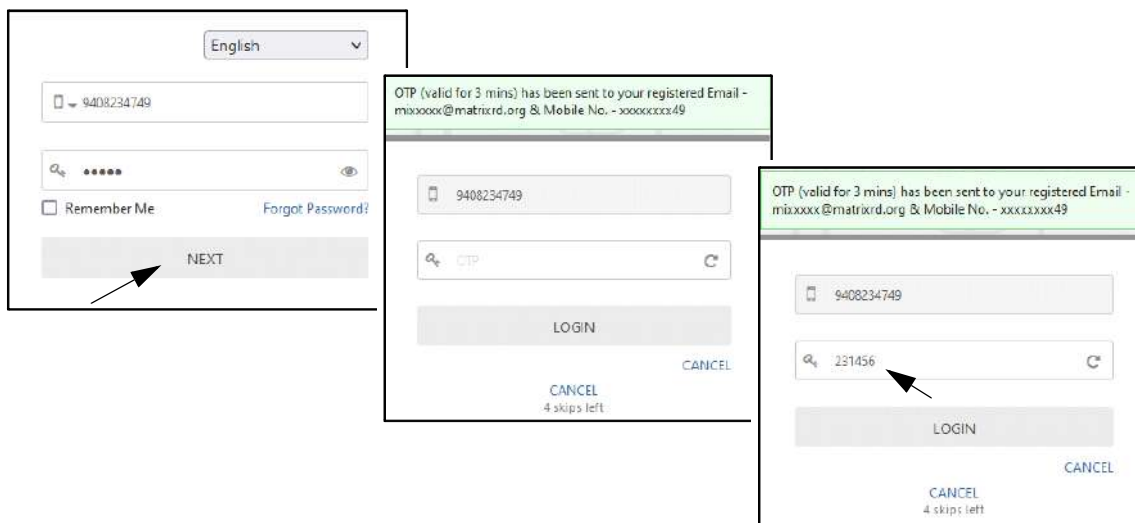

Enter the **Email ID** of login user. Then enter the Password and click **Next** button.

The OTP will be sent to the registered contact details. Then enter the OTP and click Login button to login to COSEC.

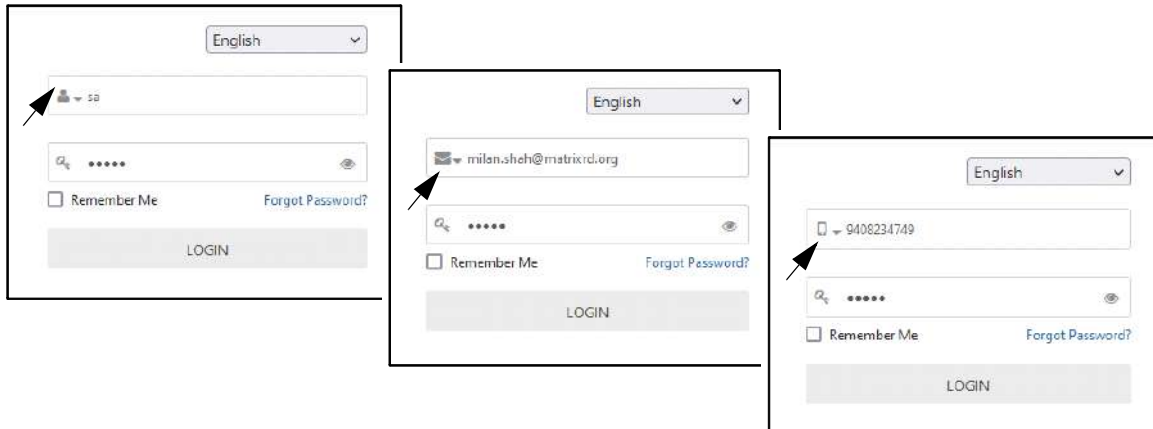

### Mobile Number with Password Then OTP

Enter the **Mobile number** of login user. Then enter the Password and click **Next** button. The OTP will be sent to the registered Mobile Number/ Email ID. Then enter the OTP and click **Login** button to login to COSEC.

### Password

You can select Login Authentication mode as "Password". This will require login ID with only password. Enter the login ID as User ID/ Email ID/ Mobile Number and the password. Then click Login to login into COSEC Web.

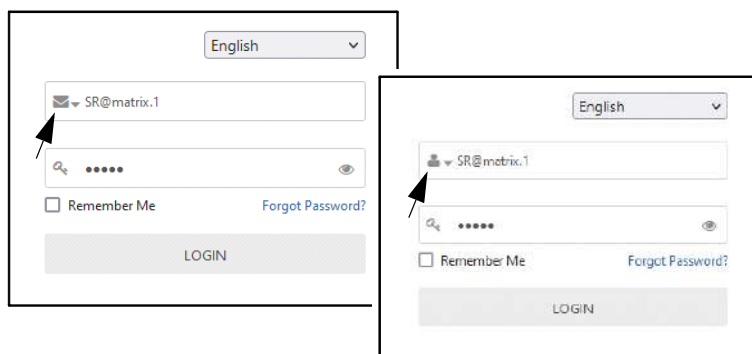

### Icon of Login ID

Suppose you are logging into COSEC with your User ID  which is similar to Email ID  configuration.

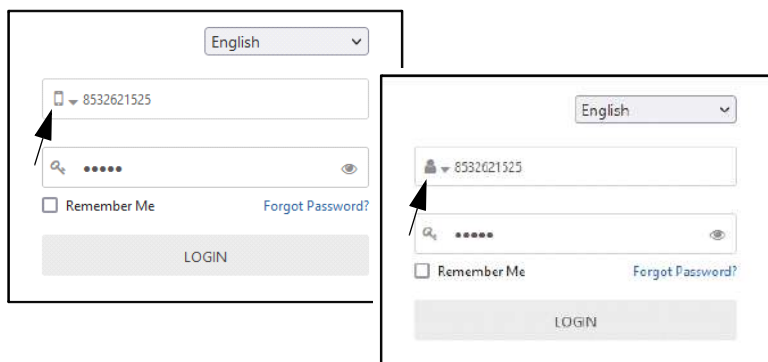

eg: SR@matrix.1.

So the icon will automatically change to Email ID and it will try to login using Email ID. As there is no such Email ID; you will not be able to login. Hence you should manually click on the icon to change from Email ID to User ID.

Suppose you are logging into COSEC with your User ID  which is of 10 characters eg: 8532621525 so as

there are 10 numeric characters; the icon will automatically change to Mobile Number  and it will try to login using Mobile number. As there is no such mobile number; you will not be able to login. Hence you should manually click on the icon to change from Mobile to User ID.

If the entered Mobile number/ Email ID is found for more than one user; then you will get the error "Unable to Identify the user. Please enter different Login ID". So Ensure that your Mobile Number/Email ID are entered correctly.

## Link ESS User

For authentication mode equal to "Password Then OTP"; linked ESS user is mandatory. But when ESS user is not linked to System account user and system account user is trying to access COSEC then he will have to link the ESS user along with the contact details.

Enter the login ID and password. Click **Next** button.

If ESS user is not linked, then **Link ESS ID** page will appear. Enter the **ESS User ID** who is to be linked. Then click on arrow; the name of the user will appear. Then click Next. The Contact details page will appear.

If ESS user is linked but contact details are not available, then directly Contact details page will appear where Email ID and Mobile number can be entered.

Enter the **Email ID** or **Mobile number** of the ESS user which will be stored as Official Email ID and Official Mobile number respectively. Then click **Get OTP**. The OTP will be sent to the registered contact details. Noe Enter that OTP and click **Login** button to login into COSEC Web.

## Forgot Password

Click on the Forgot password link from the login page to get a new password for your login ID. The password reset will be allowed if contact details of user, OTP generation alert, SMS Configuration, Email Configuration are available in the system.

The login screen features a language dropdown set to 'English', a username field with 'sa' entered, and tabs for 'Password' and 'OTP'. Below these is a password field with a toggle icon, a 'Remember Me' checkbox, and a 'Forgot Password?' link. A 'LOGIN' button is at the bottom. An arrow points to the 'Forgot Password?' link.

For “sa” login you can select Send OTP or Security Question. The **Send OTP** option will send an OTP to the registered contact detail. By entering this OTP you can set a new password.

### **Send OTP**

The flowchart illustrates the 'Send OTP' process in three steps:

- Forgot Password:** A screen with two radio buttons: 'Send OTP' (selected) and 'Security Question'. A 'SEND' button and a 'CANCEL' link are at the bottom.
- Enter 6-digit OTP:** A screen with a text input field containing '880616', a refresh icon, a 'VERIFY' button, and a 'CANCEL' link.
- Set Password:** A screen with two text input fields: 'New Password' and 'Confirm Password'. A 'SET' button and a 'CANCEL' link are at the bottom.

You can select **Security Question** which will ask you the question as entered during the first login. By entering the answer of the security question, you can set a new password.

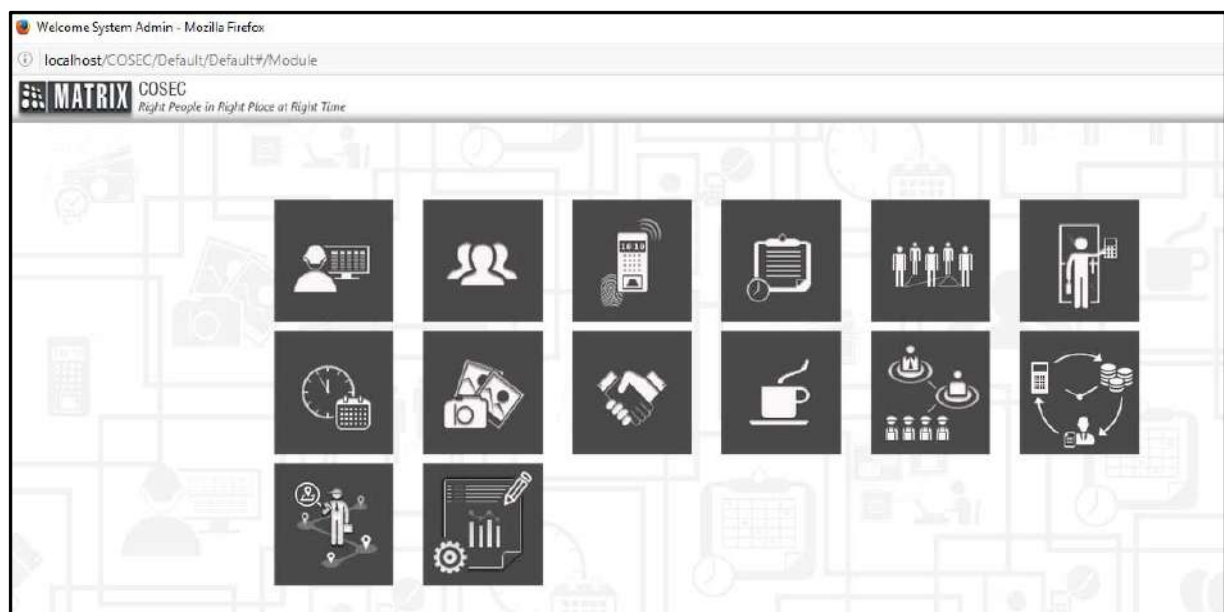

## Security Question

The first screenshot, titled 'Forgot Password', shows two radio buttons: 'Send OTP' and 'Security Question'. The 'Security Question' option is selected. A 'NEXT' button is at the bottom. The second screenshot, titled 'Security Question', asks 'fav actor?' with a text input field containing 'A. Hrithik'. It has 'NEXT' and 'CANCEL' buttons. The third screenshot, titled 'Set Password', has two password input fields labeled 'New Password' and 'Confirm Password', followed by 'SET' and 'CANCEL' buttons.

For system account users other than “sa” or ESS/ CSS users, when Forgot password link is clicked then Forgot Password screen will appear as shown below. Clicking on **Send** will send an OTP to the registered contact detail. By entering this OTP you can set a new password.

The first screenshot shows a login form with fields for 'SE' (username) and 'Password' (password). There is a 'Remember Me' checkbox and a 'Forgot Password?' link. A mouse cursor points to the 'Forgot Password?' link. The second screenshot, titled 'Forgot Password', states 'A 6-digit OTP will be sent to your registered Email Id.' and features a 'SEND' button and a 'CANCEL' link.

Now Login with UserID/Email ID/Mobile number with Password/OTP. Then click **Login** button. The home page of COSEC will open as shown below.

The home page displays of the list of modules which are available as per the license. The user can now select the appropriate module and configure the parameters as per the site requirements.

Now user can start the online **COSEC Monitor** and Control application. The COSEC Monitor Utility connects with the Panel lite and Doors on the TCP port. This enables the COSEC application to connect to the COSEC controllers and upload and download configuration changes.

COSEC Monitor Service must be running to add devices to COSEC Web application. For more information on COSEC Monitor, ["Starting Monitor Service & Utility"](#)

# Starting Monitor Service & Utility

---

The COSEC Monitor application consists of two components:

- Monitor Service
- Monitor Utility

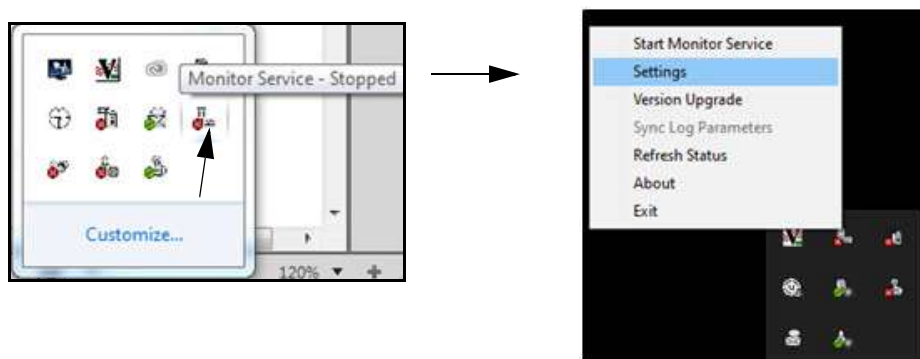

## Monitor Service

For COSEC Centra, Monitor Service has to be started for using the Monitor Utility. For COSEC VYOM, Monitor Service will be running at Cloud so user can access the Monitor Utility directly.

The **Monitor Service** connects with the configured COSEC devices. This service starts up each time the computer is restarted.

After the Installation of COSEC Centra (Premise based setup), you can start the COSEC Monitor Service by browsing the folder from *C:\Program Files (x86)\Matrix\COSEC Monitor Service*.

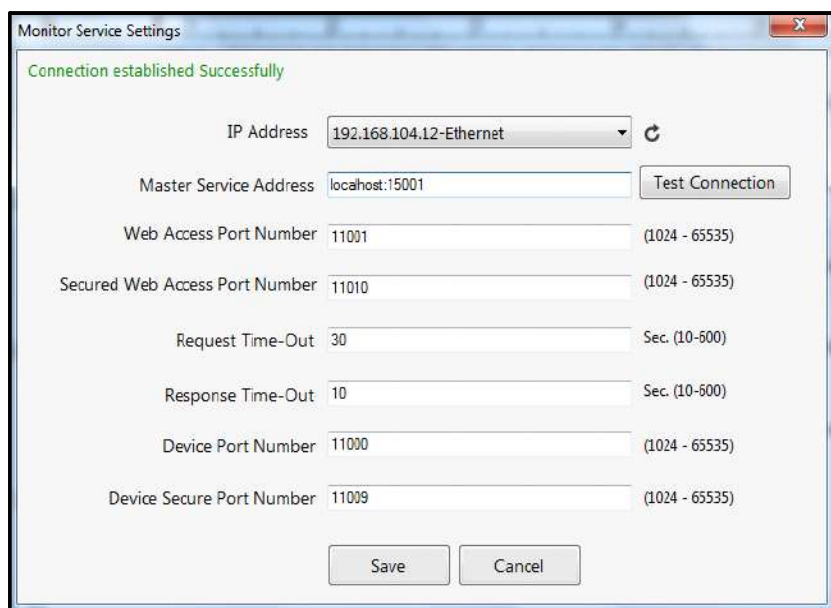

When the Monitor Service is started, an icon will be visible in the system tray as shown below. Then Right click on icon to configure the settings and start the service.

On the **Monitor Service Settings** window select the **IP Address** of the PC where Monitor service is to be started. Enter the **Master Service Address** as the URL of the system where Master service is running.

1. Refer Monitor Service in Service User Guide for details.
2. Monitor Service will be active and running only if Master service is running.

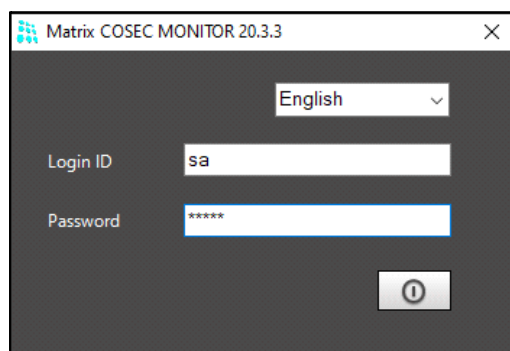

## Monitor Utility

The Monitor application is used to send commands to the COSEC devices as well as monitor and control the device and user events.

Once the Monitor Service is running, the COSEC Monitor Utility can be accessed through the COSEC Monitor icon

on the desktop.

To view the login page in the desired language, click the Language dropdown list and select the desired language.

*By default, the login page appears in the language as set by the System Administrator in **Global Language For Login**. For more information refer **Global Language For Login** in User Guide, **Admin Module> System Configuration> Global Policy> Basic Policy> Global Language For Login**.*

Enter the **Login ID** and **Password** as set in the web application module.

The COSEC Monitor window appears as shown.

# Dongle/Virtual License in COSEC CENTRA

---

In COSEC CENTRA, License Dongle is required for accessing the COSEC application if you have select the License Verification Mode as Server Based or Device Based. Refer to [“Served Based/Devices Based Verification Mode”](#)

However, if you have selected the License Verification Mode as Virtual License, you do not require any Dongle. Make sure the Virtual License has been registered. Refer to [“Virtual License Verification Mode”](#).

For more details refer to the Admin Management Portal User Guide.

## Served Based/Devices Based Verification Mode

If the License Verification from the Dongle is not done, then the application will show license verification failed as shown below:

The License Verification can be done by following modes for Dongle:

- **Server Based:** License will be verified from the Dongle connected to the PC where Master Service is installed.
- **Device Based:** License will be verified from the Dongle connected to the COSEC Device. This device will communicate with Master Service so that Master Service can fetch the license key from the dongle and all of the COSEC services will function.

For License Verification Mode as Virtual License, refer to [“Virtual License Verification Mode”](#).

The mode of License Verification Mode can be selected while installation the COSEC setup.

Contact No.: 9825095600  
License Verification Mode: Device Based (selected)  
Other options: Server Based, Device Based, Virtual License

Exit Back Next

For Server Based License Verification, make sure the Dongle is connected to the USB port of the PC where the Master Service is running.

For Device Based License Verification,

- the devices — VEGA, ARGO, ARGO FACE Direct Doors and Panel lite V2/Panel200 in Server Mode — can be used.
- make sure you have a **COSEC CENTRA** connection mode and the devices are configured in the same application.

Once Dongle is connected to the desired device, enter the License Server URL (Default is 192.168.50.100) and License server Port (Default is 15025) in Server Settings from device or its webpage.

## Virtual License Verification Mode

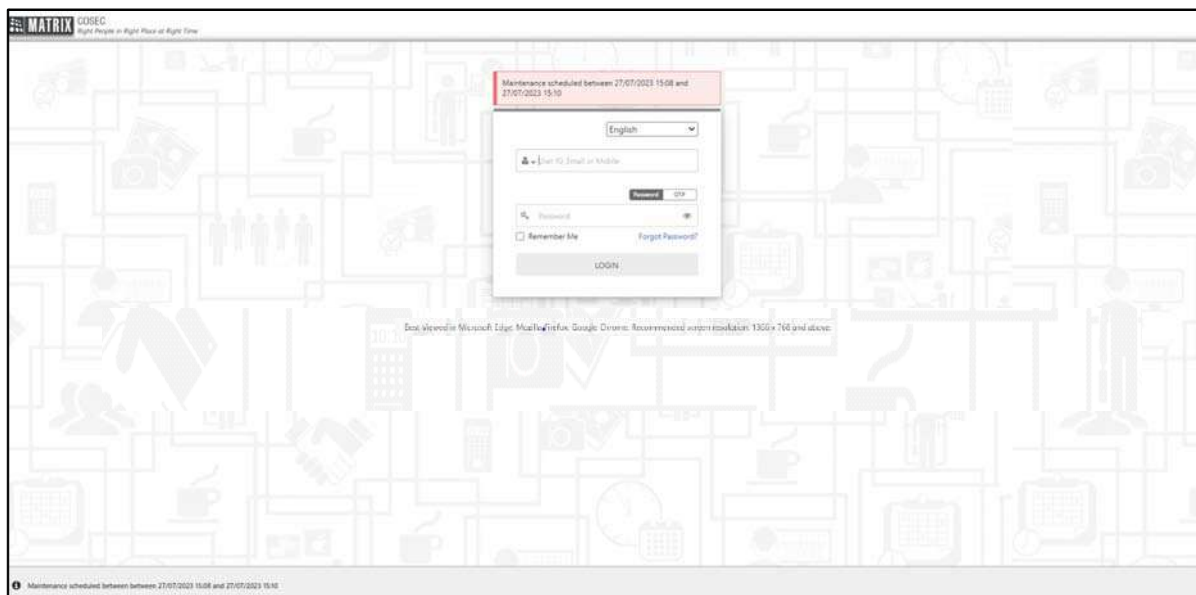

You need to register the Virtual License from the Admin Portal. The License registration request is sent from the Admin Portal to the Virtual License Manager. The Virtual License Manager checks for the authenticity of the key as well as it communicates with the Matrix License Manager. After the request is served successfully, communication is established between COSEC (Master Service) and Virtual License Manager, wherein the License verification is done. The Master Service and other Services function in the same manner as in Dongle Based.

# Maintenance Scheduling

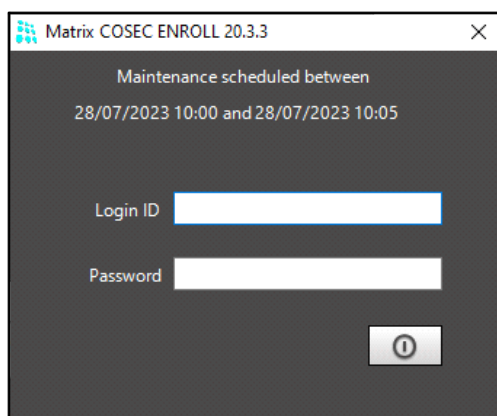

The COSEC system requires maintenance time for upgrading the version. During this time the user cannot access COSEC application. So the admin can configure the Maintenance duration in advance from the COSEC Admin Portal which will be displayed on the login page of COSEC Web, COSEC Enroll Utility and COSEC VMS Utility.

To configure the maintenance information go to the System Configuration> Maintenance Configuration of the Admin Portal.

When the user tries to login into COSEC Web within the maintenance duration then he will not be allowed to access the application.

The Maintenance duration can also be reset from the Admin Portal if the maintenance gets completed before the scheduled time.

## *Getting Started With COSEC Devices*

The Matrix COSEC Application is truly scalable, allowing a customer to start with smaller configuration and expand step-by-step as the organisation grows. One PANEL(Site Controller) can control from 1 to 255 Door Controllers. An Enterprise can deploy up to 1000 such PANELs and 10000 Door Controllers, managing over 1 million users.

The COSEC Panel is designed to operate off-line, making access control decisions independently from a PC or other controlling device. It can also be connected to a host computer for system configuration, alarm monitoring and direct control. Connectivity to the host computer is accomplished via TCP/IP network connection. Another key feature of the Matrix COSEC Panel is its completely distributed database. All information regarding cards, time zones, relay control and alarm points are loaded into its memory, enabling the unit to operate independently of any other equipment.

The **COSEC PANEL/PANEL LITE** and its variant is designed to support following major features.

- PANEL is a stand alone unit with multiple PANEL Door that work as slave controllers.
- Finger Print templates storage on PANEL for easy replacement of door controllers.
- PANEL communicates with RS-485 and Ethernet interface with PANEL Doors simultaneously.
- PANEL Doors IP address assignment and configuration through PANEL.
- Automatic Door firmware upgrade from PANEL.
- Automatic verification of Doors' firmware at start-up.
- “[Degraded Mode](#)” support on PANEL Doors for Exit by default and for Entry through configuration selection.
- Network clock synchronization of all PANEL Doors with PANEL.

Specification	COSEC PANEL/ PANEL LITE
Total Door Controllers supported	255
Door Controllers supported on Ethernet	255
Door Controllers supported on RS 485	32
User database support	25,000 users per Panel/Panel lite
No. of Events that can be stored in the memory	5,00,000 Events

The **COSEC DOOR** is designed to support following major features.

- The COSEC Door can be configured as a PANEL Door or DIRECT Door.
- COSEC doors support a 128 x 64 pixel LCD display as well as a 16 key cap sense type keypad. However, the Panel doors are available in variants without the LCD display and Keypad (Standard Panel Door).
- Panel Doors depend on the PANEL for configuration while DIRECT Doors are configured directly from the COSEC application platform.
- DIRECT DOORS have limited functionality as compared to the PANEL DOORS

The basic configuration of COSEC Doors is given in following topics links.

[“Degraded Mode”](#)

[“Connecting the COSEC RF Module”](#)

[“Connecting the Door Locking Device”](#)

[“External Reader Wiring”](#)

[“Powering the COSEC DOOR”](#)

[“Setting the IP Address of the Direct DOOR”](#)

[“Default Initialization of the DOOR”](#)

“Connection Diagram for the COSEC DOOR”

“Connection Diagram for COSEC PANEL DOOR (Standard)”

## Degraded Mode

The Degraded mode of PANEL DOOR can be defined as a mode of operation, where the DOOR starts working in standalone mode.

This mode will allow users to have access to controlled area by providing their credentials. However the user access rights are not verified while allowing the access to these areas and hence it is known as Degraded Mode.

In degraded mode, the PANEL DOOR performs the following functions.

1. Read the user credentials through any of its reader ports. If required communicate with user for further inputs (Card with FP stored on card for 1:1 match)
2. Identify the user based on credentials provided by user.
3. If request is for exit, allows user without any validation.
4. If request is for entry, then identify the user as a valid user for the facility.
  - In case of Proximity cards with FC, user is identified as collective users allowed.
  - In case of smart cards/FP templates, the user is identified with user ID, FC, ASC and hence the user is individually validated with enhanced security.
5. Store all events in non-volatile memory and send it to COSEC PANEL on restoration of network.
6. Monitor the door sense and activate the Door Relay according to degraded mode settings received.

*The degraded mode has to be enabled at the PANEL (Advance Parameters) as well as the Access Zone level for the PANEL DOOR to be able to operate in this mode.*

## Connecting the COSEC RF Module

The COSEC DOOR enclosure has a connector for connecting the COSEC RF module. This female connector is located on the rear of the enclosure. The RF module has a corresponding male connector as shown. Place the RF module in the slot provided on the back of the door enclosure and apply a gentle pressure on the module and ensure that it is set properly in the slot.

## Connecting the Door Locking Device

The relay Normally Open (NO), COM, Normally Closed (NC) and +12VDC terminals for the Door lock are located at terminal nos. 21 through to 24 on the top right of the COSEC DOOR terminal strip. The locking device output is controlled by the software according to preset parameters for allowing access or unlocking doors according to schedules and access levels.

The Normally Open (NO) or Normally Closed (NC) output can operate DC powered locking devices such as electromechanical strikes and Magnetic Locks. The maximum permitted current is 250mA @ 12VDC per output. For locks of higher capacity an external 24 VDC power supply has to be used as shown.

*In order to use the 12VDC power supply from the COSEC DOOR, short the +12V and the COM terminals prior to connecting the Normally Open/ Normally Closed (NO/NC) and the 0V (terminal 25) to the Door locking device as shown in the above figures.*

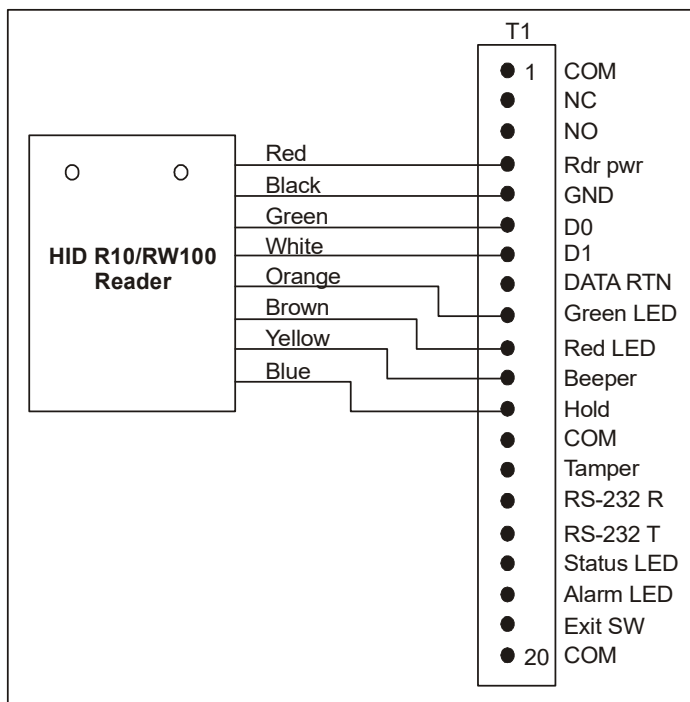

Terminal no.	Wire Color	Connects to Door Terminals
C5-1	Blue	COM
C5-2	Yellow	Normally Closed (NC)
C5-3	Orange	Normally Open (NO)
C5-4	Red	Power Out +
C5-5	Black	Power Out -
C5-6	Black	Power Out -
C5-7	Brown	Lock Tamper IN+
C5-8	Black	COM
C5-9	White	Door Status IN+
C5-10	Black	COM

## External Reader Wiring

The COSEC DOOR supports a maximum of 3 readers (2 internal and one External). The External reader port supports a single reader with Wiegand / Serial interface. To fully utilize Wiegand reader port, a shielded 13-conductor cable (18-22 AWG) is required. The maximum recommended length of wiring is 500 feet per reader. The COSEC system offers the following external reader options:

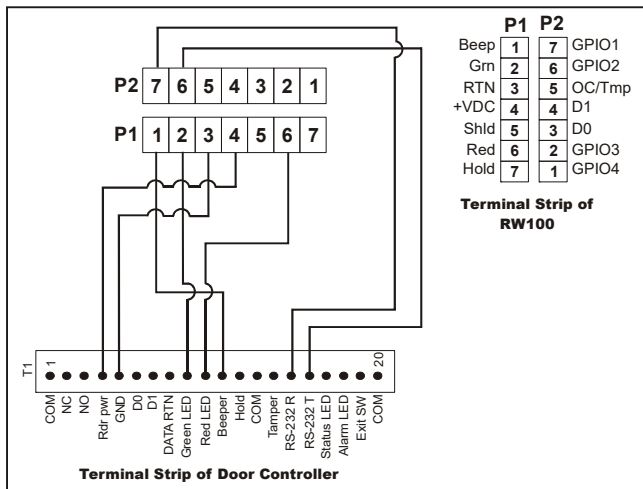

- HID Prox Reader R10 (Wiegand)
- HID Prox Reader RW10 (Wiegand / serial)
- COSEC Reader RFR (Serial)
- COSEC Reader FPR (Serial)

**Connecting the Wiegand HID R10 / RW100 Prox Reader:** The HID R10 and RW100 readers come with the Pigtail option which has color coded conductors as specified in the following connection diagram:

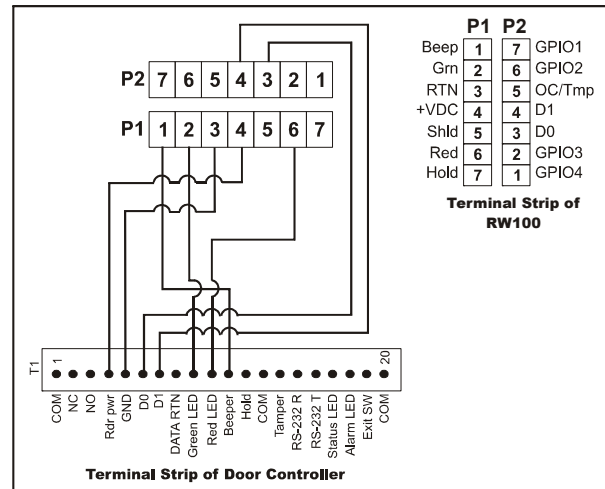

In the absence of the pigtail option on the RW100 reader the following are the connection diagrams for the serial and the Wiegand readers.

### Serial Reader

### Wiegand Reader

Connecting the red wire lead (or power lead) of a 5 VDC reader to the 12 VDC terminal may damage the reader. Refer the reader installation procedure for proper power connection.

For further connection details on External Readers, Refer COSEC DOOR Quick Start.

## Powering the COSEC DOOR

The COSEC DOOR can be powered using any one of the following three options:

- Connect the adapter giving an output of 12VDC @ 1A-1.5A to the terminals 39 and 40 on the COSEC DOOR Controller Unit.
- A 2 conductor cable can be drawn from the terminals on the power supply unit and can be connected to the terminals 39 and 40 of the DOOR terminal strip.
- Connect the two cables coming from the Matrix PSBB - Universal Mains Power supply(13.8 VDC @ 2A) with Battery Backup to the terminals 39 and 40 of the DOOR controller.

On powering up the COSEC DOOR it goes through the power on sequence and displays the booting message along with the following information:

- Matrix Logo
- Firmware Version
- RS-485 address as set on the DIP switch of the DOOR
- Mac address of the DOOR (Note the address to be used in COSEC application)
- Hardware Version of the DOOR

## Setting the IP Address of the Direct DOOR

There are two ways to configure the IP Settings of the Direct DOOR:

### From the Direct DOOR Display

After powering up the Direct DOOR, the user need to navigate to the Admin option using the keypad and display. Navigate to Admin > LAN Settings > IP. Change the IP by pressing 1 on keypad and enter the new IP.

### From the Direct DOOR Web Page

Type `http://192.168.50.50` in the Address field of internet browser. Enter admin as default user and password to login to the COSEC DOOR Web page. Navigate to Network Configuration and change the IP settings.

## Default Initialization of the DOOR

The COSEC DIRECT DOOR configuration comes with three DIP switches on the rear of the DIRECT DOOR as shown which can be used to initialize the **IP settings**, **Password** and **System Parameters** of the DIRECT DOOR to factory defaults.

The DOOR reconfigures its network settings to the factory defaults whenever the DIP Switch number 1 is set to the ON position and the DIRECT DOOR is powered up again.

Use the Network Defaults DIP switch (1) to correct potential errors in a DIRECT DOOR's network configuration. In order to reset the IP address of the DIRECT DOOR to default settings:

- Power down the DOOR.
- Set the DIP Switch no. 1 to ON position.
- Power up the DOOR.
- The DOOR goes through the IP default process and indicates on the display that the IP has been defaulted.

The IP address settings of the DOOR are now set back to default as follows:

DOOR IP address: **192.168.50.50**

Subnet Mask: **255.255.255.0**

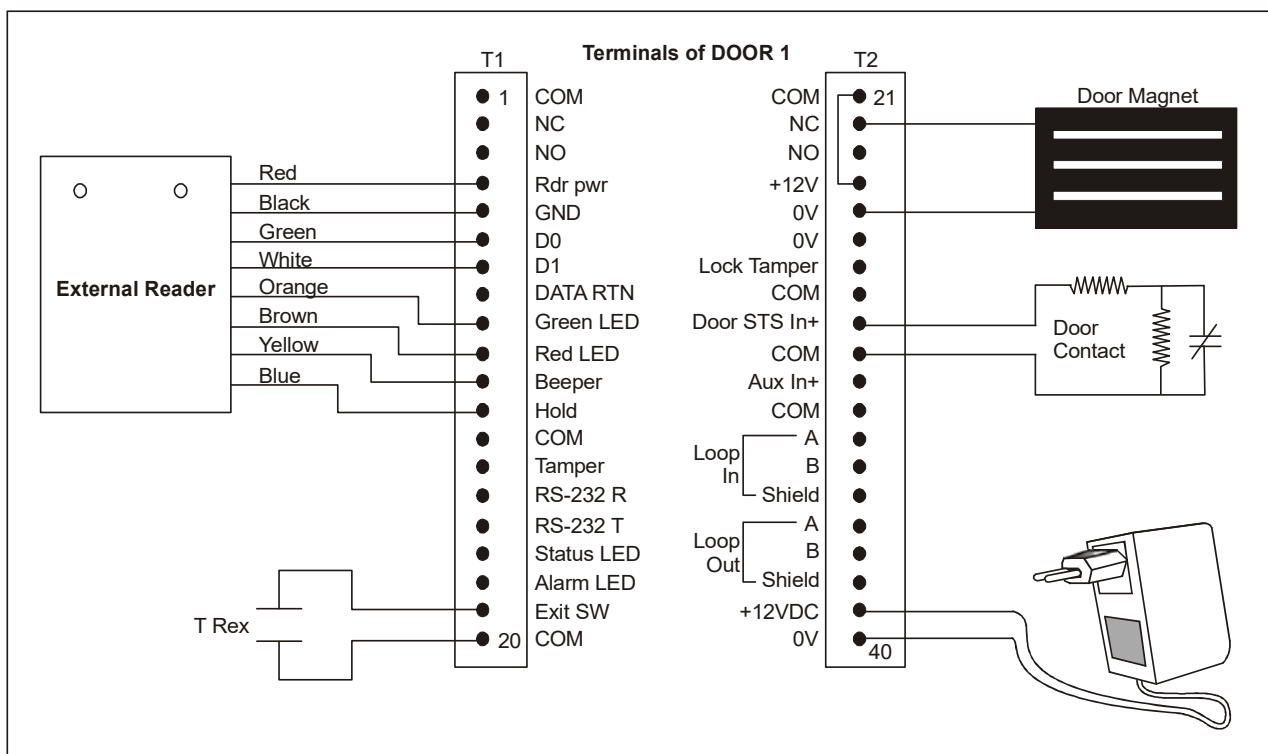

Push the DIP switch 1 back to Off position to ensure that the IP does not go back to default again the next time you power up the DOOR.

Similarly, DIP Switch no. 2 and 3 are used for resetting the Password and the system parameters respectively by following the same procedure as enumerated above.

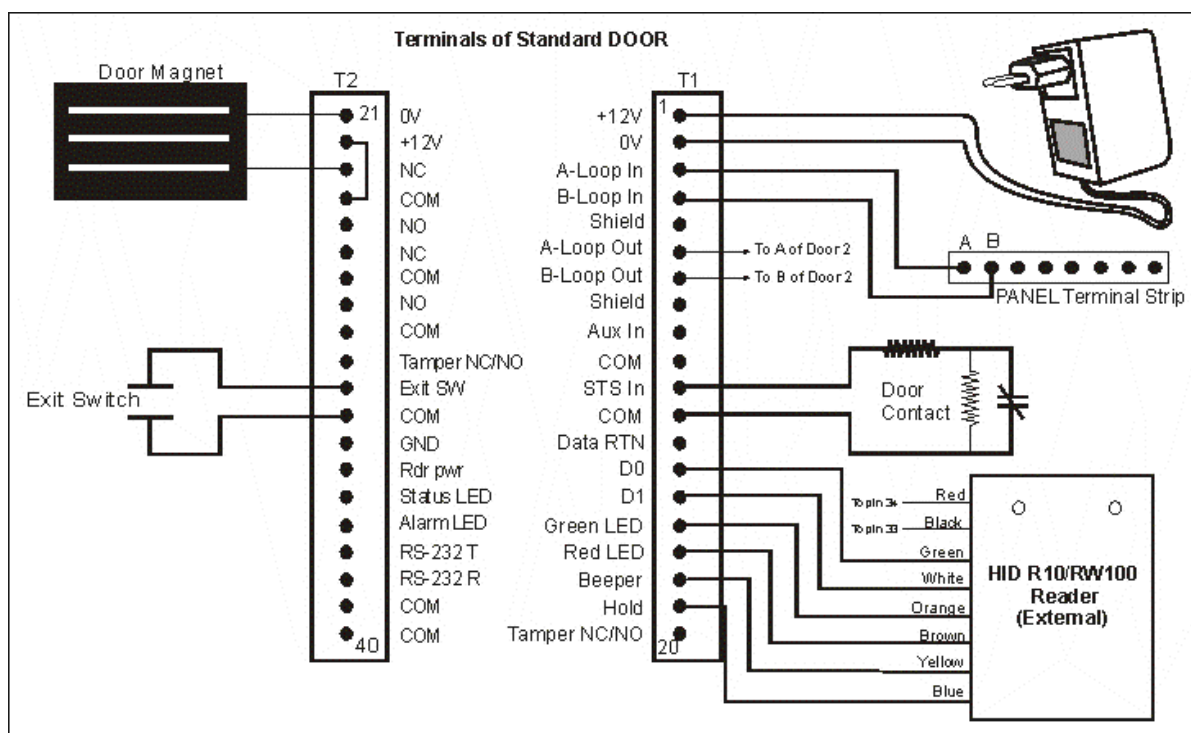

Please use the System default setting only in exceptional cases as it will erase all configuration and event data from the DOOR.

- *The Access Level function in Direct Door would come into picture only with smart secure access.*
  - *Access Modes for Panel and Panel-Lite are applicable at zone level, while for Direct Doors, they are applicable to the particular Direct Door only.*
  - *Direct Doors have limited Access Policies applicable as compared to Panel Doors.*
  - *The Degraded Mode feature needs to be enabled for Panels at the zone level, but comes into use in Panel Doors only.*
  - *V1, V2, V3 and V4 Cafeteria Direct Doors can be converted into Panel Doors by manual RS-485 address assignment.*
  - *NGT has 6 digit password field whereas all other door has 4 digit password field.*
  - *Tamper Detection is present in Panel and not in Panel-Lite.*
  - *CDC Exit Reader Support in FMX door is without FP reader.*
  - *In Wireless door there is inbuilt Wi-Fi. which is not there in Door V3/V4. But in Door V3/V4; if dongle is inserted then it will work with wireless Wi-Fi.*
  - *Wiegand Out feature is supported only in Door V4 out of all Door Controllers i.e. Door V1, Door V2, Door V3.*
  - *COSEC MODE Device is specially designed for Face Recognition feature which uses in-built camera of Mobile device for capturing the face. See MODE Door for detailed configuration. COSEC Vega, COSEC FMX and COSEC ARGO supports face recognition by using IP camera for capturing the face.*
- Duress Detection - PIN is applicable to Door V3/V4 and PVR (Direct Doors and Panel Doors).*
- Duress Detection - Finger is applicable to ARGO, VEGA and PATH V2, ARC DC200 and Door V4 (Direct Door and Panel Doors).*

# Network Configuration

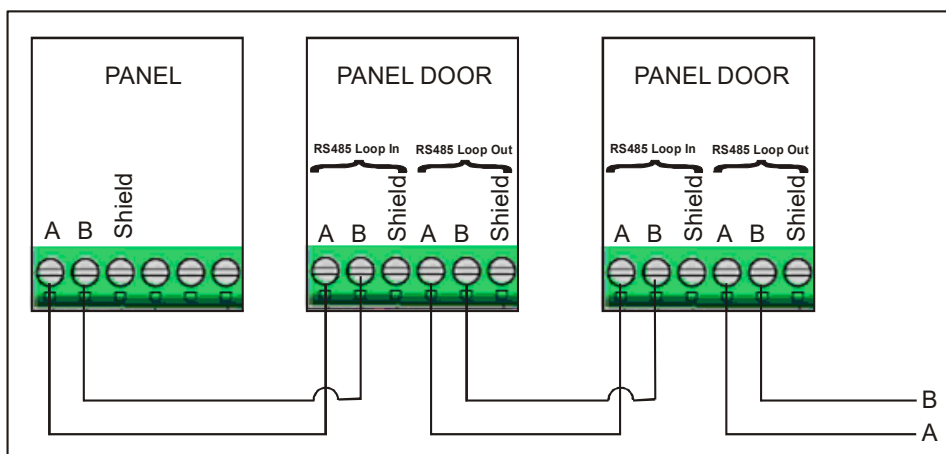

The COSEC PANELS and DOORs come with the following networking options:

- TCP/IP
- RS485

However, in the event of the DOOR being configured as a DIRECT DOOR, only the TCP/IP option will be available for communication. The DIRECT DOORs communicate directly with the COSEC Monitor application over the TCP/IP network while the PANEL DOORs communicate with the PANEL over the TCP/IP network or the RS485 loop.

## Connecting the PANEL DOOR to the RS-485 Bus

The PANEL DOORs are linked together through their RS-485 Loop in and Loop Out terminals in the event of a RS485 loop connection with the COSEC PANEL. The interface allows the wiring of a Multidrop communication network of up to 4,000 feet (1200 m) in length from the last PANEL DOOR to the COSEC PANEL. Only one host COSEC PANEL per RS485 loop is supported as shown in the following figure.

The RS-485 communication loop should be wired using a two conductor cable (see cable specifications Belden 1227A or equivalent). The RS-485 loop can operate from 1,200 to 115,200 baud, under normal conditions. The baud rate depends on the loop length and the environment. DIP switch positions 1-5 are used to select the Controller's address on the network. Refer to **Table 1** for DIP switch setting information.

Switch **SW3** is provided at the bottom right on the rear face of the Premium DOORs for supplying end-of-line termination for the RS-485 network. The board ships with the switch in the non-termination mode. Push the switch to the **ON** position on the last Controller in the RS485 loop to provide end of line termination. Similarly on the Standard DOOR Models the switch is located just above the terminal strip on the rear face of the DOOR.

0 is ALSO a valid address for a DOOR controller in the RS485 loop.

**DIP Switch Settings: Table 1**

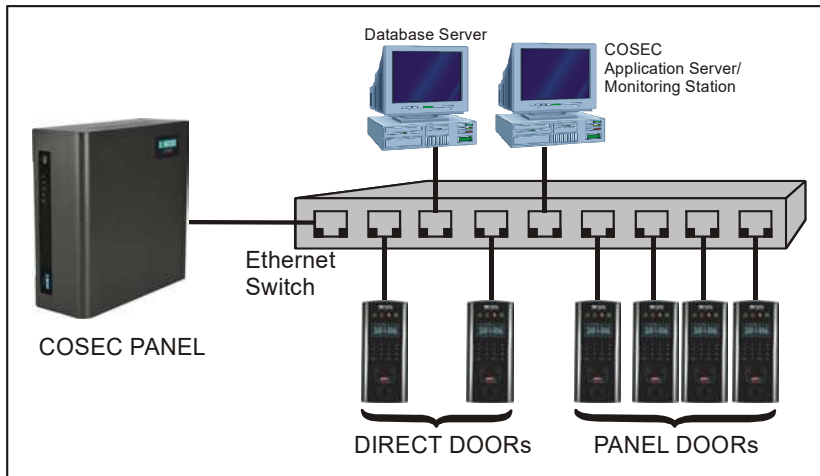

S1	S2	S3	S4	S5	Controller Address

## Ethernet Connectivity with the COSEC PANELS and DOORS

If the COSEC controllers are used in a LAN-enabled corporate setting, use the RJ-45 Ethernet port to connect the controllers to the corporate network. This method uses the existing network cabling for data exchange between the

Application server and the COSEC PANEL and the DIRECT DOORS as well as between the COSEC PANEL and PANEL DOORS.

The COSEC PANELs as well as the DOORS come with an on-board RJ-45 Connector.

The **PANELs** come factory configured with a default IP address of **192.168.50.1** while the **DIRECT DOORS** come pre-configured with a default IP address of **192.168.50.50**.

However, in the event of the DOORS being configured as PANEL DOORS, the IP addresses are assigned by the COSEC PANEL based on the **Slave network** parameters.

In order to change the IP address of the COSEC PANEL in line with the site requirements, change the IP settings of one of the computers on your LAN to **192.168.50.x** (where "x" can be any number from 2 to 254) by following the steps as described hereunder:

### Connecting the COSEC PANEL to the Monitoring PC

1. Connect your computer's Ethernet port and the PANEL's Ethernet Port by using either of two below mentioned methods:

**Option 1:** Connect both the computer's Ethernet port and the PANEL's Ethernet port to an Ethernet hub with standard straight-through Ethernet patch cables.

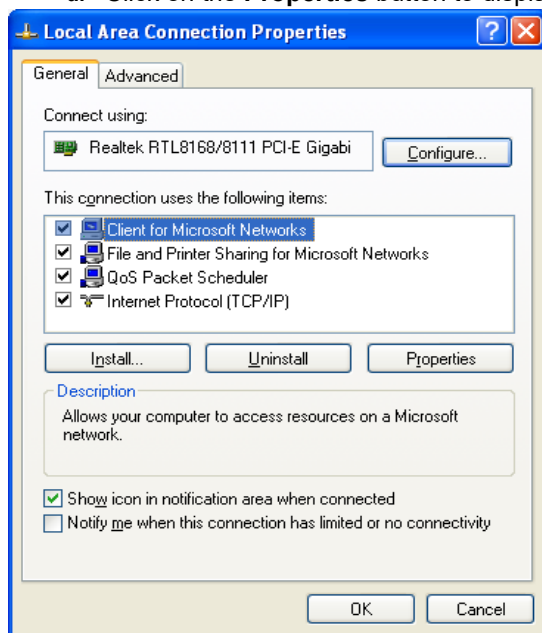

**Option 2:** Connect the computer's Ethernet port directly to the PANEL's Ethernet port with an Ethernet straight/crossover cable. A crossover cable is a cable that maps all output signals on one connector to the

input signals on the other connector. This allows the computer and the PANEL to perform full-duplex Ethernet communication.

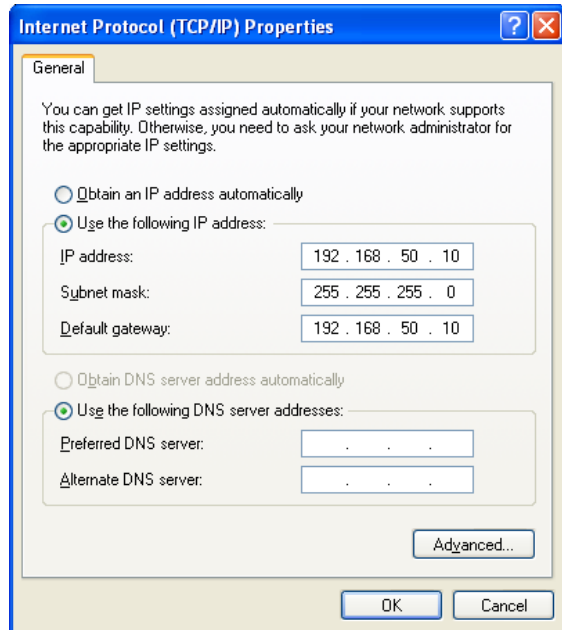

2. Configure the computer's network connection:

- a. Select **Start → Settings → Control Panel** from the Windows Desktop.
- b. Click **Network Connections**. The Network Connections window appears.
- c. Identify your local Ethernet connection (commonly labeled **Local Area Connection**), and click the icon to display the **Local Area Connection Status** window.
- d. Click on the **Properties** button to display the **Local Area Connection Properties** Window.

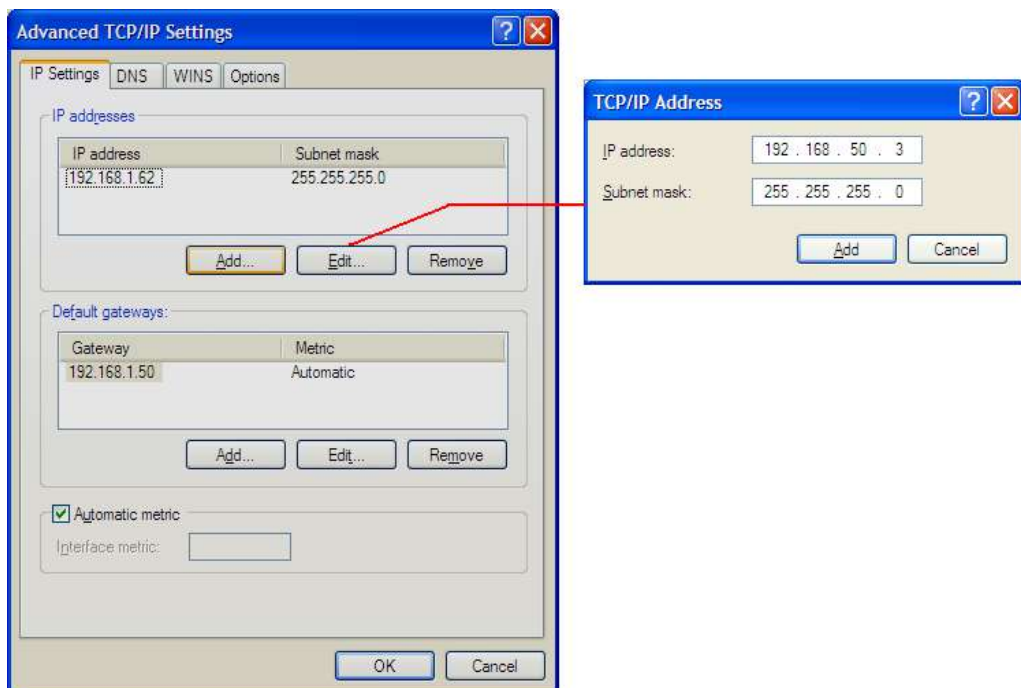

- e. Select the **Internet Protocol (TCP/IP)** option.

- f. Click **Properties** to display your system's current Internet Protocol properties.

- g. Click on **Advanced** to access the Advanced TCP/IP Settings window as shown below.

- h. Click on Add in the above window and enter "192.168.50.x" in the IP address field where "x" can be any number from 2 to 254.
- i. Enter "255.255.255.0" in the Subnet mask field.
- j. Click on Add to add the IP address to the list.

Click **OK** to save the settings.

# Licensing for Premise Solution

---

The COSEC Application Platform has been partitioned into different modules to cater to the specific end user requirements.

The COSEC Application Platform has been categorized under the following licensing pattern based on the number of application users and door capacity. In addition to the above, the users can opt for the following modules at the time of placement of orders.

- **Platform/Basic Licence** - Admin + User + Device + Enterprise + Report Builder
- **T&A Licence** - Basic + T&A + Shift + Enterprise + Leave
- **ACS Licence** -Basic + Access Control
- **ESS Licence** - Used with T&A or Cafeteria
- **Cafeteria Licence** - Basic + Cafeteria
- **VMS Licence** - Basic +VMS
- **CWM Licence**- Basic +CWM including CSS+ Enterprise (CWM is recommended with T&A Licence)
- **JPC License**- Basic + T&A + JPC
- **FVM License**- Basic + T&A + FVM

*The Licensing for Cloud based solution is based on user days for the particular license voucher. The voucher activation is done by the Administrator of the Tenant Portal.*

In the event of the **Basic** COSEC Platform License, the following options will be available on the home page after logging into the web application.

- Admin
- Users
- Devices
- Enterprise
- Report Builder

*With Basic License; Report Builder will have only Events Template as default template. Other default templates of Report Builder will be available with T&A license.*

With the **Access Control** add on module the following options will be available on the home page after logging into the web application.

- Admin
- Users
- Devices
- Shifts & Schedules
- Access Control

The COSEC home page with only **Time and Attendance** add on module will have the following options available on the home page after logging into the web application.

- Admin
- Users
- Devices
- Shifts & Schedules
- Time & Attendance
- Leave management

The **Leave Management** module comes along with the Time and Attendance module and enables you to perform the following operations:

- Define Leave Policies
- Leave Opening Balance management
- Record Leave Adjustment transactions
- Record Leave Encashment transactions
- Leave application and approval
- View Reports

The **Visitor Management** module enables you to perform the following operations:

- Visitor Pre-Registration
- Maintain record of Blocked and Frequent Visitors
- Create Visitor E-Pass and Paper Pass
- View Reports

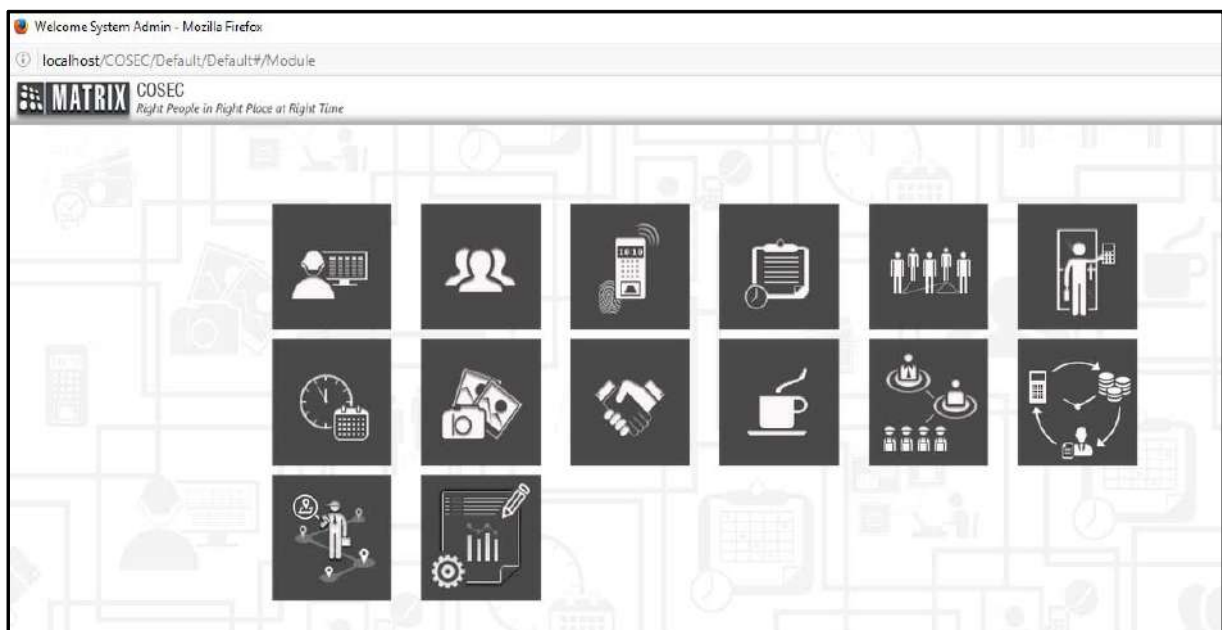

The **Contractor Worker Management** needs the Time and Attendance module to monitor contractor and workers and enables you to perform the following operations:

- Assign work orders to contractors
- Add and enroll contract workers and manage their credentials
- Manage worker assignments
- Approve, Reject, Blacklist contract workers
- Monitor daily and monthly work

The **Job Processing and Costing** Module enables to Create Project and Add Phases and Jobs to it, Assign Users to various Jobs. Also Monitor Daily Jobs and User's Time sheet.

The **Field Visit Management** Module enables to create task, assign task and location to some time slot. And monitor the user visiting the field.

A full COSEC application license will have the following home page.

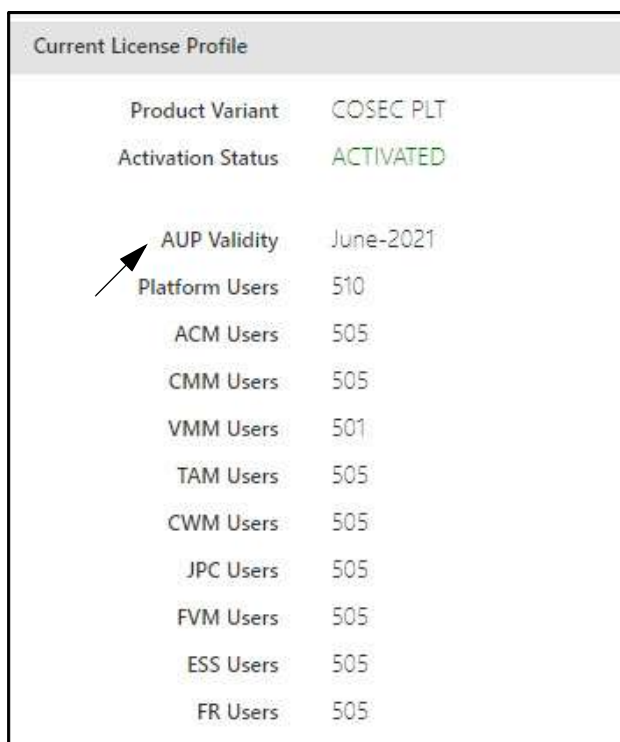

Thus, with the addition of module licenses, access to the various options are enabled.

### Application Upgrade Package (AUP) Validity

COSEC AUP License allows you to upgrade the firmwares available before the time period specified in the Application Upgrade Package (AUP) Validity in **COSEC Centra Admin> Company Configuration> License and Services> Current License Profile> AUP Validity**.

The screenshot shows a window titled 'Current License Profile'. It contains a table with the following data:

Product Variant	COSEC PLT
Activation Status	ACTIVATED
AUP Validity	June-2021
Platform Users	510
ACM Users	505
CMM Users	505
VMM Users	501
TAM Users	505
CWM Users	505
JPC Users	505
FVM Users	505
ESS Users	505
FR Users	505

An arrow points to the 'AUP Validity' row.

You will be allowed to upgrade the firmwares released before Month-Year specified in the Application Upgrade Package (AUP). These firmware upgradations are free of cost.

To upgrade the firmwares after this time period, you must renew the COSEC AUP License. As soon as you activate the License, AUP Validity date will be updated.

### For Example:

In a system, AUP Validity is displayed as June-2021.

If a new firmware is released on March 2021, then the system can be upgraded with this firmware free of cost.

Similarly, if a new firmware is released on July 2021, and you wish to upgrade the system, then you must renew the COSEC AUP License.

To take the above example further, if a new firmware is released on July 2023 and the AUP Validity displayed in your system is July 2021, if you wish to upgrade the system, you must renew the COSEC AUP License twice.

## Upgrading the COSEC License

For COSEC CENTRA, the COSEC application is shipped with the Generic license. This can be either a Dongle License or a Virtual License.

The License has to be updated with COSEC CENTRA PLT Voucher and Module specific vouchers based on User count as per your requirement.

You need to update the vouchers purchased against the Generic Key in case of Dongle license and in case of Virtual License, the Generic key needs to be registered first and then the other vouchers can be updated.

There are license keys (Dongle) with old structures also, in this case you need to first upgrade the key to the new structure and then other activations can be done.

Follow the Steps to upgrade the COSEC to new License structure (V14R1 onwards):

1. Ensure Application Upgrade Package (AUP) is available for upgrading to desired version.
2. Take Database Backup before upgrading.
3. Upgrade COSEC Software. Open COSEC Web login page/COSEC Admin Portal- License and Services page.
4. On License and Services page, SA user can accept and upgrade to new licensing structure. Once accepted; your license will be ported to new structure.

*Once new License structure is upgraded, you cannot move back to older license structure.*

The Login User name and Password will be provided by License Support team.

For more information on buying and upgrading license, refer to the Admin Management Portal User Guide as well as Contact Matrix Channel Partners or Matrix Technical Support.

# Using COSEC Web Application

The COSEC Web application enables the users to log in to the web application from local or remote computers and configure the various parameters available in the functional modules. After the installation of the COSEC web application on the computer, the users can access the application by entering the following URL in the web browser:

http://(ip address of web server computer)/cosec

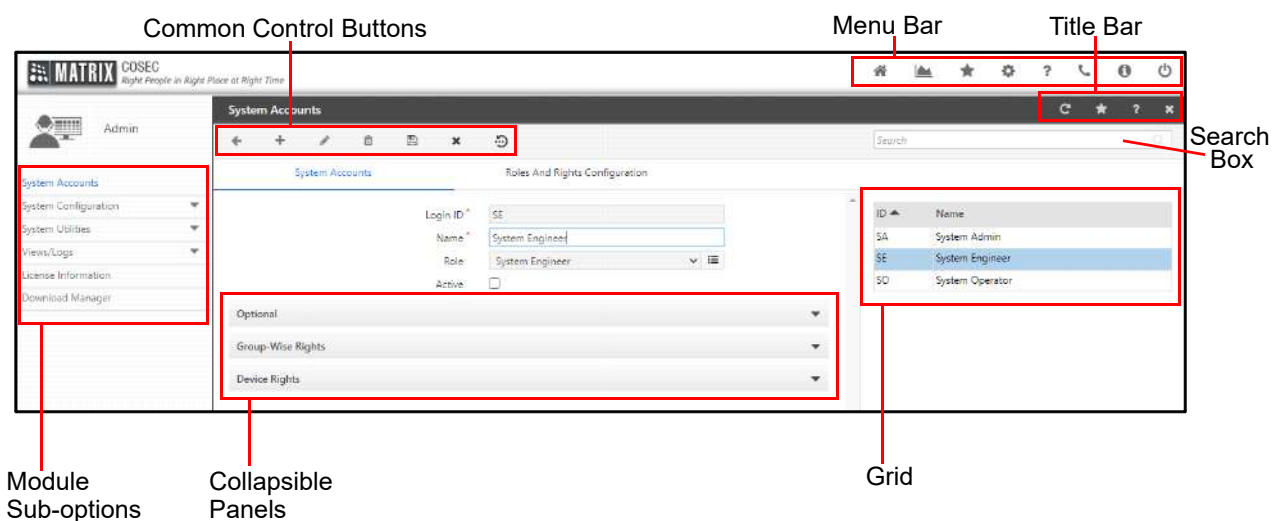

OR click on

From the home page of COSEC Web Application, the user can log into the various modules as supported by the License. The first page of any Module opens to the **Dashboard** as shown below which displays the information about the respective Module. On clicking the information links, the user can view additional details, or is directed to the corresponding configuration page.

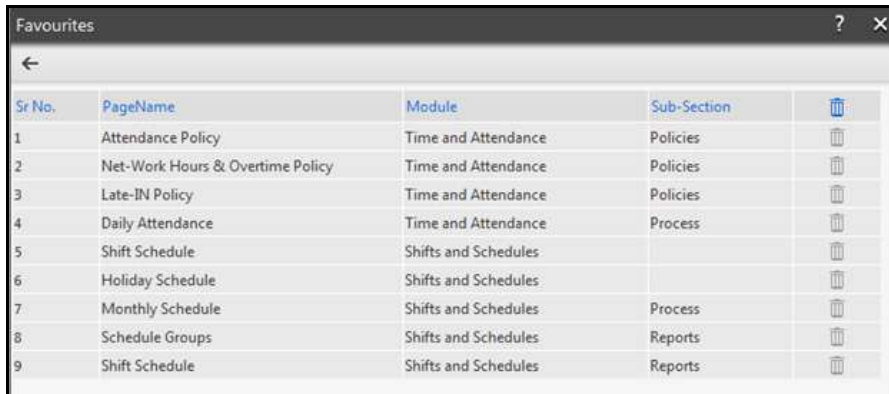

The Other interfaces are shown in below figure:

The **Menu Bar** at the top right side of window consist of following Icons:

- **Home:** Allows to go back to the Home Page.
- **Dashboard:** Allows to go to the dashboard page of the selected module.
- **Favourites:** Click on the **Favourites**  button from the Menu bar. This redirect to the Favourites Page as shown below.

Sr No.	PageName	Module	Sub-Section	
1	Attendance Policy	Time and Attendance	Policies	
2	Net-Work Hours & Overtime Policy	Time and Attendance	Policies	
3	Late-IN Policy	Time and Attendance	Policies	
4	Daily Attendance	Time and Attendance	Process	
5	Shift Schedule	Shifts and Schedules		
6	Holiday Schedule	Shifts and Schedules		
7	Monthly Schedule	Shifts and Schedules	Process	
8	Schedule Groups	Shifts and Schedules	Reports	
9	Shift Schedule	Shifts and Schedules	Reports	

- It shows the pages which are marked as favorites from pages of different modules by clicking on **Add to Favourite** button as shown below.

- The Favourite page can contain list of maximum 25 favourite pages. The user can remove the page from favourite list by clicking on delete button.
- **Account Settings:** Click on the Account Setting  button from the Menu bar. For more information, refer "[Account Setting](#)".
- **Help:** Gives the information about the COSEC Web Application.
- **Contact Us:** Gives the contact details of Matrix Comsec Pvt. Ltd. You can click on **Visit Us** link to view the Matrix website.
- **About:** Gives the details regarding the Product version, Product Variant and the Data Protection Manager. To configure and know more about the details of Data Protection Manager, refer "[Data Protection Manager](#)".
- **Logout:** Enables to log out from the application.

The **Title Bar** at the top right side of all module sub-options page consist of following Icons:

- **Refresh:** When you change any string in the language file and its reflection is required in the COSEC so click the Refresh button to get immediate reflection or else the changes will be reflected when you restart the system.
- **Add to favorites:** Enables to add the current page to favorites list.

- **Help:** Gives the information about the current page. For cross reference details refer to the complete System Manual.
- **Close:** Enables to close the current page and goes back to the selected module Dashboard.

The pages of the COSEC Web application have the following **Control/Command** buttons which are used to perform the functions as described below:

- **Back:** Allows to back to the previous page.
- **New/Add:** Allows creation of a new record for the selected option.
- **Edit:** Allows user to edit an already existing record.
- **Delete:** Allows user to delete the selected record.
- **Save:** Allows user to save the changes to the system.
- **Cancel:** Allows user to remove the data selected.

*The COSEC application basic platform consists of the modules mentioned earlier in this manual. In order to get the COSEC BASIC application up and running, the administrator needs to configure the parameters in the following order:*

*Admin>Device Configuration> User Configuration*

*In presence of other modules follow the configuration order as:*

*Admin>Device Configuration> Configure T&A Policies, Leaves, Enterprise Structure, Shifts & Schedules*

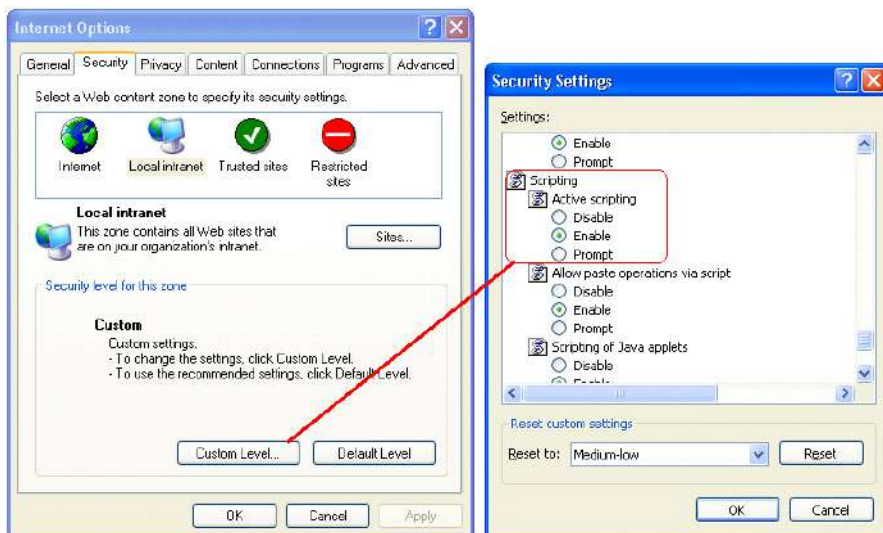

*>Then configure User configuration*

*> Configure at last Access Control,Canteen and Visitor Modules*

*Administrator needs to ensure that Java scripting is enabled in the security settings of the web browser application. In Internet Explorer this is done by selecting **Internet Options** from the **Tools** menu.*

*On the Internet options page go to the **Security** tab and click on the **Custom Level** button. Enable the Active Scripting option as shown.*

## Initial Configuration with Device

To begin with COSEC Web Application, first configure the device by setting the LAN IP and Server port in the Network parameters of Door. The LAN IP should be the IP of the PC where COSEC Monitor is installed.

Now in the COSEC Web application go to **Device List**> Click on **New** and select the device or select **Device Module**> **Device Configuration**> **Profile**> **Basic**: Enter the MAC Address of the device to be connected in the

MAC Address field. While saving the MAC, the IP from the device will be fetched by the web application and the device will get activated.

**OR**

There is easy option of Automatically addition of new device by checking the box **Auto Add New Device**. For enabling this feature go to **Admin Module> System Configuration> Global Policy>Device**.

If the Auto addition feature is enabled then there is no need to enter the MAC address. The application will automatically configure the parameters and the device will be added.

*For connecting the door as PANEL Door, auto addition has to be disabled. Then define the PANEL door manually then connect to the server. For details refer Devices Section.*

Now configure the Device with Basic and Advanced parameters from the Device Module. For more details see Devices Module.

The COSEC system enables the administrator to define **sites** which are to be used for reporting purposes. The Door Controllers can then be assigned to the defined sites.

For defining Sites go to **Device Module> Masters> Site**.

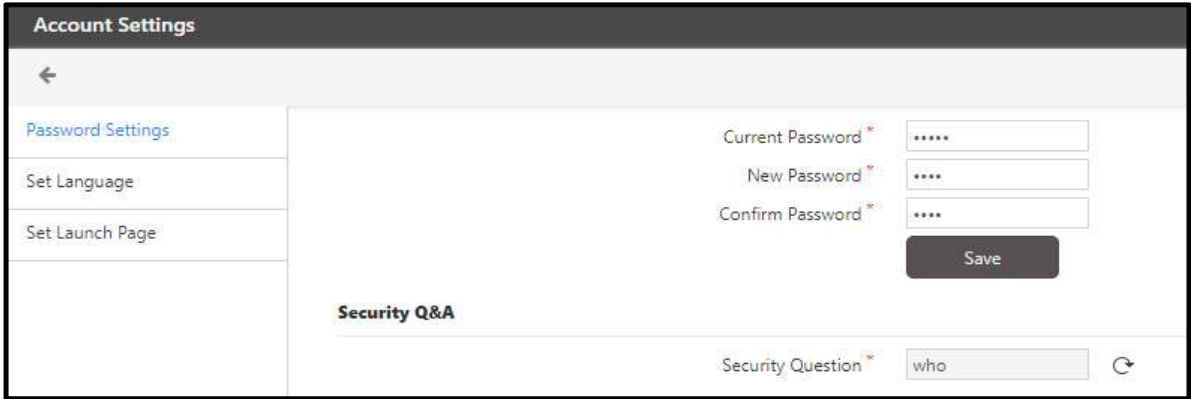

# Account Setting

---

**Account Settings:** Click on the Account Setting  button from the Menu bar. This enables the user to change the password, set the preferred language and to set the launch page for the login user.

## Password Settings

- You can set new password from the Password Settings tab.

To change the Password,

- Current Password:** Configure the Current Password of the Admin Portal.
- New Password:** Configure the new password you wish to set.

You will be able to set the Password as per the parameters set in [“Password Policy”](#) in [“Defining Global Policies”](#).

- Confirm Password:** Re-enter the new password for confirmation.
- Click **Save**.

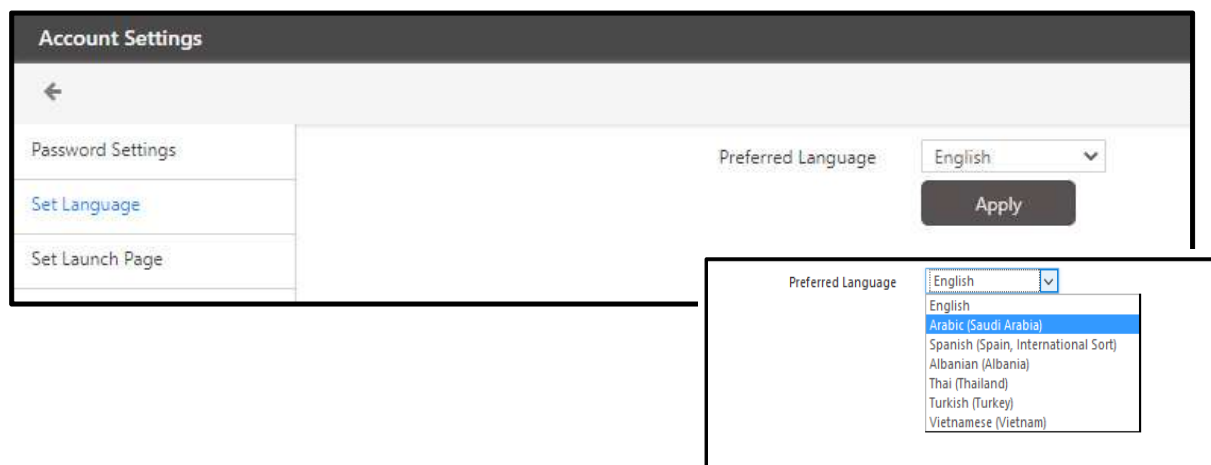

## Security Q&A

The Security Q&A will initially display the Security Question you already set at the time of login. However you can change the same. To do so,

- Click **Reset Security Q&A**  and configure the following parameter:
  - Security Question:** Configure the new question you wish to set as the Security Question.
  - Security Answer:** Configure the answer for the set Security Question.
  - Confirm Security Answer:** Re-enter the answer to confirm.
  - Current Password:** Configure the Current Password.
- Click **Save**.

## Set Language

- You can set the language by selecting the preferred language.

The screenshot shows the 'Account Settings' interface. On the left, there is a sidebar with options: 'Password Settings', 'Set Language' (highlighted in blue), and 'Set Launch Page'. The main area displays 'Preferred Language' with a dropdown menu currently set to 'English' and an 'Apply' button below it. A callout box shows the expanded dropdown menu with the following options: English, Arabic (Saudi Arabia), Spanish (Spain, International Sort), Albanian (Albania), Thai (Thailand), Turkish (Turkey), and Vietnamese (Vietnam).

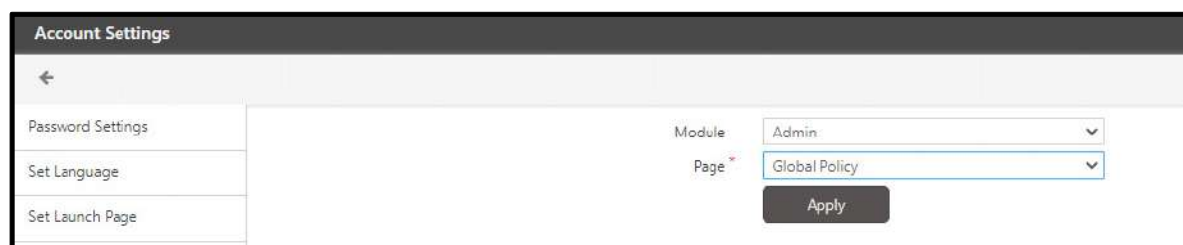

The Language translation can be done via Multi-Language Utility. To know more, refer to the Multi-Language Utility User Guide.

If you wish to set the language of the Login page, click **Admin module > System Configuration > Global Policy > Basic > Global Language For Login**. For details, refer to [“Basic Policy”](#) under [“Defining Global Policies”](#).

## Set Launch Page

- You can select the launch page i.e. the page which will appear directly after logging into COSEC.

The screenshot shows the 'Account Settings' interface. On the left, there is a sidebar with options: 'Password Settings', 'Set Language', and 'Set Launch Page' (highlighted in blue). The main area displays 'Module' with a dropdown menu set to 'Admin' and 'Page' with a dropdown menu set to 'Global Policy'. An 'Apply' button is located below these dropdowns.

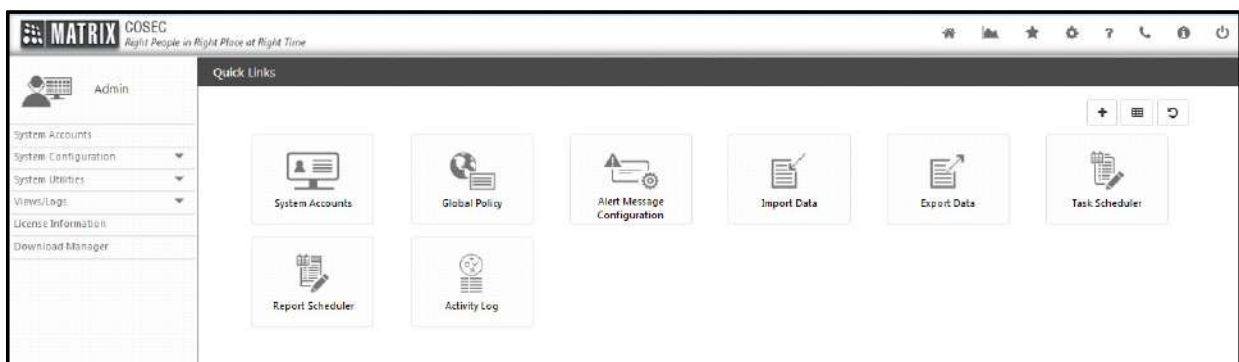

The **Admin** module allows the System Administrator to define users who will be using the COSEC application. Using this module, system rights and other information for the users of the COSEC application can be specified based on their roles. In addition, each user can be assigned a unique set of IDs and Passwords. It is recommended that this module be configured before starting the configuration of the COSEC Controllers for other applications.

A system administrator can set all parameters related to the use of the COSEC application and its modules. The administrator can also set the data export format based on certain database views which are provided by default along with the COSEC application. This would thus enable exporting of data which can be used as an input to external applications like Payroll.

This module also has the License Information option which allows the administrator to view the license details as well as enter new license string for updating the application and add more application user licenses as well as other modules.

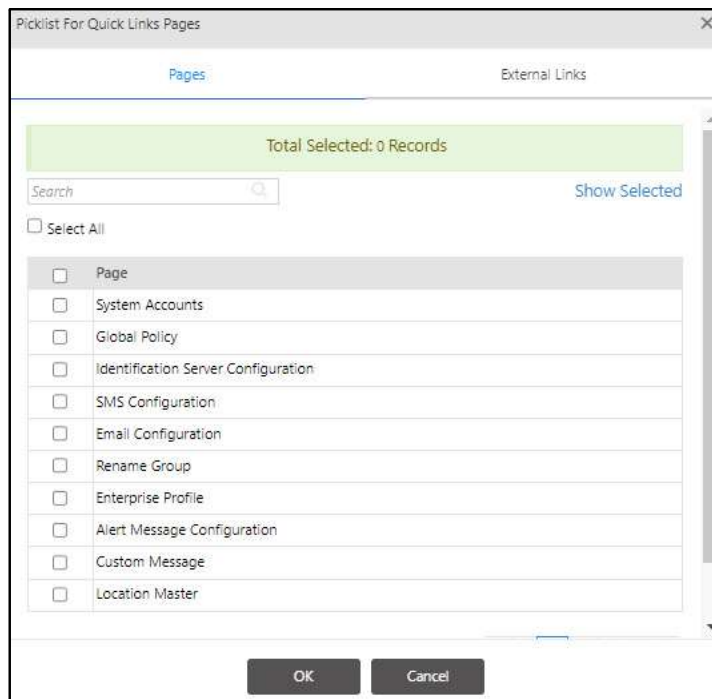

To use the system administration functionality, select the **Admin** module icon  on the module selection page. The **Admin** module page appears on the screen as shown below.

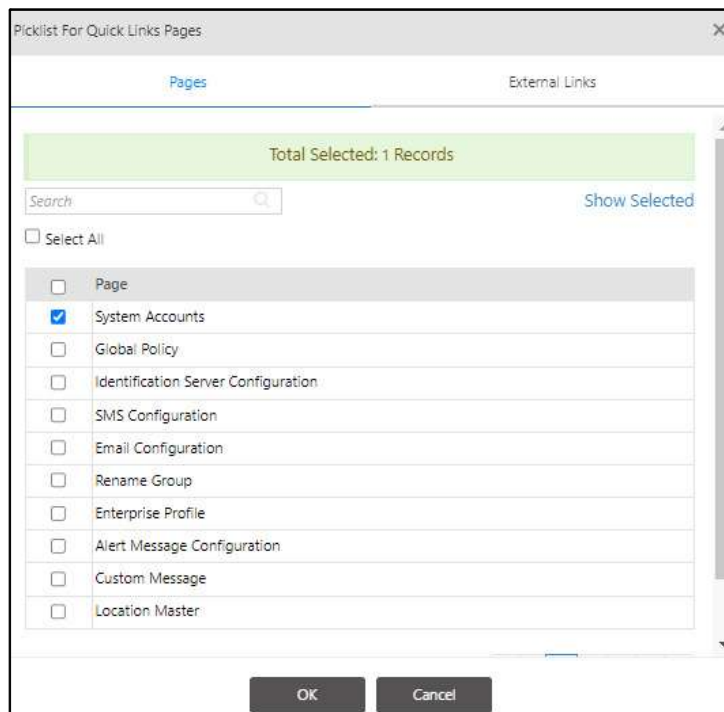

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add** . The **Picklist For Quick Links Pages** pop-up appears.

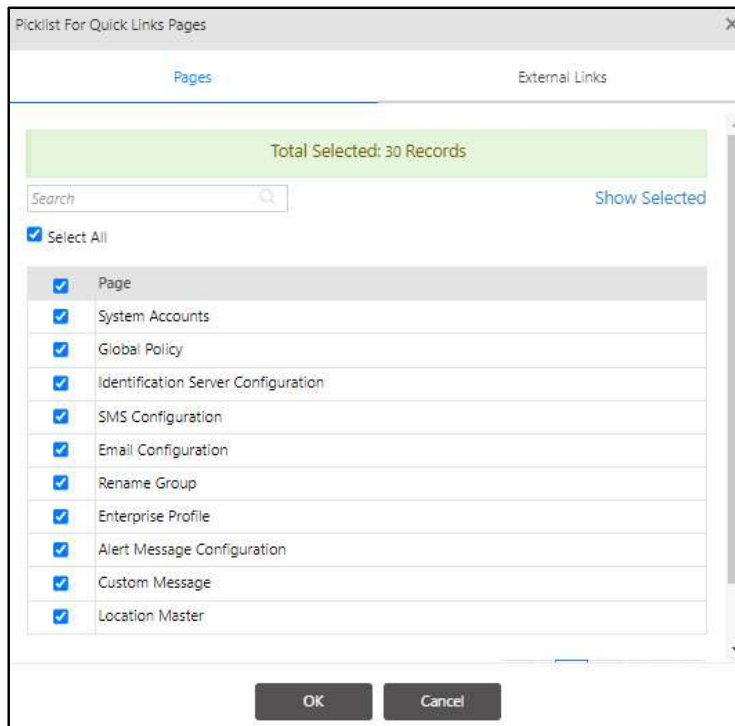

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

**OR**

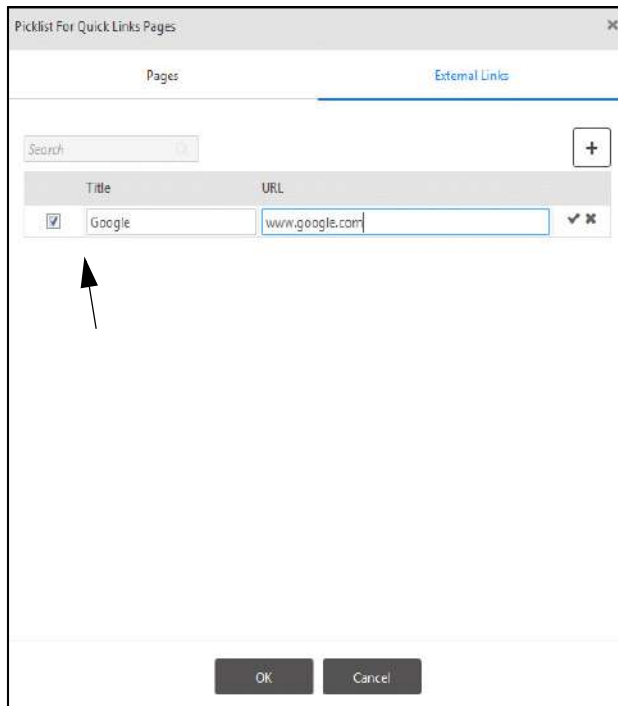

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

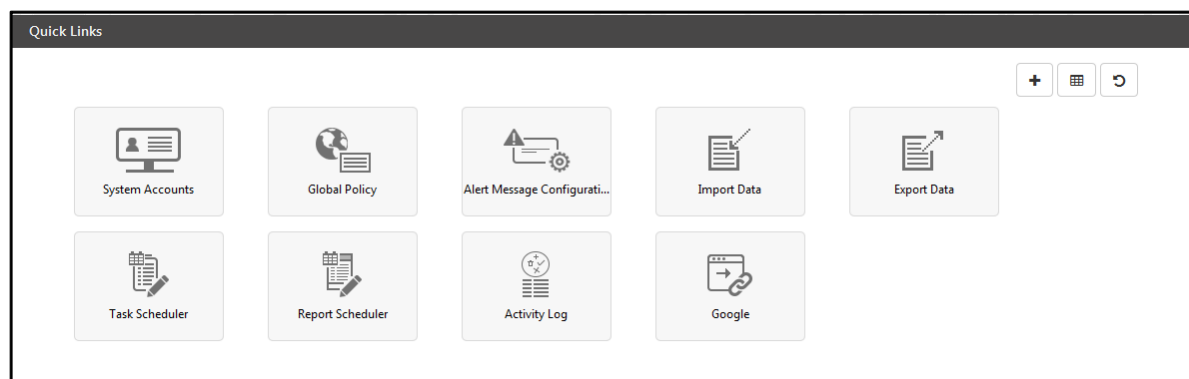

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

#### **Adding External Links,**

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

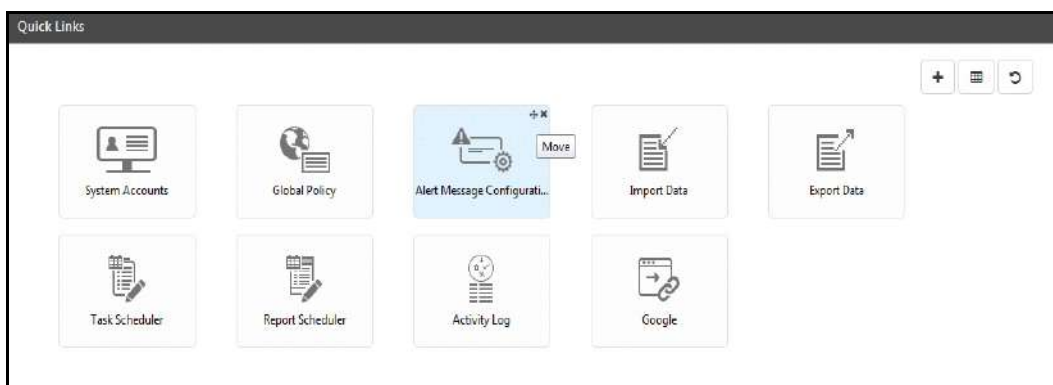

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

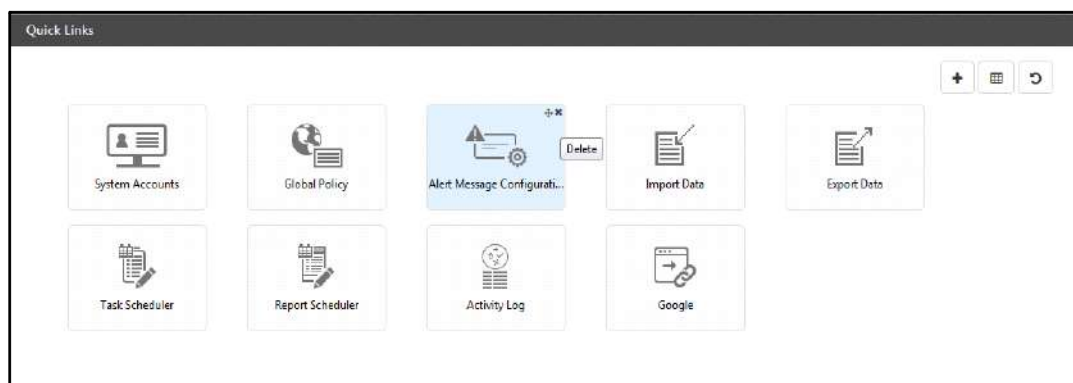

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

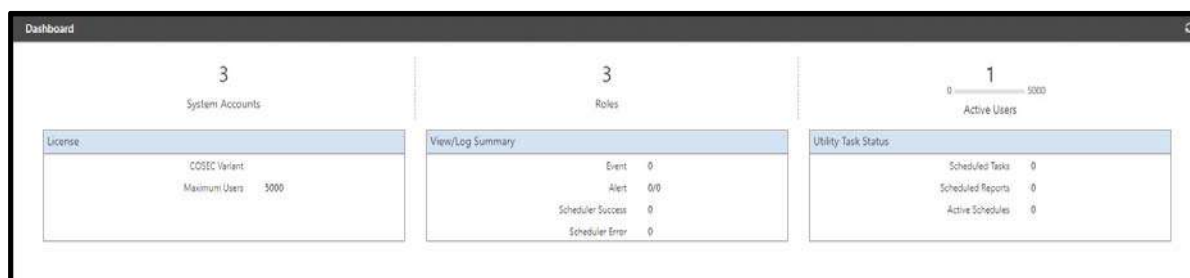

*Quick links are displayed as per rights given to System Account and ESS users.*

## Admin Dashboard

The Admin Dashboard presents an overview of system information along with current system status. It also displays the total number of created Users in System Account, total number of created Roles and total number of active users. To view the Dashboard, click the Dashboard button  on the **Admin** page. It appears with the following information:

- System Accounts- Displays the number of system accounts created in the COSEC.
- Roles- Displays the number of Roles created in the COSEC.
- Active Users- Displays the number of active users created in the COSEC.

## License

- Maximum Users - Maximum number of users allowed per license.

## View/Log Summary

- Event - No. of event views made on the current day.
- Alert - No. of SMS Alerts/No. of e-mail alerts for the current day.
- Scheduler Success - No. of scheduled tasks completed successfully on the current day.
- Scheduler Error - No. of scheduled tasks which failed on the current day.

## Utility Task Status

- Scheduled Tasks - Total tasks that are configured in scheduler.
- Scheduled Reports - Total reports that are configured in scheduler.
- Active Schedules - Total number of scheduled tasks and reports that are currently active.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The Latest values on Dashboard are updated on clicking the Refresh  button.

# Managing System Accounts

Every system account on COSEC is associated with a login role and a login user.

A login role on COSEC is a pre-defined role that determines how a user associated with it may login or perform certain activities on the COSEC application. For example, a Human Resources (HR) Manager in an organization may be assigned the login role of a system administrator, thus enabling him to administer system policies for an organization.

COSEC identifies three types of system-defined login roles which determine the login and system operation rights for each user. These are -

- System Administrator (SA)
- System Engineer (SE)
- System Operator (SO)

*SE and SO account will be inactive by default during first login after installation. SA user can login and activate the SE and SO accounts.*

In addition to these, Admin can add new login roles and configure role rights for each role. Based on these role rights, all login users associated with a login role can perform specific activities on COSEC.

You can create On Behalf System Accounts Users also. On Behalf Users can perform specific activities such a Leave Applications, Attendance Corrections, Apply for Shout Leaves etc on behalf of other users. For details refer to [“On Behalf System Account User”](#).

To view System Accounts page go to **Admin module > System Accounts** and the following screen appears.

The screen displays two tabs namely:

- [“System Accounts”](#)
- [“Roles and Rights Configuration”](#)

## System Accounts

This tab enables to create login users.

To add a new login user to the system, go to **Admin module > System Accounts > System Accounts** tab and the following screen appears.

ID	Name
Aahar	Aahar
Canteen	Canteen
cosecdevic	COSEC Device
custom	custom
Devanand	Devanand
Enroll	Enroll
FR	Face Recognition
IDS	IDS
jayesh	jayesh
kanul	kanul

The page displays a **tool-bar** for creating, editing, deleting, saving, canceling and resetting password for a user along with configurations on the left hand side and a grid containing a list of created users on the right hand side. One can also search a particular user from the grid using **Search** field.

1. Click the **New**  icon on the **System Accounts** page.
2. Configure the following options as required:
  - **Login ID** - Assign a unique ID for the Login User.
  - **Name** - Enter a name for the login user.
  - **Role** - Select a login role from the drop-down list. One can also create a new login role from the Role Configuration tab or by clicking on the pick list button. Refer [“Roles and Rights Configuration”](#).
  - **Active** - Select to mark the status of the user as active. On enabling, the user becomes an active user.
3. Configure the remaining parameters on this page as described in the following sections.
4. Once the new system account is configured, click **Save** to add the new login user to the COSEC database.

### Optional

This section allows the administrator to perform additional configurations for defining a login user on COSEC. To do this,

Under **System Accounts**, expand the **Optional** collapsible panel as shown below.

Enter the following details:

- **Linked ESS User:** Select an ESS user using the picklist to link with the System Account. This allows selected employees to be assigned login rights to COSEC web system accounts. On logging into the respective system account, the user is now also able to access his/her ESS page directly from the COSEC Web module selection page.
- **Preferred Language:** Select the language to be preferred from the dropdown list. On selecting a specific language all the labels of the COSEC will change into that particular language. E.g. if Urdu language is selected, then all the labels get changed into Urdu.
- **Mobile No.:** Configure the Mobile Number of the System Account User/On Behalf System Account User. You can add multiple numbers if required. Multiple numbers must be separated by comma. If you have Linked ESS User, then the official mobile number, fetched from User > Profile > Contact > Official > Mobile) of this ESS User will be displayed here automatically. You can change/remove the same if required. Make sure you save the changes. Maximum 32 characters can be configured. Valid: 0 to 9,+()-

*Once the Mobile Number of Linked ESS User is fetched and displayed and later if the same is updated/ removed from User > Profile > Contact > Official > Mobile, then the same will not be updated here automatically.*

*If you change the Linked ESS User and the new user does not have any Mobile Number, then the mobile number of the previously Linked ESS User will be displayed.*

The following alerts will be triggered on the Mobile Number to the System Admin / [“On Behalf System Account User”](#) if the application is done by them and the final verdict for the same is received provided in these Alert Configurations, for the parameter **Send Alert To**, the **System Account** check box is enabled:

- Leave Approval
- Leave Rejection
- Attendance Correction Approval/Rejection
- Short Leave/Official Approval/Rejection
- Advance Overtime Approval/Rejection
- Shift Change
- Visit Request Approval Rejection

For details refer to [“Configuring Alert Messages”](#).

- **Email:** Configure the Email ID to be link with the System Account and to be mapped with the attributes received in the SSO response. After successful SSO configuration, through this Email ID the SSO User will be able to login.

The following Alerts will be triggered to the configured Email, to the System Admin / “On Behalf System Account User” if the application is done by them and the final verdict for the same is received provided in these Alert Configurations, for the parameter **Send Alert To**, the **System Account** check box is enabled:

- Leave Approval
  - Leave Rejection
  - Attendance Correction Approval/Rejection
  - Short Leave/Official Approval/Rejection
  - Advance Overtime Approval/Rejection
  - Shift Change
  - Visit Request Approval Rejection
- **Enable API Access:** Select this check box allow the System Account user to use an *Application Programming Interface* (API) to access or update the COSEC database. While accessing COSEC through API you will need to enter the API login credentials for devices as mentioned in Global Policy.
  - **Report Export Output In PDF Only:** Enable this check box to restrict exporting reports to the PDF format only. This will prevent risks of data manipulation using any other output format.

### Login Via Active Directory

This feature will be active only if the same parameter is also enabled at the Global system level (*Admin module > System Configuration > Global Policy > Login*). Select the check box to enable system account users to login using their Active Directory credentials.

Enter the Active Directory **Username**. For eg: admin123

Specify the **Domain** name. For e.g. if the domain name is matrix.com the domain name is specified as: dc=matrix,dc=com.

Click the **Default Domain** button to set the domain name as saved in Global Policy configuration.

### Set Launch Page

The user who accesses only one particular page in COSEC on a daily basis can be assigned that page as the launch page i.e. when the user logs into COSEC; the launch page will directly appear.

**Module:** Select the Module from the drop down list whose page is to be set as launch page.

**Page:** Select the page belonging to the selected module which will directly appear after login into COSEC.

Click **Save** button.

1. If a page is set to Launch page; then afterwards if the page view rights are made disabled or the respective Module rights are enabled to “Hide” then selection of Module and Page will get reset to default.

2. If Customized report is set to Launch page; then afterwards if the customized report is being deleted then selection of Module and Page will get reset to default.

## Assigning Group-Wise Rights

The administrator can assign all or specific enterprise groups to each login user. The login user will then have access rights only to the user records belonging to the assigned group.

To assign group-wise rights,

- Under **System Accounts**, expand the **Group-Wise Rights** collapsible panel as shown below.

Group-Wise Rights

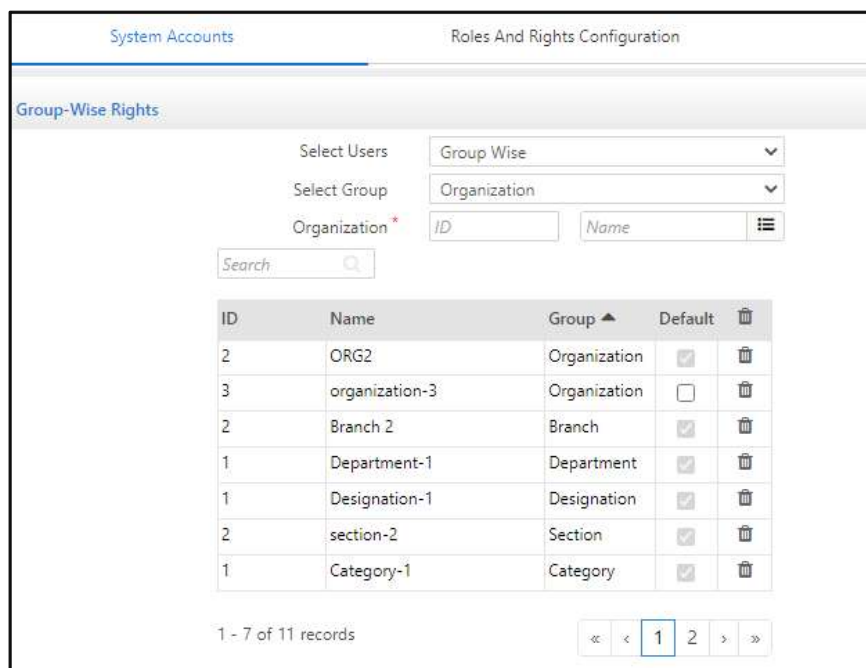

Select Users: Group Wise

Select Group: Organization

Organization \* ID Name

**Select Users:** Select the desired option — **All** or **Group Wise**.

- Group Wise:** To specify users based on the selected enterprise group using a picklist.
  - All:** To select all active users on the system.
- Select Group:** If **All** is selected, then the default enterprise groups will be assigned as per the assignment in the Enterprise Module.  
If **Group Wise** option is selected, select the desired enterprise group from the drop-down list — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

System Accounts Roles And Rights Configuration

Group-Wise Rights

Select Users: Group Wise

Select Group: Organization

Organization \* ID Name

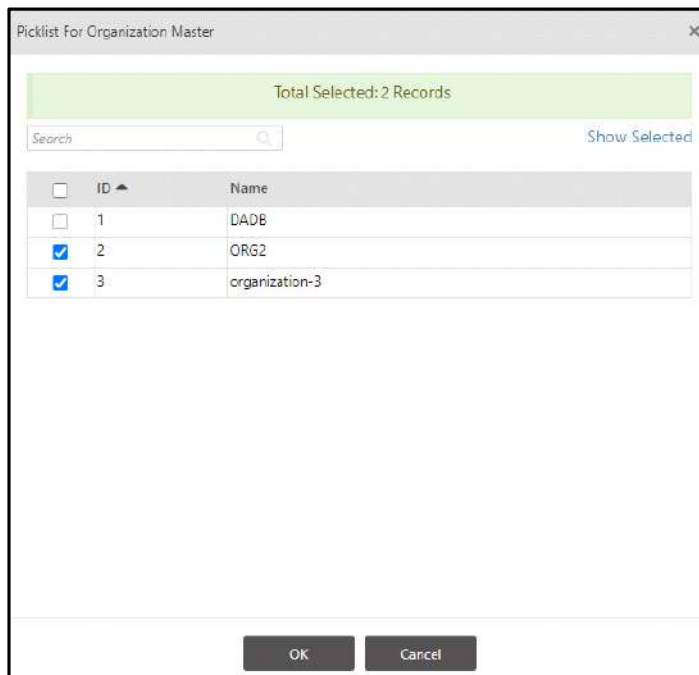

Search

ID	Name	Group	Default	
2	ORG2	Organization	<input checked="" type="checkbox"/>	
3	organization-3	Organization	<input type="checkbox"/>	
2	Branch 2	Branch	<input checked="" type="checkbox"/>	
1	Department-1	Department	<input checked="" type="checkbox"/>	
1	Designation-1	Designation	<input checked="" type="checkbox"/>	
2	section-2	Section	<input checked="" type="checkbox"/>	
1	Category-1	Category	<input checked="" type="checkbox"/>	

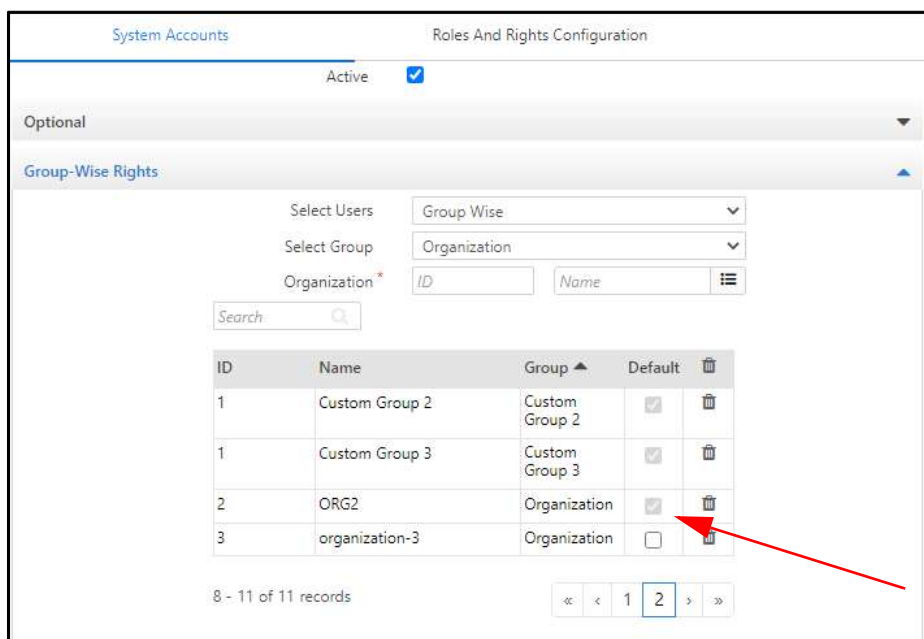

1 - 7 of 11 records

« < 1 2 > »

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

Click **OK**.

If there are multiple options available in each group, you can also set the default option as per your requirement.

For example: If you have 3 organizations — ORG1, ORG2 and ORG3, then ORG1 will be assigned as default. If you wish to set ORG3 as default, select the corresponding check box under Default.

The SA User will have rights to these groups only. New users created using his/her SA login, will be assigned these groups as their default groups.

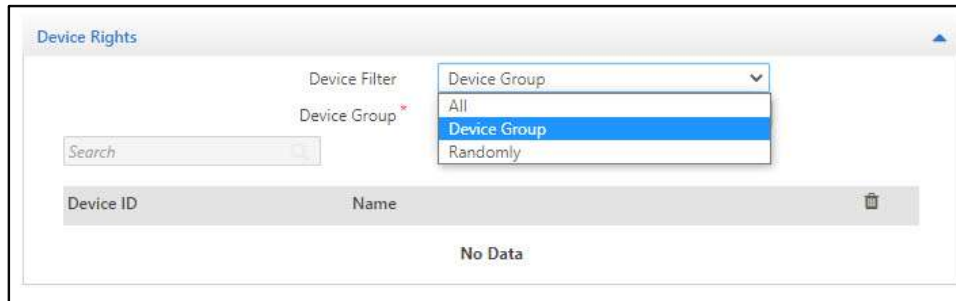

- These selected groups get displayed in the grid below the parameters. If required they can be deleted also by clicking on **Delete** icon.

## Assigning Device Rights

A login user can also be assigned rights to access only selected devices or device groups on COSEC.

To do this,

- Under **System Accounts**, expand the **Device Rights** collapsible panel as shown below.

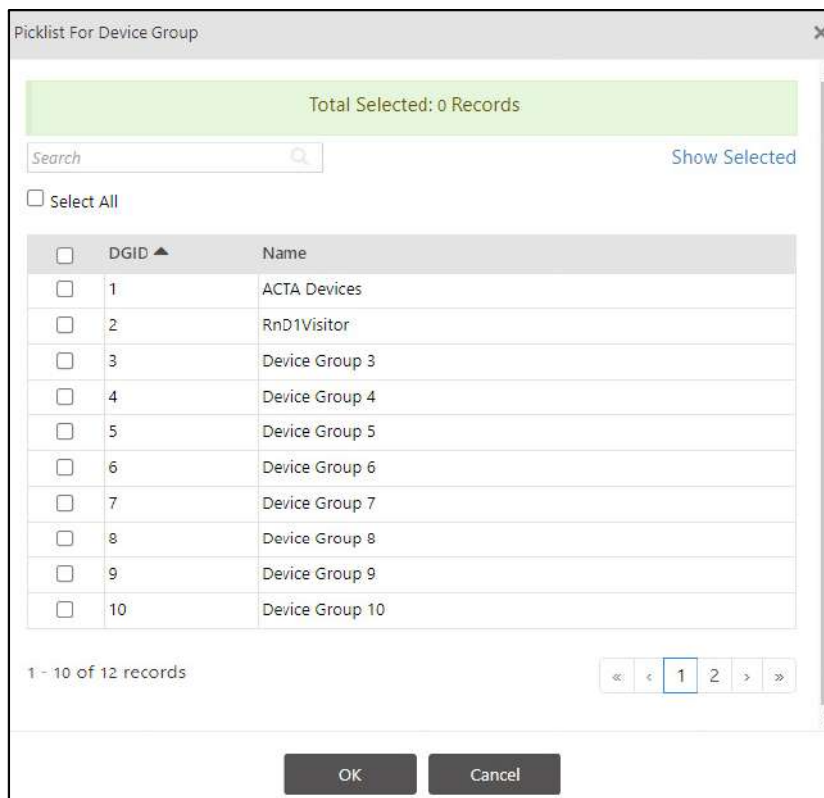

The screenshot shows the 'Device Rights' window. It has a 'Device Filter' dropdown menu with options 'All', 'Device Group', and 'Randomly'. The 'Device Group' option is selected. Below the dropdown is a search bar. At the bottom, there is a table with columns 'Device ID' and 'Name', and a 'No Data' message.

- Device Filter:** Select the desired option — All, Device Group, Randomly — from the drop-down list.
- Device/Device Groups:** Based on the option selected in the Device Filter select the devices/device groups using the picklist for which the rights are to be assigned.

If you select Device Groups as the Device Filter,

- Click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

The screenshot shows the 'Picklist For Device Group' pop-up window. It has a search bar and a 'Show Selected' button. Below the search bar is a table with columns 'DGID' and 'Name'. The table lists 10 device groups. At the bottom, there is a pagination control showing '1 - 10 of 12 records' and a '1' button. There are 'OK' and 'Cancel' buttons at the bottom.

DGID	Name
1	ACTA Devices
2	RnD1Visitor
3	Device Group 3
4	Device Group 4
5	Device Group 5
6	Device Group 6
7	Device Group 7
8	Device Group 8
9	Device Group 9
10	Device Group 10

- You can either select particular Device Groups or can select all the Device Groups at once.

- To select particular Device Groups, select the check boxes of the desired Device Groups.

<input checked="" type="checkbox"/>	10	Device Group 10

1 - 10 of 12 records

« < 1 2 > »

OK Cancel

- Click **OK**.
- The selected Device Groups appear in the grid.

The screenshot shows a window titled 'Devices' with a tab labeled 'Assign'. Below the tab, there are input fields for 'Device Group', 'ID', and 'Name'. A search bar is also present. Below these, there is a table with the following data:

DGID ▲	Device Group Name	
1	ACTA Devices	
2	RnD1Visitor	
3	Device Group 3	
4	Device Group 4	

- You can also delete the desired device group. To do so, click **Delete** of the respective Device Group.
- Similarly, if you select **Randomly** as the Device Filter, click the **Device** picklist. The **Picklist for Panel and Direct Doors** pop-up appears. To proceed, follow the steps as mentioned under Device Groups.
- Click **Save** button.

*Predefined System Account Login Roles (SA, SE or SO) are non-editable.*

Once the user is created, the password for ESS User can be reset by clicking on **Reset ESS Password** button located in the toolbar. On clicking the button a message stating **Password Reset Successfully** gets displayed on the screen.

## On Behalf System Account User

If in a certain scenario a user/worker is not able to access the system and subsequently fails to apply for a leave application, attendance correction or any other similar requests, in that case the On Behalf System Account User will be able to do so for that user/worker.

The On Behalf System Account User will have rights equivalent to that of a System Admin to execute the desired request of a User/Worker. You can modify the Roles and Rights assigned to this user as per your requirement.

To create the On Behalf System Account User follow the steps mentioned under [“System Accounts”](#) and for the roles and rights to be assigned to this user, refer to [“Roles and Rights Configuration”](#)

The On Behalf System User can either further the request of the application to the respective RIC or, the request can be considered for auto approval depending on the **Auto Approve** check box selection in Admin> [“Roles and Rights Configuration”](#).

The On Behalf System User can perform the following:

- [“Attendance Correction Application”](#)
- [“Short Leave/Official IN-OUT Application”](#)
- [“Advance Overtime Application”](#)
- [“Leave Application/Approval”](#)
- [“Tour Application/Approval”](#)
- [“C-OFF Application/Approval”](#)
- [“Manual Correction”](#)
- [“Field Visit Correction”](#)
- [“Time Sheet Correction”](#)
- [“Pre-Registration”](#)
- [“Shift Change Application/Approval”](#)

If the application are done by the On Behalf System User and the application’s final verdict is received then an Alert will be triggered to the On Behalf System User based on Alert Configuration done for below mentioned alert:

- Leave Approval
- Leave Rejection
- Attendance Correction Approval/Rejection
- Short Leave/Official Approval/Rejection
- Advance Overtime Approval/Rejection
- Shift Change
- Visit Request Approval/Rejection

Make sure you have configured the desired number in Mobile Number in [“Optional”](#) parameters as well as the desired Alert parameters. For details, refer to [“Configuring Alert Messages”](#).

## Roles and Rights Configuration

Login Roles can be created in COSEC and each role can be assigned rights by the system administrator to access and perform specific functions in the COSEC Web Application or COSEC Desktop Apps. To do this,

- Under **System Accounts**, click the Role pick-list button in the **New/Edit** mode or click the **Role Configuration** tab as shown in the screen below.

### Page Right

Menu	Parent Menu	View	Add	Edit	Delete	Print	Auto Approve

- **Role:** Enter a name for the Login Role.
- **Copy Right As Per:** If role rights are to be copied from another role then select a created role using the picklist button. **E.g.** If a new role Employee is created and the Copy Right As Per value is SA. Then all the rights of SA are copied to Employee. So, now even Employee role has the same rights as SA role.

After you select the desired option in Copy Right As Per, if required you can manually change/modify the View, Add, Edit Delete, Print or Auto Approve options for the desired Module's Menu options.

- **Module:** Select a module from the drop-down list for which rights are to be assigned to the Login Role.
- Select the type of rights to be assigned to the role from **Page Rights**  / **Module Rights**  /

**Application Rights**  section by clicking on the respective icons.

- Further, as per the selected rights you can assign the View, Hide, Add, Edit, Delete, Print and Auto Approve login rights to the login role by selecting the respective check boxes against each function.
- **Auto Approve:** Select this check box, if you want the applications made by the On Behalf System Account User to be pre-approved. Clear this check box if you want the applications made by the On Behalf System Account User to be sent to the respective RIC for approval. To know more about On Behalf System Account User, refer to [“On Behalf System Account User”](#)

If no role rights are assigned to a system account, for a particular module (say, Leave Management), user can check the **Hide Module** option to hide this module from the login user's view for the same system account.

- Click **Save** button.

- All saved Login Roles can be viewed in the list on the left hand side. One can also search a login role using **Search Role** field.

## Module Rights

The screenshot shows the 'Roles And Rights Configuration' window. On the left, there is a 'System Accounts' list with 'System Administrator', 'System Engineer', and 'System Operator'. The 'System Administrator' role is selected. The main area displays a table of 'Module Rights' for this role. The table has columns for 'Module Name', 'Hide', 'View', 'Add', 'Edit', and 'Delete'. The 'Hide' column has checkboxes, and the other columns have checkboxes or checkmarks. The 'Module Rights' tab is active.

Module Name	Hide	View	Add	Edit	Delete
Admin	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Access Control	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Time and Attendance	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Leave Management	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Visitor Management	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Shifts and Schedules	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Enterprise Structure	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

1 - 10 of 14 records

If you select the Hide check box of any Module then that Module will not be visible on the Home page of COSEC Web, however its reflections in other Modules will be visible. For example if you select the Hide check box for Visitor Management, then Visitor Management will not be visible on the Home page but the Visitor Management tab in the User > User Configuration will be visible.

If you want to remove any Module and its reflections from COSEC Web, it can be done from the COSEC Admin Portal > Company Configuration > License and Services. For details, refer to the Admin Mgt Portal User Guide

## Application Rights

The screenshot shows the 'Roles And Rights Configuration' window. On the left, there is a 'System Accounts' list with 'System Administrator', 'System Engineer', and 'System Operator'. The 'System Administrator' role is selected. The main area displays a table of 'Application Rights' for this role. The table has columns for 'Application Name', 'View', 'Add', 'Edit', and 'Delete'. The 'View' column has checkboxes, and the other columns have checkboxes or checkmarks. The 'Application Rights' tab is active.

Application Name	View	Add	Edit	Delete
Cosec	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Below the table, there is a section for 'Login Rights' and 'Rights Type'.

Application Name	Login Rights	Rights Type
COSEC Enroll	<input checked="" type="checkbox"/>	System Administrator
COSEC Monitor	<input checked="" type="checkbox"/>	System Administrator
COSEC Alert	<input checked="" type="checkbox"/>	System Administrator
COSEC VMS	<input checked="" type="checkbox"/>	System Administrator
COSEC Identification Server	<input checked="" type="checkbox"/>	System Administrator
COSEC Visitor Portal	<input checked="" type="checkbox"/>	System Administrator

# Defining Global Policies

---

Global Policies are general administrative policies that are applicable all across the COSEC system and define the governing parameters for all COSEC system account users. In COSEC, the system administrator has the rights to define such general system policies as per the organization's norms, practices and requirements. The different sets of policies that COSEC allows the administrator to configure are:

- *"Basic Policy"*
- *"User Policy"*
- *"Login Policy"*
- *"Password Policy"*
- *"Device"*
- *"Access Control Policy"*
- *"Time Attendance Policy"*
- *"Reports Policy"*
- *"Visitor Management Policy"*
- *"CWM"*
- *"Job Costing"*
- *"Field Visit Management"*
- *"ESS"*
- *"SSO Configuration"*
- *"Face Recognition"*

To define Global System Policies,

1. Go to **Admin module > System Configuration > Global Policy**
2. Configure different global system policies as described in the following sections.
3. Once all policies are defined as per requirement, click **Save**  button.

## Basic Policy

These policies govern the general working of the COSEC system.

To configure Basic Policy, go to **Admin module > System Configuration > Global Policy > Basic** and the following screen appears.

The screenshot shows the 'Global Policy' configuration window with the 'Basic' tab selected. The window has a sidebar on the left with a list of policy categories: Basic, User, Login, Password Policy, Device, Access Control, Time Attendance, Reports, Visitor Management, CWM, Job Costing, Field Visit Management, ESS, SSO Configuration, and Face Recognition. The main content area is divided into several sections:

- Create Activity Log:** A checkbox that is checked.
- Auto Login To COSEC Monitor:** An unchecked checkbox.
- System Date Format:** A dropdown menu showing 'dd/mm/yyyy'.
- Change Background:** A section with a 'Background' label and a preview image of a world map.
- Google API Key:** A section with a 'Get Location Details' checkbox (unchecked) and an 'API Key' text input field.
- General Data Protection Regulation:** A section with a 'Personal Data Protection' checkbox (unchecked) and a 'Custom Fields' checkbox (unchecked) with an information icon.
- Note:** A text note stating: 'Note: It is advisable to take backup of Database before updating value of Personal Data Protection.'
- Data Protection Manager:** A section with a form containing fields for Name, Designation, Organization Name, Organization Address, Email ID, and Contact No. Below these fields is a 'Privacy Policy' label with a download icon.

The parameters for configuring this system policy are as follows:

- **Create Activity Logs:** Select to enable the system to create and maintain an audit trail of all login user activity. The audit trail will have details of the login user id, activity date, activity time, key field information and activity description. Wherever applicable, it will also have the old and new values of the edited parameters.

To know more about viewing *Activity Logs*, go to *Admin Module > Views/Logs > Activity Log*.

- **Auto Login to COSEC Monitor:** Enable to allow users to directly login to the Desktop Monitoring application without going through the login process, once they login to the COSEC Web application.

When this check-box is disabled and **SO** login is inactive (default on installation) then on direct login of COSEC monitor utility, following warning will be displayed. clicking on OK will allow to login through **SA** account.

- **System Date Format:** Set the system date format as per the site requirements from the dropdown list.

## Change Background

- **Background:** To change, download or remove the background of COSEC Web pages, click on background image. The pop up will open. Browse and select the image to be uploaded and Save from the toolbar. The uploaded image will be applied to the background of Web.

## Google API Key

- **Get Location Details:** Select this checkbox to perform Reverse Geo Coding, which is a process of converting a latitude and longitude coordinates into corresponding street address or human readable address using Google Maps. To perform Reverse Geo Coding process, refer [“Get Location Details”](#)
- Enter the **API Key** for displaying location on Google map. The maximum characters for API key are 100.

*For additional security and privacy while using Google API, COSEC supports Proxy Server Configuration. For more details, refer to [“Proxy Server Configuration”](#)*

## General Data Protection Regulation

General Data Protection Regulation (GDPR) aims in providing safety and privacy to users<sup>1</sup> data. They limit the access to the users personal data.

By enabling GDPR, the personal information of the users will be masked and the data will be encrypted, accordingly a dummy image shall be displayed in place of the user's profile picture.

1. Users include Workers and Visitors also.

The following will be able to View/Edit/Add data:

- System Administrator whether System defined or User defined having the roles and rights of the System Administrator.
- OR**
- System Administrator whether System defined or User defined having rights of View as well as Add/Edit for User Configuration, Worker Profile as well as respective rights of the pages of the Visitor Management Module.
- For details, refer to [“GDPR Reflections”](#).

Contact No

Privacy Policy

**Personal Data Protection:** Select the checkbox to impose **General Data Protection Regulation**.

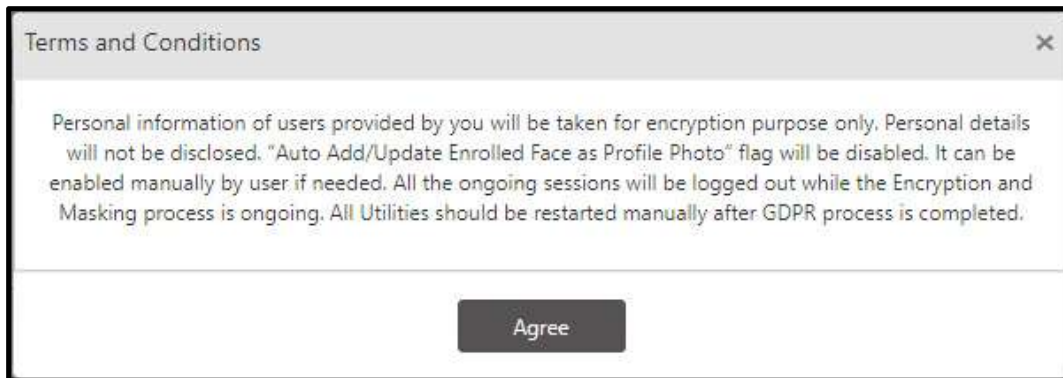

*Make sure while enabling/disabling GDPR all the services are running successfully.*

*Before proceeding with the GDPR process (before enabling), make sure you have taken the backup of the existing database. Refer to Manage Database in the Admin Mgt Portal User Guide.*

*If you take the backup of the data after enabling GDPR and after the GDPR process is completed, the backup database will be encrypted. We recommend you to take the backup before enabling GDPR.*

A pop- up stating necessary **Terms and Conditions** appears. Select **Agree** to proceed.

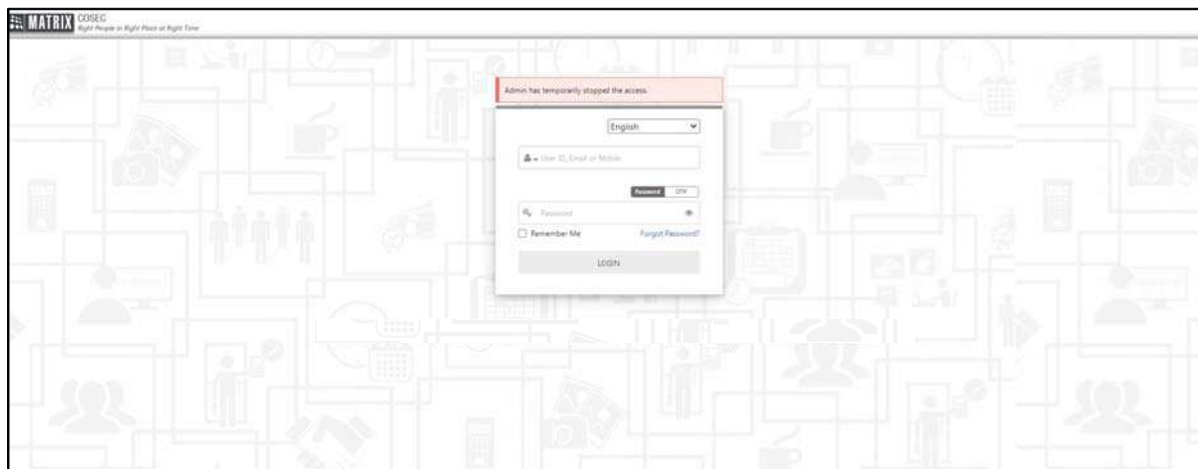

You will be re-directed to the **Session Timeout** page.

To re-login, click on the **Click Here** link.

The following screen appears, if the masking/encryption process is in-progress.

Else, you will be able to login successfully using your credentials and you can continue configuring the GDPR parameters.

*Make sure the login details are correctly entered, else login will fail.*

*It is recommended to restart the IIS, all the services and utilities for swift functioning on successful completion of GDPR Process.*

If you encounter a failure during the GDPR Process, the screen will display the error message “Processing Failed. Kindly contact Administrator.” or if the GDPR process remains in in-progress state for a prolonged period, there is a provision to Reset the GDPR Process. For details, refer to Company Configuration > Profile > Reset Personal Data Protection Process Flag in the **Admin Mgt Portal User Guide**.

**Custom Fields:** Select the check box if you desire masking the personal data provided in the customized fields.

*The custom fields masking will be applicable to Users, Visitors and Contractors.*

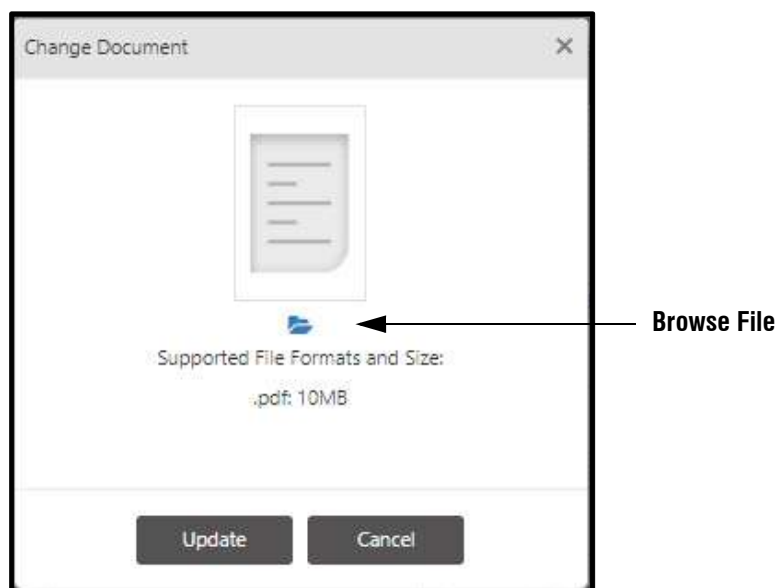

## Data Protection Manager

You need to update the details of the Data Protection Manager in this section

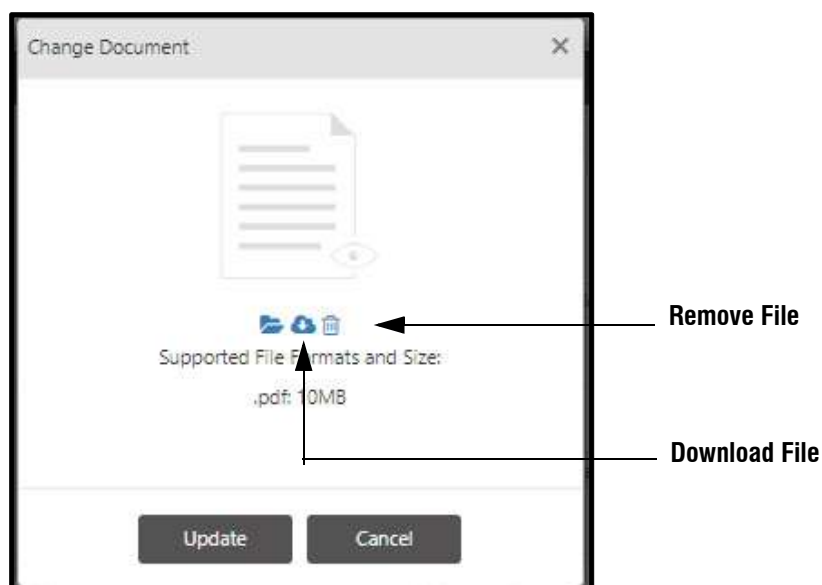

The screenshot shows a web form titled "Data Protection Manager". It contains several input fields for configuration: "Name", "Designation", "Organization Name", "Organization Address", "Email ID", and "Contact No". Each field has a corresponding text input box. Below these fields is a "Privacy Policy" label followed by an "Upload" icon (a small square with an upward arrow). The form is enclosed in a black border.

- Configure the **Name**, **Designation**, **Organization Name**, **Organization Address**, **Email ID** and **Contact No** of the Data Protection Manager.
- You can upload the **Privacy Policy** if you desire. To do so, click **Upload**  icon. The **Change Document** pop-up appears as shown below.

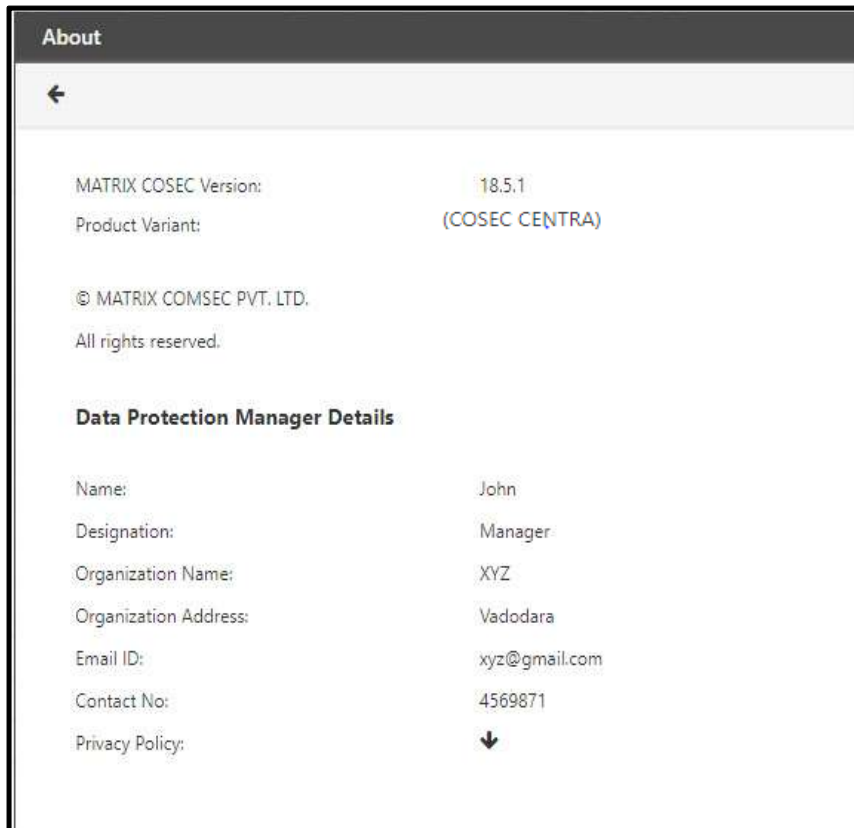

- Click **Browse File**  and select the desired file as per the supported formats and size from your local PC.
- Click **Update**.

- After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.
- To download the uploaded file, click **Download File** .
- To remove the uploaded file, click **Remove File** .

- Then click **Update**.
- Click **Save**

The details of the Data Protection Manager will be displayed in **About**. To view the details, click the **About**  icon on the top bar. To know more, refer [“Using COSEC Web Application”](#)

Enabling GDPR will have an impact on the various modules. For details, refer to [“GDPR Reflections”](#).

For specific module details refer to the links mentioned below.

- [“User Module”](#)
- [“Contract Worker Management”](#)
- [“Time and Attendance”](#)
- [“Visitor Management Module”](#)

To know more about GDPR reflections in Enroll Utility refer, COSEC Enroll User Manual.

*Masking will not be applicable for the VMS Web Portal and VMS Utility, only relevant data will be encrypted.*

*Masking will not be applicable for CSS Web Login as well as ESS/RIC Login, only relevant data will be encrypted.*

*For ESS/RIC user login, the data will be encrypted and as per the relevant user login the relevant fields will be visible.*

*For Host user login, relevant data will be masked as well as encrypted. Refer to the ESS manual for details.*

## User Policy

These policies define the credential limitations for users.

To configure User Policy, go to **Admin module > System Configuration > Global Policy > User** which is shown in next page.

User policy consists of:

- *“Minimum Age Requirement for Users”*
- *“Job Costing”*
- *“Sensor Calibration”*
- *“QR Scan Feature”*
- *“Generate User ID”*
- *“Custom Fields”*
- *“Temperature and Symptoms Configuration”*
- *“Invite User”*

The screenshot shows the 'Global Policy' configuration window with the 'User' tab selected. The left sidebar lists various policy categories. The main content area is divided into sections: 'Basic' (Save FP Image, Template Per Finger, Maximum No. of Fingers, Fingers On Device Per User, Maximum No. of Palm Templates, Palm Templates On Device Per User, Maximum No. of Faces, Self-Enrollment Retry Count, Auto Add/Update Enrolled Face as Profile Photo), 'Minimum Age Requirement for Users' (Date of Birth Mandatory, Minimum Age), 'Job Costing' (Job Assignment Level), and 'Sensor Calibration' (Fingerprint Security Level - Suprema, Fingerprint Security Level - Lumidigm, Fingerprint Fast Mode, Palm - False Rejection Ratio).

The screenshot shows the 'Global Policy' configuration window with the 'User' tab selected. The left sidebar lists various policy categories. The main content area is divided into sections: 'Job Costing' (Job Assignment Level), 'Sensor Calibration' (Fingerprint Security Level - Suprema, Fingerprint Security Level - Lumidigm, Fingerprint Fast Mode, Palm - False Rejection Ratio), 'QR Scan Feature' (Add/Update User/Worker through Aadhaar Scan, Aadhaar No. Mandatory), 'Generate User ID' (Auto Generate User ID, ID Format, Numeric Value Length, Zero Padding is required), 'Custom Fields', 'Temperature and Symptoms Configuration', and 'Invite User'.

The parameters available under User Policy are:

- **Save FP Image:** Enable the check box to store the source of your **FP templates** to avoid re-enrollment in case of changes in FP template format.
- **Template Per Finger:** Select the number of template copies to be stored at the DOOR Controllers for each enrolled finger from the drop-down list.

In the event of selecting the Dual Template/Finger option the Door Controllers would maintain an additional copy of the enrolled finger template, which would be updated as and when a change is detected in the fingerprints of the users.

*After making changes to this parameter the administrator needs to use the Restore Finger Print Template option from the Configuration tab of the COSEC Monitor application and restore the FPs to all the PANELs and DIRECT Doors.*

- **Max No. Of Fingers:** Select the number of fingerprint templates that can be enrolled per user and stored in COSEC database from the drop-down list. One can select maximum 10 fingers.
- **Fingers On Device Per User:** Based on the configured max no. of fingers, select the number of finger templates that will be sent to each device per user. This parameter limits the device to enroll not more than the set number of finger templates.

When the parameter “Fingers on Device per user” is changed, a pop-up is displayed giving a warning message to understand the necessary follow up step needed to be done later.

- **Max No. Of Palm Templates:** This field determines the number of palm templates that can be enrolled per user and stored in COSEC database. You can select maximum 10 palm templates.
- **Palm Templates On Device Per User:** Based on the configured max no. of palm templates, select the number of palm templates that will be sent to each device per user from the drop-down list. This parameter limits the device to enroll not more than the set number of palm templates.
- **Max No. Of Faces:** This field determines the number of Face templates that can be enrolled per user and stored in COSEC database. The valid range for Max No. Of Faces is 1-30.
- **Self-Enrollment Retry Count:** Specify the maximum retry count for self-enrollment. The user gets locked, if the retry count exceeds the limit.
- **Auto Add/Update Enrolled Face as Profile Photo:** Enrolled Image of a User/ Worker/ Visitor can be set as the Profile Photo automatically on successful Face Enrollment.

Select the **Auto Add/Update Enrolled Face as Profile Photo** check box to set User/ Worker/ Visitor Profile Photo automatically.

If the check box is disabled, then only Manual Photo Upload method will be applicable to set Profile Photo for the User.

#### For System Administrator:

- The system will consider the enrolled face image located at index number 0 of Enroll / VMS Utility to set it as Profile Photo.
- So to update an Enrolled face as Profile Photo, first delete the previously enrolled face image located at index number 0 via Enroll/ Visitor Utility and enroll a new image at the same location.

## Minimum Age Requirement for Users

Minimum Age Requirement for Users			
Date of Birth Mandatory	<input checked="" type="checkbox"/>		
Minimum Age	<input type="text" value="0"/>	Year(s) <input type="text" value="0"/>	Month(s)

- **Date of Birth Mandatory:** Select the check box if you wish to make the configuration of Date of Birth parameter compulsory in the User Configuration page.
- **Minimum Age:** If you select Date of Birth Mandatory check box, configure the Minimum Age limit in years and months. Any User Profile below this age will not be created.

## Job Costing

Job Costing	
Job Assignment Level	<input type="text" value="Department"/>

- **Job Assignment Level:** Selecting an Enterprise Group here will affect Site and Enterprise Group mapping in the **Job Costing And Processing** module. The group selected in *Global Policy* will be applicable to Enterprise Group-specific job assignment on the Site-mapping page.

## Sensor Calibration

User Identification can occur from COSEC Enroll application or it can occur on the back end via Identification Server. From the desktop applications, identification is done using an API. To manage all qualities of FP/Palm template, sensor calibration fields must be configured from the Global Policy.

Sensor Calibration	
Fingerprint Security Level - Suprema	<input type="text" value="Level 4"/>
Fingerprint Security Level - Lumidigm	<input type="text" value="High"/>
Fingerprint Fast Mode	<input checked="" type="checkbox"/>
Palm - False Rejection Ratio	<input type="text" value="Normal"/>

These below fields enable to improve the probability of finding the correct user match for an FP template in cases where there fingerprint mismatch occurs.

- **Fingerprint Security Level- Suprema:** You can select the security level for suprema sensor from the options of Level1 to Level7. The False Acceptance Ratio (FAR) varies as per the selection of levels.
  - For Level 1: FAR is below 1%

- Level 2: Below 0.1%
  - Level 3: Below 0.01%
  - Level 4: Below 0.001%
  - Level 5: Below 0.0001%
  - Level 6: Below 0.00001%
  - Level 7: Below 0.000001%
- **Fingerprint Security Level- Lumidigm:** You can select the security level for Lumidigm sensor from the options of Lowest to Highest. The default value of security level is set to High.
    - Lowest
    - Low
    - Normal
    - High
    - Highest

If the user is enrolling via Suprema, then Fingerprint Security level- Suprema will be considered for Enroll Utility and VMS Utility.

If the user is enrolling via Lumidigm, then Fingerprint Security level- Lumidigm level will be considered for Enroll Utility and VMS Utility.

1. If existing user has set the security level  $\leq 5$ , then the user will continue with existing security level.
2. If existing user has set the security level  $> 5$ , then security level will be set to "Highest" in Fingerprint Security level - Lumidigm drop-down.

- **Fingerprint Fast Mode:** Select to enable the fingerprint fast mode. This mode will then be used to identify the user from a template. It will also be considered when Verification button is clicked from desktop application (Enroll) or when Identification feature is involved via Identification API.
- **Palm-False Rejection Ratio:** Select the option as Normal, Highest, High, low or lowest. In COSEC Enroll Palm Identification method will use the value of FRR configured in Global Policy.

## QR Scan Feature

This feature allows user to enable the Aadhar Card scanning facility in order to fill up the required details while configuring the users and workers.

**QR Scan Feature**

---

Add/Update User/Worker through Aadhaar Scan ☒

Aadhaar Number Mandatory ☐

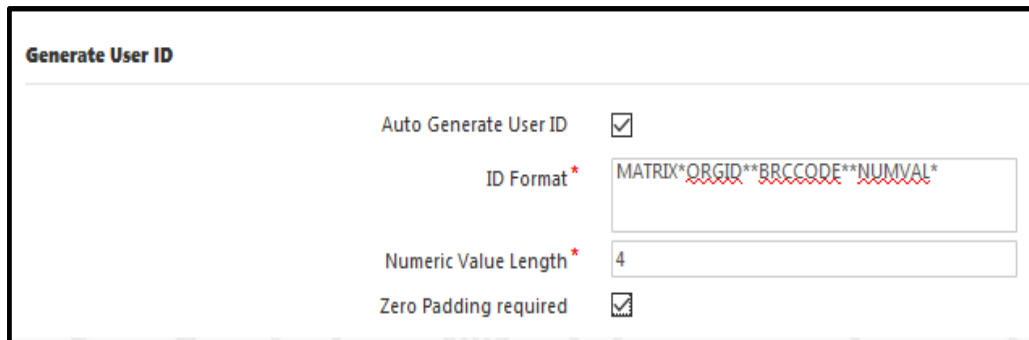

- **Add/Update User/Worker through Aadhaar Card:** By enabling the check-box, an option for scanning of the 'Aadhar Card QR Code' at user/worker configuration page will become visible.
- **Aadhar Number Mandatory:** Enable the check-box to make the 'Aadhar Card QR Code' scanning mandatory for the configuration of new users.

*In CSS module, 'Worker Assignment from CSS' option must be checked On to enable the QR Scan feature for the configuration of CSS Workers.*

## Generate User ID

You can configure the required format of the User ID and accordingly, the User ID will be generated automatically while configuring a new/temporary user. The format can be configured as shown below.

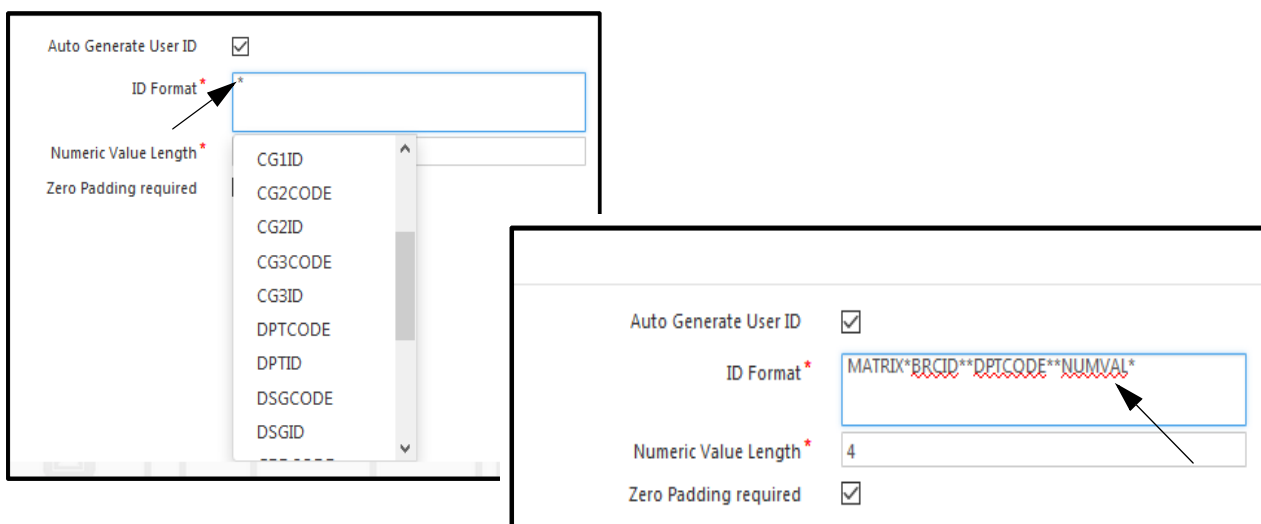

The screenshot shows the 'Generate User ID' configuration form. It includes the following fields and values:

- Auto Generate User ID:** ☒
- ID Format:** MATRIX\*ORGID\*\*BRCCODE\*\*NUMVAL\*
- Numeric Value Length:** 4
- Zero Padding required:** ☒

- **Auto Generate User ID:** Select this check box to generate User ID automatically for the configuration of new/temporary users. If disabled, then you need to enter the User ID manually.
- **ID Format:** Configure the required format of the ID by selecting the 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user.

To select the different format for the ID, enter \* in **ID Format** box and the drop-down list containing different Value formats appears as shown below. Select the desired format from the drop-down list.

 The NUMVAL (Numeric Value) is mandatory to be selected.

The first screenshot shows the 'ID Format' field with an asterisk (\*) and a dropdown menu open, displaying a list of available formats: CG1ID, CG2CODE, CG2ID, CG3CODE, CG3ID, DPTCODE, DPTID, DSGCODE, and DSGID. The second screenshot shows the 'ID Format' field with the configured format: MATRIX\*BRCID\*\*DPTCODE\*\*NUMVAL\*

The drop-down list contains different formats for; Branch Code (BRCCODE), Organization Code (ORGCODE), Branch ID (BRCID), Department ID (DPTID), Numeric value (NUMVAL) etc. You can select the multiple formats, each time you need to enter \* and then select the desired format.

Example: As shown in above image, the fixed value 'MATRIX' is entered as a company name, BRCID and DPTCODE is selected which can vary as per the assigned 'Branch' and 'Department' for new configured users. The NUMVAL is selected which will provide a unique 'Numeric number' at the end of the ID.

Now, on the user configuration page while configuring the new user, the Branch is assigned as 4 (Waghodia) and the Department is assigned as Documentation.

So, once the user is configured and saved, the unique User ID “**MATRIX4DOC1**” will be generate and assigned automatically. Here, **MATRIX4DOC1**, that is **Fixed Value**, **Branch ID**, **Department Code**, Numeric Value.

*Numeric Value for each User ID will generate as per the next available number.*

- **Numeric Value Length:** Enter the desired number of digits from 1 to 15 till which the ‘NUMVAL’ must be generated. For example: 4
- **Zero Padding Required:** Select this check box to allow the prefixing zeros before the ‘NUMVAL’ value. For example, if the Numeric value length is configured as 4 and the number assignment starts from a single digit then as explained in above example, the new user id to be generated is ‘MATRIX4DOC1’ if Zero Padding is enabled, it will generated as ‘MATRIXDOC0001’.

Click on the **Save** button to save the configuration.

## Custom Fields

- **Field Name 1 - 10:** These are fields that can be customized as per your requirements (e.g. ID Proof, Security Number etc.). These field names will later be available for user/worker configuration on the COSEC Web as well as for ESS application (only for Users). These can also be used for third party integration purposes. The Field Names can be upto 20 alphanumeric characters (space, -, . and “comma” allowed).

Custom Fields						
Field No.	Active	Field Name	Type	Upload	Mandatory	
1	Yes	Security Number	Textbox	Yes	No	
2	Yes	ID Proof	Textbox	Yes	Yes	
3	Yes	Nominee Name	Textbox	No	Yes	
4	Yes	Field 4	Textbox	Yes	No	
5	No	Field 5	Textbox	No	No	

- **Field No:** It displays the serial number and order of the field.
- **Active:** Select the check-box for this field to be visible in User/ Worker Profile.
- **Field Name:** Enter the desired Name. For example: Security Number.
- **Type:** Select the desired type of the field—Textbox and Date.
- **Upload:** Select the check-box if the configured field requires a provision to upload a document.
- **Mandatory:** Select the check-box for this field to be mandatory.

You can always edit this custom field by clicking the **Edit**  button.

Custom Fields							
Field No.	Active	Field Name	Type	Upload	Mandatory		
1	<input checked="" type="checkbox"/>	Spouse Name	Textbox	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
2	Yes	Spouse Birthdate	Date	Yes	No		
3	Yes	Aadhar No.	Textbox	Yes	No		
4	Yes	Field 4	Textbox	Yes	No		
5	No	Field 5	Textbox	No	No		

Click on the **Ok**  button and the pop-up appears.

Confirmation

Changing the 'Type' of the custom field will result in permanent loss of custom field data of all Users. Field will be set to default values. Do you want to continue?

Click the **Yes** button to save the configuration else click the **No** button.

The configured custom fields for Users will be visible in the **Users> User Configuration> Profile> General**.  
The configured custom fields for Workers will be visible in the **CWM> Workers> Worker Profile> Profile> General**.

## Temperature and Symptoms Configuration

You can configure the temperature and symptoms parameters with this feature.

Users need to declare their Health parameters from their ESS login. These will be displayed under Users> Utilities> Health> Health Declaration.

For ESS/Mobile Application users the Health Module will be visible only if the user is assigned the right for the **Health Records** and **Self Declaration** pages. For details, refer to [“ESS Role Rights”](#).

The admin can modify the health parameters displayed in [“Health”](#). The parameters displayed are those as declared by a user from Users> Utilities> Health> Health Declaration from their ESS login. According to this, an Alert will be sent to the user as well as a Warning message will be displayed to the user, if required.

If you disable both the **Enable** check boxes, that is Temperature Configuration and Symptoms Configuration, the following will not be visible:

- Health tab under Users> Utilities
- Health tab via ESS login of user.
- Health module on APTA Dashboard.
- [“Temperature Logging”](#) section under [“Settings - VEGA as Direct Door”](#).
- [“Temperature Logging”](#) section under [“Settings”](#) for [“ARGO Door”](#).
- [“Temperature Logging”](#) section under [“Settings - Direct Door”](#) for [“ARGO FACE Door”](#).

*Temperature Logging in Devices is dependent only on the Temperature Configuration check box.*

However, if you disable only Temperature Configuration, then you will only be able to view the Symptom details of the users from Users> Utilities> Health> Health Declaration as well as users will be able to declare only their Symptom status via ESS login and vice versa is applicable.

User will be notified by an Alert if the declared temperature and/or symptoms value is equal to or exceeding the predefined threshold values. Alerts will be generated for a user only if it is configured in Admin > System Configuration > Alert Message Configuration. The Alerts are as follows:

- Select Alert Filter as Users and Event as Health Declaration Pending.
- Select Alert Filter as Users and Event as Exceeding Health Declaration Parameters.
- Select Alert Filter as Users and Event as User Allowed- Threshold Temperature Exceeded.
- Select Alert Filter as Users and Event as User Denied- Threshold Temperature Exceeded.

For details, refer to [“Configuring Alert Messages”](#).

To configure the Temperature and Symptoms,

Click the **Temperature and Symptoms Configuration** collapsible panel.

## Temperature Configuration

The screenshot shows the 'Global Policy' configuration window. On the left is a sidebar with various policy categories: Basic, User (selected), Login, Password Policy, Device, Access Control, Time Attendance, Reports, Visitor Management, CWM, Job Costing, Field Visit Management, ESS, and SSO Configuration. The main area is titled 'Temperature and Symptoms Configuration'. It contains two sections: 'Temperature Configuration' and 'Symptoms Configuration'. In 'Temperature Configuration', the 'Enable' checkbox is checked, 'Temperature Unit' is set to 'Fahrenheit (°F)', and 'Temperature Threshold' is set to '99.5'. In 'Symptoms Configuration', the 'Enable' checkbox is unchecked. Below this is a table of symptoms: 'Fever', 'Cough', and 'Difficulty in Breathing'. Each symptom has edit and delete icons. A 'Symptoms Threshold' dropdown is set to 'Any one'. At the bottom, the 'Warning Message' section shows a message: 'Health declaration parameter exceeded threshold. Consult the Doctor'.

By default the temperature parameters are disabled for configuration. Configure the following parameters if you wish to use this feature:

- **Enable:** Select this check box to enable.
- **Temperature Unit:** Select the desired unit — Fahrenheit, Celsius — for the temperature.
- **Temperature Threshold:** You need to define the maximum threshold value above which the system will generate a warning message and an alert will be sent to the user, if configured.

For Example: The specified Temperature Threshold = 99.8 Fahrenheit and if the user's self declared value is equal to or greater than 99.8 Fahrenheit, then a warning message and an alert will be generated.

## Symptoms Configuration

By default the symptoms parameters are disabled for configuration. Configure the following parameters if you wish to use this feature:

- **Enable:** Select this check box to enable.
- To add the desired symptoms, click **Add**  .
- Enter the **Symptom Name**, for example Fever.
- Click **OK**  to save the assigned name or click **Cancel**  to discard.

This symptom appears in the Grid.

- You can edit the configured Symptom if required. To do so, click **Edit**  of the respective symptom and make the changes.
- If you wish to delete the symptom, click **Delete**  of the respective symptom.

Similarly, other symptoms can be added.

- **Symptoms Threshold:** If you have configured multiple symptoms, select the desired options — Any one, Any two or All.

As per the Symptoms Threshold option selected, the symptoms will appear for users in order to declare their health status from their ESS login.

A warning message and an alert will be generated if the number of symptoms declared by the user is equal to or greater than the predefined symptoms threshold.

**Warning Message:** By default a message is provided, but the same can be customized if required. This warning message will be displayed to the users when they are self declaring their Health status from their ESS login, if their declared temperature and symptoms parameters exceeds the predefined threshold values.

## Invite User

Invite User enables you to pre-determine the information that you need to collect from the on boarding employees prior to their physically joining the organization. To know more refer [“Invite User”](#), Users>Utilities> Invite User.

After you determine the parameters a link will be sent to the on boarding employee to collect the information. To determine the desired parameters:

- Click **Invite User** collapsible panel.

Parent Name	Field Name	Active	Mandatory
Basic	Profile Photo	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Basic	Name	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Basic	Full Name	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Basic	Short Name	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Basic	Face Image	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
General	Date of Birth	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
General	Joining Date	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
General	Vehicle Registration No.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
General	Driving License	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
General	Passport No.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

- **Link Expiry:** Enter the number of days after which the link will expire.
- A list of default parameters that will be sent to the on boarding employee will be displayed. You can customize the parameters as per your requirement.
  - Select the respective **Active** check boxes of the desired parameters. Only Active parameters will be visible in the link.
  - If you wish to make the parameter compulsory, select the **Mandatory** check box.
  - Here, you can also add customize fields as per your requirement. Refer to [“Custom Fields”](#). (Admin module > System Configuration > Global Policy > User > Custom Fields)

## Login Policy

These policies define the time till which the users can login to the system.

To configure Login Policy, go to **Admin module > System Configuration > Global Policy > Login** and the following screen appears.

Following are the parameters for configuration under Login Policy:

Login Policy ☒

Maximum Days Allowed Without Login \* 0

Restrict ESS Local Login ☐

Login Via SSO ☐

SSO Certificate (.pfx) Choose File No file chosen ⓘ

Password \*

Login Via Active Directory ☒

Secure Connection ☒

Active Directory Server Address \* 192.168.103.55 636

Domain Name \* DC=matrixsv,DC=acta

Enable Notification ☒

RSA Key Size 512 Generate Key

Modulus 2DORRZ5uhdTkeQB4f2KYw+4eYwBsf3VomxpZ7YrBPpyNQk/7d9Mc371KJ+PJrsX/o9wl5KGcEhKEIF5KNaLX3qcKEVOz1bh0n5lwHSi2+fg9/C9CWx53R

Exponent AQAB

Login Authentication Mode Password OR OTP

- **Login Policy:** Enable to allow administrator for enforcing the login policy for the system. If enabled the system will limit the period for which the user does not login to the system.
  - This period is specified in the **Maximum Days allowed without Login** parameter. If the user does not have successive logins within the period as specified then the user account is disabled.
- **Restrict ESS Local Login:** Select this check box to restrict the ESS Local Login for the Users via Web as well as the application (APTA).
- **Login via SSO:** Select this check box to enable the user to login into the ESS via SSO and/or for the System Account User to login via SSO. Configure the following parameters:
  - **SSO Certificate (.pfx):** Click **Choose File** and select the certificate to be uploaded from the local PC.
  - **Password:** Enter the password for accessing the certificate.

For Login via SSO to function, make sure you have configured the parameters — ACS Endpoint and ACS Logout Endpoint under IDP Configuration. For details of the SSO and IDP parameter configurations, refer to [“SSO Configuration”](#).

*The System Administrator will not be able to Login via SSO in APTA.*

- **Login Via Active Directory:** Select this check box, to enable ESS enabled users to login using their active directory credentials for COSEC Centra.
- **Secure Connection:** Select this checkbox to enable secure connection with the Active Directory Server.
- **Active Directory Server Address:** Specify the IP Address or the network name of the Domain Controller along with the port number, if configured.
- **Domain Name:** Specify the domain name here. For e.g. if the domain name is matrix.com the domain name is specified as: dc=matrix,dc=com.
- **Enable Notification:** Select this checkbox to enable notifications to be sent to a user on ESS.
- **RSA Key Size:** Specify the Key size to generate a public encryption key for securely sending credentials from a third party application using RSA encryption (for *Direct Login to ESS*). Select the key size from the dropdown list and click the **Generate Key** button to generate the public key **modulus** as shown below.

RSA Key Size	512	Generate Key
Modulus	2DORRZ5uhdTkeQB4f2KYw+4eYwBsf3VomxpZ7 YrBPpyNQk/7d9Mc371KJ+PJrsX /o9wI5KGcEhKEIF5KNaLX3qcKEVOz1bh0n5IwHSi2 +fg9/C9CW53RJPc/sF+BNr	
Exponent	AQAB	

*The higher the RSA Key Size, the more secure is the transmission.*

*Once a new key is generated from this page, all data that was encrypted using the previous key, will not be decrypted.*

- **Login Authentication Mode:** Select the option to allow users to login into system via Password, Password OR OTP or Password Then OTP.

Login Authentication Mode
Password OR OTP
Password
Password OR OTP
Password Then OTP

If **“Password OR OTP”** or **“Password Then OTP”** is selected; then you must configure OTP generated Alert in Alert Message Configuration to get OTP on SMS and or Email. And hence SMS Configuration and or Email Configuration must be done.

- **Skip OTP:** You can select the number of times for which OTP will be skipped when **“Password Then OTP”** is selected.

Login Authentication Mode	<input type="text" value="Password Then OTP"/>
Skip OTP	<input type="text" value="2"/> (times)

## Password Policy

This page allows to define policies for password.

To configure Password Policy, go to **Admin module > System Configuration > Global Policy > Password Policy** and the following screen appears.

- **Password Security Policy:** Enable to enforce the Application user to change password after the expiry of configured period as specified in the **Password Reset Period (Days)** field. Default: Disabled.
- **Password Reset Period (Days):** Configure the number of days after which you want to enforce the user to change the password. Default: 0.
- **Lock Account For Invalid Attempts:** By default this check box is selected, that is, the user's account will be locked after a certain number of consecutive failed login attempts.

- **Maximum Invalid Attempts:** Specify the maximum number of invalid attempts after which the account should get locked for the time specified in **Auto Unlock Timer**. Valid range is 1-15. Default: 5

If Login Authentication Mode is set as Password or OTP/ Password Then OTP in Global Policy> Login tab; then Invalid Login Attempts count will be incremented when wrong password or wrong OTP is entered. When this count reaches the value configured in **Maximum Invalid Login Attempts** then the account will be locked.

- **Auto Unlock Timer (Min):** Specify the time in minutes after which the locked user account will be automatically unlocked or you can request the system administrator to reset the password. Valid range is 0-999. Default: 15.

*While configuring **Auto Unlock Timer (Min)**, do not specify the value as 0. If you specify the value as 0, the account will be permanently locked and to unlock the account you will have to contact the **Support Team**.*

- **Maximum OTP Generation Attempts:** Specify the maximum number of invalid attempts to re-generate/ resend OTP for Forgot Password, Login and/or Password Setting. Valid range is 0-15. Default: 10.

*If the value of **Maximum OTP Generation Attempts** is configured as 0, then users will have infinite OTP generation attempts.*

- **Resend OTP After (Min):** Specify the time in minutes after which the user will be able to re-generate/ resend OTP. Valid range is 1-999. Default: 15.
- **Deny Password Reuse:** By default, this check box is selected, that is, the users is restricted from setting a new password that is same as a specific number of previously used passwords.
- **Reuse Count for System Account Users:** Specify the count of previously used passwords for System Account users. E.g.: If Reuse count for a System Account user is set to “3”, then a new password cannot be same as either of the last three used password. Default: 5.
- **Reuse Count for ESS Users:** Specify the count of previously used passwords for ESS users. E.g. if Reuse count for an ESS user is set as “2”, then a new password cannot be same as either of the last two used passwords. Default: 0.
- **OTP Authentication For Setting Password:** Select to enable OTP authentication for setting password. If enabled, the ESS user has to go through OTP Authentication for setting password while logging in for the first time into his/her ESS account.

### Process

Ensure that Email ID / Mobile Number of the ESS user is configured in the Contact Details of User Configuration. And Receive Alerts on Mobile/Email is enabled.

The Alert Message Configuration for SMS/Email for System Alert Event “OTP Generated” must be enabled. For details, refer to [“Configuring Alert Messages”](#).

To receive OTP on SMS, make sure you have configured SMS setting and to receive OTP on Email, make sure you have configured Email Setting The Alert service must be started for sending Email and SMS notification. For details, refer to [“SMS Configuration”](#) and [“Email Configuration”](#).

*If you upgrade the system to V20R09, then the value of all the above parameters will be the same as set by you (SA) before upgrade.*

## System Account User Password Strength

- **Minimum Required Characters:** Specify the minimum character count that is mandatory for setting a new password for any user account. Valid range is 5 to 45. Default: 6
- **Security Level:** There can be 3 security levels allowed for setting a password:
  - **Low:** No restriction. All characters are allowed in password.
  - **Medium:** 1 lowercase (a-z) character and 1 number (0-9) mandatory in password.
  - **High:** 1 uppercase (A-Z) character, 1 lowercase (a-z) character, 1 number (0-9) and 1 special character (`~!@#\$%^&\*()-=\_+[]\{}|;':",./<>?) mandatory in password.**Default: High**

*The values of these parameters will be applicable when you (SA):*

- *set the Password for the first time on the Login page.*
- *access Account Settings > Password Settings > New Password.*

*If you upgrade the system to V20R09, the values of the parameters under **System Account User Password Strength** as well as **ESS/CSS User Password Strength** will be the same (Minimum Required Characters and Security Level) as set by you (SA) before upgrade.*

## ESS/CSS User Password Strength

- **Minimum Required Characters:** Specify the minimum character count that is mandatory for setting a new password for any user account. Valid range is 5 to 45. Default: 6
- **Security Level:** There can be 3 security levels allowed for setting a password:
  - **Low:** No restriction. All characters are allowed in password.
  - **Medium:** 1 lowercase (a-z) character and 1 number (0-9) mandatory in password.
  - **High:** 1 uppercase (A-Z) character, 1 lowercase (a-z) character, 1 number (0-9) and 1 special character (`~!@#\$%^&\*()-=\_+[]\{}|;':",./<>?) mandatory in password.**Default: High**

*The values of these parameters will be applicable when the ESS/CSS User:*

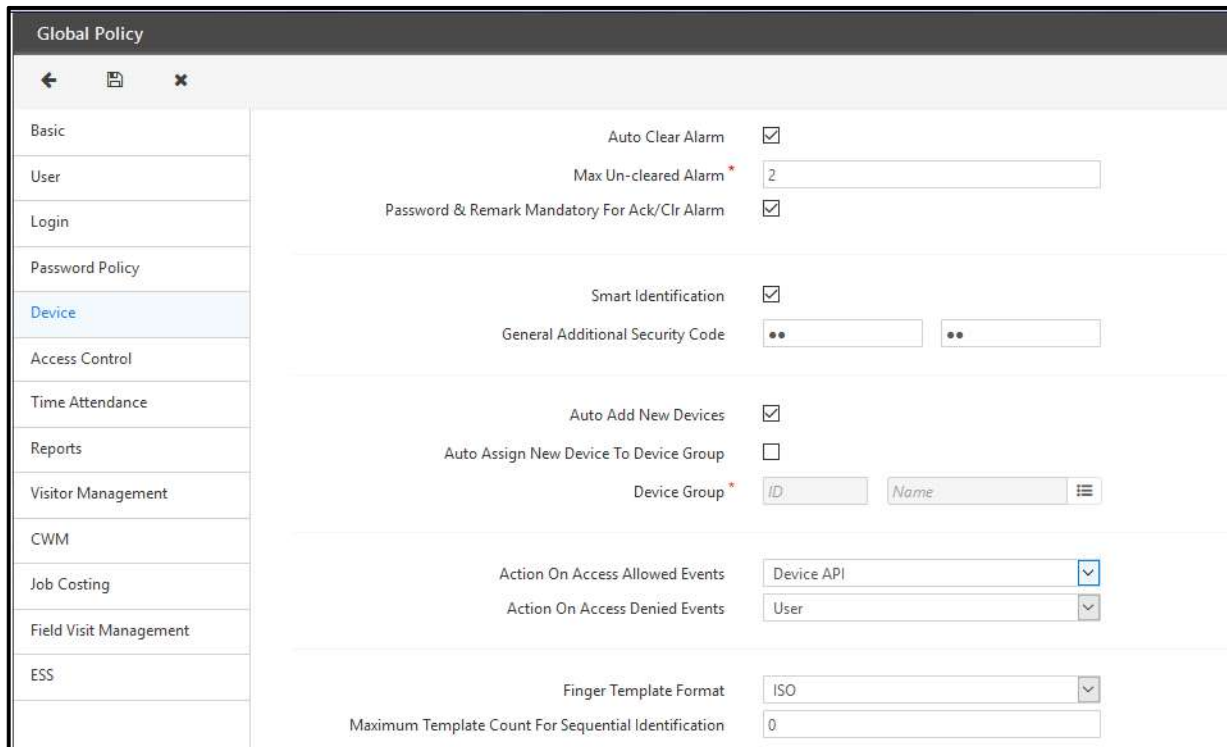

- *sets the Password for the first time on the Login page.*
- *access Account Settings > Password Settings > New Password.*
- *set/change Password via API.*

*If you upgrade the system to V20R09, the values of the parameters under **ESS/CSS User Password Strength** as well as **System Account User Password Strength** will be the same (Minimum Required Characters and Security Level) as set by you (SA) before upgrade.*

## Device

This page allows to define policies for device.

To configure Device Policy, click **Admin module > System Configuration > Global Policy > Device** and the following screen appears.

**Global Policy**

Basic | User | Login | Password Policy | **Device** | Access Control | Time Attendance | Reports | Visitor Management | CWM | Job Costing | Field Visit Management | ESS

Auto Clear Alarm ☒

Max Un-cleared Alarm \* 2

Password & Remark Mandatory For Ack/Clr Alarm ☒

Smart Identification ☒

**FTP Server Details for Firmware Upgrade**

Server Firmware Location

Username

Password

**API Login Credentials for Device(s)**

System Account ID

Password

**Auto Clear Alarm:** Select this check box, if you wish to Auto Clear the Alarms triggered on the devices connected into the system.

**Maximum Un-cleared Alarm:** Specify the number of Alarms which will be kept uncleared on the devices connected into the system.

Let us understand this with an example:

The number of **Maximum Uncleared Alarm** is set at 2 and total devices connected are 10. Any device alarm gets activated and after sometime the second device alarm also gets activated. Now, when any third device alarm gets activated, then the first device alarm will get deactivated automatically.

**Password & Remark Mandatory For Ack/Clr Alarm:** Enable this option if password and remark is to be provided mandatory for acknowledging or clearing an alarm.

**Smart Identification:** Select to enable the Smart Identification (SI) functionality at the system level. Under this functionality, users defined in the system are assigned smart cards by enrolling at the [“COSEC Enrollment station”](#). Access to these users is granted based on the information written on the smart cards.

**General Additional Security Code:** To take the security level a step higher, an Additional Security Code can be added. This Additional Security Check is possible only with Smart Cards which will prevent the duplicacy of card and restrict unauthorized access to the facility. Configure the Additional Security Code (ranging from 1 to 65535) and Re-enter the code to confirm.

*SI and ASC feature will work independently.*

*However, the user needs to ensure that the functionality is enabled at the device level. It is essential to install either a Mifare or an HID i-Class serial reader at the Door devices for this functionality to work. SI users need not be assigned any devices and need to be enrolled from the COSEC ENROLL application only.*

#### COSEC Enrollment station

**Auto Add New Devices:** Enable to automatically add new devices on the COSEC system on first-time detection.

The devices will be added but will be inactive. To connect the device to the network enable the Active check box in Device > Device Configuration > Profile of the desired devices.

*When installing COSEC for the first time the **Auto Add New Devices** check box will be enabled automatically.*

*When the Auto Add New Devices check box is enabled, it may be possible that multiple MODE devices are added in the Server in inactive state. Admin will have to manually remove these devices if not required.*

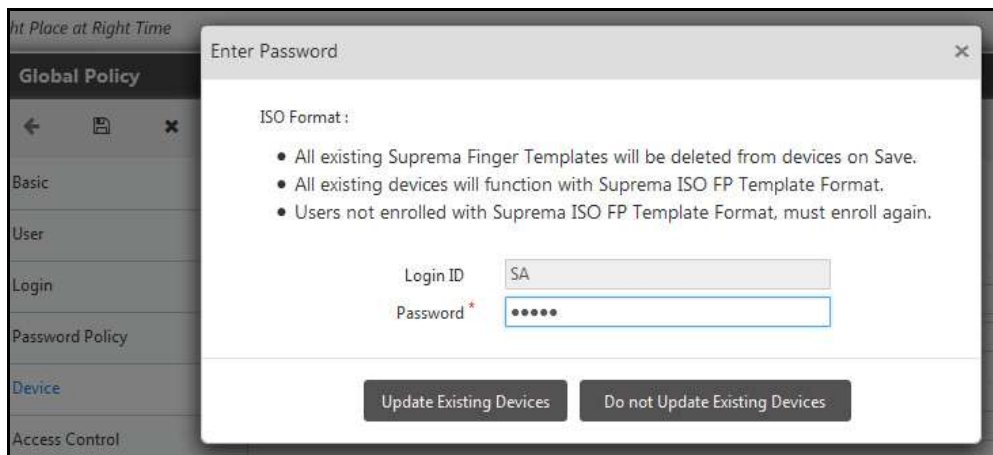

**Auto Assign New Device To Device Group:** Select to enable the system to automatically assign any auto-added device to a specified device group.

**Device Group:** Select and specify a device group by clicking the device group picklist button, to which the system can automatically assign auto-added devices.

**Action On Access Allowed Events:** Select the event types as **All, User, Devices API** whose occurrence will trigger actions as per IO Linking and Satatya Integration configuration defined in the COSEC Web Application. See *Device Configuration > Video Surveillance and Input/Output* for details.

**Action On Access Denied Events:** Select the event types as **All, User, Devices API** whose occurrence will trigger actions as per IO Linking and Satatya Integration configurations defined in the COSEC Web Application.

**Suprema/Lumidigm Finger Template Format:** COSEC Devices, by default, support a proprietary format for fingerprint templates. However, users also have the option to switch to the ISO format in Global Policy for saving templates. Changing from Proprietary to ISO format (and vice versa) will remove all existing fingerprint templates from the COSEC database and devices on saving, and finger enrollment for all users must be done again. Login credentials are required to save any changes in finger template format.

**Maximum Template Count for Sequential Identification:** This allows configuring Maximum Template Count on global level for all devices (PVR as Direct Door).

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

The Identification Server is connected to many device. At a time, many device will request the Server for identification and the response by the server will consume more time. So at a small installation site with less number of users; your device locally can respond for the Identification.

Specify the “Maximum Template Count for Sequential Identification” as the maximum number of templates upto which identification will be done locally through device after which request is forwarded to the Identification Server.

**Example:**

- Suppose 10 templates are stored at device, and “Max Template count for Sequential Identification” set value is 60. When user punches on device, his template will be identified locally from the device first. If he is not identified by 10 templates, then identification will be done from server.
- Suppose 10 templates are stored, and Max Value is 8. Then Identification is done through both device and server.

**Sync Device Time with Server Time:** This parameter enables the system to synchronize the system time of the COSEC Monitor computer with that of the connected devices. This is enabled by default.

**Run PVR Door in Guide Mode:** PVR doors can be used with or without hand guides, depending on which, the enrollment and identification of palm credentials vary. Hence, COSEC enables the system administrator to run the PVR in two modes, the Guide Mode and the Non-guide mode (default mode). Palm templates are saved and identified by the device differently, depending on the mode selected.

The **Run PVR Door in Guide Mode** check-box is available only to login users with system administrator rights. Enable this option to remove all existing palm templates from COSEC and for all future palm enrollment and identification to be performed in the Guide mode only. On saving this option, the system administrator will be prompted to enter his login credentials for authentication as displayed below.

Auto Assign New Device To Device Group ☒

Device Group \* 1 Device Group-RnD

Run PVR Door In Guide Mode ☒ All existing palm templates will be deleted. Palm enrollment must be done again for all users. Note : All PVR Doors will re-boot.

Enter Password

PVR Guide Mode :

- All existing palm templates will be deleted.
- Palm enrollment must be done again for all users.
- All PVR Doors will re-boot.

Login ID SA

Password \* .....

Update Existing Devices Do not Update Existing Devices

**Run PVR Door in Adaptive mode:** Enable the check-box to run the PVR door in an Adaptive mode. In this mode, the new enrolled 'Palm Templates' will allow to be saved into the 'Smart Card' for the enrollment type; 'Smart Card' / 'Biometric then Card', which is selected in **User module > Enrollment**. The users will then allow to be identified by their Palm Credentials through the smart card if configured.

*Mifare 4K smart card is mandatory for the Palm Template to be saved.*

*If 'Run PVR in Adaptive Mode' checkbox is disabled then also the previously saved (compressed) Palm Templates will remain present into the COSEC Server.*

**PIN Change Code:** Enter the PIN Change Code which will be used by the employees to change their own code.

Example: If PIN change code is 11 and employee code is 1220 which is required to be changed to 1320 then you have to enter 11 on device. Then you will have to enter old code as 1220 and new code as 1320. If new PIN is unique, then it will be updated.

**Security Key For Door Access Through API:** This is required, to get access on door through APTA/MODE Application. That is, it is required for authenticating the API.

**Allow Access Via QR:** If you wish to allow users to access the Device using QR code, select this check box. Now, when you add new devices, this check box will be enabled by default. This feature is applicable for ARGO FACE (Direct Door as well as Panel Door only). The addition of this feature will eliminate the need of connecting a Wiegand QR Reader separately for detecting QR Codes.

*It is supported in ARGO FACE Panel Door when connected with Panel200 in Server Mode only.*

For the QR Code functionality to work, make sure:

- you have generated the QR Code for the desired user, refer to [“Credentials”](#), Access Card 2.
- you have generated the QR Code for the desired worker, refer to [“Worker Profile- Credentials”](#), Access Card 2.
- enabled the Alert, so that the generated/re-generated QR can be sent to the desired users/workers using SMS/Email/WhatsApp. Make sure you select the Alert Filter as **Users** and Event as **User Access - QR Credentials**. For details, refer to [“Configuring Alert Messages”](#)
- you have enabled Allow Access Via QR in the desired ARGO FACE (Direct Door / Panel Door) device as well as configured the Image Setting parameters. For details refer to [“Face/Image Settings”](#).
- users will be able to use QR Code as credential when User/Visitor Access Mode is set as Any One, Card, Card + PIN or Card + Face.
- users will be able to use QR Code as credential when Mobile Entry/Exit Access Mode is set as Mobile then Card.
- users will be able to use QR Code as credentials (if enabled) for Special Functions, if the QR number is configured against a Card1/2/3/4.

## Template Syncing for Door FMX

The screenshot shows the 'Template Syncing For Door FMX' configuration window. At the top, there are two input fields: 'PIN Change Code' (masked with dots) and 'Security Key For Door Access Through API'. Below these, the title 'Template Syncing For Door FMX' is displayed. The main configuration area includes a 'Sync Type' dropdown menu set to 'Immediate', a 'Schedule Time' field set to '00:00', and a 'Schedule Days' section with checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, and Sat, all of which are checked.

**Sync Type:** Select the template sync type option as **Immediate** or **Scheduled**.

In **Immediate** option, the templates will get sync from server to device immediately with the enrollment. The user template will be identified immediately.

In **Scheduled** option, the templates will get sync from server to device based on the **schedule Time** and **Schedule Days**. The enrollment of the template will be done but the identification will be done once the template gets synced.

## FTP Server Details for Firmware Upgrade

The screenshot shows the 'FTP Server Details for Firmware Upgrade' configuration window. It contains three input fields: 'Server Firmware Location' with the value 'ftp://matrixtelecomsolutions.com', 'Username' with the value 'cosecforread', and 'Password' which is masked with dots.

**Server Firmware Location:** It is the location of FTP where device firmware files would be available for upgrade.

- For **COSEC VYOM**; default location is ftp://matrixtelecomsolutions.com.
- For **COSEC CENTRA** you can specify the desired FTP path. For this you have to create the folder structure for keeping Firmware files on FTP path. You must specify the URL path up- till COSEC\_ DEVICE folder. i.e. if your COSEC\_ DEVICE folder is at path ftp://192.168.107.15/Softwares/COSEC\_DEVICE then your URL would be ftp://192.168.107.15/Softwares

See "Example: Firmware upgrade from FTP" on page 1477. on Device Status page.

The folder structure for keeping Firmware files on FTP path is:

COSEC\_DEVICE\_NEW > GateController > CENTRA  
COSEC\_DEVICE\_NEW > NGT > CENTRA  
COSEC\_DEVICE\_NEW > PVR > CENTRA  
COSEC\_DEVICE\_NEW > FMX > CENTRA  
COSEC\_DEVICE\_NEW > WirelessDoor > CENTRA  
COSEC\_DEVICE\_NEW > V3 > CENTRA  
COSEC\_DEVICE\_NEW > V4 > CENTRA  
COSEC\_DEVICE\_NEW > VegaPanel200 > CENTRA  
COSEC\_DEVICE\_NEW > VEGA > CENTRA  
COSEC\_DEVICE\_NEW > V4 > CENTRA  
COSEC\_DEVICE\_NEW > PathV2 > CENTRA  
COSEC\_DEVICE\_NEW > ARCDC200 > CENTRA  
COSEC\_DEVICE\_NEW > VegaPanel200BLE > CENTRA  
COSEC\_DEVICE\_NEW > ARGO > CENTRA  
COSEC\_DEVICE\_NEW > ARGOFACE > CENTRA

*Before trying to Update Firmware for Centra (OnPremise Solution) above mentioned folder structure must be available on client side.*

*The file structure is Case Sensitive. So the folder structure must be created as specified.*

**User Name:** Enter the Username for accessing the FTP location in COSEC CENTRA. For COSEC VYOM default Username is cosecforread.

**Password:** Enter the password for accessing the FTP location in COSEC CENTRA. For COSEC VYOM default password is Cosec@341

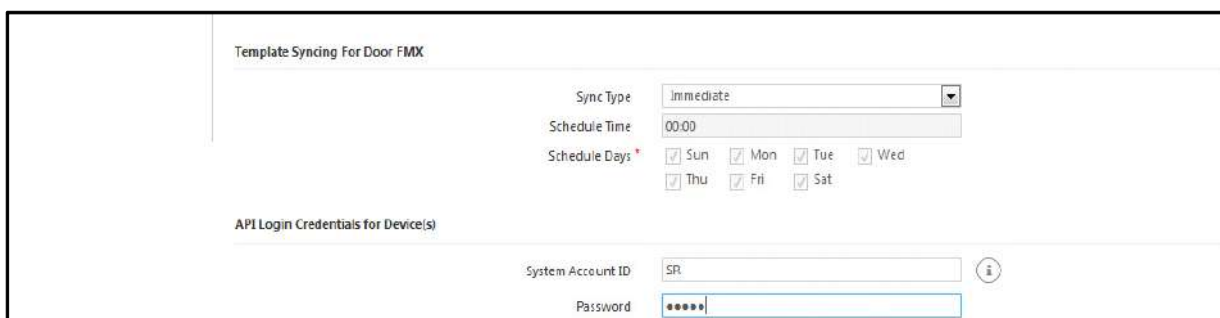

The valid values for above three fields are

**A-Z**

**a-z**

**0-9 !\"#\$%&'()\*+,-./:;<=>?@[\\]^\_`{|}~**

## API Login Credentials for Devices

This section enables to configure the API login credentials for the system account user and the same credentials can be used by devices. Only SA user can configure these parameters.

**System Account ID:** Enter the ID of system account type of user for whom API access is enabled. You can enable API access for a user from *Admin module > System Accounts > Optional*.

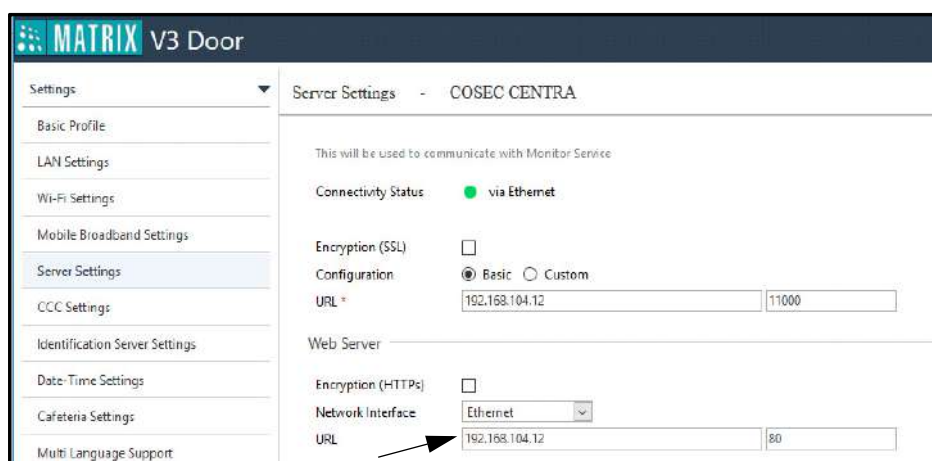

**Password:** Enter the password of the system account user with minimum 128 characters.

For APIs other than e-Canteen Account details; you have to enter the System Account ID and Password. Thus, whenever API is fired, if API's credentials don't match with the configured ID password in the global policy, then the request will get denied.

*If the System Account ID or Password are changed (refer "[Managing System Accounts](#)"), then these changes will not be reflected in API Login Credentials for Devices automatically. You need to update the changes manually.*

If System Account ID and Password are not entered, then only e-Canteen Account Details API will work. For getting Cafeteria Account details the URL of COSEC server must be specified in Web Server section of device webpage as shown below.

*In COSEC VYOM, Encryption in Web Server is must to enable to fetch the account details in API.*

## Access Control Policy

This page allows to define policies for access control.

To configure Access Control Policy, go to **Admin module > System Configuration > Global Policy > Access Control** and the following screen appears.

Global Policy

Basic

User

Login

Password Policy

Device

Access Control

Smart Card Based Access Route ☐

Access Route Type: Level 0 is lowest level

Smart Card Key Settings

Customize HID iClass Card Key ☐

16 Digit Hexadecimal Key

0 0 0 0 0 0 0 0

0 0 0 0 0 0 0 0

Auto Update Key Change On Cards ☐

Customize MIFare Card Key ☐

Card Type: Mifare 1K

Key Type: Global

12 Digit Hexadecimal Key

0 0 0 0 0 0 0 0

0 0 0 0 0 0 0 0

**Smart Card Based Access Route:** Select to enable access route based on smart card. For further configuration refer **Access Control Module > Smart Access > Smart Access Route** page

**Access Route Type:** If Smart Card Based Access Route is enabled, select the Access Route type as incremental by selecting **Level 0 is lowest level** and decremental by selecting **Level 0 is highest level**.

### Smart Card Key Settings

You can either use the default Matrix Key for Smart Cards or customize the Smart Card key. You can change the Smart Card key as many times as you want or revert to the default Matrix Smart Card key.

You can define two custom keys—one for HID and one for MIFare cards. To use a custom key, select the type of Smart card to be used and enter the desired key in hexadecimal digits.

#### Customize HID iClass Card Key

Customize HID iClass Card Key ☒

16 Digit Hexadecimal Key

E 6 G H F 6 C E

B C F D A 6 8 0

Check the box to enable HID iClass Card Key configuration.

Enter **16 Digit Hexadecimal Key** as a custom key which will be used for all the sectors of Card.

Select the **Auto Update Key Change On Cards** check box to update all Smart Cards with the new (custom) key, when they communicate with the devices connected with COSEC.

**Auto Update Key Change On Cards** checkbox will be enabled only if “Customize HID iClass Card Key” / and “Customize MiFare Card Key” checkbox is enabled.

### Customize MiFare Card Key

Check the box to enable Mifare Card Key configuration.

**Card Type:** You can select the Card type as **MiFare 1K** or **MiFare 4K**.

**Key Type:** You can select the Key type as **Global** or **Sector-Wise**.

#### For Global Key-Type:

All the sectors of card will be assigned same key.

Enter **12 Digit Hexadecimal Key** as custom key for the selected MiFare Cards.

#### For Sector-Wise Key-Type:

Smart cards are used for multiple purposes like storing user details for access control, his cafeteria details etc. So, in-order to ensure that all the information in card is not getting vulnerable to security threats like unauthenticated data access, different keys for different sectors of smart cards can be defined.

**Save Sector-Wise Keys in DB:** If this checkbox is **enabled**, configured sector-wise key sets will be saved in database and simultaneously sent to devices as commands.

If this checkbox is **disabled**, configured sector-wise key sets will not be stored in database but will be sent to devices as commands. If there are any old sector-wise keys in database, then it will be removed.

*If there are no keys saved in database, then COSEC Utilities (VMS, Enroll) will work with Default Keys for all the sectors. (FFFFFFFFFFFF).*

*Sector-wise configuration of keys in MiFare cards is supported in following Direct Doors: Wireless Door, Door V3, Door V4, NGT Direct Door, PVR Door, Vega Controller and Door FMX.*

## Configuring sector-wise keys for different sectors.

Customize MIFare Card Key ☒

Card Type

Key Type

Save Sector-Wise Keys in DB ☒

Search

Start Sector	End Sector	Key A	Read Using	Write Using	
8	12	D E 2 4 A 3 A F C 0 8 F	Key A	Key A	✓ ✕

**Start Sector:** Select the starting sector of card. If Card type selected is Mifare 1K; then you can select from 0 to 15 sectors for defining key. If Card type selected is Mifare 4K; then you can select from 0 to 39 sectors for defining key.

**End Sector:** Select the ending sector of card. If Card type selected is Mifare 1K; then you can select from 0 to 15 sectors for defining key. If Card type selected is Mifare 4K; then you can select from 0 to 39 sectors for defining key.

*The End Sector will be always greater than or equal to the option value selected in Start Sector.*

**Key A:** Enter the Custom key value in hexadecimal format (0 to 9 & A to F)

**Read Using:** This field displays Key A as default. The hexadecimal Key A will be used for reading the selected Mifare card.

**Write Using:** This field displays Key A as default. The hexadecimal Key A will be used for writing on the card.

1. If Key is kept blank, then the grid will show as blank for the corresponding key.

2. If previously key is defined for sector 0 to 10 and new key is defined for sector 8 to 12. Then the new key will be assigned to sector 8 to 12. And the previous key will be marked for sector 0 to 7. See below image.

3. If previously key is defined for sector 0 to 10 and new key is defined for sector 3 to 8. Then the new key will be assigned to sector 3 to 8. And the previous key will be marked for 0 to 2 and 9 to 10.

Customize MIFare Card Key ☒

Click **Add** button to save the key configuration to the grid. The newly defined keys for sector8 to 12 will be listed along with previously defined keys for Sector 0 to 7 as shown above.

## Time Attendance Policy

This page allows to define policies for time attendance.

To configure Time Attendance Policy, go to **Admin module > System Configuration > Global Policy > Time Attendance** and the following screen appears.

- **Auto Run Daily Process:** Select this checkbox for the system to run the daily attendance process automatically at 12:00 AM. The attendance status will be updated for the previous day only.

Example:

- Current Date and Day: 04/09/2021, Saturday (Week Off for users)
- **Auto Run Daily Process:** Enabled
- The system will run the daily process on 05/09/2021, Sunday at 12:00 AM.
- The attendance status of 04/09/2021, Saturday will be updated as WO.

### Attendance Process Calibration

These Attendance processing parameters can be calibrated to determine how a punch is posted in the COSEC system. These can be set by the administrator as per organizational preferences in terms of recording attendance behavior of employees. The parameters are as follows:

- **Max Early-IN Allowed (Hrs):** Maximum number of hours before shift-start time during which a punch should be considered as an Early-IN punch. Default value is 02:00 hours.
- **Max Late-OUT Allowed (Hrs):** Maximum number of hours after shift-end time during which a punch should be considered as a Late-OUT punch. Default value is 02:00 hours.
- **Priority:** This parameter assigns posting priority to an intermediate punch between two shifts. The administrator can determine whether such a punch is to be posted as an Early-IN punch for the next shift or a Late-OUT punch for the previous shift.
- **Max Working Hours Per Day (Hrs):** The maximum number of working hours to be considered per day for punch posting. All punches falling within this duration will be posted for the same day as per shift-based priority (if any). Default value is 16:00 hours.

If Attendance Process Calibration parameters are defined on both the Global Policies page and Attendance Policy page of Time and Attendance module, then only the Attendance Policy will be considered for a user.

The working of the Attendance Calibration parameters is explained below:

Assume the shift timing of an employee for the night shift from 19:30 hrs to 04:00 hrs.

Employee is entering the organization on 18<sup>th</sup> February at 19:31hrs and leaving at 04:30 hrs on 19<sup>th</sup> February, thus total working hours is 08:59 hrs.

**Scenario1:** With default parameters, The Punch 2 is in the Late out duration of the shift. So it will be posted on the same day(18th Feb).

**Scenario2:** If Late Out allowed is changed to 00:00 hrs, then the punch at 04:30 hrs comes under maximum working hrs. So OUT punch will be posted on the same day(18th Feb).

**Scenario3:** Now with Late Out allowed as 00:00 hrs and Max working hrs changed to 08:00 hrs, So according to the priority, punch at 04:30 hrs will be posted on next day(19th Feb) as IN punch.

If here, priority is changed to Late out, then punch at 04:30 hrs will be posted as OUT punch for same day(18th Feb).

When the user is assigned non-FB/RD shifts that end on FB/RD day, then in that case, process considers global policy parameters Max Early IN, Max Late OUT, Max Work Hours and priority with respect to Shift start-end time.

## Reports Policy

This page allows to define policies for reports.

To configure Reports Policy, go to **Admin module > System Configuration > Global Policy > Reports** and the following screen appears.

These report policies except 'Report Export Output in PDF only' will not have impact on the customized reports generated from Report builder.

If the checkbox "Report Export Output in PDF only" is enabled; then only PDF export option will be available in Report builder Export options.

**Sorting Field In Reports:** Select the option based on which the listing in the reports will be sorted in ascending order. The options available are: User ID and Name.

**Report Print Output:** Specify whether the report output is to be **Printed** on paper or as a **PDF** document.

**Report Font:** Select the font style from the drop down options in which the report is to be generated. If the selected font is not available then report will be generated in default “Courier New” font.

*Depending on the font style selected, the report may overlap or get misaligned.*

*In case of multi-lingual content, unsupported characters will be displayed as garbage values.*

**Report Export Output in PDF Only:** Select to restrict exporting reports to the PDF format only. This will prevent risks of data manipulation using any other output format.

**Show Company Logo:** Select to allow the “Company Logo” uploaded in “Enterprise Profile” page to be shown in the Reports.

For details go to *Admin Module > System Configuration > Enterprise Profile*.

## Visitor Management Policy

This page allows to define policies for managing visitors.

To configure Visitor Management Policy, select **Admin module > System Configuration > Global Policy > Visitor Management** and the following screen appears.

The screenshot shows the 'Global Policy' configuration window with a sidebar on the left containing various system settings. The main area is titled 'Visitor Management' and contains several sections: 'Authorization For Visitor Pre-Registration' (dropdown: Not Required), 'Authorization For Visitor Initiated Visit' (dropdown: Not Required), 'Send OTP For Verification' (checkbox: unchecked), 'Security Approval For Visitor E-Pass' (checkbox: unchecked), 'Required Visitor Acceptance' (checkbox: unchecked), 'Allow E-Pass Generation Before Duration' (input field), 'Alert for Pass Expiration After Duration' (input field), 'Dynamic PIN On Pass Creation' (checkbox: unchecked), 'PIN Length' (input field: 4), 'Access via QR' (checkbox: unchecked), 'Auto Profile Assignment' (checkbox: unchecked), 'Matching Level' (dropdown: Organization), 'Auto Device Assignment' (checkbox: unchecked), 'Visit Creation Restriction' (Minimum Days Before Allowing Visit: input field, Maximum Days Before Allowing Visit: input field, Apply Restriction On: dropdown: Both), 'Default Host User' (Host User: input field), 'Custom Fields' (Visitor Custom Fields: ID Proof 1, ID Proof 2).

- **Authorization For Visitor Pre-Registration:** When Visitor Pre-Registration request is initiated by host, it will be sent to the host's RIC for authorization.

Select the desired option from the dropdown list — Always, Not Required or When Visit Outside The Shift.

- **Always:** Select this option to always send all the Visitor Pre- Registration requests initiated by the host to the RIC for authorization.

All visit applications must be approved by the RIC irrespective of the visit time. That is, whether it is within or outside the shift timing of the host.

- **Not Required:** Select this option if you do not wish to send the Visitor Pre- Registration requests initiated by host to the RIC for authorization.
- **When Visit Outside The Shift:** Select this option to send all the Visitor Pre- Registration requests having visit time outside the shift timing of the host, to RIC for authorization.

If you select this option, Pre-registration requests within the shift timing of the host do not require approvals from the RIC.

An example with different cases is explained below for Visitor Pre-Registration initiated by both Host and Visitor. Refer [“Examples”](#).

For Visit Pre-Registrations, refer [“Pre-Registration”](#).

- **Authorization for Visitor Initiated Visit:** When a visit application is initiated by a visitor, it will be sent to the authorized host (of the visitor) for approval.

Once the host approves the visit application, this application will be sent to the host's RIC for authorization which depends on the option selected from the dropdown list.

Select the desired option from the dropdown list — Always, Not Required or When Visit Outside The Shift.

- **Always:** Select this option to always send all the visitor initiated visit applications (after the host authorizes) to the RIC for authorization.

All the visit applications must be approved by RIC irrespective of the visit time if it is within or outside the shift timing of the host.

- **Not Required:** Select this option if you do not wish to send the Visit application initiated by the Visitor for authorization to the RIC.
- **When Visit Outside the Shift:** Select this option to send all the visit requests having visit time outside the shift timing of the host to the RIC for authorization.

If you select this option, visitor initiated visit requests within the shift timing of the host do not require approvals from the RIC.

An example with different cases is explained below for Visitor Pre-Registration initiated by both Host and Visitor. Refer [“Examples”](#).

- **Send OTP for Verification:** If this checkbox is enabled, OTP will be sent to the visitor's mobile number for verifying the number provided by the visitor.

This is to verify that the visitor is genuine and the mobile number available in the system matches with the number of the visitor.

*The OTP Verification will be applicable only when Pass is created from VMS Utility.*

1. For Sending OTP to visitor, SMS configuration must be done in Admin module> System Configuration > SMS Configuration.
2. The OTP message alert must be configured from Alert Message Configuration by selecting “OTP Visitor Verification” event.
3. Visitor Service and Alert Service must be running for sending OTP.

Once this verification is done, visitor pass can be created from the VMS utility.

- **Security Approval for Visitor E- Pass:** Enable this Check-box if the Security Approval For Visitor E-Pass generation is required.
- **Required Visitor Acceptance:** Select this checkbox if the Visitor Acceptance is required.

If this checkbox is enabled then after approval of an appointment from RIC or system account user, appointment will be forwarded to visitor associated with appointment for the approval & Visitor Pre-Registration Alert will be dispatched to Visitor with approval links.

- **Allow E-Pass Generation Before Duration:** Enter the duration in minutes i.e. the duration before the system allows to generate Visit E-Pass. Only numeric value is allowed to enter upto 3 digits. Max Limit is 999 minutes.
- **Alert for Pass Expiration After Duration:** Enter the duration in minutes i.e. the duration after which the system generates an alert for visitor pass expiration. Only numeric value is allowed to enter up to 3 digits. Max Limit is 999 minutes.
- **Dynamic PIN On Pass Creation:** Select this checkbox to auto-generate a unique Dynamic PIN on Pass Creation for Visitor during his/her visit and assign this PIN to a Visitor Profile.

When **Dynamic PIN On Pass Creation** is enabled, then

- a. define the length of Dynamic PIN in **PIN Length**.
- b. during check-in, when Visitor Profile is assigned to a Visitor, then a Dynamic PIN as per set length will be auto-generated for the Visitor Profile.
- c. visitor will gain access to the devices assigned to that Visitor Profile via entering the Dynamic PIN.

If disabled, then PIN configured on Visitor Profile will be assigned to the Visitor during check-in.

To manually configure the PIN for Visitor Profile, refer "[Credentials](#)" under Visitor Profile.

- **Access via QR:** Select **Access via QR** checkbox to permit the visitor to access via QR Code.

During the check-in time of a visitor, when a Visitor Profile is assigned to a visitor, the Dynamic ID will be auto-generated and that Dynamic ID will be inserted in the QR Code which will be further added in the Visitor Pass Alert Message as well as in the visitor e-pass.

Dynamic ID will be set as the **Access Card 2** value for that Visitor Profile.

Once the Dynamic ID value is set in the **Access Card 2**, the **Access Card 2** will not be configurable from *Visitor Management> Visitor Profile> Credentials* and the **Card 2** will not be configurable from *Visitor Management> Utilities> Set and Sync Credentials> Credentials*.

When the visitor displays the QR Code in front of the device (with a Wiegand reader), the device scans the QR Code and check for the Dynamic ID inserted in the QR Code. If the Dynamic ID matches then the access is granted, else the access is denied.

Access will be denied if the visitor tries to access the device before/after the visit duration.

In any case, if the Dynamic ID is not generated or the **Access via QR** checkbox is disabled, then the Appointment ID will be generated and inserted in the QR Code.

*It is recommended not to change the Access Card 2 value from the Device Module to avoid overwriting the Dynamic ID value set as the Access Card 2.*

- **Auto Profile Assignment:** Visitor Profiles can be assigned to the visitors automatically. To do so, make sure the Visitor Profiles are created beforehand as per your requirement. To know more about the Visitor Profile, refer "[Visitor Profile](#)" in *Visitor Management> Visitor Profile*.

The system assigns these pre-configured profiles to the visitors as per certain matching criteria.

For Auto Assignment of Visitor Profiles, follow the steps given below:

- Select the **Auto Profile Assignment** checkbox. Once enabled, then configure **Matching Level**.
- To set the matching criteria for selection of the visitor profile which is to be assigned to the visitor, select the desired parameters' checkboxes in **Matching Level**.

Matching Level consists of different Groups such as Organization, Branch, Department etc. These are also configured for the Hosts.

The system will compare the selected criteria for the Visitor with the Groups assigned to the Host (in *User > User Configuration > Group*) and assign the best matched Visitor Profile to the Visitor automatically.

Along with the Profile, the visitor will also be granted access to the devices configured in the respective profile.

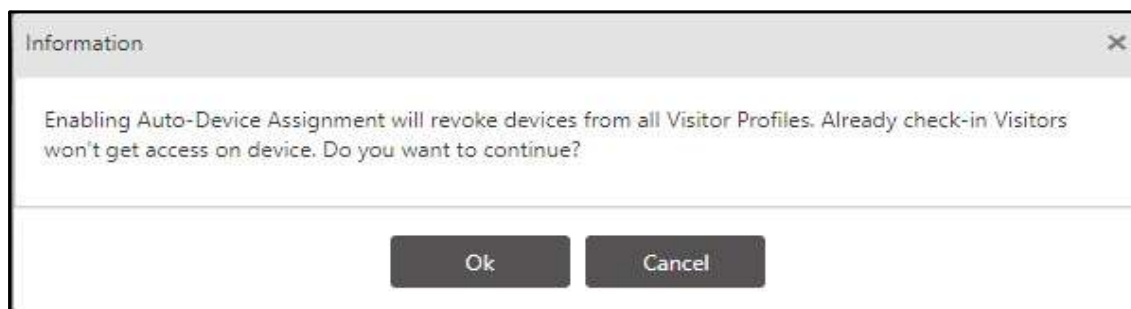

If **Auto Profile Assignment** is disabled, then the system will assign the first free Visitor Profile to the Visitor.

To understand this feature with the help of an example, refer Example 2 under [“Examples”](#).

- **Auto Device Assignment:** Select this checkbox to provide access to the devices assigned to the Host of a visitor, instead of the devices configured in the Visitor Profile (assigned to the visitor).

You can provide access to the devices assigned to the Host from the *User > User Configuration > Visitor Management*. For more information, refer [“Visitor Management”](#).

When you enable this feature, a pop-up will be displayed with an information as shown below:

Click **OK** if you want to continue, else click **Cancel** to discard the changes.

Once you click **OK**, all the devices will be revoked from the free as well as from the occupied Visitor Profiles.

If **Auto Device Assignment** is disabled, then the Visitor will be assigned devices configured in *Visitor Management > Visitor Profile > Devices*.

To understand this feature with the help of an example, refer Example 3 under [“Examples”](#).

## Visit Creation Restriction

You can impose restriction on the Host/Visitor for Visit creation application by configuring minimum or maximum days as per your requirement.

Visit creation restriction will also be applied to rescheduled visits as well as inviting visitors via Invite Link, refer Reschedule Visit in [“Visit Approval”](#) and [“Invite Visitor”](#).

Configure the following parameters to impose restriction.

Visit Creation Restriction	
Minimum Days Before Allowing Visit	<input type="text" value="Days"/>
Maximum Days Before Allowing Visit	<input type="text" value="5"/>
Apply Restriction On	<input type="text" value="Both"/>

- **Minimum Days before Allowing Visit Creation:** Enter the minimum number of days before which the Host/Visitor needs to apply for the Visit creation.

For example: If **Minimum Days before Allowing Visit Creation** value is set to 2 and current date is 01/11/2020, then the visit start date cannot be before 03/11/2020.

If minimum days are not configured, then Visit creation will not be restricted.

- **Maximum Days Before Allowing Visit Creation:** Enter the maximum number of days before which the Host/Visitor needs to apply for the Visit creation.

For example: If **Maximum Days Before Allowing Visit Creation** is set to 10 and current date is 01/11/2020, then visit start date cannot be after 11/11/2020.

If maximum days are not configured, then Visit creation will not be restricted.

- **Apply Restriction On:** Apply the above configured restrictions on Host and/or Visitor which will be effective during a visit creation.

Select the desired option from the dropdown list — Both, Host only or Visitor only.

- **Host Only:** The restriction will be applied only when Host is creating the visit.
- **Visitor Only:** The restriction will be applied only when Visitor is creating the visit.
- **Both:** The restriction will be applied on both Visitor and Host while creating the visit.

*The values for these parameters set in Global Policy will be considered as default values while creating a new user/worker. For more information refer [“Visitor Management”](#) and [“Worker Profile-Visitor Management”](#).*

Visit creation application can also be created for the current date. To know more, refer Visit Creation on Current Date in [“Station Location”](#).

## Default Host User

Select the authorized host user from the picklist.

## Visitor Custom Fields

- **ID Proof1 & ID Proof2:** Enter the name of ID Proof which will be printed on the visitor pass. The availability of these proofs need to be verified before the Visitor enters the premises. The ID Proofs specified here will appear in VMS Utility.
- **Custom Field 1 - 5:** These are fields that can be customized as per your requirements (e.g. ID Proof, Security Number etc.) which will be printed on the Visitor Pass from VMS Utility. These fields will be available for visitor configuration in the Visitor Management module of COSEC Web as well as for VMS Utility.

**Visitor Custom Fields**

ID Proof 1 \*   
ID Proof 2 \*

Field No.	Active	Field Name	Type	Upload	Mandatory	
1	Yes	Security Number	Textbox	Yes	No	
2	Yes	Address Proof	Textbox	Yes	No	
3	Yes	Custom Field 3	Textbox	Yes	No	
4	Yes	Custom Field 4	Textbox	Yes	No	
5	Yes	Custom Field 5	Textbox	Yes	No	

- **Field No:** It displays the serial number and order of the field.
- **Active:** Select this check box, if you wish to display this field in Visitor Profile.
- **Field Name:** Enter the desired Field Name. For example: Security Number.
- **Type:** Select the desired type to be assigned to the field—Textbox and Date.
- **Upload:** Select the check box, if the configured field requires a provision to upload a document.
- **Mandatory:** Select the check box to mandate this field.

You can always edit this custom field by clicking **Edit**

**Visitor Custom Fields**

ID Proof 1 \*   
ID Proof 2 \*

Field No.	Active	Field Name	Type	Upload	Mandatory	
1	<input checked="" type="checkbox"/>	<input type="text" value="Spouse Name"/>	Textbox	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
2	Yes	Spouse Birthdate	Date	Yes	No	
3	Yes	Custom Field 3	Textbox	Yes	No	
4	Yes	Custom Field 4	Textbox	Yes	No	
5	Yes	Custom Field 5	Textbox	Yes	No	

Click **OK**  and the pop-up appears.

Confirmation

Changing the 'Type' of the custom field will result in permanent loss of custom field data of all Users. Field will be set to default values. Do you want to continue?

Yes

No

Click **Yes** to save the configuration else click **No**.

The configured Visitor Custom Fields here will be displayed in **VMS Utility> New Visitor> Additional Details** and in **VMS Utility> Visitor Details> Additional Details** on the home page of VMS Utility.

The configured custom fields for Visitor will be visible in the **Visitor Management> Visitor Template> Details**.

The configured custom fields for Visitor will be visible in the **Visitor Management> Utilities> Frequent Visitor> Additional Details**.

The configured custom fields for Visitor will be visible in the **Visitor Management> Utilities> Watchlist> Additional Details**.

## Visit Custom Fields

Visit Custom Fields						
Field No.	Active	Field Name	Type	Upload	Mandatory	
1	Yes	Field 1	Textbox	Yes	No	
2	Yes	Field 2	Textbox	Yes	No	
3	Yes	Field 3	Textbox	Yes	No	
4	Yes	Field 4	Textbox	Yes	No	
5	Yes	Field 5	Textbox	Yes	No	

1 - 5 of 10 records

  1 2  

- **Custom Field 1-10:** These fields can be customized as per your requirement. For detailed information, refer ["Visitor Custom Fields"](#).

The configured Visit Custom Fields here will be displayed in **VMS Utility> Home Page> Visit Details**.

The configured custom fields for Visitor will be visible in the **Visitor Management> Visit Template> Additional Details**.

The configured custom fields for Visitor will be visible in the **Visitor Management> Pre- Registration> Visit Details**.

The configured custom fields for Visitor will be visible in the **Visitor Management> Utilities> Visitor History**.

## Examples

### Example 1: Visitor and Host initiated Visit Requests

- Consider following data for Shift: GS  
Shift Start Time:08:00  
Shift End Time:17:00
- Consider following data for Shift: ES  
Shift Start Time:18:00  
Shift End Time:02:00
- Consider following data for host: H1  
Date:12/10/2020  
Shift:GS

#### Case 1: Visitor Initiated Visit Request

- Consider that visitor, V1 initiates a visit request as follows:  
Visit Date:12/10/2020  
Visit Start Time:18:00  
Visit End Time:19:00  
Host: H1
- This visit request when initiated successfully will be sent to the host for visit approval.
- Once the host approves this visit, then based on one of the following selected value for **Authorization For Visitor Initiated Visit** in *Admin> System Configuration> Global Policy > Visitor Management*, the request should proceed —
  - *Always*

This request application will be sent for RIC Approval.

- *Not Required*

This request application will not be sent for RIC Approval.

- *When Visit Outside The Shift*

This request application, for the above case, is outside the host's shift timings. Hence, as per the host's Reporting Group configurations it will be considered for RIC Approval.

Ex- RIC can approve from *Visitor Management > Visit Approval* page

#### • Case 2: When Host's Shift is changed

- Now, let us consider that in the above example the **Authorization For Visitor Pre-Registration** is selected as *When Visit Outside The Shift*, and shift for H1 is changed from GS to ES.
- Then only for upcoming visit request applications, ES will be applicable. No changes in previous Visitor Pre-Registration request applications.

- **Case 3: When either Visitor/Host Reschedules the Visit**

Visit can be rescheduled by —

1. *Visitor*

- If rescheduled by the visitor, then the request application will be sent to the host for acceptance.
- Once the host approves, then based on **Authorization For Visitor Initiated Visit** value, the application will be considered for RIC Approval.

2. *Host*

- If rescheduled by the host, then it will be sent to the visitor for acceptance and once the visitor accepts (depends on the value of the option **Required Visitor Acceptance**), then it should be considered for RIC approval based on the value set in **Authorization For Visitor Pre-Registration**.

3. *SA*

- Rescheduled visit by SA will be pre-approved.

- **Case 4: When Visit Transfer is done**

On visit transfer to another host can be done by —

1. *Visitor*

- If the visit is transferred by the visitor, then the request application will be sent to the new host for acceptance. (Host changed by Visitor)
- Once this new host approves, then based on **Authorization For Visitor Pre-Registration** dropdown value, the application will be considered for RIC Approval.

2. *Host itself*

- If the visit is transferred by the host, then it should be sent to the new host for acceptance. Once this new host approves the application, then it will be considered for RIC approval (of this new host) based on the value set in **Authorization For Visitor Pre-Registration**.

3. *SA*

- Visit transferred by SA will be pre-approved.

- **Case 5: Values of Authorization For Visitor Pre-Registration and Authorization For Visitor Initiated Visit change**

- When **Authorization For Visitor Pre-Registration** and/or **Authorization For Visitor Initiated Visit** value is changed then it will be applicable for upcoming visit request applications. There will be no change in previous Visitor Pre-Registration applications.

## Example 2: Auto Profile Assignment

### Case 1:

- A Visitor creates a visit for Host 1 and checks-in
- **Auto Profile Assignment** = Enabled
- **Matching Level** = Organization, Department, Section

	Host 1	Visitor Profile 1	Visitor Profile 2	Visitor Profile 3
<b>Organization</b>	Matrix	Matrix	Matrix	Matrix
<b>Branch</b>	R&D	HO	R&D	HO
<b>Department</b>	PMT	MKTG	PMT	PMT
<b>Section</b>	TL	TL	Member	TL
<b>Category</b>	C1	C1	C1	C4
<b>Grade</b>	G1	G2	G1	G4
<b>Designation</b>	D1	D2	D1	D4

- Here, as Matching Level is set as Organization, Department and Section, the Visitor Profile's groups should be matching with the values of host's groups.
- Hence, the profile Visitor Profile 3 will be assigned to the visitor.

### Case 2: Multiple Profiles Match

- A Visitor creates a visit for Host 1 and checks-in
- Auto Profile Assignment = Enabled
- Matching Level = Department
- As per the configurations of Table 1, two profiles would be available for the visitor i.e. Visitor Profile 2 and Visitor Profile 3.
- In this case, any one of the profiles will be selected randomly for the visitor.

### Case 3: No Profile Matches

- A Visitor creates a visit for Host 1 and checks-in
- Auto Profile Assignment = Enabled
- Matching Level = Section

	Host 1	Visitor Profile 1	Visitor Profile 2	Visitor Profile 3
<b>Organization</b>	Matrix	Matrix	Matrix	Matrix

	Host 1	Visitor Profile 1	Visitor Profile 2	Visitor Profile 3
<b>Branch</b>	R&D	HO	R&D	R&D
<b>Department</b>	PMT	MKTG	PMT	PMT
<b>Section</b>	TL	Member	Member	Member
<b>Category</b>	C1	C1	C1	C4
<b>Grade</b>	G1	G2	G1	G4
<b>Designation</b>	D1	D2	D1	D4

- As per the configurations of Table 2, no profile would be available for the visitor.
- In this case, no profile would be assigned to the visitor.

#### ***Case 3: No Profile Available***

- A Visitor creates a visit for Host 1 and checks-in.
- Auto Profile Assignment = Enabled
- Matching Level = Department
- In this case, no profile would be available to assign to the visitor if all the profiles are occupied.

#### ***Case 4: Auto Profile Assignment is Disabled***

- When **Auto Profile Assignment** is disabled, the first free visitor profile will be assigned to the visitor.

### **Example 3: Auto Device Assignment**

#### **Case 1:**

- A Visitor creates a visit for Host 1 and checks-in.
- Auto Device Assignment = Enabled
- Then the devices assigned to the Host in the *Users> User Configuration> Visitor Management* will be assigned to the visitor.

#### **Case 2: No Device Assigned**

- A Visitor creates a visit for Host 1 and checks-in.
- Auto Device Assignment = Enabled
- When no device is assigned to the Host in the *Users> User Configuration> Visitor Management*, the Visitor visiting the host won't be allotted any device.

#### **Case 2: Auto Device Assignment is disabled**

- When Auto Device Assignment is disabled, the devices configured for a Visitor Profile from *Visitor Management> Visitor Profile> Devices* page will be assigned to the visitor.

## CWM

This page allows to define policies for managing contract workers.

To configure CWM Policy, go to **Admin module > System Configuration > Global Policy > CWM** and the following screen appears.

The screenshot displays the 'Global Policy' configuration window for 'CWM'. On the left is a sidebar menu with options: Basic, User, Login, Password Policy, Device, Access Control, Time Attendance, Reports, Visitor Management, CWM (selected), Job Costing, Field Visit Management, ESS, SSIO Configuration, and Face Recognition. The main content area is divided into several sections: 'Worker Assignment From CSS' (checked), 'Assignment Approval' (Direct), 'Approval Scheme' (Serial), and 'Approval Required For Existing Workers' (unchecked). The 'Generate Worker ID' section includes 'Auto Generate Worker ID' (unchecked), 'ID Format' (text input), 'Numeric Value Length' (0), 'Zero Padding is required' (unchecked), and 'Worker ID Range' (CWM, 1, 9999999). The 'Minimum Age Requirement for Workers' section has 'Date of Birth Mandatory' (unchecked) and 'Minimum Age' (0, Year(s), Month(s)). At the bottom is a 'Custom Fields for Contractors' section with a dropdown arrow.

- **Worker Assignment from CSS:** Enable to provide rights to Contractors for adding workers or assigning work orders using their Contractor Self Service (CSS) account.
- **Assignment Approval:** Select a Worker Approval type from the dropdown list to determine the process by which workers assigned by a Contractor can be approved by an organization. There are two options:
  - **Direct** - Approval Requests are directly sent to the system administrator.
  - **Approval Stage** - Approval Requests are sent to all the assigned *Approving In-Charges* either serially, or in a Parallel order (as per the *Approval Stage*). To set an approval scheme, select **Approval Stage** and select **Serial** or **Parallel** option from **Approval Scheme** dropdown list.

*For more information on the Worker Approval process, go to: Contract Worker Management > Work Order > Approval Stages.*

- **Approval Required For Existing Workers:** Select this check box if an existing worker is also required to go through the configured approval process, when assigned to a new work order. If unchecked, the worker assignment will be directly approved.

### Generate Worker ID

You can configure the required format of the Worker ID and accordingly, the Worker ID will be generated automatically while configuring a new/temporary worker. The format can be configured as shown below.

**Generate Worker ID**

Auto Generate Worker ID ☐

ID Format \*

Numeric Value Length \*

Zero Padding is required ☐

Worker ID Range \* CWM

- **Auto Generate Worker ID:** Select the check box to be generate the Worker ID automatically for the configuration of new/temporary workers from the Contract Worker Module. If disabled, then you need to enter the Worker ID manually.
- **ID Format:** Configure the required format of the ID by selecting the 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the Worker ID for every user.

To select the different format for the ID, enter \* in **ID Format** box and the drop-down list containing different Value formats appears as shown below. Select the desired format from the drop-down list.

**Generate Worker ID**

Auto Generate Worker ID ☒

ID Format \*

Numeric Value Length \*

Zero Padding is required ☐

Worker ID Range \*

Minimum Age Requirement for Workers

Date of Birth Mandatory

Minimum Age

Custom Fields for Contractors

**Generate Worker ID**

Auto Generate Worker ID ☒

ID Format \*

Numeric Value Length \*

Zero Padding is required ☐

Worker ID Range \* CWM

*The NUMVAL (Numeric Value) is mandatory to be selected.*

The drop-down list contains different formats for; Branch Code (BRCCODE), Organization Code (ORGCODE), Branch ID (BRCID), Department ID (DPTID), Numeric value (NUMVAL) etc. You can select the multiple formats, each time you need to enter \* and then select the desired format.

Example: As shown in above image, the fixed value 'MATRIX' is entered as a company name, BRCID and DPTCODE is selected which can vary as per the assigned 'Branch' and 'Department' for new configured users. The NUMVAL is selected which will provide a unique 'Numeric number' at the end of the ID.

Now, on the user configuration page while configuring the new user, the Branch is assigned as 4 (Waghodia) and the Department is assigned as Documentation.

So, once the user is configured and saved, the unique User ID “**MATRIX4DOC1**” will be generate and assigned automatically. Here, **MATRIX4DOC1**, that is **Fixed Value**, **Branch ID**, **Department Code**, **Numeric Value**.

*Numeric Value for each User ID will generate as per the next available number.*

Click **Copy ID Format Same as User**  , if you wish to copy the format as configured for User ID.

- **Numeric Value Length:** Enter the desired number of digits from 1 to 15 till which the ‘NUMVAL’ must be generated. For example: 4
- **Zero Padding Required:** Select this check box to allow the prefixing zeros before the ‘NUMVAL’ value. For example, if the Numeric value length is configured as 4 and the number assignment starts from a single digit then as explained in above example, the new user id to be generated is ‘MATRIX4DOC1’ if Zero Padding is enabled, it will be generated as ‘MATRIXDOC0001’.
- **Worker ID Range:** This is applicable only if you have disabled **Auto Generate Worker ID**.

Enter a range for Worker IDs to define new/temporary workers in COSEC. The range can be from 1 to 9999999. Any prefix defined here will be added before all system-generated Worker IDs by default. For example, if prefix defined is “CWM”, Worker IDs will appear as shown below.

CWM35	Ramesh Pai
CWM32	Anil Aggarwal
CWM31	Ranjan Parmar
CWM3	Raju R.

## Minimum Age Requirement for Workers

Minimum Age Requirement for Workers			
Date of Birth Mandatory	<input checked="" type="checkbox"/>		
Minimum Age	<input type="text" value="0"/>	Year(s)	<input type="text" value="0"/>
		Month(s)	<input type="text"/>

- **Date of Birth Mandatory:** Select the check box if you wish to make the configuration of Date of Birth parameter compulsory in the Worker Configuration page.
- **Minimum Age:** If you select Date of Birth Mandatory check box, configure the Minimum Age limit in years and months. Any Worker Profile below this age will not be created.

## Custom Fields For Contractors

- **Field Name 1 - 10:** These are fields that can be customized as per your requirements. (e.g. ID Proof, Security Number etc.). These field names will later be available for Contractor configuration on the COSEC Web as well as for CSS application. These can also be used for third party integration purposes. The Field Names can be upto 20 alphanumeric characters (space, -, . and “comma” allowed).

Custom Fields for Contractors						
Field No.	Active	Field Name	Type	Upload	Mandatory	
1	Yes	Security Number	Textbox	No	No	
2	No	Field 2	Textbox	No	No	
3	No	Field 3	Textbox	No	No	
4	No	Field 4	Textbox	No	No	
5	No	Field 5	Textbox	No	No	

- **Field No:** It displays the serial number and order of the field.
- **Active:** Select the check-box for this field to be visible in Contractor Profile.
- **Field Name:** Enter the desired Name. For example: Security Number.
- **Type:** Select the desired type of the field—Textbox and Date.
- **Upload:** Select the check-box if the configured field requires a provision to upload a document.
- **Mandatory:** Select the check-box for this field to be mandatory.

You can always edit this custom field by clicking the **Edit**  button.

Custom Fields for Contractors						
Field No.	Active	Field Name	Type	Upload	Mandatory	
1	<input checked="" type="checkbox"/>	<input type="text" value="Security Number"/>	Textbox	<input type="checkbox"/>	<input type="checkbox"/>	 
2	No	Field 2	Textbox	No	No	
3	No	Field 3	Textbox	No	No	
4	No	Field 4	Textbox	No	No	
5	No	Field 5	Textbox	No	No	

Click on the **Ok**  button and the pop-up appears.

Confirmation

Changing the 'Type' of the custom field will result in permanent loss of custom field data of all Users. Field will be set to default values. Do you want to continue?

Click the **Yes** button to save the configuration else click the **No** button.

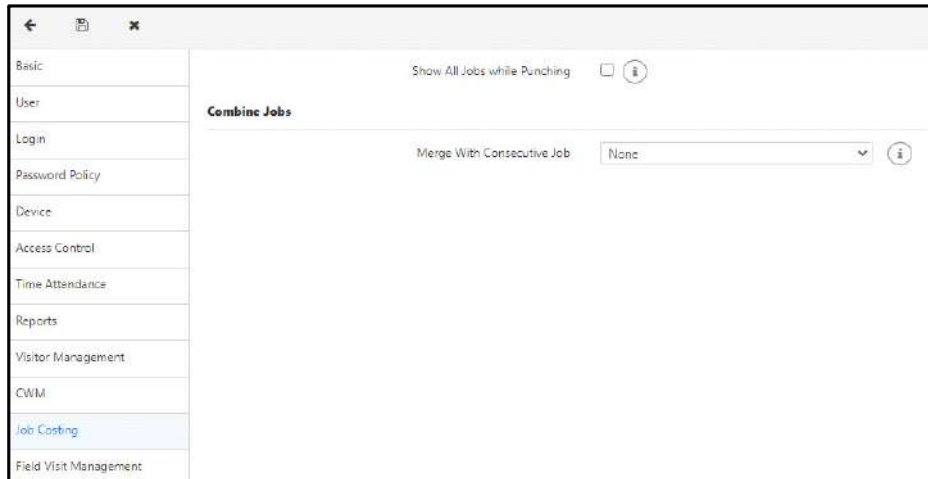

The configured custom fields for Contractor will be visible in the **CWM> Contractor> Contractor Profile> Details**.

Click on the **Save** button to save the configuration.

## Job Costing

When a user shifts from one site to another, the hours spent in the transition are to be added in the **Preceding** or **Succeeding** Job transaction.

To access Job Costing, go to **Admin module > System Configuration > Global Policy > Job Costing** and the following screen appears.

**Show All Jobs while Punching:** Select this check box if you want all the jobs present in the system to be displayed to the users. All jobs will also be displayed in **ESS login /APTA** Jobs drop-down when a user wants to punch.

The **ESS Assignment** check box at the following locations will not be displayed:

- User Module > Multi-User Options > User Configuration > Multi-User Configuration > Job Costing > Default Jobs
- User Module > Multi-User Options > User Configuration > Multi-User Configuration > Job Costing
- Enterprise Structure > Enterprise Groups > Job Costing
- Contract Worker Management > Worker Profile > Job Costing > Default Jobs

## Combine Jobs

**Merge with Consecutive Job:** Select the desired option — None, Preceding, Succeeding.

If few transactions were made and then value in **Merge With Consecutive Job** drop-down is changed, its reflection in existing transactions will be made once “Daily Process” has been done.

## Field Visit Management

This page allows to define policies for managing field visits.

To configure Field Visit Management Policy,

Click **Admin > System Configuration > Global Policy > Field Visit Management** and the following page appears.

The screenshot shows a web application interface for 'Field Visit Management'. On the left is a sidebar with a list of menu items: Basic, User, Login, Password Policy, Device, Access Control, Time Attendance, Reports, Visitor Management, CWM, Job Costing, and Field Visit Management (which is highlighted). The main area contains two fields: 'Scheduling Reporting In-Charge' with a dropdown menu currently showing 'Group In-Charge 2', and 'Schedule Lock Out Period' with a text input field containing the number '2' and a '(Days)' label to its right.

**Scheduling Reporting In-Charge:** Select the Scheduling Reporting In-Charge from the drop down list—Group In-Charge1, Group In-Charge 2, Group In-Charge 3, Group In-Charge 4 or Group In-Charge 5 to give the rights for creating the Field Visit Schedule. The selected Reporting In-Charge can create/modify/ import/export the field schedules whereas the other Reporting In-Charges can only view the schedule.

**Schedule Lock Out Period:** Select the time duration (days) after the Schedule Date, for which the editing of the past schedules will be allowed.

If Lock Out Period is set as 0, then schedule can be edited on the schedule date only.

Example:

Consider Schedule Lock Out Period = 20 days

Current Date = 30/09/2015

If Schedule Date = 15/09/2015, field schedule will be in Edit Mode.

If Schedule Date = 05/09/2015, field schedule will be in View Mode.

## ESS

To access ESS, go to **Admin module > System Configuration > Global Policy > ESS** and the following screen appears.

**Global Policy**

Basic | User | Login | Password Policy | Device | Access Control | Time Attendance | Reports | Visitor Management | CWM | Job Costing | Field Visit Management | **ESS** | SSO Configuration | Face Recognition

Refresh & Run Monthly Process ☒

**Special Functions Configuration**

Allowed Special Functions

- ☒ Regular IN
- ☒ Official Work IN
- ☐ Short Leave IN
- ☒ Break End
- ☐ Overtime IN
- ☒ Regular OUT
- ☒ Official Work OUT
- ☐ Short Leave OUT
- ☒ Break Start
- ☐ Overtime OUT

**Refresh & Run Monthly Process:** Select this checkbox for Refresh icon to be visible at “Current Month” and “Previous Month” section of ESS dashboard.

You can disable this checkbox to prevent the ESS users from refreshing or processing the monthly attendance period which creates ambiguities in attendance data of user.

**Allowed Special Functions:** Select the desired special functions for allowing ESS users to configure these special functions while punch marking.

## SSO Configuration

To access SSO Configuration, go to **Admin module > System Configuration > Global Policy > SSO Configuration** and the following screen appears.

*Make sure you have enabled Login via SSO, refer to [“Login Policy”](#).*

**Relaystate URL:** Enter the relaystate URL.

**IDP Profile Details:** Specify the Details of IDP Profile by selecting Identity provider from drop-down list from options- OKTA, Pingone, ADFS and Azure. For Custom IDP, select *other* option from the drop-down list.

*The dimensions of the Logo for IDP should be 32 x 32 pixels with its size less than or equal to 100kb.*

**COSEC Connections:** Specify the details related to service provider by mentioning SP Identity ID. You may download COSEC Public certificate on click of **Signing Certificate** icon.

If the 'Sign Authentication Request' check-box is enabled for IDP profile as ADFS then, the COSEC Public certificate is mandatory to be uploaded at the ADFS. The User will be notified with an error; 'SSO Login Failed' while login with IDP, if the certificate is not found at the ADFS.

*If the certificate is expired then in that case login response from IDP will be failure and user needs to re new or upload new certificate.*

COSEC Connection

SP Identity ID \*

Signing Certificate

Sign Authentication Request

IDP Configuration

Attribute Mapping

**IDP Configuration:** Configure IDP in this collapsible panel by adding ACS Endpoint, ACS Logout Endpoint, SSO Login and SSO Logout URLs.

For SSO based login to work, make sure you have configured the:

- **ACS (Assertion Consumer Service) Endpoint:** Enter the Domain URL for COSEC Login. The SSO Token will be sent to this location.
- **ACS (Assertion Consumer Service) Logout Endpoint URL:** Enter the Domain URL for COSEC Logout. The logout requests will be sent to this location.
- **SSO Login URL:** The URL entered in the SSO Login URL must be the URL where the user should be redirected.
- **SSO Logout URL:** The URL entered in SSO Logout URL must be the URL that should hit just after the user logout from COSEC.
- **IDP Entity ID:** The URL entered in the IDP Entity ID must be the URL which should be used to identify the IDP to which the SSO request to be send.

*Make sure the IDP Entity ID is configured properly to ensure proper functioning of SSO login.*

- **Upload the IDP Certificate:** Click **Browse** to select the certificate to be uploaded from the local PC.

*If any of the URL or certificate uploaded are invalid or does not exist then SSO should fail.*

IDP Configuration

ACS Endpoint <Domain URL for COSEC Login>/Login/ReceiveSSO

ACS Logout Endpoint <Domain URL for COSEC Login>/Login/ReceiveSLO

SSO Login URL \*

Enable Logout From IDP

SSO Logout URL \*

IDP Entity ID \*

Upload IDP Certificate \* Browse... No file selected.

**Attribute Mapping:** To identify which user wants to access COSEC from the respective IDP, Attribute Mapping is used. Map the Attribute such as User ID, Email, User Name and AD ID to be received in SSO Response.

The image shows a window titled "Attribute Mapping". Inside, there are two columns: "COSEC User Profile Attribute" and "IDP Profile Attribute". The "COSEC User Profile Attribute" column has a dropdown menu that is open, showing the following options: "Select", "Select", "UserID", "Email", "User Name", and "AD ID". The "IDP Profile Attribute" column is currently empty.

After successful SSO Configuration, the Login page will be have additional option under Log in with as shown in figure below:

The image shows a login page. At the top, there is a language dropdown menu set to "English". Below it is a text input field for "User ID, Email or Mobile". To the right of this field is a toggle switch for "Password" and "OTP". Below the input field is a "Password" label and a text input field for the password. To the right of the password field is a toggle switch for "Remember Me" and a link for "Forgot Password?". Below these fields is a "LOGIN" button. At the bottom, there is a section titled "Or log in with:" followed by a button with the "okta" logo and the text "OKTA".

## Face Recognition

To access Face Recognition, go to **Admin module > System Configuration > Global Policy > Face Recognition**, and the following screen appears.

The screenshot shows the 'Global Policy' configuration window with the 'Face Recognition' tab selected. The left sidebar lists various policy categories, with 'Face Recognition' highlighted. The main content area is divided into several sections:

- Conflict Matching Threshold:** A text input field set to '93' with a '%' symbol.
- Group FR:** A checkbox labeled 'Group FR' is unchecked. Below it, 'Matching Threshold (Face) for Group Attendance' is set to '98' with a '%' symbol and an information icon.
- Unidentified Face:** Contains several settings: 'Capture Face of Unidentified User' (unchecked), 'Unidentified Face Clustering Threshold' (set to '98' with '%'), 'Unidentified Face On Device Per Cluster' (set to '5' with a dropdown arrow), 'Show Feedback for Unidentified Face' (unchecked), and 'Generate Unidentified Face Event' (unchecked).
- Mask Coverage:** Contains 'Face Mask Coverage' (set to '98' with '%') and 'Visible Face' (set to '99' with '%').
- Adaptive Face Enrollment:** 'Adaptive Face Templates Per User' is set to '5' with a dropdown arrow.
- APTA Anti-Spoofing:** 'APTA Face Anti-Spoofing Mode' is set to 'Advance' with a dropdown arrow, and 'APTA Face Anti-Spoofing Threshold' is set to '62' with a '%' symbol.

A note at the bottom states: 'Note: For Group FR/ Capture Face of Unidentified User feature to work, ensure that Identification Service is defined in Cosec Admin > License and Service'.

- **Conflict Matching Threshold:** Enter the desired Conflict Matching Threshold value in percentage.

The system will consider this value while comparing the face with the face templates already present in the database.

If a conflict is found, that is, if the system detects a face template in the database similar to the new face, then a conflict error will be displayed.

Make sure a higher value is set for this parameter, as it will result in less equivalent matches with the face templates available in the database.

**Make sure the *Conflict Matching Threshold* is set lower than *Matching Threshold* in *Admin module > System Configuration > Identification Server Configuration*.**

### Example: Face Enrollment of Suresh

- **Conflict Check** checkbox is selected.
- **Conflict Matching Threshold** is set as 93%.

Now during the face enrollment of Suresh, the system will check in its database if his face matches with faces of other users available in the database.

- **Case 1:** If Suresh's face matches 92% with Ram, then the system will allow to enroll Suresh's face.
- **Case 2:** If Suresh's face matches 94% with Shyam, then the system will display the conflict error while enrolling Suresh's face.

## Group FR

For Group FR ("[Mark Group Attendance](#)") Capture Face of Unidentified User and Face Enrollment via Web feature to work, ensure that Identification Service is defined in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

- **Group FR:** Select this checkbox to enable face recognition feature for multiple users for marking attendance at the same time.
- **Matching Threshold (Face) for Group Attendance:** Enter the matching threshold value, which will be used by the COSEC Server to match faces of users from the uploaded group image (having faces of different users) for group attendance. Image can be uploaded by Admin as well as by RIC. To know how to upload a group image, refer "[Mark Group Attendance](#)".

## Unidentified Face

- **Capture Face of Unidentified User:** During face recognition, if a user is not identified by his/her face credential, the system will consider that face as an unidentified face.

Unidentified faces can be found in the following cases:

1. User and face both are not enrolled
  2. User is enrolled but face is not enrolled
  3. User and face are enrolled
- Then the system will capture this unidentified face image and send it to the Admin.
  - Admin will authorize these unidentified face images and once authorized, Admin can enroll the face against the respective user manually or discard it.
  - In case the unidentified face image received is of a new user, then the Admin can create a new user profile and enroll that image against that profile. For more information refer "[Unidentified Face Authorization](#)" in Users> Utilities.
  - Select this checkbox to enable **Capture Face of Unidentified User**.

If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.

*If you are using Cogniface EBS, make sure you have a centralized IDS installed for this feature to function.*

- **Unidentified Face Clustering Threshold:** Multiple unidentified faces of a single user can be recognized by the system. Such faces will be saved in a cluster for a user.
  - Enter the Unidentified Face Clustering Threshold value which is basically a matching threshold based on which the system will identify whether two unidentified faces recognized, belong to the same user or not.
  - These two unidentified faces will be kept in the same cluster if matching threshold between them is equal to or greater than the value entered by the Admin.

- **Unidentified Face On Device Per Cluster:** Select the number of unidentified faces of an unidentified user that should be received from each device available in a cluster.

Select the number of unidentified faces to be received from each device present in a cluster

*When the number of unidentified faces received from a device in a cluster exceeds the value you entered, then before adding a new unidentified face from the same device, the unidentified face with the highest matching threshold from that device needs to be removed.*

Let's understand with the help of an example:

Value set for **Unidentified Face On Device Per Cluster** = 5

Cluster ID = 1

Unidentified faces from device 1 = 4

Unidentified faces from device 2 = 5

- Case 1: A new unidentified face from device 1 is matched with cluster 1. So new face should be directly added in cluster 1.
- Case 2: A new unidentified face from device 2 is matched with cluster 1. So here new unidentified face should be matched with all 5 unidentified faces. The face having highest matching threshold should be replaced by the new unidentified face from device 2 in cluster 1.
- **Show Feedback for Unidentified Face:** Select this check box, if you wish to display a message on the Device display screen to user's whose face is not identified.

*If you wish that events should be generated for Unidentified Face, enable **Generate Unidentified Face Event**.*

*If you have enabled **Group FR**, **Show Feedback for Unidentified Face** feature will not be functional.*

- **Generate Unidentified Face Event:** Select this check box, if you wish to generate events when a user's face is unidentified.

***Generate Unidentified Face Event** is applicable for **Face** credentials only. To generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under Device Configuration > Advanced > Settings for the desired device.*

*If you wish that a message should be displayed on the device display screen for Unidentified Face, enable **Show Feedback for Unidentified Face**.*

These events can be viewed from **Admin Module > View/Logs > Event View** as well as **Device Module > Reports > Invalid Events**.

If you wish to view the snapshots in the Events/Logs, make sure you have configured Visual Tagging for the desired devices.

## Mask Coverage

- **Face Mask Coverage:** Enter the minimum percentage required for considering face mask in Face Mask Compulsion at the time of user identification.

Set higher percentage values for accurate face mask detection.

- **Visible Face:** Enter the maximum percentage required for the face to be visible during user enrollment/identification.

Set higher percentage value to identify or enroll face without mask accurately.

Setting lower value will increase false acceptance.

This parameter is applicable for Face Enrollment from Enroll Utility, Adaptive Face Enrollment and identification when Face Mask Compulsion is enabled.

*Make sure you have selected the Enable FR checkbox in **Device Configuration> Identification Server> Face Recognition**.*

*If Face Mask Compulsion is disabled in **Device Configuration> Advanced> Settings> Face Mask Compulsion**, then Face Mask Coverage will not be applicable.*

## Adaptive Face Enrollment

- **Adaptive Face Templates Per User:** Select the desired number of Adaptive Face Templates that can be enrolled against a user from the drop-down list.

## APTA Anti-Spoofing

- **APTA Face Anti-Spoofing Mode: Face Anti-Spoofing** feature prevents false face verification by using a photo, video, mask or a different substitute for an unauthorized person's face.

Along with the configurations to be done for Face Anti-Spoofing you also need to take care of the recommended settings for liveness verification and for face recognition, refer [“Recommendations for Liveness Verification”](#) and [“Recommendations for Face Recognition”](#).

Select the desired Face Anti-Spoofing Mode for liveness detection via COSEC APTA Application from the following:

1. **Moderate:** This mode analyzes the texture of face. Select this option when the distance between Camera and Face is less than 2 feet
  2. **Advance:** Select this option when the distance between Camera and Face is more than 1 feet and less than 2 feet.
- **APTA Face Anti-Spoofing Threshold:** Enter the Face Anti-Spoofing threshold value in percentage within the range from 1.00 to 99.99 to identify user's face liveness via COSEC APTA Application for considering him/her as a genuine person.

# Identification Server

---

Identification Server is a server which enables to identify the credentials (Finger/Palm/Face) faster in comparison to local identification. COSEC Device do not have heavy storage capacity for credential templates so Identification Server (IDS) can be used which can be installed on 64 bit PC with high storage capacity.

The Identification Service must be installed from the COSEC Setup and configured with Master Server Settings.

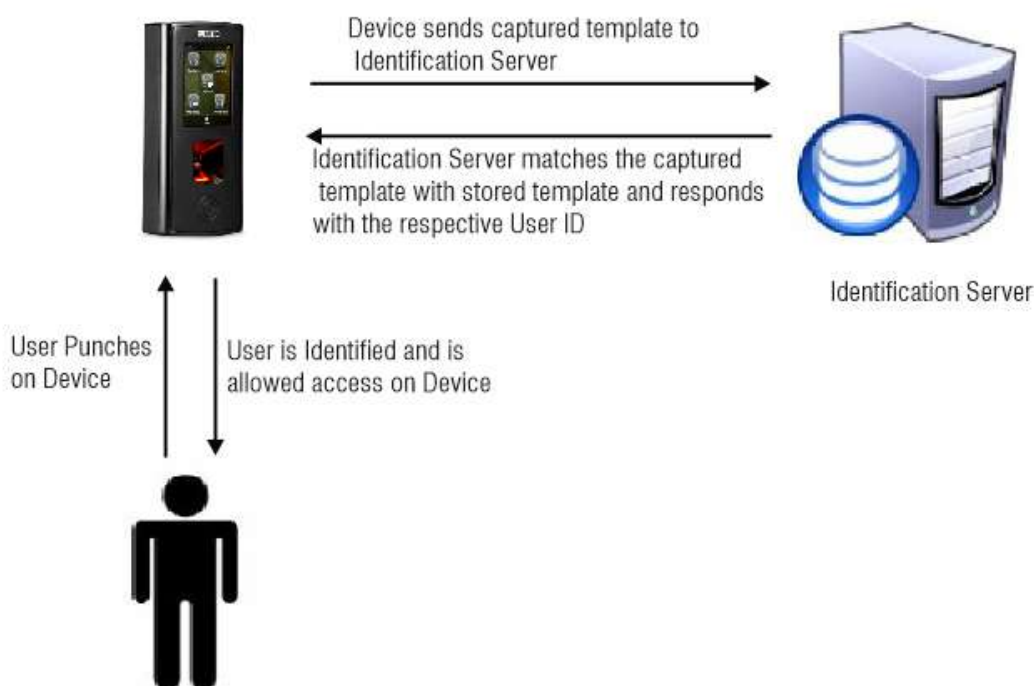

*For Identification Server to work smoothly, ensure that ports specified in Master Service and Identification Service are opened in the Firewall settings.*

When you start the Identification Service; then Identification Server Configuration will be added in Admin module > System Configuration with the IP address and MAC address of the PC where Identification Service is installed.

## Identification of Credential

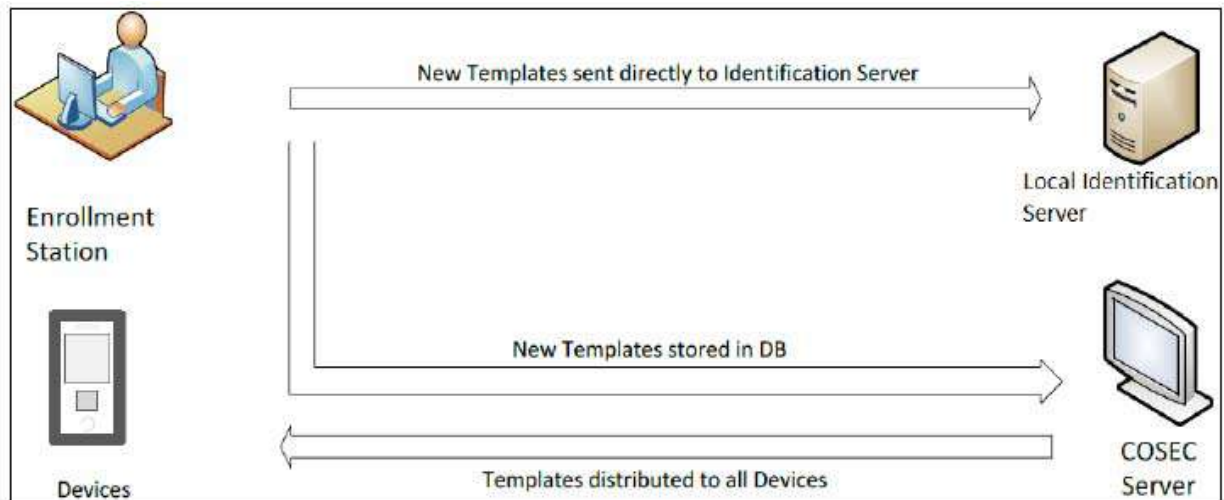

The Identification Server runs as a service of the COSEC Application and enables the COSEC server to perform both centralized as well as localized finger, palm and face template identification across a multi-site installation. Multiple Identification servers can be configured at multiple locations for a single COSEC installation where credentials are maintained locally based on enterprise group assignment. This ensures a faster identification process as matching of credentials is performed only against locally stored templates on each identification server.

Each Identification Server can be configured for a specific location and assigned specific devices and enterprise groups for which it will perform local identification. This will ensure that only the templates of users at this location are available with the Identification Server. You can configure the Identification Server parameters from **Identification Server Configuration** page in the Admin module. For details, refer [“Identification Server Configuration”](#).

On completion of Identification Server configuration, whenever an enrollment is performed at an Enrollment station (or at a door controller), the enrolled templates shall be sent both to the COSEC database as well as the local identification server configured for the site. Now, when a user shows a palm or swipes a finger at any of the

assigned door controllers, the local Identification Server shall respond with a User ID for which the template is matching.

To assign a device to an Identification Server, go to **Devices > Device Configuration > Identification Server**

A local Identification Server will have two databases for storing finger/palm/face templates:

- A **local** database - This stores only the templates of local users and will be used for location-based user identification. This can be set up at the time of server configuration.
- A **global** database - This stores the templates of all COSEC users and will be used at the time of finger/palm enrollment of all COSEC users from an enrollment station.

*For Group FR ("Mark Group Attendance"), Capture Face of Unidentified User, Manual Group Attendance and Face Enrollment via Web feature to work, ensure that Identification Service is defined in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

The following process enables you to collaboratively setup and configure the Identification Service:

- "Installing Identification Server"
- "Starting Identification Service"
- "Identification Server Configuration"

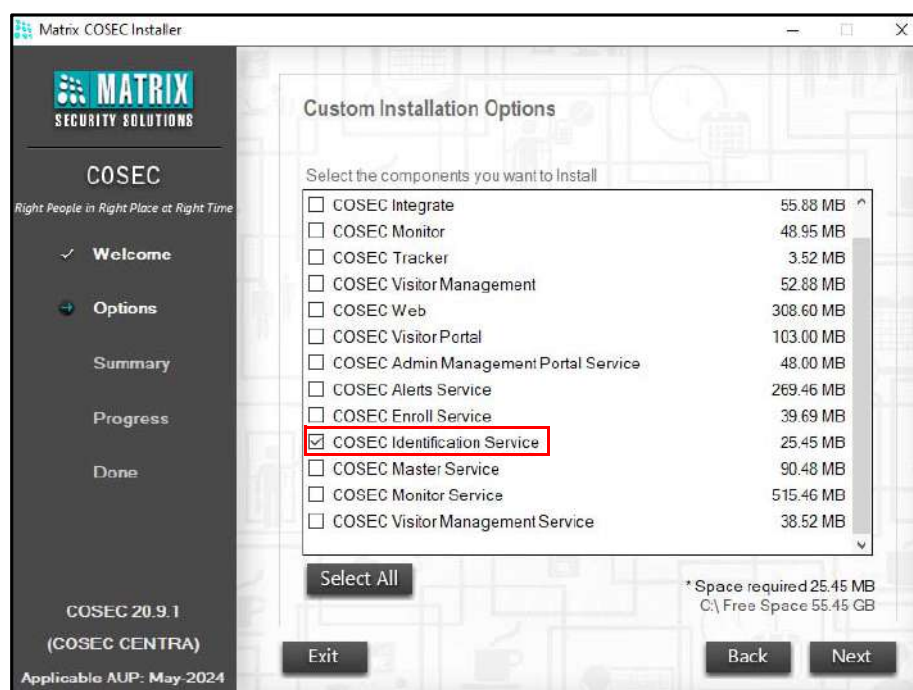

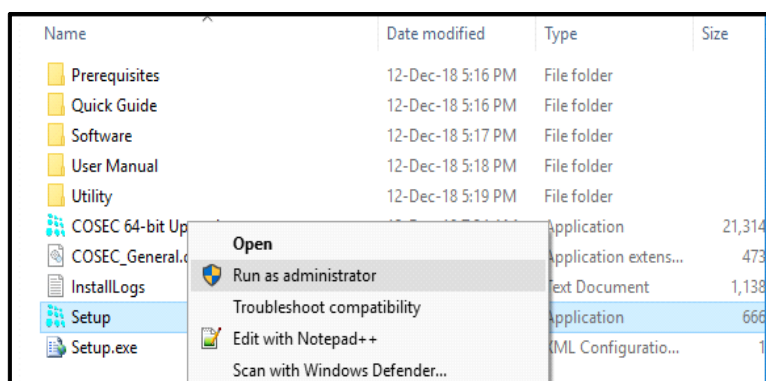

## Installing Identification Server

The Identification Server runs as a service of the COSEC Application. You can install the Identification service from the Custom Installation of COSEC Installer directly or from the COSEC Setup> Software> COSEC\_Identification.

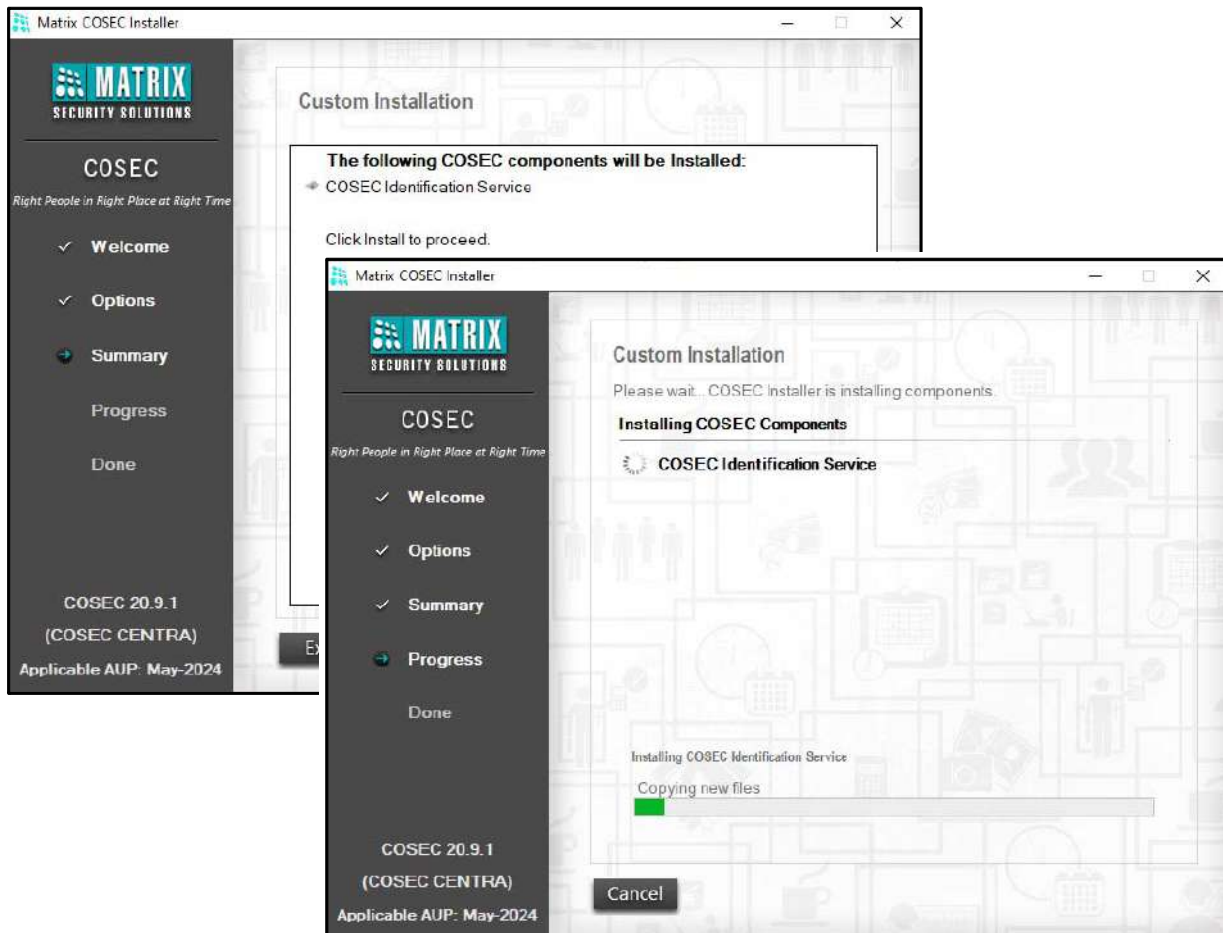

To install the Identification Service right click on the **Setup** and click **Run as Administrator** option as shown in the screen below.

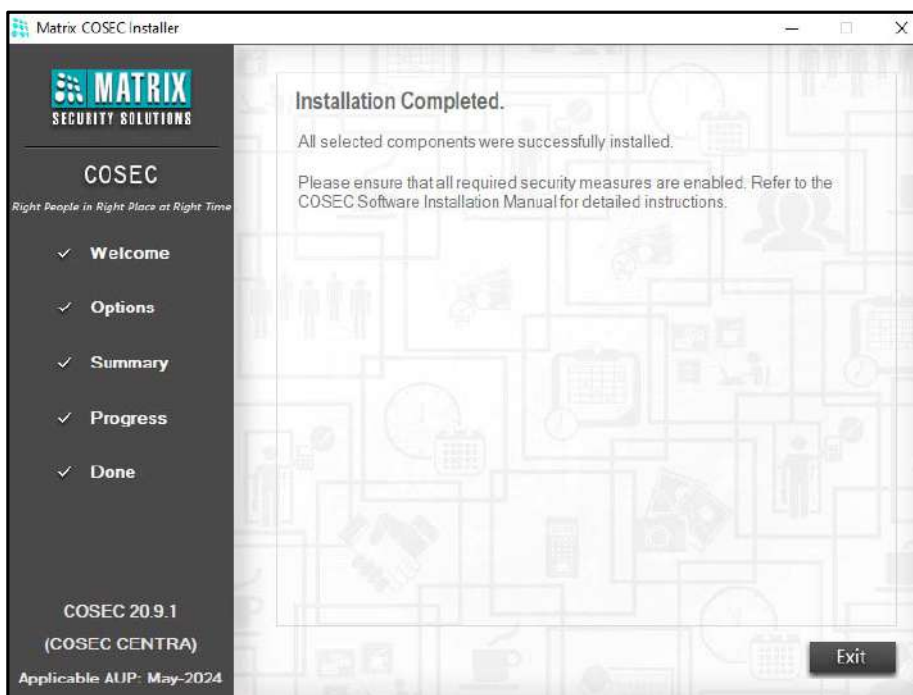

*The Identification Service must be installed on 64 bit computer with high configuration.*

Select **COSEC Identification Service** and proceed for installation.

Once the installation gets over the following screen appears.

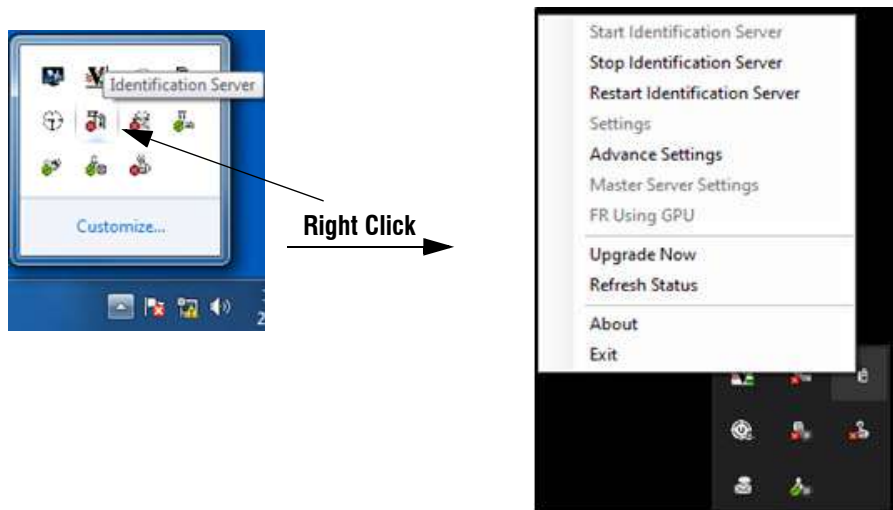

The Identification Server is installed successfully and click **Close** button to exit the wizard. Now, you need to start the service which is described in the following section.

## Starting Identification Service

After the installation, you can start the COSEC Identification Service Application by browsing the folder from **C:\Program Files (x86)\Matrix\COSEC Identification Service**

When Identification Service starts, Identification Service's  icon will be displayed in the System Tray (Notification area) on the right side of the taskbar.

Right click on the  icon.

The options displayed are — Start Identification Service, Stop Identification Service, Restart Identification Server, Settings, Advance Settings, Master Server Settings, FR Using GPU, Version Up-To Date, Refresh Status, About and Exit.

- To start this service through the Service Manager Tray, click on **Start Identification Service**.
- To configure the settings of Identification Service, first stop this service by clicking **Stop Identification Service**, and then click **Settings**. To know more, refer [“Settings”](#).
- To restart this service, click **Restart Identification Service**.
- To configure the settings of logs and tenants in the Identification Service, click **Advance Settings**. To know more, refer [“Advance Settings”](#)
- To configure the settings of Master Service, first stop the Identification Service, then click **Master Service Settings**. To know more, refer [“Master Service Settings”](#)
- To run FR with GPU, you require a graphic card installed in your PC, then click **FR with GPU**. If the graphic card is not available, then the system will continue the FR process without GPU.
- To upgrade the version of Identification Service, click **Version Up-To-Date**.
- To refresh the status of this service, click **Refresh Status**.

- To view the service details, click **About**.
- To close the Service Manager Tray window, click **Exit**.

*When service is running and Admin database loses connectivity or is unavailable then the service will keep running for 24 hours by default after which it will stop.*

*The maximum hours allowed for service is given as the configurable tag in Settings.xml file from **C:\Program Files (x86)\Matrix\COSEC Identification Service**.*

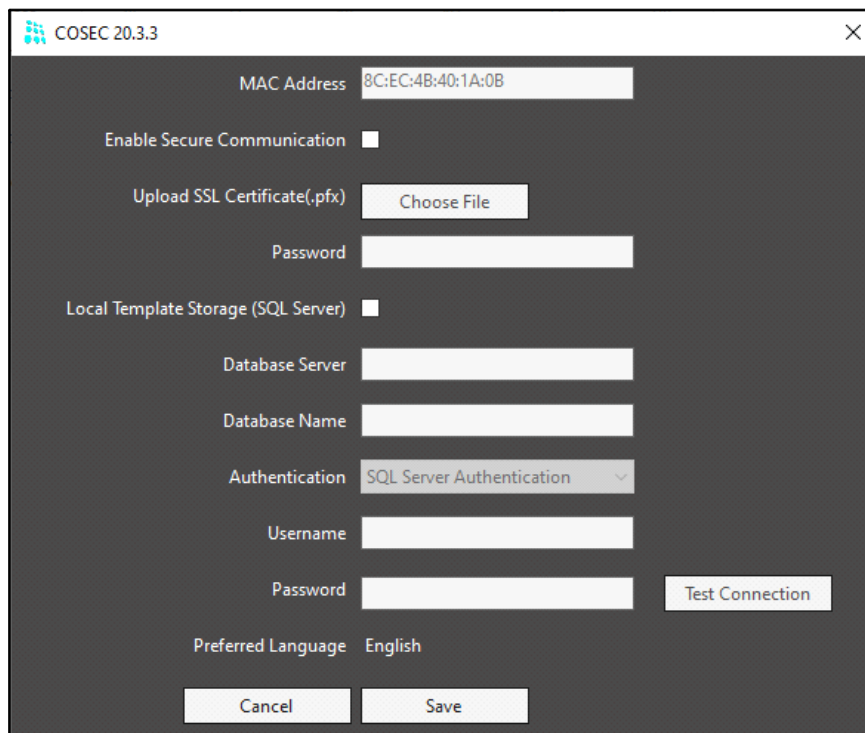

## Settings

To configure the settings of Identification Service, first stop this service, then click on **Settings** from the Service Manager Tray option.

**Login** page appears.

- Enter the **Login ID** and **Password** same as configured in the COSEC Web.
- Click **OK**.

Identification Service's Settings window appears as shown below.

Configure the following parameters:

- **MAC Address:** It displays the MAC address of the system corresponding to the IP address selected from the Tenant Settings screen.
- **Enable Secure Communication:** Select this checkbox to enable secure communication with the COSEC database.
- **Upload SSL Certificate (.pfx):** For secured communication, SSL Certificate is to be uploaded.
- **Password:** Enter the password for accessing SSL Certificate file.
- **Local Template Storage (SQL Server):** Select this checkbox to allow the template storage in the local database for the retention of stored templates when the service gets restarted.
- **Database Server and Database Name:** Enter the server address of the database and its name.

*The Database Server name should be specified using the following syntax:  
Server IP Address\instance name of SQL Server.*

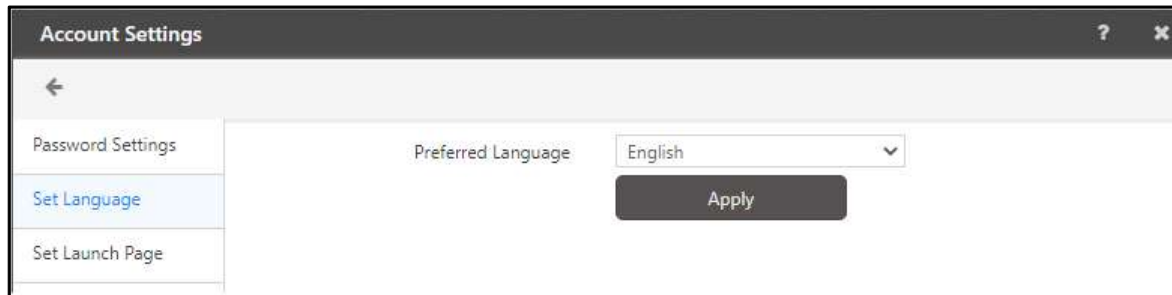

**E.g.** 192.168.104.24\sqlexpress. Here, IP Address is of the system on which the Database Server is installed and sqlexpress is the instance name given to the SQL Server.

- **Authentication:** Select the desired authentication mode — SQL Server Authentication or Windows Authentication.
- **Username and Password:** Enter the user name and the password of the database.

Click **Test Connection** to test the connection of Identification Service with the database.

- **Preferred Language:** It displays the language selected for the COSEC Web for a specific System Account User.

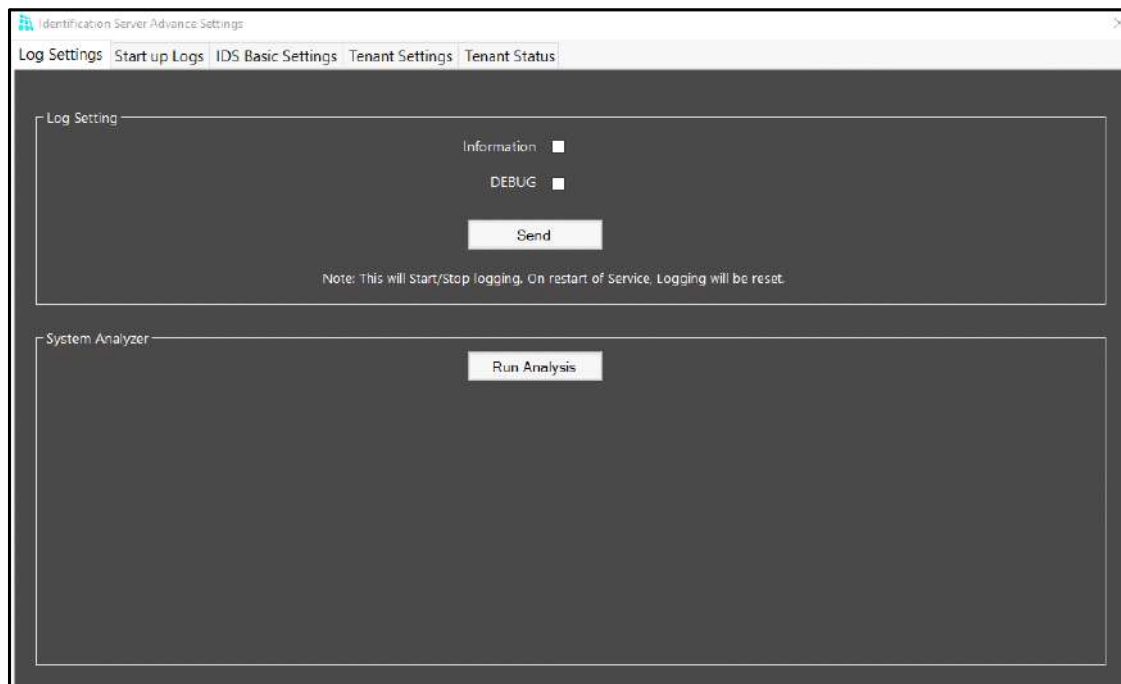

The screenshot shows a dialog box titled "Account Settings" with a dark header bar containing a question mark and a close button. Below the header is a light gray bar with a back arrow. On the left is a sidebar with three items: "Password Settings", "Set Language" (highlighted in blue), and "Set Launch Page". The main area displays the "Preferred Language" label next to a dropdown menu currently set to "English". Below the dropdown is a dark "Apply" button.

- Click **Save** to save the settings or click **Cancel** to discard.

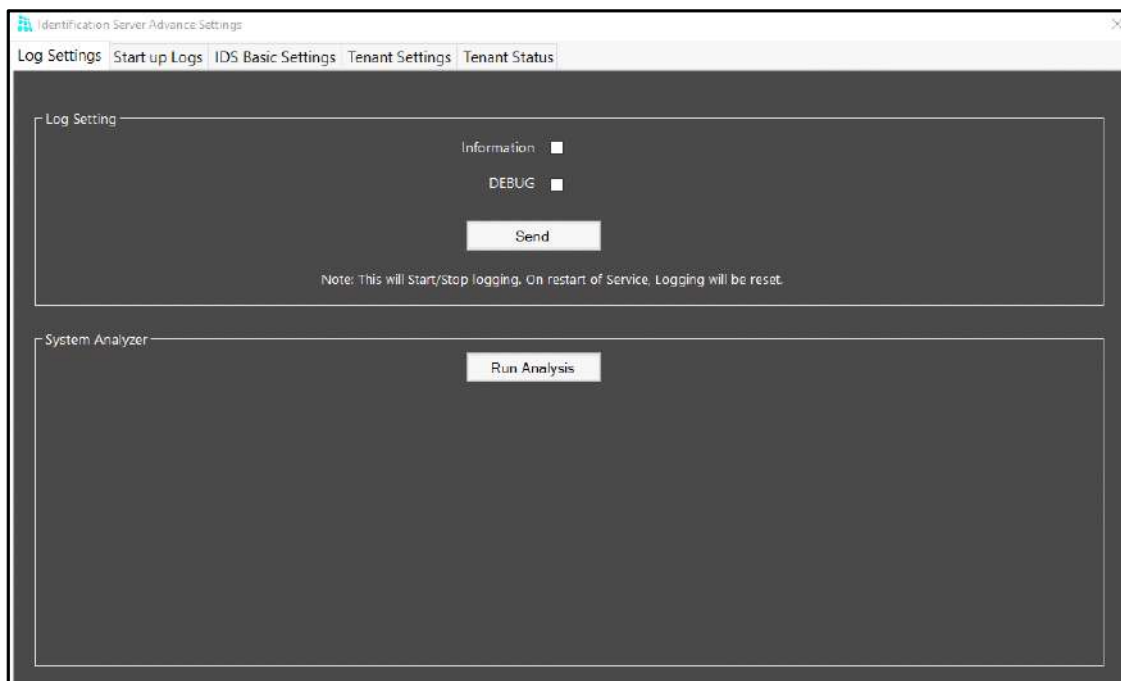

## Advance Settings

In order to configure the settings of logs and tenants in the Identification Service, click **Advance Settings** from the Service Manager Tray option. The **Identification Server Advance Settings** page appears as below:

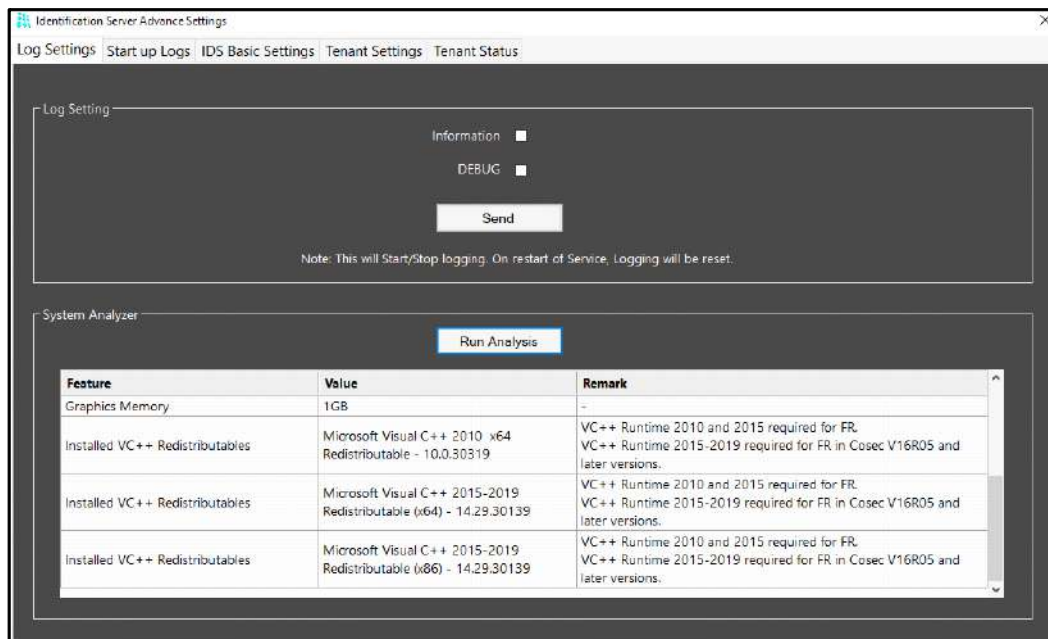

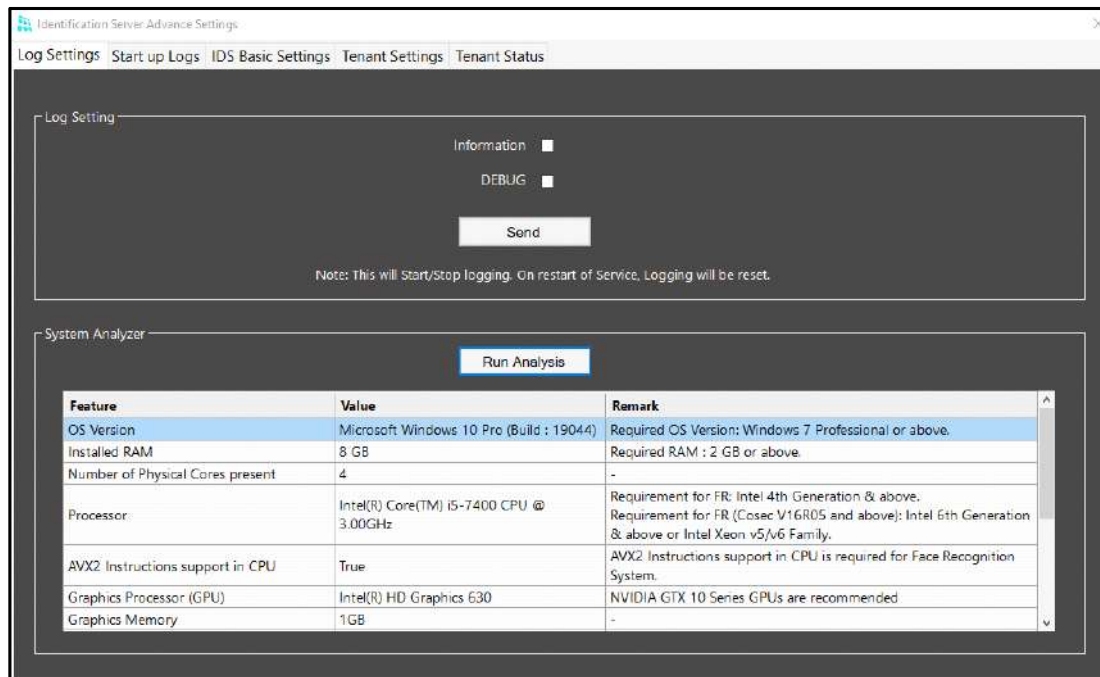

Before you start the configurations, you can check if your PC is compatible and the required pre-requisites for the installation of the Identification Server are fulfilled.

- To check the compatibility,
- In the System Analyzer section, click **Run Analysis**.

- After the process completes, it displays a table with the three columns Feature, Value and Remarks.
- Value mentions the current systems details for each Feature and the Remark column displays what is required for the IDS to function.

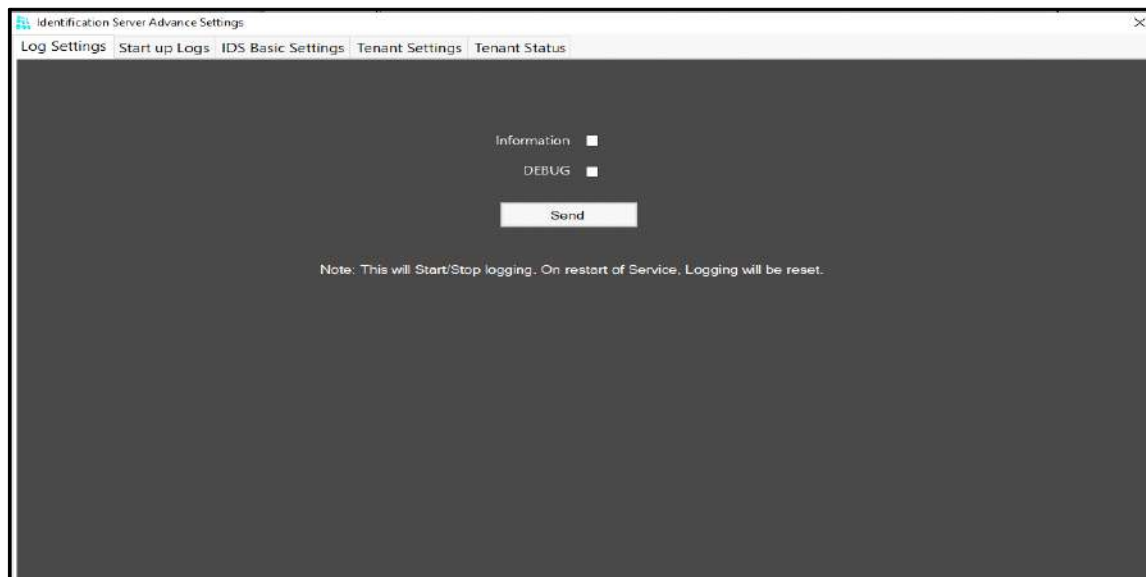

- If all Values are as per the Remarks the IDS will be functional. If not you need to update the system as per the Remarks.

Now, you can continue with the configuration, the screen displays the following tabs:

- “Log Settings”
- “Start up Logs”
- “IDS Basic Settings”
- “Tenant Settings”
- “Tenant Status”

## Log Settings

Click the **Log Settings** tab to enable logs of the IDS Service.

Select the check box of the desired option — **Information**, **DEBUG**.

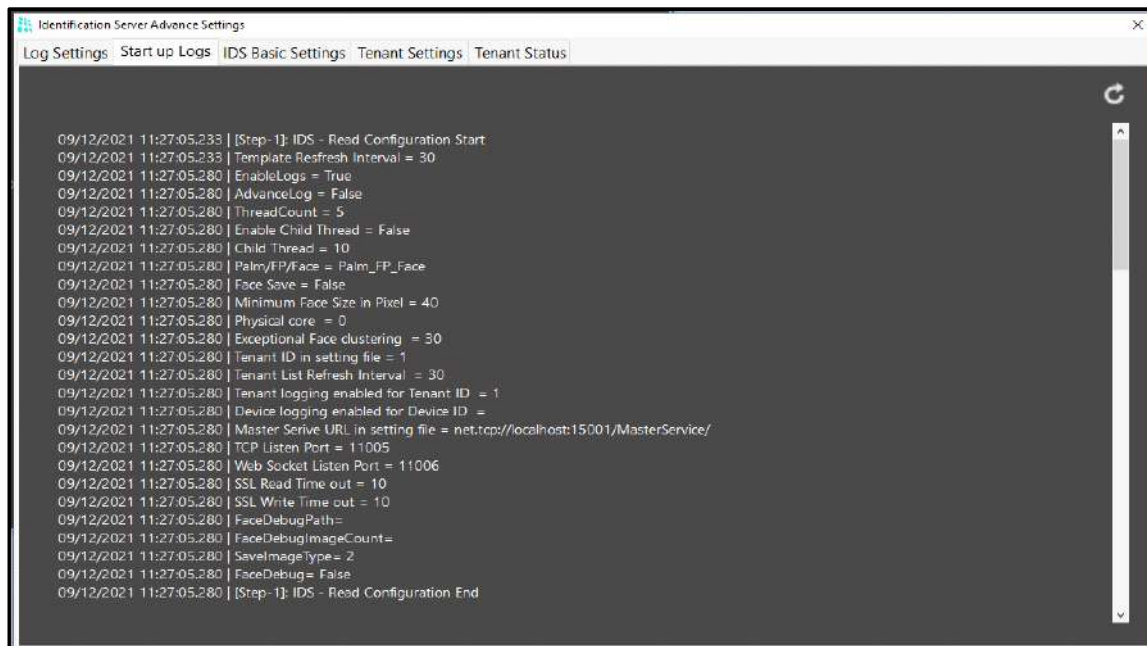

Click **Send** and the respective logs will be stored in the COSEC Identification Server in the Logs folder. These logs can be used for troubleshooting issues related to IDS by the Support Team.

*If in case you restart the Identification Service, the configured log settings will be reset. You need to configure it again.*

## Start up Logs

Click the **Start up Logs** tab if you desire viewing the previous start-up logs of the identification Service. The **Start up logs** page appears as below:

If you stop and then start the IDS, the previous logs will be replaced with the current logs.

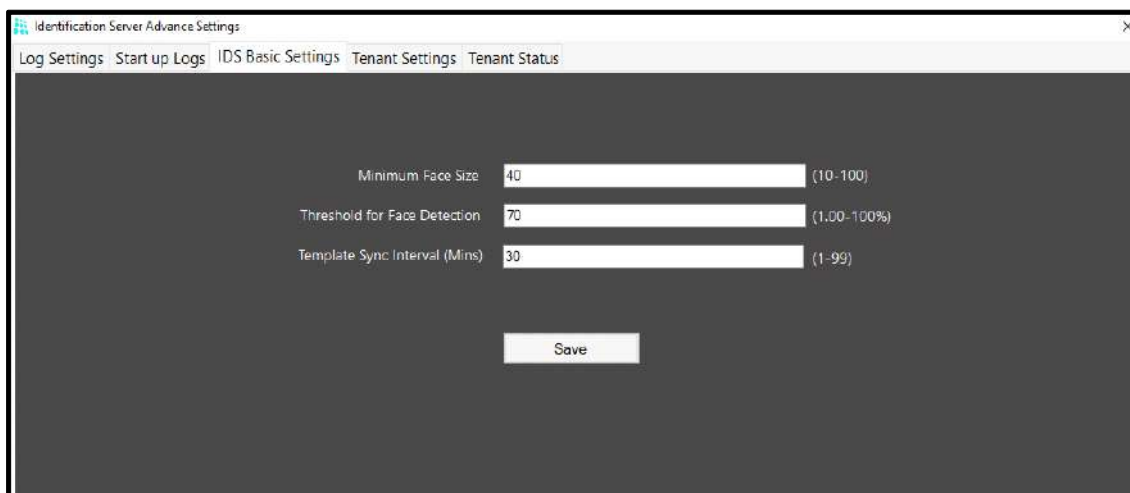

Click **Reload**  , to refresh the logs on the page.

*In the event, when user stops IDS and starts immediately, logs may not be displayed because, before IDS could complete its stopping task, the start command was executed in that case the user will have to reload logs after some time.*

## IDS Basic Settings

Click the **IDS Basic Settings** tab, in order to configure the basic settings of the Identification Service. The page appears as below:

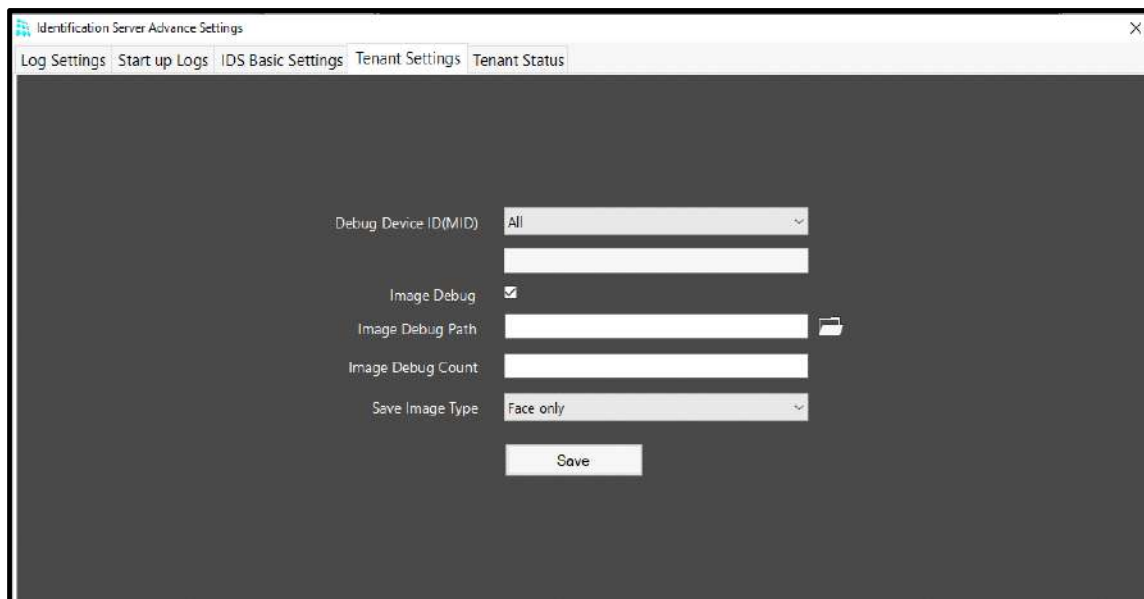

Configure the parameters:

- **Minimum Face Size:** Specify the minimum percentage value of face mandatory in the frame, for the face to be detected.
- **Threshold for Face Detection:** Specify the desired threshold value in percentage to detect a face.
- **Template Sync Interval:** Specify the desired time after which the Identification Service will request the Enroll Service to sync the face template.

## Tenant Settings

Click **Tenant Settings** tab, to configure the parameters of the tenant. The **Tenant Settings** page appears as shown below.

Configure the parameters:

- **Debug Device ID(MID):** You can select the desired device/s from which you intend to get logs as well as face images.

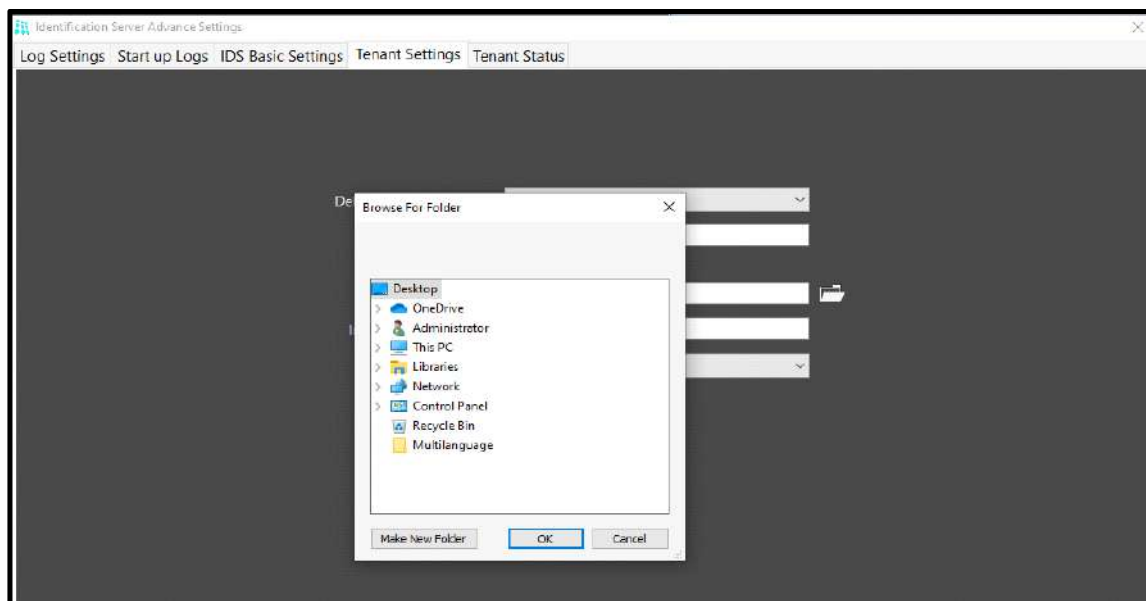

From the dropdown list:

- Click **All** if you desire logs from all the devices.
- Click **Selected** if you desire logs from a specific device. Enter the Device ID in the text box.

*To debug multiple devices make sure you specify Device ID as comma-separated values. For example, if you desire logs/image templates of three devices, that is, 15, 05, 44 then select **Selected** as the Debug Device ID (MID) option and in the text box enter the values as 15, 5, 44.*

- **Image Debug:** Select the checkbox to enable image debugging.
- **Image Debug Path:** If you have enabled the **Image Debug** checkbox, mention the path where you wish to store the images. Click on the icon  and a pop up appears, browse and select the respective folder. Click **OK**.

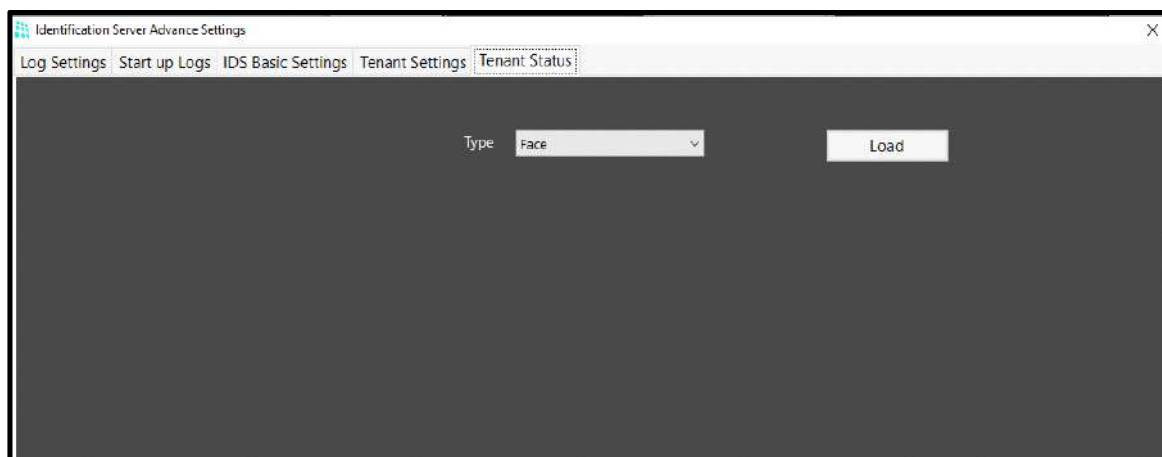

- **Image Debug Count:** Specify the desired number of images you wish to store in the folder on the above mentioned path.
- **Save Image Type:** Select the image type from the drop down list.
  - Select **Face only** if you desire saving only images with face.
  - Select **All** if you desire saving all images, that is, with or without face.

Click **Save** to save the configured parameters.

### Tenant Status

Click the **Tenant Status** tab in order to configure the type of tenant status. The **Tenant Status** page appears as shown below:

- **Type:** From the drop down list select the desired type of tenant status —**Face**, **Palm** or **FP**.

Type

Face

Face

Palm

FP

- Click **Load**. According to the **Type** selected the information regarding the tenant will be displayed. The following screen appears.

OK

Configure the following parameters of Master Service:

- **Tenant ID:** Enter the COSEC Tenant ID.
- **Master Service Address:** Enter the IP Address or URL of the Master Service.
- **IP Address:** If your PC is having multiple network connections, the IP Addresses of these networks will be displayed in the drop down list.

Select the desired IP Address.

The IP Address of the enabled network will be set as the default IP Address for this service.

*If none of the network connections are enabled, then IP Address of the running service will get updated to 127.0.0.1 - Localhost and the services will continue running.*

*To restore the IP Address to the desired one, you must first enable the connection from network connections and then select its IP Address from the drop down list manually.*

*As the Windows10 PC boots up fast, so services will check and retry for the availability of assigned IP address before finally moving to 127.0.0.1*

*If more than one network connections are enabled then the first enabled network connections IP Address will be assigned to all the services on service startup after installation.*

*If the PC is assigned a DHCP Addressing scheme, then whenever the IP Address changes, the same will be updated against every service.*

Click **Refresh IP List**  to update the list of all network adapters (network connections).

- **Login ID and Password:** Enter the Login ID and Password same as configured in the COSEC Web.

Click **Save** to save the settings.

*Existing COSEC users must upgrade to COSEC V9R3 for the Identification Service feature to function as expected. On upgrading to COSEC V9R3, any Identification Server configuration performed from the device Web page shall be reset and will require to be re-configured from the COSEC Web application. It is recommended that all Identification Server configuration be performed from the COSEC Web application only.*

## Identification Server Configuration

This page enables the administrator to configure multiple Identification Servers and assign devices and enterprise groups to each of them. An Identification Server can be assigned to multiple enterprise groups (i.e. department, branch etc.) at a time. However a device can be assigned to only one Identification Server at a time.

*For Group FR ("[Mark Group Attendance](#)"), Capture Face of Unidentified User, Manual Group Attendance and Face Enrollment via Web feature to work, ensure that Identification Service is defined in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

To configure an Identification Server,

Go to **Admin module > System Configuration > Identification Server Configuration** and the following screen appears.

**Identification Server Configuration**

← + ✎ 🗑️ 💾 ✕ ↺

ID \* 1 Identification - 4CCC6A15649C

MAC Address \* 8C : EC : 4B : 4C : 53 : CC

Support Global Identification ☐

Enable Secure Communication ☐

Matching Threshold(Face) \* 94.00 %

Biometric Group Based Identification ▼

Assign Groups ▼

Assign Devices ▼

- When an Identification Server and the COSEC Server both are installed on the same system, then the identification server will get automatically added on the Identification Server Configuration page.
- You only need to configure other required parameters. But if an identification server is installed on the other system then you need to configure it manually by clicking **New** button and providing the following parameters as described below.
- **Name:** Enter a suitable name for the Identification Server.
- **MAC Address:** Enter MAC Address of the PC where Identification Server is installed.
- **Server Address:** Enter IP Address of the system where Identification Server is installed.
- **Support Global Identification:** Select the check-box to enable identification of all the COSEC users whose finger/palm has been enrolled from an enrollment station.
  - If not selected then templates of only those users will be identified which are stored locally.
- **Enable Secure Communication:** Select the check-box to establish secure communication with server.
- **Matching Threshold (Face):** Enter the Matching Threshold in percentage for Face identification. It also accepts upto two decimal points.

*Example: If you set Matching threshold as low (e.g.: 20%) then your Face may match with other person. But if you set matching at high percentage (e.g.: 90%) then more accurate matching of your template will be done and accordingly access will be granted or denied.*

## Biometric Group Based Identification

In the Biometric Group Based Identification panel, configure the required parameters for minimizing the search time of template by classifying the templates based on user's biometric group number. Also, configure parameters for handling Roaming Users template.

*The firmware (V10R2) of Identification Server and Devices must be upgraded to work in sync for searching templates in threads.*

- **Enable:** Select the checkbox to activate the biometric group based identification feature. If enabled, Identification Server will maintain the biometric group wise user templates.
- **Extended Search:** Select the checkbox to do extended search, if the user's biometric group specific template match is below the configured matching threshold.
- **Extended Search In:** If extended search is enabled, select the group for which Extended Search In should be done, i.e. Roaming Group or All.
- **Matching Threshold Palm/FP:** Enter the Matching Threshold in percentage for Palm identification. Also, select the Matching Threshold (FP) for finger print to be configured for matching the FP template.

If you set Matching threshold as low (Example: 20%) then lose matching may be found. i. e. your template may match with other person. But if you set matching at high percentage (Example: 70%) then more accurate matching of your template will be done and accordingly access will be granted or denied.

### Example:

The Biometric group number of Device at R&D is 1 and HO is 2. The default Biometric group number of users belonging to R&D is 1 and those of HO is 2.

A user Ashish (roaming user) belonging to HO (biometric group no.2) when regularly punches on device at HO, then his templates are searched from thread handling group number2. The Identification server stores the Roaming user templates at 0.

When Ashish punches at R&D then his template is searched from group1. If you have enabled Extended search and selected Roaming group, then the template will specifically search from Roaming user templates. This will reduce the time for identification. If you select option for extended search to All, then templates will be searched from all the threads.

## Assign Groups

In the **Assign Groups** panel, select enterprise groups to be assigned to the Identification Server. For e.g. Admin can select the Group “Branch” in User Filter and select users of Branch-1 to be assigned to the current Identification Server. Similarly all users of Branch-2 can be assigned to a different Identification Server.

The screenshot shows the 'Assign Groups' panel. It includes a 'Select Users' dropdown set to 'Group Wise', a 'Select Group' dropdown set to 'Organization', and an 'Organization' field with a red asterisk. Below these are input fields for 'ID' and 'Name', and a search bar. A table lists groups with columns for ID, Name, and Group. The first row shows ID '1', Name 'Organization-1', and Group 'Organization'. There are trash icons for each row.

ID	Name	Group
1	Organization-1	Organization

## Assign Devices

Similarly, in the **Assign Devices** panel, select one or multiple devices to be assigned using the picklist button.

The screenshot shows the 'Assign Devices' panel. It has two main sections: 'Face Recognition' and 'Other Biometric Credentials'. Each section has a search bar, a 'Device' label, and input fields for 'ID' and 'Name'. The 'Face Recognition' section contains a table with columns for MID, Name, and Type. The first row shows MID '1', Name 'ARGO-Device-1', and Type 'ARGO'. The 'Other Biometric Credentials' section shows a table with columns for MID, Name, and Type, but it is currently empty, displaying 'No Data'.

MID	Name	Type
1	ARGO-Device-1	ARGO

No Data

- **Face Recognition:** Click the Device picklist, to select and assign these to the Identification Server. This is where the Face templates will be saved.

- Click the **Device** picklist. The **Picklist For Direct Doors** pop-up appears.

1 - 5 of 15 records

« < 1 2 3 > »

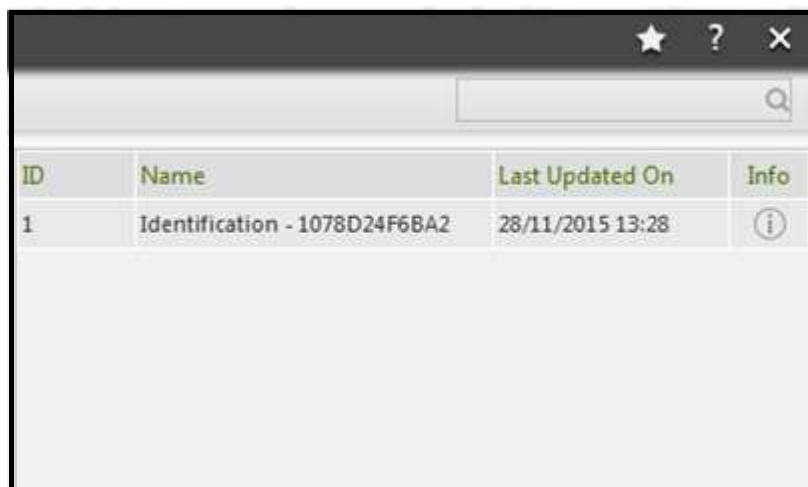

- You can also delete the desired devices. To do so, click **Delete** of the respective device.

The configuration done in Assign Devices for Face Recognition and Other Biometric Credentials will also be updated into the Device Configuration > Identification Server section.

Click **Save** . The new Identification Server will appear in the grid list on the right hand side of the page as shown below.

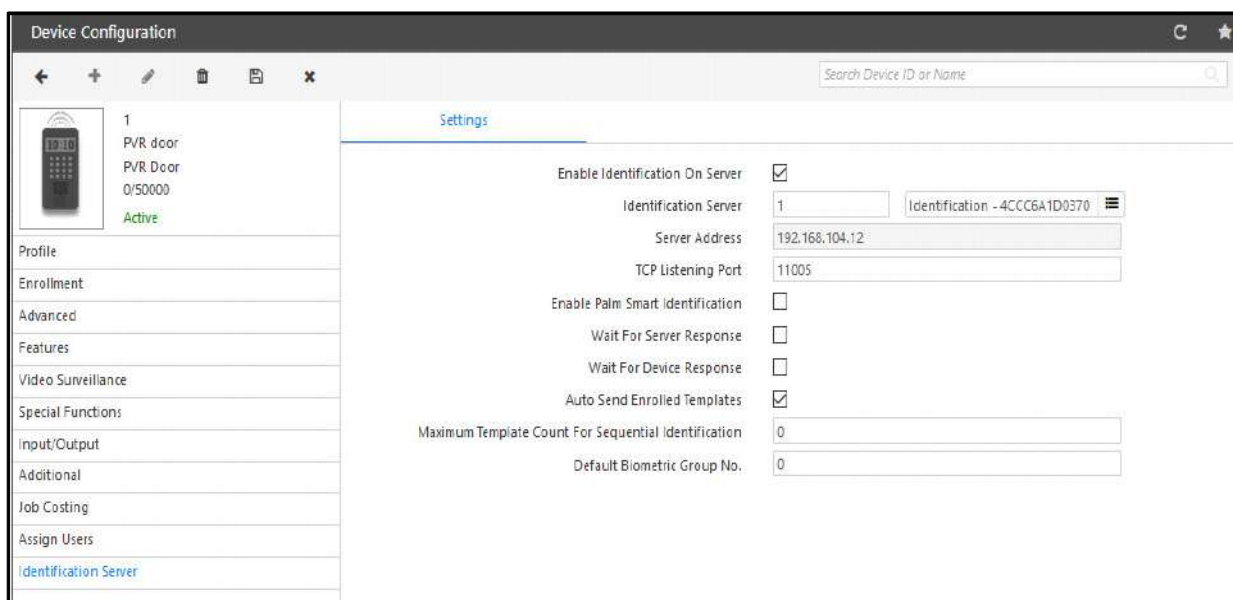

ID	Name	Last Updated On	Info
1	Identification - 1078D24F68A2	28/11/2015 13:28	

The **Last Updated On** column displays the date and time at which the server last came online. Hover your mouse on the **Info** icon to view the time duration since the server last came online.

After the IDS configuration has been done in System Configuration, you now need to configure the parameters in the desired devices.

The COSEC device (Eg: PVR door) on which identification of user is to be done through IDS; must be assigned the IDS settings from Device Configuration> Identification Server.

Auto Send Enrolled Templates

☒

Maximum Template Count For Sequential Identification

0

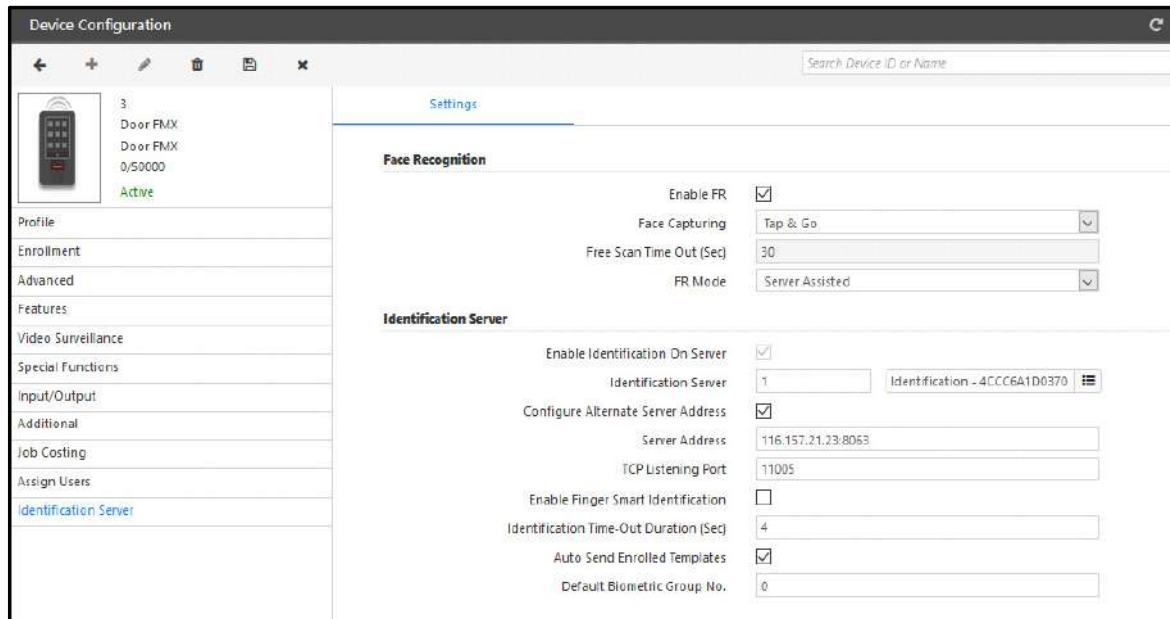

Default Biometric Group No.

0

The enrolled templates of user are stored in Identification server.

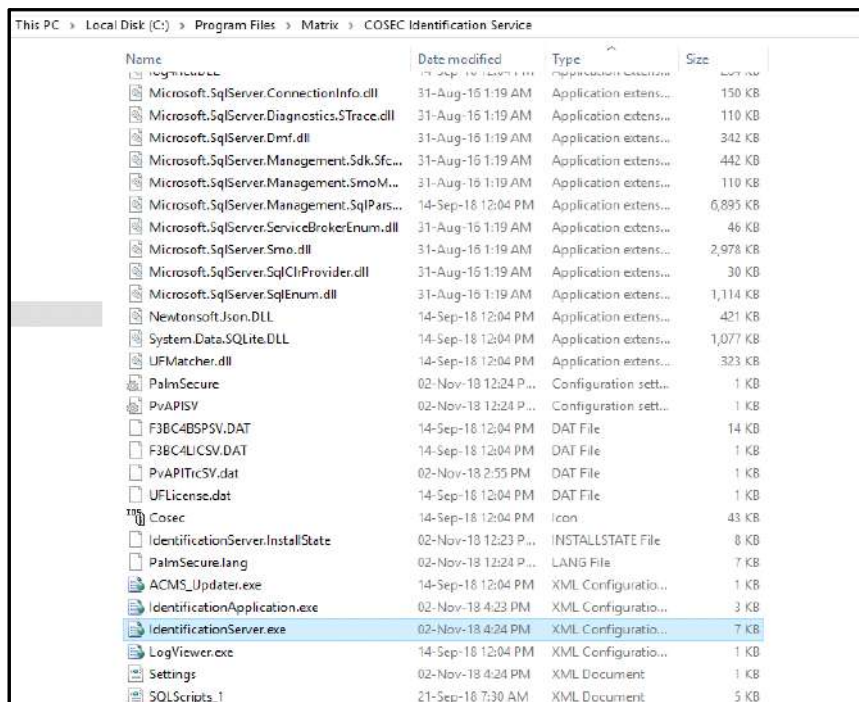

Now when a user punches on PVR door, his palm template will go to Identification server for matching. The Identification server matches the palm template with the stored templates and gives the response to device and hence user is identified/rejected accordingly.

When new template of user is enrolled, it can be sent to the identification server if “Auto Send Enrolled Templates” checkbox is enabled. Also Identification server automatically checks for new templates after every 2 minutes (by default).

For Devices such as FMX, Vega, ARGO and MODE, the identification of Face can be done through Local as well as Server Assisted Mode. For Server Assisted Mode; FR server must be installed and its IP address and Port must be specified in the Configuration file as explained below.

The **Settings** File and **Configuration** File is available in Program files as shown below.

```

```

You can edit the tag as per your requirement. The description of tag can be viewed in **Parameter Description** comments when the particular tag is selected.

Some of the tags are described here:

**DBRetryInterval:** When Identification service loses connectivity with database server; then it is required to connect again so Identification service will retry to connect with Database after every 10 seconds of interval. You can edit this interval.

**ThreadCount:** It is the number of Identification requests handled by Identification server at once. The default is 5 i.e. at a time identification can be done through 5 devices.

**EnrollMinute:** When new enrollment is done; then after every 2 minutes (default) the templates will be updated in Identification server. You can edit this time for updating the enrolled templates to identification server.

**GroupLimit:** When there are more than 4000 Palm templates in Identification server then templates can be grouped which will reduce the time for identification. Suppose there are 10,000 templates in a server and the algorithm can run for 3999 templates at once so the templates will be divided into 3999,3999 and 2002 for faster identification in group. The default grouping is for 999 templates.

**PalmOrFP:** The default value is 2 = Palm+ FP. To include Face credential change this parameter to 6 = Palm + FP + Face.

**FPGGroupLimit:** When there are more than 50000 FP templates in Identification server then templates can be grouped which will reduce the time for identification. The default grouping is for 500 templates.

**FPSecurityLevel:** Default is 4, max is 7 and minimum is 1

**FPTemplateFormat:** FP Template Format(0-Proprietary , 1- ISO) : Default is 0

**FaceServerIP:** IP address of face server. The Face server must be installed for identification to be done through FR Mode as Server Assisted.

**FaceServerPort:** Port number of the face server.

**FaceTCPorHTTP:** 0=TCP, 1=HTTP

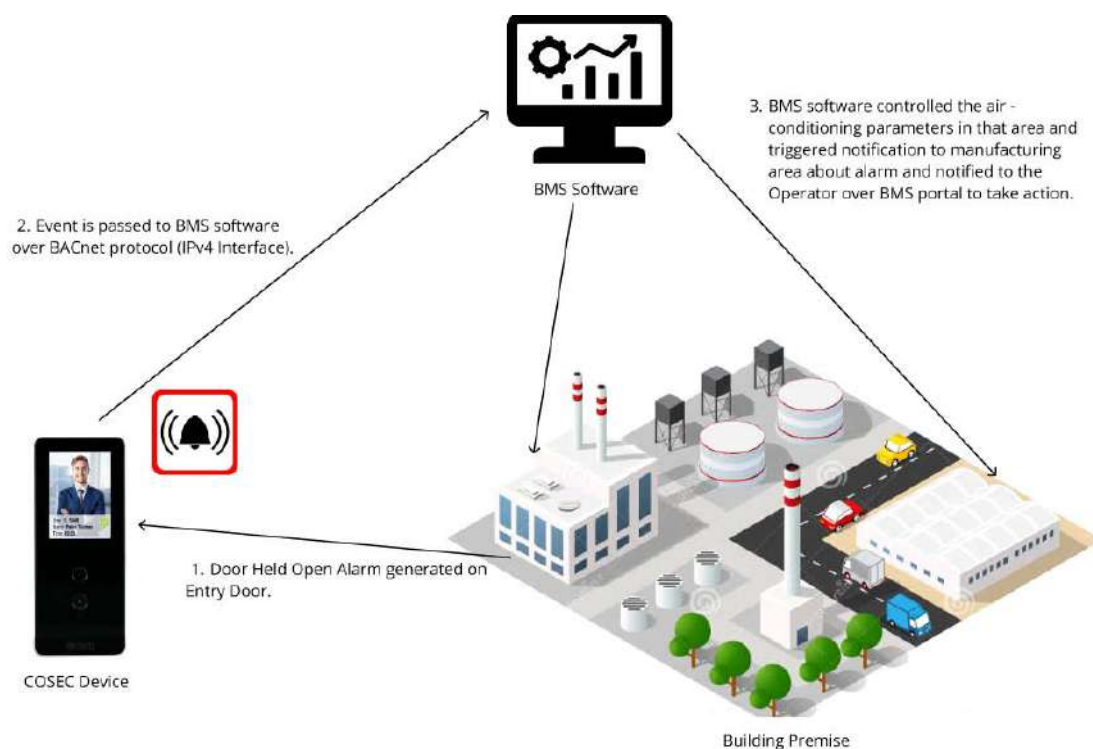

# BACnet Configuration

BACnet (Building Automation and Control Network) is an industry-standard protocol that is specifically used in Building Automation Systems. BACnet provides a standard framework for communication, management, monitoring and control of various automation functions specific to buildings, such as Lighting, HVAC, Fire Safety, Access Control and Energy Management Systems. BACnet supports multiple communication protocols, including Ethernet, TCP/IP, and RS-485, allowing for the integration of devices from different manufacturers and technologies.

Various Building Management Systems (BMS) rely on BACnet to communicate with each other for the exchange of data and to control devices and automation systems within a building.

Integration of BACnet with COSEC enhances its capability to integrate with 3rd party Building Management Systems. With this integration, COSEC Devices and their Events can be used to control various automation functions.

Let us understand this with the help of an example as depicted in the diagram below.

- In the above diagram there are two premises — Manufacturing and Office — wherein BMS is installed.
- The BMS and COSEC communicate using BACnet.
- When the Door Held Open Alarm is generated by COSEC Device at the Manufacturing premise, COSEC sends this event to the BMS over BACnet.
- The BMS software controls the air-conditioning parameters in that premise, hence it triggers a notification to the Manufacturing area about the Alarm.
- The BMS software also notifies the Operator over BMS Portal to take action.

BACnet supports various types of services for data exchange. There are selected services that are supported by COSEC. For details, refer to [“Services supported by BACnet Server”](#).

To integrate BACnet with COSEC, you need to:

- Configure the BACnet Server in COSEC Integrate. For details, refer to BACnet Server Configuration in the COSEC Integrate User Guide.
- Assign devices to the configured BACnet Server. For details, refer to [“BACnet Server Configuration”](#)
- Configure the BACnet Client List parameters. For details, refer to [“BACnet Client List Configuration”](#).

## BACnet Server Configuration

The BACnet Server parameters as configured in COSEC Integrate appear here. The grid on the right side of the page displays the multiple BACnet Servers if configured in COSEC Integrate. However, you can select the devices that you wish to assign to each BACnet Server.

For each Server, you need to configure Client IP Address/es with which it will communicate. The list of such clients is displayed here.

To configure the parameters,

- Click **Admin module > System Configuration > BACnet Configuration > BACnet Server Configuration**.

The screenshot shows the 'BACnet Server Configuration' page. On the left is a sidebar with 'Admin' selected. The main area has a form with the following fields: BACnet Server ID (1), BACnet Server IP Address (192.168.103.237), BACnet Server Port Number (47808), BACnet Instance ID (1234), BACnet Instance Name (1), Network Number (1), Select Device (Randomly), and Device (Name). Below the form is a 'BACnet Client IP List' table with columns: BACnet Client IP Address, BACnet Client List ID, and BACnet Client List Name. The table is empty, showing 'No Data'.

Click the desired BACnet Server from the right grid. The details will be displayed on the left.

This screenshot shows the same 'BACnet Server Configuration' page, but with the form fields populated. The values are: BACnet Server ID: 1, BACnet Server IP Address: 192.168.103.237, BACnet Server Port Number: 47808, BACnet Instance ID: 1234, BACnet Instance Name: 1, Network Number: 1, Select Device: Randomly, and Device: Name. The 'BACnet Client IP List' table remains empty with 'No Data'.

- **ID:** This displays the auto-generated ID assigned to the BACnet Server.
- **BACnet Server IP Address:** This displays the BACnet Server IP Address as configured in COSEC Integrate.
- **BACnet Server Port Number:** This displays the BACnet Server Port Number as configured in COSEC Integrate.
- **BACnet Instance ID:** This displays the BACnet Instance ID as configured in COSEC Integrate.
- **BACnet Instance Name:** This displays the BACnet Instance Name as configured in COSEC Integrate.
- **Network Number:** This displays the Network Number as configured in COSEC Integrate.
- **Select Device:** Select the desired option — All or Randomly.

If you select **All**, all the devices will be selected.

If you select **Randomly**, click the **Device** picklist. The **Select Device** pop-up appears.

## BACnet Client IP List

The screenshot shows a window titled "BACnet Server Configuration". It contains several input fields for server settings: BACnet Server ID (1), BACnet Server IP Address (192.168.103.237), BACnet Server Port Number (47808), BACnet Instance ID (1234), BACnet Instance Name (1), Network Number (1), and Select Device (All). Below these fields is a section titled "BACnet Client IP List" which contains a table with three columns: BACnet Client IP Address, BACnet Client List ID, and BACnet Client List Name. The table lists four entries: 192.168.110.23 (ID 1, Name Client1), 192.168.110.24 (ID 1, Name Client1), 192.168.115.25 (ID 2, Name Client2), and 192.168.118.90 (ID 3, Name Client3).

BACnet Client IP Address	BACnet Client List ID	BACnet Client List Name
192.168.110.23	1	Client1
192.168.110.24	1	Client1
192.168.115.25	2	Client2
192.168.118.90	3	Client3

The list displays the list of BACnet Client Lists associated with the configured BACnet Server.

The BACnet Client details displayed are BACnet Client IP Address, BACnet Client List ID, BACnet Client List Name

The list will be displayed as well as updated, only if it has been configured from ["BACnet Client List Configuration"](#).

## Services supported by BACnet Server

### Who-Is and I-Am Services

The Who-Is service is used by a sending BACnet-user to determine the Device object identifier, the network address, or both, of other BACnet devices that share the same internetwork. The Who-Is service is an unconfirmed service. The Who-Is service may be used to determine the Device object identifier and network addresses of all devices on the network, or to determine the network address of a specific device whose Device object identifier is known, but whose address is not. The I-Am service is also an unconfirmed service. The I-Am service is used to respond to Who-Is service requests. However, the I-Am service request may be issued at any time. It does not need to be preceded by the receipt of a Who-Is service request. In particular, a device may wish to broadcast an I-Am service request when it powers up. The network address is derived either from the MAC address associated with the I-Am service request, if the device issuing the request is on the local network, or from the NPCI if the device is on a remote network.

### Who-Has and I-Have Services

The Who-Has service is used by a sending BACnet-user to identify the Device object identifiers and network addresses of other BACnet devices whose local databases contain an object with a given Object\_Name or a given Object\_Identifier. The I-Have service is used to respond to Who-Has service requests or to advertise the existence of an object with a given Object\_Name or Object\_Identifier. The I-Have service request may be issued at any time and does not need to be preceded by the receipt of a Who-Has service request. The Who-Has and I-Have services are unconfirmed services.

**ReadProperty Service**

The ReadProperty service is used by a client BACnet-user to request the value of one property of one BACnet Object. This service allows read access to any property of any object, whether a BACnet-defined object or not.

**ReadPropertyMultiple Service**

The ReadPropertyMultiple service is used by a client BACnet-user to request the values of one or more specified properties of one or more BACnet Objects. This service allows read access to any property of any object, whether a BACnet-defined object or not. The user may read a single property of a single object, a list of properties of a single object, or any number of properties of any number of objects. A 'Read Access Specification' with the property identifier ALL can be used to learn the implemented properties of an object along with their values.

**UnconfirmedEventNotification Service**

The UnconfirmedEventNotification service is used by a notification-server to notify a remote device that an event has occurred. Its purpose is to notify recipients that an event has occurred, but confirmation that the notification was received is not required. Applications that require confirmation that the notification was received by the remote device should use the ConfirmedEventNotification service. The fact that this is an unconfirmed service does not mean it is inappropriate for notification of alarms. Events of type Alarm may require a human acknowledgment that is conveyed using the AcknowledgeAlarm service. Thus, using an unconfirmed service to announce the alarm has no effect on the ability to confirm that an operator has been notified. Any device that executes this service shall support programmable process identifiers to allow broadcast and multicast 'Process Identifier' parameters to be assigned on a per installation basis.

# BACnet Client List Configuration

---

*Make sure the BACnet Server Configurations are done appropriately at the Client end to ensure smooth functioning of the feature.*

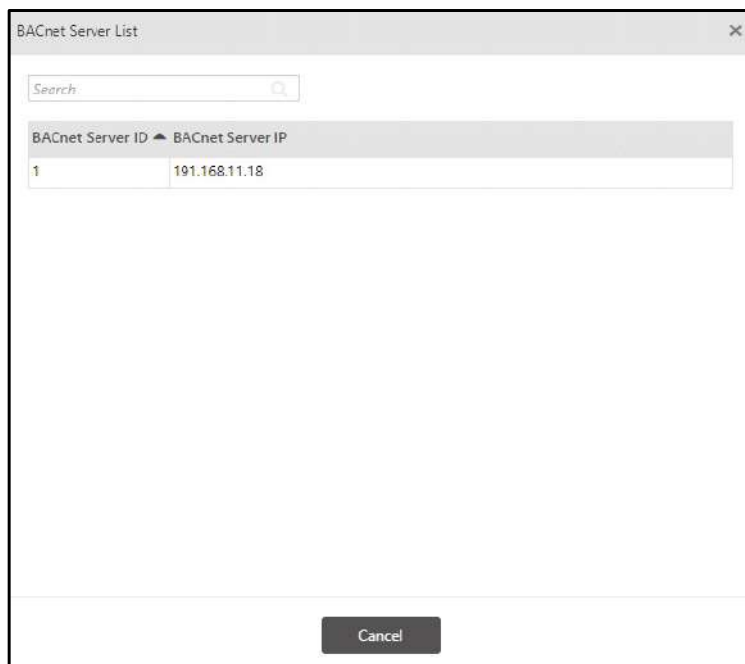

After you have configured the BACnet Server, you need to associate Clients with the BACnet Server.

To do so, you need to configure the following parameters,

- Click **Admin module > System Configuration > BACnet Configuration > BACnet Client List Configuration**.
- Click **Add**  to add a new Client List. You can add upto 100 Client Lists.
- **BACnet Client List**: Configure the desired name you wish to assign to the BACnet Client List. The ID is auto-generated.
- BACnet Client List Configuration includes the following:
  - “BACnet Server Selection”
  - “BACnet Client List Configuration”

## BACnet Server Selection

- Click the **BACnet Server Selection** collapsible panel and configure the following:
- **BACnet Server**: Click the BACnet Server picklist. The **BACnetServer List** pop-up appears.

The screenshot shows a window titled "BACnet Server List" with a search bar at the top. Below the search bar is a table with two columns: "BACnet Server ID" and "BACnet Server IP". The table contains one row with the ID "1" and the IP "191.168.11.18". At the bottom of the window is a "Cancel" button.

BACnet Server ID	BACnet Server IP
1	191.168.11.18

- Click to select the desired Server.
- **Devices:** Click the picklist. The **Select Device** pop-up appears.

All the devices associated with the selected Server appear. From this you can select the devices which you wish to associate with the Client/s.

You can select the particular devices or can select all the devices at once.

Select Device

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	Name	Type

<input type="checkbox"/>	PanelLite	Panel Lite

OK Cancel

- To select particular devices, select the check boxes of the desired devices. You can also search for the desired device using the search bar.

**OR**

- To select all the devices at once, select the **Select All** check box. The devices on all the pages will be selected.
- Click **OK**.

The events/alarms from these devices will be sent to the clients. Each device can be associated with one Client List only.

- The selected devices appear in the grid.

BACnet Client List 1 Client1

BACnet Server Selection

BACnet Server\* 1 192.168.103.237

Device Name

Search

Device Name	Type	
ARGO FACE PD	Panel200 Door	
ARGO PD	Panel200 Door	
VEGA PD	Panel200 Door	

- You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Only those devices which are allocated to a BACnet Server will be displayed in the picklist to be assigned to the Client Lists.

Each Client List must have a unique list of devices from the BACnet Server, that is, one device can be assigned to a single Client List.

## BACnet Client List Configuration

- Click the **BACnet Client List Configuration** collapsible panel and configure the following:

BACnet Client List Configuration

SrNo	Client IP Address	Client Port	Network Number	Start Time	End Time	Days	Notification Type	Process Identifier	Event Selection
No Data									

+

- Click **Add**  to add a new Client configuration. You can add upto 10 clients in each BACnet Client List.

BACnet Client List Configuration

SrNo	Client IP Address	Client Port	Network Number	Start Time	End Time	Days	Notification Type	Process Identifier	Event Selection
	192.168.103.237	47808	0	00:00	00:00	Select	Unconfirm	0	Alarm

+

- Sr. No:** This is auto-generated by the system.

- **Client IP Address:** Configure the IP Address of the BACnet Client.
- **Client Port:** Configure the Port of the BACnet Client.
- **Network Number:** Configure the Network Number which will be used by BACnet to communication with the Client. This will be provided by the Client.
- **Start Time:** Configure the Start Time for the schedule when data is to be sent to the BACnet Client.
- **End Time:** Configure the End Time for the schedule when data is to be sent to the BACnet Client.
- **Days:** Click to select the desired days or select **Check All** to select all the days, for the schedule when data is to be sent to the BACnet Client.
- **Notification Type:** Un-editable, this displays Unconfirmed Notification Type.
- **Process Identifier:** Configure the Process Identifier using which the BACnet Server will read the data.
- **Event Selection:** Select the desired Event — Alarm, Event— whose data is to be sent to the BACnet Client.
- Click **Save**  to save the configuration or click **Cancel**  to discard. The Client appears in the grid.

BACnet Client List Configuration										
SrNo	Client IP Address	Client Port	Network Number	Start Time	End Time	Days	Notification Type	Process Identifier	Event Selection

2	192.168.110.24	47808	1	09:00	18:00	Mo Tu We Th Fr Sa Su WO PH FB RD	Unconfirmed	1	Event	

- Click **Edit**  to edit the configuration of the Client.
- Click **Delete**  to delete the Client.

Similarly, you can add other Clients. You can add a maximum of 10 Clients in each BACnet Client List.

The Client List associated with the selected Server will be displayed in the BACnet Server Configuration page. For details, refer to [“BACnet Client IP List”](#) in [“BACnet Server Configuration”](#).

## Changing the Association of the BACnet Server with the BACnet Client List

After you have configured the desired BACnet Client Configuration Lists and later if you wish to change the BACnet Server associated with the BACnet Client Lists, you can do the same. To do so,

- Click **Admin module > System Configuration > BACnet Configuration > BACnet Client List Configuration**
- Click the desired BACnet Client List.
- Click the **BACnet Server Selection** collapsible panel.
- Click **BACnet Server** picklist. The **Picklist For BACnetServer** pop-up appears and select desired Server.

The devices associated with the new BACnet Server will be displayed, however the BACnet Client List Configuration will remain the same.

- Click **Save**.

Now the configured BACnet Client List and their schedules will be associated with the new BACnet Server.

# SMS Configuration

This tab enables to configure parameters for sending SMS using one the selected SMS service providers.

For additional security and privacy while sending SMS, COSEC supports Proxy Server Configuration. For more details, refer to [“Proxy Server Configuration”](#)

To view SMS Configuration page, go to **Admin module > System Configuration > SMS Configuration** and the following screen appears.

The screenshot shows the 'SMS Configuration' window. It contains the following fields and controls:

- Service Provider:** A dropdown menu with 'SMS Lane' selected and an 'Add' (+) button.
- Active:** A checkbox that is currently checked.
- User Name:** A text input field containing 'ca'.
- Password:** A text input field with masked characters '\*\*\*\*\*'.
- Sender ID:** A text input field containing 'KUNAL'.
- Flash Message:** A checkbox that is currently unchecked.
- Account Type:** A dropdown menu with 'Promotional' selected.
- Alert Cycle:** A text input field containing '10', with a unit label 'Seconds [1-120]'.
- Retry Count:** A text input field containing '3', with a unit label '3-99'.
- Active Days:** A text input field containing '1', with a unit label '1-9'.
- Disable Sending SMS:** A checkbox that is currently unchecked.
- Buttons:** 'Save' and 'Cancel' buttons are located below the configuration fields.
- Test Message Section:** Located at the bottom, it includes a 'Phone Number' input field, a 'Template ID' input field, and a 'Send' button.

The page displays configurations for the added service providers. The pre-defined service providers are: SMS Gateway Center, SMS Lane, Business SMS, Bulk SMS, Smart Life Tech and SNOWEBS.

To set SMS configurations provide the following parameters:

- **Service Provider:** Select the service provider to be used for sending SMS from the dropdown list. One can also add a new Service Provider by clicking on **Add Service Provider** + button and the following API Configuration pop-up window appears.

Enter the following parameters as given in the API document of the service provider:

*The API Document of the service provider is mandatory for configuring the below parameters.*

- **Service Provider Name:** Enter the name of SMS service provider.
- **Service Provider URL:** Enter the url of the service provider. This url is displayed on the main SMS configuration page.
- **Base URL:** Enter the base url of the service provider. E.g: localhost/way2sms/login
- Click Add button to associate **API Arguments** with the **Argument value** selected from the dropdown list. These API arguments are available in the API document of the service provider.
- **Argument Separator:** Enter the argument separator to be used for firing a commmand. E.g.: & or ;. Also, select the method to be used for sending the message from the dropdown list.
- **Request Preview:** Displays the preview of the url with arguments.
- **Balance Check:** Select to allow balance check, if the service provider needs to use it.
- Click **Add** button and provide the **API Response** for failure or success of the COSEC response.

Click **Save** button to save the above API configurations and return to the main page where you need to configure the remaining below given parameters.

- **Active:** Enable to activate the selected service.
- **User Name:** Enter the username.
- **Password:** Enter the password.

*Contact the administrator to get user name and password for using the SMS service.*

- **Sender ID:** Enter the registered sender ID.
- **Flash Message:** Enable the checkbox to flash the message at the time of arrival.
- **Alert Cycle:** Specify the time in seconds between successive send attempts when the system tries to send the pending messages.
- **Retry Count:** Specify the number of times the system needs to try to send the message. The retry count can be from 3 to 99.
- **Active Days:** Specify the number of days till which the pending messages are treated as active in the event of the Alert service being temporarily stopped. Maximum 9 active days can be specified.
- **Disable Sending SMS:** Select to temporarily disable the SMS sending functionality.

The URL displayed is a link to the website of the selected service provider. Click on the link and login with your user-name and password to connect with service provider.

Click **Save**, once all the configurations are done. The created service provider gets displayed in the dropdown list as shown below.

### Test Message

- **Phone Number:** Enter the mobile number to send the test message for testing the settings.
- **Template ID:** As per TRAI Regulation, an enterprise which sends messages to customers like OTP, communication message, promotional messages via SMS, have to register their entity and the content template to avoid Spam, fake and fraudulent communication through SMS.

It is mandatory for an Admin to register the SMS content template prior with your Service Provider which will be verified before it is delivered to the users.

Once registered, the Service Provider will provide a Template ID against the registered SMS content.

Here, a test message content is pre-defined, which has to be registered with the Service Provider.

The test message which is to be registered is — **Hello this is a test message.**

The Service Provider will provide a Template ID against this test message.

Enter the Template ID provided by the Service Provider.

*If you have multiple Service Providers, then make sure the required templates are registered with all the desired Service Providers. Hence for each template you will have multiple Templates IDs. Also make sure you maintain a record of all the registered Message Templates with their respective Template IDs for reference.*

Click **Send** to link the phone number and the test template ID with the respective Service Provider.

*For each tenant, you can send upto 10 test messages in one minute. Thereafter the message “Maximum count reached. Please try after sometime” will be displayed.*

# Email Configuration

This tab enables to set email configurations. Before configuring ensure that an SMTP Server has been set up on the network.

For additional security and privacy while sending Emails, COSEC supports Proxy Server Configuration. For more details, refer to [“Proxy Server Configuration”](#)

To view Email Configuration page, go to **Admin module > System Configuration > Email Configuration** and the following screen appears.

Enter the following parameters:

- **SMTP Server:** Specify the IP Address or name of the configured SMTP server. Check the server availability with your network administrator.

You can use Gmail SMTP Server if Internet connection is available.

- SMTP server : smtp.gmail.com
- SMTP Port: 587(POP3)/993 (for imap)
- Email ID: gmail id of the user
- **SMTP Port Number:** Specify the TCP port for the SMTP service as set on the SMTP server.
- **Incoming Mail Protocol:** In the event of activating the approve/reject links in the leave application alerts the user needs to specify the mail protocol for the incoming mails.
- **POP3/IMAP Server:** Specify the IP Address or name of the configured POP3 or IMAP server.
- **POP3/IMAP Port Number:** Specify the appropriate incoming port for the SMTP service as set on the SMTP server.
- **Sender E-mail ID:** Mention the Email ID of the sender.
- **Sender Display Name:** Specify the user name as to be displayed in the emails.

- **Authentication:** Select a desired method of authentication from the drop down list — Basic Authentication and Modern Authentication.

- **Basic Authentication:** It provides a simple mechanism to perform authentication.

Basic Authentication works by prompting a web server user for a username and password.

It repeatedly sends username and password on each request which will be stored in the server to avoid constantly prompting the user for their credentials.

Also, all the information is sent over the network in an unencrypted format.

Any password sent using Basic Authentication can easily be decoded making it vulnerable to replay attacks which proves, it is not a secure method of authentication.

If you select Basic Authentication, configure the following:

- **User Name:** Specify the user name as set in the outlook account.
- **Password:** Specify the password as set in the outlook account.
- **Modern Authentication:** It is a combination of authentication and authorization between client and server.

## Pre-requisites for Modern Authentication

### Microsoft 365 Configuration

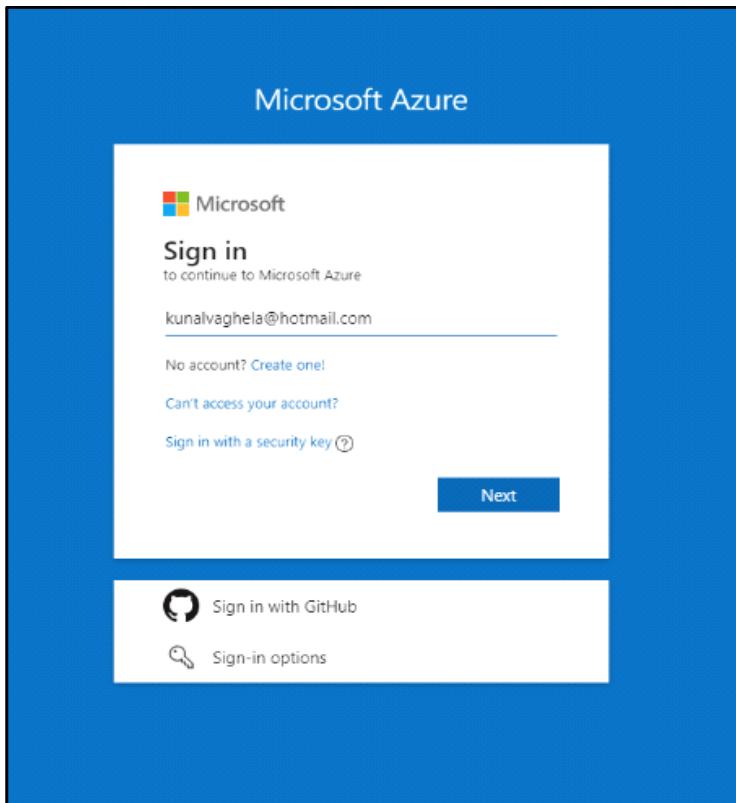

*Make sure you have Internet connectivity in your PC.*

- Enter the **portal.azure.com** in your Web Browser.

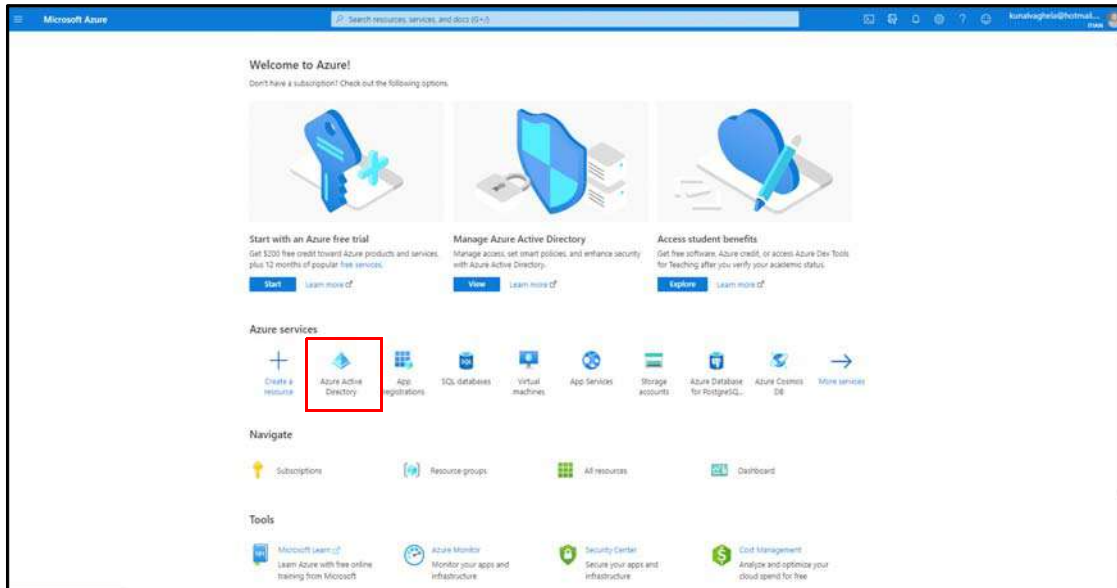

- Create Microsoft Azure Account.

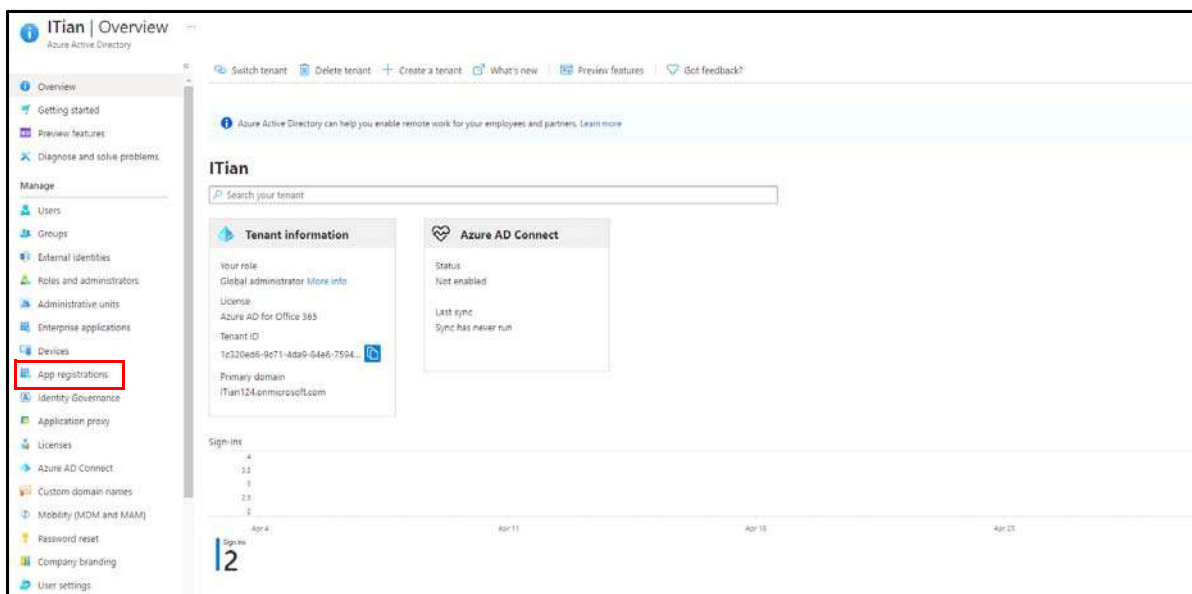

*Make sure the **Sender Email ID** in COSEC Server and the Microsoft Account Email ID are same.*

- Login in to Microsoft Azure Account.

- Click **Azure Active Directory**.

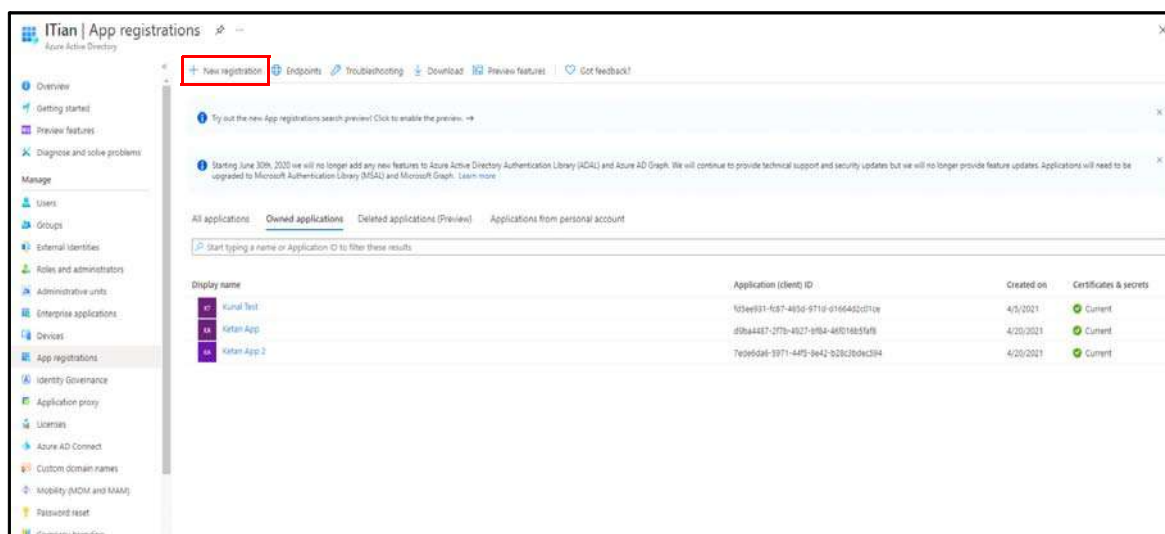

- Click **App Registration** on the left pane.

- Click **New Registration**.

Configure the parameters as mentioned below:

- In **Name**, enter the name you wish to assign.
- Under **Supported Account Types**, select the options **Accounts in any organizational directory (any Azure AD Directory + Multitenant)** and **personal Microsoft Account (eg. Skype, Xbox)**
- **Redirect URI (Optional)**, select the options **Public client/native (mobile & desktop)** and enter the IP Address/Domain Name of the Cossec Server in the format **https://172.16.2.175/cossec/login/ReceiveAuthorizationToken**.

Home > ITian >

## Register an application

\* Name

The user-facing display name for this application (this can be changed later).

Athira Application

Supported account types

Who can use this application or access this API?

☐ Accounts in this organizational directory only (ITian only - Single tenant)  
☐ Accounts in any organizational directory (Any Azure AD directory - Multitenant)  
☒ Accounts in any organizational directory (Any Azure AD directory - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)  
☐ Personal Microsoft accounts only

[Help me choose...](#)

Redirect URI (optional)

We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

Public client/native (mobile ... [^](#)) https://localhost/cosec/Login/ReceiveAuthorizationToken

New support request

Starting November 9th, 2020 end users will no longer be able to grant consent to newly registered multitenant apps without verified publishers. [Add MPA ID to verify publisher](#)

The "Admin consent required" column shows the default value for an organization. However, user consent can be customized per permission, user, or app. This column may not reflect the value in your org.

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as part of the consent process. The list of configured permissions should include all the permissions the application needs. [Learn more about permissions and consent](#)

+

Add a permission

Grant admin consent for ITan

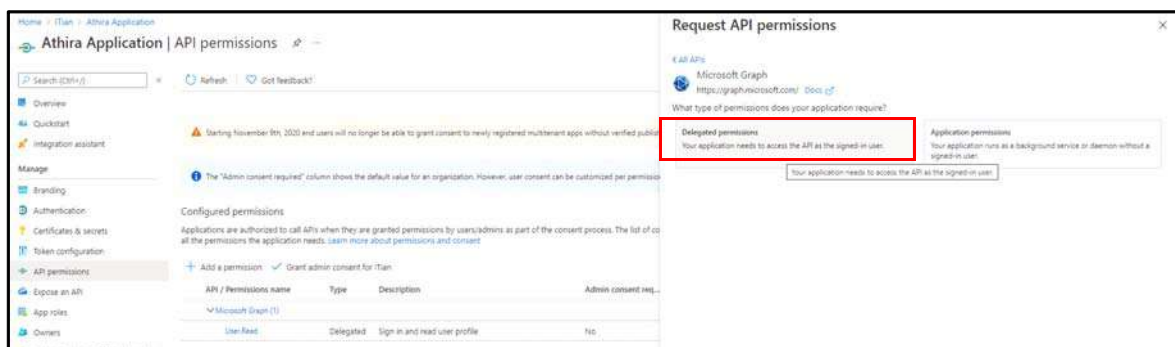

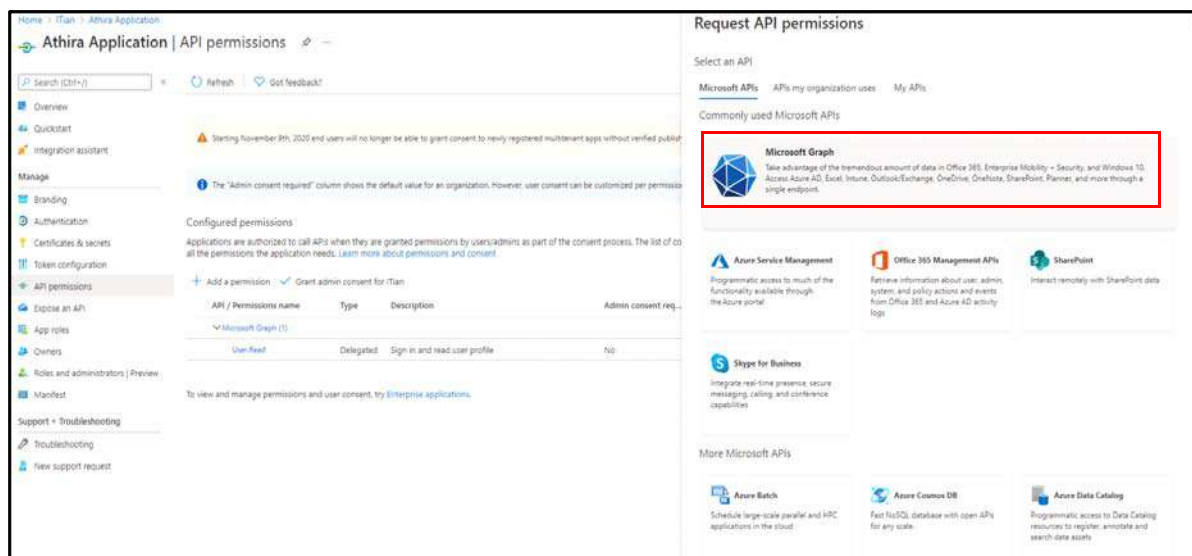

API	Type	Description	Admin consent req...	Status
Microsoft Graph (1)				...
UserRead	Delegated	Sign in and read user profile	No	...

To view and manage permissions and user consent, try [Enterprise applications](#).

Matrix COSEC System Manual

241

- In Request API permissions window, click **Microsoft Graph**, then click **Delegated Permissions**.

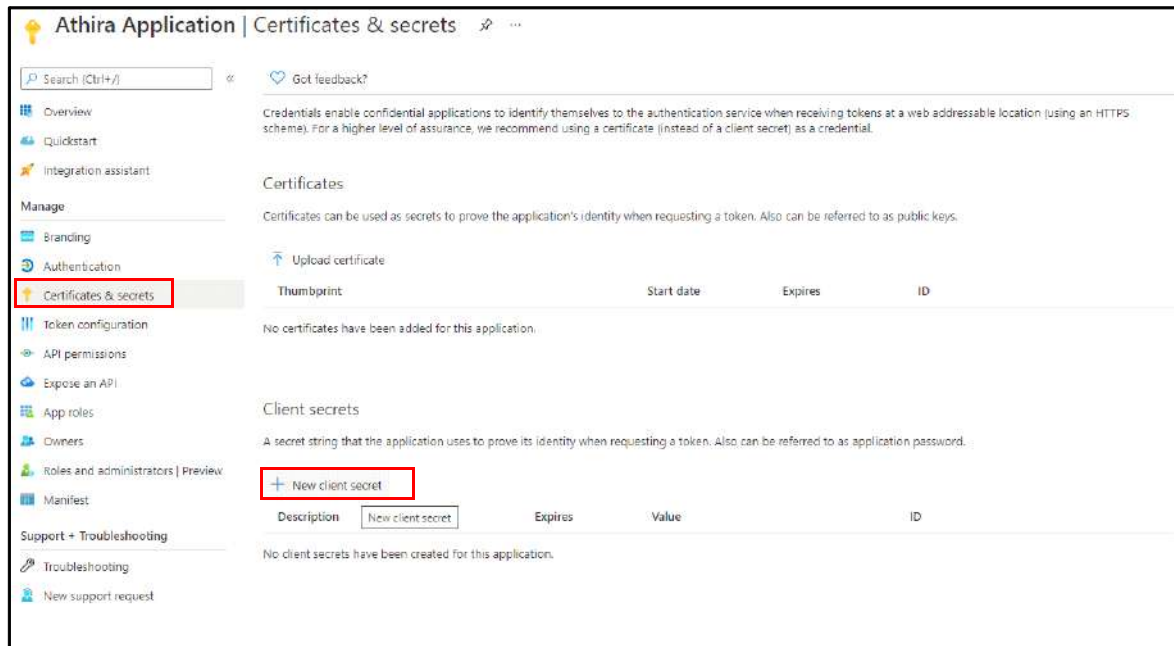

- Select the check boxes of the list of permissions displayed in the below screen.

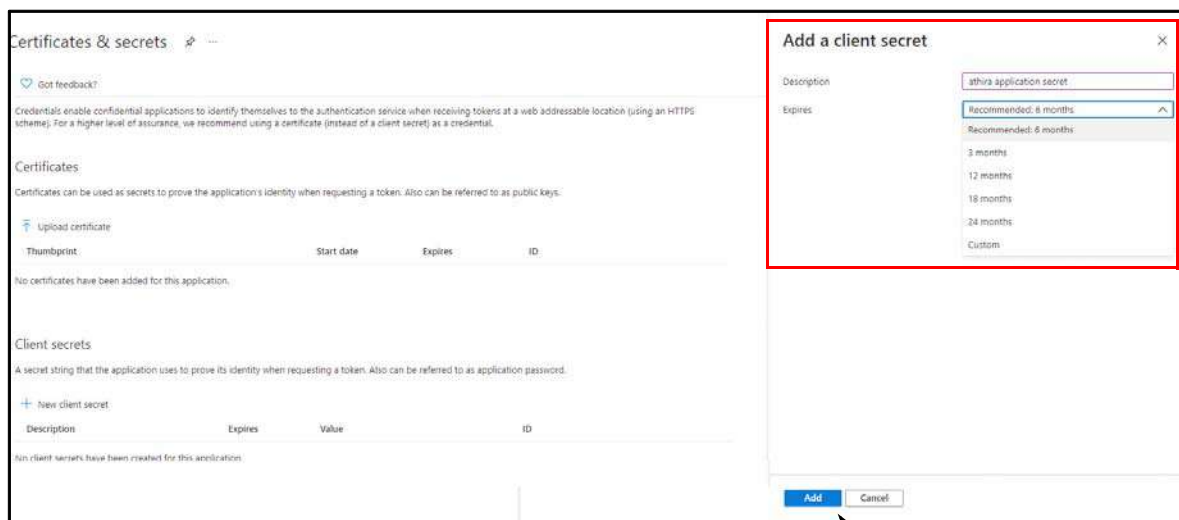

+ Add a permission ✓ Grant admin consent for matrix					
API / Permissions name	Type	Description	Admin consent req...	Status	
Microsoft Graph (10)					
email	Delegated	View users' email address	No	Granted for matrix	...
IMAP.AccessAsUser.All	Delegated	Read and write access to mailboxes via IMAP.	No	Granted for matrix	...
Mail.Send	Delegated	Send mail as a user	No	Granted for matrix	...
Mail.Send	Application	Send mail as any user	Yes	Granted for matrix	...
offline_access	Delegated	Maintain access to data you have given it access to	No	Granted for matrix	...
openid	Delegated	Sign users in	No	Granted for matrix	...
POP.AccessAsUser.All	Delegated	Read and write access to mailboxes via POP.	No	Granted for matrix	...
profile	Delegated	View users' basic profile	No	Granted for matrix	...
SMTP.Send	Delegated	Send emails from mailboxes using SMTP AUTH.	No	Granted for matrix	...
User.Read	Delegated	Sign in and read user profile	No	Granted for matrix	...

Once the permissions are added, click **Grant admin consent for matrix**.

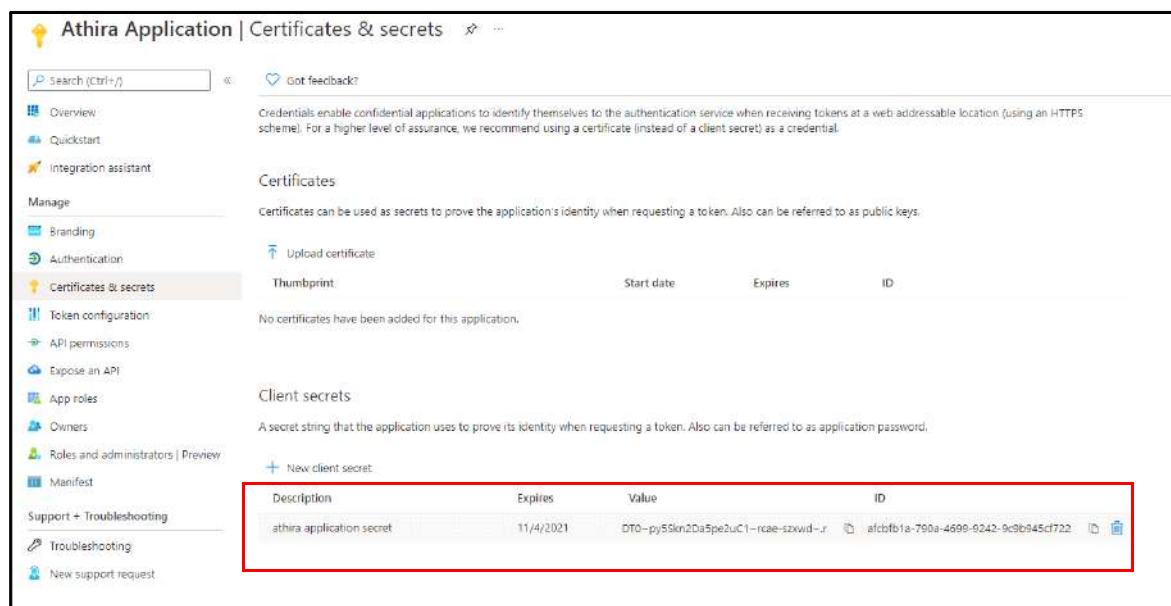

- Click **Certificates and secret** on the left pane. Then click **New Client secret**.

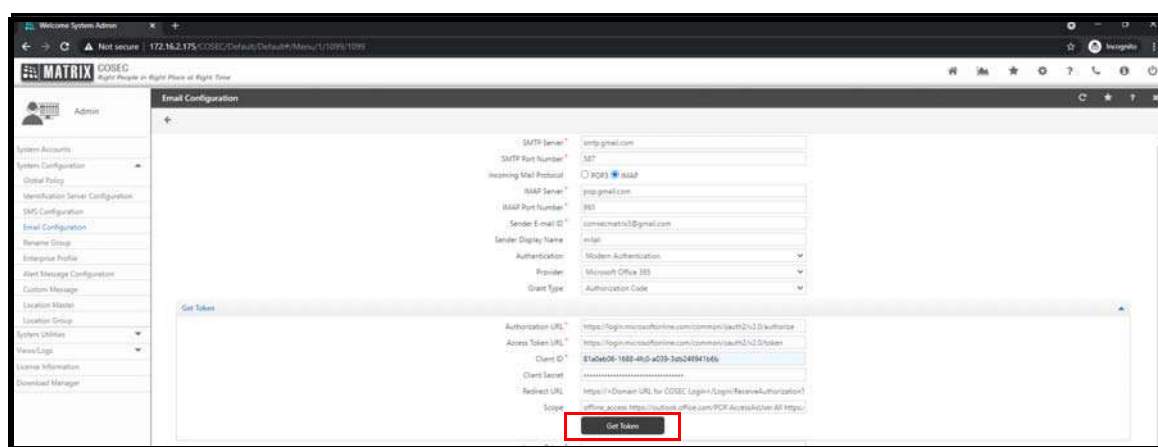

- Enter the **Client Secret description** and **Expires**. Then click **Add**.

- The secret will be visible short time period, hence make sure you copy the same.

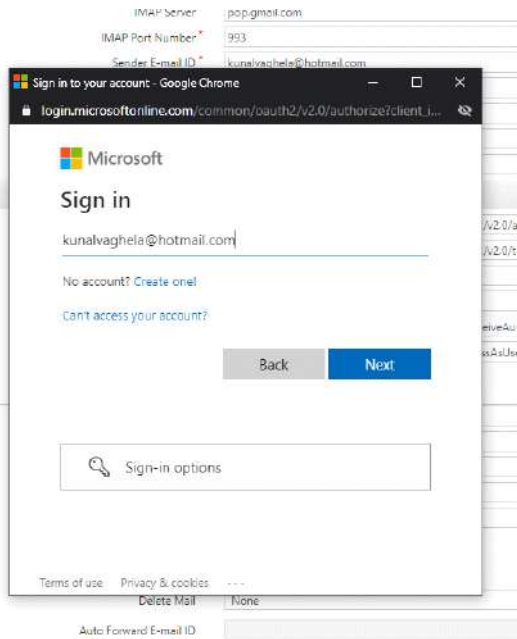

- Now, in the Cossec Server click **Admin module > System Configuration > Email Configuration** (refer ["Modern Authentication - Microsoft 365 Configuration"](#)) and enter the following details as displayed in the screen below:
  - Authorization URL
  - Access Token URL
  - Client ID
  - Client Secret
  - Redirect URL
  - Scope

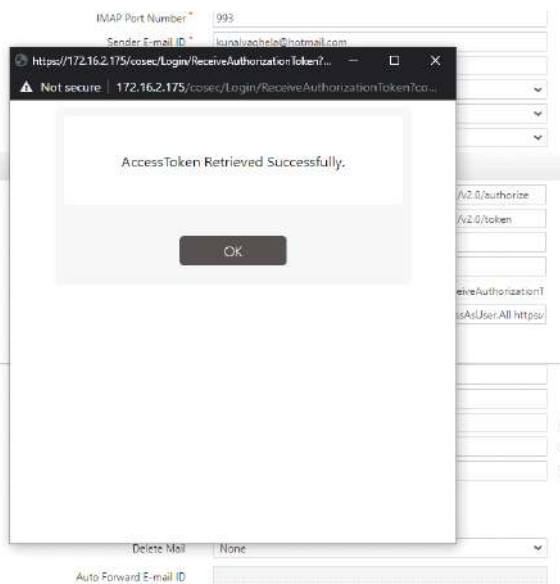

- Click **Get Token**.

- The **Microsoft Sign in** pop ups appears. Enter the **Microsoft Email ID** and then enter the **Password**.

- Click **Allow** (this is to grant the Read/Write Permission). Then the Access Token Retrieved Successfully pop up appears.

- Click **OK**.

The Access Token and Refresh Token will be updated automatically in the Email Configuration page in the Cossec Server.

## Modern Authentication - Microsoft 365 Configuration

Modern Authentication does not allow servers to save Microsoft 365 account details.

To authenticate, a user needs to log in to their account using standard Microsoft 365 login and accept the application's request to access the account.

Access is granted on the basis of tokens which gives a strictly defined permission scope which is accepted by the user.

User receives two tokens namely — Access Token and Refresh Token.

- **Access Token:** This is the most important Token, as on the basis of this, the third party application is allowed access to user data as well as gain access to O365 services.

This token needs to be sent by the client as a parameter or as a header in the request to the third party resource server.

It has a limited lifetime, which is defined by the authorization server.

It must be kept confidential to restrict its misuse by unauthorized entity.

- **Refresh Token:** This token is issued along with the Access Token but unlike the latter, it is not to be sent in each request from the client to the third party resource server.

When an Access Token expires, the Office client will present the Refresh Token to Azure Active Directory (Azure AD) and request for a new Access Token.

*We recommend you to use Modern Authorization to avoid any security breach.*

Configure the following parameters for Modern Authentication:

- **Provider:** It displays the name of the provider which is Microsoft Office 365.
- **Grant Type:** It refers to the way an application gets an Access Token.

This field is non-configurable and displays Authorization Code as the Grant Type.

Authorization Code is used only to be returned to exchange for an Access Token. It keeps this token hidden from the user client as it could be potentially exposed to the malicious agents trying to steal the token for nefarious means.

When you select Modern Authentication as a method of Authentication, you need to configure Get Token parameters.

## Get Token

- **Authorization URL:** This command sends the URL to the endpoint of the Authorization Server that authenticates user credentials.

Enter the URL of the authorization endpoint.

Format: *https://login.microsoftonline.com/common/oauth2/v2.0/authorize*

- **Access Token URL:** This command sends the URL to the endpoint of the Authentication Server that is used to exchange the Authorization Code for Access Token.

Enter the Access Token URL.

Format: *https://login.microsoftonline.com/common/oauth2/v2.0/token*

- **Client ID:** Enter the application's Client ID, issued during the client application registration provided by the Azure AD.
- **Client Secret:** Client Secret is a secret string that the application uses to prove its identity while requesting a token. It is also known as Application Password.

It ensures that the request to get the Access Token is made only from the application and not from a potential attacker that may have intercepted the authorization code.

Enter the application's Client Secret. The Client Secret is issued to the client during the Application registrations process.

It will be in an encrypted format like a Password field.

- **Redirect URL:** It tells the authorization server where to send the user back to after they approve the request.

It extracts the Authorization Code/ Access Token.

The Redirect URL will be displayed in this field. The authentication response will be returned to the configured URL after successfully authenticating the user.

Redirect URL: *https://<Domain URL for COSEC Login>/Login/ReceiveAuthorizationToken*

- **Scope:** It is one or more space-separated strings indicating the permissions, the application is requesting. The specific OAuth API you are using will define the scopes that it supports.

Scopes are set of permissions granted for each Client to access a specific data. It may have space-delimited values.

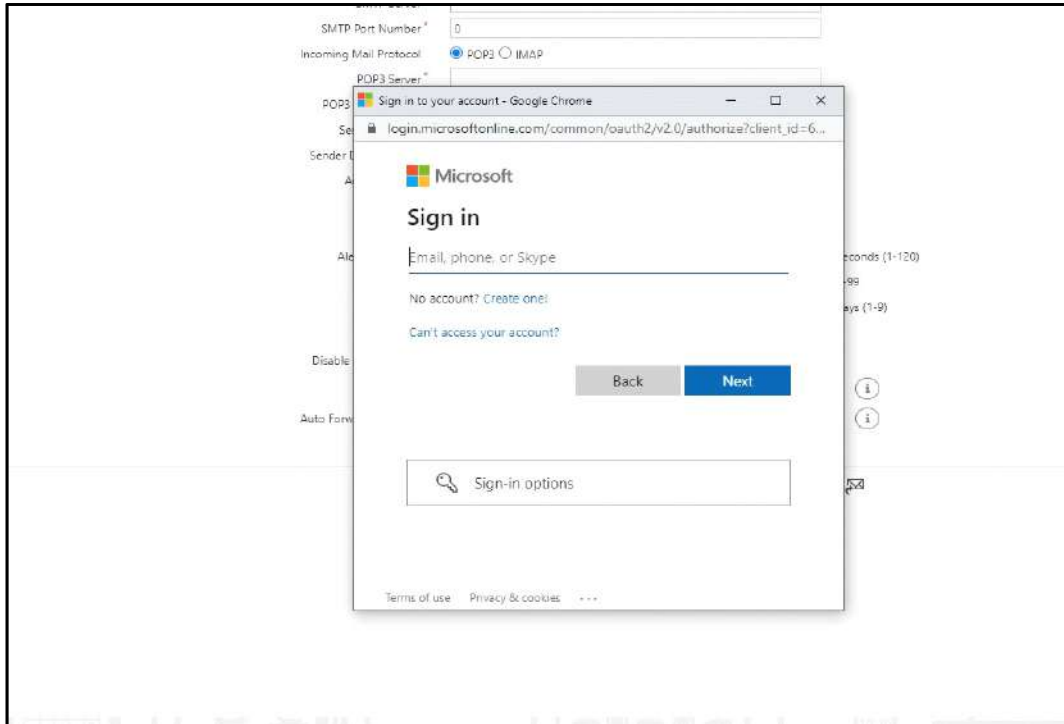

Enter Scope of the access request.

Format: *offline\_access https://outlook.office.com/POP.AccessAsUser.All https://outlook.office.com/IMAP.AccessAsUser.All https://outlook.office.com/SMTP.Send https://outlook.office.com/Mail.Read*

- **Client Credential:** It defines whether to send client credentials as basic authorized header or as a plain text in the request body.

Select a desired option from the drop down list — In Basic Auth Header or Request Text.

Click **Get Token**. Once you click this button, you need to sign in to your Microsoft account and then all the parameters in the request will be verified ensuring the Authentication Code has not expired and that the Client ID and Client Secret is a match.

After the verification process is completed, the Authorization Server will generate and return the Access Token and Refresh Token in the response.

- **Access Token:** It displays the Access Token received in the response received from the Authorization Server or Access Token Server. To know more about Access Token, refer Access Token under Modern Authentication on [page 246](#).
- **Refresh Token:** It is obtained in the response received from the Authorization Server or Access Token Server. To know more about Refresh Token, refer Refresh Token under Modern Authentication on [page 246](#).
- **Alert Cycle:** Specify the time in seconds between successive send attempts when the system tries to send the pending messages.
- **Retry Count:** Specify the number of times the system needs to retry to send the same Email message in the event of an unsuccessful attempt.
- **Active Days:** Specify the number of days the system needs to keep the unsent messages active in the event of the service being stopped.
- **Send Interval:** Specify the time in milliseconds between sending two consecutive emails.
- **Batch Size:** Specify the number of emails that system should send at a time.
- **Enable SSL:** If you are using an external SMTP server like Gmail, then select the check box to enable.
- **Disable Sending Mail:** Select the check box to temporarily disable the email sending functionality.
- **Email Reading Interval:** Specify the desired duration (in minutes). This is the duration after which the Alert Service to fetch the data from the database.

- **Delete Mail:** Select the desired option from the drop-down list. Options are **All**, **Server**, **None**.
  - Select **All** to delete all the mails related to the Server and personal. This is applicable if the set **Email Reading Interval** is less than or equal to 30 minutes.
  - Select **None** to delete none of the mails. This is applicable if the set **Email Reading Interval** is equal to 30 minutes.
  - Select **Server** to delete all the emails from the server as soon as they are downloaded by the client. This is applicable if the set **Email Reading Interval** is equal to 30 minutes.
- **Auto Forward Email Id:** If a user selects either delete mail as **All** or **Server**, before deleting the mails, it will be auto forwarded to the configured email ID.

If mail is successfully forwarded, then the mail will be deleted from the inbox of the Server & log will be added in Alert view in **Admin> Views/Logs> Alert view**.

If mail is not forwarded due to incorrect E-mail Id (with valid characters), then the mail will be deleted from the inbox of the Server & log will be added in Alert view in **Admin> Views/Logs> Alert view**.

Once the above settings are done click **Save** button.

#### Test Mail

- **E-mail ID:** Specify the email id on which the test mail can be sent. Click  **Send Test Mail** button to send the test mail.

*For each tenant, you can send upto 10 test emails in one minute. Thereafter the message "Maximum count reached. Please try after sometime" will be displayed.*

# WhatsApp Integration

---

In today's world as we move ahead with technology, WhatsApp has become an integral part of businesses and hence its integration with COSEC is the need of the hour.

Integrating WhatsApp with COSEC will enable you to send messages on WhatsApp.

To integrate WhatsApp with COSEC, you need to:

- Configure the WhatsApp parameters, refer to ["WhatsApp Configuration"](#) for details.
- Enable WhatsApp and Assign the same to Users in Alert Message Configuration, refer to ["Configuring Alert Messages"](#) for details.
- Configure the Mobile Numbers of Users, refer to ["Configuring Users"](#) for details.

If the registered WhatsApp mobile number and the mobile numbers to which Alerts need to be sent are in different countries, make sure you configure the country code along with those mobile numbers (to whom the Alerts are to be sent). If the registered WhatsApp mobile number is in India (country calling code 91) but the Alerts need to be sent to number outside India, then make sure the number is configured with the country code, for example country code of the mobile number on which alert is to be sent is 1 and mobile number is 631555XXXX, then the mobile number needs to be configured as 1631555XXXX. For more details refer to <https://developers.facebook.com/docs/whatsapp/cloud-api/reference/phone-number/>

- To view the details of the Alerts send via WhatsApp, refer to ["Alert View"](#).

*For additional security and privacy while sending WhatsApp messages, COSEC supports Proxy Server Configuration. For more details, refer to ["Proxy Server Configuration"](#)*

## WhatsApp Configuration

The WhatsApp Configuration includes two steps:

- Fulfilling the Pre-requisite requirements, for details refer to ["Pre-requisites"](#).
- Configuring the WhatsApp parameters, for details refer to ["Configuring WhatsApp Parameters"](#).

### Pre-requisites

To use WhatsApp for sending and receiving messages make sure you have completed the following:

*Make sure you have persistent Internet connectivity.*

*The details mentioned below are as per the current (Oct, 2023) updates available on the official website of Meta. These are subject to change. To know more visit their official website:*

***<https://developers.facebook.com>***

- Registered as a Meta Developer, refer to ["Register as a Meta \(Facebook\) Developer"](#).
- Enabled Two- Factor Authentication for your account, refer to ["Enable Two-Factor Authentication"](#).

- Created a Meta App, refer to [“Create an App”](#).
- Added a Phone Number in the Meta App, refer to [“Add a Phone Number”](#).
- Made the payment as per your requirement, refer to [“Add Payment Method”](#).
- Created a Permanent Token for usage, refer to [“Creating a Permanent Access Token”](#).

## Register as a Meta (Facebook) Developer

To register as a Meta Developer, following the steps given below:

- To start the registration process

Login into your Facebook Account.

*Make sure your Facebook Account is Meta verified and complies to all the Terms and Conditions of Meta. To do so, access your Facebook Account Setting & privacy > Meta Account Center > Meta Verified. Make sure you follow the instructions and fulfill all the necessary Meta requirements for the same.*

- Agree to the Terms and Policies.

Click **Next** to agree to the Platform Terms and Developer Policies.

- Verify your account

A confirmation code will be send to the phone number and email address that you provide in order to confirm that you have access to them. Your number and email will be used for important developer notifications of any changes that may impact to your app.

- Select your occupation

Select an occupation that most closely describes what you do for a living.

The registration process is completed.

## Enable Two-Factor Authentication

Two-factor authentication is a security feature that helps protect your Facebook account in addition to your password. If you set up two-factor authentication, you will be asked to enter a special login code or confirm your login attempt each time someone tries accessing Facebook from a browser or mobile device that Facebook does not recognize. You can also get alerts when someone tries logging in from a browser or mobile device that Facebook does not recognize.

### Turning-on/managing two-factor authentication:

- Go to your **Security and Login Settings**.
- Scroll down to **Use two-factor authentication** and click **Edit**.
- Choose the any one of the three security method that you wish to add and follow the on-screen instructions.
  - Tapping your security key on a compatible device.
  - Login codes from a third-party authentication app.
  - Text Message (SMS) codes from your mobile phone.

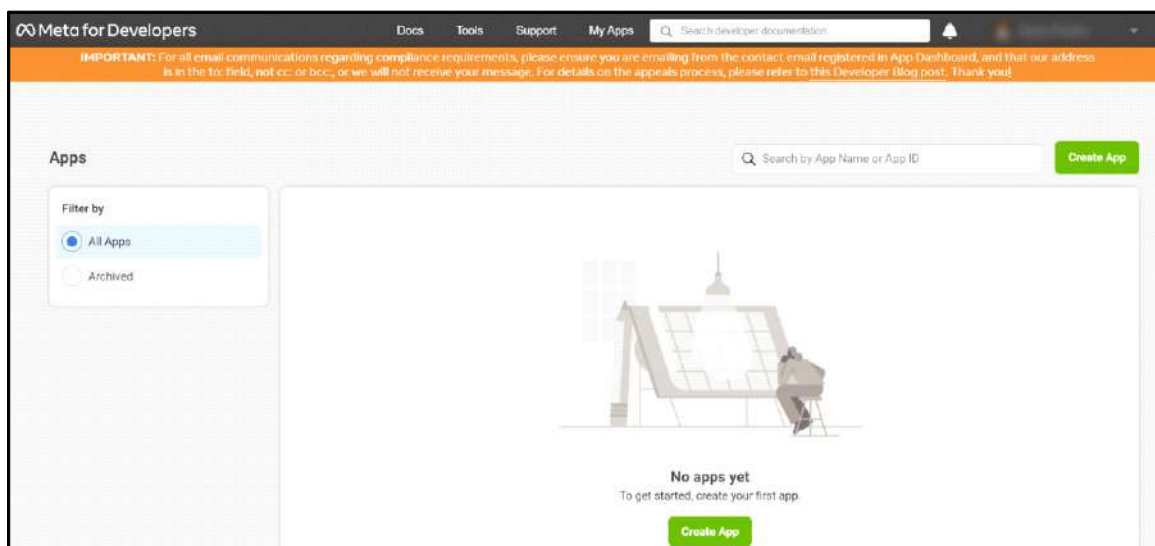

## Create an App

*Making sure you have a developer account on Meta for Developers. You also need WhatsApp installed on a mobile device to send test message.*

To create the App, following the steps mentioned below:

- Once you are signed in, you see the Meta for Developers App Dashboard. Click **Create App** to get started.

- Select **Business** as the **App Type**.

The screenshot shows the 'Create an App' dialog box with the 'Type' tab selected. On the left, there are two tabs: 'Type' (active) and 'Details'. The main area is titled 'Select an app type' with a note: 'The app type can't be changed after your app is created. [Learn more](#)'. There are four options, each with an icon and a radio button:

- Business**: Create or manage business assets like Pages, Events, Groups, Ads, Messenger, WhatsApp, and Instagram Graph API using the available business permissions, features and products.
- Consumer**: Connect consumer products and permissions, like Facebook Login and Instagram Basic Display to your app.
- Instant Games**: Create an HTML5 game hosted on Facebook.
- Gaming**: Connect an off-platform game to Facebook Login.

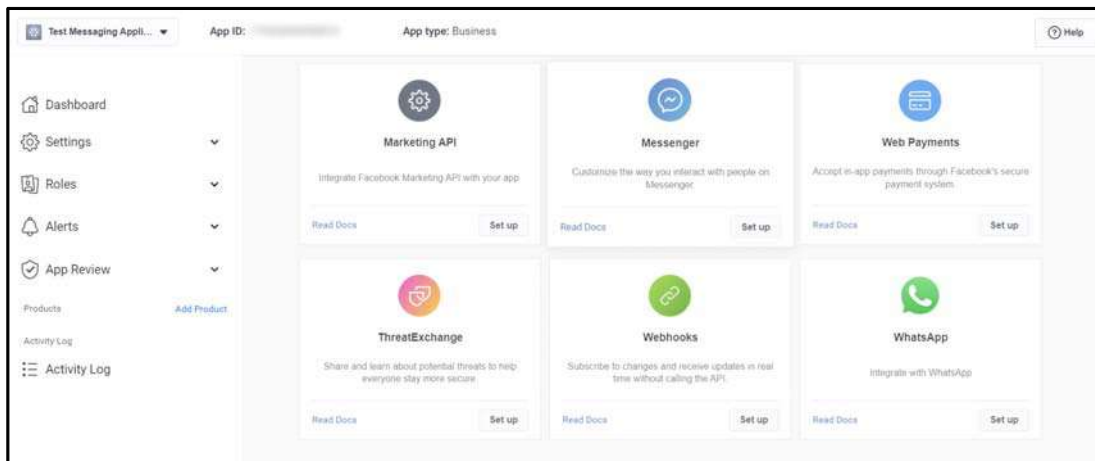

- Enter the **Display Name** for your App and an **Email Address** where you wish to receive any important developer notifications. The email address can be different from the email address associated with your Facebook account, just make sure it is valid and that you monitor it, since all important developer notifications will be sent there.

The screenshot shows the 'Create an App' dialog box with the 'Details' tab selected. The main area is titled 'Provide basic information'. It contains the following fields:

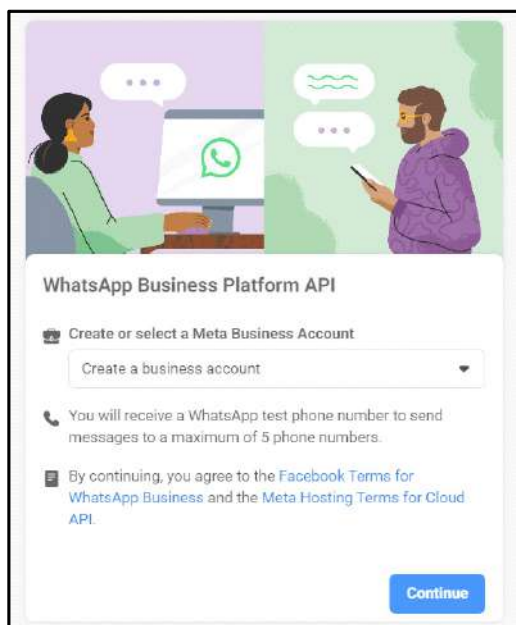

- Display name**: This is the app name associated with your app ID. You can change this later. The input field contains 'Test Messaging Application' and a character count '26/32'.
- App contact email**: This email address is used to contact you about potential policy violations, app restrictions or steps to recover the app if it's been deleted or compromised. The input field is empty.
- Business Account - Optional**: To access certain permissions or features, apps need to be connected to a Business Account. The dropdown menu shows 'No Business Manager account selected'.

At the bottom, there is a link: 'By proceeding, you agree to the [Facebook Platform Terms and Developer Policies](#)'. There are two buttons: 'Previous' and 'Create app'.

- You need to add products to your App. Scroll down until you see **WhatsApp** and click the **Set up**.

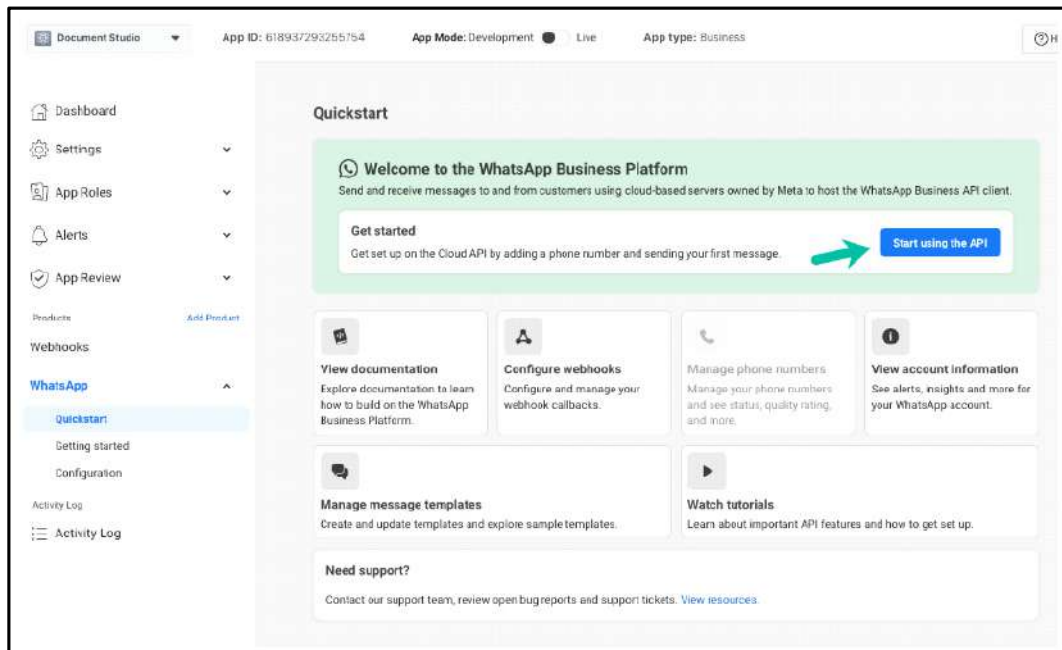

- Finally, choose an existing Meta Business Account or ask the platform to create a new one and click **Continue**.

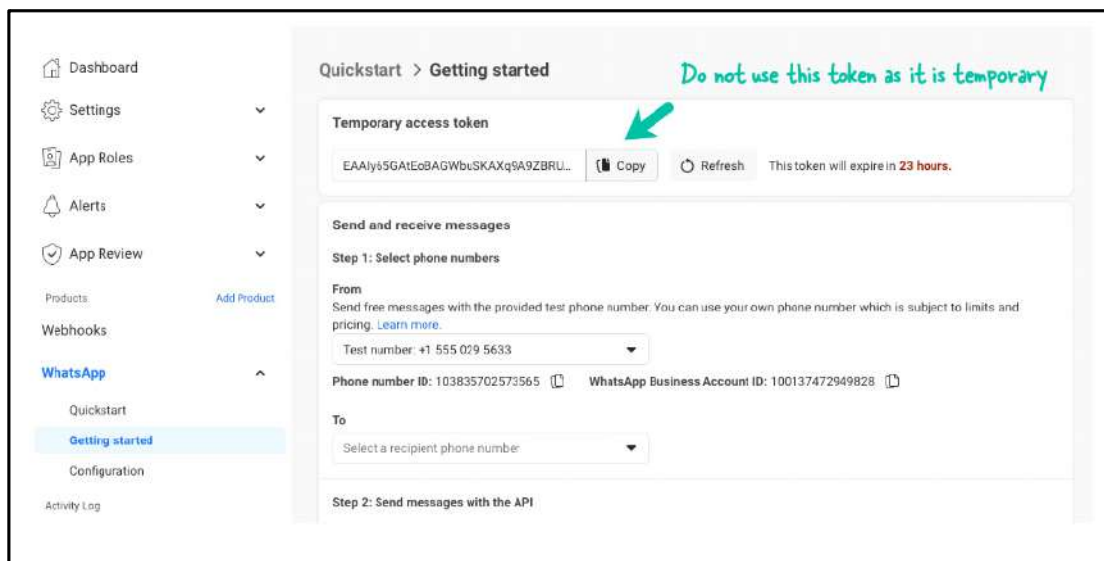

- Click on **Start using the API** on the next screen.

Facebook will now generate a temporary access token that allows you to test your WhatsApp Cloud API integration. However, we will not use this token since it expires after 24 hours. So instead, we will generate a permanent access token. For details, refer to [“Creating a Permanent Access Token”](#).

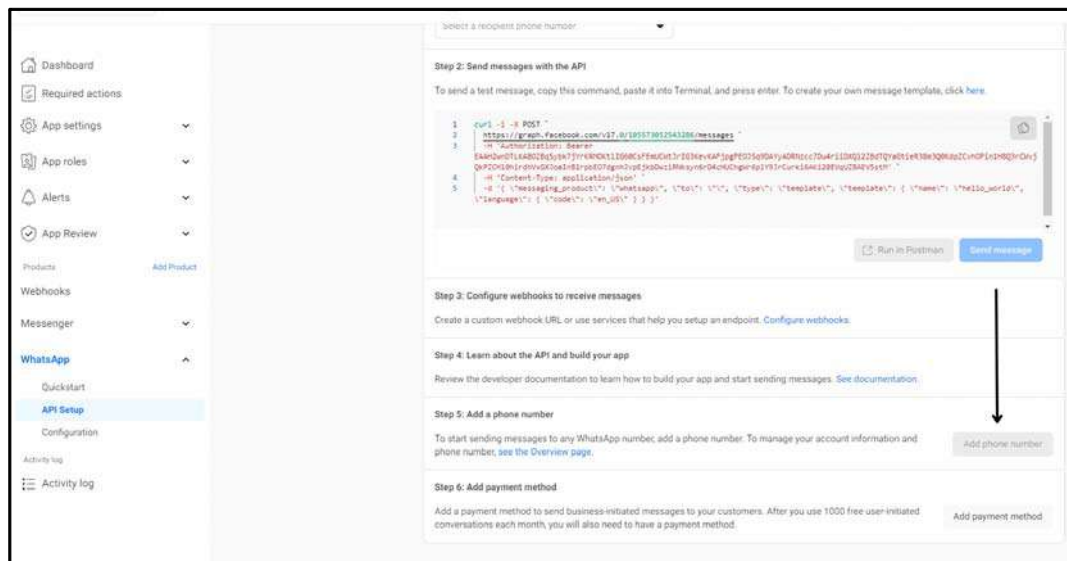

Send a message with the test number generated by WhatsApp to your Business WhatsApp number to test if your integration is a success.

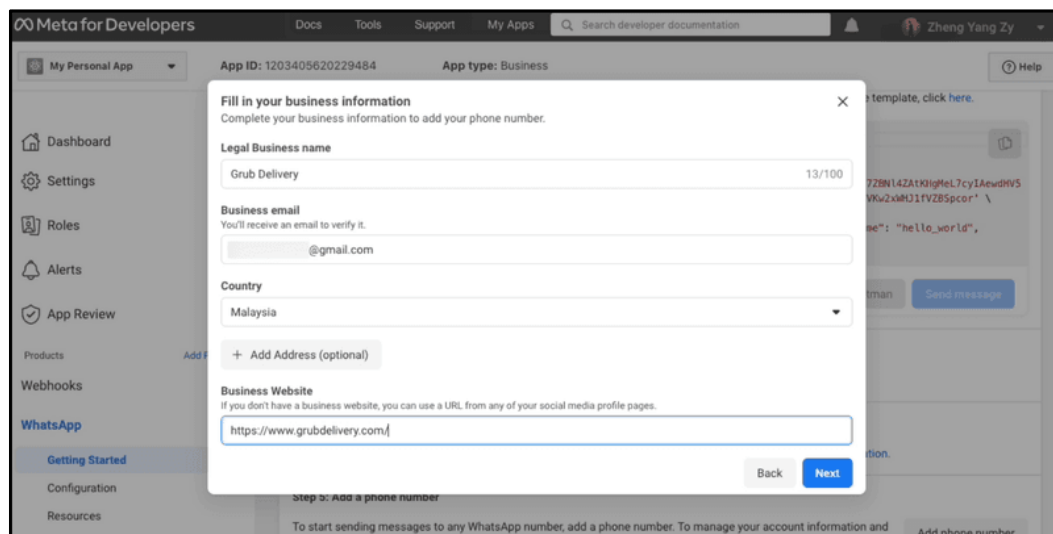

Next, you need to add your phone number to your WhatsApp Cloud API account.

## Add a Phone Number

- Scroll down on the page and click **Add phone number**. You need to associate a phone number with the WhatsApp API to send messages to any WhatsApp number.

- Fill in your business information and click **Next**.

- Fill in your WhatsApp Business profile information and click **Next**.

**Create a WhatsApp Business profile**  
Your profile information will be visible to people on WhatsApp.

WhatsApp Business profile display name  
Grub Delivery

Timezone  
(GMT+08:00) Asia/Shanghai

Category  
Food and Grocery

Business description - Optional  
Tell people about your business 0/512

Back Next

- Add a phone number for your WhatsApp Cloud API.

**Add a phone number for WhatsApp**  
This is the number people will see when they chat with you. [Learn how to use a number that's already on WhatsApp.](#)

Phone number  
US +1 (206) 70

You'll receive a code to verify this number.

Choose how you would like to verify your number:  
If you are using a landline number, choose phone call.

☒ Text message ☐ Phone call

Back Next

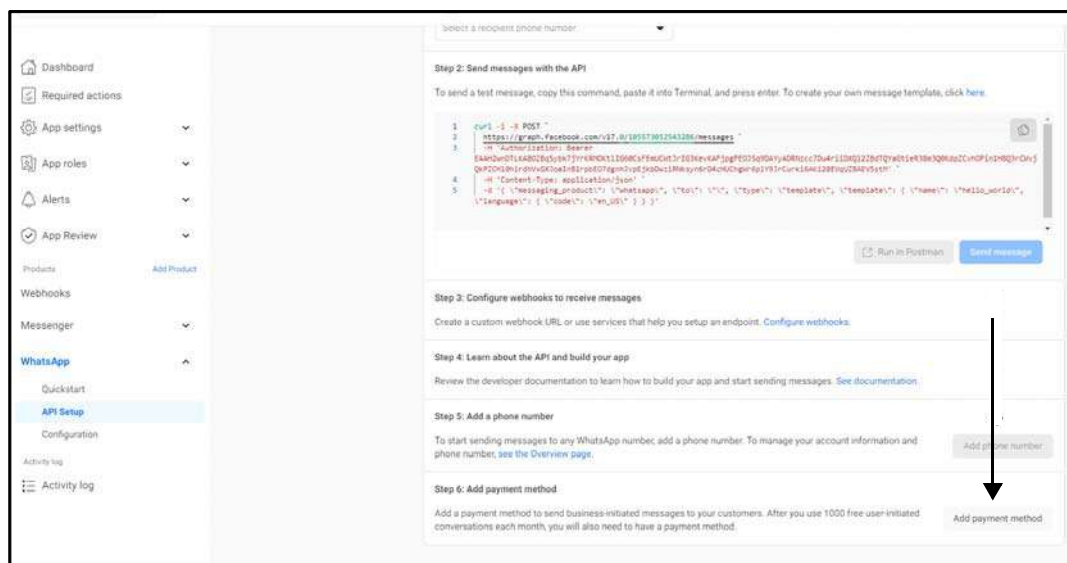

*Make sure that when you are adding a number it is a new number and has never been used in WhatsApp.*

- To verify the phone number you added, a 6-digit verification code will be sent to the number. Enter the verification code once you receive it.

## Add Payment Method

- Click **Add payment method**.

Follow the steps and complete the payment.

Next, copy and save the **WhatsApp Business Account ID** for this phone number.

## Creating a Permanent Access Token

Knowing that you need to use a bearer token in the Authorization Header of an HTTP request is helpful, but it is not enough. The only access token you have seen so far is temporary. Chances are that you want your App to access the API for more than 24 hours, so you need to generate a longer-lasting access token.

The Meta for Developers platform makes this easy. All you need to do is add a System User to your business account to obtain an access token that you can use to continue accessing the API.

To create a system user, following the steps:

- Go to **Business Settings**.
- Select the business account your app is associated with.
- Select **Users > System Users**.
- Click **Add**.
- Configure a **Name** for the system user, choose **Admin** as the user role, and click **Create System User** to continue.
- Select the **whatsapp\_business\_messaging** and **whatsapp\_business\_management** permission.
- Click **Generate New Token** to generate a permanent access token.
- Please copy the access token and save it in your notepad as it will not be visible again on your Facebook Dashboard.

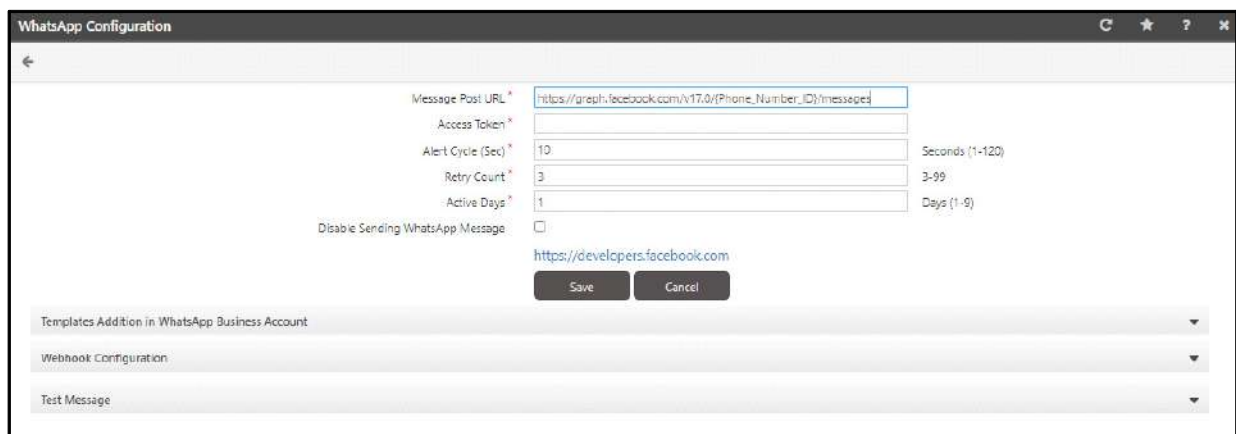

## Configuring WhatsApp Parameters

WhatsApp configuration includes the following:

- “WhatsApp Parameters”
- “Templates Addition in WhatsApp Business Account”
- “Webhook Configuration”
- “Test Message”

### WhatsApp Parameters

- Click **Admin module > System Configuration > WhatsApp Configuration** and the following screen appears.

The screenshot shows the 'WhatsApp Configuration' window. It contains the following fields and controls:

- Message Post URL**: `https://graph.facebook.com/v17.0/{Phone_Number_ID}/messages`
- Access Token**: (Empty field)
- Alert Cycle (Sec)**: `10` (Range: Seconds (1-120))
- Retry Count**: `3` (Range: 3-99)
- Active Days**: `1` (Range: Days (1-9))
- Disable Sending WhatsApp Message**: ☐
- Save** and **Cancel** buttons.
- Links at the bottom: [Templates Addition in WhatsApp Business Account](#), [Webhook Configuration](#), and [Test Message](#).

Configure the following parameters:

- **Message Port URL**: This is the URL that will be used for sending WhatsApp Messages.

**Default:** `https://graph.facebook.com/v17.0/{Phone_Number_ID}/messages`

You only need to change the `{Phone_Number_ID}` in the URL, with your actual Phone Number ID. The Phone Number ID can be taken from the WhatsApp Business Account you created.

You also need to check if the version mentioned in the URI, that is v17.0, is the same as your WhatsApp Business Account Version. If not, change it as per your account version.

For example, if your Phone Number ID is 123115956238956 and version is 18, then the URL will be:  
`https://graph.facebook.com/v18.0/123115956238956/messages`.

*The system will only consider the configured URL for sending messages. Make sure it is configured correctly.*

- **Access Token**: Enter the token number received after you have successfully created the WhatsApp Business Account.
- **Alert Cycle (Sec)**: Specify the time in seconds between successive send attempts when the system tries to send the pending messages. Valid Range: 1 to 120.
- **Retry Count**: Specify the number of times the system needs to retry to send the same message in the event of an unsuccessful attempt. Valid Range: 3 to 99.

- **Active Days:** Specify the number of days the system needs to keep the unsent messages active in the event of the service being stopped. Valid Range: 1 to 9.
- **Disable Sending WhatsApp Message:** Select the check box if you do not wish to send WhatsApp messages.

Click **Save** to save the configurations.

## Templates Addition in WhatsApp Business Account

Make sure you have visited their official website: <https://developers.facebook.com> and read the guidelines provided for the Templates.

Before you add any template to your WhatsApp Business Account make sure:

- you have updated/edited the templates as per your requirement from Alert Messages. For details, refer to “[Configuring Alert Messages](#)”. If you have sent the template/s to your WhatsApp Account and then modify the same from Alert Messages, you will have to manually update/edit/delete the templates from your WhatsApp Account. For smooth functioning of WhatsApp, make sure the content of the Alert Templates and the WhatsApp Templates are identical.
- you do not have any template/s with the same name/s already created in your WhatsApp Account. If same name template/s are found in your WhatsApp Account and you select the same here, then these templates will not be sent to your WhatsApp Account.
- you have checked the WhatsApp Business Policy. As per the WhatsApp Business Policy, you can create 100 templates per hour. The policies are frequently updated, hence refer to the policy details once before you move further.
- you have noted your WhatsApp Business Account ID. To check your WhatsApp Business Account ID, navigate to Business Manager > Business Settings > Accounts > WhatsApp Business Accounts. Click on the your account. A panel opens with the information of your account as well as ID.
- you have noted the App ID of your WhatsApp Business Account. To check your WhatsApp Business Account ID, navigate to Business Manager > Business Settings > Accounts > WhatsApp Business Accounts. Click on the your account. A panel opens with the information of your account as well as ID.

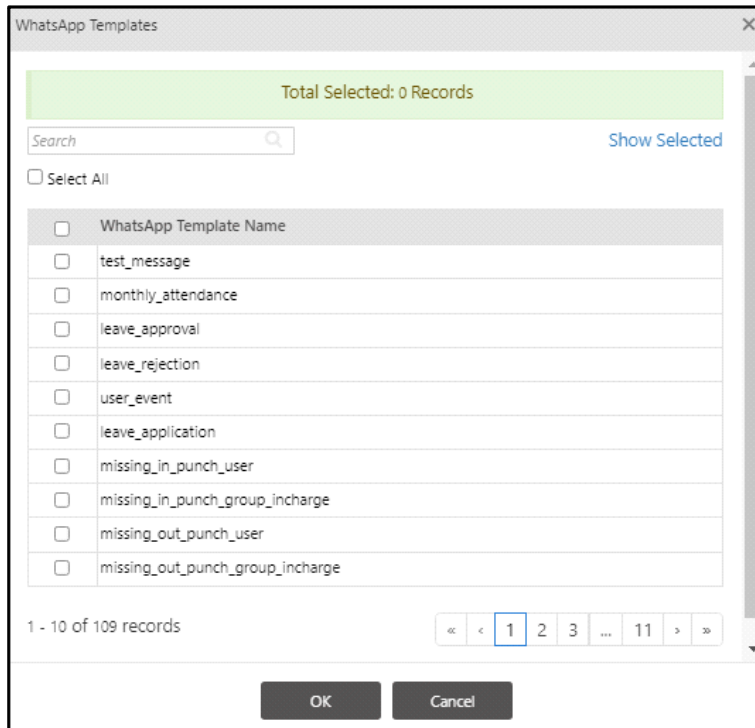

You can select the Templates that you wish to add in your WhatsApp Business Account. To do so,

- Click the **Templates Addition in WhatsApp Business Account** collapsible panel and configure the following:

- **Template Post URL:** The default value is :[https://graph.facebook.com/v17.0/{WhatsApp\\_Business\\_Account\\_ID}/message\\_templates](https://graph.facebook.com/v17.0/{WhatsApp_Business_Account_ID}/message_templates).

You need to replace the {WhatsApp\_Business\_Account\_ID} with your WhatsApp Business Account ID. While replacing the text make sure you remove the brackets and do not change the format. For example: [https://graph.facebook.com/v17.0/111000111100/message\\_templates](https://graph.facebook.com/v17.0/111000111100/message_templates)

- **App ID:** Enter the App ID of your WhatsApp Business Account.
- Click **Save** to save the configurations.
- **Select Templates:** Click the picklist. The **WhatsApp Templates** pop-up appears.

The names of the WhatsApp Templates appear as configured in Alert Messages. The Templates will be added to your WhatsApp Business Account in the language that you have selected in Alert Messages. For details refer to [“Configuring Alert Messages”](#).

After the Templates are sent to your WhatsApp Business Account, Alerts will be sent only after these templates are approved by WhatsApp.

If you are manually adding the Templates to your WhatsApp Account and the template has images/ document, then in the WhatsApp Template **Header** make sure you select **Media** and then select the relevant option. For the list of templates that have images/documents, refer to [“Templates with Images/ Documents”](#).

If you are manually adding Verdict Confirmation Alert Templates to your WhatsApp Account, that is when a Visitor Pre-registration Alert is sent, this has two options — Approve, Reject. If the receiver approves the request and you wish to send a verdict confirmation back to the receiver for the same, in such cases make sure you define the content as mentioned in [“Verdict Confirmation Alert Content”](#). But if you are exporting the same, then make sure the templates that have the word **system defined** in the default name are selected.

You can select the desired templates or can select all the templates at once.

To select the desired templates, select the check boxes of the desired templates.

**OR**

To select all the templates, select the **Select All** check box. The templates on all the pages will be selected.

- Click **OK**. Hover-over the **Info**  icon. It displays the number of templates selected.
- Click **Create Template** to create the templates in your WhatsApp Business Account. The templates will appear in your WhatsApp Account once these are approved by WhatsApp.

If you wish to abort, click **Cancel**.

If the template/s creation fails, the reasons for failure will be displayed under the Error List collapsible panel. For details, refer to [“Error List”](#).

## Webhook Configuration

You may have templates wherein certain actions are required to be taken by the receiver of the message, for example Approve/Reject a Leave Application.

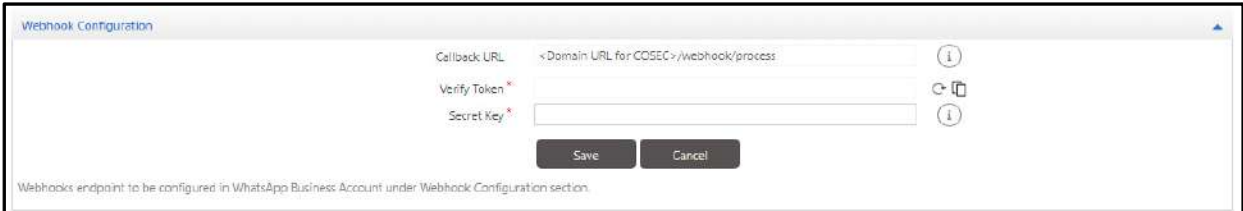

We can only send messages on WhatsApp, hence any action taken in response of the message needs to be communicated to COSEC. In such cases Webhook acts as a intermediary between COSEC and WhatsApp.

You need to configure:

- [“Configuring Webhook Parameters in COSEC”](#)
- [“Configuring Webhook Parameters in WhatsApp Business Account”](#)

## Configuring Webhook Parameters in COSEC

Configure the following Webhook parameters:

A screenshot of a 'Webhook Configuration' dialog box. It has a title bar 'Webhook Configuration'. Inside, there are three input fields: 'Callback URL' with a placeholder '<Domain URL for COSEC>/webhook/process', 'Verify Token' with a red asterisk, and 'Secret Key' with a red asterisk. To the right of each field is an information icon. Below the fields are 'Save' and 'Cancel' buttons. At the bottom, there is a small text note: 'Webhooks endpoint to be configured in WhatsApp Business Account under Webhook Configuration section.'

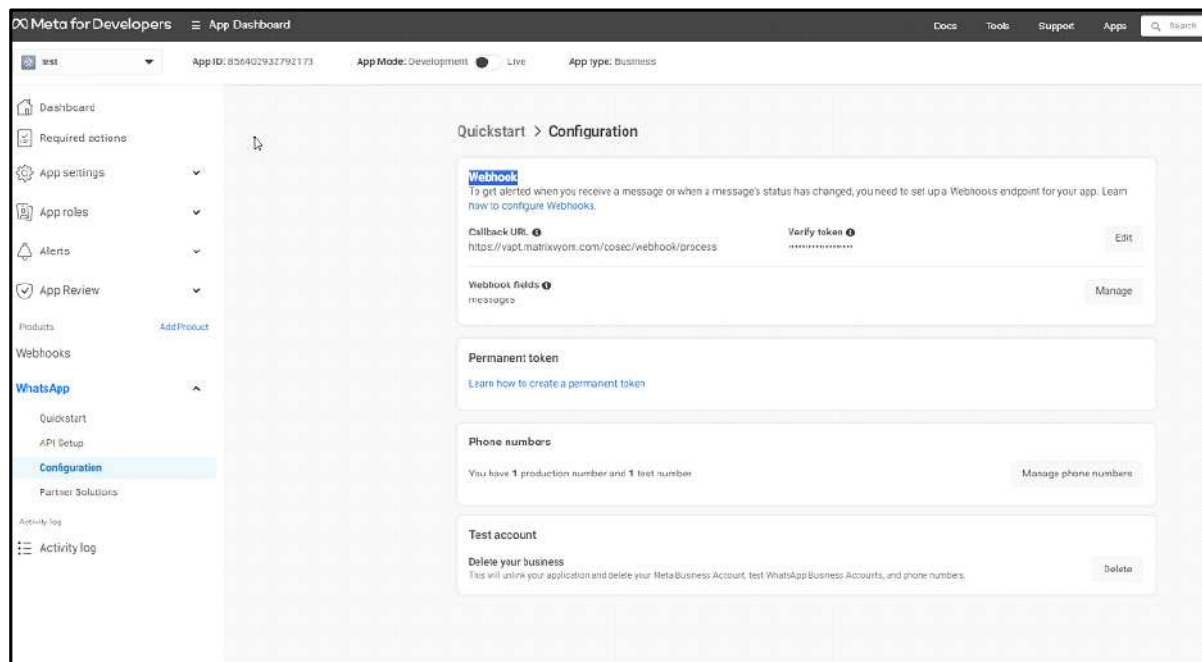

- **Callback URL:** By default it is <Domain URL for COSEC>/webhook/process. You need to replace <Domain URL for COSEC> with the URL of your COSEC.
- **Verify Token:** Click **Generate Token** . A token is generated by COSEC. Click **Copy**  to copy this token.
- **Secret Key:** Access your WhatsApp Business Account > App Settings > Basic > App Secret. Click **Show** and take a note of this value. Enter the same as the Secret Key here.

Click **Save** to save the configurations else click **Cancel**.

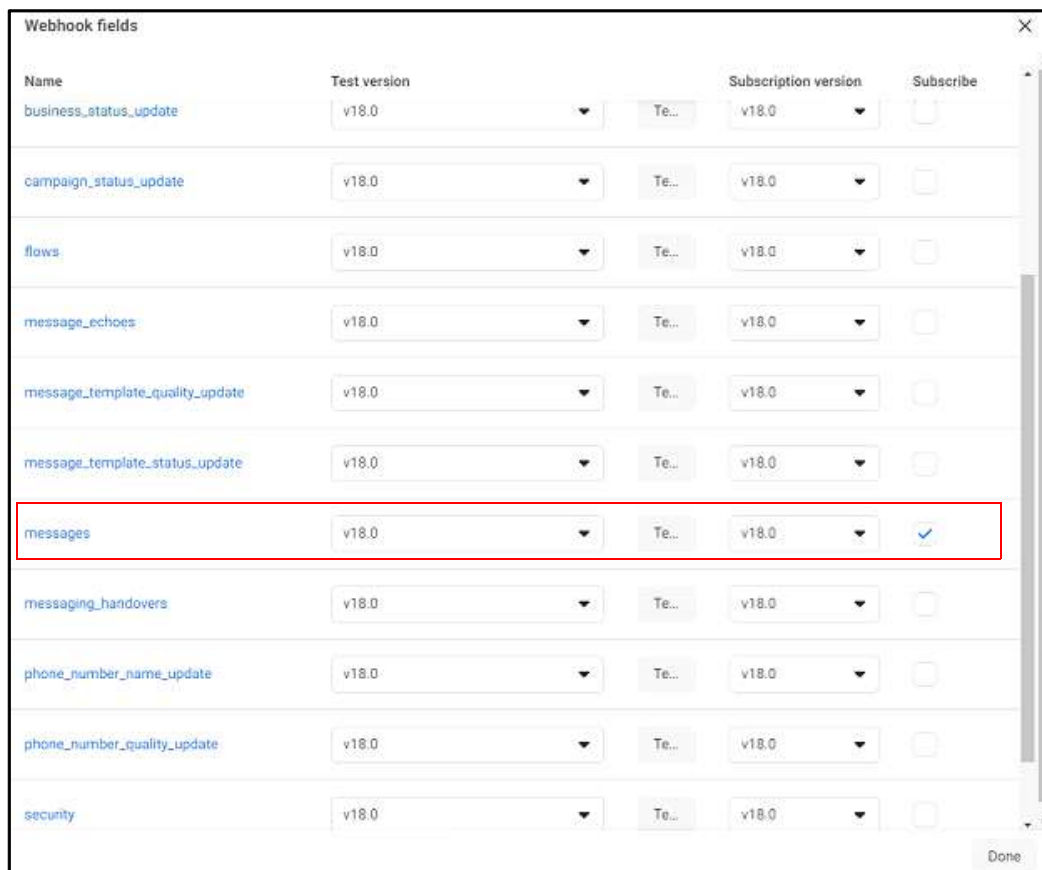

## Configuring Webhook Parameters in WhatsApp Business Account

Now, access your WhatsApp Business Account > Configuration.

Click **Edit**. Configure the **Callback URL** and **Verify Token** as configured in COSEC.

Click **Manage** against **Webhook fields**.

Click the corresponding **Subscribe** check box to enable.

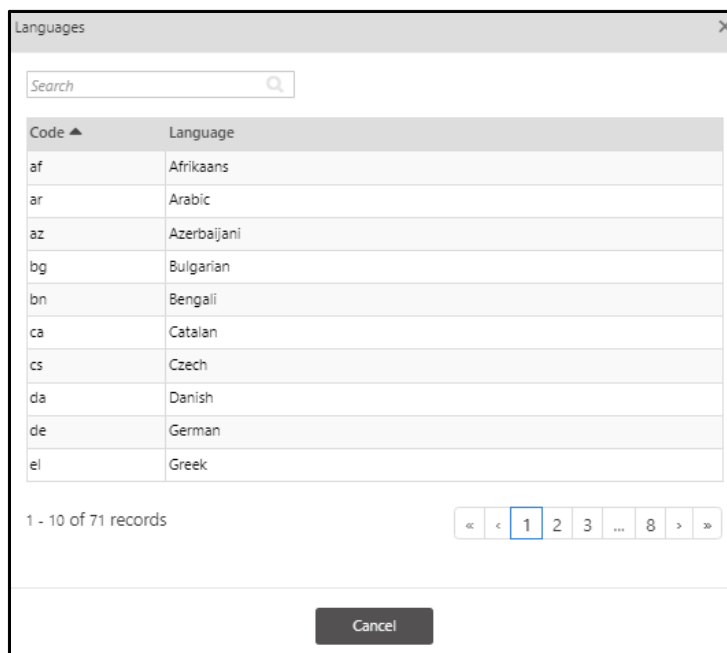

## Test Message

You can send a test message to check if your WhatsApp integration is successfully. To do so,

- Click the **Test Message** collapsible panel and configure the following:

- **Template Language:** Click the picklist. The **Languages** pop-up appears.

Code	Language
af	Afrikaans
ar	Arabic
az	Azerbaijani
bg	Bulgarian
bn	Bengali
ca	Catalan
cs	Czech
da	Danish
de	German
el	Greek

Select the language in which you wish to send the test message.

- **Template Name:** Enter the name of the template that you wish to send as the test message. The content of the template will be content of the test message.

**Make sure:**

- *the template you selected as the test message has only plain text and no variables.*
- *the template is registered and approved by WhatsApp.*
- **Phone Number:** Enter the phone number to which you wish to send the test WhatsApp message.

Click **Send**, to send the test message.

## Error List

Click the Error List collapsible panel the view the reason for the failure in sending the templates to your WhatsApp Business Account.

The name of the template/s along with the reason for failure are displayed.

## Templates with Images/Documents

Alerts with Documents/Images (ID - Name)
5- Leave Application
17- Visitor Pre-Registration
23- Leave Cancellation Application
31- Leave Modification Application
60-Visit Transfer
61- Visitor Pass
62- Visit State Change
71-APTA Auto Sign-In Configuration
72-Invite Visitor
74-Birthday Greetings
91- Invite User
99 - User Access - QR Credential

## Verdict Confirmation Alert Content

Default Template Name	Language	Content
application_already_processed_system_defined	English	Application is already been processed
application_proceessed_successfully_system_defined	English	Application Processed successfully
generic_error_occured_system_defined	English	Error in Application Processing

# Proxy Server Configuration

COSEC provides the provision for configuring the Proxy Server. A Proxy Server acts as a gateway between the end user and the internet. All the outbound internet traffic will flow through the Proxy Server on its way to the address requested. Proxy Servers encrypt the outbound web requests as well as the destination server would not know who actually made the original request. Hence using Proxy Servers enhances security as well as privacy.

COSEC provides the provision to select the services — SMS, Email, WhatsApp, Google API — for which you wish to use Proxy Server for outbound requests.

*Proxy Server Configuration is applicable to COSEC Centra and OEM.*

*Make sure there is persistent internet connection where the Proxy Server is installed.*

To configure the Proxy Server parameters,

- Click **Admin module > System Configuration > Proxy Server Configuration**.

- **Proxy Server:** Configure the IP Address of your Proxy Server. It can be a maximum of upto 50 characters. Default: Blank.
- **Proxy Port:** Configure the Port of your Proxy Server. It can be a maximum of upto 5 characters. Valid Characters: 0 to 9 and Valid Range: 1 to 65535. Default: Blank.
- **Proxy Auth:** By default, the Proxy Auth check box is selected, that is authentication is enabled and you need to configure the User Name and Password for the same. Clear the check box to disable.
- **User Name:** Configure the User Name that is to be used for logging into the Proxy Server. It can be a maximum of upto 50 characters.

Valid characters are ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz  
1234567890/\_\.@:

*Rename Group will not be applicable to User Name.*

- **Password:** Configure the Password that is to be used for logging into the Proxy Server. It can be a maximum of upto 128 characters.

Valid characters are !\"#\$%&'()\*+,- 0123456789:;<=>?@ABCDEFGHIJKLMNOPQRSTUVWXYZ[\]^\_`abcdefghijklmnopqrstuvwxyz{|}~

## Use Proxy Server For

If you have configured the Proxy Server and Proxy Port, then you can select the services for which you wish to use the Proxy Server for outbound requests. To do so, configure the following:

- **SMS:** Select the check box to enable. Default: Disabled.
- **Email:** Select the check box to enable. Default: Disabled.
- **WhatsApp:** Select the check box to enable. Default: Disabled.
- **Google API:** Select the check box to enable. Default: Disabled.

Click **Save** to save the configurations.

# Renaming Groups

---

The COSEC application defines 7 enterprise groups with default group labels and 3 custom groups. These are:

- Organization
- Branch
- Department
- Section
- Category
- Grade
- Designation
- Custom Group1
- Custom Group2
- Custom Group3

However, COSEC administrators can rename these group labels as per the site requirements. For e.g. some sites would need to refer to the **Organization** group as 'Company' or 'Condominium'.

Administrators can also rename the following entities in COSEC :

## All modules

- User (e.g. "User" can be re-labelled as "Employee")

## Contract Worker Management module

- Worker
- Work Order
- Contractor

## Job Processing and Costing module

- Cost Centre
- Project
- Phase
- Job

Also **Quick Links** group can be renamed as required which will be reflected on the dashboard of modules.

To rename a group, Go to **Admin module > System Configuration > Rename Group** and the following screen appears.

**Rename Group**

Search

Rename Group: Organization

Rename As: Organization

Default Group Name	Renamed As
Organization	Organization
Branch	Branch
Department	Department
Section	Section
Category	Category
Grade	Grade
Designation	Designation
User	User
Worker	Worker
Work Order	Work Order
Contractor	Contractor
Cost Centre	Cost
Project	Project
Phase	Phase
Job	Job

1 - 15 of 16 records

« 1 2 »

**Rename Group:** Select a **Group** from the list view that is to be renamed. The selected Default Group Name appears in the field.

**Rename As:** Enter the new Group Name/label in the field.

Click the **Save** button.

The new Group name/label will appear in the list view under the **Renamed As** column as shown below.

**Rename Group** ✓ Saved Successfully

Search

Rename Group: User

Rename As: Employee

Default Group Name	Renamed As
Organization	Organization
Branch	Branch
Department	Department
Section	Section
Category	Category
Grade	Grade
Designation	Designation
User	Employee
Worker	Worker
Work Order	Work Order
Contractor	Contractor
Cost Centre	Cost
Project	Project
Phase	Phase
Job	Job

The updated label gets reflected all across the COSEC system.

# Setting Up the Enterprise Profile

The system administrator can define how the profile of an enterprise appears on the COSEC home page. This representative profile can be set up to display the company logo, the contact information as well as other descriptive details about the company.

To set up the enterprise profile, select **Admin module > System Configuration > Enterprise Profile** and the following screen appears.

The screenshot shows the 'Enterprise Profile' configuration window. It contains several sections: 'Company Name' with a text field containing 'Organization-1'; 'Logo' with a placeholder image; 'Show Company Logo in Title Bar' with an unchecked checkbox; 'I-Card Issuing Authority' with 'ID' and 'Name' fields; 'Contact Details' with a 'Show Details To Users' dropdown set to 'Matrix Details Only'; 'Address Info' with fields for 'Address 1', 'Address 2', 'Address 3', 'Phone No.', 'Fax No.', 'Email', and 'Website'; and 'Contact Info' with fields for 'Contact Details 1', 'Contact Details 2', and 'Contact Details 3'.

**Company Name:** Enter the name of the company in the field.

## Uploading Logo

**Logo:** Click to add an image for the company logo.

**Show Company Logo in Title Bar:** Select the box to show company logo in title bar.

*Company Logo with size 96 pixels in width and 48 pixels in height will display properly otherwise it is possible that logo will not fit properly. If image with transparency has been uploaded as company logo then it will not be displayed properly in reports.*

The uploaded company logo will be shown in title bar when you login again.

**I-card Issuing Authority:** Select the User as the I-card Issuing Authority using the picklist.

## Contact Details

**Show Details To Users:** Select an option from the dropdown list to make the company profile information visible to the employees.

- **Matrix Details Only:** If this value is selected, the user will be able to view only the Matrix Details on the "Contact Us" page.
- **Enterprise Details Only:** "Only the details configured in the "Address Info" and "Contact Info" will be displayed.
- **Both:** If this option is selected, both the "Matrix Contact Details" and "Enterprise Contact Details" will be displayed.

In the **Address Info** section, enter the company's correspondence **address, phone no., fax no., email address** and **website** as per the fields requested.

In the **Contact Info** section, you can define additional contact information to be provided.

In the **About Company** Section, add a brief description about the company.

Click **Save** button. The saved information will be now be updated on the COSEC Web application home page as well as the **Contact**  page.

# Sending Messages from COSEC

---

The COSEC system can be configured to send preset alerts or customized messages to its users in response to certain predefined user events. If such a predefined user event occurs, it will trigger off an alert message to be sent to the relevant user or users via SMS or e-mail. A system administrator may also choose to send custom messages to selected users. COSEC allows you to configure both alert messages and custom messages.

- [“Configuring Alert Messages”](#)
- [“Configuring Custom Messages”](#)

# Configuring Alert Messages

---

Alert Messages can be sent for various events to the desired users. For sending alerts for events, make sure the **Alert Message** check box is enabled while configuring the desired device. For details, refer to [“Device List”](#).

Alerts can be sent as SMS messages, Emails, WhatsApp messages as well as PUSH notifications.

Make sure the pre-requisites are configured to ensure the Alerts are sent. Refer to [“Pre-requisites”](#).

For sending Alert Messages, each Alert Message Template has a default content that will be sent. You can edit this content if required. For details refer to [“Alert Message Parameters”](#).

For SMS Alerts, make sure the desired Alert Message Templates are registered with your Service Provider, who will verify the contents and then provide a Template ID for the same. Prepare the list of registered Alert Messages with their respective Template IDs as these are required while configuring the Alert Message parameters.

Each Alert Message Template is assigned a unique WhatsApp Template Name so that the templates can be added to your WhatsApp Business Account. If you wish to edit the Alert Message Templates, it should be done before sending the templates to your WhatsApp Business Account, else you will have to manually edit the templates from your WhatsApp Business Account. For smooth functioning of WhatsApp, make sure the content of the Alert Templates and the WhatsApp Templates are identical. If you edit the name of the template, make sure it is unique, as same name templates cannot be added to your WhatsApp Business Account. For adding the Templates to your WhatsApp Business Account, refer to [“Templates Addition in WhatsApp Business Account”](#).

For PUSH Notifications details, refer to [“PUSH Notification - APTA Application”](#) and [“PUSH Notification - VMS Application”](#).

You can view the status of the Alerts. Refer to [“Alert View”](#) for details.

*If the user is situated in a time zone other than Alert Service's time zone; Alert Service will take tenant's time zone into consideration while processing scheduled tasks or generating scheduled reports.*

*Multi-language is not supported in Alert Messages sent via Email/SMS/WhatsApp/App Notification.*

## Pre-requisites

Before you configure the Alert parameters, make sure:

- you have configured the SMS parameters, refer to [“SMS Configuration”](#).
- you have configured the Email parameters, refer to [“Email Configuration”](#).
- you have configured the WhatsApp parameters, refer to [“WhatsApp Integration”](#).
- you have enabled the Alert Messages checkbox in Device Configuration >Profile> Basic of the desired devices, refer to [“Device List”](#).
- you have configured the Mobile number and Email ID of the desired users as well as enabled the desired Receive Alert On options, refer to [“Configuring Users”](#).

- ensure Alert Service is running so that alert messages can be sent to the assigned users.
- users have installed and configured the desired applications — APTA/VMS— for PUSH Notifications.

To configure an Alert Message, you need to configure the following

- “Alert Message Parameters”
- “Additional Message Parameters”
- “Message Preview”
- “Assign Alert”

## Alert Message Parameters

Click **Admin module > System Configuration > Alert Message Configuration**.

ID	Event
1	Monthly Attendance
2	Leave Approval
3	Leave Rejection
4	User Events
5	Leave Application
6	Missing In Punch - Users
7	Missing In Punch - Group Incharge
8	Missing Out Punch - Users
9	Missing Out Punch - Group Incharge
10	User Allowed
11	User Denied
12	Door Force Open
15	New Joining - Confirmation
16	Visitor Arrival
17	Visitor Pre-Registration

1 - 15 of 89 records

By default, **All** is selected as the **Alert Filter** and the grid on the right side displays all the events for which alert messages can be configured. You can directly click on the desired event and configure its parameters.

If you wish to configure alert message for an event of a particular module, then configure the following:

**Alert Filter:** Select the desired module. The modules appear as per the available licenses. Based on the selected module the various Events will be displayed.

**Event:** Select an event from the drop-down list for which the alert message is to be configured. The events appear as per the Module selected in Alert Filter and the available licenses.

**Header Message:** Enter the required text to be displayed in the header of the message, for example: Dear User.

**SMS/Email Footer Message:** Enter the required text to be displayed in the footer of the SMS/Email message, for example: From COSEC Software.

**WhatsApp Footer Message:** Enter the required text to be displayed in the footer of the WhatsApp message, for example: From COSEC Software.

## Additional Message Parameters

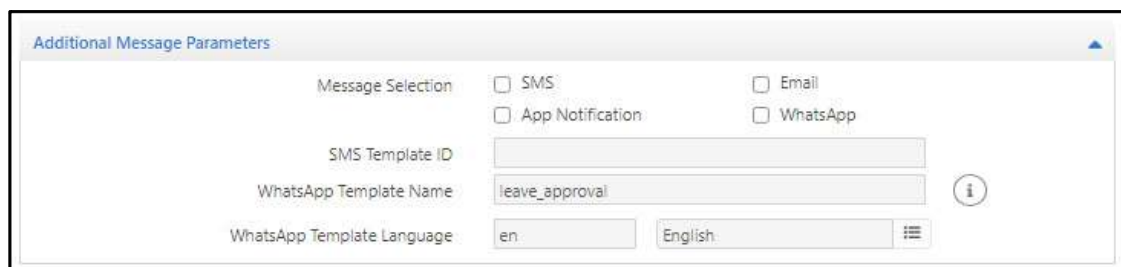

As per the selected Event the Additional Message Parameters may vary.

You need to configure the following:

- “Common Additional Parameters”
- “Specific Additional Parameters”

The Common Additional Parameters are applicable to all the Alerts, whereas the Specific Additional Parameters are differ as per the event.

Click the **Additional Message Parameters** collapsible panel and configure the following parameters:

### Common Additional Parameters

The following Additional Parameters are common for all the Alerts.

- **Message Selection:** Select the desired check boxes — **SMS, Email, App Notification, WhatsApp** — to determine the type of message/s to be sent. If you select the **App Notification** check box, PUSH Notifications will be sent on the APTA/VMS mobile applications for the related events. To know more about the Events for which PUSH Notifications will be received by the mobile applications, refer to “[PUSH Notifications](#)”.

*The options available in Message Selection vary as per the selected Event.*

*If you are upgrading COSEC to V20R08, make sure all the APP Notifications have been sent before you upgrade. If the App Notifications are in-progress and you initiate the upgrade, the Notifications will not be sent.*

- **SMS Template ID:** As per TRAI Regulation, an enterprise which sends messages to customers like OTP, communication message, promotional messages via SMS, have to register their entity and the content template to avoid spam, fake and fraudulent communication through SMS.

*There can be multiple SMS Template ID's such as SMS Template ID - User, SMS Template ID - Reporting In-charge, SMS Template ID-Host/Security, SMS Template ID-Visitor, SMS Template ID-Security, SMS Template ID-Contractor. These SMS Template ID may vary as per the Event selected. Each Template has a different content and the same needs to be registered with the Service provider.*

It is mandatory for an Admin to register the SMS content template beforehand with their Service Provider which will be verified before it is delivered to the users.

Once registered, the Service Provider will provide a Template ID against the registered SMS content. For every different Alert messages, a unique Template ID will be provided by the Service Provider.

Make sure **SMS** check box is enabled in **Message Selection** to configure SMS Template ID. Enter the respective Template ID for the configured Alert message which is to be send to users via SMS.

*If you have multiple Service Providers, then make sure the required templates are registered with all the desired Service Providers. Hence for each template you will have multiple Templates IDs. Also make sure you maintain a record of all the registered Message Templates with their respective Template IDs for reference.*

- **WhatsApp Template Name:** Make sure **WhatsApp** check box is enabled in **Message Selection**. The default name assigned to this alert template is displayed. You can change the same if required. If you opt to add the alert templates to your WhatsApp Business Account then this same name will be displayed in the WhatsApp **Select Templates** picklist. Make sure you have checked the contents of the template before the same are added to your WhatsApp Business Account. For details, refer to [“Templates Addition in WhatsApp Business Account”](#).
- **WhatsApp Template Language:** Click the picklist. The **Language** pop-up appears. Select the desired language in which you wish to send the WhatsApp message. When you add the templates to your WhatsApp Business Account these will be added in the selected language. For details, refer to [“Templates Addition in WhatsApp Business Account”](#).

## Specific Additional Parameters

There are parameters under Additional Parameters that differ as per the selected Events. Refer to the respective module link for the configurations:

*Alerts having only Common Parameters in the respective Modules have not been mentioned separately.*

- “Users Module”
  - “Event: User Events”
  - “Event: Missing In Punch - Users/Missing In Punch - Group Incharge”

## Users Module

### Event: User Events

- **Event Selection:** Select the desired option — First, All.

If you select First then only the first event will be considered. If you select all then all events will be considered.

### Event: Missing In Punch - Users/Missing In Punch - Group Incharge

- **Post Shift Start (Min):** Configure the time after the shift start time which you wish to consider for sending the Alert. After this time the system will trigger the Alert.

### Event: Missing Out Punch - Users/Missing Out Punch - Group Incharge

- **Pre -Shift End (Min):** Set the time period in minutes prior to the shift end time that the system should consider to trigger the Alert.
- **Post Shift End (Min):** Set the time period in minutes after the shift ends that the system should consider to trigger the Alert.  
Example: If the shift ends at 18:00 P.M. and you have not marked the out punch.

Consider the following configurations:

**Pre -Shift End:** 60 min

**Post Shift End:** 60 min

In this case an alert of **Missing Out Punch** will be triggered between the time interval 17:00 - 19:00.

### Event: User Allowed / User Denied

- **Event Check Period:** Click  and configure the following. Maximum **99** Event Check Periods can be configured.
- **Start Time** and **End Time:** Define the time period for checking the event by configuring the start and end time in HH: MM format.
- **Active Days:** Select the days on which you wish the events should be checked. To select all the days, select **Check All**.

Event Check Period		
<div></div>		
Start Time	End Time	Active Days
09:00	18:00	Mon Tue Wed Thu Fri  

- Click **OK**  to save the configurations or click **Cancel**  to discard.
- Click **Edit** , to make changes.

- Click **Delete**  , to remove the configured Event Check Period.

#### **Event: New Joining - Confirmation**

##### **Confirmation Period (Days)**

- **Confirmation:** Specify the days after joining for which alert is to be sent.

##### **Reminder Period (Days)**

- **Set Reminder (Days before Confirmation):** Specify the number of days before confirmation on which the alert is to be sent.
- **Reminder Time:** Time at which Alert is to be sent.

#### **Event: Validity / Expiry Date**

- **Send Alert To:** Select the check box to enable the desired option — User, Reporting In-Charge — to send the alert.

##### **Reminder Period (In Days)**

Click **Edit**  of the desired entry and configure the following:

- **Send Alert For:** Select the check box to enable. The Alert will be sent as a notification.
- **Document:** This field displays the name of the documents for which Alert can be configured. Custom fields with **Type** as **Date** will also appear in this grid. For configuring Custom Fields refer to ["Custom Fields"](#).
- **Days Before Expiry:** Configure the number of days before which the user will get notified about the expiry of documents validity. You can enter the days from 1 to 99. For Example:5
- **Reminder Time:** Define the Time of the reminder in 24hrs format, when the alert will get generated. For Example: 15:30
- **Repeat Reminder:** Select the check box to enable, that is if you wish to repeat the configured reminder.
- **Repeat Interval (In days):** Configure the number of days (1 to 99). The alert will be repeated every-time after those number of days. For example if 1 is configured, then the reminder alert will be sent every alternate day.
- Click **OK**  to save the configurations or click **Cancel**  to discard.

#### **Event: Birthday Greetings**

- **Send Alert To:** Select the check box to enable the desired option — User, Reporting In-Charge, Group — to send the alert.
- **Select Group:** If you select **Group** as the **Send Alert To** option, select the check boxes of the desired Groups.

- **Additional Recipients:** If you wish this alert to other people as well, configure their Email IDs here. For multiple IDs use comma as a separator. Maximum characters supported are 1000.
- **Schedule Time:** Configure the time at which Alert is to be sent.
- **Upload Card:** To upload a card, click on the image of the card, The Change Photo pop-up appears.

Click **Browse** and select the file from the desired path.

Click **Update**. This card will be sent in the alert message.

#### ***Event: Health Declaration Pending***

- **Send Alert To:** Select the check box to enable the desired option — User, Reporting In-Charge, System Account — to send the alert.
- **Send Alert As Per:** Select the desired option — Shift Start Time, Schedule Time.
- **Post Shift Start (Minutes):** If you select Shift Start Time as the Send Alert As Per option, configure the time after the start time that you wish to consider before sending the alert.
- **Schedule Time:** If you select Schedule Time as the Send Alert As Per option, configure the time at which you wish to send the alert.
- **Schedule Days:** If you select Schedule Time as the Send Alert As Per option, select the check boxes of the desired days on which you wish to send the alert.

#### ***Event: Exceeding Health Declaration Parameters/ User Allowed - Threshold Temperature Exceeded/ User Denied - Threshold Temperature Exceeded / User Allowed - Face Mask Not Detected / User Denied - Face Mask Not Detected***

- **Send Alert To:** Select the check box to enable the desired option — Reporting In-Charge, System Account — to send the alert.

#### ***Event: Invite User***

- **Days Before Link Expiry:** Configure the number of days before which the user will get notified about the expiry of link. You can enter the days from 1 to 99. For Example:5
- **Reminder Time:** Define the Time of the reminder in 24hrs format, when the alert will get generated. For Example: 15:30

#### ***Event: User Onboarding - Schedule Time***

- **Schedule Time:** Configure the time at which the Aler is to be sent.
- **Schedule Days:** Select the check boxes of the desired days on which you wish to send the alert.

### **Devices Module**

#### ***Event: Door Force Open / Door Abnormal***

- **Event Check Period:** Click  and configure the following. Maximum **99** Event Check Periods can be configured.

- **Start Time** and **End Time**: Define the time period for checking the event by configuring the start and end time in HH: MM format.
- **Active Days**: Select the days on which you wish the events should be checked. To select all the days, select **Check All**.

Event Check Period

+

Start Time	End Time	Active Days
09:00	18:00	Mon Tue Wed Thu Fri

- Click **OK** to save the configurations or click **Cancel** to discard.
- Click **Edit** , to make changes.
- Click **Delete** , to remove the configured Event Check Period.

#### Event: Door Offline

- **Event Reminder**: Select the check box to enable the Event Reminder.
- **Reminder Interval (Min)**: Define the time interval in minutes between sending two consecutive reminders.
- **Event Reminder Count**: Define the number of reminders to be sent after the initial alert is sent.

The calculation of Time Period for sending reminders will be (Reminder Interval x Current Reminder Count)+ Tolerance Period.

Let us understand this with the help of an example,

Door Offline Time = 08:30:00 AM  
 Reminder Interval = 1 min  
 Event Reminder Count = 2  
 Tolerance Period = 1 min

Consider a device, say ARGO FACE, went offline on 08:30:00 AM, then the initial alert will be sent at 08:31:00 AM. Now, the first reminder will be sent at 08:32:00 AM [1 (Reminder Interval) x 1 (Current Reminder Count)+ 1 (Tolerance Period)]. Similarly, the second reminder will be sent at 08:33:00 AM [1 (Reminder Interval) x 2 (Current Reminder Count)+ 1 (Tolerance Period)].

- **Event Check Period**: Click and configure the following. Maximum **99** Event Check Periods can be configured.
- **Start Time** and **End Time**: Define the time period for checking the event by configuring the start and end time in HH: MM format.

- **Active Days:** Select the days on which you wish the events should be checked. To select all the days, select **Check All**.

Event Check Period

+

Start Time	End Time	Active Days	
09:00	18:00	Mon Tue Wed Thu Fri	 

- Click **OK**  to save the configurations or click **Cancel**  to discard.
- Click **Edit** , to make changes.
- Click **Delete** , to remove the configured Event Check Period.
- **Tolerance Period (Sec):** Configure the time to be considered before sending the alert.

#### Event: Door Online

- **Event Check Period:** Click  and configure the following. Maximum **99** Event Check Periods can be configured.
- **Start Time** and **End Time:** Define the time period for checking the event by configuring the start and end time in HH: MM format.
- **Active Days:** Select the days on which you wish the events should be checked. To select all the days, select **Check All**.

Event Check Period

+

Start Time	End Time	Active Days	
09:00	18:00	Mon Tue Wed Thu Fri	 

- Click **OK**  to save the configurations or click **Cancel**  to discard.
- Click **Edit** , to make changes.
- Click **Delete** , to remove the configured Event Check Period.
- **Tolerance Period (Sec):** Configure the time to be considered before sending the alert.

## Access Control

### *Event: Guard Tour Completion*

- **Schedule Time:** Configure the time at which Alert is to be sent.

### *Event: Access Route Violation / Anti-Pass Back Rule Violation / Guard Tour Violation*

- **Send Alert To:** Select the check box to enable the desired option — Reporting In-Charge, User— to send the alert.

### *Event: Access Route Timer Violation*

- **Send Alert To:** Select the check box to enable the desired option — Reporting In-Charge, User — to send the alert.
- **Send Alert For Event:** Select the check box to enable the desired option — Allowed, Denied.

## Time and Attendance

### *Event: Attendance Correction Application / Short Leave/ Official Hours Application / Event Authorization / Advance Overtime Application / Shift Change Application*

- **Email/WhatsApp Approval Links:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option. Now, select the **Email/WhatsApp Approval Links** check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.
- **Email Approval Acknowledgment:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option as well as selected the **Email/WhatsApp Approval Links** check box to configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

### *Event: Monthly Attendance*

- **Show Monthly Leave Balance:** Select this check box if you wish add the details of the Leave Balance in the message.

The leave details for the month — Opening Balance, Leaves CreditDebit, Leave Encashment, Availed Leaves, Closing Balance, Overflow — will be included in the alert message.

### *Event: Shift Change*

- **Alert for Normal Shift Update:** Select the check box to send alert for normal shift update.
- **Alert for Field Break Shift Update:** Select the check box to send alert for field break shift update.
- **Alert for Rest Day Shift Update:** Select the check box to send alert for f rest day shift update.
- **Send Alert To:** Select the **System Account** check box to send the alert to the System Admin/ On Behalf System Account User.

### *Event: Overtime/C-Off Authorisation*

- **Schedule Time:** Configure the time at which alert is to be sent.

**Event: Overtime Limit Exceeded - User / Overtime Limit Exceeded - Group Incharge**

- **Schedule Time:** Configure the time at which alert is to be sent.
- **Processing Period:** Select the desired processing period — Current, Previous.

**Event: Attendance Exception**

- **Send Alert To:** Select the desired check boxes — **User, Reporting In-Charge** — to send the alert.
- **Send Alert As Per:** Select the desired option — **Daily-Schedule Time, Daily-Shift End Time**, Weekly, Bi-Weekly, Monthly.

If you select **Daily-Schedule Time** as the Send Aler As Per option, configure the following:

- **Schedule Time:** Configure the time at which the Aler is to be sent.
- **Schedule Days:** Select the check boxes of the desired days on which you wish to send the alert.

If you select **Daily-Shift End Time** as the Send Aler As Per option, configure the following:

- **Post Shift End (Minutes):** Select this option to generate an alert after the shift ends. Specify the time after which the alert should be generated.

For example: Value of this parameter is set to 120. Shift of Ram ends at 18:00. If any exception occurs for Joy, its alert should be sent at 20:00.

If you select **Weekly** as the Send Aler As Per option, configure the following:

- **Schedule Time:** Configure the time at which the Aler is to be sent.
- **Schedule Days:** Select the check boxes of the desired days on which you wish to send the alert.

If you select **Bi-Weekly** as the Send Aler As Per option, configure the following:

- **Type of Week:** Select the desired option — Odd Weeks, Even Weeks— for which the Alert is to be sent.
- **Schedule Time:** Configure the time at which the Aler is to be sent.
- **Schedule Days:** Select the check boxes of the desired days on which you wish to send the alert.

If you select **Monthly** as the Send Aler As Per option, configure the following:

- **Day of the Month:** Select the desired day of the month, that is from 1 to 31 on which you wish to send the Alert.
- **Schedule Time:** Configure the time at which the Aler is to be sent.
- **Exceptions:** Select the check boxes of the desired exceptions, when these occur the alert will be sent to the RIC/User. Exceptions will be calculated separately for each user. For each exception, a different alert will be sent.

If you select **Send Alert To** as Reporting In-Charge, then only single message will be sent containing details about all the users for whom the same exception occurred.

- **Maximum Absence Allowed:** Configure the number of times user is allowed to be absent, after which the Alert is to be sent.

**Event: Attendance Correction Approval/Rejection / Short Leave/Official Approval/Rejection / Advance Overtime Approval/Rejection**

- **Send Alert To:** Select the **System Account** check box to send the alert to the System Admin/ On Behalf System Account User.

**Leave Management**

**Event: Leave Application / Leave Cancellation Application / Leave Modification Application**

- **Email/WhatsApp Approval Links:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option. Now, select the **Email/WhatsApp Approval Links** check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.
- **Email Approval Acknowledgment:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option as well as selected the **Email/WhatsApp Approval Links** check box to configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.
- **Include Attachment:** Select this checkbox to send an attachment like Medical Certificate/Tour document along with the alert message to the RIC. Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option.

**Event: Leave Credit/Debit**

- **Alert Reporting In-Charge:** Select the check box if you wish to send the alert to the Reporting In-Charge.

**Event: Leave Approval/ Leave Rejection**

- **Send Alert To:** Select the **System Account** check box to send the alert to the System Admin/ On Behalf System Account User.

**Visitor Management**

**Event: Visitor Pre-Registration / Visit Transfer**

- **Calendar Invite:** Make sure **Email** is selected as the Message Selection option. Select this checkbox to attach icalender (.ics) file in the Email invitation along with the details of the scheduled visit to a visitor.

ICS file is an universal calender format which enables the users to publish and share calendar information over Email.

By attaching the .ics file in the Email invitation, all scheduled visit details will get imported directly in to the calendar of the invited visitors, provided it has an email reader with calendar application.

Recipients of the .ics file will get a notification from the calendar event for the scheduled visit before the start time of the visit.

An .ics file includes — Summary of the Visit, Visitor and Host Information, Date and Time of the Visit, Unique ID (UID), Location, Description of the Visit etc.

- **Email/WhatsApp Approval Links:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option. Now, select the **Email/WhatsApp Approval Links** check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.

**Email Approval Acknowledgment:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option as well as selected the **Email/WhatsApp Approval Links** check box to

configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

- **Send Alert To:** Select the desired check boxes — **Host, Visitor, Security** — to send the alert.

Security is applicable for Visit Transfer only.

#### ***Event: Visitor Pass Expiry Reminder / Visitor Pass Expired***

- **Send Alert To:** Select the desired check boxes — **Host, Visitor, Security** — to send the alert.
- **Expiry Reminder (Minutes):** Configure the time after which the alert is to be sent for reminder of the pass expiry.

#### ***Event: Visitor Pass Expired***

- **Send Alert To:** Select the desired check boxes — **Host, Visitor, Security** — to send the alert.
- **Reminder Period (Min):** Configure the time after pass expiry time after which the alert is to be sent.

#### ***Event: Security Clearance / Visitor Pre-Registration Approval/Rejection***

- **Email/WhatsApp Approval Links:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option. Now, select the **Email/WhatsApp Approval Links** check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.
- **Email Approval Acknowledgment:** Make sure you have enabled the **Email/WhatsApp** check box as the Message Selection option as well as selected the **Email/WhatsApp Approval Links** check box to configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

#### ***Event: Visitor Pass***

- **Scan Code:** Select the desired check box, QR and /or Barcode. The selected code will be sent in the alert.

#### ***Event: Visit State Change***

- **Calendar Invite:** Make sure **Email** is selected as the Message Selection option. Select this checkbox to attach icalender (.ics) file in the Email invitation along with the details of the changes in the visit to a visitor.

ICS file is an universal calendar format which enables the users to publish and share calendar information over Email.

By attaching the .ics file in the Email invitation, all scheduled visit details will get imported directly in to the calendar of the invited visitors, provided it has an email reader with calendar application.

Recipients of the .ics file will get a notification from the calendar event for the scheduled visit before the start time of the visit.

An .ics file includes — Summary of the Visit, Visitor and Host Information, Date and Time of the Visit, Unique ID (UID), Location, Description of the Visit etc.

- **Approval Links:** Make sure you have enabled the **Email** check box as the Message Selection option. Now, select the **Approval Links** check box to include particular links in the Email message, enabling the user to take an action — Approve/Reject.

**Email Approval Acknowledgment:** Make sure you have enabled the **Email** check box as the Message Selection option as well as selected the **Approval Links** check box to configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

- **Send Alert To:** Select the desired check boxes — **Host, Visitor, Security**.

**Event: Visitor - Login without OTP**

- **Approval Links:** Make sure you have enabled the **Email** check box as the Message Selection option. Now, select the **Approval Links** check box to include particular links in the Email message, enabling the user to take an action — Approve/Reject.

**Email Approval Acknowledgment:** Make sure you have enabled the **Email** check box as the Message Selection option as well as selected the **Approval Links** check box to configure **Email Approval Acknowledgment**. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

**Event: Visit Reminder**

- **Send Alert To:** Select the desired check boxes — **Host, Visitor, Additional Host** — to send the alert.
- **Reminder Prior Hours:** Configure the desired hours to send an alert before the configured time ends.
- **Reminder Prior Days:** Configure the desired days to send an alert before the configured time ends.

**Event: Create Visit - Watchlist/Blacklist / Visitor Form Execution**

- **Send Alert To:** Select the desired check boxes — **Host, Security** — to send the alert.

**Event: Visit Request Approval / Rejection**

- **Send Alert To:** Select the **System Account** check box to send the alert to the System Admin/ On Behalf System Account User.

Also refer to [“Visitor Pre-registration Requests and Approvals”](#).

**Contractor Worker Management**

**Event: Worker Assignment**

- **Schedule Time:** Configure the time at which the alert message should be sent.
- **Processing Period:** Select the desired processing period — Current, Previous.

**Event: Worker Approval**

- **Schedule Time:** Configure the time at which the alert message should be sent.

**Event: Work Order Expiry**

- **Send Reminder:** Select the desired option — Everyday, Once.
- **Set Reminder (Days before Validity End):** Configure the desired days to send an alert before the validity ends.
- **Reminder Time:** Configure the time at which the reminder alert should be sent.

#### **Event: Contractor Validity**

- **Send Alert To:** Select the desired check boxes — **User**, **Contractor**— to send the alert.
- **Reminder Period (Days):** Click **Edit**  to configure the parameters:
  - **Days Before Validity End Date:** Configure the number of days before the validity end date on which the alert reminder should be sent.
  - **Reminder Time:** Configure the time at which the reminder alert should be sent.
  - **Repeat Reminder:** Select the check box if you wish to repeat the reminder.
  - **Repeat Interval (Days):** Configure the number of days in between 1 to 99. The reminder will repeat till the entered number of days. For example: 10

#### **Event: Worker Assignment**

- **Email/WhatsApp Approval Links:** Make sure you have enabled the Email/WhatsApp check box as the Message Selection option. Now, select the Email/WhatsApp Approval Links check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.
- **Email Approval Acknowledgment:** Make sure you have enabled the Email check box as the Message Selection option as well as selected the Email/WhatsApp Approval Links check box to configure Email Approval Acknowledgment. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

#### **Job Processing and Costing**

##### **Event: Award/Penalty Application**

- **Email/WhatsApp Approval Links:** Make sure you have enabled the Email/WhatsApp check box as the Message Selection option. Now, select the Email/WhatsApp Approval Links check box to include particular links in the Email/WhatsApp message, enabling the user to take an action — Approve/Reject.
- **Email Approval Acknowledgment:** Make sure you have enabled the Email check box as the Message Selection option as well as selected the Email/WhatsApp Approval Links check box to configure Email Approval Acknowledgment. Select this checkbox to get an Acknowledgment Email (reply) when an action is taken — Approval/Rejection — by respective user.

#### **Field Visit Management**

##### **Event: Schedule Unavailable -Users / Schedule Unavailable - Group Incharge**

- **Set Reminder:** Select the desired option — Everyday, Once. The reminder will be sent as the selected option.
- **Reminder Time:** Configure the time at which you wish to sent the reminder alert.
- **Reminder Period (Days Before Schedule Date):** Configure the number of days prior to the schedule date for which users are not available, for which the alert need to be sent.

## System

### *Event: Identification Server Inactive*

- **Event Check Period:** Maximum 99 Event Check Periods can be configured. Click  and configure the following.
  - **Start Time and End Time:** Define the time period for checking the event by configuring the start and end time in HH: MM format.
  - **Active Days:** Select the days on which you wish the events should be checked. To select all the days, select Check All.
- Click **OK**  to save the configurations or click **Cancel**  to discard.
- Click **Edit** , to make changes.
- Click **Delete** , to remove the configured Event Check Period.
- **Tolerance Period (Min):** Configure the time that can be considered before sending the alert.

### *Event: Pending Application for Approval*

- **Set Reminder:** Select the desired option — Daily, Monthly, Weekly. The reminder will be sent as the selected option.
- **Reminder Time:** Configure the time at which you wish to sent the reminder alert.

## Visitor Pre-registration Requests and Approvals

Pre-registration requests can be initiated by Visitor, Host as well a SA.

For SA initiated requests, refer to [“Pre-Registration”](#) and [“Visit Registration Approval”](#).

Visitor can initiate requests from the Visitor Portal:

- The requests are sent to the Host for Approval.
- After the Hosts approval the request is sent to the RIC.

Host can initiate requests from his/her ESS login:

- This request is sent to the RIC for approval.

The following Alerts can be configured:

- When requests are initiated by the Visitor/Host for notifications select Alert Filer as Visitor Management, Event as Visit Pre-registration.
- When requests are Approved/Rejected if notifications are required, select Alert Filer as Visitor Management, Event as Visit Request Approval/Rejection.
- When Host user approves the request, then the request is sent to RIC as well as alert is sent to the RIC. For this select Alert Filer as Visitor Management, Event as Visit Pre-registration Approval/Rejection.

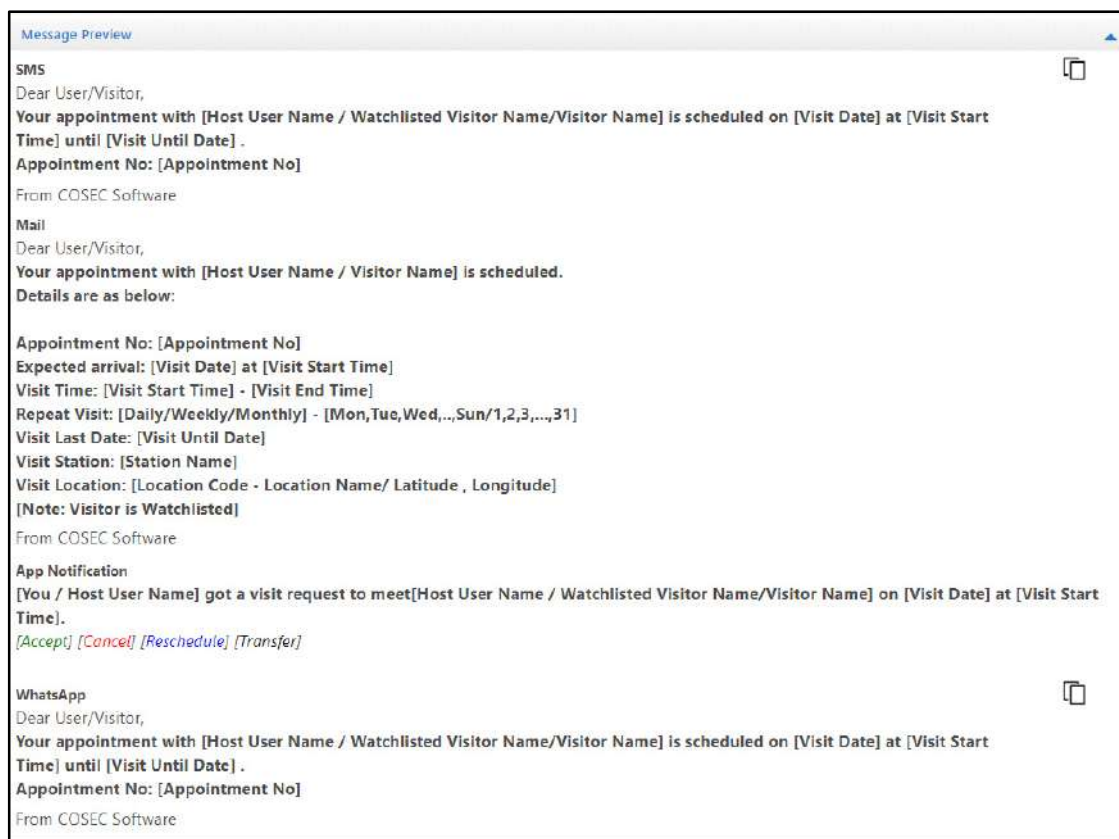

Visits can be transfered or rescheduled, in these cases the alerts will be sent to the Host/RICs accordingly.

## Message Preview

You can preview the alert message content as per the selected event. To do so,

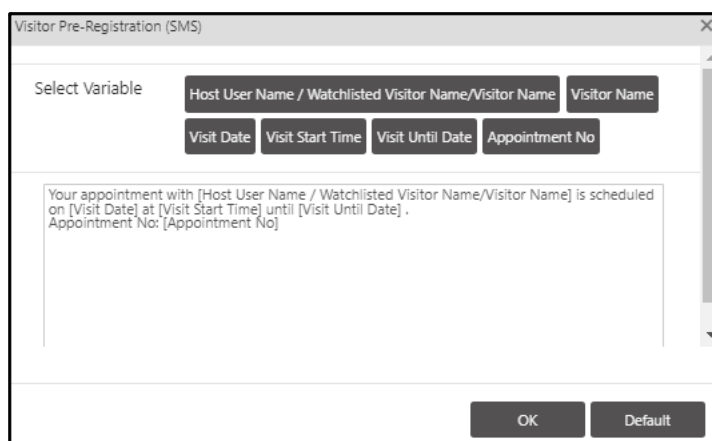

- Click the **Message Preview** collapsible panel.

The message details that will be sent to the recipient — SMS, Email, WhatsApp, App Notification — appear.

You can copy the content of the message — SMS, WhatsApp — if required. To do so, click **Copy** .

Messages may contain variables as well. For certain Events the variables as well as message text can be edited. The text and variables that can be edited appear in bold and when you hover-over the same, a hand icon appears. Click to edit. A pop-up appears wherein you can customize the message as per your requirements.

Click **OK** to save the changes.

After customization if you wish to set the template back to the default one, click **Default**.

If no customization is done, the default will be sent.

*As per the selected Event, the content (text) and variables differ and are editable.*

*The number of variables that can be added in a single template in any custom message depends on the TRAI regulations in India. Hence, make sure you customize your message according to the regulations prevailing in your country.*

## Assign Alert

Depending on the selected Event, the Assign Alerts parameters may differ. Refer to the desired link as per your requirement.

- “Option 1”
- “Option 2”
- “Option 3”
- “Option 4”
- “Option 5”
- “Option 6”

### Option 1

- **Select Users:** Select the desired option — All, Randomly.

User ID	Name	SMS	Email	App Notification	WhatsApp	
Nirali	Nirali	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	

If you select **All**, all the uses appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

You can also remove any user from the grid. To do so, click **Delete** of the respective user.

If you select **Randomly**, click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users to whom you wish to assign the alert.

- Click **OK**.

The selected users appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

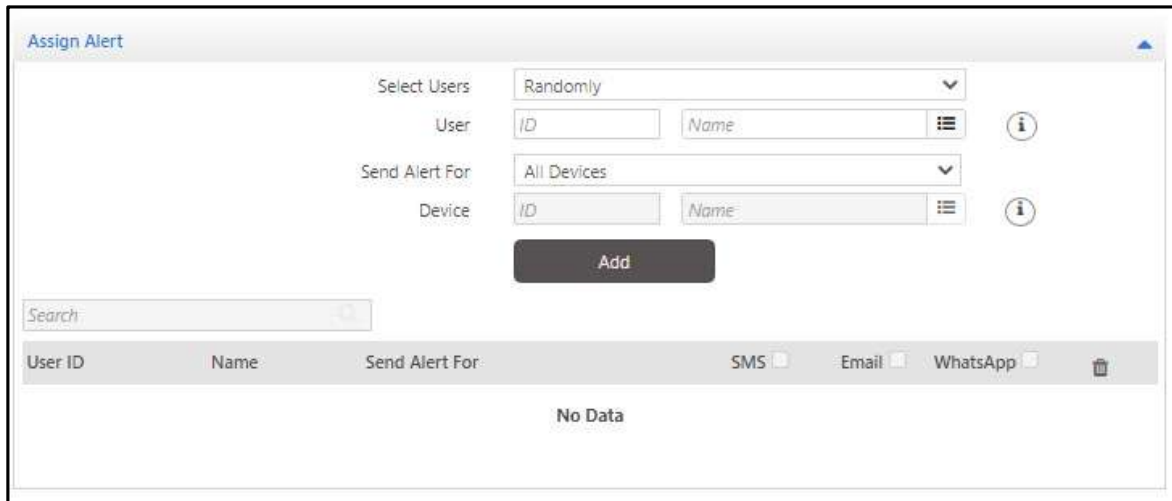

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

You can also remove any user from the grid. To do so, click **Delete**  of the respective user.

## Option 2

- **Select Users:** Select the desired option — All, Randomly.

If you select **All**, all the users appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable. Hover over the Info  icon. It displays the number of selected users.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

You can also remove any user from the grid. To do so, click **Delete**  of the respective user.

If you select **Randomly**, click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users to whom you wish to assign the alert.
- Click **OK**. Hover over the Info  icon. It displays the number of selected users.
- **Send Alert For:** Select the desired option — All Devices, Selected Devices, Selected Device Groups.

If you select **All Devices**, hover over the Info  icon. It displays the number of devices selected.

If you select **Selected Device Groups**, click the **Device Group** picklist.

- The **Picklist For Device Group** pop-up appears.

DGID	Name
1	ACTA Devices
2	RnD1Visitor
3	Device Group 3
4	Device Group 4
5	Device Group 5
6	Device Group 6
7	Device Group 7
8	Device Group 8
9	Device Group 9
10	Device Group 10

- You can either select particular Device Groups or can select all the Device Groups at once.

- To select particular Device Groups, select the check boxes of the desired Device Groups.

**OR**

To select all the Device Groups at once, select the **Select All** check box. The Device Groups on all the pages will be selected.

- Click **OK**. Hover over the Info  icon. It displays the number of Device Groups selected.
- Similarly, if you select **Selected Devices**, click the **Device** picklist. The **Picklist for Devices** pop-up appears. To proceed follow the steps as mentioned under **Device Groups**.

The **Select All** check box is applicable for the following options only:

- Alert Filter selected is Device and Events selected are — Door Offline, Door Abnormal, Duress, Door Force Open.
  - Alert Filter selected is CWM and Event selected is Contractor Validity, Worker Induction Approval/ Rejection.
  - Alert Filter selected is System and Event selected is Identification Server Inactive.
  - Alert Filter selected is Access Control and Event selected is Guard Tour Violation.
- Click **Add**. The users along with the selected devices appear in the grid.

The screenshot shows the 'Assign Alert' window. At the top, 'Select Users' is set to 'Randomly'. Below it, the 'User' section shows 'ID' and 'Name' fields. The 'Send Alert For' section is set to 'All Devices', with 'Device' fields for 'ID' and 'Name'. An 'Add' button is present. Below these fields is a search bar. The main table has columns: User ID, Name, Send Alert For, SMS, Email, WhatsApp, and a delete icon. One user is listed: User ID 10, Name RAJENDRA GOSWAMI, Send Alert For Selected Devices (1), with all notification checkboxes (SMS, Email, WhatsApp) checked.

User ID	Name	Send Alert For	SMS	Email	WhatsApp	
10	RAJENDRA GOSWAMI	Selected Devices (1)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	

The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

You can also remove any user from the grid. To do so, click **Delete** of the respective user.

### Option 3

- **Select Users:** Select the desired option — All, Group Wise, Randomly.

The screenshot shows the 'Assign Alert' window with the same settings as the first image. However, the table below the search bar is empty, displaying 'No Data' in the center. The columns remain the same: User ID, Name, Send Alert For, SMS, Email, WhatsApp, and a delete icon.

User ID	Name	Send Alert For	SMS	Email	WhatsApp	
No Data						

If you select **All**, all the uses appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable. Hover-over the Info icon, it displays the number of selected users.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

If you select **Group Wise**, configure the following parameter:

- **Select Group:** Select the desired enterprise group from the drop-down list—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

Click **OK**. Hover-over the Info  icon, it displays the number of selected groups.

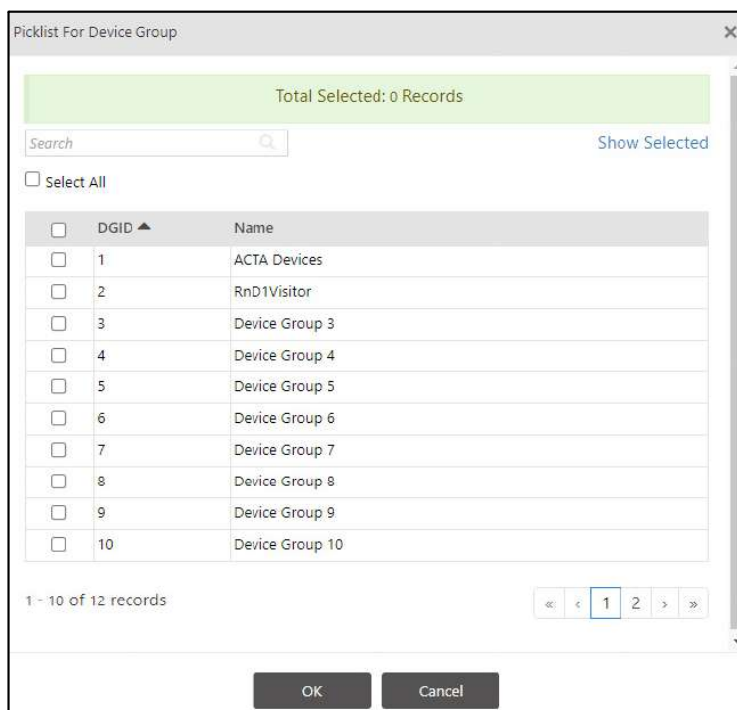

If you select **Randomly**, click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users to whom you wish to assign the alert.
- Click **OK**. Hover-over the Info  icon, it displays the number of selected users.
- **Send Alert For:** Select the desired option — All Devices, Selected Devices, Selected Device Groups.

If you select **All Devices**, hover-over the Info  icon, it displays the number of devices selected.

If you select **Selected Device Groups**, click the **Device Group** picklist.

- The **Picklist For Device Group** pop-up appears.

<input type="checkbox"/>	DGID ▲	Name
<input type="checkbox"/>	1	ACTA Devices
<input type="checkbox"/>	2	RnD1Visitor
<input type="checkbox"/>	3	Device Group 3
<input type="checkbox"/>	4	Device Group 4
<input type="checkbox"/>	5	Device Group 5
<input type="checkbox"/>	6	Device Group 6
<input type="checkbox"/>	7	Device Group 7
<input type="checkbox"/>	8	Device Group 8
<input type="checkbox"/>	9	Device Group 9
<input type="checkbox"/>	10	Device Group 10

- You can either select particular Device Groups or can select all the Device Groups at once.
  - To select particular Device Groups, select the check boxes of the desired Device Groups.
- OR**

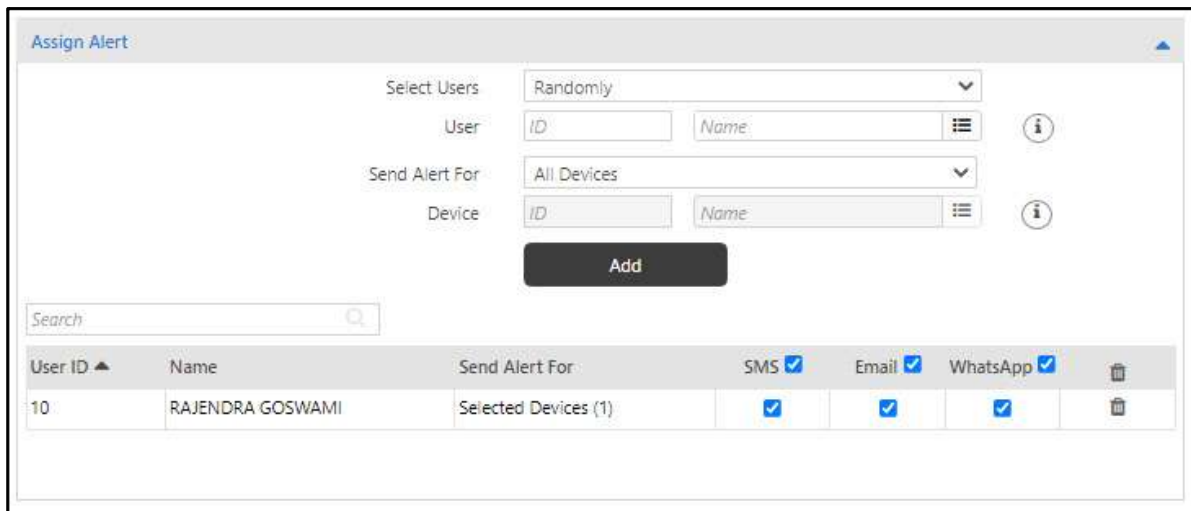

To select all the Device Groups at once, select the **Select All** check box. The Device Groups on all the pages will be selected.

- Click **OK**. Hover-over the Info  icon, it displays the number of Device Groups selected.
- Similarly, if you select **Selected Devices**, click the **Device** picklist. The **Picklist for Devices** pop-up appears. To proceed follow the steps as mentioned under **Device Groups**.

The **Select All** check box is applicable for the following options only:

- Alert Filter selected is Device and Events selected are — Door Offline, Door Abnormal, Duress, Door Force Open.
  - Alert Filter selected is System and Event selected is Identification Server Inactive.
  - Alert Filter selected is CWM and Event selected is Contractor Validity, Worker Induction Approval/ Rejection.
  - Alert Filter selected is Access Control and Event selected is Guard Tour Violation.
- Click **Add**. The users along with the selected devices appear in the grid.

The 'Assign Alert' dialog box contains the following elements:

- Select Users:** A dropdown menu set to 'Randomly'.
- User:** Two input fields for 'ID' and 'Name', each with an information icon.
- Send Alert For:** A dropdown menu set to 'All Devices'.
- Device:** Two input fields for 'ID' and 'Name', each with an information icon.
- Add:** A dark button to confirm the selection.
- Search:** A text input field with a magnifying glass icon.
- Table:** A table with columns: User ID, Name, Send Alert For, SMS, Email, WhatsApp, and a delete icon. The first row shows User ID 10, Name RAJENDRA GOSWAMI, Send Alert For Selected Devices (1), and all notification checkboxes (SMS, Email, WhatsApp) are checked.

The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.

You can also remove any user from the grid. To do so, click **Delete**  of the respective user.

## Option 4

### Send Alert To

- **Users:** Click the Users picklist The **Picklist For User** pop-up appears.

Click to select the desired user.

### Send Alert Of

- **Select Users:** Select the desired option — All, Group Wise, Randomly.

The screenshot shows the 'Assign Alert' interface. It includes a 'Send Alert To' section with a 'User' picklist and 'ID'/'Name' fields. The 'Send Alerts Of' section has a 'Select Users' dropdown (set to 'Randomly') and another 'User' picklist with 'ID'/'Name' fields. A search bar is located below the dropdowns. At the bottom, a table with columns 'User ID', 'Name', 'SMS', 'Email', 'WhatsApp', and a trash icon is shown, currently displaying 'No Data'.

If you select **All**, all the uses appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

If you select **Group Wise**, configure the following parameter:

- **Select Group:** Select the desired enterprise group from the drop-down list—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

Click **OK**. Hover-over the Info  icon, it displays the number of selected groups.

If you select **Randomly**, click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users to whom you wish to assign the alert.
- Click **OK**.

## Option 5

- **Select Users:** Select the desired option — All, Group Wise, Randomly.

The screenshot shows the 'Assign Alert' window. At the top, there are two sections: 'Select Users' and 'Select Contractors'. Each section has a dropdown menu set to 'Randomly', input fields for 'ID' and 'Name', and an 'Add' button. Below these is a search bar and a table with columns: User ID, Name, Contractor ID, Contractor Name, SMS, Email, and WhatsApp. The table currently shows 'No Data'. There are also info icons next to the dropdowns and the table header.

If you select **All**, all the uses appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

If you select **Group Wise**, configure the following parameter:

- **Select Group:** Select the desired enterprise group from the drop-down list—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

Click **OK**. Hover-over the Info  icon, it displays the number of selected groups.

If you select **Randomly**, click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users to whom you wish to assign the alert.
- Click **OK**. Hover-over the Info  icon, it displays the number of selected users.
- **Select Contractors:** Select the desired option — All, Randomly

If you select **All**, all the Contractors appear in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

If you select **Randomly**, click the **Contractor** picklist.

- The **Picklist For Contractor** pop-up appears.
- You can select particular contractors or can select all the contractors at once.

To select particular contractors, select the check boxes of the desired contractors to whom you wish to assign the alert.

OR

To select all the contractors at once, select the **Select All** check box.

- Click **OK**. Hover-over the Info  icon, it displays the number of selected contractors.
- Click **Add**. The selected users along with the contractors appears in the grid. The check boxes — SMS, WhatsApp, Email as well as App Notification — all are enabled. Clear the desired check boxes to disable.

*As per the selected Event, the SMS, WhatsApp, Email, App Notification options may vary.*

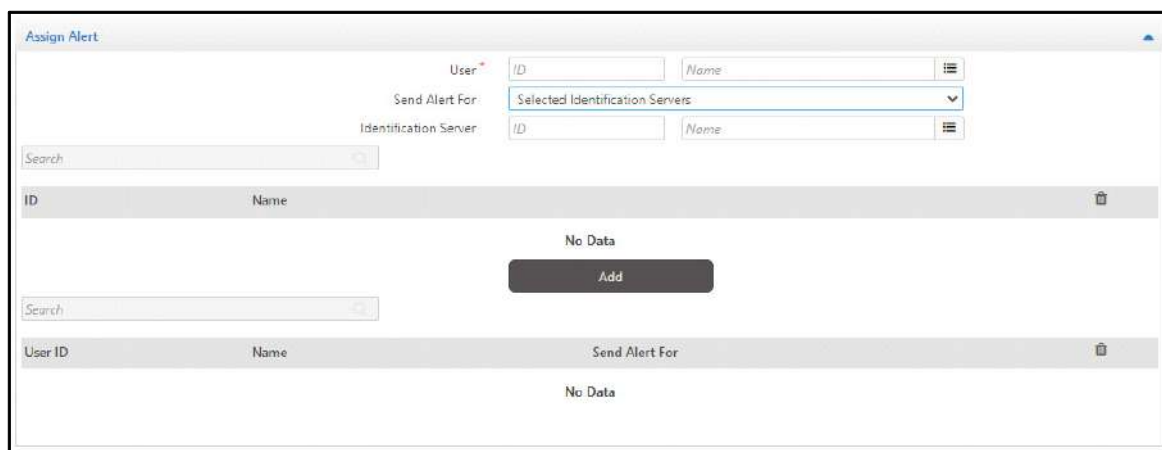

- You can also remove any entry from the grid. To do so, click **Delete**  of the respective entry.

## Option 6

- **Users:** Click the Users picklist The **Picklist For User** pop-up appears.

Click to select the desired user.

- **Send Alert For:** Select the desired option — All Identification Servers, Selected Identification Servers.

If you select **All**, all the identification servers will be selected.

Click **Add**.

If you select **Selected Identification Servers**, Click Identification Server picklist

The **Picklist For All Identification Servers** pop-up appears.

You can select all the servers at once or can select particular servers.

To select the particular servers, select the check boxes of the desired servers.

OR

To select all the servers at once, select the **Select All** check box.

Click **OK**.

Click **Add**. The Identification Servers appear in the grid.

You can also remove any entry from the grid. To do so, click **Delete**  of the respective entry.

## PUSH Notifications

### PUSH Notification - APTA Application

User can configure an alert to receive the Push notifications in the APTA Application in the user's smart-phone for the Alert Filter :**User**, **Leave Management** and **Time & Attendance** for the following events:

- Missing In/Out Punch
- Attendance Correction Application / Approval / Rejection
- Short Leave/Official Hours Application
- Short Leave/Official Hours Approval / Rejection
- Shift Change
- OT / C-OFF Authorization
- Event Authorization
- Leave Application / Approval / Rejection
- Leave Cancellation/Approval / Rejection
- Leave Credit / Debit
- Leave Modification Application / Approval / Rejection
- Overtime Limit Exceeded - Group-Incharge
- Overtime Limit Exceeded - User
- Visitor Added - Watchlist/Blacklist
- Create Visit - Watchlist/Blacklist
- Visitor Pass Expiry Reminder
- Visitor Pass Expiry Reminder
- Visitor Form Execution
- Visitor Pre-registration Approval/Rejection

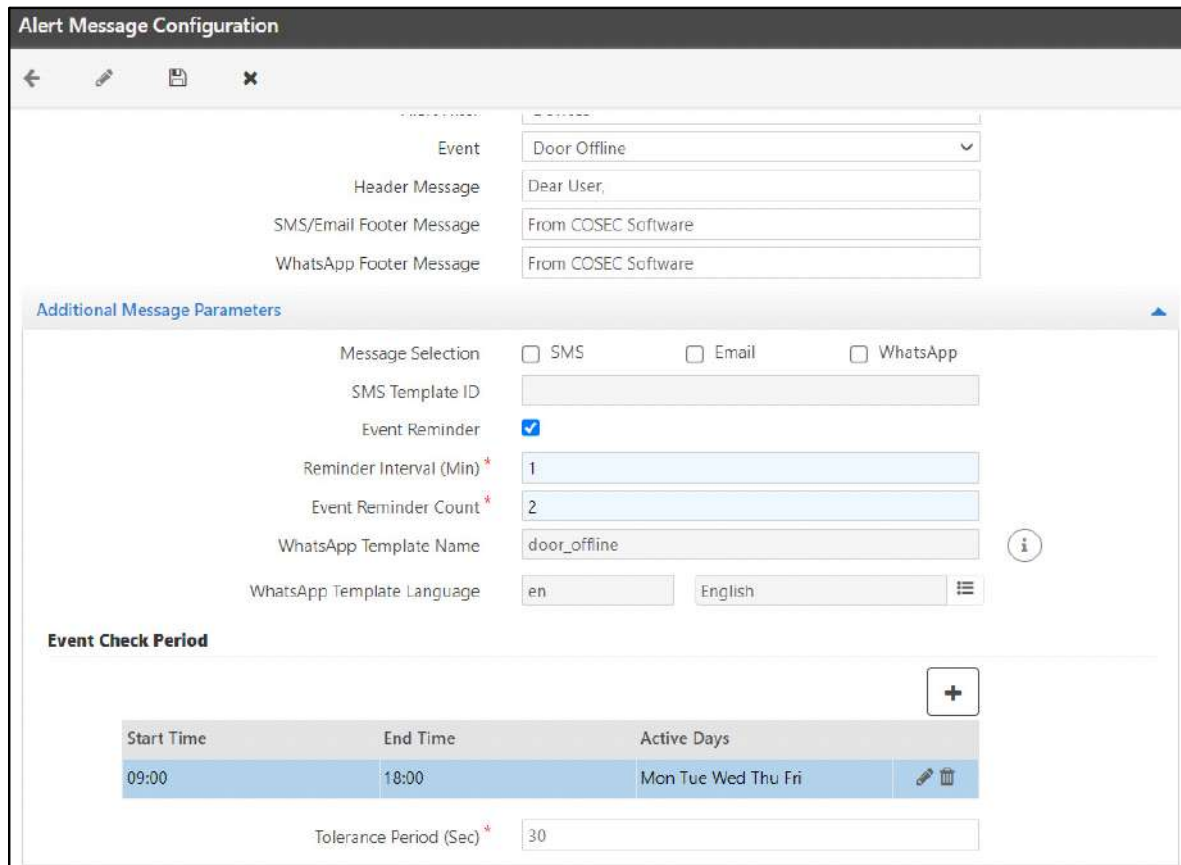

### PUSH Notification - VMS Application

User can configure an alert to receive the Push notifications in the VMS Application in the user's smart-phone for the Alert Filter: **Visitor Management** for the following events:

- Visitor Pre-Registration
- Visitor Pass Expiry Reminder
- Visit Request Approval/Rejection
- Security Clearance
- Visit Transfer
- Visitor Pass
- Visit State Change
- Visit Reminder
- Visitor Added - Watchlist/Blacklist
- Create Visit - Watchlist/Blacklist
- Visitor Form Execution

### Example 1: Door Offline Alert

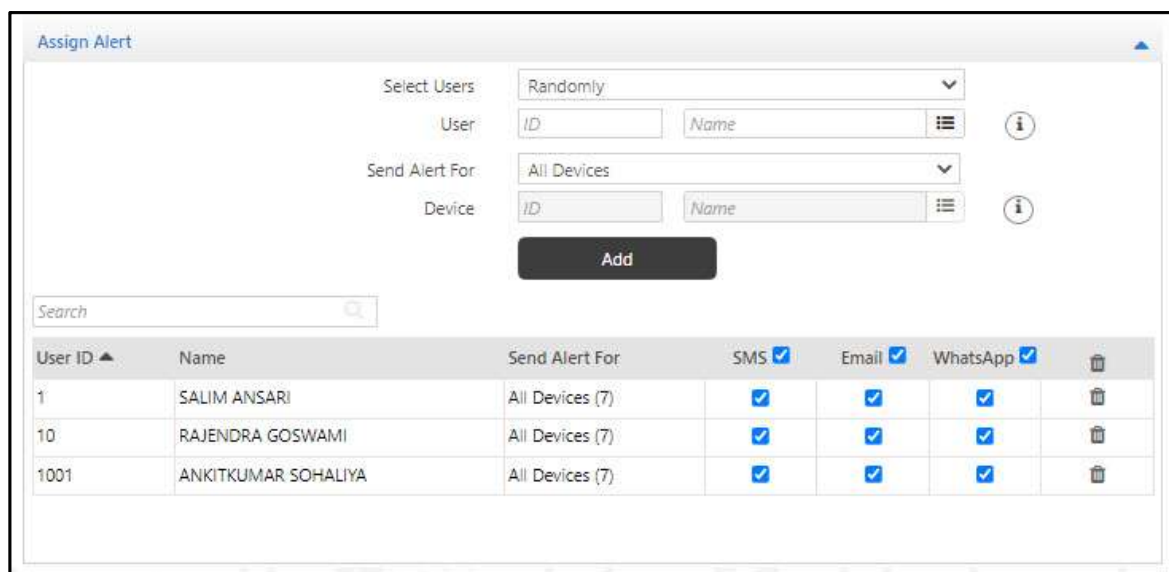

The Door Offline Alert is used to send alert through SMS, Email or WhatsApp when door is found offline at say 08:30:00 AM with Server or Panel within some defined timings say from 9:00 to 18:00 hours for tolerance duration (say 30 seconds) and on selected days (Monday to Friday). The Reminder Interval is set as 1 min with Event Reminder Count as 2.

The 'Alert Message Configuration' window shows settings for a 'Door Offline' event. The header message is 'Dear User,' and the footer for SMS/Email and WhatsApp is 'From COSEC Software'. Under 'Additional Message Parameters', 'Event Reminder' is checked with an interval of 1 minute and a count of 2. The WhatsApp template is named 'door\_offline' in English. The 'Event Check Period' table shows a start time of 09:00, end time of 18:00, and active days of Mon Tue Wed Thu Fri. The tolerance period is set to 30 seconds.

Start Time	End Time	Active Days
09:00	18:00	Mon Tue Wed Thu Fri

The alert is sent to the users who are assigned the alert by selecting the users from the picklist. You can select the devices from drop down options for which the alert is to be sent.

The 'Assign Alert' window allows selecting users and devices. 'Select Users' is set to 'Randomly'. 'Send Alert For' is set to 'All Devices'. Below is a table of assigned users with columns for User ID, Name, Send Alert For, and checkboxes for SMS, Email, and WhatsApp.

User ID	Name	Send Alert For	SMS	Email	WhatsApp
1	SALIM ANSARI	All Devices (7)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
10	RAJENDRA GOSWAMI	All Devices (7)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
1001	ANKITKUMAR SOHALIYA	All Devices (7)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

If Tolerance period is 0 seconds, alert will be sent immediately when the door offline event is generated. In this example, the alert will be sent at 08:30:30 AM, that is, 30 seconds after the door is offline. After the alert is sent, the first reminder will be sent at 08:31:30 AM. Similarly, the second alert will be sent at 08:32:30 AM. For calculation details, refer to **Event: Door Offline** under “[Devices Module](#)” under “[Specific Additional Parameters](#)”.

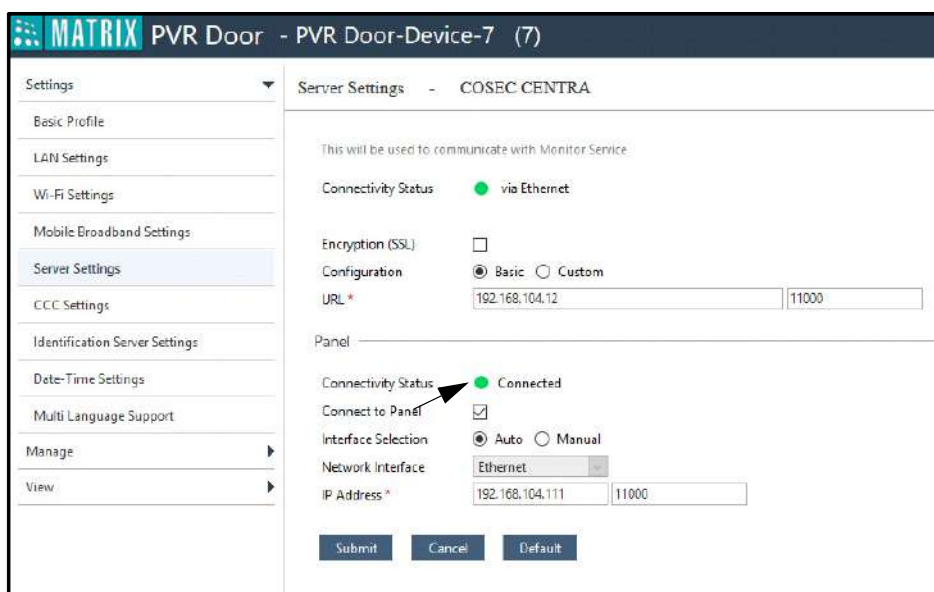

Once the alert is sent, its logs will be visible in Admin > View/Logs > Alert View page.

#### **Direct Door as Panel Door**

For generating the sequential In/Out events direct door can connect with server and panel simultaneously.

When **Connect to Panel** checkbox is enabled; device display reflects the connectivity status as per connectivity with panel.

When the Direct Door is connected to Server and Panel;

### Example 2: Alert for Validity/Expiry date of Documents

Whenever the ID proof documents such as Visa, Driving License, Passport etc. are going to be expired, the users must get notified in advance in order to renew them. By creating the **Validity/Expiry Date alert**, user will able to configure Reminder Period for important documents as explained below.

Select Alert Filter as a 'User', event as a 'Validity/Expiry Date' and update the Header-Footer if required.

**Alert Message Configuration**

Alert Filter: Users

Event: Validity/Expiry Date

Header Message: Dear User,

SMS/Email Footer Message: From COSEC Software

WhatsApp Footer Message: From COSEC Software

**Additional Message Parameters**

Message Selection: ☐ SMS ☒ Email ☐ WhatsApp

SMS Template ID-User:

SMS Template ID-Reporting In-Charge:

Send Alert To: ☒ User ☒ Reporting In-Charge

**Reminder Period (Days)**

Send Alert For	Document	Days Before Expiry	Reminder Time	Repeat Reminder	Repeat Interval(In Days)	
Yes	Visa	5	15:30	No	1	
No	Driving License	0	00:00	No	1	
<input checked="" type="checkbox"/>	Passport	0	15:30	<input checked="" type="checkbox"/>	10	

**WhatsApp Template**

Send Alert To	Template Name	Template Language
User	validity_expiry_date_user	en English
Reporting In-Charge	validity_expiry_date_ic	en English

Enable the 'Message Selection' and 'Send Alert to' check-boxes and configure **Reminder Period (In Days)** columns as described below.

- **Send Alert For:** Enable the check-box for which the Alert is to be send as a notification. For example: Visa and Passport.
- **Document:** This field shows the type of documents for which Alert is to be configured. The configured custom fields will also be available for the selection.

Only the custom fields which are configured with their **type; Date**, will be visible in the Document column. For the configuration of Custom Fields, [See "Custom Fields" on page 142.](#)

- **Days Before Expiry:** Enter the number of days before which the user will get notified about the expiry of documents validity. You can enter the days from 1 to 99. For Example:5
- **Reminder Time:** Define the Time of the reminder in 24hrs format at when the notification will get generated. For Example: 15:30
- **Repeat Reminder:** Enable the check box if the configured reminder is to be repeated again.
- **Repeat Interval (In days):** Define the number of days in between 1 to 99. The reminder will repeat till the entered number of days. For example: 10

Click on the **OK** button to Save and **Cancel** button to **Cancel** the Reminder Period configuration. Click on the **Edit** button to **Edit** the reminder.

Now, after previewing the Message and configure the assign Alert, click on the **Save** button to save the Alert message Configuration.

So, as per the above configuration, the reminder will get generated at 15:30 before 5 days of Visa and Passport expires and will repeat for next 10 days.

### Example 3: Login Account Locked Alert

When the user logs into COSEC with wrong password for a specified number of times; then his account can be locked for defined duration of time. When the account gets locked; the locked account alert will be generated.

The screenshot shows the 'Alert Message Configuration' window. It has a top bar with navigation icons. The main area contains several fields: 'Alert Filter' set to 'System', 'Event' set to 'Login Account Locked', 'Header Message' set to 'Dear User', 'SMS/Email Footer Message' set to 'From COSEC Software', and 'WhatsApp Footer Message' set to 'From COSEC Software'. Below these is an 'Additional Message Parameters' section with a 'Message Selection' row containing checkboxes for 'SMS' (checked), 'Email' (checked), and 'WhatsApp' (unchecked). Below this are fields for 'SMS Template ID', 'WhatsApp Template Name' (set to 'login\_account\_locked'), and 'WhatsApp Template Language' (set to 'en' and 'English'). At the bottom is a 'Message Preview' section.

This alert will be generated if

- Global Policy > Password Policy > **Lock Account For Invalid Login Attempts** is enabled.
- No. of Failed Login Attempts against user is equal to **Max. Invalid Login Attempts** count as specified in Password Policy.

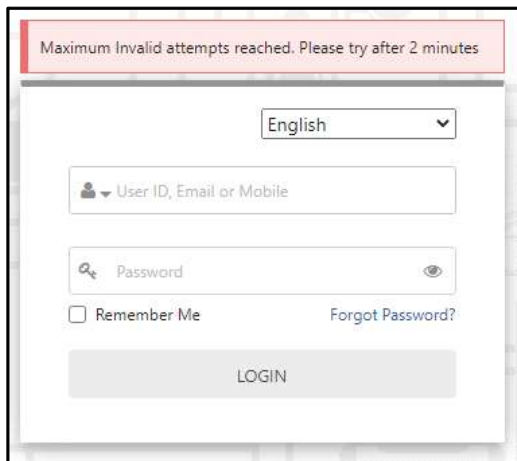

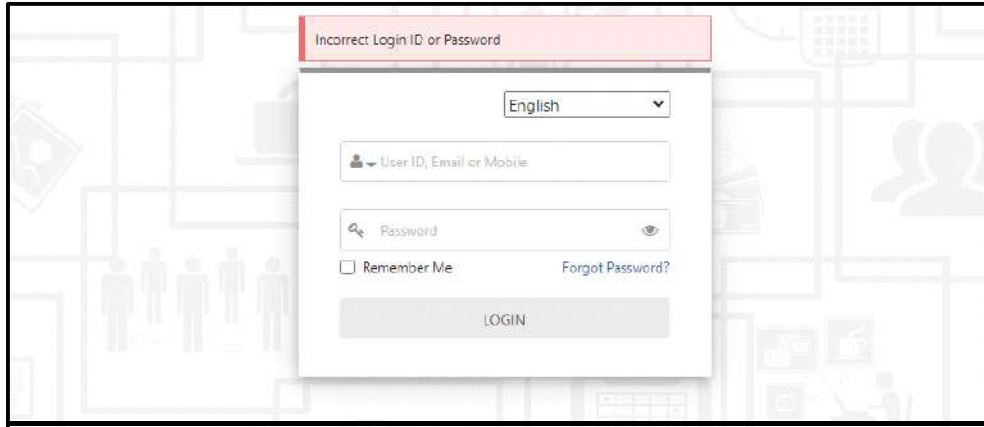

The screenshot shows the 'Global Policy' window with the 'Password Policy' section selected in the sidebar. The main area contains several settings: 'Password Security Policy' (unchecked), 'Password Reset Period (Days)' (0), 'Lock Account for Invalid Attempts' (checked), 'Maximum Invalid Attempts' (5), and 'Auto Unlock Timer (Min)' (15).

The alert can be sent to all the active users who are trying to login in COSEC. (Either as System Account User, ESS User or CSS User)

- **ESS User Login-** The **Receive Alerts On** for the user must be configured in User profile to send the SMS/ Email/WhatsApp to Personal/Official contact.
- **System Account User Login-** If a System Account has **Linked ESS User** configured, then alert will be sent to that ESS User's saved contact details considering all the conditions mentioned in ESS User Login section for ESS user satisfy.

- **CSS User Login-** The **Receive Alerts On** for the contractor must be configured in User profile to send the SMS/Email/WhatsApp to Personal/Official contact.

Here the ESS user 101 is trying to login into COSEC. When the number of attempts is equal to 3 as specified in Password Policy; then account will get blocked to 15 minutes as defined.

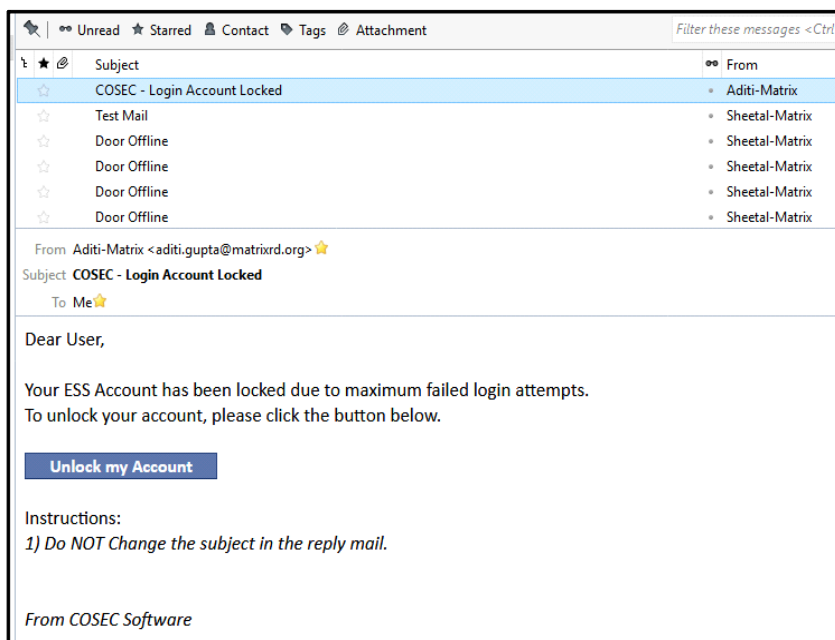

## Unlock My Account

The alert email will be sent as shown below. In the Alert mail; **Unlock My Account** button will be available. On click of this button, a reply mail will be sent to COSEC server with Subject as **Account-Locked-Date-Time** to unlock the account.

*A mail can be used only once to unlock the user's account. The same mail cannot be used multiple times to unlock a user's account.*

#### Example 4: OTP Generated Alert

OTP Generated Alert generates the alert for set/reset password, login authentication, pass creation and visitor registration verification.

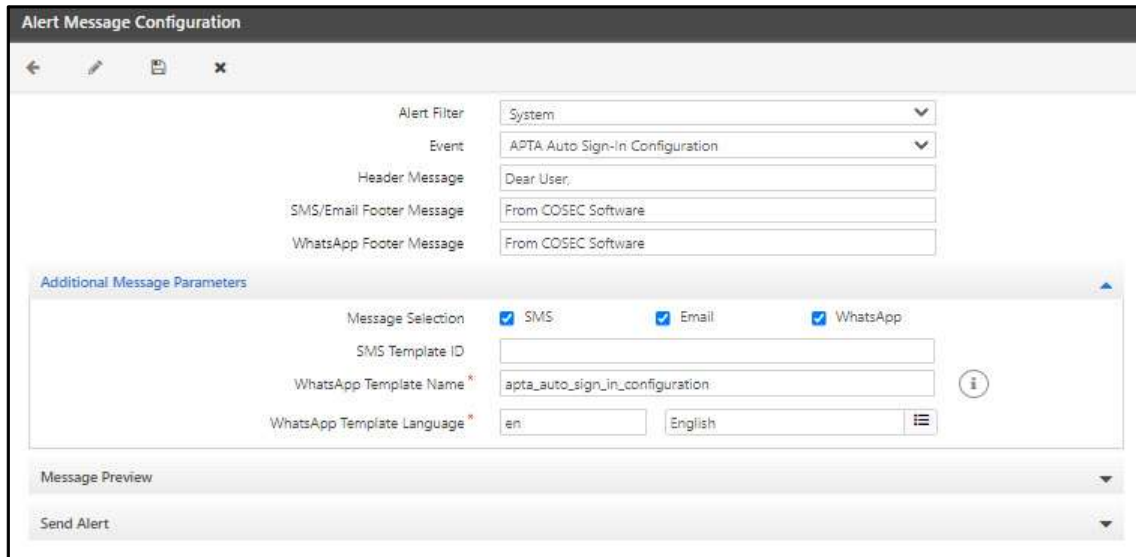

To view details on OTP alert for Set/Reset Password and Login Authentication refer to [“Launching the COSEC Application”](#).

The screenshot displays the 'Alert Message Configuration' window. It features several input fields and dropdown menus. The 'Alert Filter' is set to 'System' and the 'Event' is 'OTP Generated'. The 'Header Message' field contains 'Dear User'. The 'SMS/Email Footer Message' and 'WhatsApp Footer Message' fields both contain 'From COSEC Software'. Below these is a section for 'Additional Message Parameters' which includes 'Message Selection' (with checkboxes for SMS, Email, and WhatsApp), 'SMS Template ID', 'WhatsApp Template Name' (set to 'otp\_generated'), and 'WhatsApp Template Language' (set to 'en' and 'English'). At the bottom, there is a 'Message Preview' section.

#### Example 5: ‘Auto Sign-in’ Alert for COSEC APTA Mobile Application

User can configure the Alert for download and sign in to the COSEC APTA application. For this, an ESS rights must be allocated to the user.

Select the Alert filter as **All** or **System**, an event as **APTA Auto Sign-in Configuration** as shown below. Update the Header and Footer message if required.

The 'Alert Message Configuration' window contains the following fields and options:

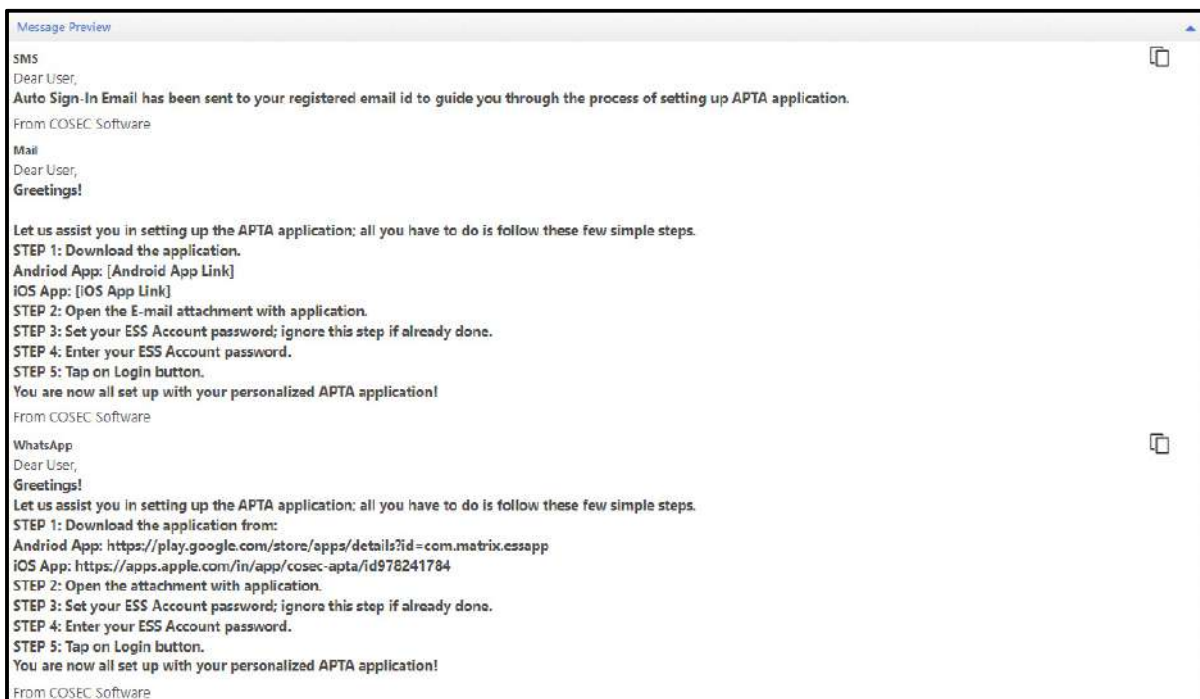

- Alert Filter:** System (dropdown)
- Event:** APTA Auto Sign-in Configuration (dropdown)
- Header Message:** Dear User, (text input)
- SMS/Email Footer Message:** From COSEC Software (text input)
- WhatsApp Footer Message:** From COSEC Software (text input)
- Additional Message Parameters:**
  - Message Selection:** SMS, Email, WhatsApp (all checked)
  - SMS Template ID:** (empty text input)
  - WhatsApp Template Name:** apta\_auto\_sign\_in\_configuration (text input)
  - WhatsApp Template Language:** en (dropdown), English (text input)
- Message Preview:** (dropdown menu)
- Send Alert:** (button)

Enable the respective checkbox for **SMS**, **Email** and/or **WhatsApp** through which the alert message is to be sent.

*The respective links to download the application and Auto Sign-In configuration file will be sent through the email.*

The Message preview with the necessary steps for downloading the APTA Application and Sign-In are as shown below.

The 'Message Preview' window displays the following content for SMS and Mail:

**SMS**  
Dear User,  
Auto Sign-In Email has been sent to your registered email id to guide you through the process of setting up APTA application.  
From COSEC Software

**Mail**  
Dear User,  
**Greetings!**  
Let us assist you in setting up the APTA application; all you have to do is follow these few simple steps.  
**STEP 1: Download the application.**  
Android App: [Android App Link]  
IOS App: [IOS App Link]  
**STEP 2: Open the E-mail attachment with application.**  
**STEP 3: Set your ESS Account password; ignore this step if already done.**  
**STEP 4: Enter your ESS Account password.**  
**STEP 5: Tap on Login button.**  
You are now all set up with your personalized APTA application!  
From COSEC Software

**WhatsApp**  
Dear User,  
**Greetings!**  
Let us assist you in setting up the APTA application; all you have to do is follow these few simple steps.  
**STEP 1: Download the application from:**  
Android App: <https://play.google.com/store/apps/details?id=com.matrix.essapp>  
IOS App: <https://apps.apple.com/in/app/cosec-apta/id978241784>  
**STEP 2: Open the attachment with application.**  
**STEP 3: Set your ESS Account password; ignore this step if already done.**  
**STEP 4: Enter your ESS Account password.**  
**STEP 5: Tap on Login button.**  
You are now all set up with your personalized APTA application!  
From COSEC Software

Click the **Send Alert** collapsible tab and select the users to whom the Auto Sign-In email is to be sent.

Click **Save** to save the configuration.

#### **Example 7: Alert for Overtime Limit Exceeds for User/Group In-charge.**

*If for Authorizing Overtime, the Weekly/Monthly overtime option is enabled for WO, PH, WO/PH as well as Daily overtime is enabled for the same day, then in this case the Alert would be sent twice to the respective user.*

You can configure an Alert to notify a user/group in-charge about the Overtime Limit if it exceeds as described below.

Select the Alert Filter as a **Time and Attendance**, and Event as **Overtime Limit Exceeded-User/Overtime Limit Exceeded-Group In-charge** for which the alert is to be configured. Update the **Header** and **Footer** if required.

Select the respective checkbox for **SMS**, **Email**, **WhatsApp** and/or **App Notification** through which the alert is to be sent from the **Additional Message Parameters**.

Configure the **Template ID** only if you have enabled **SMS** as the **Message Selection** option.

Configure the **Schedule Time** to send the Alert.

## Example 8: Seamless VMS

### a) Visitor Pre-Registration Alert

License required: Basic (For Alert Message Configuration page) & VMS (For Pre-Registration Alert)

The screenshot shows the 'Alert Message Configuration' interface. At the top, there are navigation icons (back, edit, save, close). The main configuration area includes:

- Alert Filter:** Visitor Management (dropdown)
- Event:** Visitor Pre-Registration (dropdown)
- Header Message:** Dear User/Visitor, (text input)
- SMS/Email Footer Message:** From COSEC Software (text input)
- WhatsApp Footer Message:** From COSEC Software (text input)

Below these is the 'Additional Message Parameters' section, which is expanded. It contains:

- Message Selection:** ☐ SMS, ☐ Email, ☒ App Notification, ☒ WhatsApp
- SMS Template ID:** (empty text input)
- WhatsApp Template Name:** visitor\_preregistration (text input)
- WhatsApp Template Language:** en (dropdown), English (dropdown)
- Calendar Invite:** ☐
- Email/WhatsApp Approval Links:** ☐
- Email Approval Acknowledgment:** ☐
- Send Alert To:** ☒ Host, ☒ Visitor

At the bottom, there is a 'Message Preview' section with a dropdown arrow.

*Make sure you configure SMS/Email for the visitors who will access the Visitor Portal so that the OTP can be sent on the Mobile number/Email Address entered by the visitor.*

If you wish to receive Push Notifications on the VMS Application, make sure you select the **App Notification** check box.

### b) Visitor Pre-Registration Approval/Rejection Alert

License required: Basic (For Alert Message Configuration page) & VMS (For Pre-Registration Alert)

The screenshot shows the 'Alert Message Configuration' interface for a different alert type. The configuration is as follows:

- Alert Filter:** Visitor Management (dropdown)
- Event:** Visitor Pre-Registration Approval/Rejection (dropdown)
- Header Message:** Dear User (text input)
- SMS/Email Footer Message:** From COSEC Software (text input)
- WhatsApp Footer Message:** From COSEC Software (text input)

The 'Additional Message Parameters' section is expanded and shows:

- Message Selection:** ☐ SMS, ☐ Email, ☐ App Notification, ☒ WhatsApp
- SMS Template ID:** (empty text input)
- WhatsApp Template Name:** visitor\_preregistration\_approval\_rejection (text input)
- WhatsApp Template Language:** en (dropdown), English (dropdown)
- Email/WhatsApp Approval Links:** ☐
- Email Approval Acknowledgment:** ☐

This alert will be sent to the Host user associated with respected pre-registration application.

App Notification will be sent to the Device ID mapped against the respective Host / Visitor and Security User through cloud messaging notification provider.

Mobile Device Token will be user's / visitor's App Notification Token mapped in User Master Table & VMS Visitor Master table respectively.

### c) Security Clearance Alert

The screenshot shows the 'Alert Message Configuration' window. At the top, there are navigation icons (back, edit, save, close). The main configuration area includes:

- Alert Filter:** A dropdown menu set to 'Visitor Management'.
- Event:** A dropdown menu set to 'Security Clearance'.
- Header Message:** A text input field containing 'Dear User'.
- SMS/Email Footer Message:** A text input field containing 'From COSEC Software'.
- WhatsApp Footer Message:** A text input field containing 'From COSEC Software'.

Below these fields is a section titled 'Additional Message Parameters' with a blue header and a collapse arrow. It contains:

- Message Selection:** Four checkboxes: 'SMS' (unchecked), 'App Notification' (checked), 'Email' (unchecked), and 'WhatsApp' (unchecked).
- SMS Template ID:** An empty text input field.
- WhatsApp Template Name:** A text input field containing 'security\_clearance'.
- WhatsApp Template Language:** A dropdown menu set to 'en', with a button labeled 'English' and a menu icon.
- Email/WhatsApp Approval Links:** An unchecked checkbox.
- Email Approval Acknowledgment:** An unchecked checkbox.

At the bottom of the window is a 'Message Preview' section with a downward arrow.

If you wish to receive Push Notifications on the VMS Application, make sure you select the **App Notification** check box.

#### d) Visitor Pass Expired Alert

The screenshot shows the 'Alert Message Configuration' window. The 'Alert Filter' is set to 'Visitor Management' and the 'Event' is 'Visitor Pass Expired'. The 'Header Message' is 'Dear User/Visitor,'. The 'SMS/Email Footer Message' and 'WhatsApp Footer Message' are both 'From COSEC Software'. Under 'Additional Message Parameters', 'Message Selection' has checkboxes for 'SMS', 'Email', and 'WhatsApp', all of which are unchecked. 'SMS Template ID-Visitor' and 'SMS Template ID-Host/Security' are empty. 'Send Alert To' has checkboxes for 'Host', 'Visitor', and 'Security', all of which are checked. 'Reminder Period (Min)' is set to '0'. Below this is a 'WhatsApp Template' section with a table:

Send Alert To	Template Name	Template Language
Visitor	visitor_pass_expired_visitor	en English
Host/Security	visitor_pass_expired_host_security	en English

At the bottom is a 'Message Preview' section.

For any appointment, if Visit State is other than Check-OUT and Pass Expiry Time is reached, then this alert will be sent to Host / Visitor / Security based on Send Alert To selection.

#### e) Visitor Pass Alert

The screenshot shows the 'Alert Message Configuration' window. The 'Alert Filter' is set to 'Visitor Management' and the 'Event' is 'Visitor Pass'. The 'Header Message' is 'Dear Visitor,'. The 'SMS/Email Footer Message' and 'WhatsApp Footer Message' are both 'From COSEC Software'. Under 'Additional Message Parameters', 'Message Selection' has checkboxes for 'SMS', 'Email', 'WhatsApp', and 'App Notification'. 'App Notification' is checked. 'SMS Template ID' is empty. 'WhatsApp Template Name' is 'visitor\_pass'. 'WhatsApp Template Language' is 'en English'. 'Scan Code' has checkboxes for 'QR' and 'Barcode', with 'QR' checked. At the bottom is a 'Message Preview' section.

Once visit request is approved then visitor can generate Pass by themselves. Hence, the alert Visitor Pass will notify visitors for Visit Pass via SMS/ Email.

If you wish to receive Push Notifications on the VMS Application, make sure you select the **App Notification** check box.

*Visitor Pass Alert will be sent only when Visitor has applied Check-IN from Mail, Generated E-Pass from Mobile Application or from COSEC Visitor Portal and if security has created Pass from the VMS Utility.*

This Visitor Pass alert includes Message, QR Code, Barcode and visit pass. Along with these, visitor will also get **Access PIN** of Visitor Profile which is assigned to the visitor while Pass creation.

Message Preview

The Visitor Pass Expiry Reminder notifies the assigned Host/Visitor/Security when the Visitor Pass is about to expire.

If you wish to receive Push Notifications on the VMS Application, make sure you select the **App Notification** check box.

#### **Example 9: To get an alert for Worker Induction**

##### **(a) Worker Induction**

This alert allows user to get notified about the Induction Approval application, created by the contractor for respective workers. User can also **Approve/Reject** the Induction application from the notified email if configured.

Select the Alert Filter as CWM and Event as a **Worker Induction** and configure the Additional Message Parameters as shown below.

Select the required checkbox; **SMS, Email, WhatsApp** through which the user will get notified.

Select the **Email/WhatsApp Approval Links** checkbox to include particular links into email body by which user can Approve/Reject the application. Select the **Email Approval Acknowledgment** checkbox to get an Acknowledgment Email (*reply*) from the application if it is Approved/Rejected by respective user.

*To configure **Email/WhatsApp Approval Links** and **Email/WhatsApp Approval Acknowledgment**, make sure the Email option is enabled in Additional Message Parameter' as the link will be sent only on configured Email Address.*

The Preview of the message is as shown below.

By clicking on the respective link; **Approve / Reject** the application can be approved or rejected.

If the Application is approved by In-Charge 1, then the 2nd alert will be sent to In-Charge 2 for the verdict. If the In-charge 2 approves the application then it will be sent to the next In-charge and so on until the final verdict is not given by the last In-charge. This will however depend on the Approval Policy assigned to the user.

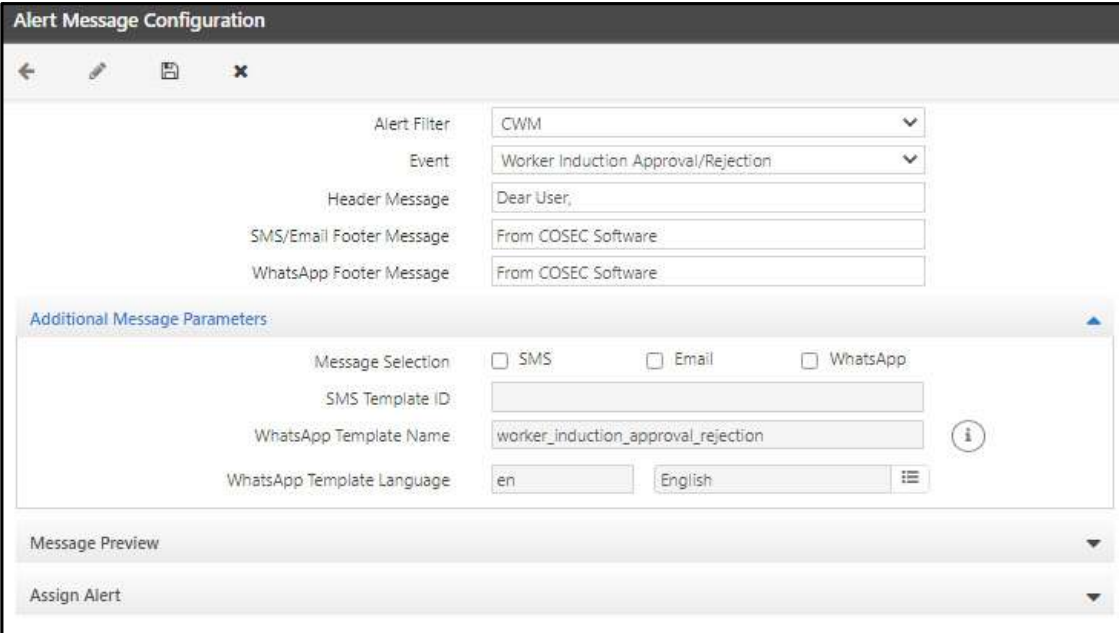

If the application is rejected by any of the In-Charge then, the final verdict will be considered as Rejected and alert will not be sent to the next In-Charge.

Click the **Assign Alert** collapsible panel and assign an alert to the users as explained in above examples.

Click **Save** to save the configured alert.

### (b) Worker Induction Approval/Rejection

You can create another Alert for the 'Approval' or 'Rejection' of worker Induction. For this, select the Alert filter as 'CWM' and an event as 'Worker Induction Approval/Rejection'.

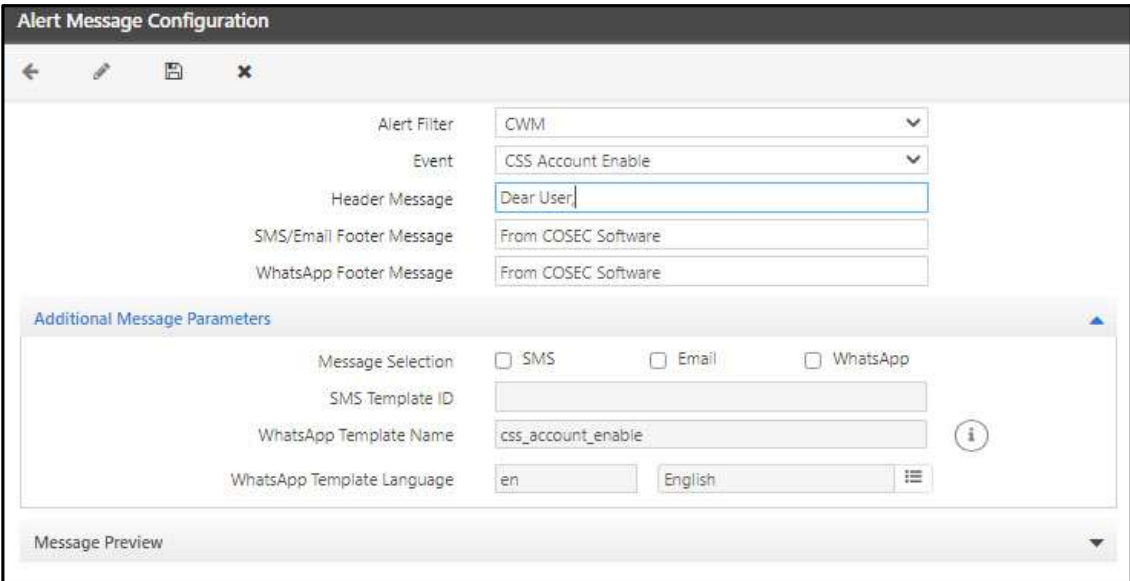

The screenshot shows the 'Alert Message Configuration' window. The 'Alert Filter' is set to 'CWM' and the 'Event' is 'Worker Induction Approval/Rejection'. The 'Header Message' is 'Dear User,'. The 'SMS/Email Footer Message' and 'WhatsApp Footer Message' are both 'From COSEC Software'. The 'Additional Message Parameters' section shows 'Message Selection' with checkboxes for 'SMS', 'Email', and 'WhatsApp'. The 'SMS Template ID' is empty. The 'WhatsApp Template Name' is 'worker\_induction\_approval\_rejection' and the 'WhatsApp Template Language' is 'en' with 'English' selected. At the bottom, there are sections for 'Message Preview' and 'Assign Alert'.

Configure the other parameters as explained above in (a) **Worker Induction**.

### Example 10: To get an alert for the CSS account enabled

This alert allows you to get a notification through SMS and Email, once the CSS Account is enabled for the contractor.

Select the Alert Filter as 'CWM' and Event as **CSS Account Enable** as shown below.

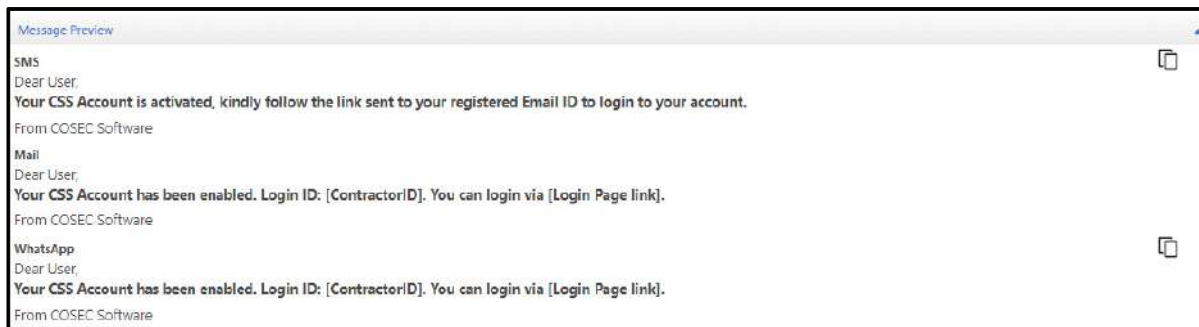

The screenshot shows the 'Alert Message Configuration' window. The 'Alert Filter' is set to 'CWM' and the 'Event' is 'CSS Account Enable'. The 'Header Message' is 'Dear User,'. The 'SMS/Email Footer Message' and 'WhatsApp Footer Message' are both 'From COSEC Software'. The 'Additional Message Parameters' section shows 'Message Selection' with checkboxes for 'SMS', 'Email', and 'WhatsApp'. The 'SMS Template ID' is empty. The 'WhatsApp Template Name' is 'css\_account\_enable' and the 'WhatsApp Template Language' is 'en' with 'English' selected. At the bottom, there is a section for 'Message Preview'.

Update the Header and Footer if required and configure the Additional Message Parameters by enabling the respective checkbox; **SMS**, **Email** and/or **WhatsApp** through which the user will get notified.

The Contractor Login ID and COSEC Login link can be sent to the user's Email ID.

The preview of the message is as shown below.

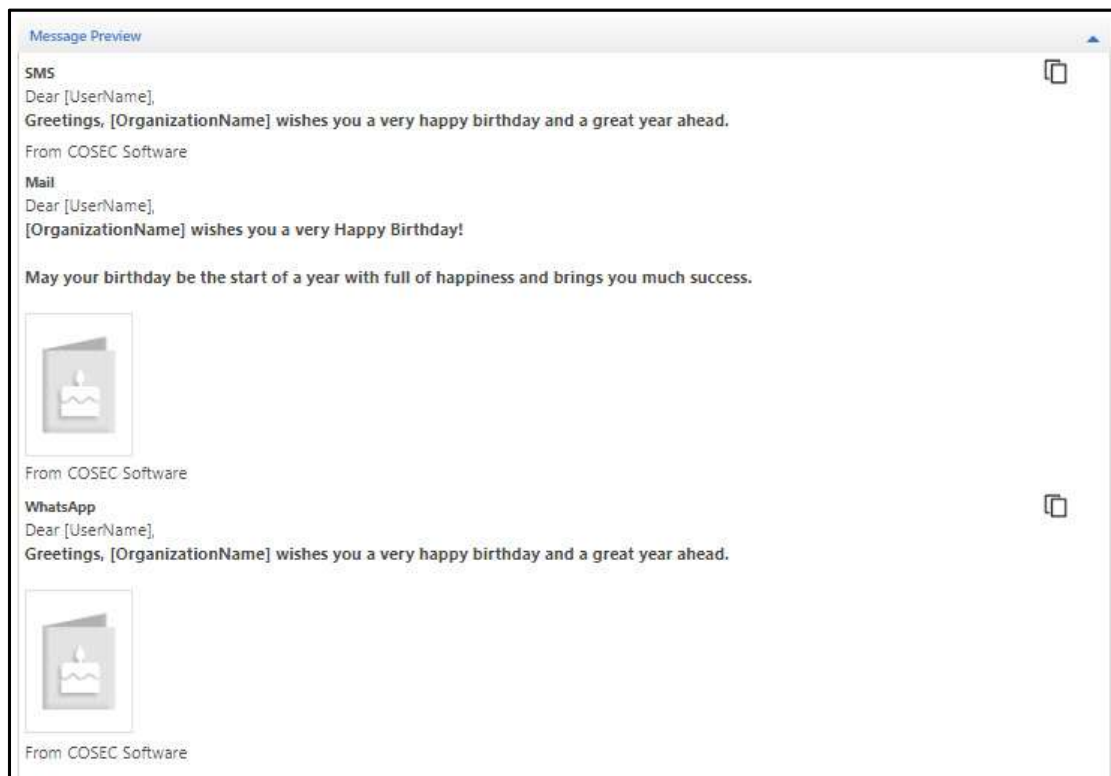

Click **Save** to save the configured alert.

### Example 11: Birthday Greeting

Birthday Greetings allows you to configure an Alert which will send birthday wishes to the user as well as notify the same to the Reporting In-charge and group through **SMS**, **Email** and/or **WhatsApp**.

Select the Alert Filter as User and Event as Birthday Greetings and configure Additional Message parameters as required.

The message preview is as shown below.

Also click the **Assign Alert** collapsible panel and configure the parameters as explained in above example.

Click **Save** to save.

### Example 12: Contractor Validity

This Alert is used to send alert message to both Users and Contractors, informing them about upcoming Contractor validity end date via SMS/Email/WhatsApp.

Select **Alert Filter** as ALL or CWM and **Event** as Contractor Validity.

The 'Alert Message Configuration' window is shown with a dark header and standard window controls. It contains several configuration fields: 'Alert Filter' is a dropdown menu set to 'CWM'; 'Event' is a dropdown menu set to 'Contractor Validity'; 'Header Message' is a text field containing 'Dear User,'; 'SMS/Email Footer Message' is a text field containing 'From COSEC Software'; and 'WhatsApp Footer Message' is a text field containing 'From COSEC Software'. At the bottom, there are three collapsible panels: 'Additional Message Parameters', 'Message Preview', and 'Assign Alert', each with a downward-pointing arrow.

## Additional Message Parameters

Click the Additional Message Parameters panel and select the respective check boxes; Message Selection and Send Alert according to which the alert will be generated. Also, set the **Reminder Period (In Days)** which will allow you to set a particular scheduled time to resend an alert message to the user and contractor regarding the expiry of Contractor's Validity.

### Example 13: Guard Tour Violation

This alert is used to send a message regarding the violation occurred during Guard Tour.

### Additional Parameter

Additional parameter enables to select the modes of alert to be sent, namely SMS, Email, WhatsApp or/and App Notification. It also allows you to send configured alert to the User and/or Reporting In-charge if required on each guard tour violation.

## Message Preview

It shows the final message preview before sending it to the user and/or report-in-charge.

The Message Preview window displays four message templates for Guard Tour Violations. Each template includes a greeting, a violation message with placeholders for user information and door details, and a signature from COSEC Software.

**SMS**  
Dear User,  
**Guard Tour Violated by [Username] ([User ID]) on [Door Count] Door(s) at [date-time].**  
From COSEC Software

**Mail**  
Dear User,  
**Guard Tour Violated by [Username] ([User ID]) on below [Door Count] Door(s) at [date-time].**

Door ID	Name
[Door ID]	[Door Name]

From COSEC Software

**App Notification**  
**Guard Tour Violated by [Username] ([User ID]) on [Door Count] Door(s) at [date-time].**

**WhatsApp**  
Dear User,  
**Guard Tour Violated by [Username] ([User ID]) on [Door Count] Door(s) at [Date-time].**  
From COSEC Software

Message can also be edited by clicking on the message line as shown below.

The Guard Tour Violation (SMS) edit window allows users to modify the message content. It features a 'Select Variable' section with buttons for Username, User ID, Door Count, Date-time, and UserID-Username. The main text area contains the template: 'Guard Tour Violated by [Username] ([User ID]) on [Door Count] Door(s) at [date-time].'. At the bottom, there are 'OK' and 'Default' buttons.

Once the modifications are done, click **OK** to save or **Default** to reset the message.

## Assign Alert

Click the **Assign Alert** collapsible panel by selecting Users and the respective checkbox; **SMS**, **Email**, **App Notification**, **WhatsApp** through which they will be notified as shown below.

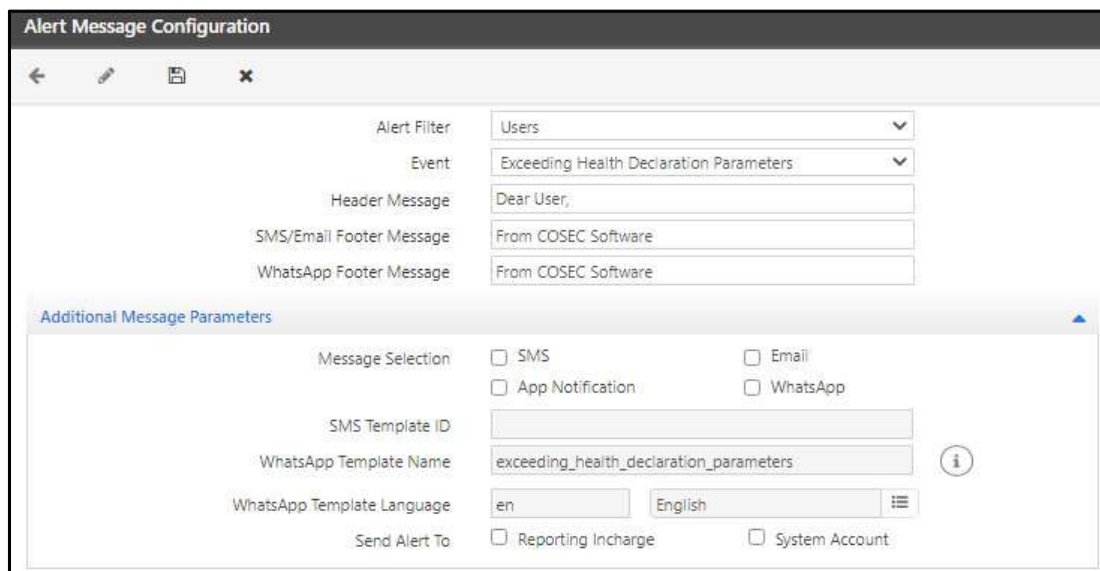

The Assign Alert window is used to configure notifications for specific users. It includes a 'Select Users' dropdown set to 'All'. Below, there are sections for 'User' and 'Guard Tour', each with 'ID' and 'Name' input fields and a list icon. A 'Send Alert For' dropdown is set to 'All Guard Tours'. An 'Add' button is located below these fields. At the bottom, there is a search bar and a table with columns for User ID, Name, Send Alert For, and notification methods (SMS, Email, App Notification, WhatsApp). The table currently shows 'No Data'.

Click **Save** to save or **Cancel** to cancel the Alert configuration.

#### **Example 14: Exceeding Health Declaration Parameters**

This alert is used to get notified about the health parameters of users if they are exceeding from their specified threshold value.

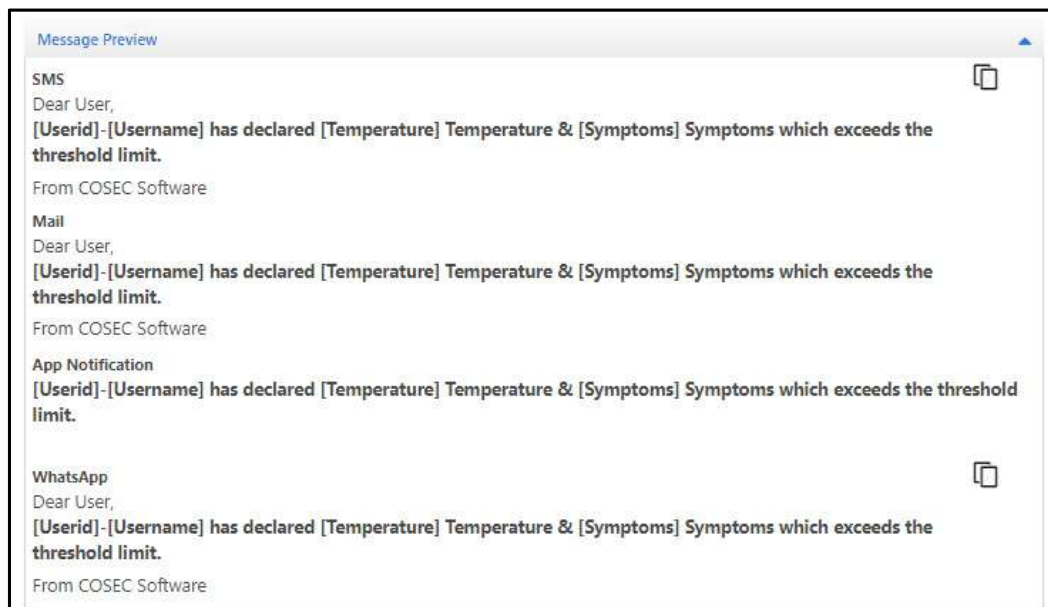

The 'Alert Message Configuration' window is used to set up alerts. It includes fields for 'Alert Filter' (set to 'Users'), 'Event' (set to 'Exceeding Health Declaration Parameters'), 'Header Message' (set to 'Dear User,'), 'SMS/Email Footer Message' (set to 'From COSEC Software'), and 'WhatsApp Footer Message' (set to 'From COSEC Software'). Below these is an 'Additional Message Parameters' section with checkboxes for 'SMS', 'Email', 'App Notification', and 'WhatsApp'. It also has fields for 'SMS Template ID', 'WhatsApp Template Name' (set to 'exceeding\_health\_declaration\_parameters'), 'WhatsApp Template Language' (set to 'en' and 'English'), and 'Send Alert To' (with checkboxes for 'Reporting Incharge' and 'System Account').

This alert can be sent to Reporting In-Charge and System Administrator.

In the same way alerts can be configured for the events like Health Declaration Pending, User Denied/allowed-Threshold Temperature Exceeded.

#### **Message Preview**

The 'Message Preview' window shows the alert message for different channels. For SMS, Mail, App Notification, and WhatsApp, the message is: 'Dear User, [Userid]-[Username] has declared [Temperature] Temperature & [Symptoms] Symptoms which exceeds the threshold limit. From COSEC Software'. Each channel preview has a copy icon in the top right corner.

The message can also be edited if required.

## Assign Alert

Assign Alert

Select Users: All

User ID: Name

Search

# Configuring Custom Messages

Custom messages unlike alert messages are not predefined in their formats. These are customizable messages that you can send to employees on the occurrence of events, other than those predefined for alert message configuration.

*Make sure:*

- you have configured the SMS parameters, refer to [“SMS Configuration”](#).
- you have configured the Email parameters, refer to [“Email Configuration”](#).
- you have configured the WhatsApp parameters, refer to [“WhatsApp Integration”](#).
- you have configured the Mobile number and Email ID of the desired users as well as enabled the desired Receive Alert On options, refer to [“Configuring Users”](#).
- ensure Alert Service is running so that alert messages can be sent to the assigned users.

*The Custom Templates are as per the user requirement, hence these needs to be created manually in your WhatsApp Business Account prior to sending the alert. Alert will be sent only after the same are created as well as approved by WhatsApp. For details regarding WhatsApp Pre-requisites and WhatsApp functionality, refer to [“WhatsApp Configuration”](#).*

To send a Custom Message configure:

- [“Custom Message Parameters”](#)
- [“Select Users”](#)

## Custom Message Parameters

Click **Admin Module > System Configuration > Custom Message**.

The screenshot shows the 'Custom Message' configuration screen. At the top, there's a title bar 'Custom Message' with a back arrow. Below it, the 'Send Message Via' section has three checkboxes: 'SMS', 'Email', and 'WhatsApp'. The 'Select Users' section is below, featuring a 'Select Users' dropdown menu set to 'User Wise'. Underneath, there are input fields for 'User ID' and 'User Name', and a 'Send' button.

- **Send Message Via:** Select the desired check boxes — SMS, Email and/or WhatsApp and configure the parameters:

The screenshot shows the 'Custom Message' interface. It includes a header bar with a back arrow. The main area contains the following elements:

- Send Message Via:** Three checkboxes for 'SMS', 'Email', and 'WhatsApp', all of which are checked.
- SMS/Email Message Header:** A text input field.
- SMS/Email Footer Message:** A text input field.
- Message \*:** A large text input area for the message body.
- Subject:** A text input field.
- WhatsApp Template Name \*:** A text input field with an information icon to its right.
- WhatsApp Template Language \*:** Two picklist menus labeled 'Code' and 'Language'.
- Select Users:** A section with a 'Select Users' dropdown menu currently set to 'User Wise'.
- User \*:** Two picklist menus labeled 'ID' and 'Name'.
- Send:** A dark button at the bottom center.

- **SMS/Email Message Header:** Configure the text that you wish to display in the header of the message, for example: Dear User. This is applicable for SMS/Email messages.
- **SMS/Email Footer Message:** Configure the text that you wish to display in the footer of the message, for example: From COSEC Software. This is applicable for SMS/Email messages.
- **Message:** Configure the text that you wish to display as the message body. This is applicable for SMS/Email/WhatsApp messages.
- **Subject:** Configure the text that you wish to display as the subject of the message. This is applicable for Email messages.
- **WhatsApp Template Name:** Configure a name for this customized template. If you opt to add this template to your WhatsApp Business Account then this same name will be displayed in the WhatsApp **Select Templates** picklist. For details, refer to [“Templates Addition in WhatsApp Business Account”](#). This is applicable for WhatsApp messages.
- **WhatsApp Template Language:** Click the picklist. The **Language** pop-up appears. Select the desired language in which you wish to send the WhatsApp message. When you add this template to your WhatsApp Business Account this will be added in the selected language. For details, refer to [“Templates Addition in WhatsApp Business Account”](#). This is applicable for WhatsApp messages.

## Select Users

**Select Users:** Select the desired option — All, Group Wise, User Wise — to whom this message is to be sent.

If you select **All**, the message will be sent to all the user. Click **Send** to send the message.

If you select **User Wise**. Click the **User** picklist.

- The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users.
- Click **OK**. The selected users appear in a grid.

You can also remove any user from the grid. To do so, click **Delete**  of the respective user.

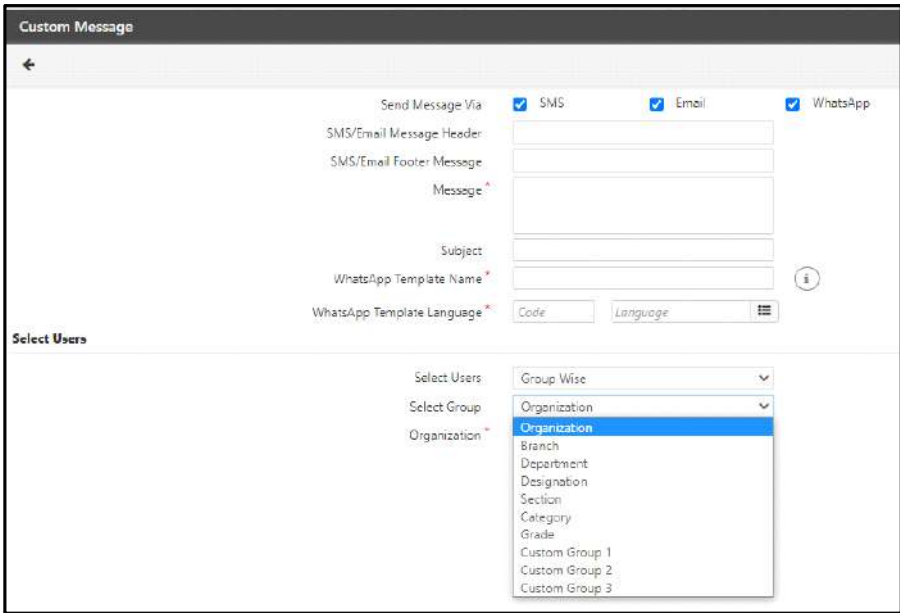

Click **Send** to send the message.

If the message was sent successfully, then you can check its details from [“Alert View”](#).

If the message is not sent, you can view the reason for the same. For details refer to [“Error List”](#).

If you select **Group Wise**,

- Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

The screenshot shows the 'Custom Message' form. At the top, there are checkboxes for 'Send Message Via' with 'SMS', 'Email', and 'WhatsApp' all selected. Below these are input fields for 'SMS/Email Message Header', 'SMS/Email Footer Message', 'Message', 'Subject', 'WhatsApp Template Name', and 'WhatsApp Template Language'. The 'Select Users' section is at the bottom, featuring a 'Select Users' dropdown set to 'Group Wise', a 'Select Group' dropdown set to 'Organization', and an 'Organization' picklist. The picklist is open, showing a list of options: Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group 1, Custom Group 2, and Custom Group 3. The 'Organization' option is highlighted in blue.

- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

For example, Organization is select. Click the **Organization** picklist.

The **Picklist For Organization Master** pop-up appears.

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	Organization-1
<input type="checkbox"/>	2	ORG2
<input type="checkbox"/>	3	ORG3

Select the check boxes of the desired organizations.

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	Organization-1
<input checked="" type="checkbox"/>	2	ORG2
<input checked="" type="checkbox"/>	3	ORG3

Click **OK**.The selected group appear in a grid.

1007	Mobile No. not configured
1008	Mobile No. not configured

# Configuring Locations

This feature enables COSEC to detect and record the source location for all punch events submitted from a mobile device using the ESS Application. This can be done by pre-configuring a set of locations on the Web Application. This will ensure that only punches entered by an employee from a pre-configured location radius are authenticated by the system as valid punches.

Geographical areas such as the office campus, branch offices, workshops, client offices etc. may be identified as valid locations for accepting attendance punches from employees. Hence, an employee who has entered the office campus area as per shift timings, may submit a punch from his current location, without having to physically approach the device.

To access configure locations on the COSEC Web Application,

Go to **Admin module > System Configuration > Location Master** and the following screen appears.

The screenshot shows the 'Location Master' configuration interface. On the left is a sidebar menu with the 'Admin' header and various system configuration options. The 'Location Master' option is highlighted. The main area contains a form with the following fields:

- Code \***: A text input field with a search icon, containing the value 'ID'.
- Location Name \***: A text input field with a search icon, containing the value 'Name'.
- Type**: A dropdown menu set to 'GPS'.
- BLE Code**: A text input field with a hint '4 characters. 1111 to 9999'.
- BLE Name**: A text input field with a hint 'BLE Name'.
- Latitude \***: A text input field with a hint '8 characters. -90.0000 to +90.0000' and a location pin icon.
- Longitude \***: A text input field with a hint '9 characters. -180.0000 to +180.0000'.
- Location Radius (Meters) \***: A text input field containing the value '0'.
- Wi-Fi MAC Address**: A text input field with a hint ': : : : : '.
- Address**: A large text input field.
- Mode**: A dropdown menu set to 'Attendance'.
- Device**: Two text input fields, 'ID' and 'Name', with a list icon.
- Alternate Address**: A text input field.
- Port No. (HTTPS)**: A text input field.
- Event Type**: A dropdown menu set to 'Entry'.

To add a new location click the **New** button.

Every location is configured with a **Code** and **Location Name**.

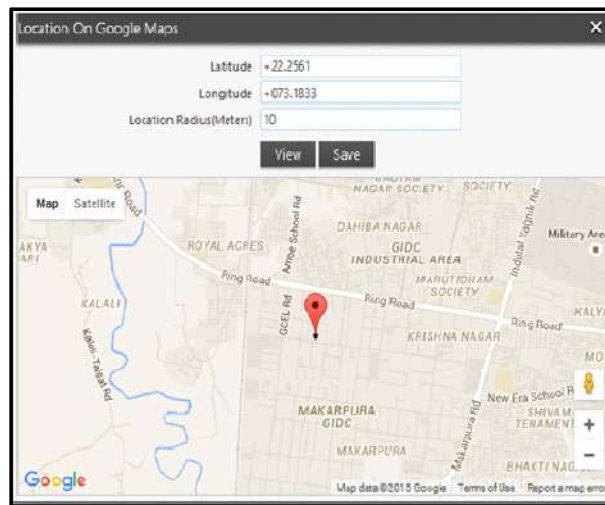

**Type:** Select the type from the drop down options based on which location is to be defined.

- **GPS:** Enter the Latitude, Longitude and location radius.
- **Wi-Fi:** Enter the Wi-Fi MAC address of a specific Wi-Fi access point to define the coverage area.
- **BLE- Beacon:** Enter the **BLE Code** for configuring location based on bluetooth enabled beacon. Select the Mode as Attendance and or Access Control.
- **BLE- Device:** Enter the **BLE Name**. Valid characters are maximum 10 alphanumeric characters. Mode will be set as Attendance automatically.

A location can be defined by recording its geographical details such a **Latitude**, **Longitude** and **Location Radius** i.e. the radius in meters over which the area would be spread.

Click the  button to view and edit the coverage area, as per requirement.

Navigate and click a location on the map to select its latitude and longitude. You can also manually enter the location details and click the **View** button to view the location. Edit the location radius, if required.

**Address:** You can specify the address of the location.

**Device:** When Mode is selected as Access Control or Both then you can select the direct doors and Panel200 doors from the picklist.

**Alternate Address:** It is the external network (public network) IP address of device.

If Door V3 is selected for Location1. The IP address (Internal Address) of Door V3 is 192.168.104.114. The Alternate Address of Door V3 is 173.183.4.11:43.

When the door is accessed from external network then alternate address will be used for communication.

If you are using APTA in the external network at Location1 and tries to access Door V3, then it will be accessed through 173.183.4.11:43. In Door API response to APTA, alternate IP address will be sent in response.

The communication between the device and the external network takes place via device port configured in **Port No. (HTTPS)**.

**Port No. (HTTPS):** Enter the Device Port number for secure communication between the device and the external network.

*The Device must be Wi-Fi enabled so that it can be accessed through external network.*

**Event Type:** Select the event type as **Entry** or **Exit** which will identify the events from the BLE-Beacon or BLE-Device based locations as Entry event or Exit event.

*The In-built bluetooth is supported in VEGA door only.*

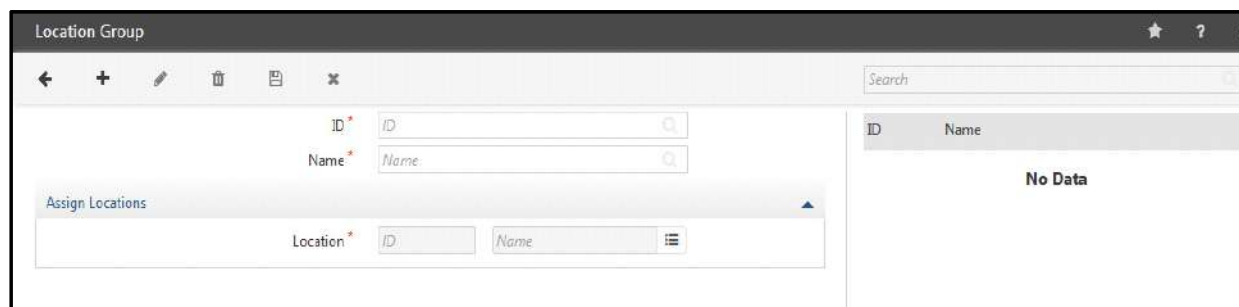

Click the **Save** button from the toolbar to save the Location Master configuration.

# Location Group

This page allows defining location groups as collection of multiple locations. Location group can then be used while defining Field Visit Schedule for users.

To create location group, Select the **Admin module > System Configuration > Location Group**.

The **Location Group** page appears as shown below.

ID	Name
No Data	

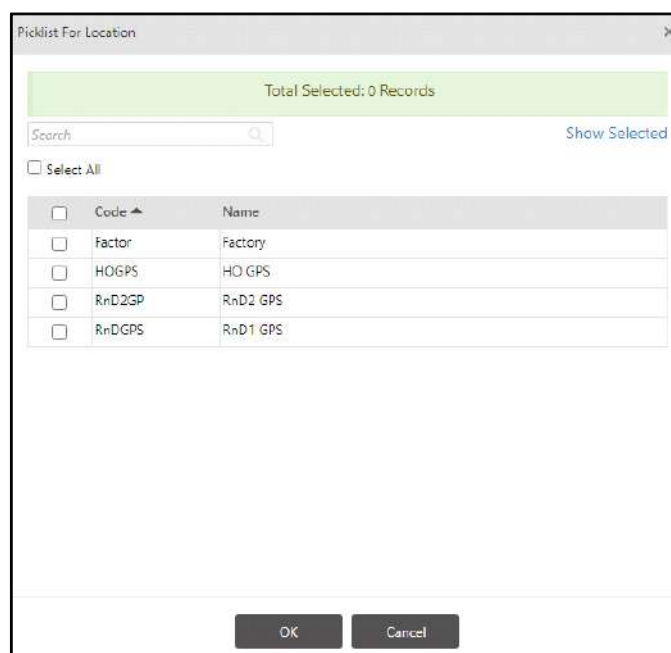

Click the **New** button to configure a new location group.

**ID:** The ID will be generated automatically after saving the location group.

**Name:** Specify a name of the location group.

**Location:** Click the picklist to select the locations to include them in the Location Group. Make sure the desired locations have been configured in the Location Master.

- Click the **Location** picklist. The **Picklist for Location** pop-up appears.

Code	Name
Factor	Factory
HOGPS	HO GPS
RnD2GPS	RnD2 GPS
RnD1GPS	RnD1 GPS

- You can either select particular Locations or can select all the Locations at once.

- To select particular Locations, select the check boxes of the desired locations.

The screenshot shows a dialog box titled "Picklist For Location". At the top, a green bar indicates "Total Selected: 2 Records". Below this is a search bar with the text "Search" and a magnifying glass icon, and a "Show Selected" link. A "Select All" checkbox is present and unchecked. The main area contains a table with two columns: "Code" and "Name".

<input type="checkbox"/>	Code	Name
<input type="checkbox"/>	Factor	Factory
<input checked="" type="checkbox"/>	HOGPS	HO GPS
<input checked="" type="checkbox"/>	RnD2GP	RnD2 GPS
<input type="checkbox"/>	RnDGPS	RnD1 GPS

At the bottom are "OK" and "Cancel" buttons.

**OR**

- To select all the Locations at once, select the **Select All** check box. The Locations on all the pages will be selected.

The screenshot shows the same "Picklist For Location" dialog box, but now the "Select All" checkbox is checked. The green bar at the top indicates "Total Selected: 4 Records". In the table, all four rows have their checkboxes selected.

<input checked="" type="checkbox"/>	Code	Name
<input checked="" type="checkbox"/>	Factor	Factory
<input checked="" type="checkbox"/>	HOGPS	HO GPS
<input checked="" type="checkbox"/>	RnD2GP	RnD2 GPS
<input checked="" type="checkbox"/>	RnDGPS	RnD1 GPS

At the bottom are "OK" and "Cancel" buttons.

- Click **OK**.
- The selected locations appear in the grid.

- You can also delete the desired locations. To do so, click **Delete**  of the respective location.
- Click on **Save** button to save the configured location group.

1. You can assign multiple locations to one location group.
2. Same location can be added in multiple location groups.

System sends *Field Schedule Modified Alert to User* for schedule dates whose records have been affected by addition or removal of location from location group.

# Agreement Builder

---

The Visitor Portal is used for — creating visit by visitor, for checking-in and checking-out of visitors as well as maintaining visit logs of the visitors.

To enhance the utility of the Visitor Web Portal, the provision for displaying an Agreement and /or a Form (Questionnaire) has been added. To be able to use this functionality, you need to configure the Agreement and Form parameters in COSEC Web.

You can configure the content of the Agreements/Forms as per your requirement. You can also link any Agreement with a Form. You can determine the placement of the Agreement/Forms — Login, Check-in, Check-out. The Agreement/Forms configured here will be displayed in the Visitor Web Portal.

You can send Alert Messages when Forms are executed by Visitors. To do so, click **Admin Module > Alert Configuration**. In **Alert Filter** make sure you select **Visitor Management** and in the **Event** you select **Visitor Form Execution**. For details, refer to [“Configuring Alert Messages”](#).

To create the form, select the **Admin Module> System Configuration> Form Builder**. For details refer to, [“Form Builder”](#).

To determine the placement of the Agreement/Forms — Login, Check-in, Check-out of Visitor as per your requirement. For details refer to [“Station Location”](#).

## Agreement Builder

To create the agreement, select the **Admin Module> System Configuration> Agreement Builder**.

The **Agreement Builder** page appears.

To add a new Agreement,

- Click the **New**  icon. You can add upto 99 different agreements.
- **ID**: The ID is auto-generated by the system. It will be displayed after you save the agreement.
- **Name**: Assign a name to the agreement.

The Agreement is divided into — Agreement Content and Additional.

### Agreement Content

Click the **Agreement Content** collapsible panel to configure the parameters. This section is divided into three sub-sections — Header, Content and Footer.

- **Header:** This will be displayed on top before the Agreement Content. This is the Title you wish to provide. Maximum 100 characters.
- **Content:** You can add text or media here.

The text can be in the form of Terms and Conditions or any Contract requirements or Non Disclosure Agreements or any text as per your requirement. Maximum 5000 characters.

In Media, you can upload an image, pdf or video relevant to the agreement.

*You can either upload an image/pdf or video. Both cannot be uploaded.*

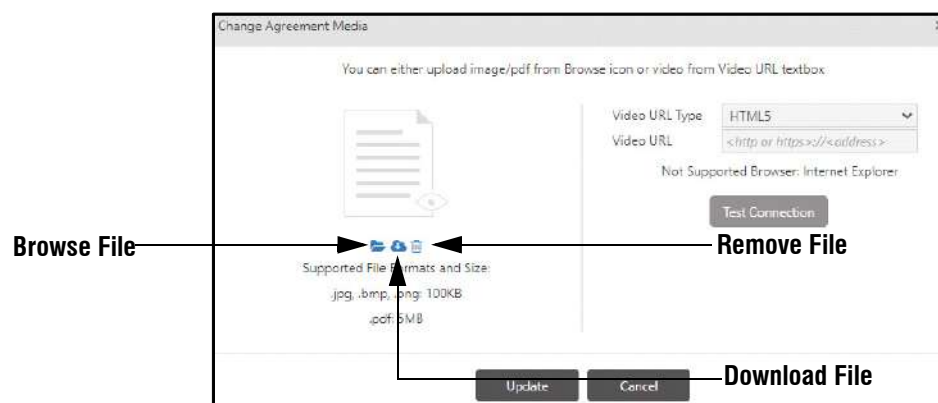

## Uploading Image/PDF

- Clicking **Upload**  . The **Change Agreement Media** pop-up appears.

- Click **Browse File**  .

To upload, select the desired file from your local PC.

Make sure the image size is not more than 100KB and the pdf is upto 5MB. The supported formats are .jpg, .bmp, .png, pdf

After uploading the file, if you wish to upload a different file instead of the current uploaded file, click

**Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File** .

To remove the uploaded file, click **Remove File** .

Then click **Update**.

The document will be uploaded and you can preview it by clicking the **Preview**  icon.

*PDF can be viewed only after it is downloaded.*

## Uploading Video

You can also upload a relevant video. To do so,

- Select the desired option for uploading the **Video URL Type** — **HTML5, FTP, YouTube, Vimeo, Wistia, Custom Embed (iFrame)**.

If you select **FTP**, in **Video URL** enter the desired FTP URL from where the COSEC will fetch the video. To access the FTP URL, you need to enter the FTP credentials. Enter the **User Name** and **Password**. **User Name** can be a maximum of 40 characters and **Password** can be a maximum of 128 characters.

The screenshot shows the 'Change Agreement Media' dialog box. On the left, there is a 'Browse' icon and text indicating supported file formats and sizes: .jpg, .bmp, .png (100KB) and .pdf (5MB). On the right, the 'Video URL Type' dropdown is set to 'FTP'. Below it, the 'Video URL' field contains the placeholder '<ftp>//<address>'. Further down, there are fields for 'Username' and 'Password', and a note stating 'Not Supported Browsers: Internet Explorer'. A 'Test Connection' button is located below the password field. At the bottom of the dialog are 'Update' and 'Cancel' buttons.

If you select **YouTube**, **HTML5**, **Vimeo** or **Wista**, in **Video URL** enter the desired URL from where the COSEC will fetch the video.

This screenshot shows the same 'Change Agreement Media' dialog box, but with the 'Video URL Type' dropdown set to 'YouTube'. The 'Video URL' field now contains the placeholder '<Enter YouTube URL>'. The 'Test Connection' button remains visible below the URL field. The 'Update' and 'Cancel' buttons are at the bottom.

If you select **Custom Embed (iFrame)**, in **Video URL** enter the video URL which is the extracted URL from embed code which belongs to any video on web platform.

Follow the steps given below to extract the URL from the embed code, for example to extract the URL from a YouTube video:

- Click on the desired Video.

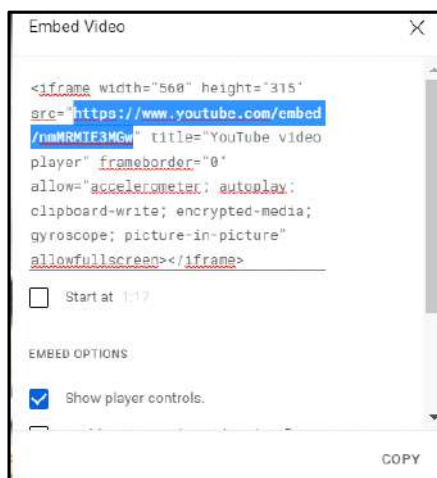

- Click **Share**.

- Click **Embed**.

- In the **Embed Video** pop-up select the link as shown above. Paste this link in the **Video URL**.

Similarly, you can copy the link from any other web video and paste the same in the Video URL.

- File formats supported for FTP/Web[HTML5, YouTube, Vimeo, Wistia, Custom Embed(iFrame)] are .mp4 and .mov.
- For a video to be displayed using the FTP link make sure the file size is 100MB.
- Make sure the Web Video URL's — HTML5, YouTube, Vimeo, Wistia, Custom Embed(iFrame) do not have any type of authentication.
- Click **Test Connection** to check the connectivity, to fetch the video data from the configured URL.

If the Test Connection is Successful, it only depicts that there is connectivity till the Video URL link. The video may or may not be functional.

- Click **Update**. The video will be uploaded.
- **Footer:** You can add the desired text. This will be displayed at the end of the Agreement, before the Signature. Maximum 100 characters.

## Additional

Click the **Additional** collapsible panel and configure the following parameters:

- **Signature:** Select the check box, if you want the user to add their signature along with their confirmation.
- **Confirmation Style:** This defines the way in which the confirmation to the drafted agreement would be provided. Select the desired **Confirmation Style** as **Agree Checkbox** or **Buttons (Accept/Decline)**.

If you select **Agree Checkbox**, a check box will be provided to agree with the Terms and Conditions.

If you select **Buttons (Accept/Decline)**, two buttons — 'Accept' and 'Decline' will be provided to agree with the Terms and Conditions.

Click **Save** to save the configuration. The Agreements you add appear in the right pane.

Sample of Agreement if you select **Agree Checkbox**, as displayed in the VMS Portal.

DECLINE ACCEPT

## Top Panel Functionality

After the Agreements have been created, you can perform the following:

Click **Add** , to add a new Agreement.

Click the desired agreement from the list of agreements in the right pane. Click **Edit** , if you wish to make modifications in the existing agreement.

Click the desired agreement from the list of agreements in the right pane. Click **Delete** , if you wish to delete the agreement.

Click the desired agreement from the list of agreements in the right pane. Click **Duplicate** , if you wish to replicate the agreement.

# Form Builder

---

We all know that collecting feedback, opinions, data etc via Forms is an important aspect for every organization.

The Form Builder allows you to customize the design of the questionnaire in the form of different formats, convey messages as well as provide feedback. You can customize the content of the Forms as per your requirement. You can also link any Agreement with a Form. For details related to Agreements, refer to [“Agreement Builder”](#).

You can determine the placement of the Agreement/Forms — Login, Check-in, Check-out of Visitor as per your requirement. For details refer to [“Station Location”](#).

For displaying the Form and Agreement on Visitor Web Portal, you need to configure the Form and Agreement parameters in the COSEC Web.

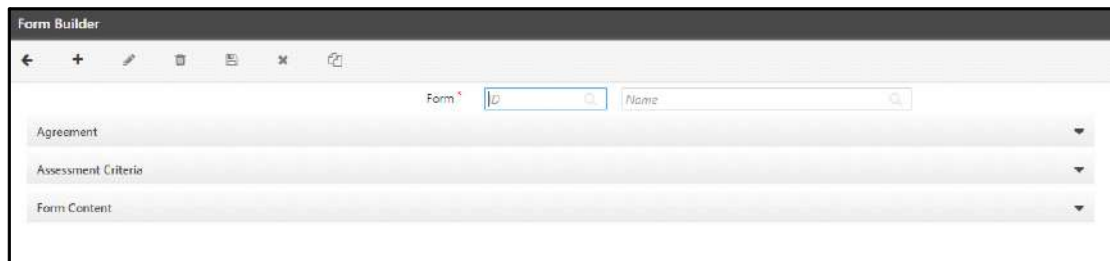

After the Form is submitted by the Visitor, the details are displayed in the Form Summary. For details refer to [“Form Summary”](#).

You can send Alert Messages when Forms are executed by Visitors, to do so click **Admin Module> System Configuration> Alert Message Configuration**. Select Visitor Event from the Alert filter drop-down list and Visitor Execution from the event drop-down list. For details, refer to [“Configuring Alert Messages”](#).

To configure the Form parameters:

Click **Admin Module> System Configuration> Form Builder**.

The **Form Builder** page appears.

To add a new Form,

Click the **New**  icon. You can add upto 99 different Forms.

- **ID:** The ID is auto-generated by the system. It will be displayed after you save the form.
- **Name:** Assign a name to the form.

The Form Builder is divided into three sections— **Agreement**, **Assessment Criteria** and **Form Content**.

## Agreement

Click the **Agreement** collapsible panel and configure the following parameters:

- **Agreement Selection:** Click the picklist to select and bind a pre-configured agreement with this form.
- **Position At:** Select the position — Starting, Ending — at which you want the agreement to be displayed.

If you select **Starting**, the agreement will be displayed before the form.

If you select **Ending**, the agreement will be displayed after the form is filled-in.

## Assessment Criteria

This defines the eligibility criteria on the bases of which the further functionality would be executed.

Click the **Assessment Criteria** collapsible panel and configure the following parameters:

- **Approve On:** Select the desired eligibility criteria for further action — All Correct, Minimum Percentage, Any Condition.

**All Correct:** If you select this option, the visitor will be allowed further course of action only if all the questions are answered correctly.

**Minimum Percentage:** If you select this option, the visitor will be allowed further course of action only when the defined percentage value cut-off score is achieved as the score after answering the questions.

**Any Condition:** If you select this option, the visitor will be allowed further course of action without fulfillment of any condition.

- **Display Score to User:** Select this check box if you wish to display the score to the visitor after the questionnaire is filled-in.

## Form Content

In the Form Content, you first need to add Sections. In each Section you can then add different types of questions as Multi-Choice, Single-Choice, Text Answer Only, Fixed Content, Rating.

Create a list of Sections and the questions to be added in each Section manually as after you have completed a Section and its questions and then add a new Section, you will not be able to add other questions in the previous Section.

If you still wish to do so, you will have to add the desired question in the current Section and then click Move  or drag and drop it to the desired Section.

Click the **Form Content** collapsible panel and configure the following parameters:

A screenshot of the 'Form Content' panel. It has a title bar 'Form Content' with a blue arrow icon on the right. The main area contains the text 'No data added yet. Click '+' to start.' and a plus icon in the bottom right corner.

## Section

To add a **Section**,

A screenshot of the 'Form Content' panel. It shows a section titled 'Section 1' with edit and delete icons. Below it is a question: '(1) Multiple Choice Question' with the text 'Which are the products of Matrix Comsec company?'. A context menu is open on the right with options: Multi-Choice, Single-Choice, Text Answer Only, Fix Content, Rating, and Section.

- Click **Add**  and select **Section**. The **Section** will be added. You can add upto 10 Sections.
- By default, the name assigned is Section 1. Click **Edit**  to assign the desired name to the Section you added. Click **Save**  to save the assigned name or click **Cancel** .
- Click **Merge**  if you wish to merge one section with another.

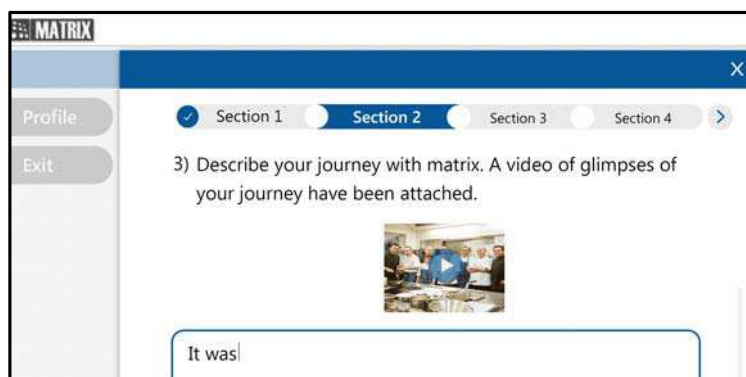

*Merge will be visible only when you add multiple Sections.*

*Merge is not applicable for individual questions.*

*If questions in current Section and questions in the Section to be merged exceeds 10, then sections cannot be merged.*

- Click **Discard**  if you wish to discard the complete Section along with its questions.

Sample of Sections as displayed in the VMS Portal.

A screenshot of the VMS Portal interface. It has a sidebar with 'Profile' and 'Exit' buttons. The main area shows a form with four sections: Section 1 (checked), Section 2 (active), Section 3, and Section 4. Section 2 contains a question: '3) Describe your journey with matrix. A video of glimpses of your journey have been attached.' Below the question is a video thumbnail and a text input field with the placeholder 'It was|'.

All of the samples are samples of Check-In Form as displayed in the VMS Portal. It will vary according to the configurations done by you in Station Location for Login, Check-In and Check-Out. For details refer to “Form” under Station Location.

## Adding Questions within Sections

- Click **Add**  again and select the type of question you wish to add — Multi-Choice, Single-Choice, Text Answer Only, Fixed Content, Rating in this Section. You can add upto 10 questions in each Section.

### Multi-Choice/Single-Choice

If you select Multi-Choice/Single-Choice, configure the following:

- Question:** Configure a **Question**. You can add the text and/or media —image, pdf or video.

The text can be a maximum of 100 characters.

You can either upload an image/pdf or video. Both cannot be uploaded.

To add media, click **Upload**  . Refer to “Uploading Image/PDF” and “Uploading Video”.

- Description:** Add a brief **Description** for the question if required. The text can be of maximum 100 characters.
- Options:** You can add text and/or media —image, pdf or video.

The text can be a maximum of 50 characters. You can add upto 10 options.

To add media, click **Upload**  . Refer to “Uploading Image/PDF” and “Uploading Video”.

To add another answer as an option, click **Add**  .

To remove an existing option, click **Remove** ✕ .

To change the sequence of the options, click **Move** ↕ .

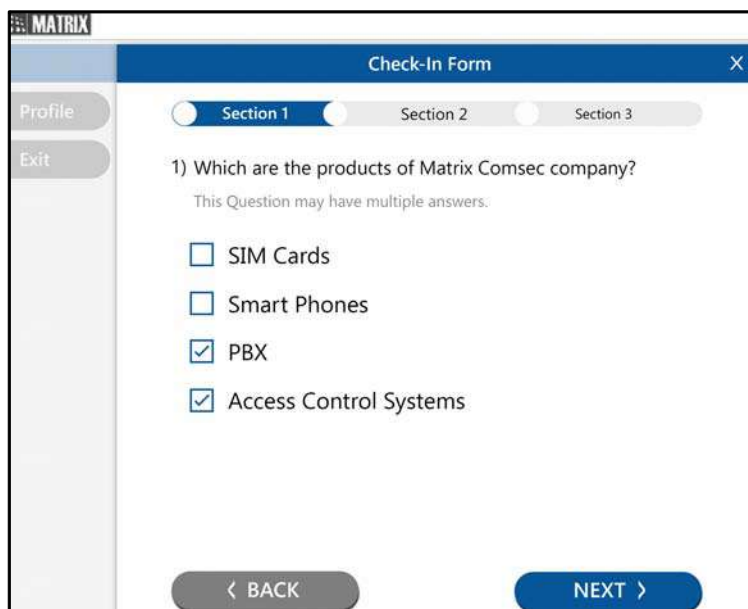

- **Answer:** For **Multi-Choice**, all the options added appear as answers in the drop-down list. You can select a single option or multiple options as the answer or to select all the options as the answer click **Check All**.

The  icon will display the correct option.

For **Single-choice**, all the options added appear as answers in the drop-down list. You can select only one option as the answer.

Click **Save** ✔ to save the configurations done or click **Cancel** ✕ to discard the changes.

Sample of Multi-Choice as displayed in the VMS Portal.

The screenshot shows a web application window titled "MATRIX" with a "Check-In Form" header. On the left is a sidebar with "Profile" and "Exit" buttons. The main content area has three tabs: "Section 1" (selected), "Section 2", and "Section 3". Below the tabs is a question: "1) Which are the products of Matrix Comsec company?". A note below the question states "This Question may have multiple answers." There are four options with checkboxes: "SIM Cards", "Smart Phones", "PBX", and "Access Control Systems". The "PBX" and "Access Control Systems" options are checked. At the bottom are two buttons: "< BACK" and "NEXT >".

Sample of Single-Choice as displayed in the VMS Portal.

## Text Answer Only

If you select this option the answers can be in text format only. Configure the following parameters:

- **Question:** Configure a **Question**. You can add the text and/or media —image, pdf or video.

The text can be a maximum of 100 characters.

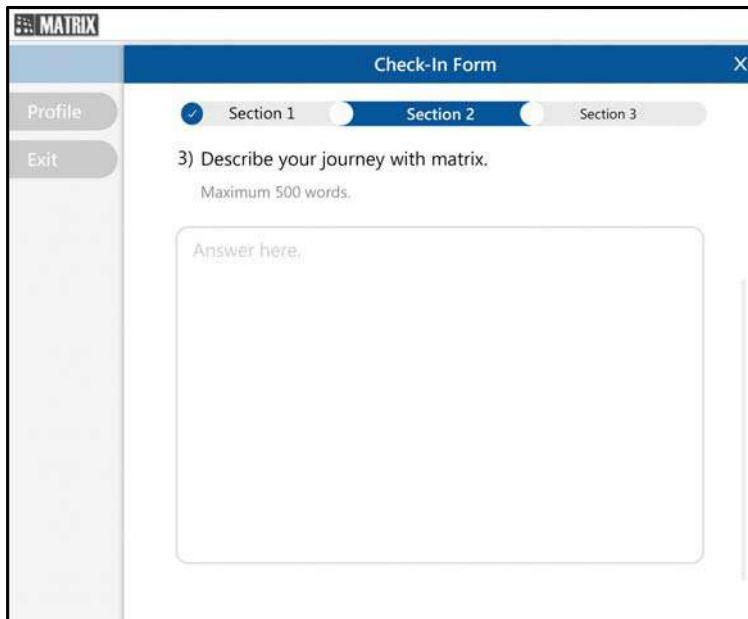

*You can either upload an image/pdf or video. Both cannot be uploaded.*

To add media, click **Upload** . Refer to [“Uploading Image/PDF”](#) and [“Uploading Video”](#).

- **Description:** Add a brief **Description** for the question if required. The text can be of maximum 100 characters.
- **Input Type:** Select the type of input — All Characters, Alpha Numeric or Numeric — you wish to allow.  
Valid characters for Alpha Numeric: - A-Z a-z 0-9 +  
Valid Range for Numeric - 0-9 +
- **Input Length:** This is the maximum input length to be allowed as the answer. Valid Range: 1 to 999.

Click **Save** to save the configurations done or click **Cancel** to discard the changes.

Sample of Text Answer Only as displayed in the VMS Portal.

The screenshot shows a web application titled 'MATRIX' with a 'Check-In Form' window. The form has a sidebar with 'Profile' and 'Exit' buttons. The main content area has three sections: 'Section 1' (checked), 'Section 2' (active), and 'Section 3'. Section 2 contains the question '3) Describe your journey with matrix.' with a note 'Maximum 500 words.' and a large text input area labeled 'Answer here.'.

## Fix Content

If you select this option, you can display fixed content along with a description. Configure the following parameter:

The screenshot shows a configuration window titled '(4) Fix Content'. It features a rich text editor with a toolbar containing options for Bold, Italic, Underline, Font Family (set to Verdana), Font Size (set to 13px), Text Color (A), Highlight Color (H), and various alignment and list options. The editor contains the following text: 'Welcome to Matrix Comsec. Before you enter the Matrix premises. Kindly view the Safety video below. The video below is of five minutes which describes the safety rules that are to be followed for entering in Factory- restricted Manufacturing zone. Kindly view the video carefully and provide the answers to the multiple choice questions configured below. Description if any...'.

- **Fix Content:** You can add the text and/or media —image, pdf or video for the question.

You can add text as well as format it as per your requirement.

You can add the text using different font, font- size, font color, highlight color and remove formatting. You can customize your content according to different font layouts like Bold, Italic, Underlined, Ordered List, Unordered List, Outdent and Indent.

All characters are allowed.

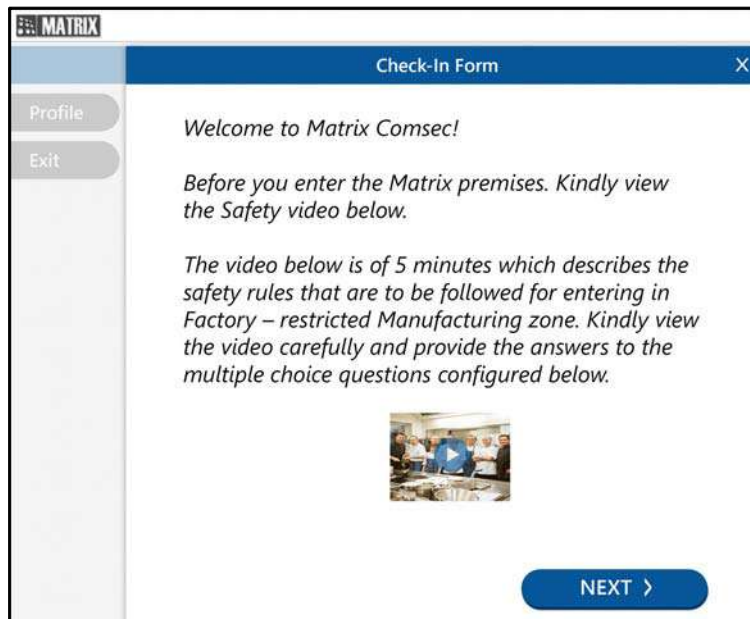

You can either upload an image/pdf or video. Both cannot be uploaded.

To add media, click **Upload** . Refer to [“Uploading Image/PDF”](#) and [“Uploading Video”](#).

- **Description:** Add a brief **Description** for the question if required. The text can be a maximum of 100 characters.

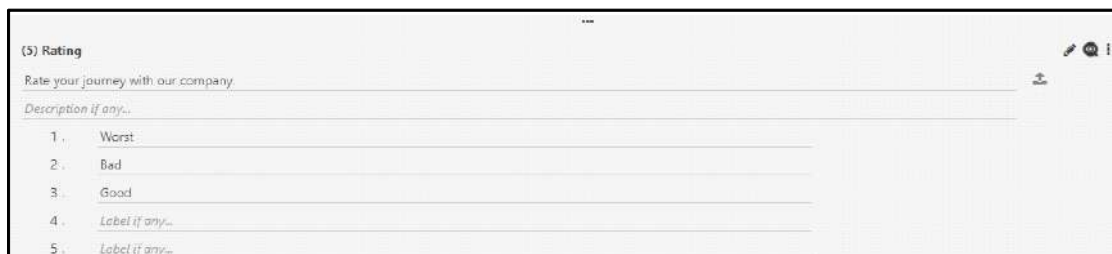

Click **Save**  to save the configurations done or click **Cancel**  to discard the changes.

Sample of Fix Content as displayed in the VMS Portal

## Rating

If you select this option, after the question and description, five Stars icons will be displayed to the visitor to provide the rating. Below each Star the Labels you configured will be displayed. Configure the parameters as per your requirement:

- **Question:** Configure a **Question**. You can add the text and/or media —image, pdf or video.

The text can be a maximum of 100 characters.

You can either upload an image/pdf or video. Both cannot be uploaded.

To add media, click **Upload** . Refer to [“Uploading Image/PDF”](#) and [“Uploading Video”](#).

- **Description:** Add a brief **Description** for the question if required. The text can be of maximum 100 characters.
- **Labels:** You can add upto 5 labels. Each label can be a maximum of 15 characters. This will be visible below each Star icon.

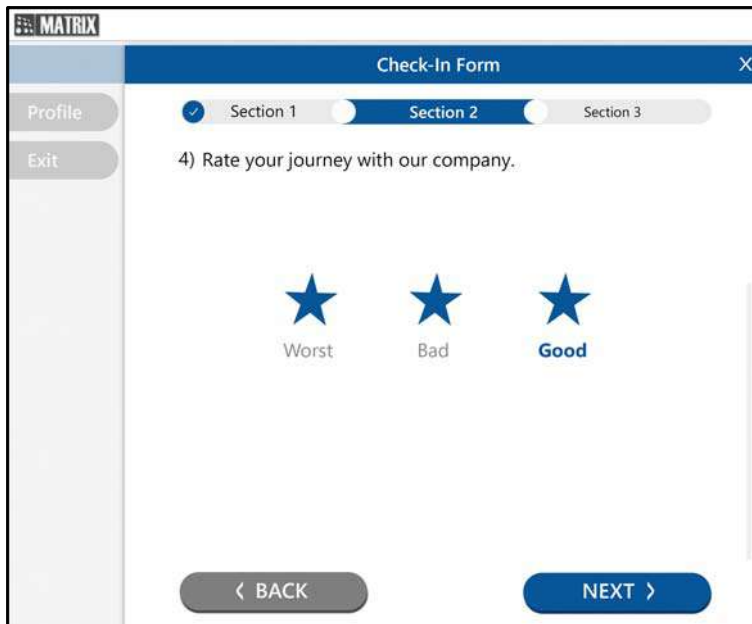

The five configurable labels are not mandatory.

- To change the sequence of labels, click **Move** .

Click **Save**  to save the configurations done or click **Cancel**  to discard the changes.

Sample of Rating as displayed in the VMS Portal.

## Common Functionality for all types of Questions

After you have saved the Question and Answer along with the Options, you can:

- Move:** You can re-arrange the sequence of the questions within a particular Section or across a Section, if required. To do so, click **Move**  or drag and drop the questions as per your the required sequence. The numbering will be changed automatically. Sections cannot be moved.
- Click **Edit** , if you wish to edit the details.
- Click **Hide** , if you wish to hide a question. This will not be visible to the visitor. Once you select **Hide** the available option will toggle to **Un-hide**.
- Click **Additional Options**  to view other options:
  - Set as Mandatory:** Select this option, if you wish to make this question compulsory. Once you select **Set as Mandatory** the available option will toggle to **Set as Non-Mandatory**.
  - Duplicate:** Select this option, if you wish to create a copy of the question along with the options.

- **Discard:** Select this option, if you wish to delete the question along with the options.

## Top Panel Functionality

After the Forms have been created, you can perform the following:

Click **Add** , to add a new Form.

Click the desired form from the list of forms in the right pane. Click **Edit** , if you wish to make modifications in the existing form.

After the form is edited and the response is submitted by the visitor, then if you edit the form, it will be considered as edit count 1. Such edits can be done upto 99 times.

Click the desired form from the list of forms in the right pane. Click **Delete** , if you wish to delete the form.

Click the desired form from the list of forms in the right pane. Click **Duplicate** , if you wish to replicate the form.

# Importing Data

The COSEC application has an inbuilt utility for enabling users to import data from excel files with predefined format. This would thus save the end user a lot of time and effort in having to make individual data entries at the application level.

*In the event of the **COSEC Application Basic Platform** license as well as the **Access Control add on module**, only the User data with some of the fields can be imported.*

*The parameter **Birth Date** will be mandatory in the Import sheet if set as mandatory in the “[Minimum Age Requirement for Users](#)” in “[User Policy](#)” and “[Minimum Age Requirement for Workers](#)” in “[CWM](#)”.*

To import data from a file follow the steps given below:

Select **Admin module > System Utilities > Import Data** and the following screen appears.

Configure the following parameters:

- **Import Data For** - Select the option from the drop-down list for which the data is to be imported. You can download sample import file by clicking on **Download Sample Import file** button. The downloaded import sheet displays the fields required for importing specific data.

	A	B	C	D	E
1	ID	CODE	NAME	EMAIL	DESCRIPTION
2	2323	A4	Anup		
3	6897	S5	Mahesh		
4	3553	F2	Mithesh		
5	3333	N5	Jithesh		

You can even refer to the Import Data Document Guidelines in the downloaded import sheet.

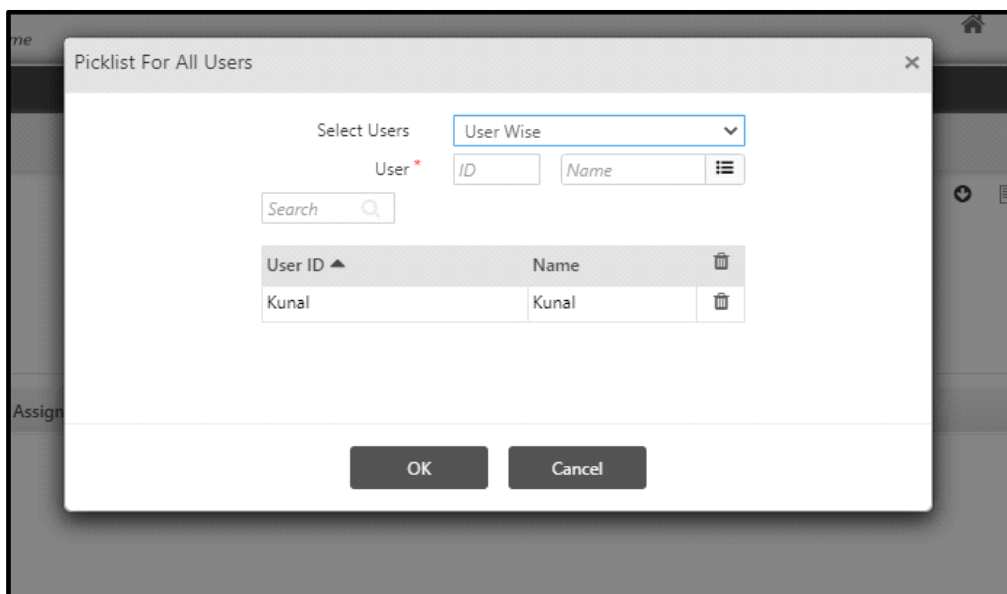

*If in Admin Module > System Accounts > Roles and Rights Configuration > Module (Admin) > Page Rights - > Import Data, if Auto Approve check box is disabled, and if you are Importing data for Shift Schedule with changes in shifts for users, then the Shift Change Applications will be sent to the RIC for approval.*

*Shifts are changed from multiple locations, then in such cases the last approved shift change will be taken into consideration. To know more refer to “[Shift Change Application/Approval](#)”.*

--	---------------------------------	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

If **Import Data For** is selected as User/Worker then you can download a detailed data sheet, to do so click on **Download Detailed Data Sheet**  button. On clicking this button, a pop-up will be displayed as shown below:

**Select Users:** Select the desired option — User Wise, Group Wise or All. If you select User Wise or Group Wise the select the desired users/groups from the picklist.

Click **OK** button to download the Data Sheet or click on **Cancel** button to abort the process.

The Detailed Data Sheet will be as per the selected option.

If the **Import Data For** option is selected as Visitor and Visit, then configure **Import Data Of**.

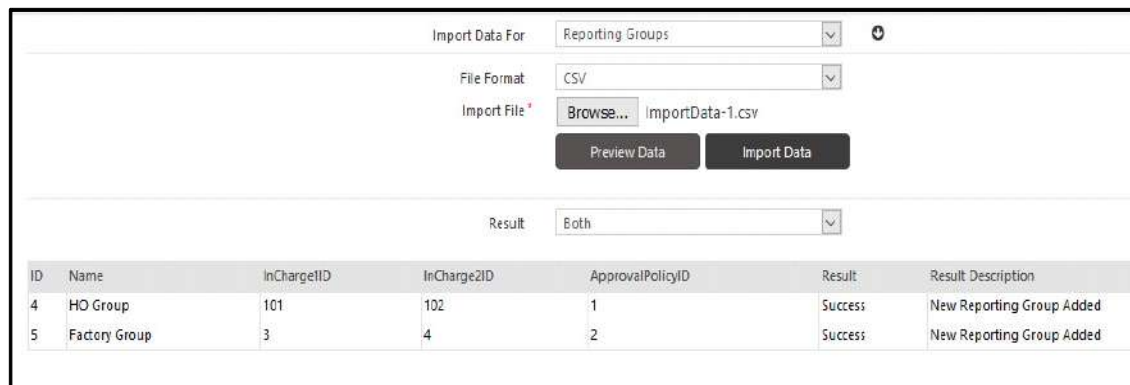

- **Import Data Of** - To import data of a Visitor and/or a Visit, select the desired option — Visitor Only, Visit Only or Both.
- **File Format** - Select the file format of the specific file from the dropdown list. The options available are XLS or CSV.
- **Import File** - Browse the path of the file from which the data is to be imported.

Click **Upload** button. The file will be saved and you can preview the data.

The Preview Data enables the administrator to view the uploaded data to confirm if it is in order before giving the import command. Click on **Preview Data** button. The preview data of reporting In-charge is shown as below.

Import Data				
←				
Import Data For		Reporting Groups		
File Format		CSV		
Import File *		Browse... ImportData-1.csv		
		Preview Data	Import Data	
ID	Name	InCharge1ID	InCharge2ID	ApprovalPolicyID
4	HO Group	101	102	1
5	Factory Group	3	4	2

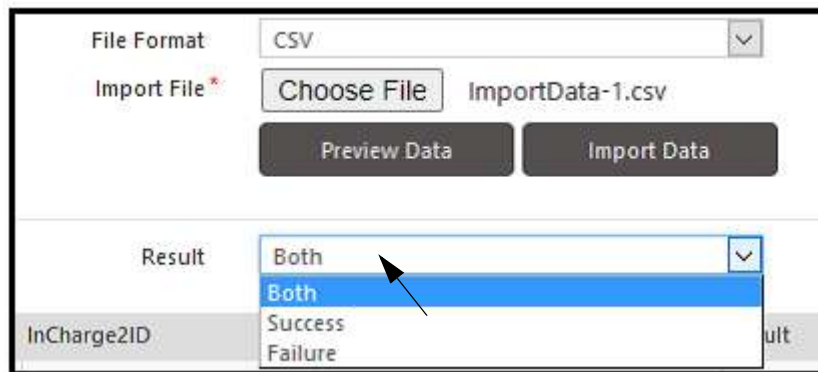

Now click on **Import Data** to start importing the uploaded data. The result of import is shown as Success or Failure along with result description as shown.

The screenshot shows the 'Import Data' interface. At the top, there's a dropdown for 'Import Data For' set to 'Reporting Groups'. Below it, 'File Format' is set to 'CSV'. The 'Import File' section shows a 'Browse...' button and the filename 'ImportData-1.csv'. There are 'Preview Data' and 'Import Data' buttons. Below this, a 'Result' dropdown is set to 'Both'. At the bottom, a table displays the import results.

ID	Name	InCharge1ID	InCharge2ID	ApprovalPolicyID	Result	Result Description
4	HO Group	101	102	1	Success	New Reporting Group Added
5	Factory Group	3	4	2	Success	New Reporting Group Added

You can also filter import result records on the basis of their Success, Failure or Both using the **Result** drop-down options.

This screenshot is a close-up of the 'Result' dropdown menu. The menu is open, showing three options: 'Both' (highlighted in blue), 'Success', and 'Failure'. An arrow points to the 'Both' option. The background shows parts of the 'File Format' (CSV) and 'Import File' (Choose File, ImportData-1.csv) sections.

Once the data is imported successfully, data will be added or updated in COSEC Web.

*Administrator needs to ensure that the ASP.NET user has full rights on the folder containing the Excel or .csv file for the import data operation.*

# Exporting Data

This functionality enables the user to export data to external applications based on the pre-configured data templates. The user has the flexibility to select the output formats and Type of Users. User can select Output formats from one of the following:

- Excel
- Text
- CSV
- XML

To access this functionality, go to **Admin Module > System Utilities > Export Data** and the following screen appears.

The screenshot shows the 'Export Data' application window. The sidebar on the left has two tabs: 'Export' and 'Templates'. The 'Export' tab is selected. The main content area contains a form with the following sections:

- Template Type:** A dropdown menu set to 'Custom'.
- Template:** A dropdown menu set to 'API\_Template\_Daily'.
- Export Fields List:** A table with the following columns: Name, UserID, UserName, ProcessDate, Punch1, and Punch2.
- 1 - 5 of 10 records:** A pagination control with buttons for '1' and '2'.
- Export Parameters:** An expandable section containing the following fields:
  - Date:** Two date pickers labeled 'From Date' and 'To Date'.
  - File Format:** A dropdown menu set to 'Excel Files'.
  - File Name:** A text input field.
  - Select Users:** A dropdown menu set to 'User Wise'.
  - User:** Two input fields labeled 'ID' and 'Name'.
  - Generate Export For:** A dropdown menu set to 'All Users'.
- Export:** A button at the bottom right of the form.

The page displays two tabs namely:

- "Export"
- "Templates"

## Export

To export data following are the configurations:

The screenshot shows the 'Export Data' window with the following configuration options:

- Template Type:** Custom
- Template:** API\_Template\_Daily
- Export Fields List:** API\_Template\_Daily, API\_Template\_Monthly, API\_Template\_ATDEvents, API\_Template\_ACSEvents, Template\_Daily, Template\_Monthly, Template\_ATDEvents, Template\_ACSEvents
- Export Parameters:** (Collapsible panel)
- Date:** From Date, To Date
- File Format:** Excel Files
- File Name:**
- Select Users:** User Wise
- User:** ID, Name
- Export:** (Button)

**Template Type:** Select the type of template to be used for exporting data from the dropdown list. There are two types of templates: Custom Templates and System Defined.

Before exporting the data based on Custom Template, it is required that the templates are pre-configured. [See "Templates" on page 364.](#)

**Template:** Based on template type, select the templates from the dropdown list for data export. For Custom Template type, select the template which is configured from section: [See "Templates" on page 364.](#)

**Export Fields List:** This displays the fields that are selected and added to the template from ["Export Field Configuration"](#)

### Export Parameters

Click on Export Parameters collapsible panel and configure the following:

The screenshot shows the 'Export Parameters' window with the following configuration options:

- Header:** 300 chars
- Export Date-Range:** ☐
- Export Generation Date-Time:** ☐
- Date:** From Date, To Date
- File Format:** Excel Files
- File Name:**
- Select Users:** User Wise
- User:** ID, Name
- Generate Export For:** All Users
- Export:** (Button)

**Header:** Enter header details which is to be displayed in Header of Export Sheet. It is a Custom header. You can enter alphanumeric characters in header.

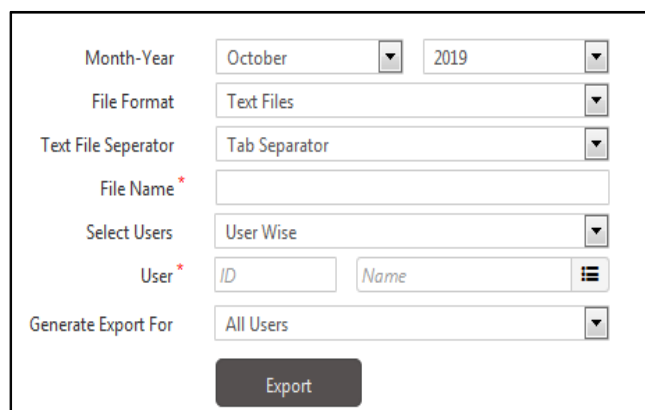

**Export Date-Range:** It allows to decide whether configured From Date & To Date is to be displayed in Export Sheet or not. This check-box is available when the selected Template is of Daily basis. If this check-box is checked, then the configured From Date & To Date will be displayed in Export sheet.

**Export Generation Date-Time:** This check-box is used for displaying details regarding when (at which date & time) the sheet is exported. If this check-box is checked, then the Date -Time of when the sheet is exported will be displayed in Export sheet.

**Date/ Month:** Select the date range or the month for the data that is to be exported based on the template selected. The Date and Month-Year field appears as per selection of template.

**File Format:** Select the format of the file to be exported from the options of **Excel**, **Text**, **CSV** and **XML** file formats.

**Text File Separator:** In the event of the **Text files** option being selected, specify the separator type. Based on the site requirements, select the **Text File Separator** as shown below:

A screenshot of a web-based export configuration form. The form contains several fields: 'Month-Year' with dropdowns for 'October' and '2019'; 'File Format' with a dropdown set to 'Text Files'; 'Text File Separator' with a dropdown set to 'Tab Separator'; 'File Name' with a text input field; 'Select Users' with a dropdown set to 'User Wise'; 'User' with two input fields labeled 'ID' and 'Name'; and 'Generate Export For' with a dropdown set to 'All Users'. An 'Export' button is located at the bottom of the form.

**Text File Separator** field will be available only when **File Format** is selected as **Text Files** format.

**File Name:** Specify a filename by which the exported data is to be saved.

**Event Selection:** Select the desired options — All, Allowed Events or Denied Events.

- Select **Both**, if you want all Allowed and Denied events to be exported.
- Select **Allowed Events**, if you want only Allowed events to be exported.
- Select **Denied Events**, if you want only Denied events to be exported.

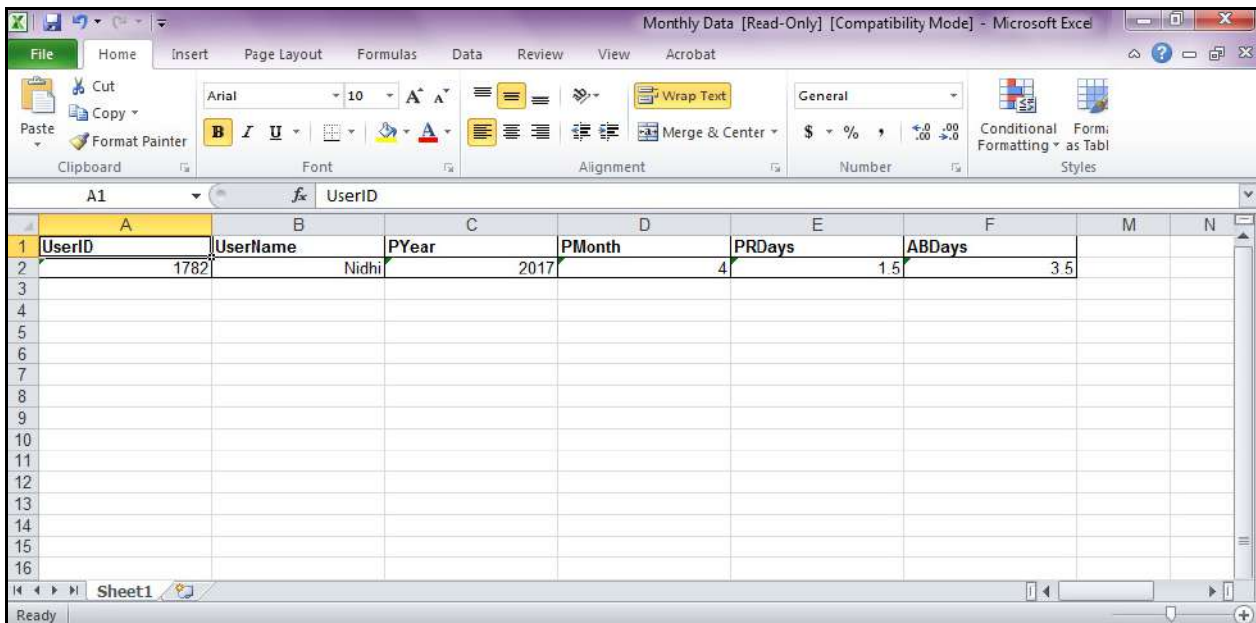

*Event Selection is applicable when Template selected is API\_Template\_ATDEvents or API\_Template\_ACSEvents or Template\_ATDEvents or Template\_ACSEvents.*

**Select Users:** Select the User as **User Wise**, **Group Wise** or **All**. Then select the users accordingly whose data is to be exported.

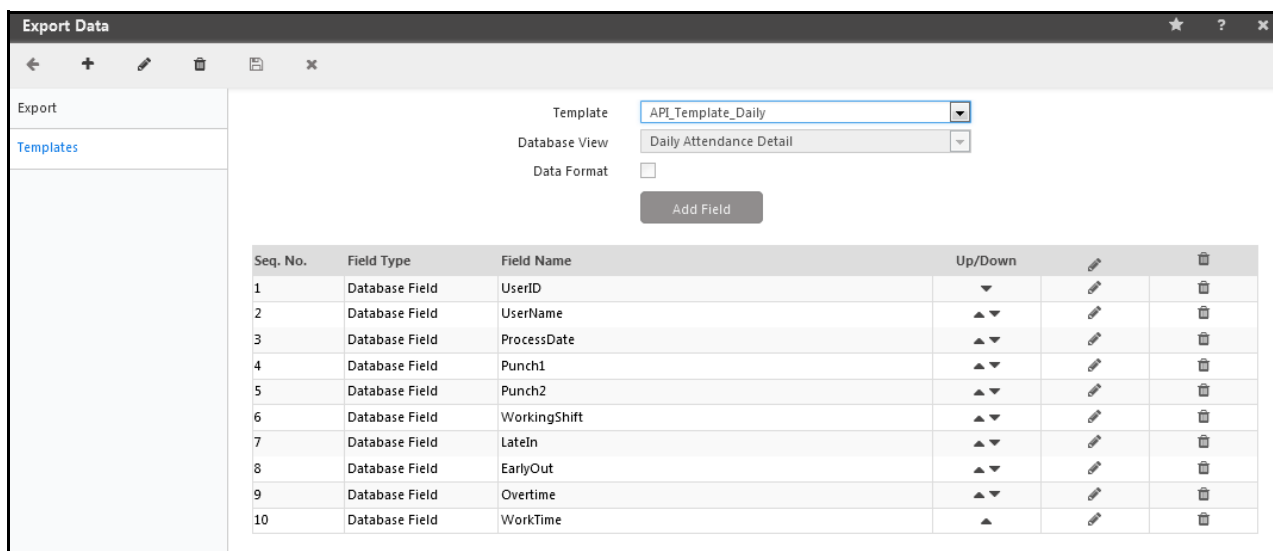

**Generate Export for:** Select the users as **All**, **Active** or **Inactive** for which data is to be exported.

Click on the **Export** button. Open or Save the export file by specifying the location. The below shown file is in Excel format.

## Templates

The COSEC system enables the administrator to define templates for export of data in a customizable format. Select the **Templates** tab on the **Export Data** home page and the following page appears.

To add a new template, click the **New**  button and the following screen appears.

**Template:** Enter a user-friendly name for the new template to be defined (e.g. “*Template\_Canteen*”, “*Template\_DailyEvents*” etc.).

**Database View:** Select a corresponding Database View from the dropdown list.

Click the **Add Field** button. The following pop-up window: **Export Field Configuration** appears for the configuration of Export fields.

### Export Field Configuration

**Field Type:** Select the type of field to be exported from the below options and then click **Save** button to add the fields in the template:

- **Database Field-** If any of the database field is to be modified.
- **Static Field** - To keep a field or column static (fixed).
- **Custom Field** - To create user defined field. Eg: User ID+UserName to be merged as a single field.

### **Field Type as Database Field**

**Display Name:** The name to be displayed as the header of the column is display name.

**Fields:** Select the fields to be displayed in the Export sheet. The fields in the dropdown depends upon the selection of Database View type.

When the "Leave Type" field is selected; then the count of leaves based on the leave code will be displayed in the exported file. Suppose SL and PL are both Paid leaves; then count of SL and PL will be shown separately. [See "Exporting Leave Details" on page 370.](#)

**Field Condition:** To change the field condition i.e. to replace the existing value of a field with new value, you must enable this.

**Field Value:** Specify the value of the field to be edited.

**Replace Value:** Specify the new value to replace the existing field value in database.

**Export Field Configuration**

Field Type: Database Field  
 Display Name: Canteen Name

---

Fields: USERID  
 Field Condition: ☒  
 Field Value:   
 Replace Value:

**Add**

Search

Field Value	Replace Value	
1220	1220001	

**Save** **Cancel**

Eg: The User ID having Field Value 1220 is replaced by value 1220001. The exported sheet will be shown as below. The display name will be shown as column header.

A	B	C	D
Research Employee	Employee ID	Edited ID	Joining
SHEETAL RAVAL	1220	1220001	2013/06/17

### Field Type as Static Field

User can select Field Type as Static field when he wants to display the same (static) field against all the other variable fields such as Employee Name.

**Export Field Configuration**

Field Type: Static Field  
 Display Name: Company Name

---

Field Name: Company Name  
 Field Value: Matrix  
 Data Type: Alpha-Numeric  
 Data Length: 20

**Save** **Cancel**

**Display Name:** The name to be displayed as the header of the column is display name. Eg: “Company Name” is set as Display name.

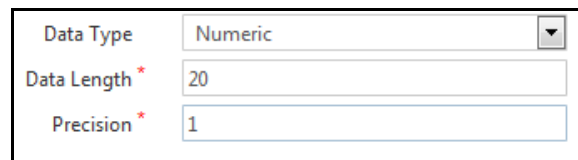

**Field Name:** Specify any field name.

**Field Value:** This is the value of the field which will remain static or same for all records. Eg: “Matrix” is the company name which remains static for all the users of the company.

**Data Type:** Select the data type as Alpha-numeric, Numeric or Date-time according to the field value.

**Data Length:** Specify the length of data which is to be used to map with the data length in destination tables of COSEC Integrate used for exporting data in other database.

**Precision:** If Data Type is selected as **Numeric**, then you will have to specify Precision also. For Eg: If the user wants to display the Working hours of the employee as static Field value, then user can select Data Type as Numeric and will have to define Precision of decimal as the value of Working hours may result in decimal.

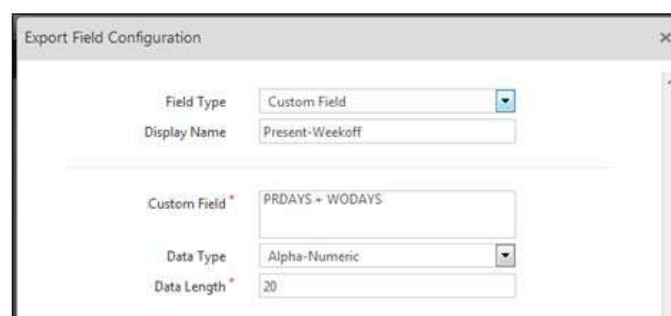

A configuration form with three fields: 'Data Type' is a dropdown menu set to 'Numeric'; 'Data Length \*' is a text input field containing '20'; 'Precision \*' is a text input field containing '1'.

Eg: The Static Field Value “Matrix” with Display Name “Company Name” is shown below in the exported excel file:

A	B
Company Name	Employee Name
MATRIX	JAY K DOSHI
MATRIX	MANOJ DETROJA
MATRIX	HARSHIT PATEL
MATRIX	ANIL TAILOR
MATRIX	VJAYKUMAR
MATRIX	KAUSHAL KADAKIA
MATRIX	VISHAL DHANANI
MATRIX	MANTHAN PATEL
MATRIX	ANIL MODI
MATRIX	SATISH RAJE
MATRIX	SHUBHANGINI
MATRIX	PARTH SUTARIYA
MATRIX	SATISH JHA
MATRIX	TANMAY SHAH

### Field Type as Custom Field

A dialog box titled 'Export Field Configuration'. It contains the following fields: 'Field Type' is a dropdown menu set to 'Custom Field'; 'Display Name' is a text input field containing 'Present-Weekoff'; 'Custom Field \*' is a text input field containing 'PRDAYS + WODAYS'; 'Data Type' is a dropdown menu set to 'Alpha-Numeric'; 'Data Length \*' is a text input field containing '20'.

- **Custom Field:** Provide custom field to display two or more fields in one column or to concatenate the fields and display in single column. The Allowed Length for the Custom Field control for Oracle is 2000; and for SQL is 4000.

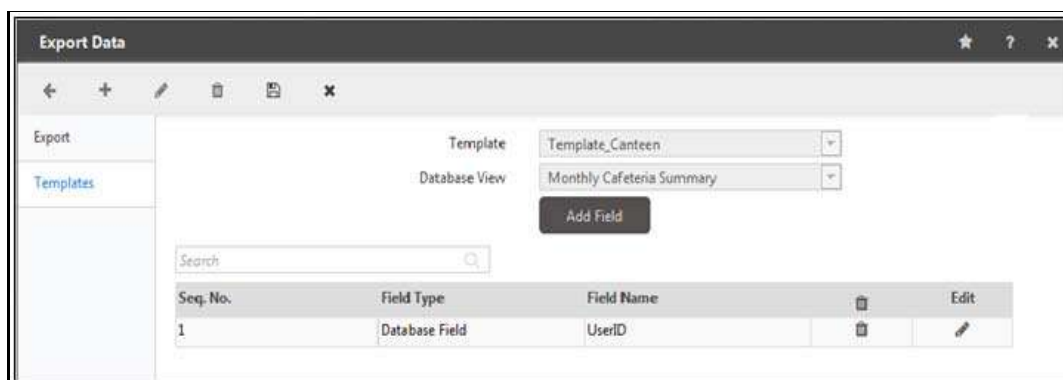

The custom fields specified here are those included in the Database View selected for the template.

For other fields See “Field Type as Static Field” on page 367.

Eg: Present days and Weekoff days are added and shown in single column with Display name “Present-Weekoff”. Also Birthdate and Joining date are shown together.

A	B	C	D	E
Company Name	Employee Name	Company	Present-Weekoff	Birthdate-Joindate
MATRIX	SHEETAL RAVAL	Matrix Comsec Pvt.	27.5	27/11/198717/06/2013
MATRIX	SHRUTI PATKI	Matrix Comsec Pvt.	29.0	08/07/199010/06/2014
MATRIX	AKHILESH DUBEY	Matrix Comsec Pvt.	23.0	14/08/199018/05/2015

- On clicking **Save** button in the Export Field Configuration pop-up window, the fields get displayed in the grid on the main Export page as shown in the screen below:

- To edit a field click the corresponding  icon.
- Click **Save**  to save the export template configuration. This new custom template will now be available for selection in the **Export** section.
- The following screen illustrates a sample Excel file that was exported using the new custom template:

	A	B	C	D
1	Canteen	Canteen door n	Menu location	User discount I
2	27	Canteen Factory	3	1
3	27	Canteen Factory	3	1
4	27	Canteen Factory	3	1
5	27	Canteen Factory	3	1
6	27	Canteen Factory	3	1
7	27	Canteen Factory	3	1
8	27	Canteen Factory	3	1
9	27	Canteen Factory	3	2
10	27	Canteen Factory	3	2
11	16	Canteen HO	1	1
12	27	Canteen Factory	3	1
13	27	Canteen Factory	3	1
14	27	Canteen Factory	3	1
15	16	Canteen HO	1	1
16	27	Canteen Factory	3	1
17	27	Canteen Factory	3	1
18	27	Canteen Factory	3	1
19	27	Canteen Factory	3	2
20	27	Canteen Factory	3	1

## Exporting Leave Details

Suppose a custom template of Database view Monthly Attendance Summary is created. The UserID, UserName, PMonth, PYear, LeaveDays-SL and LeaveDays-PL are selected from Database field.

For example: LeaveDays-SL field is added as shown below.

Export Field Configuration

Field Type: Database Field

Display Name: Sick Leave

Fields: LeaveDays-SL

Field Condition: LATE\_IN\_EARLY\_OUT\_DUR

Field Value: SL

Replace Value: Availed SL

Add

Field Value: SL

Replace Value: Availed SL

Save Cancel

Export Field Configuration

Field Type: Database Field

Display Name: Sick Leave

Fields: LeaveDays-SL

Field Condition: LATE\_IN\_EARLY\_OUT\_DUR

Field Value: SL

Replace Value: Availed SL

Add

Field Value: SL

Replace Value: Availed SL

Save Cancel

Now similarly other fields are added in the template.

Seq. No.	Field Type	Field Name	Up/Down		
1	Database Field	UserID	▼		
2	Database Field	UserName	▲▼		
3	Database Field	PMonth	▲▼		
4	Database Field	PYear	▲▼		
5	Database Field	LeaveDays-SL	▲▼		
6	Database Field	LeaveDays-PL	▲		

Now the fields in the template can be exported by configuring Export details.

Export Parameters

Month-Year: September 2018

File Format: Excel Files

File Name: UserLeaveDetails

Select Users: All

Export

The Exported file shows the count of Sick Leave and Privilege Leave (both PL type of leave) separately.

	A	B	C	D	E	F	G	H	I
1	User ID	User Name	Punch Month	Punch Year	Sick Leave	Privilege Leave			
2	1583	Shilpa	9	2018	0.0	3.0			
3	2	Chirag	9	2018	0.5	1.0			
4									
5									
6									

Similarly count of different leaves of same leave type can be exported through COSEC Integrate Utility also.

# Third Party Export

---

This functionality enables the COSEC system to export attendance data in predefined formats which can be recognized and imported by a third party application. COSEC can integrate with *three* third party applications for data export - **Tally**, **Relyon** - **Saral PayPack** and **IDS**.

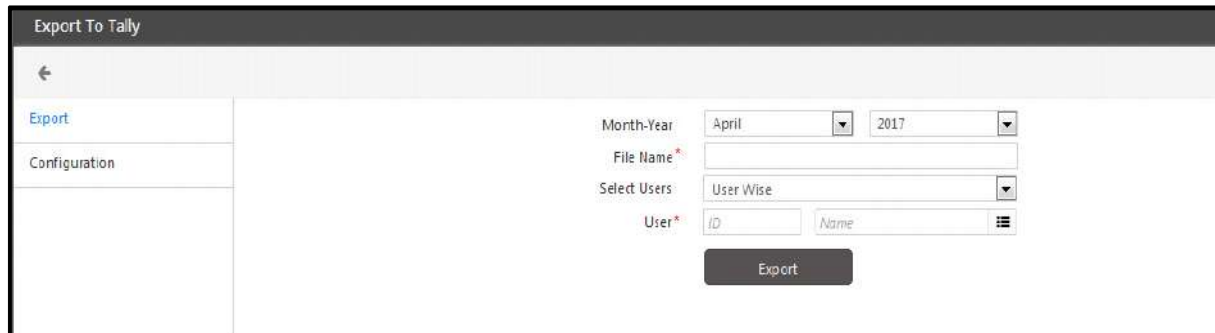

Read the following sections to configure all third party export options using the COSEC Web Application:

- [“Export to Tally”](#)
- [“Export To Relyon”](#)
- [“Export to IDS”](#)

## Export to Tally

This functionality enables the COSEC system to export attendance data in an XML format which can be recognized and imported by the Tally application. Importing attendance data from the COSEC system into the Tally payroll module would allow user to directly generate attendance vouchers which then can be used to maintain Employee accounts. Tally having its own data format does not allow direct import of attendance data from COSEC, hence has to be exported as well imported in an intermediate XML format.

In order to configure the parameters for exporting data, go to **Admin > System Utilities > Third Party Export > Export to Tally** and the following page appears.

Before exporting, Configuration has to be done. See [“Export To Tally Configuration” on page 374](#).

**Month-Year:** Select the Month & Year to specify the time period for which the data is to be exported.

**File Name:** Specify a filename for the XML file that is to be created.

**Select Users:** Select users/groups as per the option selected from the dropdown list. The options are:

- User Wise
- Group Wise (*Available only with the Time & Attendance add on module*)
- All

Click the **Export** button. The system prompts the user to browse to the folder path where the specified file will be saved.

## Guide to Tally

The following points are needed to be taken care of while configuring the Tally application.

Create all the employees whose data is to be imported from the COSEC application.

*User needs to take care and configure one of the following to ensure proper mapping of data:*

- *Enable aliases for employee and enter the User I.D. (as in COSEC application) in the alias field.*
- *Enter User I.D. (as in COSEC application) in the Cost Centre field of Account Info.*

The Tally Tags can be created using the following options:

**Gateway of Tally > Masters > Payroll Info > Units (Work):** Create the necessary units required for different attendance types. For ex: Hrs, Mins, etc.

**Gateway of Tally > Masters > Payroll Info > Attendance/Production Types:** Create the required Attendance Types, for ex: Present, Absent, etc. The user needs to take care to use these Attendance Types while creating Tally Tags in COSEC application with appropriate Attendance Type.

The Payroll Info parameters as defined here should match the parameters as specified in the **Export to Tally** option of the COSEC web application.

Refer the Tally user manual for more details. The import process can be initiated from the Tally application by going to **Gateway of Tally > Utility > Import of Data > Vouchers**.

## Export To Tally Configuration

On the **Export To Tally** page, select the **Configuration** tab.

To configure export to tally click **New** button and the following screen appears.

ID	Voucher Name	Tally Tags	COSEC Fields	Tag Type
No Data				

Configure the following parameters:

- **ID:** The ID will be auto generated.
- **Tally Voucher Name:** Specify a voucher name for tally.
- **Tag Type:** Select the tag type from the options— With Pay, Without Pay or Production.
- **Tally Tag:** Specify the tally tag.
- **Field Type:** Select the COSEC field type from the options — Attendance Fields or Leave Fields if you select the tag type as With Pay or Without Pay.
- **COSEC Fields:** Select the COSEC fields to be exported.
  - Click **Select**. The **Select Attendance Fields** or **Select Leave Fields** pop-up appears according to the selected field type.

## Export To Relyon

This functionality enables the COSEC system to export attendance data in Excel format which can be recognized and imported by the Relyon's application. The Relyon application needs the following two kinds of attendance data outputs from the COSEC application:

- Daily Attendance
- Monthly Attendance

In order to configure the parameters for exporting data, go to **Admin > System Utilities > Third Party Export > Export to Relyon** option and the following page appears.

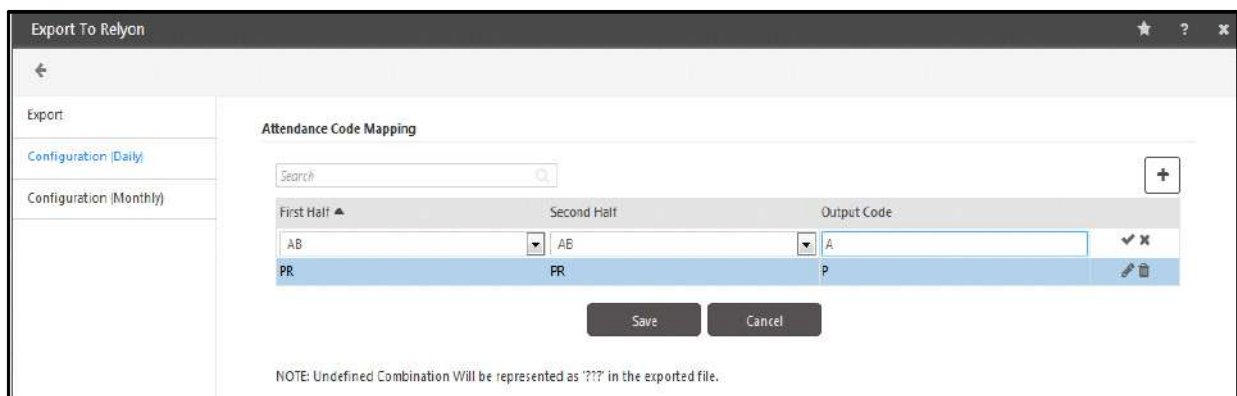

Before exporting, Configuration has to be done. See [“Daily Attendance Configuration”](#) and [“Monthly Attendance Configuration”](#)

### Daily Attendance Configuration

Select the **Configuration (Daily)** tab to configure the export parameters for the daily attendance data.

Click **Add** button to add a new output code for various combinations of attendance status codes.

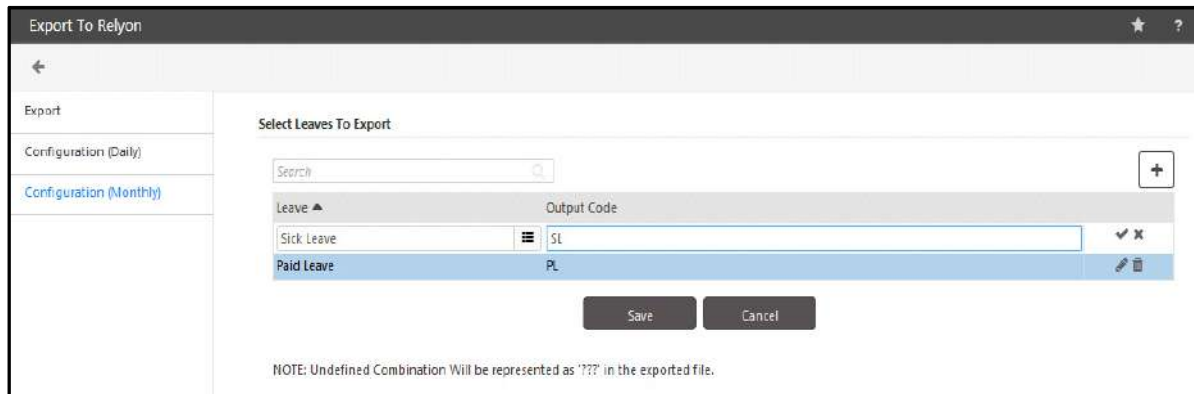

- Select the **First half** and **Second half** codes from the dropdown list and specify the **Output Code** for the combination as shown in the above figure.
- Click OK to save the code mapping.
- Define all the applicable combinations as per the site requirements and click **Save** button once done.

## Monthly Attendance Configuration

Click on the **Configuration (Monthly)** tab to configure the export parameters for the monthly attendance data.

The user can now map the Leave name to the Column name of the exported Excel file. Click **Add** button to add a new leave to export and the following screen appears.

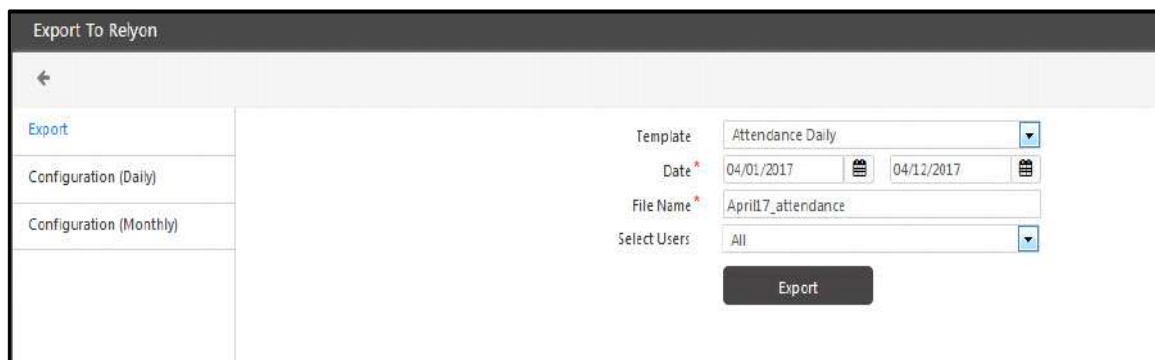

- Select the **Leave** from the picklist and specify the **Output Code** for the leave.
- Click OK to save the code mapping of leaves.
- Define all the applicable leaves to be exported and click **Save button** once done.

## Export

Once the daily and monthly configurations for the export are done, data can be exported to Relyon.

To export data to relyon, go to **Admin > System Utilities > Third Party Export > Export to Relyon > Export** tab and the following screen appears.

- **Template:** Select an export template as Attendance Daily or Attendance Monthly.
- **Date:** Select the date range in the given fields, for which the data is to be exported.
- **File Name:** Specify a filename for the exported data file.
- **Select Users:** Select single or multiple users whose data is to be exported based on filter options of:
  - User Wise
  - Group Wise

- All
- Click the **Export** button. The system will prompt the user to open or save the file. The exported file is shown as below.

A	B	C	D	E

## Export to IDS

This functionality enables the COSEC system to export attendance data in a flat line sequential file format which can be recognized and imported by the IDS application.

In order to configure the parameters for exporting data, go to **Admin > System Utilities > Third Party Export > Export to IDS > Configuration** and the following page appears.

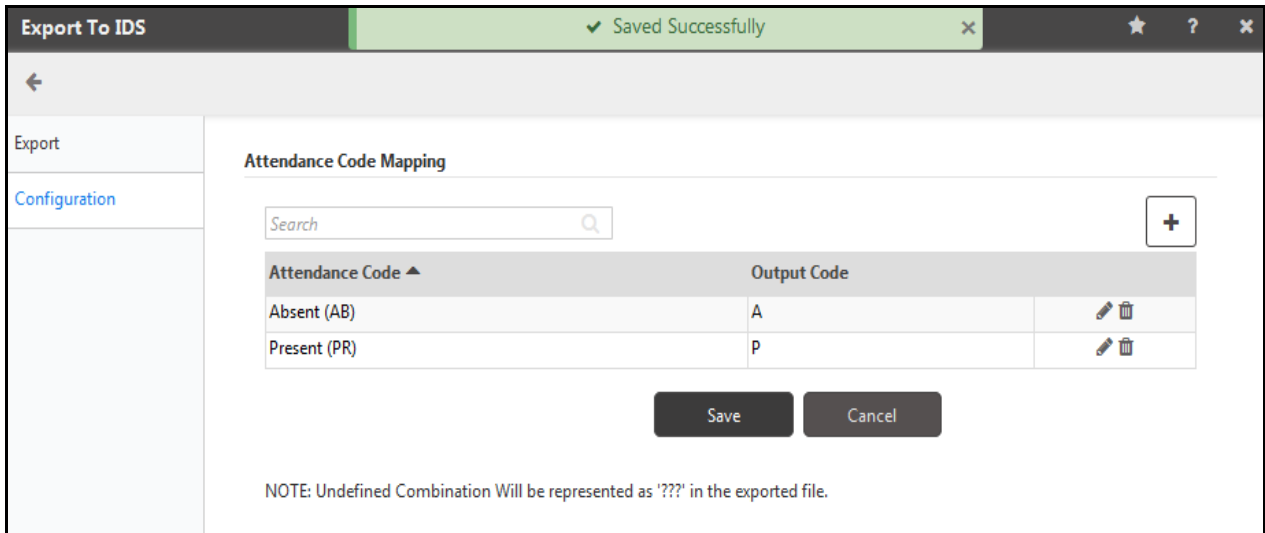

This tab enables the user to map the Attendance Code of the COSEC application to an Output Code as per the site requirements.

Click **Add**  button to add a new leave to export and the following screen appears.

**Attendance Code:** Select the **Attendance Code** from the dropdown list.

**Output Code:** Enter an Output Code to map against the **Attendance Code** (e.g. “P” can be the output code defined for “Present”).

Click on  icon to save the mapping. The defined mapping code appears in the bottom grid as shown below.

Export To IDS

Export

Click the **Export** button. The system prompts to browse to the folder path where the specified file is to be saved. The filename is automatically generated by the system as per the following format:

**PYATYYMM.DAT** (where YY stands for Year and MM stands for month).

The Exported File will display the user's Attendance Data in the following format.

The file generated contains the comma separated values in the sequence: **User ID**, Date in **YYYYMMDD** format, **Output Code**, 1/ 0.5 (Full Day/Half day).

For the better understanding, consider the following example and the screenshot above.

**Example1:**

**1782,20170401,A,1** - This value denotes that the user with ID:**1782** on Date: 1st April 2017 (**20170401**) was Absent (**A**) for the full day (**1**).

**Example2:**

**1782,20170404,P,1** - This value denotes that the user with ID:**1782** on Date: 1st April 2017 (**20170401**) was Present (**P**) for the full day (**1**).

**Example3:**

**1782,20170405,P,0.5**  
**1782,20170405,A,0.5**

The above two values are generated for the same day (**20170405**), as the user was Present (**P**) in the first half (**0.5**) and Absent (**A**) in the second Half (**0.5**).

**Example4:**

**1782,20170402,???,1** - In this value, "???" denotes that the Out put Code has not been mapped with the Attendance Code in the **Configuration** tab.

# Scheduling Tasks/Reports

---

Scheduling refers to the process of setting up certain functions on the COSEC system to take place automatically at a scheduled time, without the need of manual intervention.

The *Scheduler* option in the COSEC application enables the administrator to perform the following functions:

- [“Scheduling Tasks”](#)
- [“Scheduling Reports”](#)
- [“Scheduling Data Export”](#)

To view a log of all scheduled reports/data exports/tasks and their status for a specific period, go to **Admin > Views/Logs > Scheduler Log**. For more information on generating such logs, refer to [“Scheduling Tasks”](#).

*The Alert Service must be running to run schedulers.*

## Scheduling Tasks

The *Task Scheduler* functionality in the COSEC Application enables the system to be scheduled for performing certain pre-defined tasks. Some of these tasks are as follows:

- Periodic database backup.
- Running the monthly schedule process on the scheduled day of the month.
- Running the monthly attendance process on the scheduled day of the month.
- Crediting leaves to user account on the scheduled day of the month.
- Configuring actions related to User relieving process like revoking devices.
- Cafeteria Account Recharge and Payment Process
- Continuous Absent/Presence check
- Delete Unidentified Faces
- Visitor Pass Surrender
- Delete/de-activate Temporary User/Worker as well as convert Temporary User/Worker to Normal User/Worker etc.

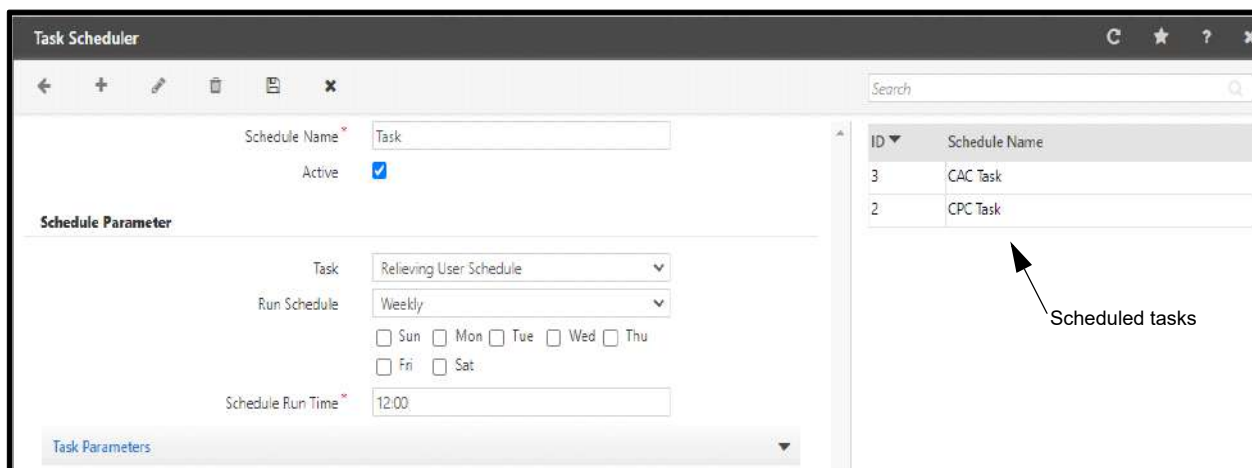

*If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.*

## Configuring Task Scheduler

To schedule a task,

Click **Admin** module > **System Utilities** > **Task Scheduler**.

The screenshot shows the 'Task Scheduler' window. On the left, the 'Schedule Name' field is set to 'Task', and the 'Active' checkbox is checked. Under the 'Schedule Parameter' section, the 'Task' dropdown is set to 'Relieving User Schedule', 'Run Schedule' is 'Weekly', and 'Schedule Run Time' is '12:00'. On the right, a table lists scheduled tasks:

ID	Schedule Name
3	CAC Task
2	CPC Task

An arrow points to the 'CPC Task' entry with the label 'Scheduled tasks'.

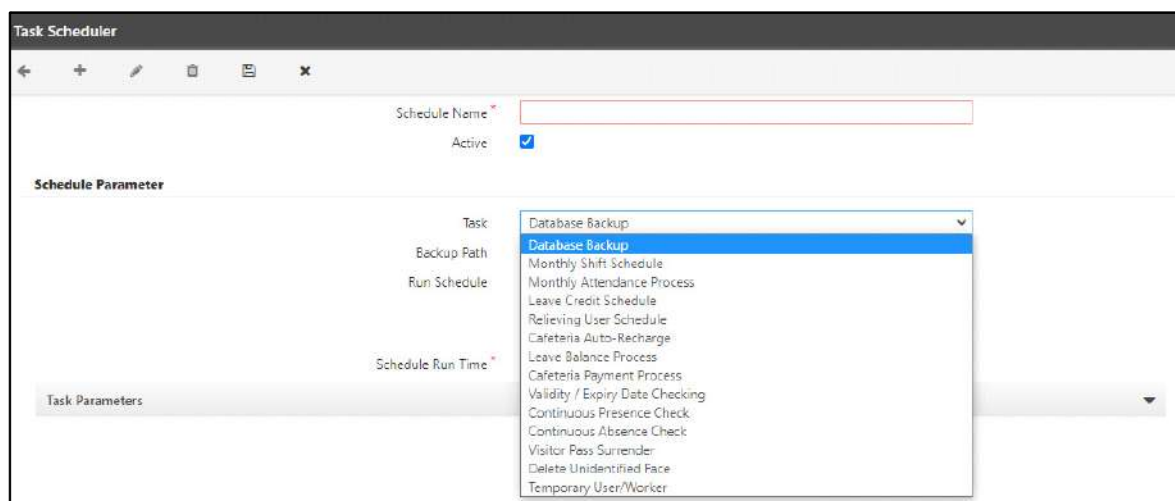

The page displays configurations on the left hand side and to the right is a grid containing scheduled tasks.

- **Schedule Name:** Enter a unique name for the new task schedule to be defined.
- **Active:** Select this check-box to activate the scheduler.

### Schedule Parameter

This section enables you to set the schedule of the desired task.

- **Task:** Select a task from the dropdown list for which you wish to run the scheduler.

The screenshot shows the 'Task Scheduler' window with the 'Task' dropdown menu open. The menu lists the following tasks: Database Backup, Monthly Shift Schedule, Monthly Attendance Process, Leave Credit Schedule, Relieving User Schedule, Cafeteria Auto-Recharge, Leave Balance Process, Cafeteria Payment Process, Validity / Expiry Date Checking, Continuous Presence Check, Continuous Absence Check, Visitor Pass Surrender, Delete Unidentified Face, and Temporary User/Worker. The 'Database Backup' task is currently selected.

- **Run Schedule:** Select the days or months to run the schedule from the drop-down.
- If **Weekly** is selected, then select the check boxes of desired days.

Run Schedule

Weekly

☐ Sun
☐ Mon
☐ Tue
☐ Wed
☐ Thu
  
☐ Fri
☐ Sat

- If **Monthly** is selected, then select the day of the month for which the task is to be scheduled.

Task Parameters

Execute Relieving Process

Process

De-activate User

Revoke Assigned Devices

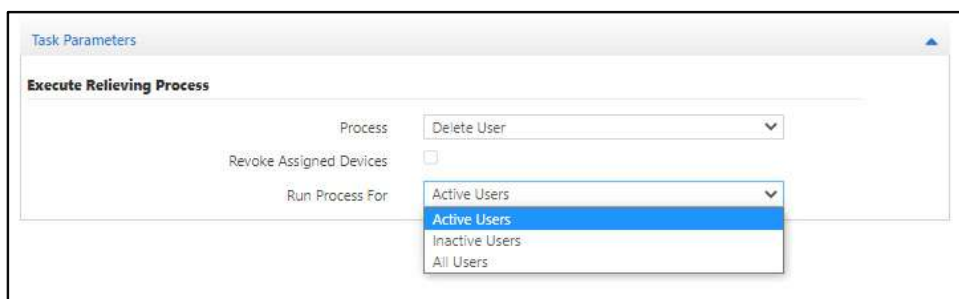

De-activate User

Configure the following for Relieving User Schedule under Execute Relieving Process:

## Execute Relieving Process

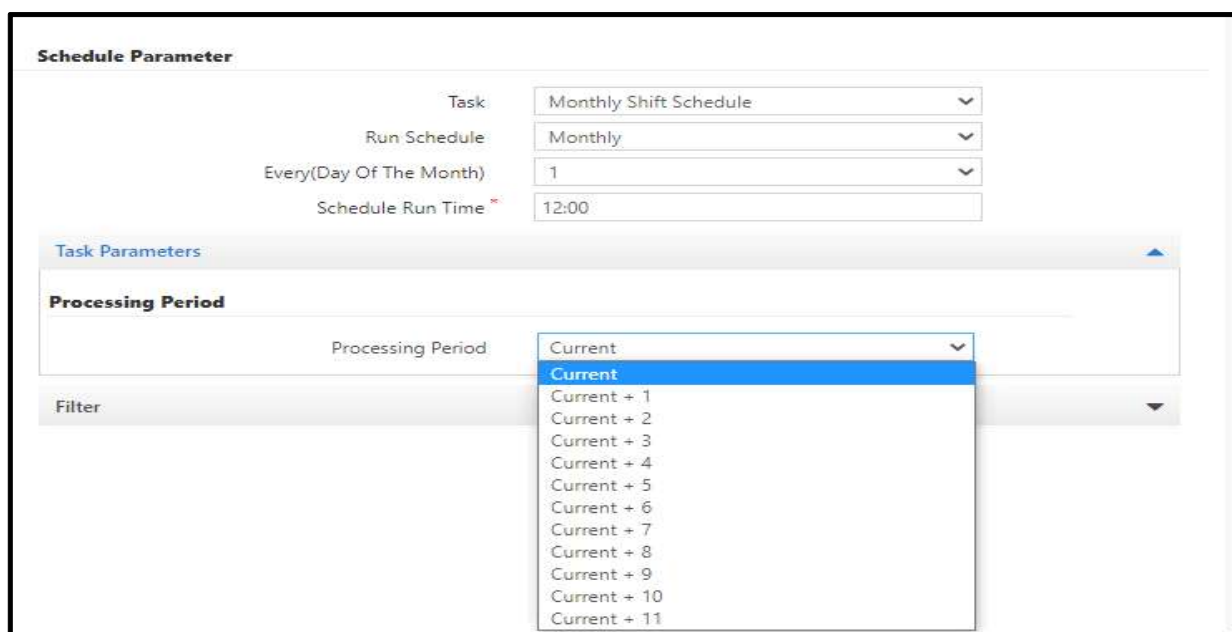

- **Process:** Select the desired process which you wish to execute — **De-activate User** or **Delete User**.
- **Revoke Assigned Device:** If you select **De-activate User**, select this check box to enable.
- **Run Process For:** If you select **Delete User**, select the desired users — Active, Inactive, All — for whom you wish to run this process.

If the user's relieving date is before the schedule run time then user will be relieved, that is, de-activated and the devices which were assigned to him/her will be revoked. For example, User relieving date is entered in his profile as 5th Feb 2023, and relieving schedule is run on 6th Feb 2023; then user will be relieved.

- Click **Save** to save the task scheduler configuration. The created scheduled appears in the grid on the right hand side.

## For Schedule Parameter: Monthly Shift Schedule

- **Processing Period:** Select the desired option— Current, Current +1, Current +2 etc.— from the drop-down list.  
**For example:** If Current month is June 2022, Processing Period selected is Current +3, then monthly schedule for September 2022 will run on 1st Sept at 12 pm.

- **Filter:** Click the Filter panel and configure the following:
- **Select Users:** Select the desired option — **User Wise**, **Group Wise**, **All**.

If you select **User Wise**, click the pick-list to select the desired user.

The screenshot shows the 'Filter' panel with the 'Select Users' dropdown set to 'User Wise'. Below it, the 'User\*' section has two input fields: 'ID' and 'Name', each with a pick-list icon to its right.

If you select **Group Wise**, select the desired type of group from the drop-down list provided.

The screenshot shows the 'Filter' panel with the 'Select Users' dropdown set to 'Group Wise'. Below it, the 'Select Group' dropdown is set to 'Organization'. Under the 'Organization\*' section, there are two input fields: 'ID' and 'Name', each with a pick-list icon to its right.

As per the selection of the group, select the particular group's name from the pick-list provided.

For example, If the type of Group selected is Organization, then select any organization's name and ID from the picklist.

The screenshot shows the 'Filter' panel with the 'Select Users' dropdown set to 'Group Wise' and the 'Select Group' dropdown set to 'Organization'. The 'Organization\*' section is expanded, showing a list of options: Organization (highlighted), Branch, Department, Designation, Section, Category, Grade, Custom Group 1, Custom Group 2, and Custom Group 3.

*The Filter parameter is same as the Monthly Shift Schedule for all the Tasks available in the drop-down list.*

*Filter Parameter is not available for Relieving User Schedule, Validity/Expiry Date Checking and Visitor Pass.*

### For Schedule Parameter: For Monthly Attendance Process

The screenshot shows a web-based configuration interface for the 'Monthly Attendance Process'. The main section is titled 'Schedule Parameter' and contains four dropdown menus: 'Task' (set to 'Monthly Attendance Process'), 'Run Schedule' (set to 'Monthly'), 'Every(Day Of The Month)' (set to '1'), and 'Schedule Run Time' (set to 'HH:MM'). Below this is a 'Task Parameters' section with a checkbox for 'Send Alert Message to Users' (unchecked). Underneath is a 'Processing Period' section with a dropdown menu set to 'Previous'. At the bottom is a 'Filter' section with a dropdown arrow.

- **Send Alert Message to Users:** Select the check box to send alert message to users while processing their monthly attendance.
- **Processing Period:** Select the desired period — Previous, Current — to perform the task.
- **Filter:** Click the Filter panel and configure the following:
  - **Select Users:** Select the desired option — **User Wise, Group Wise, All.**

If you select **User Wise**, click the picklist to select the desired user.

You can also delete the desired User. Click **Delete** of the respective user.

If you select **Group Wise**, select the desired type of group from the drop-down list provided. As per the selection of the group, select the particular group's name from the pick-list provided.

For example, If the type of Group selected is Organization, then select any organization's name and ID from the picklist.

The selected options appears in the grid.

The screenshot shows a web interface titled "Send Report Of". It includes several input fields: "Select Users" (set to "Group Wise"), "Select Group" (set to "Organization"), and "Organization" (with sub-fields for "ID" and "Name"). Below these is a search bar. A table displays a list of organizations:

ID	Name	Group	
1	MATRIX COMSEC PVT. LTD.	Organization	
2	SAMARTH	Organization	
3	AVDHOOT	Organization	

At the bottom, there is a "Generate Export for" dropdown menu currently set to "Active Users".

You can also delete particular group. Click **Delete** of the respective group.

If you select All, then all users will be selected.

### For Schedule Parameter: Validity/Expiry Date Checking

The screenshot shows the "Schedule Parameter" configuration window. It includes the following settings:

- Task:** Validity / Expiry Date Checking
- Run Schedule:** Weekly
- Schedule Run Time:** 12:00
- Task Parameters:**
  - Execute Relieving Process:**
    - Check Fields:** A list with checkboxes for "Visa", "Driving License", and "Passport", all of which are checked.
    - Process:** A dropdown menu with options "De-activate User", "De-activate User", and "Delete User". The "Delete User" option is currently selected.
    - Revoke Assigned Devices:** A checkbox that is currently unchecked.

### Execute Relieving Process

- **Check Fields:** Select the check boxes of the desired fields that you wish to check for User's ID Proof such as **Visa**, **Driving License**, **Passport**. Custom Fields configured with Date as type will also be visible here. To know more about Custom Fields, refer to ["Custom Fields"](#) in ["Defining Global Policies"](#).
- **Process:** Select the desired process which you wish to execute — **De-activate User** or **Delete User**.
- **Revoke Assigned Device:** If you select **De-activate User**, select this check box to enable and to revoke the devices assigned to these users.

- **Run Process For:** If you select **Delete User**, select the desired users — Active, Inactive, All — for whom you wish to run this process.
- **Filter:** Click the Filter panel and configure the following:
  - **Select Users:** Select the desired option — **User Wise**, **Group Wise**, **All**.

Search

User ID ▲	Name
1	SALIM ANSARI
10	RAJENDRA GOSWAMI

Generate Export For: Active Users

You can also delete the desired User. Click **Delete**  of the respective user.

If you select **Group Wise**, select the desired type of group from the drop-down list provided. As per the selection of the group, select the particular group's name from the pick-list provided.

For example, If the type of Group selected is Organization, then select any organization's name and ID from the picklist.

The selected options appears in the grid.

The 'Filter' window contains the following elements:

- Select Users:** A dropdown menu set to 'Group Wise'.
- Select Group:** A dropdown menu set to 'Organization'.
- Organization:** Two input fields for 'ID' and 'Name', with a search icon.
- Search:** A search bar with a magnifying glass icon.
- Group Table:** A table with columns 'ID', 'Name', and 'Group'. It contains one row: ID 1, Name MATRIX COMSEC PVT. LTD., Group Organization. There is a trash icon next to the 'Group' column header.
- Select Shift:** A dropdown menu.
- Shift Table:** A table with columns 'Shift ID' and 'Shift Name'. It contains one row: Shift ID 10, Shift Name GENERAL 9 30 TO 7 00. There is a trash icon next to the 'Shift Name' column header.

You can also delete particular group. Click **Delete**  of the respective group.

If you select **All**, then all users will be selected.

- **Select Shift:** You can select particulars shifts or all the shifts at once.

Click the **Select Shifts** picklist. The **Picklist For Shift Masters** pop-up appears.

The 'Picklist For Shift Masters' window displays the following information:

- Total Selected:** 0 Records
- Search:** A search bar with a magnifying glass icon.
- Show Selected:** A blue link.
- Select All:** A checkbox.
- Shifts Table:** A table with columns: SFTID, SFTName, SFTSTTime, SFTEDTime, BRKSTTime, BRKEDTime. It lists 12 shifts (IDs 10 through AS).
- Footer:** '1 - 10 of 60 records' and a pagination control showing '1' as the current page.
- Buttons:** 'OK' and 'Cancel' buttons at the bottom.

To select particular shifts, select the check boxes of the desired shifts.

**OR**

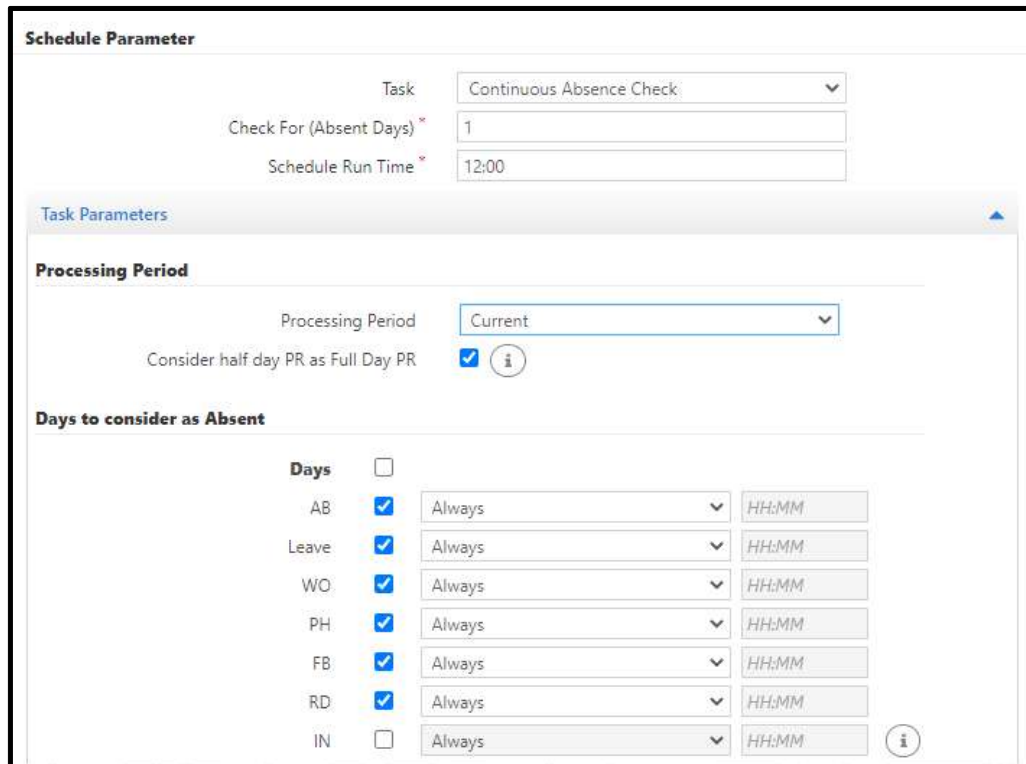

To select all the shifts at once, select the Select All check box.

The selected shifts appear in the grid.

You can also delete particular shifts. Click **Delete**  of the respective shift.

For example: If you select PH from the 'Consider Work Hours For Full Day Present', and set the parameters as 'Custom Hours' which is defined as "03:00" which means, by attending 3:00 hours on a Public Holiday will be considered as a Full Day Present.

#### For Schedule Parameter: Continuous Absence Check

The screenshot shows the 'Schedule Parameter' configuration window. At the top, the 'Task' is set to 'Continuous Absence Check'. Below it, 'Check For (Absent Days)' is set to '1' and 'Schedule Run Time' is set to '12:00'. The 'Task Parameters' section is expanded, showing 'Processing Period' set to 'Current' and 'Consider half day PR as Full Day PR' checked. The 'Days to consider as Absent' section contains a table with columns for 'Days', a checkbox, a dropdown menu, and an 'HH:MM' time field.

Days	<input type="checkbox"/>		HH:MM
AB	<input checked="" type="checkbox"/>	Always	HH:MM
Leave	<input checked="" type="checkbox"/>	Always	HH:MM
WO	<input checked="" type="checkbox"/>	Always	HH:MM
PH	<input checked="" type="checkbox"/>	Always	HH:MM
FB	<input checked="" type="checkbox"/>	Always	HH:MM
RD	<input checked="" type="checkbox"/>	Always	HH:MM
IN	<input type="checkbox"/>	Always	HH:MM

The configuration are similar to continuous Presence check. For details refer to ["For Schedule Parameter: Continuous Presence Check"](#).

## For Schedule Parameter: Visitor Pass Surrender

The screenshot shows the 'Task Scheduler' window. At the top, there's a toolbar with icons for back, add, edit, delete, save, and close. Below the toolbar, the 'Schedule Name' is 'Pass Surrender' and the 'Active' checkbox is checked. The 'Schedule Parameter' section contains a 'Task' dropdown set to 'Visitor Pass Surrender', a 'Run Schedule' dropdown set to 'Weekly', and a row of checkboxes for days of the week: Sun (checked), Mon, Tue, Wed, Thu, Fri, and Sat. Below this, the 'Schedule Run Time' is set to '12:00'. The 'Task Parameters' section at the bottom has a 'Duration After Pass Expiry' field set to '03:00'.

This task will surrender the pass for those visitors by default by system whose visit has ended and they have yet to checkout on their own through visitor portal or via security gate.

### Schedule Parameter

- **Run Schedule:** Select the desired option — **Weekly, Monthly** — to run this scheduled task.
- **Schedule Run Time:** Enter the desired time in HH:MM format at which you wish this scheduled task must be executed.

### Task Parameter

- **Duration After Pass Expiry:** Set the time duration after Visitor Pass expiry which will be considered for auto surrendering of the Visitor Pass.

This time will be a buffer to provide some time to the visitor to submit the pass. If the visitor still doesn't submit then this scheduler will surrender the pass.

*For example 1:*

If a Visitor's Visit time is from 9:00 AM to 11:00 AM.

Scheduled Run Time: 12:00 PM

Duration After Pass Expiry: 03:00 Hours

Now when the visitor checks out at 11:00 AM through Visitor portal or via Security Portal, Visitor Pass will be surrendered.

*For example 2:*

If a Visitor's Visit time is from 9:00 PM to 11:00 PM.

Scheduled Run Time: 12:00 PM

Duration After Pass Expiry: 03:00 Hours

In this case, if the Visitor due to any reason hasn't checked out even after 11:00 PM, then the system will wait for 03 Hours as set in Duration After Pass Expiry and if still the Visitor doesn't checkout, the system will auto surrender the particular Visitor's Pass.

#### For Schedule Parameter: Delete Unidentified Faces

The screenshot shows the 'Schedule Parameter' window. The 'Task' dropdown is set to 'Delete Unidentified Face'. The 'Run Schedule' dropdown is set to 'Weekly'. Below this, there are checkboxes for days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat. The 'Schedule Run Time' field is set to 'HH:MM'. At the bottom, there is a 'Task Parameters' section with a 'Captured Before' field set to '1-99' and a 'Days' label.

If you have enabled the **Capture Face of Unidentified User** feature then this task will delete the unidentified faces after the defined time to avoid storage of excess data in the database.

#### Schedule Parameter

- **Run Schedule:** Select the desired option — **Weekly, Monthly** — to run this scheduled task.
- **Schedule Run Time:** Enter the desired time in HH:MM format at which you wish this scheduled task must be executed.

#### Task Parameter

- **Captured Before:** Enter the number of days from 1 to 99. The faces captured before the specified days will be deleted as per the scheduled task.

#### For Schedule Parameter: Temporary User/Worker

The screenshot shows the 'Schedule Parameter' window. The 'Task' dropdown is set to 'Temporary User/Worker'. The 'Run Schedule' dropdown is set to 'Weekly'. Below this, there are checkboxes for days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat. The 'Schedule Run Time' field is set to 'HH:MM'. At the bottom, there is a 'Task Parameters' section with a 'Process' dropdown set to 'Make User' and a 'Run Process For' dropdown set to 'Active Temporary Users'.

### ***Schedule Parameter***

- **Run Schedule:** Select the desired option — **Weekly, Monthly** — to run this scheduled task.
- **Schedule Run Time:** Enter the desired time in HH:MM format at which you wish this scheduled task must be executed.

### ***Task Parameters***

- **Process:** Select the process which you wish to execute — Delete Temporary User/Worker, De-activate Temporary User/Worker, Make User, Make Worker.
- **Run Process For:** Select the desired option as per the Process selected.
  - If you have selected **Delete Temporary User/Worker** as the **Process**, the **Run Process For** options are Active Temporary Users, Active Temporary Workers, Inactive Temporary Users, Inactive Temporary Worker, All Temporary Users, All Temporary Workers.
  - If you have selected **De-activate Temporary User/Worker** as the **Process**, the **Run Process For** options are All Temporary Users, All Temporary Workers.
  - If you have selected **Make User** as the **Process**, the **Run Process For** options are All Temporary Users, Active Temporary Users, Inactive Temporary Users.
  - If you have selected **Make Worker** as the **Process**, the **Run Process For** options are All Temporary Workers, Active Temporary Workers, Inactive Temporary Workers.

## Scheduling Reports

The *Report Scheduler* functionality enables e-mail reports to be sent to selected users as per configured schedules. The system uses the *COSEC Alerts* service settings to send the e-mails.

To schedule a report, select **Admin module > System Utilities > Report Scheduler** and the following screen will appear.

The screenshot shows the 'Report Scheduler' web application. The interface includes a top navigation bar with a search field and a toolbar with icons for back, add, edit, delete, and print. The main content area is divided into two sections. The left section contains configuration fields: 'Scheduler Type' (set to 'Reports'), 'Schedule Name' (empty), 'Active' (checked), 'Module' (set to 'All'), 'Parent Menu' (set to 'All'), and 'Report' (set to 'Select Report'). Below these are sections for 'Send Email Notification' (with fields for 'Email ID', 'Email Address', 'Report Format' set to 'PDF', and 'Message' set to 'Email Body 500 (Chars)') and 'Schedule Parameter' (with 'Schedule Run Time' set to 'HH:MM' and 'Schedule Run Day' set to 'Weekly' with checkboxes for Mon, Tue, Wed, Thu, Fri, Sat, and Sun). The right section is a table with columns 'ID' and 'Schedule Name', currently displaying 'No Data'. At the bottom, there is a 'Report Parameters' section with a dropdown arrow.

Click the **New** button and provide the following parameters.

- **Scheduler Type:** Select the scheduler type as **Report** from the dropdown list.
- **Schedule Name:** Enter a unique name for the new report schedule to be defined.
- **Active:** Enable to activate the scheduler.
- **Module:** Select the module name from the dropdown list, for which this scheduler would apply. Select **All** if you desire to schedule reports of all the modules.
- **Parent Menu:** As per the selected module, the options (sub module) will be available into the dropdown list. Select the desired one of which the report is to be selected for schedule. If the **Module** selected is **All**, then select **All**, to schedule the report of all the sub modules.
- **Report:** Select a report type from the dropdown list, for which the schedule is assigned. This list is dependent on the **Module** selected.

Along with the existing options, the **Select All** check box is provided that allows you select all the options on all the pages at once. In the reports mentioned below the Select All check box is provided:

- Module (Leave Management) > Report (Leave Register) > Report Parameters > Select Leave (Selected)
- Module (Leave Management) > Report (Leave Application) > Report Parameters > Select Leave (Selected)
- Module (Visitor Management) > Report (Visitor History) > Report Parameters > Group by Selection > Station (Selected)
- Module (Devices) > Report (Device wise Event) > Report Parameters > Device Selection > Filter Device (Randomly)
- Module (Devices) > Report (Device wise Event) > Report Parameters > Device Selection > Filter Device (Device Group)

### Send Email Notification

This section offers the following options:

- **Send Report To:** Select the desired option from the given drop-down.
1. **Configured Email ID:** When Configured Email ID is set, then the report will be sent to the respective Email ID only.

Make sure you configure the desired **Email ID**.

- **Email ID:** If you have selected **Configured ID** as the **Send Report To** option, enter the email address of the recipient to whom the specific report is to be sent. In the event of multiple email ids, use a comma as the separator between the ids.

Report will be sent only to those recipients whose email address is already stored in the system database.

Under the **Filter** section:

- In **Send Report To**, select the desired option.
    - User Wise: Select the desired users from the picklist.
    - Group Wise: Select the desired groups from the picklist. The reports will be sent to the users within the group.
    - All
  - In **Generate Report For**, select the desired option
    - All Users
    - Active Users
    - Inactive Users
2. **Reporting In-Charge:** When Reporting In-Charge is set, then the report will be sent to the Reporting In-Charge of the user for whom this report is being generated.

You can send report to selected RIC users or selected RIC users within a group.

To set the desired option, under the **Filter** section in **Send Report To** select the desired option.

- User Wise: Select the desired RIC users from the picklist.

- **Group Wise:** Select the desired groups from the picklist. The reports will be sent to the RIC users within the group.

In case the Email ID of Reporting In-Charge is not available or is invalid, then the report will not be sent. Make sure the Reporting Group is configured for the user otherwise the report will not be sent.

3. **Assigned User Itself:** When Assigned User itself is set, then the report will be sent to respective user for whom the report is being generated.

You can send report to selected users or selected users within a group.

To set the desired option, under the **Filter** section in **Send Report To** select the desired option.

- **User Wise:** Select the desired users from the picklist.
- **Group Wise:** Select the desired groups from the picklist. The reports will be sent to the users within the group.
- **All**

In case the Email ID of the users is not available or is invalid, then the report will not be sent.

- **Report Format:** Select the format in which the report is to be mailed to the recipients in one of the three formats - PDF, XLS or CSV.
- **Message:** Enter relevant description regarding the report in the **Message** field with maximum 500 characters. The subject line for the scheduled reports will be as follows:

<Report Name>: Generated on - <schedule run date-time (dd/mmm/yyyy - hh:mm)>

### Schedule Parameter

This section enables the user to set the schedule of the reports or tasks.

The screenshot shows the 'Schedule Parameter' form. It has two main fields: 'Schedule Run Time' with a text input containing 'HH:MM' and a red asterisk, and 'Schedule Run Day' with a dropdown menu set to 'Weekly'. Below the dropdown are seven checkboxes for the days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat.

- **Schedule Run Time:** Specify the time at which you want the report to be generated.
- **Schedule Run Day:** You can schedule reports **Weekly** or **Monthly** or **Bi-weekly**.
  - For **Weekly** reports, you can select the days of the week.
  - For **Monthly**, you can select any day of the month.

The screenshot shows the 'Schedule Parameter' form with 'Monthly' selected in the 'Schedule Run Day' dropdown. The 'Every (Day Of the Month)' field is set to '1'.

- For **Bi-Weekly** reports, you can select a day of the week.as well select the desired week of the year.

**Schedule Parameter**

Schedule Run Time \*

Schedule Run Day

☒ Mon ☐ Tue ☐ Wed ☐ Thu  
☐ Fri ☐ Sat ☐ Sun

Week of the Year  ⓘ

- In **Week of the Year** select the desired option as **Odd Weeks** or **Even Weeks**.

## Report Parameters

This section lists some additional parameters for the report scheduler configuration, depending on the type of report scheduled.

- The **Processing Period** enables the administrator to set the time period of the selected report. Some reports will have only the **For Date** option while others will have the **Start Date** and the **End Date** options.
- **For Date:** Specify the day prior to the scheduled day for which the report is required. If report for current date of scheduled day is required then set the value as 0. If scheduled day is set as Friday and the number of days specified is 2 then system will send the report of Wednesday every Friday.
- **Start and End Date:** Specify the time period prior to the scheduled day for which the report is required. For reports relating to month wise data, specify the month prior to the scheduled month for which the report is required. If the number specified in this field is 1, then system will send report of the previous month.
- **Group By Selection:** Select the group from the **Group By** dropdown list for which the report is to be scheduled.
- **Format Selection:** Select the Select the desired Format from the dropdown list to generate the report. If you select Visitor History 1, the report will be generated without Visitor photo and if you select Visitor History 2, the report will be generated with Visitor photo.
- **Application Type Filter:** Select the **Application Type** from the dropdown list for which the report is to be scheduled.
- **List Selection:** Select the type of applications from the **Select** dropdown list for which the report is to be scheduled. One can select multiple applications.

The below figure illustrates the **Report Parameters** for an example, where a Leave Application report is being scheduled by a Leave Management module user:

For the customized report, the 'Processing Period' will include **Other Option** parameters (Filter) if the 'Optional Parameters' option is enabled in the *Report Configurations > Report Builder*.

The screenshot shows a 'Report Parameters' window. Under the 'Processing Period' header, there are fields for 'Start Day' (containing '1'), 'Day(s)', a 'Before' dropdown menu, and 'Scheduled Day'. Under the 'Other Option' header, there is a 'Filter' text area and a 'Filter Events' dropdown menu set to 'Both'.

*"Filter Events" option will available only for the report with Report Type = Events.*

For the detailed configuration of Other Option, [See "Example: Events Report Template placed in User module" on page 3067.](#)

## Filter

This section enables you to specify the users to whom the reports need to be sent. The users can be filtered based on individual users or users belonging to various groups as configured in the COSEC application.

Refer to ["Send Email Notification"](#) for more details.

Click the **Save** button to save the report schedule. All created report schedules are displayed in the list on the right hand side of the page.

*You must configure Email settings from **Email Configuration** page of **System Configuration** tab to send the Email notification.*

*The Access Control- Elevator Access Control Report requires Basic + ACS License.*

### Example: JPC module- Project Summary report scheduler

## Report Template

- **Continuous Absent Days:** Enter the minimum number of days for 'Absence' which is required to be counted as 'Continuous Absent Days'. Suppose, 3 days are specified, then the counting will be started and shown into the report only if user is absent for 3 or more days. The absence of less than 3 days will not be considered as Continuous Absent Days.

- **Select Shift:** Select the desired option — **All**, or **Shift Wise**.

Select **All**, if you want the report to be generated for all the Shifts. In case you require reports of particular shifts like Report of only General Shift or Report of Night Shift, then select the **Shift Wise** option. Multiple shifts can be selected from the picklist.

If you select **Shift Wise**, click the **Shift** picklist. The **Picklist for Shift Masters** pop-up appears. You can either select particular shifts or can select all the shifts at once.

To select particular shifts, select the check boxes of the desired shifts or to select all the shifts, select the **Select All** check box.

Click **OK**.

The selected shifts appear in the grid. You can also delete the desired shift. To do so, click **Delete**  of the respective shift.

- **Consider half day PR as full day PR:** Enable the check-box to consider a day as full day present even if the user is present for half day.

## Days to Consider as Absent

Enable the respective check-boxes for the days which should be consider as a Absent. Also select the required option from the dropdown list located besides the day column as shown below.

**Always:** Select the option to count the entire day as 'Absent'.

**Skip:** Select to Skip the day from counting of continuous absence.

**Shift Hours:** Select to check for assigned work hours of a user. If the work hours for the day are equal or greater than the assigned hours, then count as present else count the day in number of total continue absent days.

**Custom Hours:** Select and specify the custom work hours which is required to be completed on the day. If the work hours are equal or greater than the specified hours then, count as present else count the day in number of total continue absent days.

Configure the Filter tab and click on the save button to Save the scheduled report.

*Kindly consider below example for the report generation of Continuous Absence.*

Let consider below weekly attendance details of a User-1 for which the 'Continuous Absence' report is to be generated.

01/06/2020 - PR - PR  
02/06/2020 - PR - PR  
03/06/2020 - AB - AB  
04/06/2020 - PR - PR  
05/06/2020 - PR - PR

06/06/2020 - PR - PR  
07/06/2020 - WO - WO

The 'Schedule Run Time' is 20.00 hrs and 'Schedule Run Day'; Sunday is configured as shown below:

Continuous Presence For 1 Or More Days From 01/06/2020 To 07/06/2020

Run by: System Admin Date: 15/06/2020 17:05

Sr No	User ID	Name	From	To	No. of Days
1	1062	Mant User-1	04/06/2020	06/06/2020	3
2	1062	Mant User-1	01/06/2020	02/06/2020	2

### Example: Visitor History Report

Select “**Visitor Management**” as Module and “**Visitor History**” as Report.

Scheduler Type	Reports
Schedule Name *	Visitor Report
Active	<input checked="" type="checkbox"/>
Module	Visitor Management
Parent Menu	Visitor Summary
Report	Visitor History

This Report parameters will change according to **Report Type**.

Report Parameters	
<b>Processing Period</b>	
Start Days Before Scheduled Day *	1
End Days Before Scheduled Day *	1
<b>Group by Selection</b>	
Group By	Organization
Group Needed In Report	<input type="checkbox"/>
Station	All
<b>Report Template</b>	
Format Selection	Visitor History 1

Enabling the check-box “**Group Needed In Report**” will display the name for that particular group in the generated report.

Then Fill up the filter:

**Select Users:** Select All or User Wise depending on your requirement.

**User:** If you select “Select Users : User Wise”, then you have to mention that particular user.

**Generate Report For:** Select for whom you want to generate the report.

Filter	
<b>Send Report Of</b>	
Select Users	User Wise
User *	ID <input type="text"/> Name <input type="text"/>
Generate Report For	All Users

Click on **Save icon** after you are done with the configuration.

## Scheduling Data Export

This scheduler enables data export templates to be sent by e-mail to selected users as per configured schedules. The system uses the *COSEC Alerts* service settings to send the e-mails.

To schedule a data export, go to **Report Scheduler** page and click the **New** button.

ID	Schedule Name
5	Attendance Report
2	Monthly OT Report
1	Leave Application Schedule

- **Scheduler Type:** Select the scheduler type as **Export Data** from the dropdown list.
- **Schedule Name:** Enter a unique name for the new report schedule to be defined.
- **Active:** Enable to activate the scheduler.
- **Template:** Select template from the dropdown list based on which the report is to be exported.
- Setup the required e-mail and schedule configurations for the scheduler. Refer “Scheduling Reports”
- The **Export Parameters** section for data export scheduler will vary depending on the template selected. This section primarily defines the time range for which the data must be exported and the export file details.

For daily data, specify the number of days prior to the Scheduled Day for the **Start Date** as well as the **End Date** as shown. Here, the data from 1 day before the scheduled date to 1 day1s before the scheduled date is specified for export:

Export Parameters

Start Date (Days Before Scheduled Day) \*

1

End Date (Days Before Scheduled Day) \*

1

File Format

XLS

Filename \*

Export Data

For month-wise data, specify the month before the scheduled day for which data must be exported. If the number specified in this field is 1, then system will send data of the previous month.

- **File Format:** Specify the export file format.
- **Filename:** Specify a name for the file to be exported.

*If number of rows and columns are found to be more than 65535 and 255 respectively then Export Data would generate .xlsx file.*

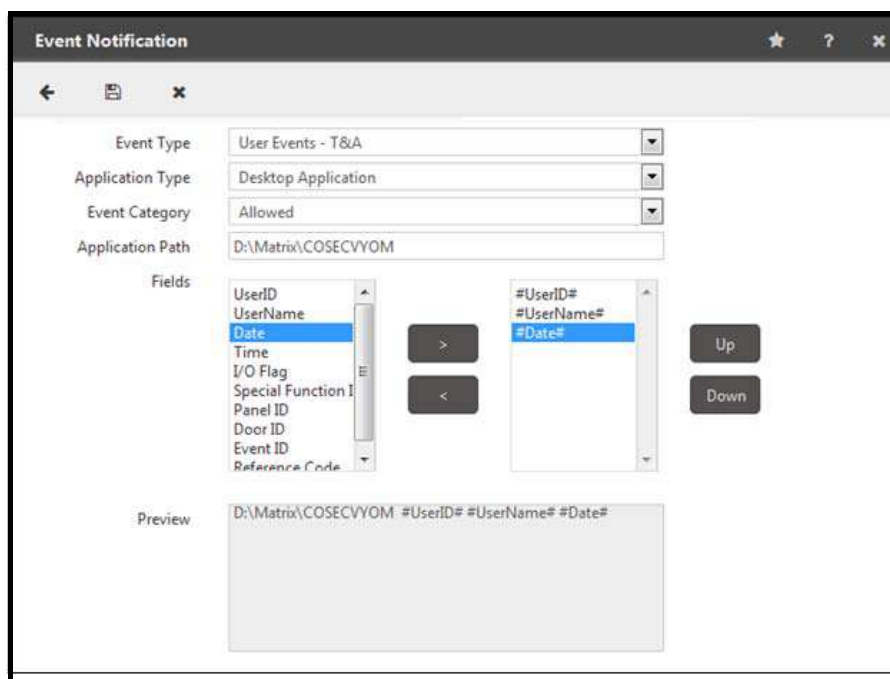

- In the **Filter** section, specify the users whose data is to be exported (if required).
- Click the **Save** button to save the schedule.

# Event Notification

The Event Notification feature enables third party application to access and display the COSEC events which is only displayed in COSEC monitor.

It enables to pass pre-defined fields from live events coming from the COSEC Panel-lite and door controllers to an external application, which in turn can place it in another database. The external application could be any third party desktop or a web application.

To access this functionality, Go to **Admin> System Utilities > Event Notification** and the following screen appears.

- **Event Type:** Select the type of event from the dropdown list. The options available are:
  - User Events - T&A (*Available only with the Time & Attendance add on module*)
  - User Events - All
- **Application Type:** Select the Application Type from the dropdown list.
- **Event Category:** Select the **Event Category** from the drop down list. The options available are: Allowed, Denied and Allowed+Denied.
- **Application Path:** Specify the application path in the following formats:
  - For Desktop application: **C:\Program Files\XYZ\XYZ.exe**
  - For Web Application: **http://localhost/XYZ/default.aspx**

The desktop application has to incorporate command line arguments while in the case of the web application query strings need to be incorporated in the external application.

*The application path is the path of third party application as required by the customer.*

- **Fields:** The grid displays the fields whose live values are available for export as shown.

The screenshot shows a user interface for selecting fields for export. On the left, under the heading 'Fields', is a scrollable list of available fields: UserID, UserName, Date, Time, I/O Flag, Special Function ID, Panel ID, Door ID, Event ID, and Reference Code. A right-pointing arrow button is positioned between the two lists. On the right, there is a scrollable list of selected fields, which currently contains '#UserName#' and '#UserID#'. Below this list are 'Up' and 'Down' buttons to adjust the order of the selected fields.

Select the fields one at a time and click on the right arrow button. The selected fields will be visible on the right grid as shown above. Click on the **Up** or **Down** button to change the order of the selected fields.

Refer the “[Field Values](#)” section of this topic for the values which will be sent for the various user events.

- Click **Save** on the menu bar to commit the changes. The administrator needs to ensure that the COSEC Monitor application is running for this functionality to work. In order to stop the exporting process the administrator needs to blank out the **Application Path** parameter from the page.

## Field Values

The export events option will send the following values based on the user event.

- **I/O Flag:** This flag represents the IN or OUT status. The following values can be sent:
  - 0 = Entry
  - 1 = Exit
- **Special Function ID:** The following special function code values will be sent based on the special function associated with the user event.

Special Function Name	Special Function Code
Official Work-IN Marking in T&A	1
Official Work-OUT Marking in T&A	2
Short Leave-IN Marking in T&A	3
Short Leave-OUT Marking in T&A	4
Regular - IN Marking in T&A	5
Regular - OUT Marking in T&A	6
Break End Marking in T&A	7
Break Start Marking in T&A	8
Over time - IN Marking in T&A	9
Over time - OUT Marking in T&A	10
Late -IN Allowed Marking in T&A	11
Early - OUT Allowed Marking in T&A	12
Access in Degrade Mode Marking	99
Smart Identification	98

Special Function Name	Special Function Code
e-Canteen	97

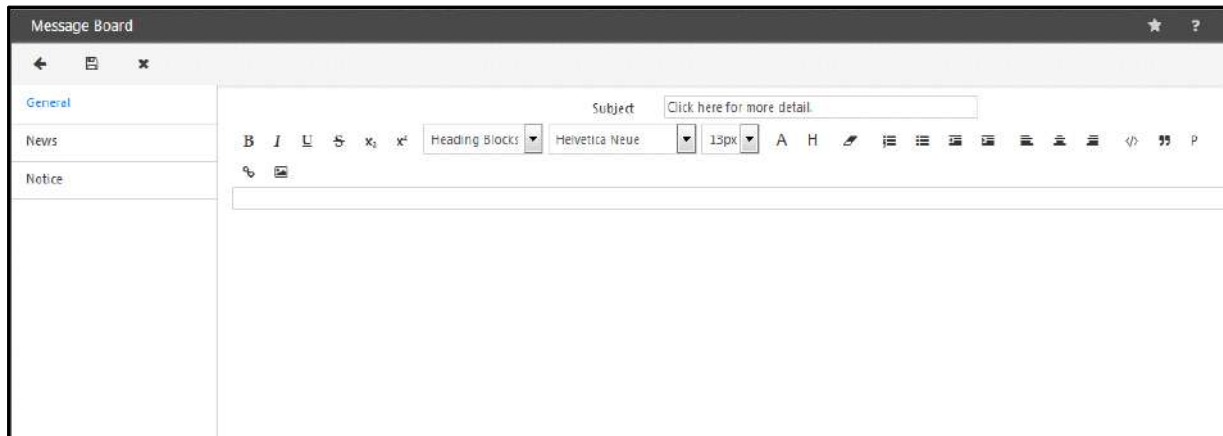

- **Event ID:** This value will depend on the User category as well as the type of user event as follows:

Event ID	Event Description
101	User Allowed
102	User Allowed - with Duress
103	User Allowed - Anti-Pass Back-soft
104	User Allowed - Dead-man Zone
105	User Allowed - Door Not open
151	User Denied - User Invalid
152	User Denied - Occupancy Control
153	User Denied - 2-Person Rule
154 '	User Denied - Time Out
155	User Denied - Visitor Escort Rule
156	User Denied - Anti-Pass Back
157	User Denied - Disabled User
158	User Denied - Blocked User
159	User Denied - First IN User
160	User Denied - DND Enabled
161	User denied - Control zone
162	User Denied - Door Lock
163	User Denied - Invalid Access Group

# Message Board

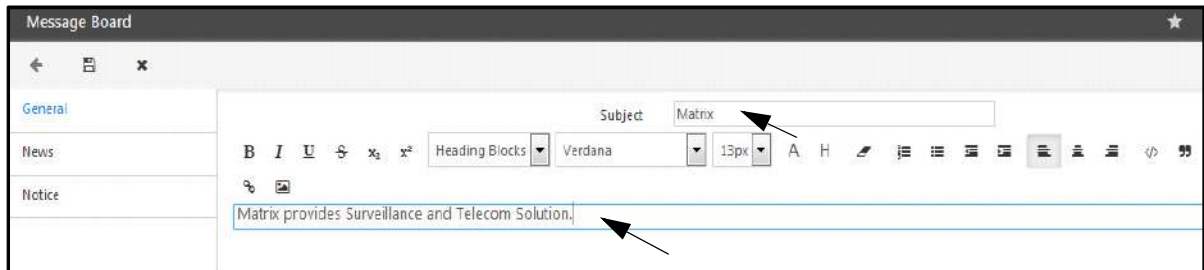

The Message board has been provided to enable the administrator to specify messages which should be displayed on the *Employee Self Service* application home page when ESS users login to the application.

To access this option, go to **Admin module > System Utilities > Message Board** and the following screen appears.

The page displays the following tabs:

- **General** - This tab allows to configure and display general messages of interest.
- **News** - This tab allows to configure and display latest news items.
- **Notice** - This tab allows to configure and display notices for all employees.

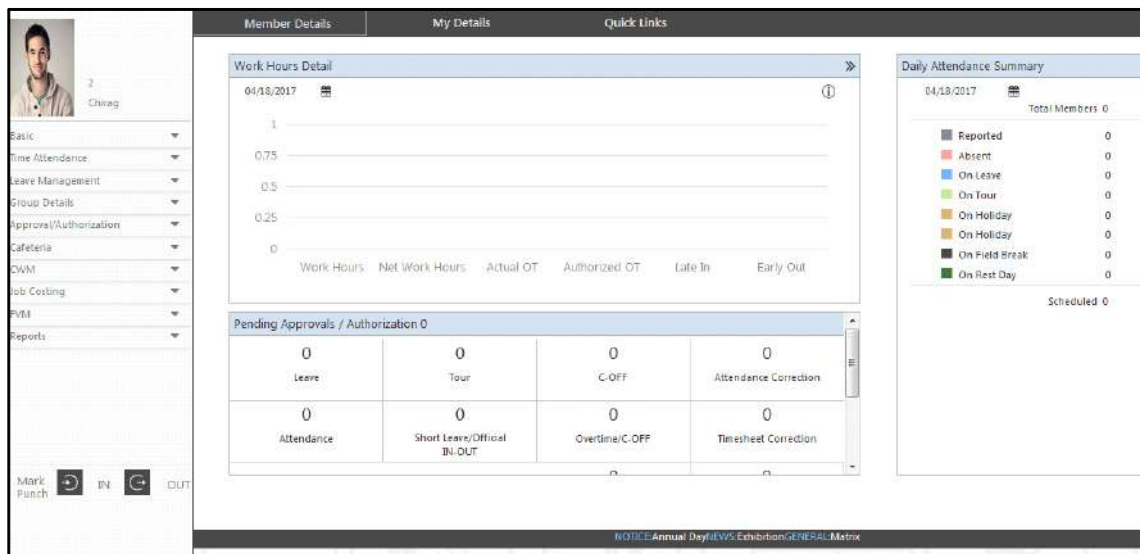

Select the appropriate tab based on the type of message to be configured and enter the message for the ESS users.

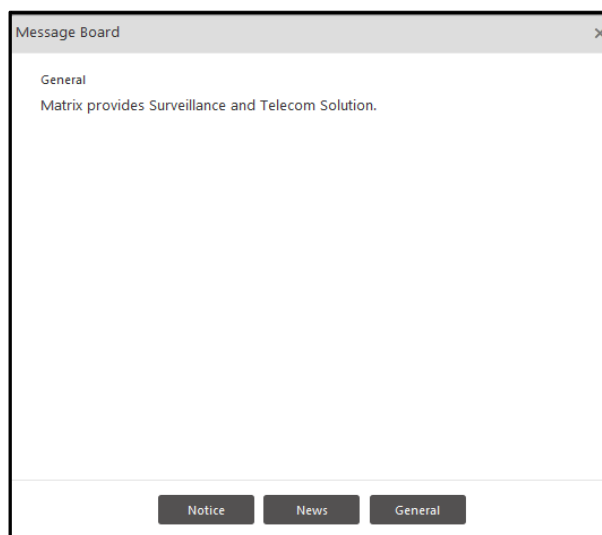

Enter the **Subject** and the related message in the box as shown above.

Click the **Save** button to save the entries.

The ESS user can view the **Notice**, **News** and **General** message by clicking on it on the scrolling information from the bottom of home page as shown below.

Click on General. The general message will be displayed as shown below.

You can click on Notice and News button to read the respective message.

# Manage Database

---

Manage Database allows the posting, retrieval and erasing of data from the database. The Post/Retrieve/Remove request is submitted in a queue which will be processed on server side in a parallel manner.

To access this functionality, go to **Admin Module > System Utilities > Manage Database** and the following screen appears.

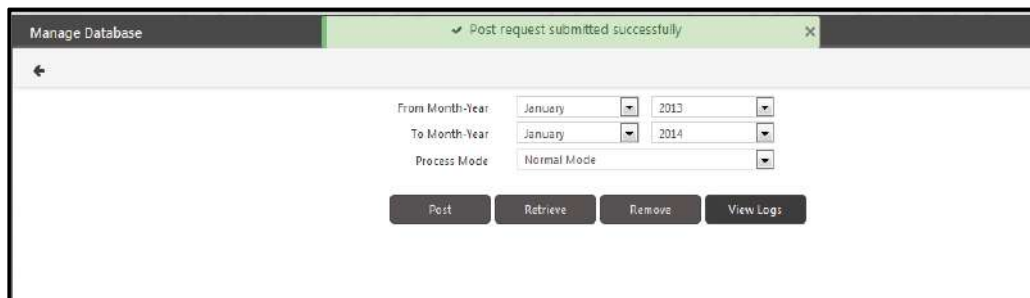

The screenshot shows the 'Manage Database' utility window. It features a header bar with the title 'Manage Database' and a back arrow icon. Below the header, there are three input fields: 'From Month-Year' with a dropdown menu set to 'January' and a year field set to '2013'; 'To Month-Year' with a dropdown menu set to 'January' and a year field set to '2014'; and 'Process Mode' with a dropdown menu set to 'Normal Mode'. At the bottom of the form, there are four buttons: 'Post', 'Retrieve', 'Remove', and 'View Logs'.

Select the **From month- year** as well as the **To month-year** whose data is to be posted. This functionality removes the transactions of the selected period from the current transaction table and posts it to another table thus reducing the load on the current transaction table.

Select the **Process Mode** as Normal mode or Advanced mode (overwrite destination).

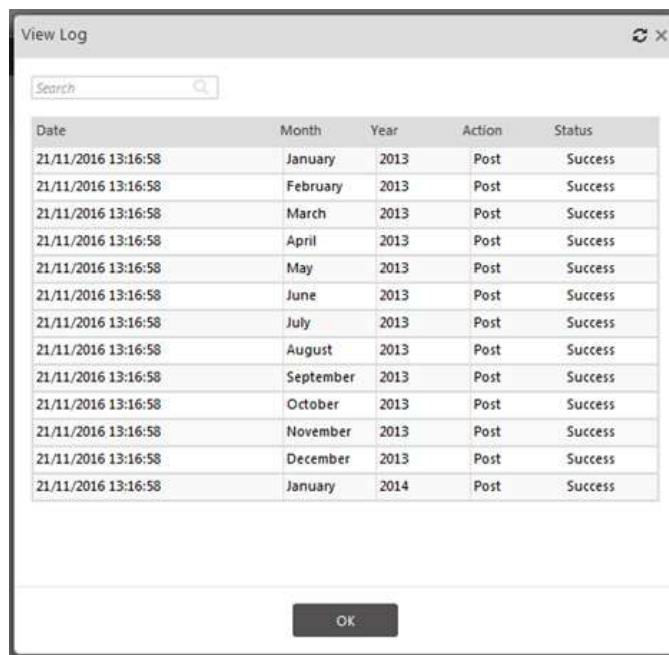

Click on the **Post** button. The utility will post the data to the backup table and will display the status in the bottom grid.

The Post request with log details is shown as below.

The screenshot shows the 'Manage Database' utility window after a successful post request. A green notification bar at the top displays the message 'Post request submitted successfully' with a close button. The form fields and buttons are identical to the previous screenshot, but the 'Post' button is now disabled.

Click on the **View Log** button to view the status of the transaction.

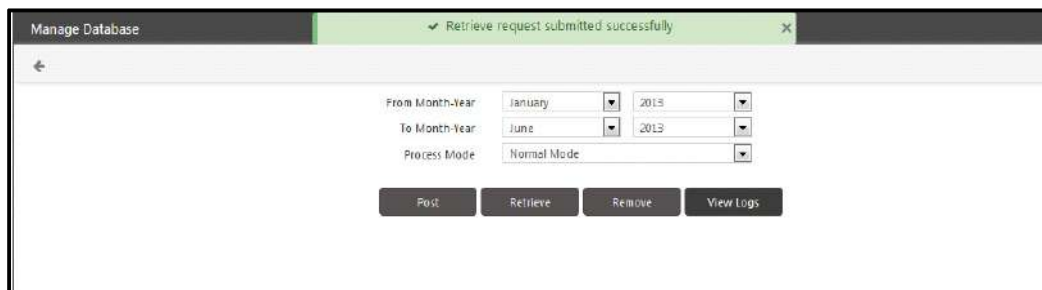

The View Log window displays a table with the following data:

Date	Month	Year	Action	Status
21/11/2016 13:16:58	January	2013	Post	Success
21/11/2016 13:16:58	February	2013	Post	Success
21/11/2016 13:16:58	March	2013	Post	Success
21/11/2016 13:16:58	April	2013	Post	Success
21/11/2016 13:16:58	May	2013	Post	Success
21/11/2016 13:16:58	June	2013	Post	Success
21/11/2016 13:16:58	July	2013	Post	Success
21/11/2016 13:16:58	August	2013	Post	Success
21/11/2016 13:16:58	September	2013	Post	Success
21/11/2016 13:16:58	October	2013	Post	Success
21/11/2016 13:16:58	November	2013	Post	Success
21/11/2016 13:16:58	December	2013	Post	Success
21/11/2016 13:16:58	January	2014	Post	Success

*Data posting cannot be done for data of the last three months, for posting data select the time period before three months.*

The **Retrieve** functionality restores the transactions of the selected month from the backup table to the current transaction table and is thus the reverse of the Posting process.

The Manage Database window shows the following options for data retrieval:

From Month-Year: January 2013

To Month-Year: June 2013

Process Mode: Normal Mode

Buttons: Post, Retrieve, Remove, View Logs

A green status bar at the top indicates: **Retrieve request submitted successfully**

The View Log window displays a table with the following data:

Date	Month	Year	Action	Status
21/11/2016 14:45:18	January	2013	Retrieve	Success
21/11/2016 14:45:18	February	2013	Retrieve	Success
21/11/2016 14:45:18	March	2013	Retrieve	Success
21/11/2016 14:45:18	April	2013	Retrieve	Success
21/11/2016 14:45:18	May	2013	Retrieve	Success
21/11/2016 14:45:18	June	2013	Retrieve	Success
21/11/2016 13:16:58	January	2013	Post	Success
21/11/2016 13:16:58	February	2013	Post	Success
21/11/2016 13:16:58	March	2013	Post	Success

The **Remove** option permanently deletes the transactions of the selected month from the table.

If Process mode is selected as **Normal**, then on clicking **Post**, the data which are already present in Backup table will be skipped when data are transferred. If the Process Mode is selected as **Advance**, then on clicking **Post**, the data which are already present in Backup table will be overwritten when data are transferred.

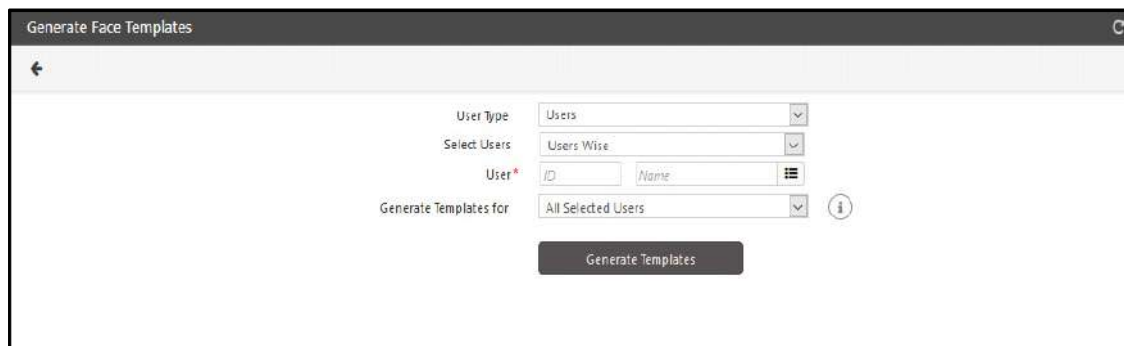

If Process mode is selected as **Normal**, then on clicking **Retrieve**, the data which are already present in Current table will be skipped when data are transferred. If the Process Mode is selected as **Advance**, then on clicking **Retrieve**, the data which are already present in Current table will be overwritten when data are transferred.

# Generate Face Templates

When Matrix FR algorithm is to be used for identification process, it requires face templates for identification and recognition process. So if the images are converted into templates during enrollment of faces, then it reduces the duration required for template conversion at Identification Service restart.

This page enables to convert face into templates.

To access this functionality, go to **Admin Module > System Utilities > Generate Face Templates** and the following screen appears.

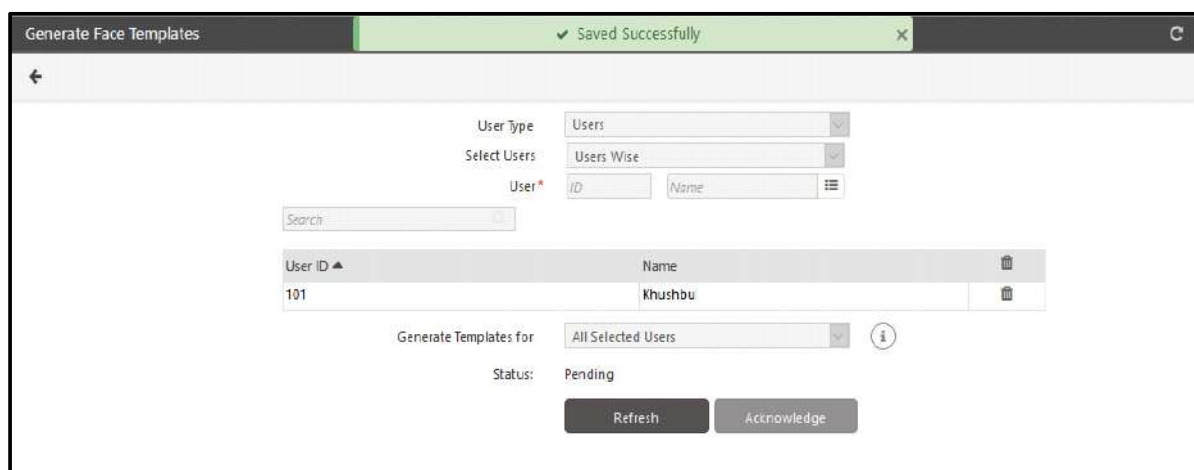

**User Type:** Select the User type as Users, Visitors or Both.

**Select Users/Visitors:** Based on selection of User Type, select the User, Visitor or Both individually, Group wise or All. The picklist will contain only FR enables user/visitor.

**Generate Templates for:** Select the option for generating template for All Selected Users or Differential Users. Selecting Differential Users will generate templates for users out of selected users, whose templates have not been generated previously.(For Users displayed in the error list)

Then click on **Generate Templates** button to process the conversion of enrolled faces into templates.

On start of Alert Service, it will pick up the records that are in pending state and the records change to "In Progress" state. If the process of generating templates is complete, the status is displayed as "Process Completed".

*Generate Face Templates is not tested in 32 bit Computer*

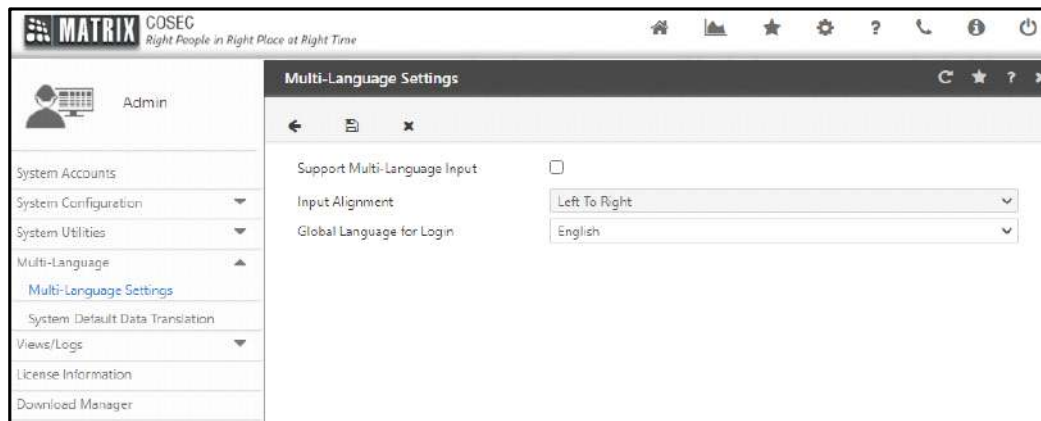

# Multi-Language Settings

COSEC supports multi-language, making it usable across the globe.

To configure multi-language settings,

Click **Admin Module > Multi-Language > Multi-Language Settings**.

The **Multi-Language Settings** page appears.

- **Support Multi-language Input:** The users around the world can use COSEC system in their regional languages. Select the check box to enable the multi-language input functionality which will enable you to enter the input in your own language.

Data input from server side, device side and storing the same in database will support UTF-8 characters.

If you wish to set the keyboard functionality to the preferred language then follow [“Keyboard Functionality”](#).

*Multi-language is not supported in Alert Messages sent via Email/SMS/App Notification.*

*Multi-language is not supported in Reports generated via Report Builder.*

- **Input Alignment:** Select the orientation of multi-language input data from **Left to right** or **Right to left**. Example: if you have selected the **Right to Left** option, then the input is entered begins from right side of the text-box and goes to the left. The invalid characters are as follows: # % ^ = ' " { } | ; < > ? & \*
- **Global Language For Login:** Select the preferred language from the drop-down list. Once you select the preferred language, it will be applied only on the Login pages of — **COSEC Web, COSEC Employee On-boarding, COSEC VMS Web Portal, COSEC Enroll Utility, COSEC Visitor Utility, and COSEC Monitor Utility**.

**Example:** If you select Gujarati from the drop-down list and save the changes, then the default English language will be replaced by Gujarati on Login pages of — **COSEC Web, COSEC Employee On-boarding, COSEC VMS Web Portal, COSEC Enroll Utility, COSEC Visitor Utility, and COSEC Monitor Utility**.

If you wish to view the pages in another language post login, click **Account Settings > Set Language> Preferred Language**. For details, refer to [“Account Setting”](#).

**Global Language For Login** option is applicable only for — **Centra** and **OEM**.

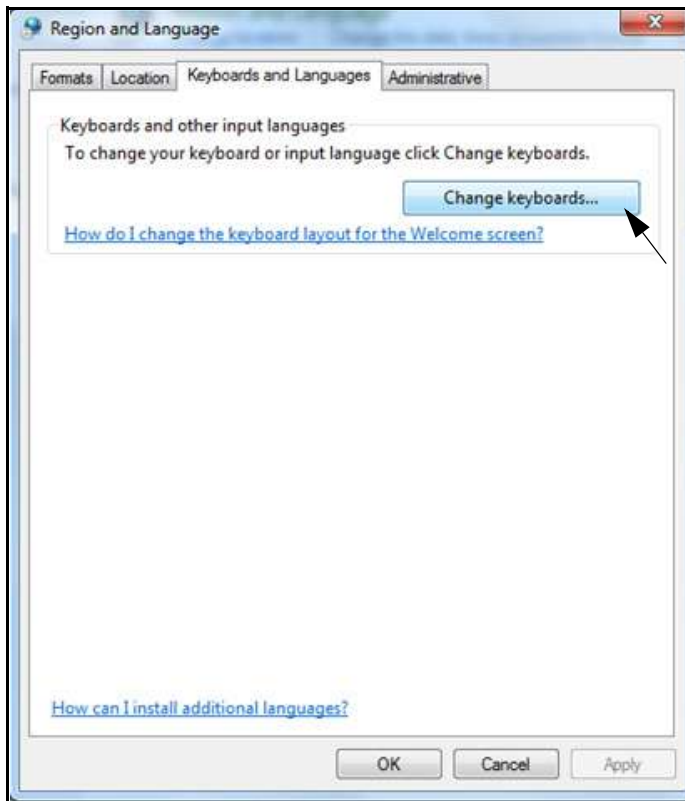

The **Global Language For Login** options appear as per the language files available in the **Language Resource** folder at the following path: **C:\inetpub\wwwroot\COSEC\Language Resource**.

You can add language files to this folder via Language translation using the Multi-Language Utility. To know more, refer to the Multi- Language Utility User Guide.

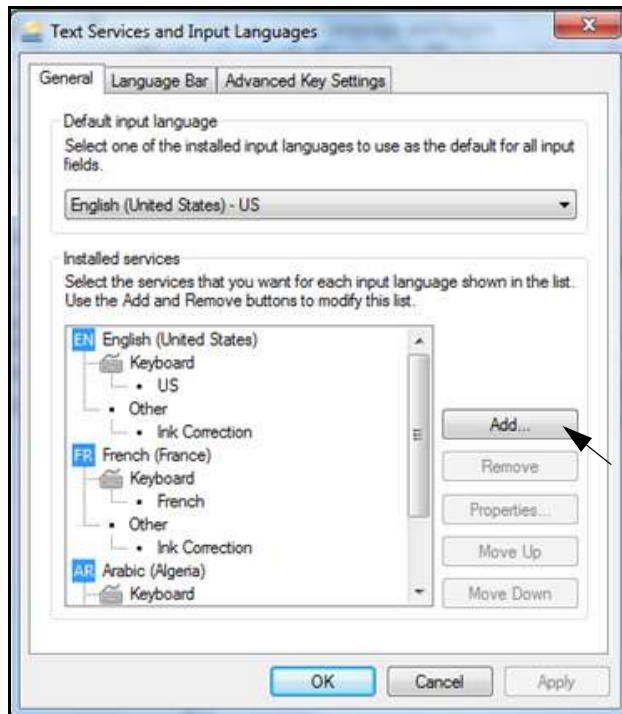

## Keyboard Functionality

To configure the Multi-language input functionality,

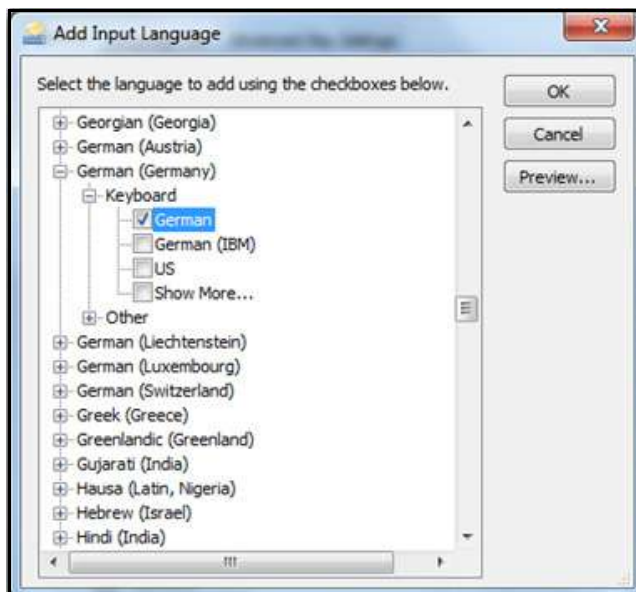

- Go to **Control Panel**.
- Select the **Clock, Language and Region**. Now click on **Change keyboards and other input methods**. The Region and Language window appears.

- Click on **Change Keyboards**. The **Text Services and Input Languages** window appears.

- Click **Add**. The Add Input Language window appears. Select the language to be added in the list. Click **OK**.

- The German language will be added as shown below.

- Again click **OK**. The Language bar can be viewed in the toolbar as shown below.

- You can select the language as Germany from language bar. The on-screen keyboard will be converted from English to German language.

## English Language Keyboard

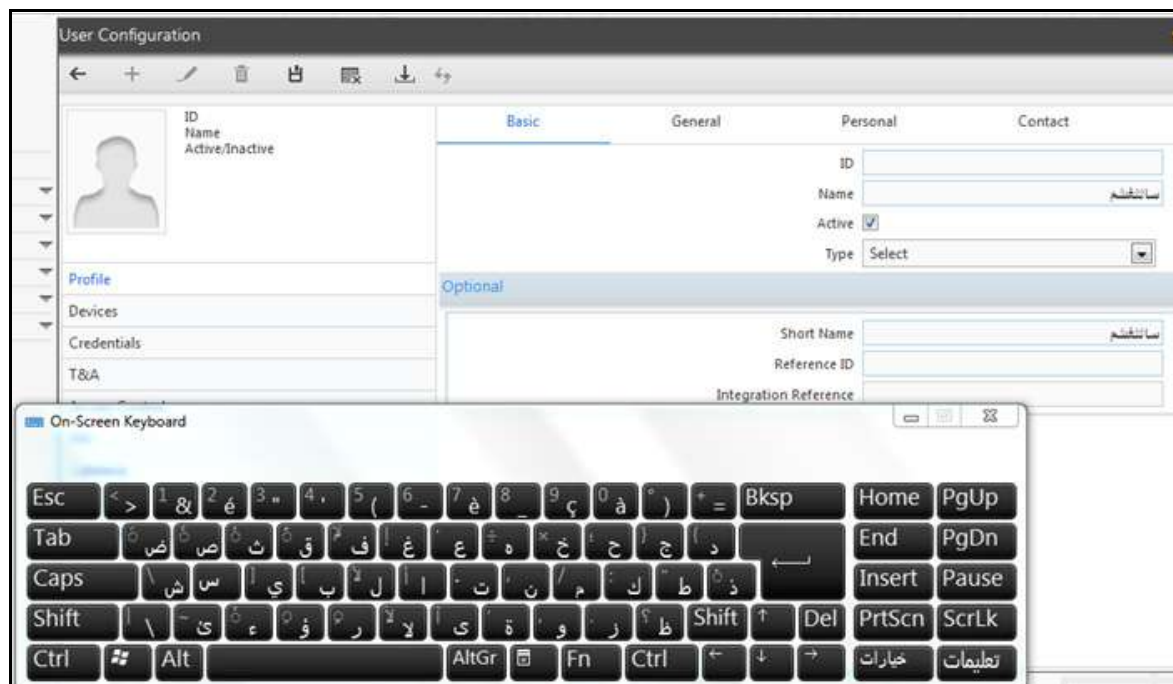

## German Language Keyboard

**Example:** The language input option selected is **right to left**. The language is selected as **Arabic**.

The user name is entered through on-screen keyboard in Arabic language as shown below:

Similarly the other parameters can be entered in the desired language.

# System Default Data Translation

The COSEC Application has various data which is displayed as the default data. You can convert this data into the language of your choice.

To translate the default data,

Make sure the **Support Multi-Language Input** check box is enabled in [“Multi-Language Settings”](#).

- Click **Admin Module > Multi-Language > System Default Data Translation**.
- The **System Default Data Translation** page appears.

- You need to download the sample import file by clicking **Download Sample Import file** . The **Custom Language Translation** file is downloaded. Double-click to open the file from the downloaded location.

The sheet displays the fields required for importing specific data. You need to update the details as per requirement in the same file.

The downloaded file has the following details:

Row ID	Default String	Translated String	Reflection Path
1	Field 1		Global Policy > User > Custom Fields
2	Field 2		
3	Field 3		
4	Field 4		
5	Field 5		
6	Field 6		
7	Field 7		
8	Field 8		
9	Field 9		
10	Field 10		
11	Fever		Global Policy > User > Temperature and Symptoms Configuration
12	Cough		
13	Difficulty in Breathing		
14	Health declaration parameter exceeded threshold. Consult the Doctor		
15	ID Proof 1		Global Policy > Visitor Management > Custom Fields
16	ID Proof 2		
17	Custom Field 1		
18	Custom Field 2		
19	Custom Field 3		
20	Custom Field 4		
21	Custom Field 5		
22	Field 1		
23	Field 2		
24	Field 3		
25	Field 4		
26	Field 5		
27	Field 6		
28	Field 7		
29	Field 8		
30	Field 9		
31	Field 10		

- **Row ID:** This is a unique ID assigned to each system default data field. Make sure you do not tamper with this field. If the same is modified/delete then while importing data the data may be translated at inappropriate locations or the system may misbehave.
- **Default String:** This displays the system default strings. You need to convert these strings in the desired language you want.
- **Translated String:** In this column you need to enter the translated language string for the Default String.
- **Reflection Path:** This is the path at which the Translated String will appear in the system.

After you have updated the file in the desired language, save the same in the local PC. Make sure it is in XLS or XLSX format.

*Make sure you do not tamper with the fields — Row ID and Default String. If the same is modified/delete then while importing data the data may be translated at inappropriate locations or the system may misbehave.*

*The changes made in the downloaded file will not be reflected in the sample file available for download.*

To import the file into the system,

- **File Format:** Select the desired file format — XLS or XLSX.

- **Import File:** Click **Choose File/Browse** and select the file from the path at which the same is stored in the local PC.

System Default Data Translation

Import Data For: System Default Data

File Format: XLS

Import File: Choose File Custom\_Lan...anslation.xls

Upload Import Data

- Click **Upload**. The file will be saved and you can preview the data.

System Default Data Translation

File saved successfully

Import Data For: System Default Data

61 - 75 of 187 records

« < 1 ... 5 ... 13 > »

- Click **Import Data** to import the data into the system.

*If multiple entries are found for the same Row ID, then the data will be updated/over-written multiple times according to the number of entries.*

*If any Row ID is deleted then the data of that Row ID will not be translated.*

*If for any Row ID the Translation String is not found then the system will not translate such data.*

*Admin Module > Form Builder > Form Content, the system will only translate new data, if added and not already available records.*

*If there are any mis-matches, then the system will ignore those strings for translation and translate the remaining data. The details of such mis-matches will be displayed in the Result Description.*

*You can translate and upload strings multiple number of times as per your requirement.*

## Result

The Result of imported data is displayed as Success or Failure along with Result Description.

The screenshot shows the 'System Default Data Translation' window. At the top, there are dropdowns for 'Import Data For' (System Default Data) and 'File Format' (XLS). Below these is an 'Import File' section with a 'Choose File' button and a text input field containing 'Custom\_Lan...anslation.xls'. There are 'Preview Data' and 'Import Data' buttons. Below this is a 'Result' dropdown set to 'Both'. The main part of the window is a table with the following data:

Row ID	Default String	Translated String	Result	Result Description
72	Good Morning	buen dia	Success	Updated Successfully
73	Good Afternoon	buenas tardes	Success	Updated Successfully
74	Good Evening	buenas noches	Success	Updated Successfully
75	Good Night	buenas noches	Success	Updated Successfully

By default all the details are displayed.

You can also filter the Result records by selected the desired option — Success, Failure or Both.

The screenshot shows the same 'System Default Data Translation' window, but with the 'Result' dropdown menu open. The menu has three options: 'Both' (selected), 'Success', and 'Failure'. An arrow points to the 'Both' option. The table below the dropdown shows the same data as the previous screenshot.

Row ID	Default String	Translated String	Result	Result Description
72	Good Morning	buen dia	Success	Updated Successfully
73	Good Afternoon	buenas tardes	Success	Updated Successfully
74	Good Evening	buenas noches	Success	Updated Successfully
75	Good Night	buenas noches	Success	Updated Successfully

Once the data is imported successfully, the data will be displayed at the relevant locations in the COSEC Web as mentioned in the **Custom Language Translation** file > Reflection Path.

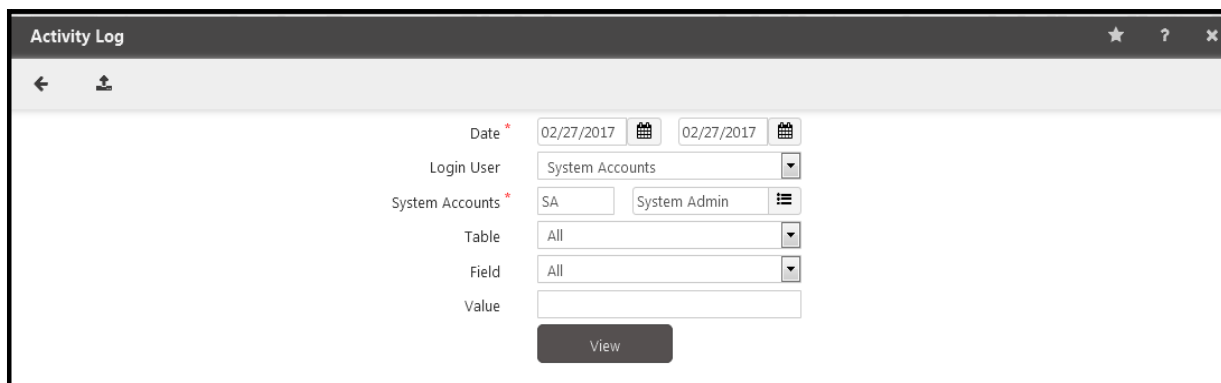

*Make sure full access rights are provided to the folder containing the xls or xlsx file for the import data operation.*

# Activity Log

This option enables the user to view activity logs which provide information about all the actions performed by login users with key field information. The system thus maintains an audit trail of all actions performed by the Login users and this information can be viewed by the system administrator.

To view the activity logs,

1. Go to the **Admin module > Views/Logs > Activity Log** and the following screen appears.

The screenshot shows a web application window titled "Activity Log". It contains a form with the following fields and controls:

- Date \***: Two date pickers, both showing "02/27/2017".
- Login User**: A dropdown menu with "System Accounts" selected.
- System Accounts \***: A text input field containing "SA" and a button labeled "System Admin".
- Table**: A dropdown menu with "All" selected.
- Field**: A dropdown menu with "All" selected.
- Value**: A text input field.
- View**: A button at the bottom of the form.

2. Select the time period for which the activity log is to be displayed by defining the start and the end **date**.
3. The other three filtering options available for viewing the audit trail are as follows:
  - **Login User**: Select the Login user whose activities need to be displayed. Available options for Login User are: All, System Accounts, User.
  - **User/System Accounts**: For the Login User type selected, specify a user/System Accounts from the user picklist. The Label will be changed to **System Accounts** in case of Login User = System Accounts as shown in the screenshot above.
  - **Table**: Select the data table for which you would like to view the change history.
  - **Field**: Select the field for which you would like to view the change history. User can Select the field from the drop down list and specify the Value for the field as an additional filtering criteria.
4. Click the **View** button.

The following screenshot illustrates an *Activity Log* for a system administrator:

# Event View

The COSEC system interfaces with specific video recorder devices such as the *Matrix HVR/NVR* and enables the user to grab images triggered by user events at the respective doors. Doors such as the *NGT door controller* also have a built-in camera which can be configured to capture user images based on an event trigger. To know more about configuring doors for *Visual Tagging*, refer to “[Device List](#)”. These user events and related images can be viewed using the **Event View** option under the *Admin* module.

To access this feature,

Click **Admin module > Views/Logs > Event View** and the following screen appears.

On the **Event View** page, in **Date**, select the start date and end date for which user event records are to be retrieved.

## Filter

Set the following parameters as per your requirement to filter the records:

- **Door Selection:** Select the doors for which events are to be viewed. Select the desired option — All, Randomly.

If you select Randomly,

- Click the **Door** picklist. The **Picklist For Panel Doors and Direct Doors** pop-up appears.
- Click to select the desired door.
- **Event Status:** Select the desired option — Allowed, Denied, Both — to view events.
- **Credentials:** Select the desired option to view events based on the type of credentials used.
- **Card Type:** If you have selected the Credentials as any one of the following — Card, Card + PIN, API + Card, Card + Face, BLE + Card, Finger + Card, Finger + Card + PIN, Palm + Card, Palm + Card + PIN — then you can select the desired **Card Type** — RFID, QR — option.
- **Card Selection:** If you have selected the Credentials as any one of the following — Card, Card + PIN, API + Card, Card + Face, BLE + Card, Finger + Card, Finger + Card + PIN, Palm + Card, Palm + Card + PIN,

BLE, BLE + PIN, BLE + Finger, BLE + Palm — then you can select the desired **Card Selection** — Access Card 1, Access Card 2 — option.

*The options Card Type and Card Selection are applicable to ARGO, VEGA, ARGO FACE, PATH V2, ARC DC 200 Direct Doors as well as Panel Doors.*

*For other devices the filters Card Type and Card Selection will not be applicable. If any option is selected in these filters then the same will be ignored and the system will display all the events as per the selected Credential option.*

- **Select Users:** Select the users whose events you wish to view. Select the desired option — User Wise, Group Wise, All.

If you select **User Wise**,

- Click the **User** picklist. The **Picklist For All Users** pop-up appears.
- Select the check boxes of the desired users.
- The selected users appear in the grid.
- You can delete users from the grid if required. To do so, click **Delete**  of the respective user.
- Click **OK**.

If you select **Group Wise** option,

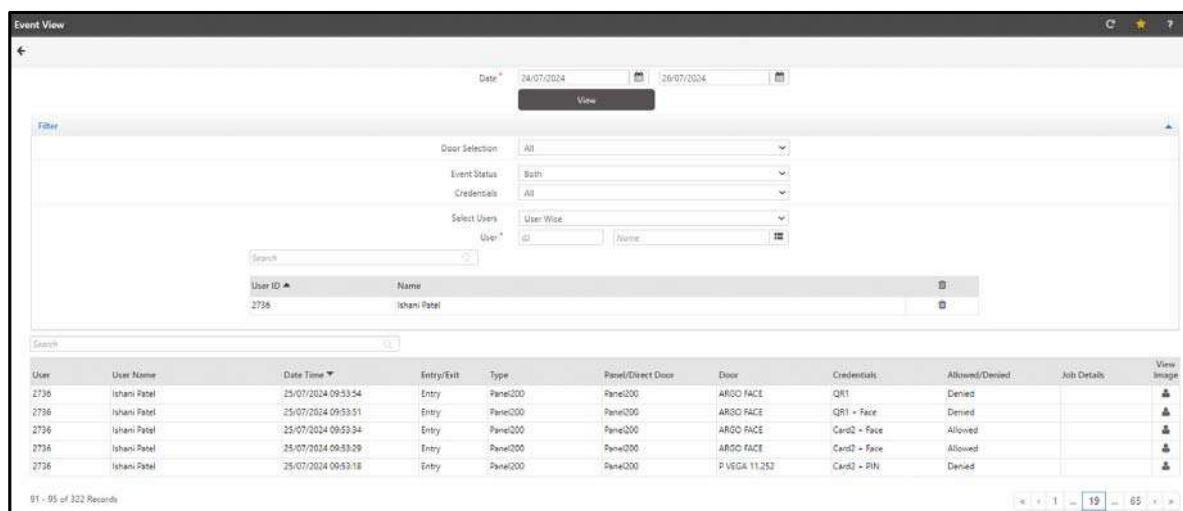

- Select the desired enterprise group—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
- The selected groups appear in the grid.
- You can also delete particular group. To do so, click **Delete**  of the respective group.
- Click **OK**.

If you select **All**, then all the users will be selected.

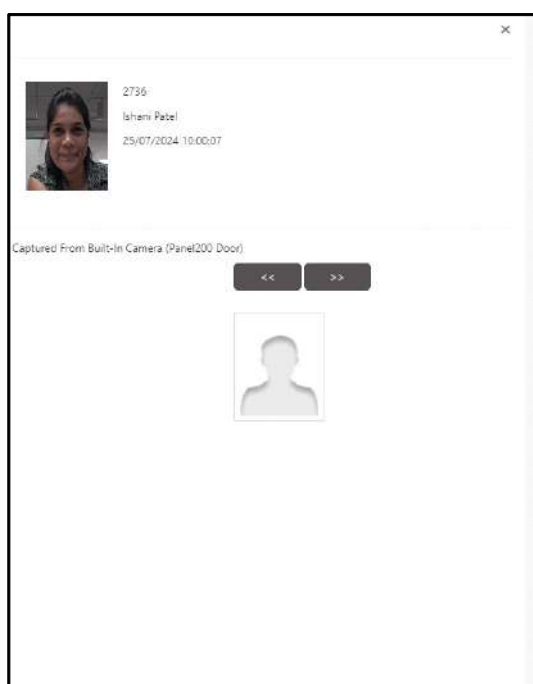

- Click **OK**.

Click **View**.

A detailed list of all the events as per the set filters appears in the grid.

Click on the icon under the **View Image** column against the relevant user event and view the associated snapshot image, if available. Click on the button to view images captured for the successive events.

# Alert View

This tab enables you to view logs of SMS, Email or WhatsApp alerts.

To view the alert logs, click **Admin module > Views/Logs > Alert View** and set the filters as per your requirement:

The screenshot shows the 'Alert Log' window. At the top, there are date pickers for 'Start' and 'End' dates, both set to '08/11/2023'. Below them is a 'View' button. A 'Filter' section is expanded, showing a dropdown for 'Alert' with options 'SMS', 'Email', and 'WhatsApp'. The 'Phone Number' field is empty.

**Date:** Select the time period — **Start** and **End** date — for which you wish to view the alert log.

Click the **Filter** collapsible panel and configure the following:

- **Alert:** Select the desired option — **SMS**, **Email** or **WhatsApp** — as the alert mode.

You can also view logs of a particular Number or Email ID. To do so,

- **Phone Number:** If you have selected **SMS** as the **Alert** option, you can configure the particular number whose logs you wish to view. If you wish to view all the logs, keep this blank.
- **Email ID:** If you have selected **Email** as the **Alert** option, you can configure the particular Email ID whose logs you wish to view. If you wish to view all the logs, keep this blank.
- **WhatsApp Number:** If you have selected **WhatsApp** as the **Alert** option, you can configure the particular WhatsApp Number whose logs you wish to view. If you wish to view all the logs, keep this blank.

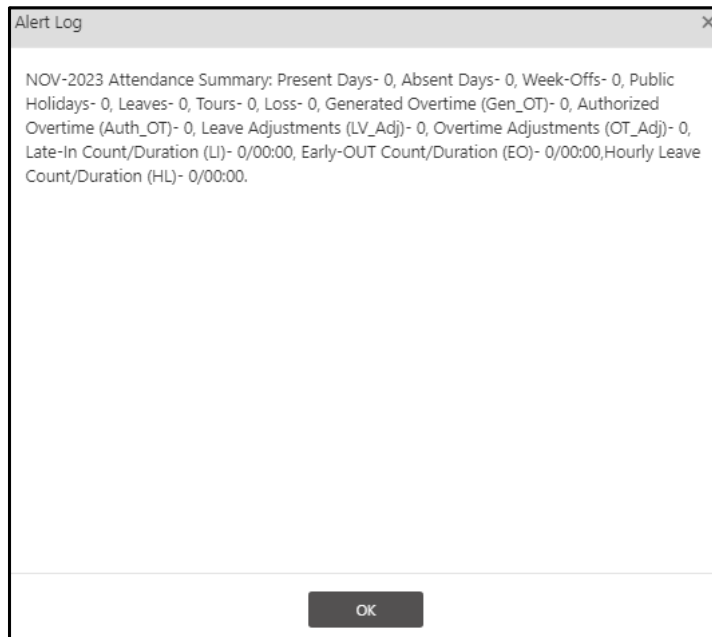

Click **View**.

The logs are displayed as per the set filters.

The screenshot shows the 'Alert Log' window with the 'Alert' filter set to 'WhatsApp'. Below the filter section, there is a search bar and a table of logs. The table has four columns: 'WhatsApp Number', 'Message', 'Date Time', and 'Error/Status'.

WhatsApp Number	Message	Date Time	Error/Status
1113232132123	NOV-2023 Attendance Summary: Present Days- 0, Absent...	08/11/2023 10:07:14	
332132131321	NOV-2023 Attendance Summary: Present Days- 0, Absent...	08/11/2023 10:07:14	
1113232132123	NOV-2023 Attendance Summary: Present Days- 0, Absent...	08/11/2023 10:07:06	
332132131321	NOV-2023 Attendance Summary: Present Days- 0, Absent...	08/11/2023 10:07:06	

- Double click on an entry in any of the columns except the **Date Time** column, you the details.

# Scheduler Log

The Scheduler Log enables the user to view details of all scheduled **tasks** and **reports** in the COSEC system for a defined date range. These details include the scheduling and completion status of all report and task schedules.

*This section displays the logs of the **Task Scheduler** or **Report Scheduler** created from the path: **Admin Module > System Utilities > Task/Report Scheduler**.*

To view Scheduler Logs, click **Admin module > Views/Logs > Scheduler Log** and the following screen appears.

**Date:** Select the time period for which the scheduler log needs to be displayed by defining the start and the end Date.

## Filter

Expand the **Filter** panel to set the following parameters:

**Scheduler Activity** - Select an activity (such as Leave Credit, Blocked User, etc) to filter the scheduler log for specific results.

**Status** - Select a **Status** type for the scheduled activity from the dropdown list. The options available are: Succeed, Failed and Both.

Click the **View** button.

The *Scheduler Log* appears in a grid as shown in the figure below.

**Scheduler Log**

Sheet1

# License Information

The page displays the license information of the COSEC web application.

To view the license details, Go to **Admin module > License Information** and the following screen appears.

Module	Current Usage	Allowed Limit
Platform Users	4	100000
ACM Users	4	100000
CMM Users	0	100000
VMM Users	2	100000
TAM Users	2	100000
CWM Users	1	100000
JPC Users	0	100000
FVM Users	0	100000
ESS Users	1	100000
FR Users	1	100000

[End User License Agreement](#)

The page displays the existing license profile and lists the following information:

- **Product Variant:** It displays the COSEC product variant licensed to the user. For example: COSEC PLT.
- **License Key:** It displays 56 or 128 (excluding the separators) characters valid license key string.

## License Details

- **Annual Upgrade Package Validity:** It displays the Month - Year for the validity of the package after which the package is required to be upgraded.
- **Modules:** It shows the modules in the license along with Current usage and Allowed limit.
  - **Current Usage-** It displays the number of users active in the system.
  - **Allowed Limit-** It is displayed as per the license key.

**End User License Agreement-** By clicking on this link, you can read the end user license agreement.

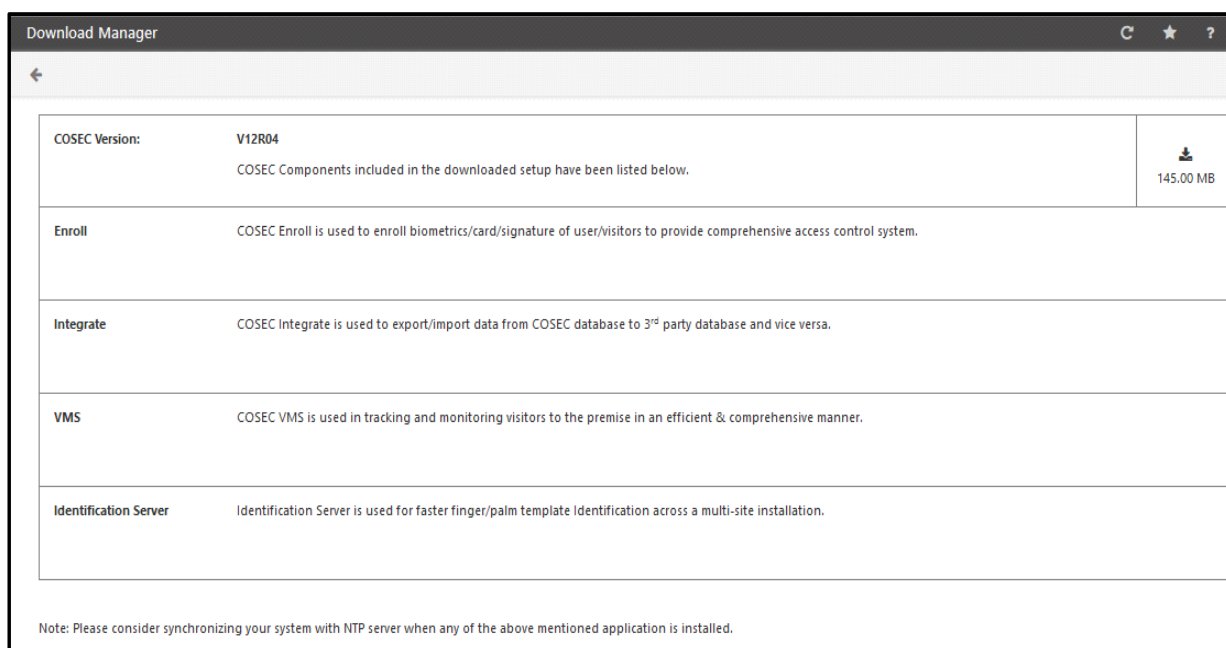

# Download Manager

Download Manager is a page that enables to download COSEC Enroll, COSEC Integrate, COSEC VMS and Identification Server applications. Before installing the COSEC applications refer, "[System Requirements](#)" to ensure the prerequisites are fulfilled.

*After the installation, if you are upgrading the IDS, Enroll, VMS, or Alert Services from the Service Tray App (refer to the Services User Guide to know more) you will need to update the FR libraries manually. To do so,*

- *Copy the desired FR files from the downloaded package, that is from MxFRSDK > MxFRSDK\_x64\_CPU or MxFRSDK\_x64\_GPU.*
- *Paste the same into the respective library folder in the setup folder in your local PC.*

To install any of the above applications click  download icon.

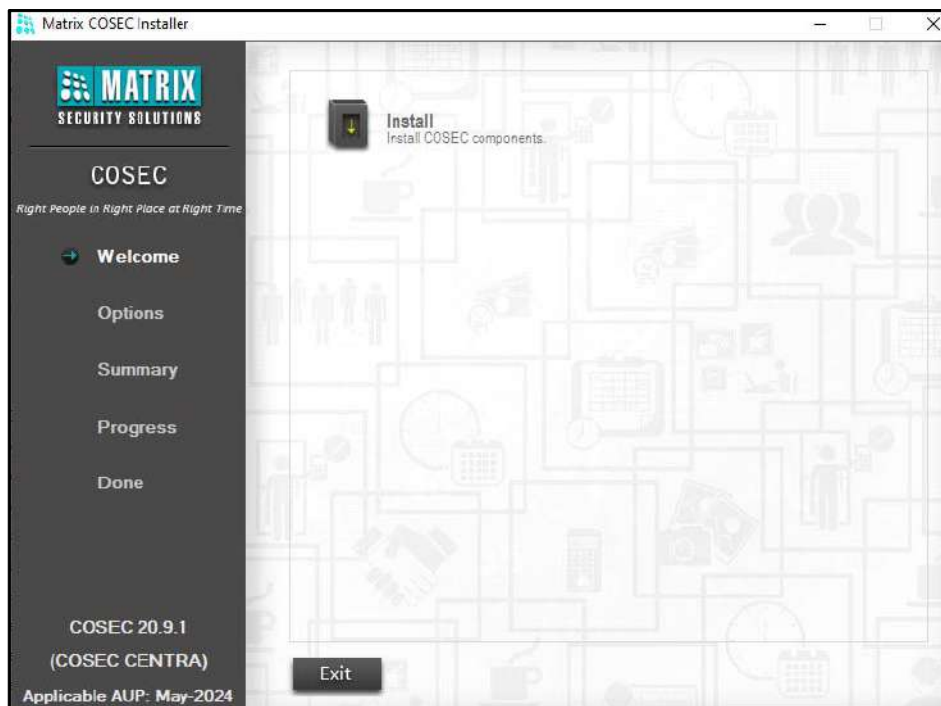

The Cloud download Setup window appears as shown below.

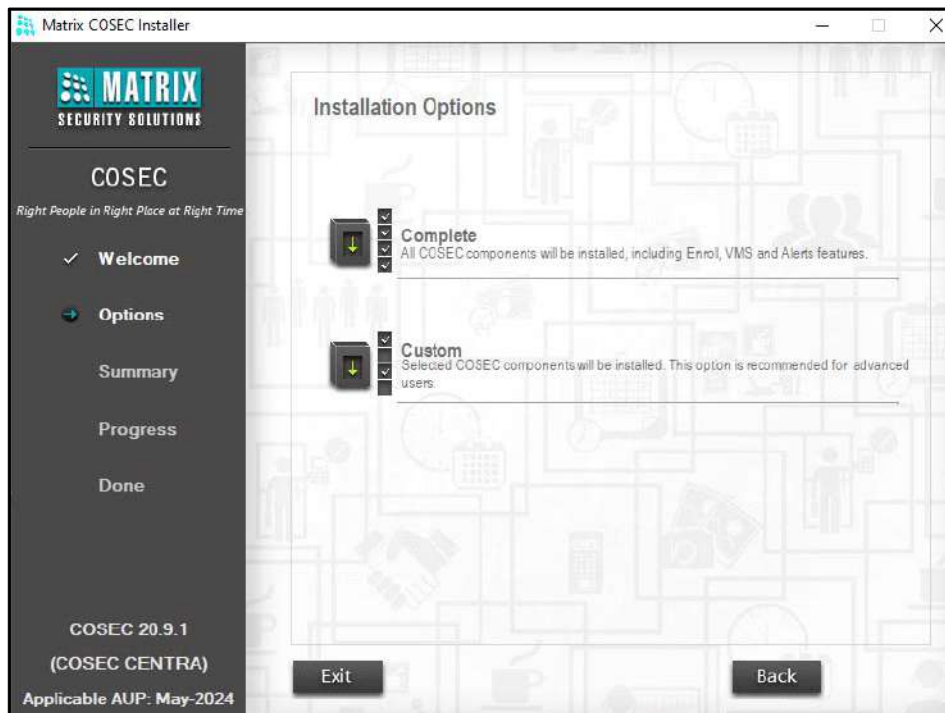

Open the Zip folder or Save the folder. Open the folder as shown below.

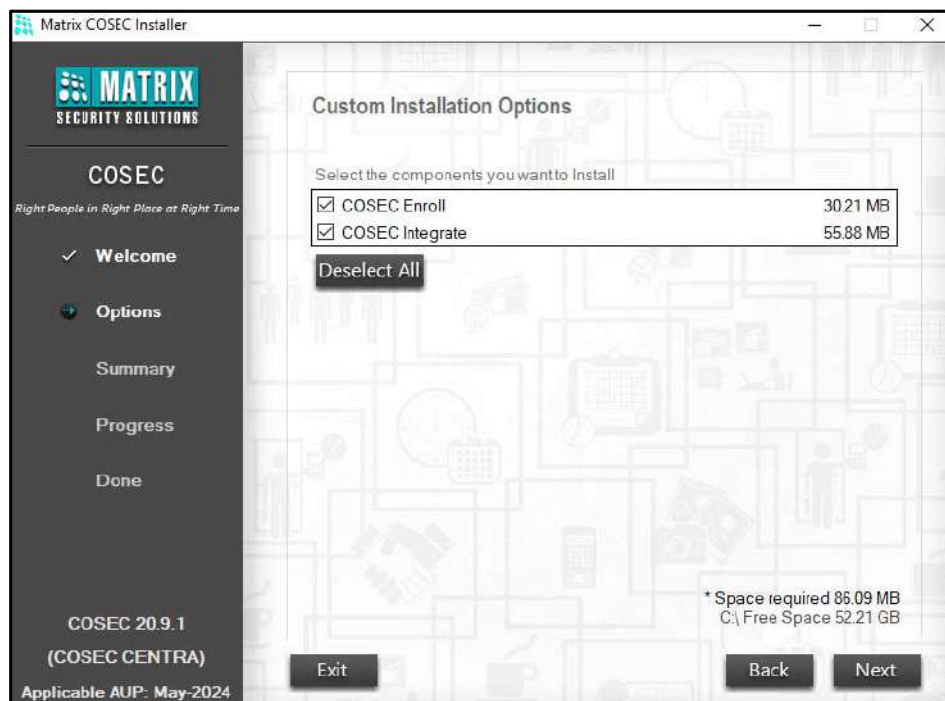

Click on Application **Setup**. The COSEC Installer is shown as below.

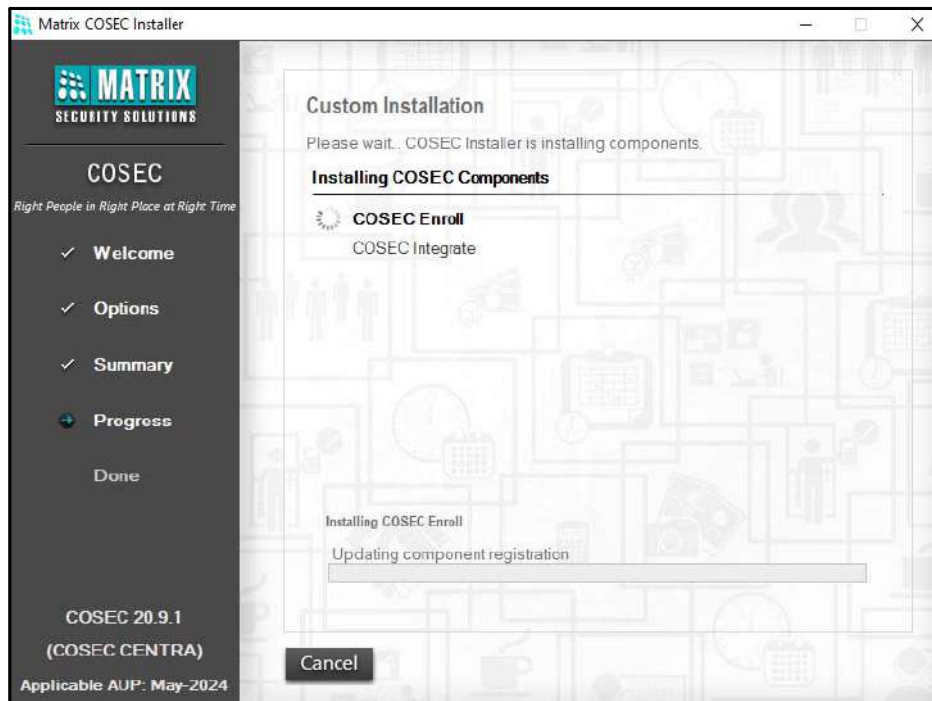

Click **Install**. The Installation options are shown as below.

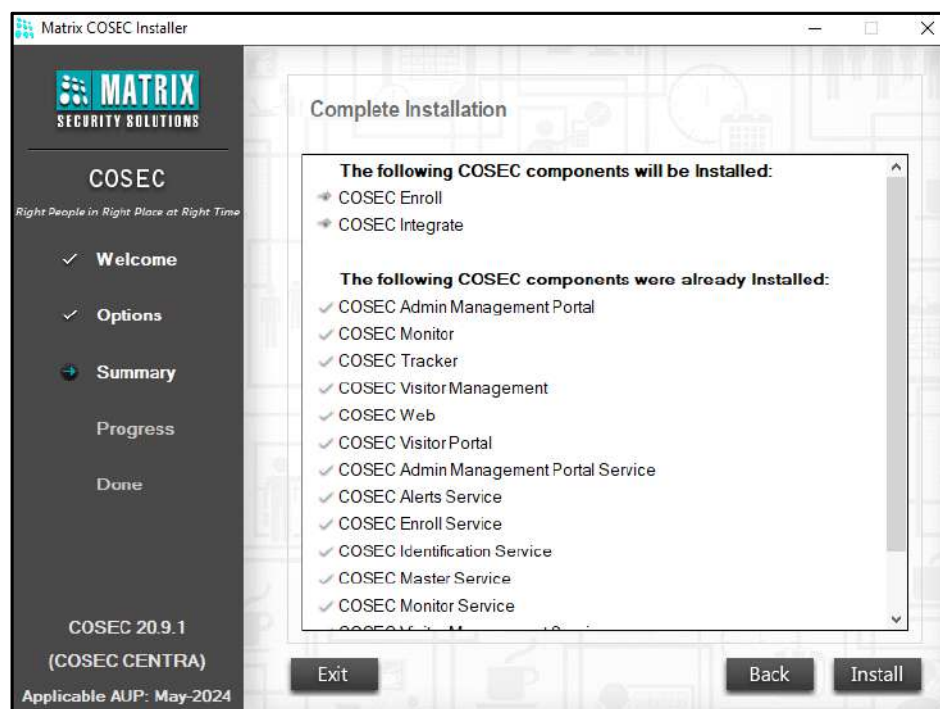

You can select the **Custom** option and select the desired component to be installed.

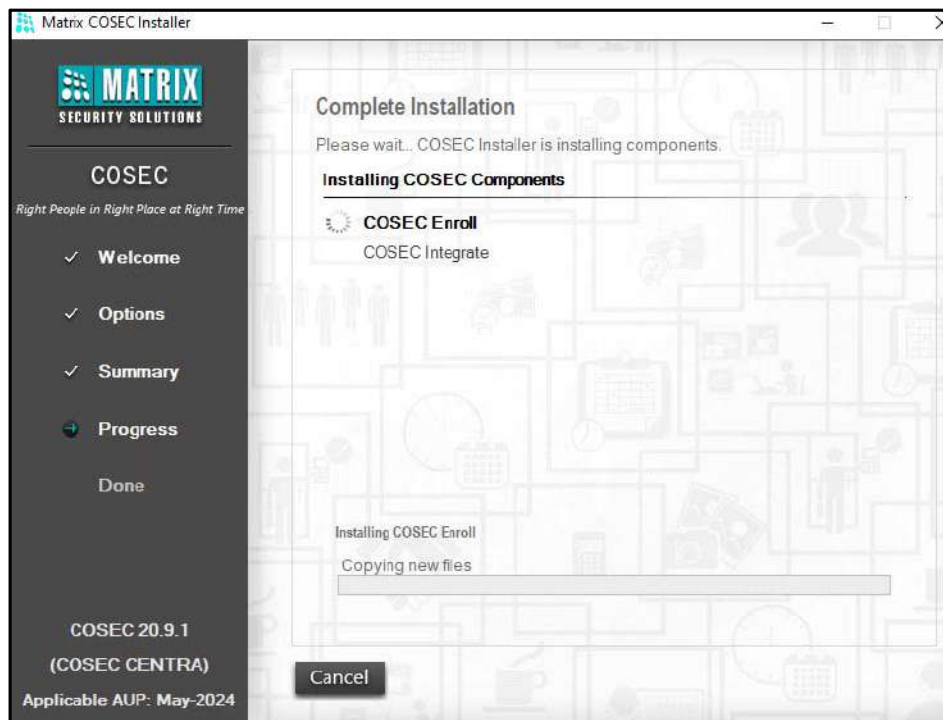

After selecting a component, click **Next** to install. The **Custom** Installation is shown as below.

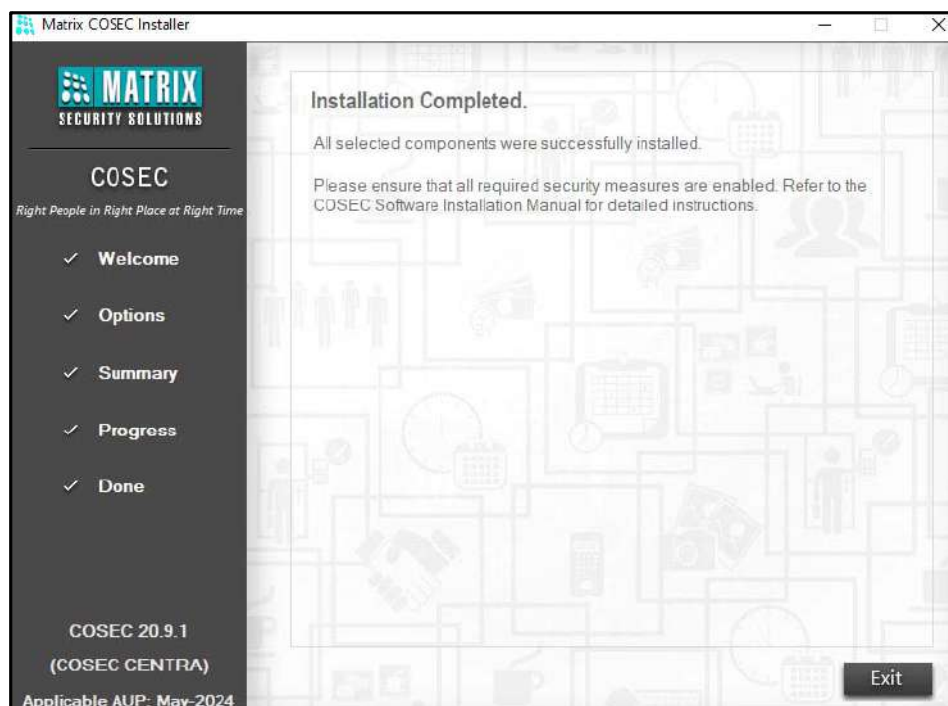

The **Complete** Installation is shown as below.

After completing the installation, Installation Completed window will be shown as below.

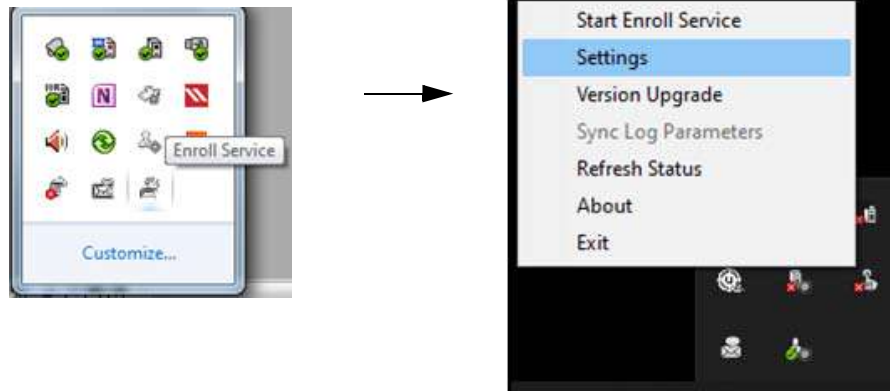

## Enroll Service

After the Installation, a shortcut icon  will be created on your desktop.

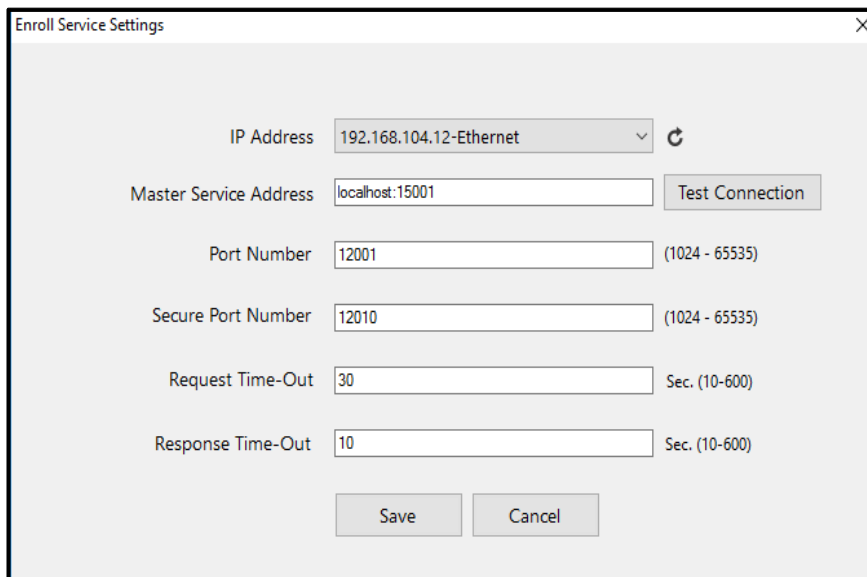

Also you can start the Enroll Service Application by browsing the folder from **All Programs> Matrix> Enroll Service**.

When the Enroll Service is started, an icon will be visible in the system tray as shown below. Then Right click on icon to configure the settings and start the service.

If the service entry is not found on general settings table then service will self-register itself. When Master Service URL in Tenant Portal> System Configuration > General Settings is blank then service will self-register itself.

At the time of self-registration MAC-Address, IP Address, URL (generated), Port Number and Domain Name from general settings should be passed as parameters.

The image shows a dialog box titled 'Enroll Service Settings'. It contains several input fields and buttons. The fields are: 'IP Address' with a dropdown menu showing '192.168.104.12-Ethernet' and a refresh icon; 'Master Service Address' with a text box containing 'localhost:15001' and a 'Test Connection' button; 'Port Number' with a text box containing '12001' and a range '(1024 - 65535)'; 'Secure Port Number' with a text box containing '12010' and a range '(1024 - 65535)'; 'Request Time-Out' with a text box containing '30' and a range 'Sec. (10-600)'; and 'Response Time-Out' with a text box containing '10' and a range 'Sec. (10-600)'. At the bottom are 'Save' and 'Cancel' buttons.

**Master Service Address:** Enter the IP Address or URL of the Master Service.

On Changing / Updating the Master Service Address, connection should be tested with the master service on click of Test Connection button. Eg: localhost:15001

Click **Test Connection** to test the connection with Master service.

**Port Number:** This is the port number of the computer at which device will do enrollment.

**Secure Port Number:** This is the port number of the computer at which device will do enrollment.

Specify the **Request time-out** duration in seconds.

Specify the **Response time-out** duration in seconds.

Click **Save** button to save the settings.

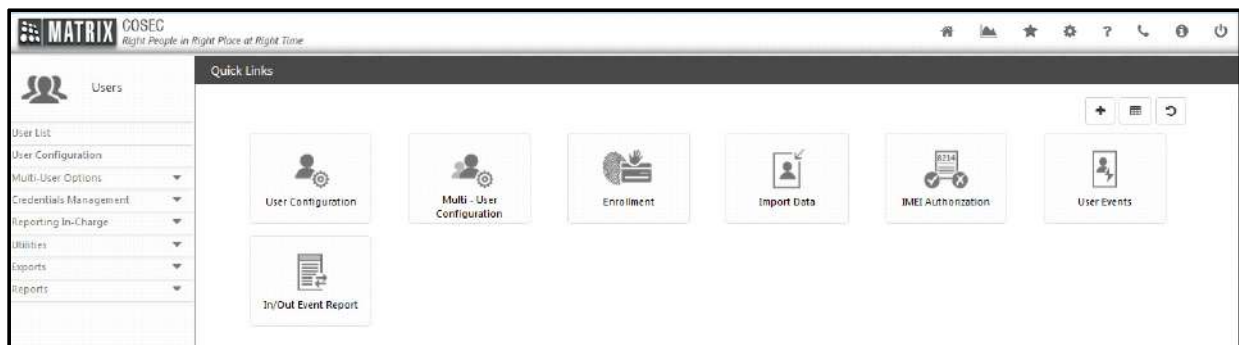

User Configuration is a consolidation of the user information at one place to manage and to obtain details whenever needed. It enables the creation of a user database that allows the system to consider the configured user as a valid user of the system.

It is necessary to create a user database that shall have the information about him/her like employee ID, general details, personal details, access privileges detail, contact details etc. Having the user details organized makes it simpler to manage the system and the details of any user can be obtained whenever needed.

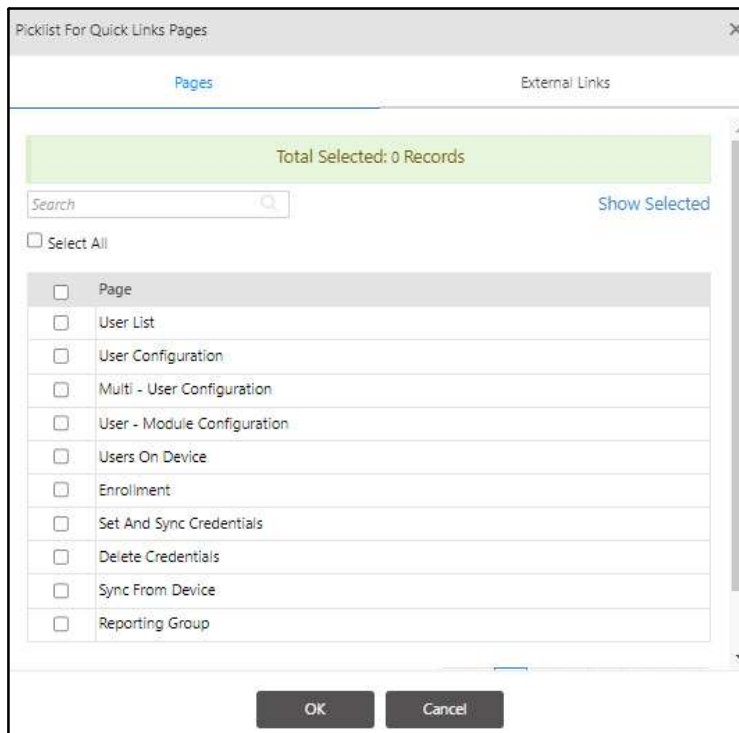

To access the **Users** module with the COSEC Web Application, select the **Users**  icon on the module selection page. The **Users** page will appear on your screen as shown below.

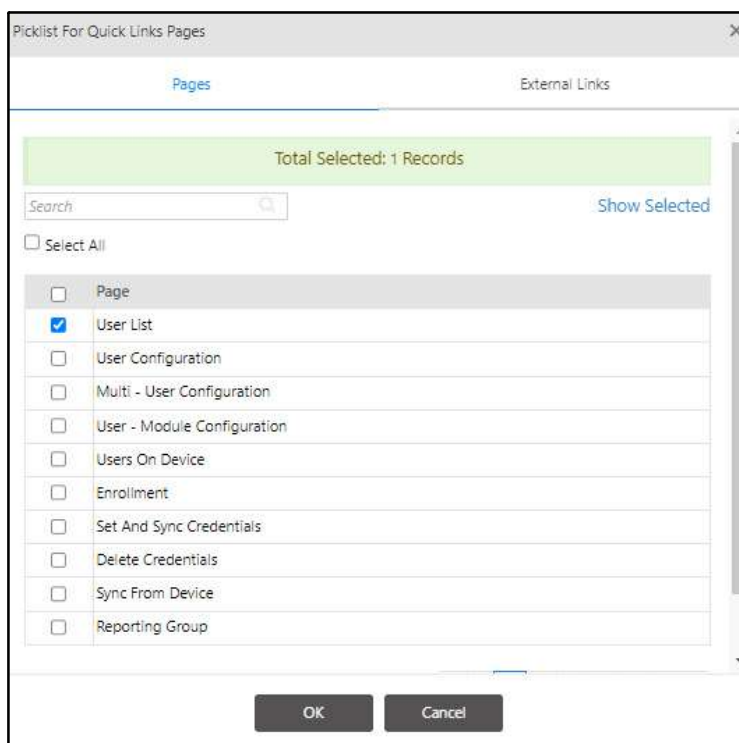

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

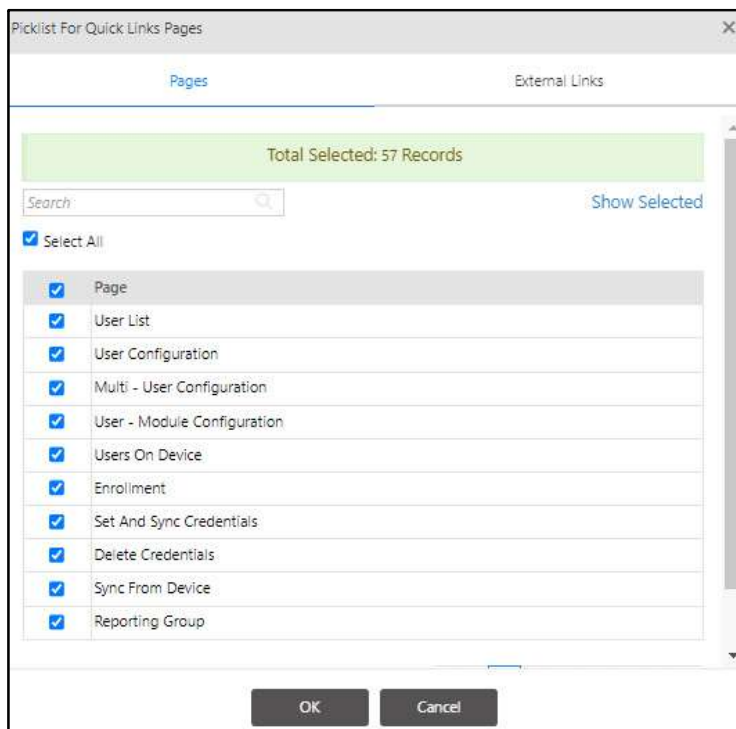

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

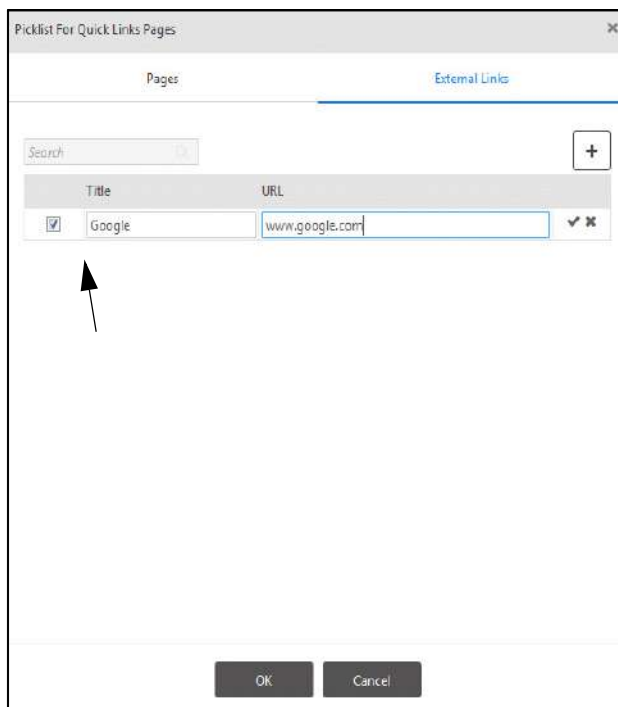

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

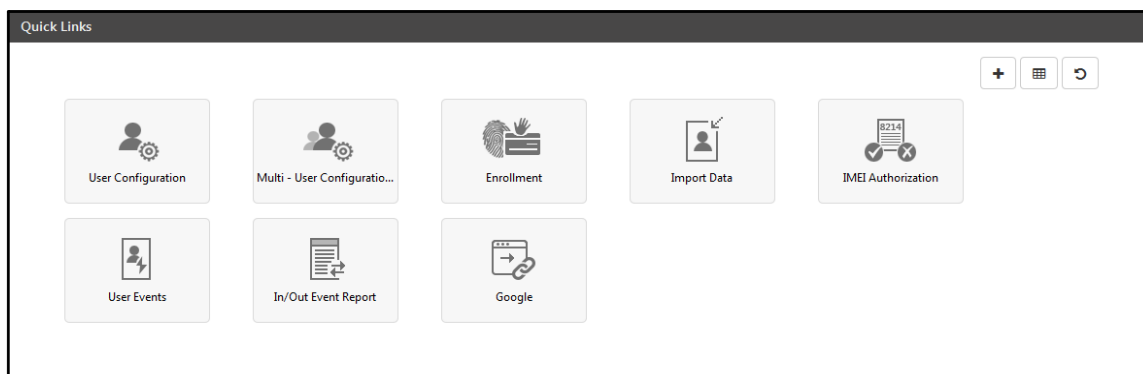

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

#### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

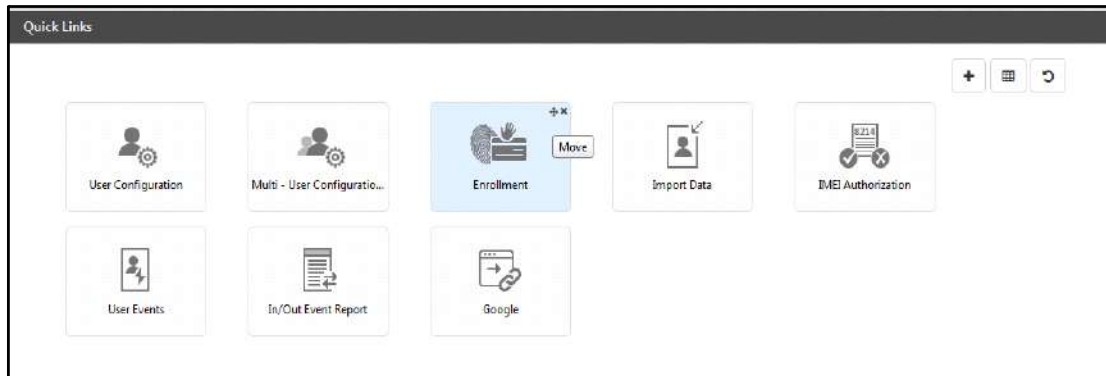

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

- Click **Reset To Default**  to reset the quick links to the default quick links.

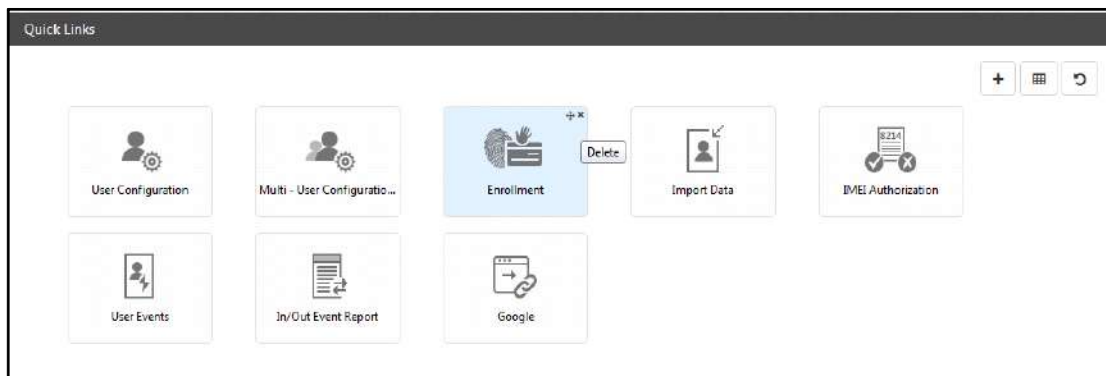

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

*Quick links are displayed as per rights given to System Account and ESS users.*

## Users Dashboard

To view the Dashboard, click the Dashboard button  on the **Users** page.

It displays the basic information on Users relating to the COSEC Software under three groups:

### Users

- Total Users- Total no. of ESS Users (employees) created in COSEC.
-  Click on the Import Users button to go to the Import users page.
- Active Users- Total no. of Users (employees) currently that are active.
- Blocked Users- Total no. of Users (employees) that are blocked.

### Enrollment Status

- Enrollment Pending- Total no. of users whose enrollment is not done at all.
- Finger Credentials- Total no. of users with one or more fingers enrolled.
- Cards Assigned- Total no. of users with one or more cards assigned.
- PIN's Assigned- Total no. of users with PIN assigned.
- Palm Credentials- Total no. of users with at least one palms enrolled.
- Face Credentials- Total no. of users whose faces are enrolled.

### Reminder

- Birthday- Total no. of users whose birthday is on the current day.
- Confirmations- Total no. of users whose confirmation date is on the current day.
- Send-off- Total no. of users whose leaving date is on the current day.
- Visa Expiry- Total no. of users whose visa expires on the current day.
- Driving License Expiry- Total no. of users whose driving license expires on the current day.
- Passport Expiry- Total no. of users whose passport expires on the current day.

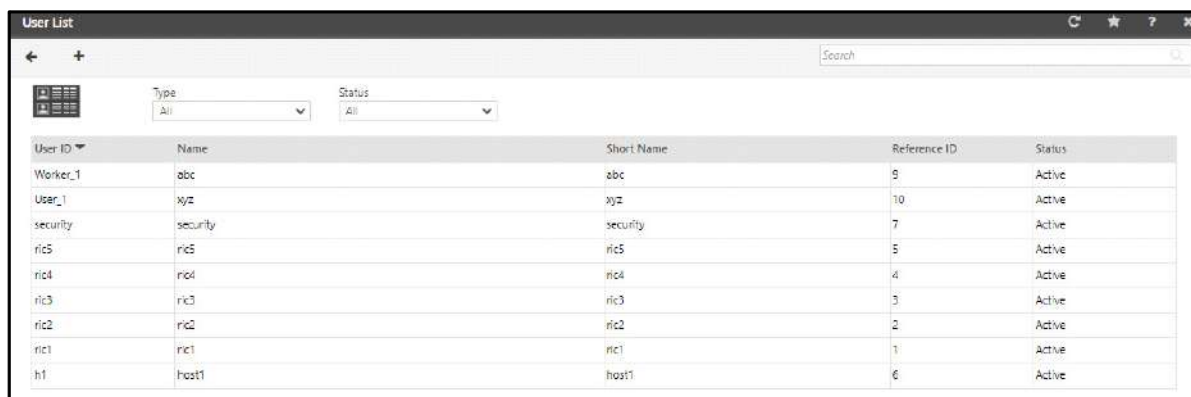

For more information on the above Dashboard options, click the respective information links on the Dashboard. The Latest values on Dashboard are updated on clicking the Refresh  button.

# User List

COSEC allows you to add new users to its database via the Users Module. This functionality can be used by administrators to add new user information, define user profiles and contact details.

To define a new user, Select the **Users module > User List**.

The **User List** page opens as follows:

The screenshot shows the 'User List' application window. It features a search bar at the top right and two dropdown menus for 'Type' and 'Status', both set to 'All'. Below these is a table with the following columns: User ID, Name, Short Name, Reference ID, and Status. The table contains the following data:

User ID	Name	Short Name	Reference ID	Status
Worker_1	abc	abc	9	Active
User_1	xyz	xyz	10	Active
security	security	security	7	Active
ric5	ric5	ric5	5	Active
ric4	ric4	ric4	4	Active
ric3	ric3	ric3	3	Active
ric2	ric2	ric2	2	Active
ric1	ric1	ric1	1	Active
h1	host1	host1	6	Active

The User List will display only those users, temporary users, workers and temporary workers for which rights are assigned to the SA, that is as per the enterprise groups assigned to the users/workers/temporary users/temporary workers.

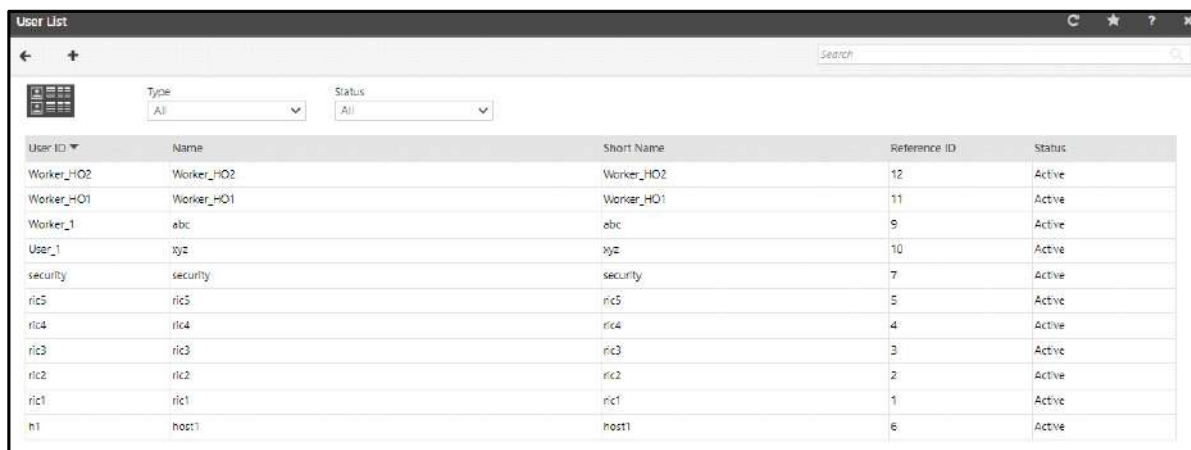

For example, if for User1 in Groups, Organization is ORG1 and if the rights for ORG1 are not assigned to the SA, then through the SA login the User List will not display User1.

For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#) as well as [“Group”](#) under [“Configuring Users”](#).

The Users List can be viewed in **Grid** or **Photo** View.

## Grid View

This is the default view. Click User List the **Grid View** appears.

The screenshot shows the 'User List' application window in Grid View. It features a search bar at the top right and two dropdown menus for 'Type' and 'Status', both set to 'All'. Below these is a table with the following columns: User ID, Name, Short Name, Reference ID, and Status. The table contains the following data:

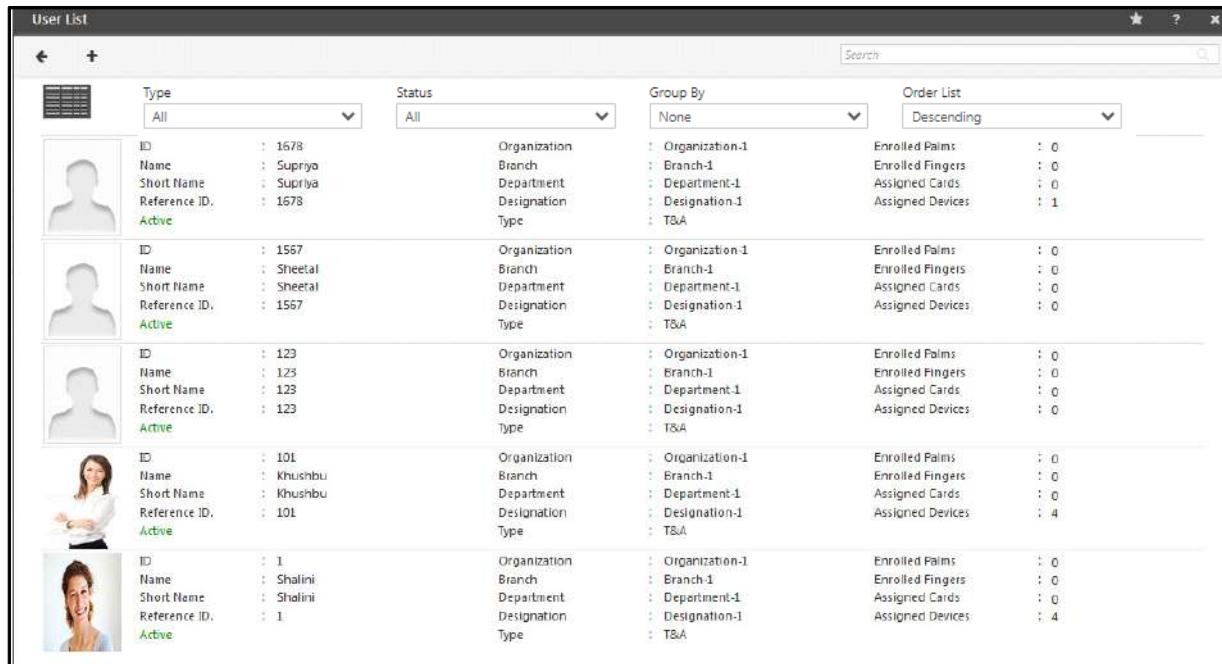

User ID	Name	Short Name	Reference ID	Status
Worker_HO2	Worker_HO2	Worker_HO2	12	Active
Worker_HO1	Worker_HO1	Worker_HO1	11	Active
Worker_1	abc	abc	9	Active
User_1	xyz	xyz	10	Active
security	security	security	7	Active
ric5	ric5	ric5	5	Active
ric4	ric4	ric4	4	Active
ric3	ric3	ric3	3	Active
ric2	ric2	ric2	2	Active
ric1	ric1	ric1	1	Active
h1	host1	host1	6	Active

The list can be filtered on the basis of **Type** and/or **Status**. To do so,

- The Type options are All, Users, Temporary Users, Worker, Temporary Worker.
- The Status options are All, Active and Inactive.

### Photo View

Click **Photo View**  to view the users in this view.

Type	Status	Group By	Order List
All	All	None	Descending

	ID : 1678 Name : Supriya Short Name : Supriya Reference ID : 1678 Active	Organization : Organization-1 Branch : Branch-1 Department : Department-1 Designation : Designation-1 Type : T&A	Enrolled Fingers : 0 Assigned Cards : 0 Assigned Devices : 1
	ID : 1567 Name : Sheetal Short Name : Sheetal Reference ID : 1567 Active	Organization : Organization-1 Branch : Branch-1 Department : Department-1 Designation : Designation-1 Type : T&A	Enrolled Fingers : 0 Assigned Cards : 0 Assigned Devices : 0
	ID : 123 Name : 123 Short Name : 123 Reference ID : 123 Active	Organization : Organization-1 Branch : Branch-1 Department : Department-1 Designation : Designation-1 Type : T&A	Enrolled Fingers : 0 Assigned Cards : 0 Assigned Devices : 0
	ID : 101 Name : Khushbu Short Name : Khushbu Reference ID : 101 Active	Organization : Organization-1 Branch : Branch-1 Department : Department-1 Designation : Designation-1 Type : T&A	Enrolled Fingers : 0 Assigned Cards : 0 Assigned Devices : 4
	ID : 1 Name : Shalini Short Name : Shalini Reference ID : 1 Active	Organization : Organization-1 Branch : Branch-1 Department : Department-1 Designation : Designation-1 Type : T&A	Enrolled Fingers : 0 Assigned Cards : 0 Assigned Devices : 4

The list can be filtered on the basis of **Type**, **Status**, **Group By** and **Order List**.

- The Type options are All, Users, Temporary Users, Worker, Temporary Worker.
- The Status options are All, Active and Inactive.
- The Group By options are Department and Designation.
- The Order List options are Ascending or Descending.

You can search either ID, Name or Short Name from the search box on top right of the page.

Click on the desired entry in the grid. The respective profile page appears.

You can also add new user's. To do so,

Click **New**  to add a new user. The **User Configuration** page appears.

You can directly click on **User Configuration** option from where the user Profile can be configured as described below:

**User Configuration**

Search User ID or Name

# Configuring Users

---

COSEC allows you to add new users from the Users Module. This functionality can be used by administrators to add new employee information, define employee profiles and contact details.

The User configuration options can be viewed from:

- *["Profile"](#)*
- *["Adding User Photo"](#)*
- *["Devices"](#)*
- *["Credentials"](#)*
- *["Group"](#)*
- *["T&A"](#)*
- *["Access Control"](#)*
- *["ESS"](#)*
- *["Cafeteria"](#)*
- *["Contract Worker Management \(CWM\)"](#)*
- *["Job Costing"](#)*
- *["Field Visit Management"](#)*
- *["Face Recognition"](#)*
- *["Visitor Management"](#)*
- *["Events"](#)*

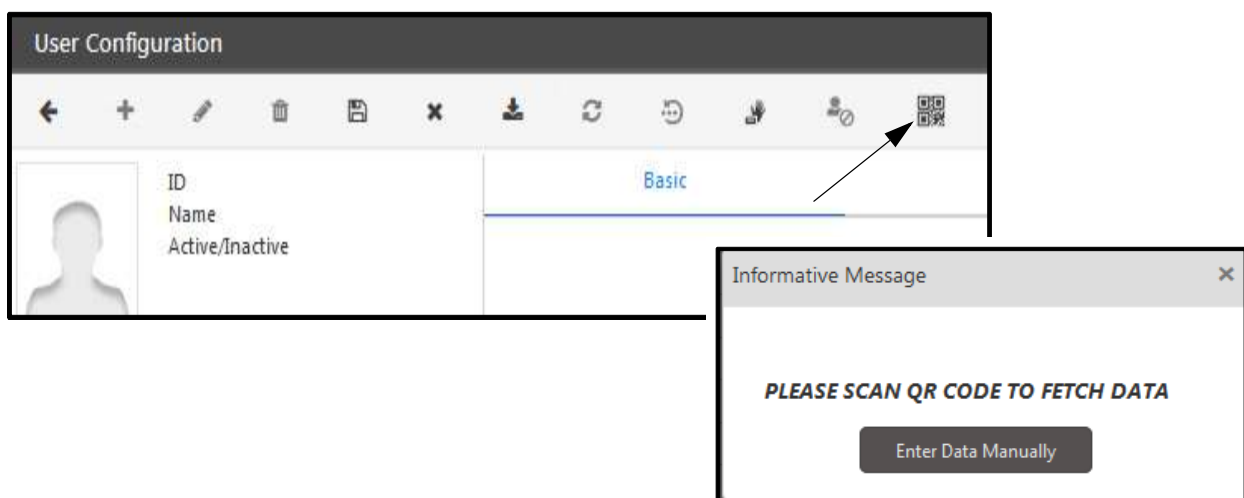

## Profile

To configure a User Profile, follow the below steps.

- *“Basic”*
- *“General”*
- *“Personal”*
- *“Contact”*

The details can also be fetched directly from user's Aadhar Card. By Scanning the QR Code of Aadhar Card through 'QR Code Scanner', the information like Name, Gender, DoB, Address etc. available in Aadhar Card will be automatically fetched, and filled into the respective fields of above listed sections.

From the Top menu Bar click on the **QR Code** button and the Pop-up will open as shown below.

Scan the user's Aadhar Card QR through the QR Code scanner or click on the **Enter Data Manually** button to enter the details manually into a pop-up window.

Once the Aadhar Card is scanned and information is received by COSEC Server, the fetched details including Aadhar Number will display as shown below.

×

Aadhaar No.

702351944240

Name

Bindu Singh

Gender

OK

Cancel

User can edit the details if required.

*The Aadhar Number must be unique from existing users to configure a new one.*

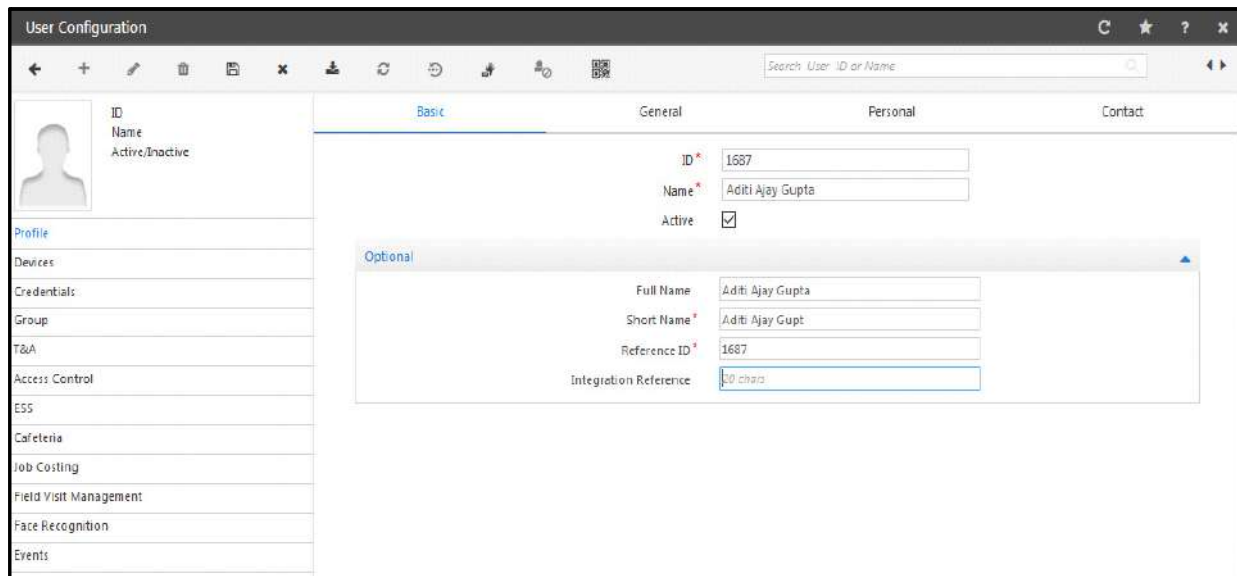

Click on the **OK** button to Save the details or **Cancel** to cancel the configuration.

Once saved, the details will be placed into the fields of respective sections.

If the Admin has configure QR Code scanning optional then, the above step can be skipped and the details can be added manually as describe below.

## Basic

The **Basic** section is displayed as follows:

The screenshot shows a 'User Configuration' window with a sidebar on the left containing links to Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Events. The main content area is divided into tabs: Basic, General, Personal, and Contact. The 'Basic' tab is active, displaying the following fields:

- ID: 1687
- Name: Aditi Ajay Gupta
- Active: ☒
- Optional section:
  - Full Name: Aditi Ajay Gupta
  - Short Name: Aditi Ajay Gupta
  - Reference ID: 1687
  - Integration Reference: 50 chars

The following parameters appear here for configuration:

*When Full name of user is entered and Name and Short name are blank then Name will be auto updated with 45 characters of full name excluding special characters and Short name will be updated with 15 characters of full name.*

**ID** - Specify a unique User ID. It can have an alphanumeric value. If the Admin has configured a User ID to be generated automatically then, a user does not need to specify this field. Once the further details are configured and saved, the unique ID will be automatically allocated to the user.

*If the ID contains colon (':') then the API authentication with such User ID will not be functional. As well as, such users will not be able to login using their credentials in COSEC APTA. However, they can login into COSEC APTA using SSO or Active Directory credentials.*

**Name** - Enter a name in this field that identifies the user (maximum upto 45 characters)

**Active** - Select this checkbox to activate the user. Whenever a user is made inactive (i.e. **Active** checkbox is unchecked), say, on the last day of employment, the admin will be prompted to choose whether all assigned devices should be revoked from the user or not.

### Optional

**Full Name**- You can also specify the Full name of the user with maximum 200 characters. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**

*A function name followed by ( bracket is invalid in full name. Eg: Thomas S/O Round ( will be invalid.*

**Short Name** - Specify an alternative short name for the user which will be displayed on the COSEC doors whenever there is an event related to this user. (maximum up to 15 characters).

**Reference ID** - The system allots a random sequential Reference Code based on the last reference code allotted (numeric value with a maximum of 8 digits). This option is used to provide a linkage ID in the event of an organization using a different user ID format in another software application for e.g. the payroll application.

**Integration Reference** - This field is provided for integration with third party applications where the user ID has to be alphanumeric and up to 20 characters.

## Temporary User/Worker

This panel will be visible only for Temporary Users/Workers.

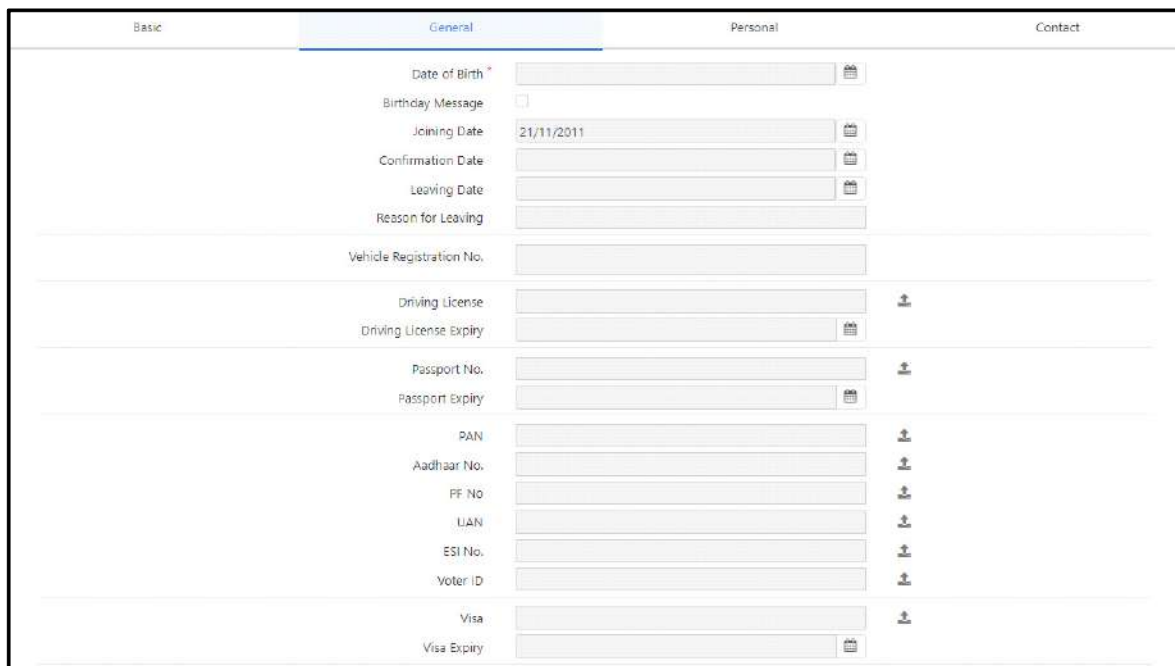

The screenshot shows a panel titled "Temporary User" with a blue header bar. Below the header, there are three rows of information:

Auto-Registered Date & Time	18/12/2023 12:34
Auto-Registered via Device	PD-ARGO FACE--61-amit testing
Auto-Registered via Credential	Face

- **Auto-Registered Date & Time:** Displays the date and time when the temporary user/worker is auto-registered.
- **Auto-Registered via Device:** Displays the name of the Device using which the temporary user/worker is auto-registered.
- **Auto-Registered via Credential:** Displays the credentials using which the temporary user/worker is auto-registered.

## General

This section allows you to add general information about a user. The **General** page appears as follows:

The screenshot shows the "General" tab of a user profile page. The page has a header with four tabs: "Basic", "General" (selected), "Personal", and "Contact". The "General" tab contains the following fields:

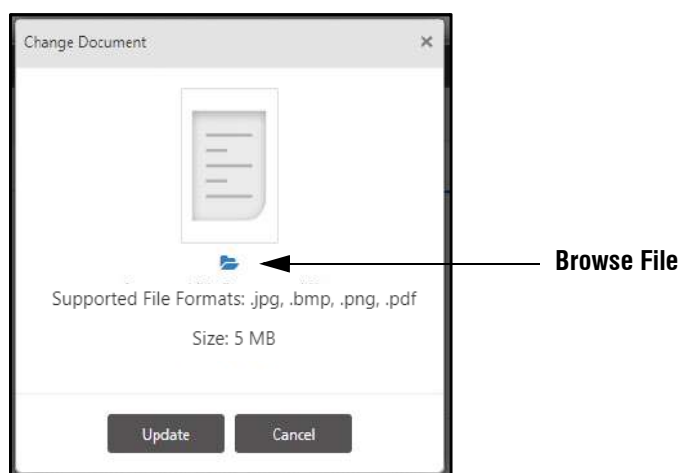

Date of Birth *	<input type="text"/>	
Birthday Message	<input type="checkbox"/>	
Joining Date	21/11/2011	
Confirmation Date	<input type="text"/>	
Leaving Date	<input type="text"/>	
Reason for Leaving	<input type="text"/>	
Vehicle Registration No.	<input type="text"/>	
Driving License	<input type="text"/>	
Driving License Expiry	<input type="text"/>	
Passport No.	<input type="text"/>	
Passport Expiry	<input type="text"/>	
PAN	<input type="text"/>	
Aadhaar No.	<input type="text"/>	
PF No	<input type="text"/>	
UAN	<input type="text"/>	
ESI No.	<input type="text"/>	
Voter ID	<input type="text"/>	
Visa	<input type="text"/>	
Visa Expiry	<input type="text"/>	

Security Number	<input type="text"/>	
ID Proof *	<input type="text"/>	
Nominee Name *	<input type="text"/>	
Field 4	<input type="text"/>	

Enter the relevant employee information — Date of Birth, Joining Date, Confirmation Date etc.— either manually or by clicking the date selection button as shown in the above images.

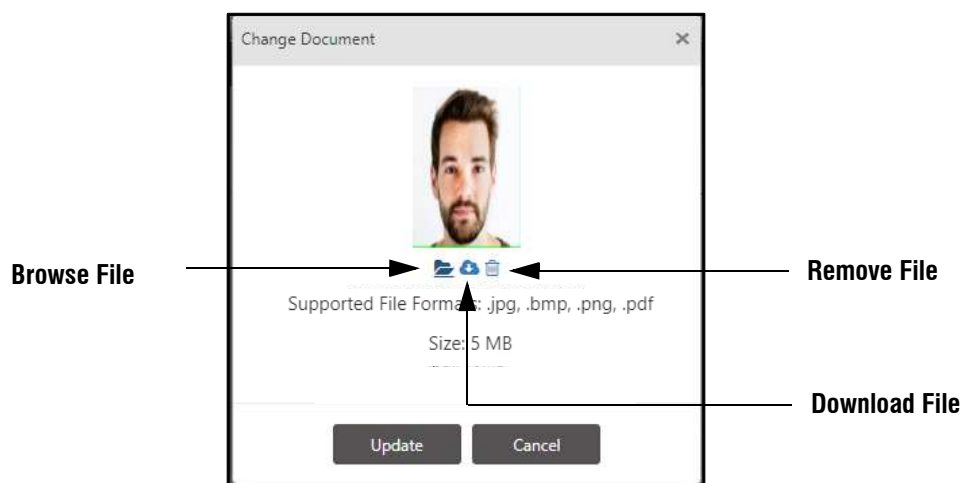

If the **Date of Birth Mandatory** check box is enabled in “[Minimum Age Requirement for Users](#)” in “[User Policy](#)”, then Date of Birth parameter will be mandatory. When the date is configured here, the age will be displayed in Years and Months. Any User Profile below the age configured in User Policy > Minimum Age will not be created.

In certain parameters like Driving License, Passport No., PAN, etc, you can upload the documents by clicking **Upload** button. Then **Change Document** pop-up appears as shown below.

Click **Browse File** .

To upload, select the desired file as per the supported formats and size (.jpg, .bmp, .png, pdf) from your local PC.

After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File**  .

To remove the uploaded file, click **Remove File**  .

Then click **Update**.

The document will be uploaded and can be previewed by clicking the **Preview**  icon.

There are 10 additional fields in which you can enter the desired details of the users as per your requirement.

These are visible only after they are configured from **Admin> System Configuration> Global Policy> User**. For details refer *“Custom Fields”*. For example Security Number, ID Proof, Nominee Name, etc.

Click on the **Upload**  button and follow the steps as mentioned above.

## Personal

This section allows you to add personal information about a user. The **Personal** page appears as follows:

Basic	General	Personal	Contact
Nationality <input type="text" value="Indian"/>			
Qualification <input type="text" value="B.E-E.C"/>			
Experience <input type="text" value="3 years"/>			
Gender <input type="text" value="Female"/>			
Blood Group <input type="text" value="A+"/>			
Height (cms) <input type="text" value="180"/>			
Weight (kgs) <input type="text" value="55.0"/>			
Medical History <input type="text"/>			
Marital Status <input type="text" value="Married"/>			
Father/Spouse Name <input type="text" value="N M Raval"/>			

Enter the relevant personal details — Nationality, Qualification, Experience etc. — of an employee in the following fields either manually or by choosing from the respective drop-down lists:

## Contact

This section allows you to add contact information about a user. The **Contact** page appears as follows:

Enter the relevant contact and address details of the employee in the **Contact Info** and **Address** tabs.

## Contact Info

Basic	General	Personal	Contact
Contact Info			
<b>Personal</b>			
Phone <input type="text" value="9682624826"/>			
Mobile <input type="text" value="8611224120"/>			
Email <input type="text" value="aditigupta@gmail.com"/>			
<b>Official</b>			
Phone <input type="text" value="230493"/> - <input type="text" value="02626"/>			
Mobile <input type="text" value="9541282005"/>			
Email <input type="text" value="aditigupta@matrixrd.org"/>			
<b>Receive Alert On</b>			
Personal Mobile <input type="checkbox"/>			
Personal Email <input type="checkbox"/>			
Official Mobile <input checked="" type="checkbox"/>			
Official Email <input checked="" type="checkbox"/>			
Address			

Enter the relevant contact information — Phone, Mobile and Email under **Personal** and **Official** sections. The alerts —SMS, WhatsApp and Email are sent on the Mobile Number and Email ID configured here.

**Receive Alert On:** Select the check boxes for the desired options where you wish to receive alerts.

## Address

The screenshot shows a web form with four tabs: 'Basic', 'General', 'Personal', and 'Contact'. The 'Contact' tab is active. Under 'Contact Info', the 'Address' section is expanded. It contains two sub-sections: 'Local' and 'Permanent'. Each sub-section has a form with the following fields: Address, Street, City-Pincode, State, and Country. To the right of the 'City-Pincode' field is a 'Pincode' field. The 'Local' section is filled with: Address: 302, shivam Residency, Street: Manjalpur, City-Pincode: 390011, State: Gujarat, Country: India. The 'Permanent' section is filled with: Address: CTM, Street: Ahmedabad, City-Pincode: 380002, State: Gujarat, Country: India.

Section	Address	Street	City-Pincode	State	Country	Pincode
Local	302, shivam Residency	Manjalpur	390011	Gujarat	India	
Permanent	CTM	Ahmedabad	380002	Gujarat	India	

Enter the relevant information— Address, Street, City-Pincode, State and Country under **Local** and **Permanent** sections.

Click on the **Save** button to save the user's profile.

This user will now be reflected in the list of users on the **User List** page.

To further add or edit any user details, go to **Users module > User List**.

Select the user from the **User List** by searching the user through ID or name. Also the user can be searched by specifying the ID or Name in User Configuration page.

The **User Configuration** page opens with the selected user details as shown below.

The screenshot shows the 'User Configuration' window with a sidebar on the left containing a user profile icon and a list of configuration tabs: Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Events. The 'Basic' tab is selected. The main area displays user details for 'Aditi Ajay Gupta' with ID '1687'. The 'Active' checkbox is checked. Below this, an 'Optional' section contains fields for 'Full Name' (Aditi Ajay Gupta), 'Short Name' (Aditi Ajay Gupta), 'Reference ID' (1687), and 'Integration Reference' (20 chars).

Tab	ID	Name	Active	Full Name	Short Name	Reference ID	Integration Reference
Basic	1687	Aditi Ajay Gupta	<input checked="" type="checkbox"/>	Aditi Ajay Gupta	Aditi Ajay Gupta	1687	20 chars

The User Configuration page provides various options for detailed configuration of the new user. Once the Profile tab is configured, the administrator can proceed to configure the other sections.

## Adding User Photo

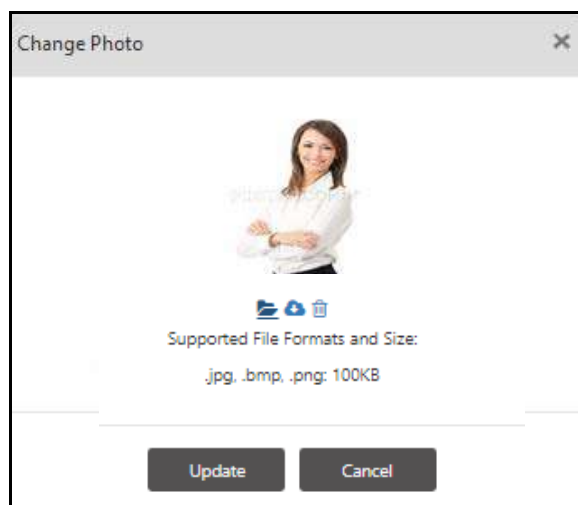

The administrator can add a profile photograph for each user defined in the COSEC system. The allowed size limit for uploading an image file is 100 KB.

This screenshot is identical to the previous one, but with a black arrow pointing to the profile photo icon in the sidebar, indicating where to click to upload a user photo.

To add an image as the profile photograph for a user, click the image icon. The Change Photo window appears as shown below.

Click  to browse the image file. The Supported File Formats are \*.jpg, .bmp and .png. Once the required image file is selected, click the **Update** button.

Then click **Save** button. The user photo will be successfully updated on the **User Configuration** page as shown below.

**Note:** Device(s) will be automatically retained which are part of any Access Rule(s) assigned to the User. For more details [Click here](#)

You can assign Device Groups as well as Devices to the users.

**Device Group:** Device Group can be a group of individual devices or a group of device groups. You can assign the same to the user.

To do so, click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

The screenshot shows a window titled "Picklist For Device Group". At the top, a green bar displays "Total Selected: 0 Records". Below this is a search bar with the text "Search" and a magnifying glass icon, and a "Show Selected" button. A "Select All" checkbox is present. The main area contains a table with columns "DGID" and "Name". The table lists 10 device groups, with DGIDs 1 through 10. The first two rows are "ACTA Devices" (DGID 1) and "RnD1Visitor" (DGID 2). The remaining eight rows are "Device Group 3" through "Device Group 10". All checkboxes in the "DGID" column are unchecked. At the bottom left, it says "1 - 10 of 12 records". At the bottom right, there are navigation buttons: "<<", "<", "1", ">", ">>". At the very bottom are "OK" and "Cancel" buttons.

DGID	Name
1	ACTA Devices
2	RnD1Visitor
3	Device Group 3
4	Device Group 4
5	Device Group 5
6	Device Group 6
7	Device Group 7
8	Device Group 8
9	Device Group 9
10	Device Group 10

You can select particular groups or can select all the groups at once.

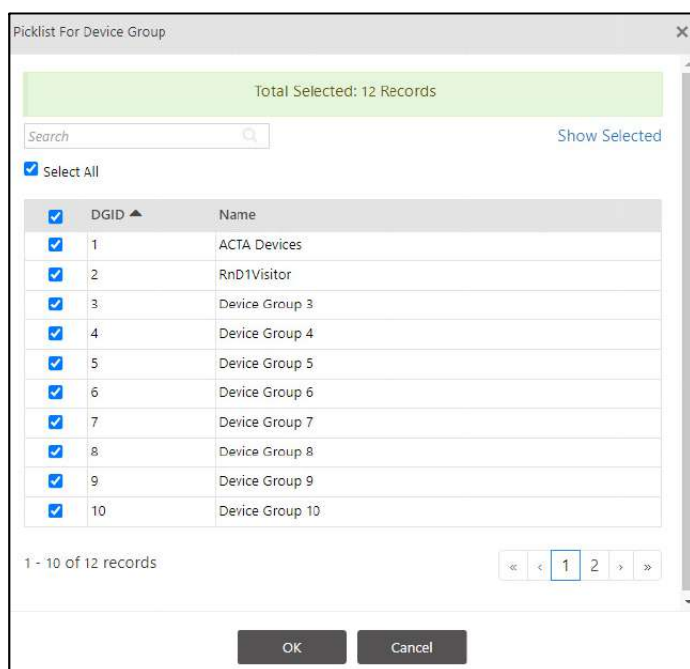

To select particular device group, select the check boxes of the desired device group.

The screenshot shows the same "Picklist For Device Group" window, but now two records are selected. The green bar at the top displays "Total Selected: 2 Records". The checkboxes for DGID 1 and DGID 2 are now checked. The rest of the interface, including the search bar, "Select All" checkbox, table, pagination, and buttons, remains the same.

DGID	Name
<input checked="" type="checkbox"/> 1	ACTA Devices
<input checked="" type="checkbox"/> 2	RnD1Visitor
<input type="checkbox"/> 3	Device Group 3
<input type="checkbox"/> 4	Device Group 4
<input type="checkbox"/> 5	Device Group 5
<input type="checkbox"/> 6	Device Group 6
<input type="checkbox"/> 7	Device Group 7
<input type="checkbox"/> 8	Device Group 8
<input type="checkbox"/> 9	Device Group 9
<input type="checkbox"/> 10	Device Group 10

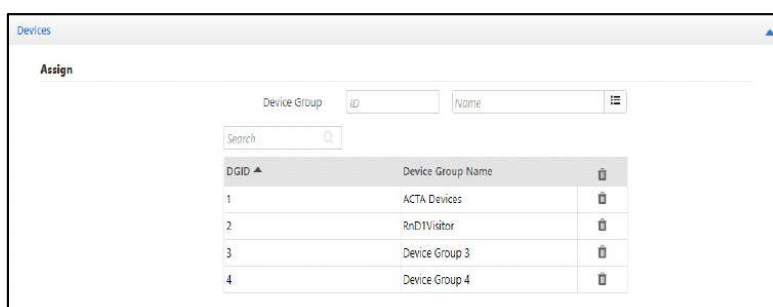

**OR**

To select all the device groups, select the **Select All** check box. The device group on all the pages will be selected.

Click **OK**.

The selected Device Groups appear in a grid.

You can also delete the desired device group/s. To do so, click **Delete**  of the respective device group.

Then click **Save**. The devices belonging to the selected device group/s appear in the grid.

DGID	Device Group Name	
1	ACTA Devices	
2	RnD1Visitor	
3	Device Group 3	

Device Name	Type	Restrict Access	Restrict Attendance	Action
FACTORY ACCOUNT	Door V3	<input type="checkbox"/>	<input type="checkbox"/>	
Factory Admin FMX	Door FMX	<input type="checkbox"/>	<input type="checkbox"/>	
Factory Canteen FMX	Door FMX	<input type="checkbox"/>	<input type="checkbox"/>	
Factory Production1 ARGO	ARGO	<input type="checkbox"/>	<input type="checkbox"/>	
Factory QC ARGO	ARGO	<input type="checkbox"/>	<input type="checkbox"/>	
Factory QC FMX	Door FMX	<input type="checkbox"/>	<input type="checkbox"/>	
FACTORY STORE	Door V3	<input type="checkbox"/>	<input type="checkbox"/>	
Factory Vega Production-2	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	
HQ Access VEGA	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	
HQ TA ARGO	ARGO	<input type="checkbox"/>	<input type="checkbox"/>	

Click **Edit**. You can un-assign the particular device from the assigned Device Group by clicking on icon. Click on the icon to assign the device again.

*If any device or a device belonging to any device group is un-assigned against any user or is selected for deletion but is a part of the Access Rule which is assigned to that user, then those door(s) will be retained against that user.*

Device Name	Type	Restrict Access	Restrict Attendance	Action
Factory Vega Production-2	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	Click to Assign
RnD1 BOOM BARRIER IN	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	
RnD1 GF TRIPOD LEFT OUT	PVR Door	<input type="checkbox"/>	<input type="checkbox"/>	

Select the corresponding **Restrict Access** and **Restrict Attendance** check boxes to enable these restrictions for the selected user on the selected device.

Similarly you can also assign devices to the user.

**Device:** To assign a device to the user; click the **Device** picklist. The **Select Device** pop-up appears.

The 'Select Device' pop-up window displays a list of devices. At the top, a green bar indicates 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main table lists devices with columns for 'Name' and 'Type'. The first device, 'ARCDC100\_DD\_Door', is selected. The bottom of the window shows '1 - 10 of 94 records' and navigation buttons.

<input type="checkbox"/>	Name	Type
<input checked="" type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door

OK Cancel

Click **OK**.

The device/s appear in the grid.

Search <input type="text"/>				
Device Name	Type	Restrict Access	Restrict Attendance	Action
Factory Vega Production-2	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	
RnD1 BOOM BARRIER IN	Vega Controller	<input type="checkbox"/>	<input type="checkbox"/>	
RnD1 Canteen1 PVR	PVR Door	<input type="checkbox"/>	<input type="checkbox"/>	
RnD1 Canteen2 PVR	PVR Door	<input type="checkbox"/>	<input type="checkbox"/>	
RnD1 CF TRIPOD LEFT OUT	PVR Door	<input type="checkbox"/>	<input type="checkbox"/>	

You can also delete the desired device/s. To do so, click **Delete** of the respective device.

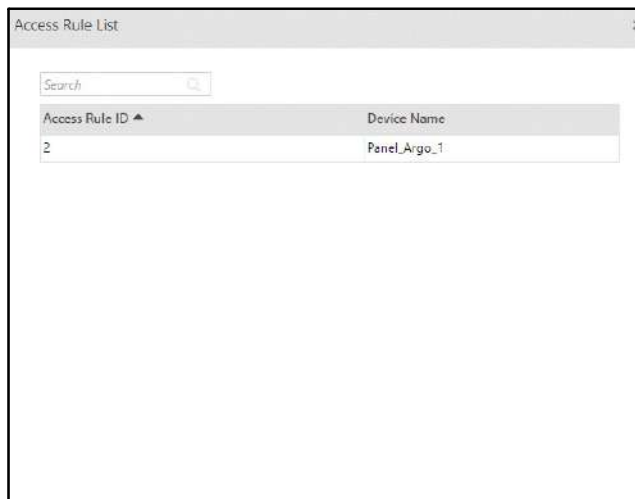

*The device picklist will include Panel Doors and Direct Doors only.*

Select the corresponding **Restrict Access** and **Restrict Attendance** check boxes to enable these restrictions for the selected user on the selected device.

- If you select the **Restrict Access** check box, then user will be restricted for access on that Door. The punches of the user on this door will be considered for attendance only and the door will not open for access.
- If you select the **Restrict Attendance** check box, the punch of the user on door will open the door for access but will not be considered for calculating the attendance.

If you wish to check the devices assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The image shows a pop-up window titled "Access Rule List". It contains a search bar at the top. Below it is a table with two columns: "Access Rule ID" and "Device Name". There is one row in the table with the value "2" under "Access Rule ID" and "Panel\_Argo\_1" under "Device Name".

Access Rule ID	Device Name
2	Panel_Argo_1

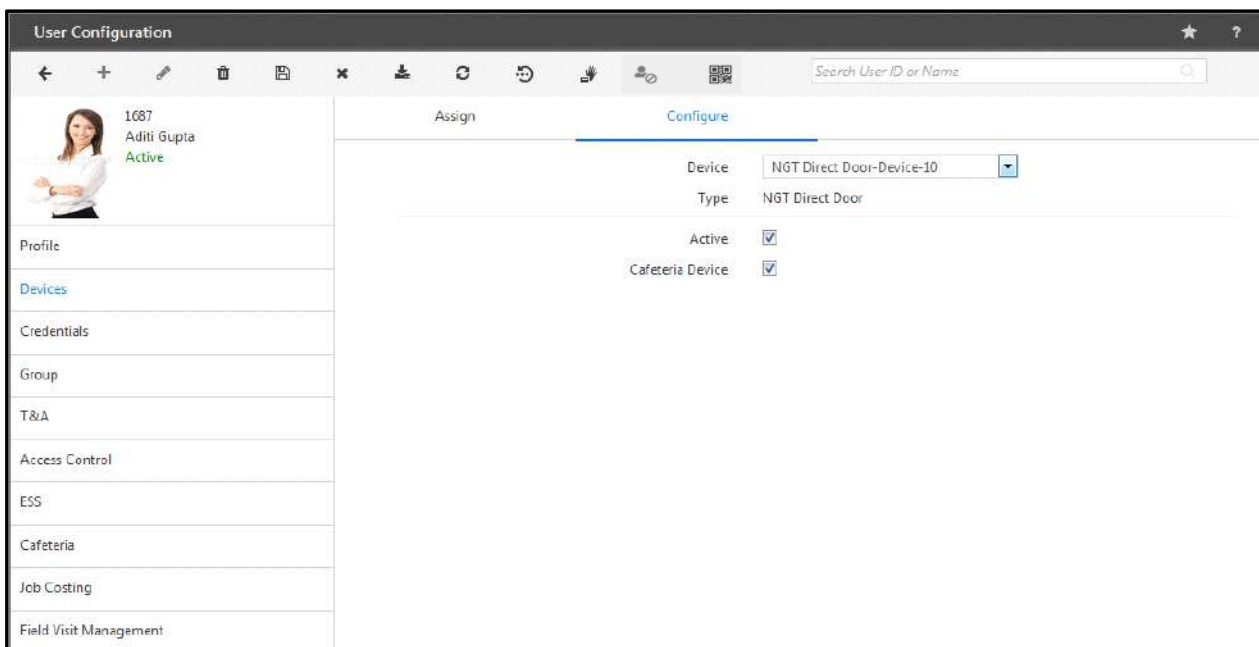

It displays the list of Devices along with the Access Rule ID against which they are assigned.

Click the **Save** button to save the device selection for assigning to the user.

## Configure

*The parameters for "Configure" varies for different type of devices.*

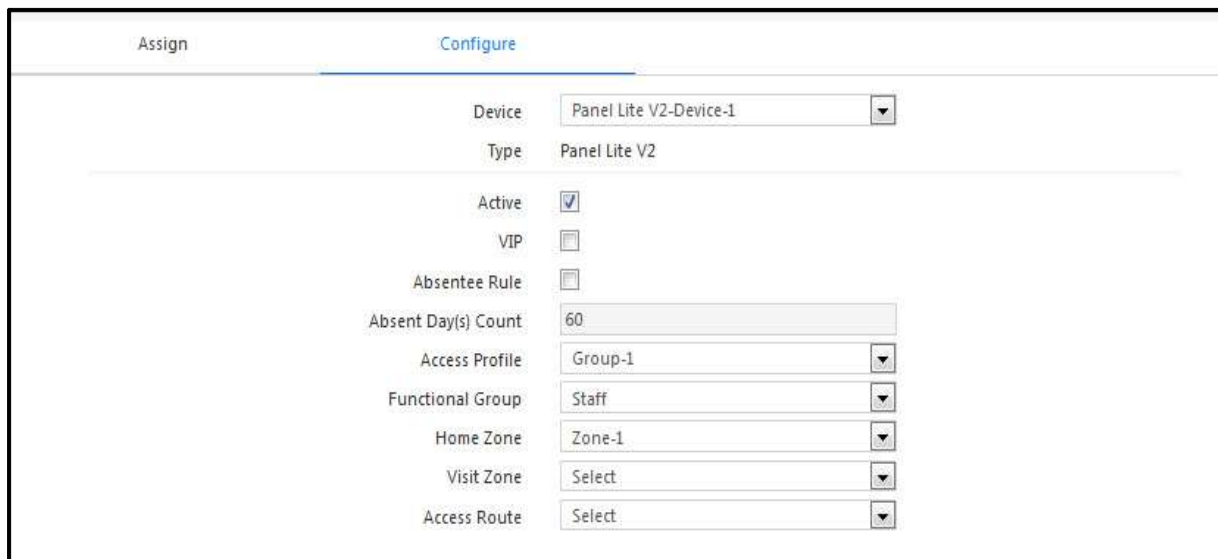

The image shows a "User Configuration" window. On the left is a sidebar with a user profile (Aditi Gupta, ID 1687, Active) and a list of configuration options: Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, Job Costing, and Field Visit Management. The "Devices" option is selected. The main area has two tabs: "Assign" and "Configure". The "Configure" tab is active, showing a "Device" dropdown menu set to "NGT Direct Door-Device-10", a "Type" field set to "NGT Direct Door", and two checkboxes: "Active" (checked) and "Cafeteria Device" (checked).

**Device:** Select a device from the Device drop down list. This list displays all devices on which the selected user is assigned.

**Active:** The Active check box is selected by default to enable the user credentials on the selected device.

Configuration of Panel200 is shown below:

The screenshot displays the 'Configure' tab of the Panel200 configuration interface. It features a list of configuration options on the left and their corresponding values or controls on the right. The options include Device, Type, Active, VIP, Absentee Rule, Absent Day(s) Count, Access Profile, Functional Group, Home Zone, Visit Zone, and Access Route. The values are: Device (Panel Lite V2-Device-1), Type (Panel Lite V2), Active (checked), VIP (unchecked), Absentee Rule (unchecked), Absent Day(s) Count (60), Access Profile (Group-1), Functional Group (Staff), Home Zone (Zone-1), Visit Zone (Select), and Access Route (Select).

**VIP:** Check the VIP box if the user is to be given unrestricted access rights.

**Absentee rule:** Check this box to enable Absentee rule feature at user level for each Panel200 and Direct door. However, this option needs to be first enabled at the Panel200 and Direct door levels.

- **Absent Days Count:** Specify the days count ranging from 1 to 365 for which if the user remains absent, he will be marked inactive.

**Access Profile:** Select the Access Profile to be assigned to the user for the selected Panel200. If you have configured the Access Profile in the Enterprise Group assigned to the user, then the same will be assigned here. However, you can assign any other group from the list if required. For details refer to the desired Enterprise Group — “Organization”, “Branch”, “Department”, “Designation”, “Section”, “Category”, “Grade”, “Custom Group1”, “Custom Group2”, “Custom Group3”.

**Functional Group:** Select the Functional Group to be assigned to the user for the selected Panel200.

**Zone:** Select the user's **Home Zone** and the **Visit Zone** for the selected Panel200.

**Access Route:** The administrator can also assign a defined access route to the user. Select the access route from the drop down list if required.

Select another device and configure the access control options as applicable.

*This option is only available with the **Access Control** add on module.*

## Credentials

The Credentials option enables the configuration and enrollment of user credentials for the selected user.

The screenshot shows the 'User Configuration' window with the 'Credentials' tab selected. On the left, a sidebar lists configuration options: Profile, Devices, Credentials (selected), Group, T&A, Access Control, ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Events. The main content area displays the following fields:

- PIN: [Empty text box]
- Biometric Group No.: 42
- Roaming User: ☐
- Access Card 1: [Empty text box]
- Access Card 2: [Empty text box]
- Enrolled Fingers (Suprema Proprietary): 0
- Enrolled Fingers (Suprema ISC): 0
- Enrolled Fingers (Lumidigm ISC): 0
- Enrolled Fingers (Lumidigm Proprietary): 0
- Enrolled Palm: 0
- Enrolled Face: 0
- Enable Self-Enrollment: ☐

The following parameters are available for configuration for the selected user:

**PIN:** Specify the PIN no. for the user. User PIN should be a numeric value ranging from 1 digit to a maximum of 15 digits. The value entered in this field will only be visible to the “SA” user. For all other login users the value in this field will be masked.

**Biometric Group No.:** Specify the Biometric group number to be assigned to the user if applicable. It is a number allotted to a group of users assigned on a device. This enables the device to match a template against only those users who are part of the same Biometric Group thus reducing processing time.

This value is used for Palm/Face Identification of user on Identification Server in shorter time span considering user first specifies Group No and then punches on the device.

Identification Server will be allocating templates to its child threads on the basis of this field.

**Roaming User:** You can mark the user as roaming user for the users who are field engineers, partners etc who report to office rarely. When such users mark their punch after pressing 0 on door, then they will be identified from the Roaming user group.

The Identification server will maintain a list of users along with their templates to be considered as roaming/remote users.

*If Enterprise Group Mapping is done then on user configuration page by default status of 'Roaming User' will be loaded as per mapped enterprise group.*

**Access Card 1:** Enter a Card Serial Number (CSN) or a Comma separated CSN which is to be assigned to the user.

Format:

- **Card Serial Number** = 1343933547.
- **Comma separated CSN** = 12,345789

The maximum character limit for Card Serial Number (CSN) is 20 digits. While the maximum character limit for Comma separated CSN is 21 digits.

To configure a comma separated card value, make sure you configure a 26-bit card format in the system and then assign the same to the device. To know more, refer [“Card Formats”](#).

If there is any discrepancy while entering the Access Card number (CSN), the system will display an error.

This Access Card number will be synced with the devices to allow/deny access to users.

COSEC accepts up to two cards per user. So if required and available, enter the **Access Card 2** number.

Once you save the configurations, hover your mouse over the Comma separated CSN value of any Access Card, the system will display an encoded (converted) value of Comma separated CSN.

While importing the data of users, make sure you enter the correct Access Card details in the desired format — Card Serial Number (CSN) or Comma separated CSN. To know more about importing users, refer [“Import Users”](#).

**Access Card 2**, can also be used to generate the QR Code. Users can access the device using this QR Code.

*Access Via QR feature is not applicable for Temporary Users.*

*Make sure you have saved the earlier configurations as QR Code can be generated in view mode only*

For QR Code functionality, make sure:

- you have enabled **Allow Access Via QR** in the desired ARGO FACE (Direct Door / Panel Door) device as well as configured the Image Setting parameters. For details refer to [“Face/Image Settings”](#).
- enabled the Alert, so that the generated/re-generated QR can be sent to the desired users/workers using SMS/Email/WhatsApp. Make sure you select the Alert Filter as **Users** and Event as **User Access - QR Credentials**. For details, refer to [“Configuring Alert Messages”](#).

If you add new devices and want **Allow Access Via QR** check box to be enabled by default, make sure you have enabled the same in Global Policy > Device. For details refer to [“Device”](#) in [“Defining Global Policies”](#)

QR Code can be generated in two ways:

- If a card is enrolled, then with the same details a QR Code can also be generated. In this case the user will be able to use, both the Card as well as the QR Code to access the device.

To generate the QR Code:

The screenshot shows the 'User Configuration' window for 'User4' (Active). The 'Credentials' tab is selected. Fields include PIN, Biometric Group No. (5), Roaming User (checkbox), Access Card 1, Access Card 2, and various biometric enrollment options (Fingers, Palms, Faces) with counts. A 'Generate' button (QR icon) and a 'Download' button (download icon) are located next to the Access Card 2 field. An arrow points to the 'Generate' button with the text 'Click Here'.

**Generate** will be accessible in view mode only.

- Click **Generate** . This generated QR Code is sent to the desired users via User Access - QR Credentials Alert using SMS, Email or WhatsApp as per the configurations done. Now, this QR Code can be used as a credential to access the device.
- Click **Download** , to download the generated QR Code on the local PC.
- If a card is enrolled, but you do not wish to generate the QR Code using the same details, then the QR Code can be generated using Re-generate option. In this case the Card value will be over-written with the QR Code value and the user will be able to use only the QR Code.

You can also click Re-generate to generate a new QR Code after you have generated the QR Code once.

To generate the QR Code:

**Re-generate** will be accessible in view mode only.

- Click **Re-generate** . A warning pop-up appears as the existing value of the Access Card will be erased. Click **Yes** to confirm. The new QR Code is generated. This generated QR Code is sent to the desired users via User Access - QR Credentials Alert using SMS, Email or WhatsApp as per the configurations done. Now, this QR Code can be used as a credential to access the device.
- Click **Download** , to download the generated QR Code on the local PC.

**Enrolled Fingers:** This option displays the number of fingerprint templates enrolled against the selected user.

- FP Template Type-** If Credential is selected as FP Template; then you can select the Type of FP Template which is to be deleted. The options of template are Suprema Proprietary, Suprema ISO, Lumidigm ISO, Lumidigm Proprietary and All.

**Enrolled Palm:** This option displays the number of palm vein templates enrolled against the selected user.

**Enrolled Face:** This option displays the number of Face templates enrolled against the selected user.

**Enable Self-Enrollment:** Select this checkbox to enable the Self-Enrollment feature for the selected user.

The *Self-Enrollment* feature enables the user to enroll himself/herself at a COSEC door controller using an already provided access PIN, without the help of any operator or HR executive. This feature is applicable for Wireless Door, PVR Door, NGT Controller, Vega Controller, Door V3 and Door V4.

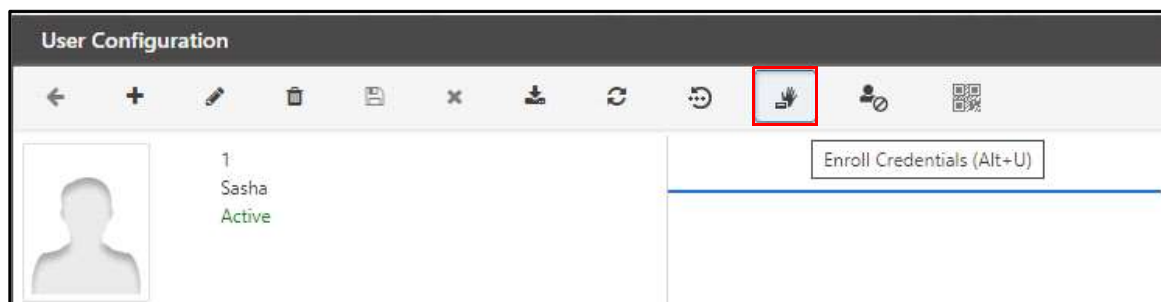

To enable Self- Enrollment at door; select *Device Configuration > Enrollment > Settings*.

An alert message containing the access PIN will be sent to the user once this feature is enabled for this user. To configure the access PIN to be sent in Alert message, [See “Configuring Alert Messages” on page 273](#). Self-Enrollment can be especially beneficial for organizations with large number of employees.

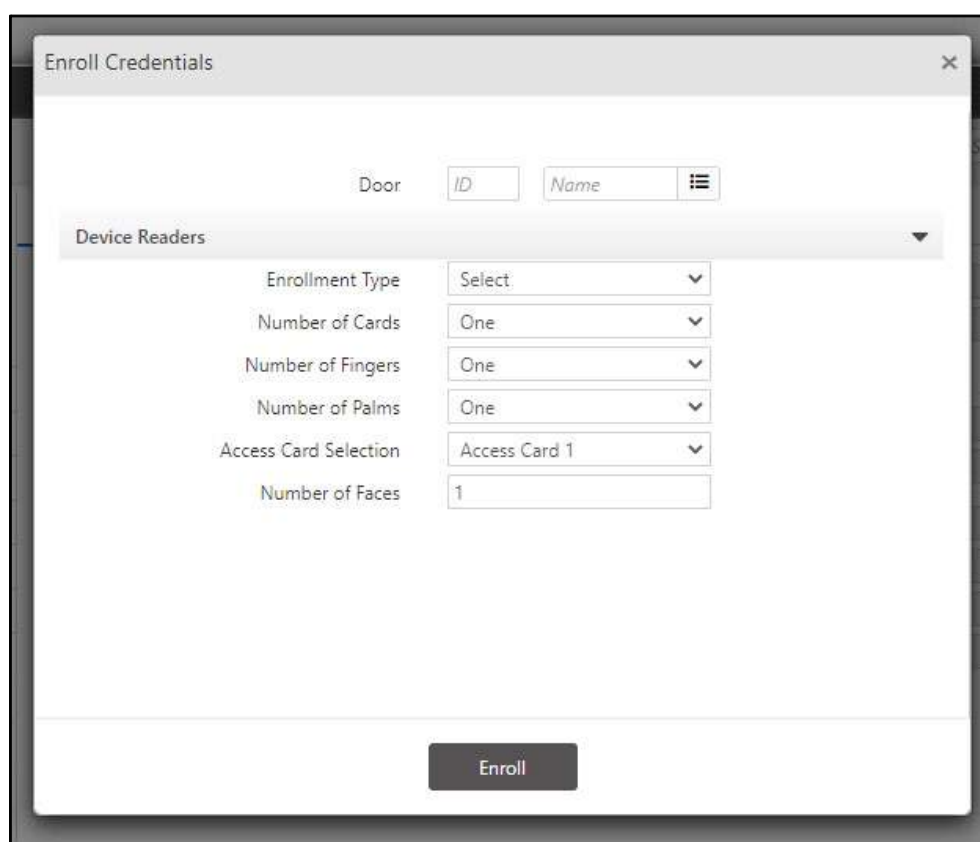

## Enroll Credentials

The Administrator can enroll credentials for the user by clicking **Enroll Credentials**  as shown below.

The **Enroll Credentials** window appears as shown below:

- **Door:** Select the desired door from the pick-list on which the enrollment is to done.

### **Device Readers**

Device Readers displays the information of the readers configured in the selected **Door**.

Biometric Reader

External Reader

Enrollment Type

Number of Cards

**Enroll**

- **Enrollment Type:** From the dropdown list, select the desired enrollment type — **Read Only Card, Smart Card, Face, Biometrics, BiometricsThenCard, Mobile, or Duress Finger.**

Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

*When Enrollment Type selected is Smart card or BiometricThenCard, Duress Finger Templates will not be written in the Smart Card.*

*Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.*

**1. Enrollment Type = Read Only Card**

**Number of Cards:** Select the desired number of cards from the drop-down list.

**2. Enrollment Type = Smart Card**

**Number of Cards:** Select the desired number of cards from the drop-down list.

**Details on Smart Card**

Select the desired check boxes of the parameters — **User ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop-down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the smart card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

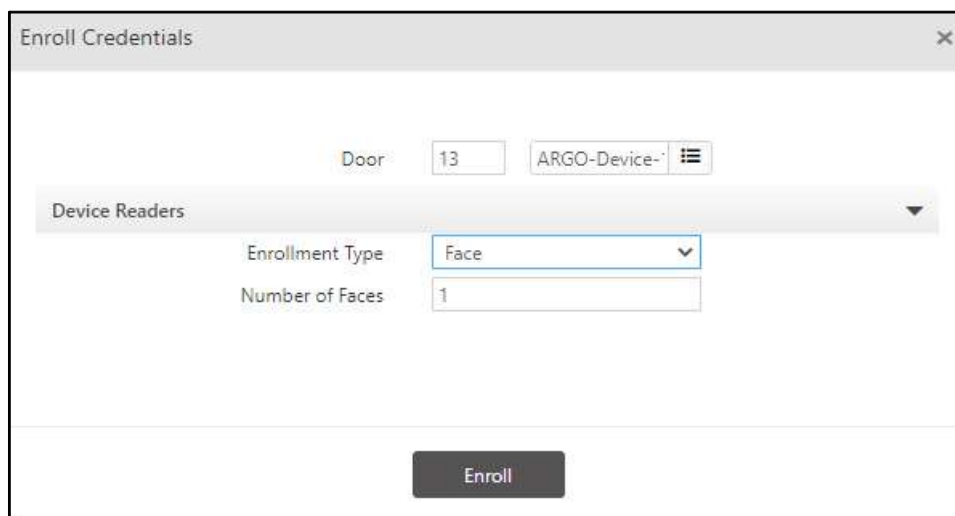

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name, Branch, Department, Designation, Emergency Contact, Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

#### 3. Enrollment Type = Face

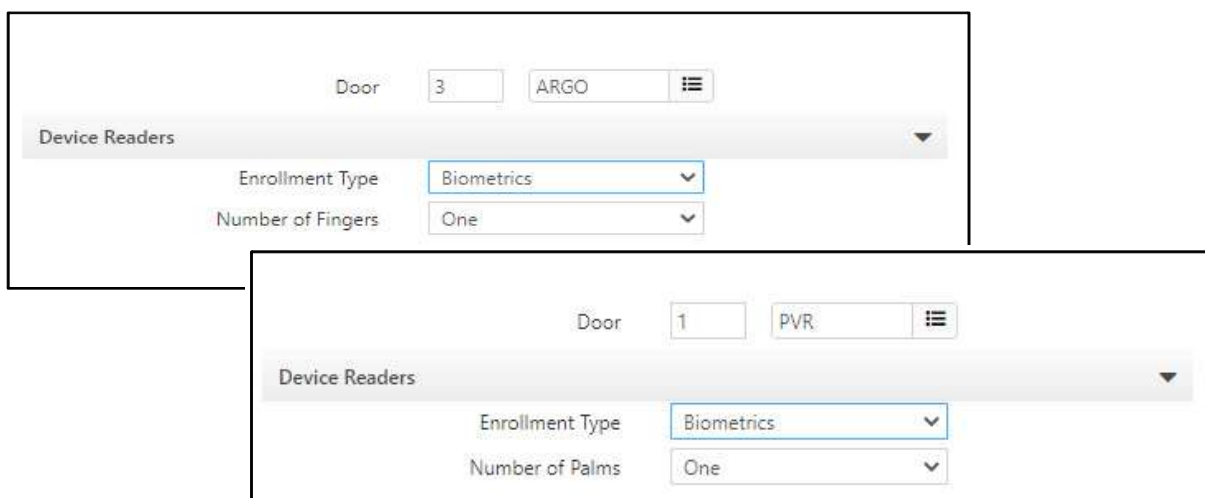

**Number of Faces:** Select the desired number of faces from the dropdown list.

The screenshot shows the 'Enroll Credentials' dialog box. At the top, there is a 'Door' field with the value '13' and a dropdown menu showing 'ARGO-Device-'. Below this is a 'Device Readers' section with a dropdown arrow. Underneath, the 'Enrollment Type' is set to 'Face' and the 'Number of Faces' is set to '1'. At the bottom, there is an 'Enroll' button.

#### 4. Enrollment Type = Biometrics

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the dropdown list.

The first screenshot shows the 'Enroll Credentials' dialog box for Biometrics enrollment. The 'Door' field has the value '3' and the dropdown menu shows 'ARGO'. The 'Device Readers' section has a dropdown arrow. The 'Enrollment Type' is set to 'Biometrics' and the 'Number of Fingers' is set to 'One'. The second screenshot shows a similar dialog box for Biometrics enrollment. The 'Door' field has the value '1' and the dropdown menu shows 'PVR'. The 'Device Readers' section has a dropdown arrow. The 'Enrollment Type' is set to 'Biometrics' and the 'Number of Palms' is set to 'One'.

##### 5. Enrollment Type = BiometricsThenCard

**Number of Cards:** Select the desired number of cards from the dropdown list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the dropdown list.

The screenshot shows the 'Enroll Credentials' window. At the top, 'Door' is set to '3' and 'ARGO' is selected. Under 'Device Readers', 'Enrollment Type' is 'BiometricsThenCard', 'Number of Cards' is 'One', and 'Number of Fingers' is 'One'. The 'Details on Smart Card' section has 'User ID', 'Facility Code (FC)', and 'Additional Security Code (ASC)' as unchecked checkboxes, and 'Finger Templates' as a dropdown set to 'None'. A tooltip points to the 'Finger Templates' dropdown with the text 'Duress Finger Templates will not be written in the Smart Card'. Below this is the 'Additional Details On Smart Card' section with a list of fields, each with an unchecked checkbox and a text input: 'Short Name' (Athira), 'Branch' (DFLTBRC), 'Department' (DFLTDPT), 'Designation' (DFLTDG), 'Emergency Contact', 'Blood Group' (NA), and 'Medical History'. An 'Enroll' button is at the bottom.

##### **Details on Smart Card**

Select the desired check boxes of the parameters — **User ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop-down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the smart card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### **Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name, Branch, Department, Designation, Emergency Contact, Blood Group and Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

### **6. Enrollment Type = Mobile**

*To select **Enrollment Type** as Mobile, the particular device must have BLE support and ensure Bluetooth is ON in the mobile.*

**Access Card Selection:** Select the desired Access Card from the drop-down list.

The screenshot shows a window titled "Enroll Credentials". Inside, there are several fields: "Door" with the value "3", "Device Readers" with a dropdown showing "ARGO", "Enrollment Type" with a dropdown showing "Mobile", "Access Card Selection" with a dropdown showing "Access Card 1", and "Facility Code (FC)" with an unchecked checkbox. At the bottom center is a button labeled "Enroll".

**Facility Code (FC):** Select this check box to enroll the Facility Code (FC) against the user.

Click **Enroll** to initiate the enrollment process.

## Group

This option enables to assign the Enterprise groups, Reporting group, Approval Policy, Leave group and Week off group to the user.

The screenshot shows the 'User Configuration' window for user 'Aditi Ajay Gupta' (ID: 1687, Status: Active). The 'Group' tab is selected. The interface includes a sidebar with navigation options: Profile, Devices, Credentials, Group (selected), T&A, Access Control, ESS, Cafeteria, Job Costing, and Field Visit Management. The main area displays assignment fields for various groups, each with a numeric input and a picklist:

Field	Value	Picklist
Organization *	1	Organization-1
Branch *	1	Branch-1
Department *	1	Department-1
Section *	1	Section-1
Category *	1	Category-1
Grade *	1	Grade-1
Designation *	1	Designation-1
Custom Group 1 *	1	Custom Group 1
Custom Group 2 *	1	Custom Group 2
Custom Group 3 *	1	Custom Group 3
Reporting Group	1	QA Group
Approval Policy	2	1then2
Leave Group *	1	Leave Group-1
Week Off Group	ID	Name

This page will be available with the Time & Attendance add on module.

The default groups will be shown in the respective fields. Click on the picklist buttons and select the appropriate enterprise groups (Organization, Branch, Department, Section, Category, Grade, Designation, Custom Groups) to assign the user.

*The Enterprise Groups changed from here will be effective from the current date only. For the changed group to be effective from previous date, change the group from User module> Utilities> Change Group.*

*The picklist options that appear in each enterprise group will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).*

- **Reporting Group:** Select the group from the pick-list to be assigned as reporting group for the user. The In-charge of the selected group will be the in-charge of the user. The different applications of user will require authorization of the in-charge of the group.

To create the Reporting group; click *Users module> Reporting In-Charge> Reporting Group*. For details, refer to [“Reporting Group”](#)

- **Approval Policy:** When Reporting Group is assigned to the user only then you can select the Approval Policy from the pick-list to assign to the user.

The Approval policy is created from *Users module> Reporting In-Charge> Approval Policy*. Refer to [“Approval Policy”](#).

- **Leave Group:** Select the leave group from the pick-list to assign a group of leaves to the user.

*To assign the new leave to the user, add the leave to the Leave group and assign the leave group to the user.*

- **Week Off Group:** Select the week off group from the picklist to assign the configured week offs to the user.

*To create the Week Off group, go to Shifts and Schedule module > Week Off Group*

*If 'Shift Based Access' flag is enabled in User Configuration, then effect of Week Off group assigned to user differently won't be effective.*

*Also if flag of 'Deny Access On Week Off' is enabled in Shift Schedule assigned to user, then user won't be granted access though user did not have week off based on Week Off group.*

## T&A

This tab will be available only for the *Time and Attendance* license. Here, the administrator can enter the attendance and the working policy related information for the user.

The screenshot shows the 'User Configuration' window with the 'T&A' tab selected. The user profile for 'Aditi Gupta' (ID: 1687, Active) is shown on the left. The main area is divided into 'Attendance' and 'Policy' sections. The 'Attendance' section includes: 'Enable Attendance Calculation' (checked), 'Restrict Half Day Considerations' (unchecked), 'Attendance Marking Type' (Normal), 'Max Punches To Be Considered' (Select), and 'Bypass Finger/Palm/Face For Attendance' (unchecked). The 'Policy' section includes: 'Max Short Leaves Allowed' (None), 'OT/C-OFF Eligibility' (None), 'Authorize C-OFF On' (WO, PH, WO/PH, FB, RD, Normal Day), 'Bus Route' (ID, Name), 'Enable Site Based Auto Tour Application' (unchecked), 'Tour' (Select), 'Base Site Selection' (ID, Name), and 'Auto Authorize Site Based Tour Application' (unchecked).

This section shows the configuration for 'Enable Location Based Auto Tour Application' (checked). It includes: 'Tour' (T2 - Tour2), 'Base Location Assignment' (Selected), 'Location' (Code, Name), 'Location Group' (ID, Name), 'Auto Authorize Location Based Tour Application' (checked), and 'Show Attendance Details On Device' (checked).

*If the Attendance Policy for the user is configured then assign that policy to the user. There is no need to configure same parameters i.e. "Max Punches to be considered" and "Max Short Leaves Allowed" here. Still If configured, then parameters configured here will be applicable for the user.*

## Attendance

In the **Attendance** section, configure the following parameters:

The screenshot shows the 'Attendance' section configuration. It includes: 'Enable Attendance Calculation' (checked), 'Restrict Half Day Considerations' (unchecked), 'Attendance Marking Type' (Normal), 'Max Punches To Be Considered' (First Punch Only), 'Bypass Finger/Palm/Face For Attendance' (Executive), 'Max Short Leaves Allowed' (Flexible), and 'OT/C-OFF Eligibility' (Present).

**Enable Attendance Calculation** - This field is checked by default. Uncheck this box if you want to disable attendance calculation for this User. This option has to be enabled for configuring any of the other parameters on this page.

**Restrict Half Day Considerations** - Enabling this option will restrict the half day markings and will consider only the full day attendance calculations.

*For Example:*

If the user has completed only the half of the required working hours, and **Restrict Half Day Considerations** is enabled for him, then his attendance will be considered as full day absent and the half day consideration will be restricted.

**Attendance Marking Type** - In case the attendance calculation is enabled then the user needs to select the attendance marking type from the drop down list.

The following options are available:

- **Normal:** type will be default for all users.
- **First Punch Only:** type users need only entry punch at the start of the shift. In this case the system will assume that the shift end time is the last out Punch for the day. All other calculations remain the same as for normal type users.
- **Executive:** type users will be marked full day present if at least one punch (entry/exit) is available in the day. There will not be any late/early & overtime calculation like it is done for normal and single punch type users.
- **Present:** category users do not require any punch for them to be marked full day present. All users belonging to this category are marked present by default.
- **Flexible:** category users' working will be checked against required minimum working and if it is more than required, full day attendance will be marked. In this case the minimum working hours required in a day for full day attendance and half day attendance can also be defined for each user as explained below.
- **Minimum Working Hours Required** - In the event of selecting the Flexible type for a user the administrator can also specify the minimum working hours required in a day to be marked **Full Day** or **Half Day** present. Specify the hours in hh:mm format.

Attendance		Policy	
Enable Attendance Calculation	<input checked="" type="checkbox"/>		
Restrict Half Day Considerations	<input type="checkbox"/>		
Attendance Marking Type	Flexible 		
<b>Min Working Hours Required</b>			
	Half Day	<input type="text" value="02:00"/>	
	Full Day	<input type="text" value="04:00"/>	
Max Punches To Be Considered	2 		
Bypass Finger/Palm/Face For Attendance	<input type="checkbox"/>		

**Max Punches to be Considered** - This parameter specifies the maximum entry/exit events per user to be considered in a day for attendance calculation.

Specify a value in this field if the value defined at the global level is to be overridden for this user. The options available are 2, 4, 6, 8, 10, 12 and N-Punch. N-Punch allows unlimited number of punches in IN/OUT pair.

**Bypass Finger/Palm/Face For Attendance** - On checking this option, the user can punch in or out using any of the assigned credentials and the same will be considered for attendance calculation. On selection of this option, finger/palm/face identification is not required for marking attendance. The user can use pin or card to mark the attendance.

**Max Short Leaves Allowed** - This parameter specifies the maximum number of short leaves (personal hours) to be allowed to selected users in an attendance period. This parameter is also defined at the global system configuration level and can be overridden for specific users using this option. The administrator can specify a value of a maximum two digits in this field.

**OT/C-OFF Eligibility:** This parameter enables the administrator to determine whether the overtime authorization for this user is to be done in one of the following ways:

- **None** - Extra work cannot be authorized as overtime or C-OFF for user.
- **Only Overtime** - Extra Work can only be authorized as overtime.
- **Only C-OFF** - Extra Work can only be authorized as C-OFF.
- **Both** - Extra Work can be authorized both as overtime and C-OFF.

On selecting **Both**, user can set the extra hours to be authorized as OT or C-OFF separately for Normal Day, WO, PH, WO/PH, FB and RD.

For detailed configuration to authorize OT/C-OFF, [See “Configuration to give OT and C-OFF to user” on page 1931.](#)

*If only Compensatory off is to be given to the user, then you must select Only C-OFF option.*

*To know more about authorization of extra hours as OT/C-OFF, [See “Overtime/C-OFF Approval” on page 2025.](#)*

**Bus Route:** Click on the Picklist button and select the bus route to be assigned to the user.

**Enable Site Based Auto Tour Application:** Select this checkbox so that tour application will be automatically applied for a particular user, if he punches from some site other than the Base Site.

Enable Site Based Auto Tour Application ☒

You can either select particular sites or can select all the sites at once.

To select particular sites, select the check boxes of the desired sites.

The 'Picklist For Site' dialog box displays a table with 10 rows. The first two rows are selected, indicated by checked checkboxes in the first column. The table has columns for 'Site ID' and 'Name'. The 'Total Selected: 2 Records' status is shown at the top. The 'Select All' checkbox is unchecked. The pagination shows '1 - 10 of 11 records' and the first page is active.

<input type="checkbox"/>	Site ID ▲	Name
<input checked="" type="checkbox"/>	1	Factory
<input checked="" type="checkbox"/>	2	HO
<input type="checkbox"/>	3	RnD1
<input type="checkbox"/>	4	RnD2
<input type="checkbox"/>	5	Site 5
<input type="checkbox"/>	6	Site 6
<input type="checkbox"/>	7	Site 7
<input type="checkbox"/>	8	Site 8
<input type="checkbox"/>	9	Site 9
<input type="checkbox"/>	10	Site 10

OR

To select all the sites, select the **Select All** check box. The sites on all the pages will be selected.

The 'Picklist For Site' dialog box displays the same table as the previous screenshot, but now all 10 rows are selected, indicated by checked checkboxes in the first column. The 'Total Selected: 11 Records' status is shown at the top. The 'Select All' checkbox is now checked. The pagination shows '1 - 10 of 11 records' and the first page is active.

<input checked="" type="checkbox"/>	Site ID ▲	Name
<input checked="" type="checkbox"/>	1	Factory
<input checked="" type="checkbox"/>	2	HO
<input checked="" type="checkbox"/>	3	RnD1
<input checked="" type="checkbox"/>	4	RnD2
<input checked="" type="checkbox"/>	5	Site 5
<input checked="" type="checkbox"/>	6	Site 6
<input checked="" type="checkbox"/>	7	Site 7
<input checked="" type="checkbox"/>	8	Site 8
<input checked="" type="checkbox"/>	9	Site 9
<input checked="" type="checkbox"/>	10	Site 10

Click **OK**. Hover over the Info  icon. It displays the number of sites selected.

- **Auto Authorize Site Based Tour Application:** Select this check box to automatically authorize the tour application for a particular user, if auto tour application feature is enabled.

- **Enable Location Based Auto Tour Application:** Select this check box so that tour application will be automatically applied for a particular user, if he punches from some location other than the Base location.

If a user goes for official activity to some location other than base location; then new location can be assigned to the user and tour application will be automatically applied for that day when event is generated from the new location.

The screenshot shows a configuration window with the following elements:

- Enable Location Based Auto Tour Application:** A checked checkbox.
- Tour:** A dropdown menu showing "T2 - Tour2".
- Base Location Assignment:** A dropdown menu showing "Selected".
- Location:** Two input fields labeled "Code" and "Name", followed by a picklist icon. An information icon is also present.
- Location Group:** Two input fields labeled "ID" and "Name", followed by a picklist icon. A status box indicates "1 Location(s) are selected".
- Auto Authorize Location Based Tour Application:** An unchecked checkbox.
- Show Attendance Details On Device:** A checked checkbox.

- **Tour:** Select the tour application from the drop-down list which will be automatically applied when user goes to other location. The Tour application will be available in the drop-down only if it is added in the Leave Group assigned to the user.
- **Base Location Assignment:** Select the base location to be assigned to the user as **All** or **Selected**.
  - If you select **All**, all the locations configured in Location Master will be assigned to the user. When new location is added in the Location Master then it will be assigned to the user automatically.
  - If you select **Selected**, you can assign Locations as well as Location Group/s to the user.
- **Location:** You can assign particular locations or assign all the locations at once.

Click the **Location** picklist. The **Picklist for Location** pop-up appears.

The screenshot shows the "Picklist For Location" pop-up window. It includes a search bar, a "Show Selected" button, and a table of locations. At the bottom, there are "OK" and "Cancel" buttons.

	Code	Name

1 - 10 of 14 records

You can either select particular locations or can select all the location at once.

To select particular location, select the check boxes of the desired location.

The screenshot shows a dialog box titled "Picklist For Location". At the top, a green bar indicates "Total Selected: 1 Records". Below this is a search bar and a "Show Selected" link. A "Select All" checkbox is present and unchecked. A table lists 14 records with columns "Code" and "Name". The first record, "RnD1 GPS" with code "RnDGPS", is selected with a blue checkmark. The other 13 records are not selected. At the bottom, it shows "1 - 10 of 14 records" and a pagination control with "1" selected. "OK" and "Cancel" buttons are at the bottom.

<input type="checkbox"/>	Code ▼	Name
<input checked="" type="checkbox"/>	RnDGPS	RnD1 GPS
<input type="checkbox"/>	RnD2GP	RnD2 GPS
<input type="checkbox"/>	I9	Location 7

1. Ensure that Email ID and Mobile number are specified in User profile of Reporting in-charge.
2. Ensure that Alert service must be properly assigned from the Admin Portal and Alert service must be running to get the alert notification.

## Posting of Tour Application

1. If user is marked as 'PR' on one of the half day then Tour will be applied for other half of the day.
2. If leave application is pending for either half of day then tour will be applied on another half of day.
3. If leave application is pending for either half of day and approved C-OFF application for another half of day; then tour will not be applied on that day.

**Show Attendance Details on Device:** Select the check-box to display the attendance summary of the user on Vega direct door and FMX door. Hence the Vega/FMX direct doors assigned to the user will display the current month's data (as per device time) when the user is allowed access to the door.

See details in *Device Configuration > Advanced > Settings (of Vega Door/ FMX door)*

In the **Policy** section assign different Policies to the selected user. This page will be available only with the **Time & Attendance** add on module.

Attendance	Policy	
Attendance Policy	<input type="text" value="1"/>	<input type="text" value="Attendance Policy-1"/>
Absentee Policy	<input type="text" value="1"/>	<input type="text" value="Absentee Policy-1"/>
Overtime Policy	<input type="text" value="1"/>	<input type="text" value="OverTime Policy-1"/>
Late-IN Policy	<input type="text" value="2"/>	<input type="text" value="Late-In 2"/>
Early-OUT Policy	<input type="text" value="1"/>	<input type="text" value="Early Out Policy-1"/>
C-OFF Policy	<input type="text" value="1"/>	<input type="text" value="COFF Policy-1"/>

The default policies will automatically be assigned to the new user. It will be displayed in the respective fields as shown above.

To change the policies from current date, click the respective picklist and select the policy to be assigned to the user. If the policies (other than Attendance Policy) are to be assigned from previous date, then go to T&A > Utilities > Change Policy.

To configure the Policies go to *T&A > Policies*.

## Access Control

On selection of the **Access Control** tab, the following page is displayed:

The screenshot displays the 'User Configuration' window. On the left is a sidebar menu with options: Profile, Devices, Credentials, Group, T&A, Access Control (highlighted), ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, Visitor Management, and Events. The main area is titled 'User Configuration' and shows details for user 'U1\_Smita' (Active). It has two tabs: 'Basic' and 'Advance'. The 'Basic' tab is active, showing configuration options: 'Bypass Finger' (checkbox), 'Bypass Palm' (checkbox), 'Access Validity' (checkbox), 'Access Validity Date' (calendar icon), 'Access Level' (dropdown menu showing '8'), 'Shift Schedule' (dropdown menu showing 'Schedule Group'), 'Start Shift' (dropdown menu showing 'General Shift'), 'Holiday Schedule' (dropdown menu showing 'Schedule 1'), and 'Access Cluster Checking' (checkbox).

### Basic

In the **Basic** section, the administrator can define access parameters for the selected user. This tab offers the following sections for configuration:

**Bypass Finger** - This option can be enabled in the event of the Finger Print image not being in order and the system thus has problems identifying the user. In such cases, the system administrator can disable the Finger Print check for the user thus enabling the user to gain access using either the assigned pin or card.

**Bypass Palm** - This option can be enabled in the event of the Palm Vein image not being in order and the system thus has problems identifying the user. In such cases, the system administrator can disable the Palm vein check for the user thus enabling the user to gain access using either the assigned pin or card.

**Access Validity** - Enable this option if the user credential is to be activated for a predefined period.

**Access Validity Date** - Specify the end date of the validity in this field.

**Access Level** - Specify the access level for which the Smart Identification feature will be applicable to the user.

**Shift Schedule** - Assign a shift schedule to the selected user from the drop-down list.

**Start Shift** - In case of multiple shifts in the schedule group, the starting shift needs to be selected from the drop down list.

**Holiday Schedule** - Select the Holiday schedule to be assigned to the user from the drop down list.

**Access Cluster Checking** - Select this checkbox to enable checking for access cluster restrictions for the selected user. It is available only with the Access Control add-on license.

## Advance

The **Advance** section is available only with the Access Control add-on module. Here, the administrator can define access parameters for the selected user. The **Advance** page appears as follows:

ID	Name
13	test
15	test2

**Enable Advance Access Control:** Check this box to enable the advance access control feature.

**Shift based Access:** This parameter allows the administrator to enable user access based on the shift working time of the user.

*In the event of not selecting the **Shift Based Access** option then the system will apply the **Default Access Settings** as defined on a Panel200 as the access settings for the user.*

**Smart Access Route** - Select the Smart Access Route to be assigned to the user from the Access Route picklist window. The user can access the assigned route using the smart card enrolled with Smart Access Route. The card can be configured to include Smart Access Route from Card Personalization.

**Max Route Level:** Select the route level up to which the user is to be allowed access from the drop down list.

**Enable Elevator Access Control:** Check this box to enable the Elevator access control feature for the user.

**Elevator Floor Group:** Click the picklist and select the Elevator floor group to be assigned to the user. The user can access the floors of the Elevators included in Elevator Floor Group.

The Elevator Floor group is created from Access Control> Elevator Access Control> Elevator floor group

*Certain parameters when configured for a specific user may over-ride corresponding parameters pre-defined at the Global Policy level.*

**Access Rule List:** The table displays the list of Access Rule/s assigned to the user.

## ESS

To enable and configure ESS account access for the selected user. On selection of the **ESS** tab, the following page is displayed:

## Settings

The **Settings** section under the **ESS** tab offers the following parameters for configuration:

**Enable Account** - Select this checkbox to enable ESS account access for the selected user.

**Edit Basic Details** - Select this checkbox to enable the selected users to edit basic details on their respective ESS accounts.

**Punch marking via ESS** - Select this checkbox to enable users to mark their attendance punch manually from their respective ESS accounts.

**ESS Role Rights**- Select the Role Rights from the picklist to be assigned to the user.

**Preferred Language**- Specifies the language preferred for the selected ESS Users as *English, Arabic, Spanish, Albanian, Turkish or Vietnamese*.

**Login via Active Directory** - Select this checkbox to enable the selected ESS user to login using his Active Directory credentials.

- **Username** - Assign a username to the selected ESS user for Active Directory login.
- **Domain** - Specify the Active Directory domain name in this field for Active Directory login.

**Auto -Authorize IMEI Registration** -Select this checkbox to automatically authorize the user request through device with registered IMEI number in COSEC database.

**Mobile Identification Number** - Specify the Mobile Identification Number which is the unique number of the mobile device from which the ESS application is to be used. This can consist of maximum 40 alphanumeric characters.

**Punch Marking Via API** - Select this checkbox to enable user to mark punches by firing API. Auto-Punch and Manual-Punch marking checkbox will be activated only if Punch marking via API is enabled.

**Mark Punch As Per-** Select the option of Time Zone which is to be applied for punch time (punch marked from API)

- **Server Time Zone-** The date- time of the punch will be as per the server time zone.
- **Local Time Zone-** The date-time of the punch will be as per the time zone of the place from where the punch is marked.

**Auto-Punch Marking** - Select this checkbox to enable the auto-attendance marking feature for the selected user from the COSEC APTA mobile application. On enabling this feature, if the user's current location matches any of the assigned locations; a punch will be marked automatically for the user from the mobile application.

**Manual Punch Marking** - Select this checkbox to enable manual punch marking from the COSEC APTA mobile application.

**Face Mandatory For Punch** - When Manual Punch Marking and Face Recognition feature is enabled for user then you can select the specific option for which face is to be made mandatory for the punch. The options are **Attendance, Access Control, Both** and **None**.

For Access Control and Both option; you must enable **Allow Door Access Through API** checkbox.

**APTA Face Anti-Spoofing:** When **Manual Punch Marking** is enabled and **Face Mandatory For Punch** is selected as — **Attendance, Access Control** or **Both** — then select **APTA Face Anti-Spoofing** checkbox to enable **Face Anti-Spoofing** feature via COSEC APTA Application to prevent false face verification by using a photo, video, mask or a different substitute for an unauthorized person's face.

**Capture Photo** - This checkbox is activated only when **Punch marking via API** and **Manual Punch Marking** are enabled. This allows the user to capture snapshot while punching through COSEC APTA.

**Allow Offline Punch** - This checkbox is activated only when "Punch marking via API" and "Manual Punch Marking" are enabled. This allows users to apply for offline punches.

In Mobile devices, when there is no connectivity between server and the Mobile device, the punches, with their timings can be stored through offline punch and send to server when connectivity is restored.

**Location Mandatory For Punch** - This field determines if information regarding the source location from where the punch has been marked should accompany a punch marking by user.

- Select **None** if location information should not accompany a punch.
- For *Manual Punch Marking*, select **Any Location** (locations need not be configured).
- For *Auto-Punch Marking* (auto-attendance feature), select **Configured Locations Only** (locations must be configured on "Location Master").

**Reason For Punching From Unassigned Location:** This checkbox will be activated only when 'Location Mandatory For Punch' has either **None** or **Any Location** as values. By enabling this checkbox, the Incharge Users can know the reason for which the punch is made from unassigned location by the employee user.

**Location Assignment:** Select the option as "All" or "Selected" for assigning location to user.

1. For **All** option; all the locations configured in Location Master will be assigned to the user. When new location is added to Location master then it will be automatically assigned to the user if "All" is selected.
2. For **Selected** option; Location and Location Group will be enabled for the selection which is to be assigned to the user.

- **Location:** Select the **Location** pick-list. You can select particular locations or can select all the locations at once.
- Click the location picklist, the **Picklist For Location** pop-up appears.

The screenshot shows the 'Picklist For Location' dialog box. At the top, a green bar indicates 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main area contains a table with 14 records, each with a checkbox, a code, and a name. The records are:

<input type="checkbox"/>	Code	Name
<input type="checkbox"/>	RnDGPS	RnD1 GPS
<input type="checkbox"/>	RnD2GP	RnD2 GPS
<input type="checkbox"/>	I9	Location 7
<input type="checkbox"/>	I8	Location 6
<input type="checkbox"/>	I7	Location 5
<input type="checkbox"/>	I6	Location 4
<input type="checkbox"/>	I13	Location 3
<input type="checkbox"/>	I12	Location 2
<input type="checkbox"/>	I11	Factory 2
<input type="checkbox"/>	I10	RnD 2

At the bottom, it shows '1 - 10 of 14 records' and a pagination control with '1' selected. There are 'OK' and 'Cancel' buttons at the very bottom.

You can either select particular location or can select all the location at once.

To select particular locations, select the check boxes of the desired locations.

The screenshot shows the 'Picklist For Location' dialog box with one record selected. The green bar at the top now indicates 'Total Selected: 1 Records'. The checkbox for 'RnDGPS' is checked. The table content is the same as in the previous screenshot:

<input type="checkbox"/>	Code	Name
<input checked="" type="checkbox"/>	RnDGPS	RnD1 GPS
<input type="checkbox"/>	RnD2GP	RnD2 GPS
<input type="checkbox"/>	I9	Location 7
<input type="checkbox"/>	I8	Location 6
<input type="checkbox"/>	I7	Location 5
<input type="checkbox"/>	I6	Location 4
<input type="checkbox"/>	I13	Location 3
<input type="checkbox"/>	I12	Location 2
<input type="checkbox"/>	I11	Factory 2
<input type="checkbox"/>	I10	RnD 2

The rest of the interface, including the pagination and buttons, remains the same.

OR

To select all the locations, select the **Select All** check box. The location on all the pages will be selected.

1 - 10 of 14 records

« < 1 2 > »

OK Cancel

Click **OK**. Hover over the Info  icon. It displays the number of selected location groups.

Locations can be configured from *COSEC Web Application > Admin > System Configuration > Location Master*.

**Allow Door Access Through API-** Select this check box to allow the access to device through API.

**PIN Authentication For Door Access-** Enable this check-box for Dual Authentication with PIN when Bluetooth or QR based access is used for Access control feature in COSEC APTA mobile application.

*Pin Authentication For Door Access can be enabled only when Allow Door Access Through API is enabled.*

## Cafeteria

The cafeteria section allows to enable the cafeteria account for the user and configure the related parameters.

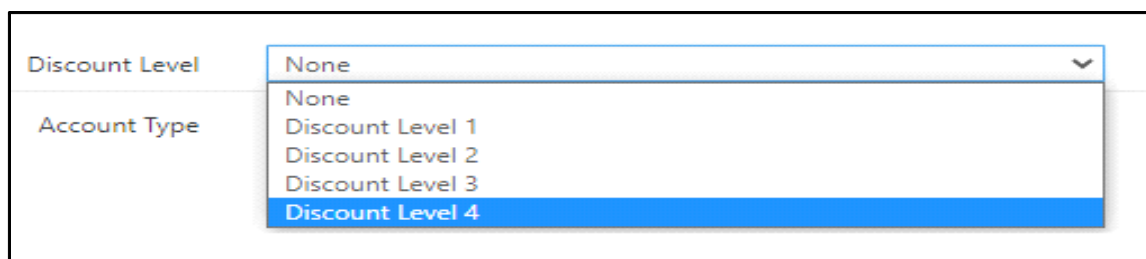

## Settings

**Enable Account** - Select this checkbox to enable Cafeteria account access for the selected user.

**Enable Offline Transaction-** Select the desired option from the drop-down list for the user to perform the offline transaction

- Select **None**, if you do not want to allow transactions to be made by the user when the device is in offline mode.
- Select **Allow With Discount**, if you want to allow transactions with discount to be made by the user, when the device is in offline mode.
- Select **Allow Without Discount**, if you want to allow transactions without discount to be made by the user, when the device is in offline mode.

**Discount Level** - Select the appropriate discount level from the drop down list as shown.

Discount Level	None
Account Type	None
	Discount Level 1
	Discount Level 2
	Discount Level 3
	Discount Level 4

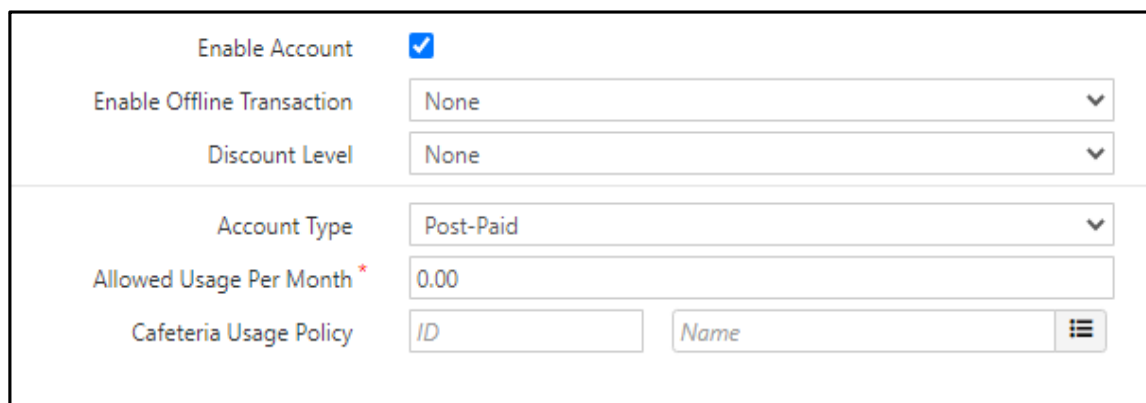

**Account Type** - Specify the account type as **Pre-Paid** or **Post-Paid** by selecting from the drop down list.

#### **Pre-paid Account**

- For **Pre-Paid** account type, specify whether the **Balance Management** should be **Device-based** or **Server-based**.
- When Balance Management is selected as **Server based**, then you can enable **Device-Server Balance Check**. This will allow Device to check Server-side balance before allowing transaction. For this, Device and Server must be connected.

#### **Post-paid Account**

- For **Post-Paid** account type, enter the **Allowed Usage Per Month** based on which monthly dues for the user can be calculated.

Enable Account	<input checked="" type="checkbox"/>
Enable Offline Transaction	None
Discount Level	None
Account Type	Post-Paid
Allowed Usage Per Month *	0.00
Cafeteria Usage Policy	ID <input type="text"/> Name <input type="text"/>

**Cafeteria Usage Policy**- Select the cafeteria usage policy to assign to the user based on which cafeteria transaction restrictions will be applied to the user.

### **Contract Worker Management (CWM)**

This tab is available for configuration only for the *Contract Worker Management* (CWM) module user when a existing worker is selected from the *User List*. This enables the administrator to assign Contractor, Work Order, Skills and PPE (Personal Protective Equipment) to the selected worker as well as add ID Proof and Address Proof.

The CWM tab for the worker is shown as below.

The screenshot shows the 'User Configuration' window with the 'Assignment' tab selected. The user profile on the left shows 'Parth' as 'Active'. The 'Other Details' section on the right contains the following fields:

Skill	1	Skill-1
Contractor	Ct2	Contractor2
Work Order	W11	Work order11
Assignment Period	31/03/2017	04/05/2017
Assignment Status		
Approval Stage	1	Approval Stage-1

Below these fields is a table with the following structure:

Level	Induction Level Name	Status	Details
No Data			

To know about the configuration of worker in CWM tab for Assignment and Other Details ,see CWM section in “Worker Profile”

## Job Costing

There are two tabs displayed namely:

- “Job Management”
- “Assigned Job Schedules”

### Job Management

To assign jobs to the user,

- Click **Job Costing > Job Management**.

The screenshot shows the 'User Configuration' window with the 'Job Management' tab selected. The user profile on the left shows 'User 1' as 'Active'. The 'Assigned Job Schedules' section on the right contains a 'Job Costing' dropdown menu currently set to 'Disabled'.

- **Job Costing:** Select the option **Enabled** from the drop down list to enable Job Costing feature for the user.

- **Device Based Job Assignment:** Select this check box to assign jobs to the user based on the devices assigned to the user.

If Job Costing is enabled and Device Based Job Assignment is selected, then the it will work in mixed mode.

When this check box is enabled, then the system will check for the Jobs configured on the assigned Device only and not to the users. In this case user can punch in the assigned Default Job or is displayed a list of jobs on the device display from which they can select the desired Job. They can also select few additional options like 'Continue Current Job' and 'Start Default Job'. For more details, refer to Device Configuration > Job Costing of the desired device.

If this check box is disabled, then the system will check for the Jobs assigned to the User. For details refer to ["Default Jobs"](#).

## Default Jobs

Jobs can be assigned to the user manually or via Job Scheduler.

- To assign jobs manually, refer to ["Manual Job Assignment"](#).
- To assign jobs via Job Scheduler, refer to ["Job Scheduler"](#).

*Default Jobs (Manual Job Assignment) and Job Schedulers assigned from Enterprise Structure Module > Enterprise Groups > Association Mapping > Job Costing will appear here when the same enterprise group is assigned to the user.*

*Once the Job Scheduler assignment is done and If Job Costing is disabled and is enabled again, then all the Job Schedulers assigned to the user will be revoked. You need to re-assign the Job Schedulers to the user from the ["Job Scheduler"](#) page again.*

*Jobs assigned via Job Schedulers cannot be deleted. However, Job Schedulers assigned to users can be deleted/changed. If jobs have already been assigned using Job Schedulers and then the Job Scheduler is deleted or the Enterprise Group assigned to the user is changed, the jobs already assigned will not be deleted. However, new jobs will not be assigned to users using the same Job Scheduler. New jobs will be assigned to the user via the new Job Scheduler assigned to the users via change of Enterprise Group.*

*Enterprise Group - Organization 1, has Job Scheduler J1 and J2*

*Enterprise Group - Organization 2, has Job Scheduler J3 and J4*

*Enterprise Group - Organization 3, has no Job Scheduler*

- *If the Enterprise Group of the user is Organization 1, then Job Schedulers J1 and J2 will be assigned to the user.*
- *If you change the Enterprise Group of the user to Organization 2, then Job Schedulers J3 and J4 will be assigned to the user and J1/J2 will be removed.*
- *If you change the Enterprise Group of the user to Organization 3, as there are no Job Schedulers in Organization 3, the assigned Job Schedulers J3 and J4 will be retained.*

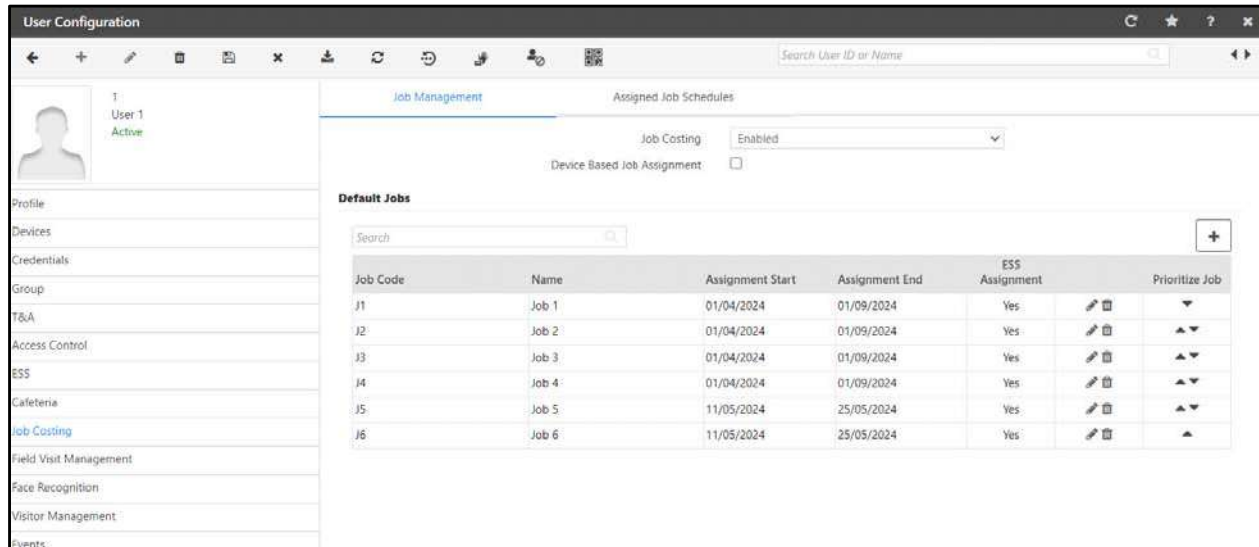

The Default Jobs will display all the jobs assigned manually or via Job Scheduler.

If you have added jobs manually and then run the Job Scheduler, in such cases, the jobs assigned via Job Scheduler will appear above manually assigned jobs in the same sequence as configured in the Job Scheduler.

Let us understand this with the help of an example,  
 Jobs assigned manually — J5 and J6.  
 Jobs assigned via Job Scheduler — J1, J2, J3 and J4.

Once the Job Scheduler is run, the jobs will appear under Default Jobs as shown below:

You can change the priority manually, if required.

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If there are overlapping dates in multiple jobs, then by default, the users punch will be marked in the job with the highest priority.

When Jobs are assigned via Job Scheduler then the Assignment Start / End Date will be the Start/ End Date of the Job as configured in the Job Scheduler. The ESS Assignment check box for the jobs assigned via Job Scheduler will be selected by default.

*If a Job is assigned manually to a user and the same is assigned again via Job Scheduler, following scenarios are possible:*

- *Jobs may have different Job Codes but they have the same Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes but they have a different Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes and they have the same Start/End Date, then the system will not create a new job.*

### Manual Job Assignment

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

*Jobs are created from Job Processing and Costing module > Project Management> Job.*

**User Configuration**

6 User 6 Active

**Job Management** Assigned Job Schedules

Job Costing: Enabled

Device Based Job Assignment: ☐

**Default Jobs**

Search: [ ] +

Job Code	Name	Assignment Start	Assignment End	ESS Assignment	Prioritize Job
No Data					

- Click **Add** . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

**Picklist For Job**

Search: [ ] Ended Days (1-999): [ ] Active: **Active**

Job Code	Name	Start	End
J1	Job 1	01/04/2024	01/09/2024
J2	Job 2	01/04/2024	01/09/2024
J3	Job 3	01/04/2024	01/09/2024
J4	Job 4	01/04/2024	01/09/2024
J5	Job 5	11/05/2024	25/05/2024
J6	Job 6	11/05/2024	25/05/2024
J7	Job 7	01/04/2024	01/09/2024

Cancel

- By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start and Assignment End:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- **ESS Assignment:** The check box is enabled by default. This Job will be displayed in the list of Jobs assigned to the user through the ESS login. If you do not want this job to be displayed, clear the check box.

*The Jobs assigned here which are In-progress, Assigned and have the ESS Assignment check box enabled will be displayed in the **ESS login > Job** drop-down while Marking a Punch.*

*The ESS Assignment column will not be displayed if the **Show All Jobs while Punching** check box is enabled. For details, refer to [“Job Costing”](#) in [“Defining Global Policies”](#).*

Job Code	Name	Assignment Start	Assignment End	ESS Assignment	Prioritize Job
J1	Job 1	01/04/2024	01/09/2024	<input checked="" type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>

- Click **OK**  to save the details.

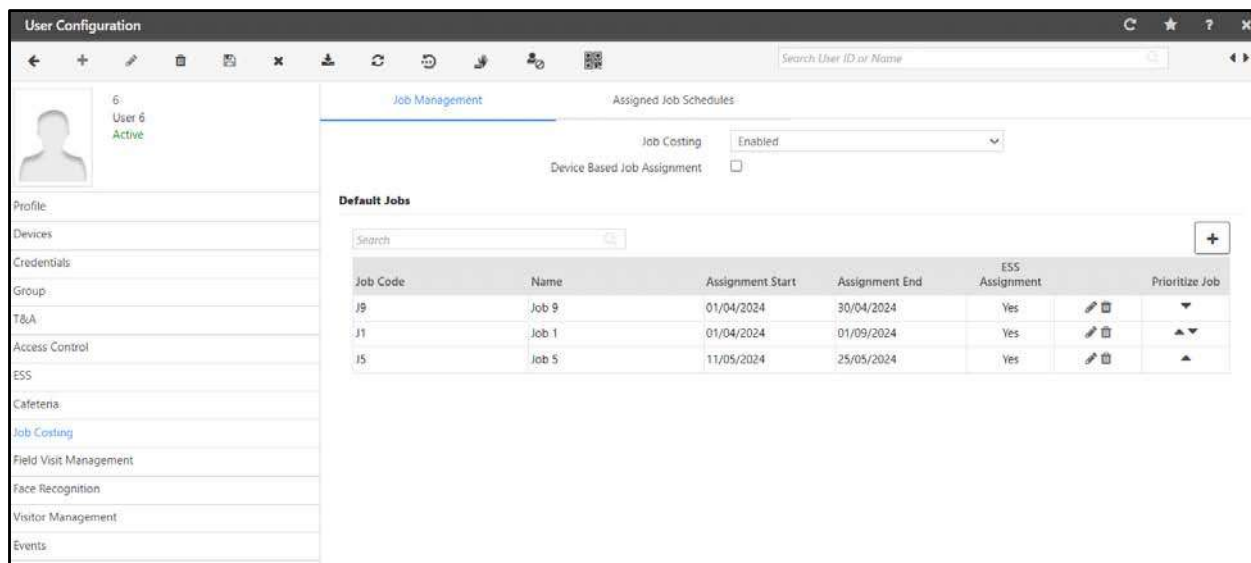

The **Default Jobs** grid will consist of all the jobs, that is, expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

*When Job Code is not assigned to user and user punches with that Job Code using Special function from door; then Reprocess Events should be enabled during Job Costing process to assign the actual Job Code to the job.*

*User configuration will be resent to devices only when there is some change in Job Assignment.*

*The Job Costing events for the past dates will be reflected only when Reprocess Attendance Events is enabled while processing Daily Attendance.*

## Assigned Job Schedules

To view the Job Schedulers assigned to the user,

- Click **Job Costing > Assigned Job Schedules**.

Scheduler ID	Scheduler Name	Scheduler Start Date	Scheduler End Date
5	Job Scheduler 5	11/05/2024	01/09/2024
7	Job Scheduler 7	11/05/2024	11/05/2024

- All the Job Schedulers assigned to the user from the “[Job Scheduler](#)” and “[Association Mapping](#)” of the Enterprise Groups appear here. You can view the Scheduler Name, Scheduler Start and End Date from this page.

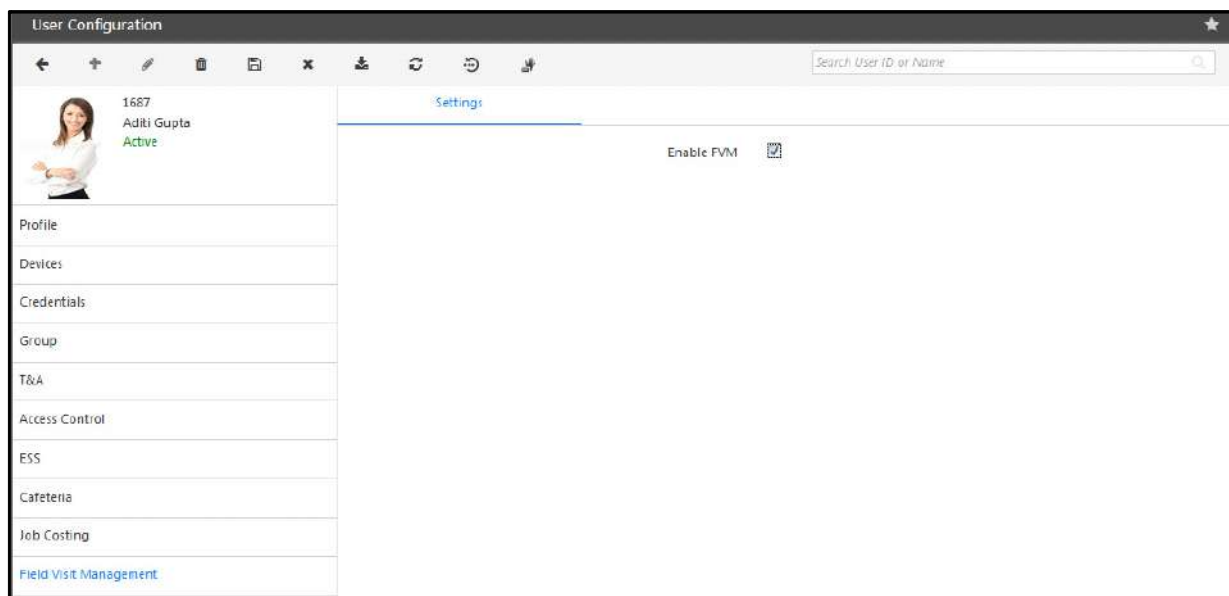

*Jobs assigned via Job Schedulers cannot be deleted. However, Job Schedulers assigned to users can be deleted/changed. If jobs have already been assigned using Job Schedulers and then the Job Scheduler is deleted or the Enterprise Group assigned to the user is changed, the jobs already assigned will not be deleted. However, new jobs will not be assigned to users using the same Job Scheduler. New jobs will be assigned to the user via the new Job Scheduler assigned to the users via change of Enterprise Group.*

## Field Visit Management

In this module, you can assign schedules to the users and keep a track of their activities, while on site and also check if the assigned tasks are being fulfilled correctly or not.

The Field Visit Management tab appears as shown below:

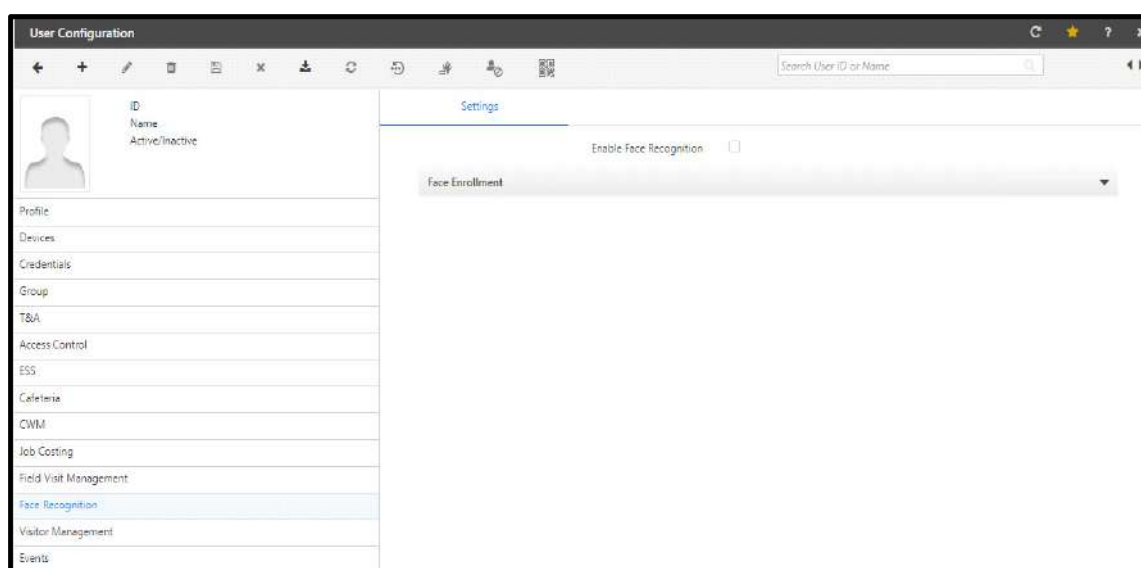

In the **Settings** tab, check the **Enable FVM** box to consider the selected user as FVM user. Then click **Save** button to save the changes.

## Face Recognition

In this feature, user can access the device or mark the attendance by verifying his Face as the credential.

The Face Recognition tab appears as shown below:

## Settings

**Enable Face Recognition:** Check this box to enable Face Recognition feature for the user.

1. Create a User. Enable Face Recognition feature.
2. Assign Vega, FMX, ARGO or AGRO FACE door to the user.
3. Connect the FR module and IP Camera to the network. Ensure that COSEC Device, FR Module and IP Camera are in the same subnet.

If you are connecting the ARGO FACE device, it has an in-built FR Module and camera.

4. Configure IP camera to be used for capturing face credential. Select the Capturing device as IP Camera in Video Surveillance section of Device Configuration and configure the snapshot URL.
5. Configure FR settings on Device. Go to Identification Server of Device Configuration. Enable FR and select the Face capturing mode. Select the FR mode as Local/Server-Assisted. Enter the FR Server Address as the IP address of FR module. Enter FR Server Port as 12000 which is default port for Identification Service.
6. Now Tap on Device screen. The motion streaming of camera will appear on COSEC Device.
7. Now Enroll the user for Face credential using Enroll Utility.
8. When you show your face in front of camera, the camera will capture your face and identify with the enrolled template. If it matches, you will be allowed access on the door.

## Face Enrollment

This functionality enables the SA to enroll face/s against a user. Face Enrollment can be done by either directly uploading the images of the desired user or by capturing and then uploading the images.

*To use the capture functionality for images, make sure you have a secure login, that is you have logged in using HTTPS.*

Using Face Enrollment you can:

- replace existing images (if any) with new images
- add new images
- remove enrolled images

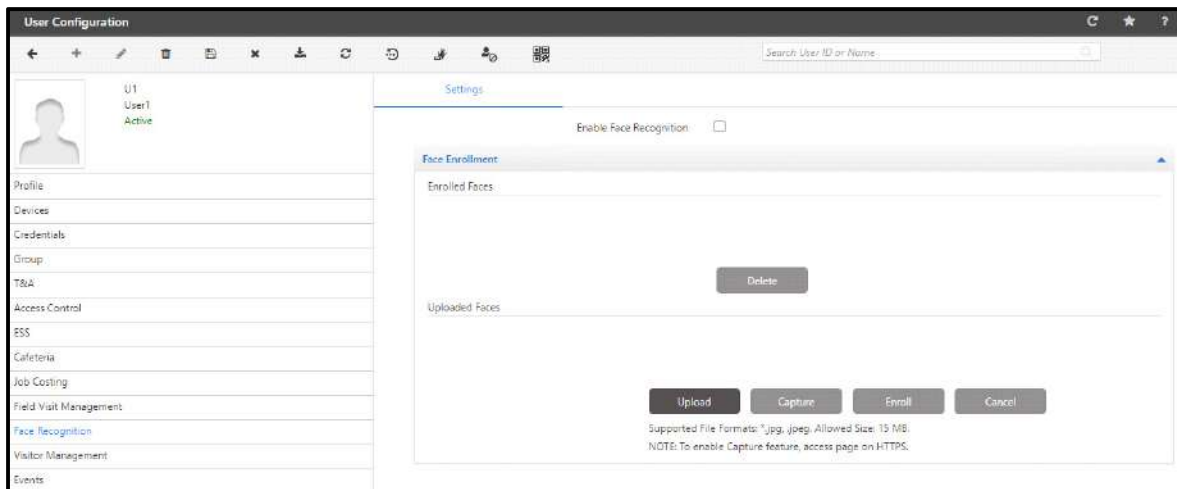

Click the **Face Enrollment** collapsible panel in order to enroll faces against a user.

*For Face Enrollment via Web feature to work, ensure that Identification Service is defined in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

To Upload the images directly, refer **“Upload”**

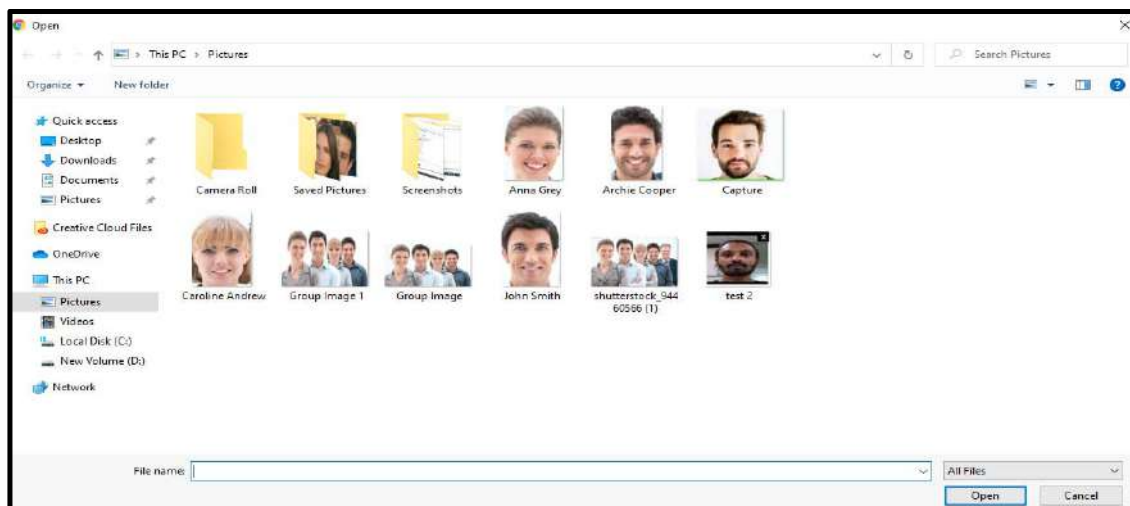

To Capture and then upload the images, refer **“Capture”**

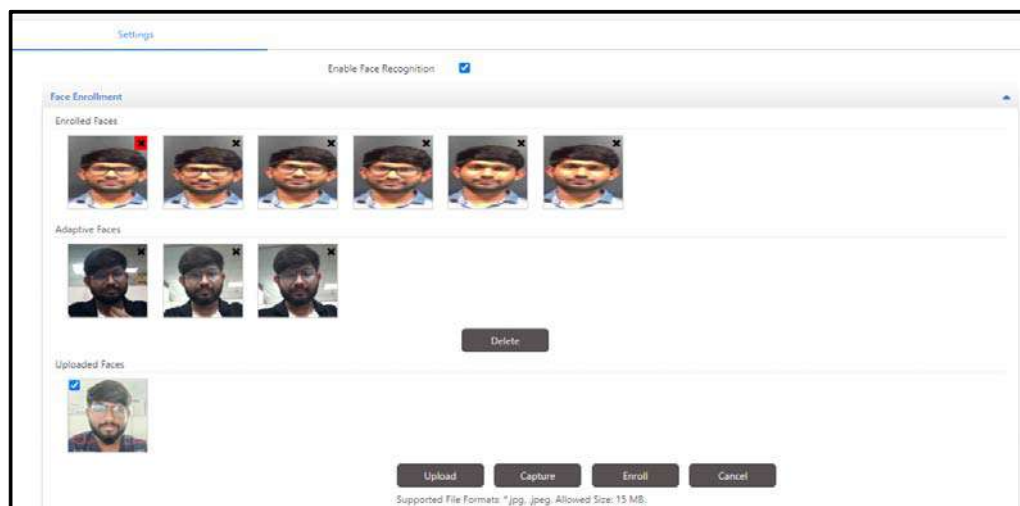

### Upload

- In order to upload face/s against a user click **Upload** in **Face Enrollment**.
- Browse to select the desired file from your local PC wherein the image is stored.
- Make sure the selected image is in the .jpg or .jpeg format.
- Click **Open**.

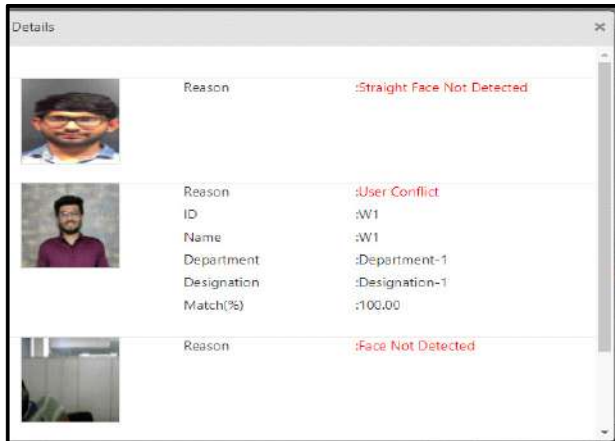

- All the faces that are uploaded will be reflected in **Uploaded Faces** Grid.
- Select the face/s that you want to enroll by clicking the checkbox provided on the top left corner of the uploaded face.

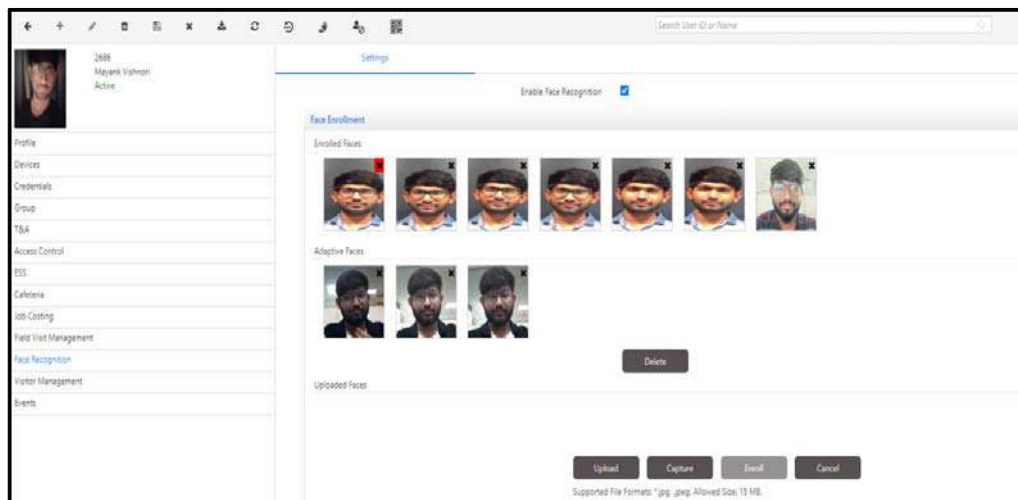

- While uploading a face if any error occurs, the **Info** icon will be displayed.
- On clicking the **Info** icon a pop up with the discarded face/s will be displayed along with the possible reason for discarding the image.

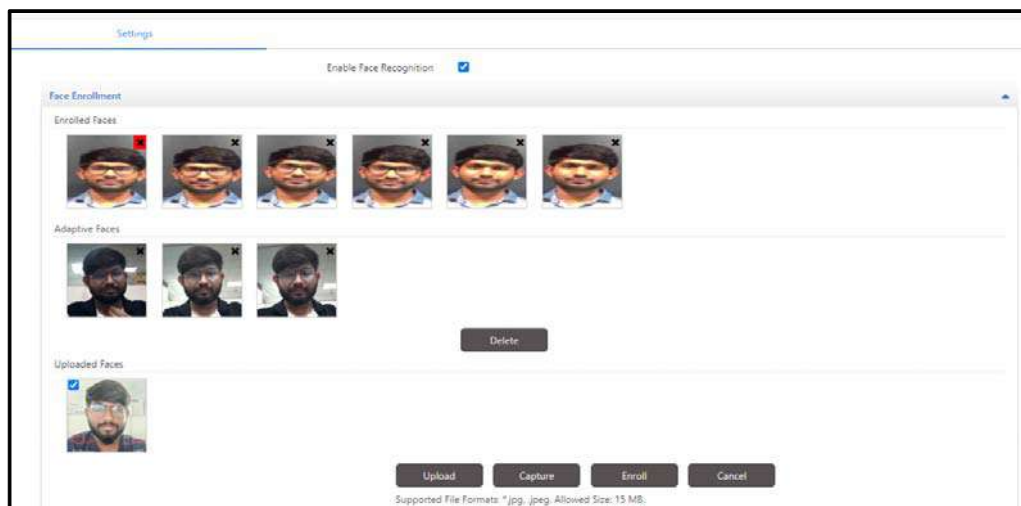

Let us understand this with the help of an example, you have uploaded 5 faces out of which 3 got discarded and then again you upload 5 more faces out of which 2 got discarded then the pop-up will display all the 5 discarded faces with the probable reasons for discarding.

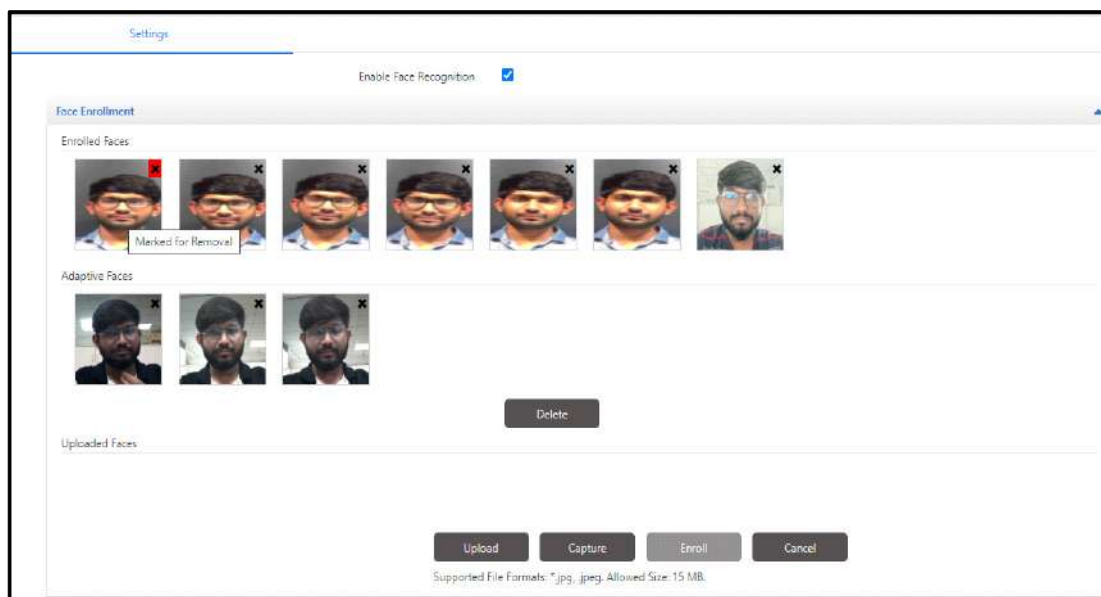

- To add the new image as the enrolled face,
- Select the check box of the desired image under **Uploaded Faces**.
- Click **Enroll** in order to enroll the selected face/s. The selected face/s will be reflected in the **Enrolled Faces** grid.

- To replace an existing enrolled faces,
- Click on the desired image, the red cross icon appears on the top right corner of the face under **Enrolled Faces**.
- Select the check box of the desired image under Uploaded Faces.
- Click **Enroll**.

- To remove an existing enrolled faces,
  - Click on the desired image, the red cross icon appears on the top right corner of the face under **Enrolled Faces**.
  - Click **Delete**.

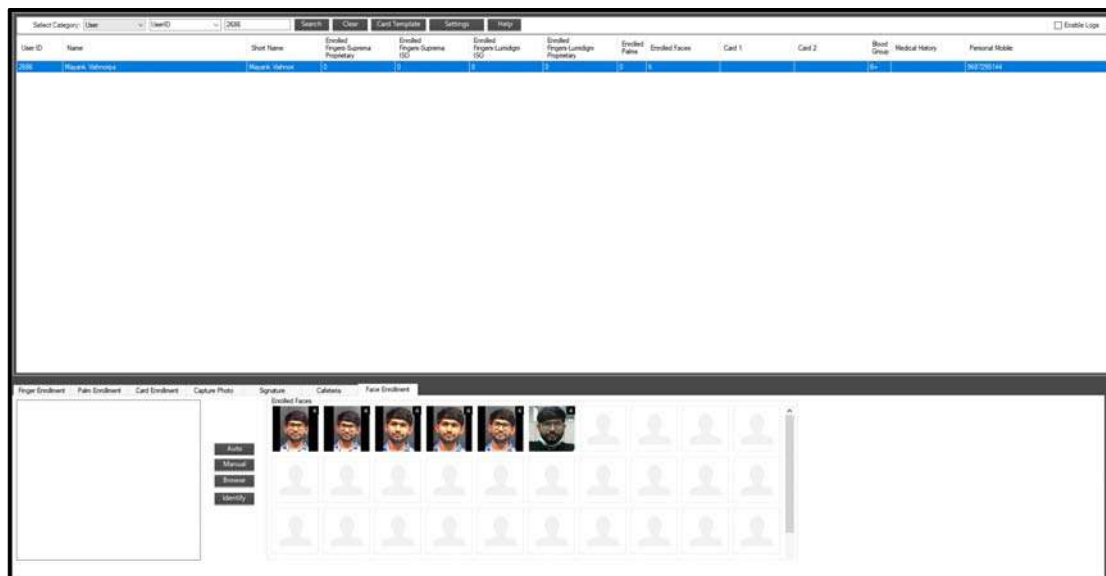

*Make sure the number of faces you consider for enrollment is lesser than or equal to the defined value in **Maximum No. of Faces** in Admin >System configuration> Global Policy >User.*

- If there is an occurrence of an adaptive face, it will be displayed under the **Adaptive Faces** grid, a sub-section under **Enrolled Faces** grid. If you desire, you may delete the image. To do so, follow the same instructions as mentioned above.
- Click the Save  in order to save all the enrolled faces. The faces will be successfully saved and considered for face recognition.

The enrolled faces of the user will be successfully reflected in the Enroll Utility under **Face Enrollment**. Refer the Enroll Utility Guide for more details.

### Capture

- In order to capture face/s, click **Capture** in Face Enrollment.
- The **Capture** pop-up will be displayed.

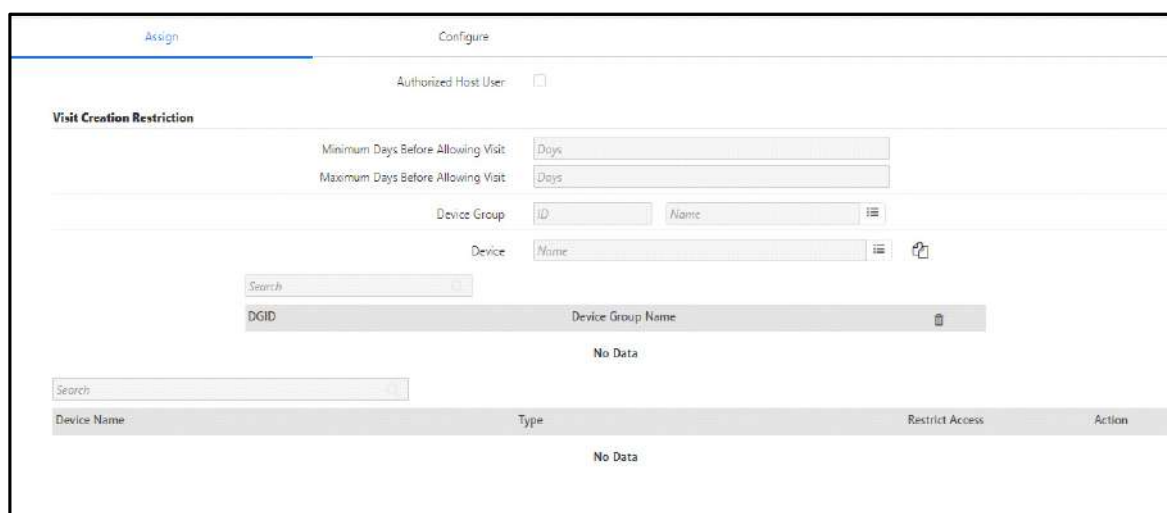

- Set the camera in a desired angle and capture the image.

- If the image captured is appropriate click the icon  . Now, you can again capture a new image if required.
- If the image clicked is not appropriate then click the icon  and a retake will be considered.
- After completing the capture, click **OK** to upload the image. Click **Cancel** if you desire to restart the **Capture**.
- The uploaded faces will be reflected in **Uploaded Faces** Grid.
- Now, refer to “[Upload](#)” for further instructions.

## Visitor Management

In this page you can authorize a host user, restrict the visitor pre-registration on the basis of no.of days and assign device groups and devices to the visitors.

### Assign

- **Authorized Host User:** Select the checkbox to authorize a Host user. Once you authorize the host, the host user will be added in the list of Authorized Host Users in *Visitor Management> Utilities> Authorized Host Users*. For more information, refer “[Authorized Host Users](#)”.

### Visit Creation Restriction

- **Minimum Days before Allowing Visit:** The minimum days configured in *Admin> System Configuration> Global Policy> Visitor Management* will be displayed here as the default value.

You can change the number of minimum days as per your requirement.

For more details, refer “[Visit Creation Restriction](#)” in *Admin> System Configuration> Global Policy> Visitor Management*.

- **Maximum Days Before Allowing Visit:** The maximum days configured in *Admin> System Configuration> Global Policy> Visitor Management* will be displayed here as the default value.

You can change the number of maximum days as per your requirement.

For more details, refer [“Visit Creation Restriction”](#) in *Admin> System Configuration> Global Policy> Visitor Management*.

- **Device Group:** Device Group can be a group of individual devices or a group of device groups. You can assign the same to the Visitor.

To do so, click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

## Events

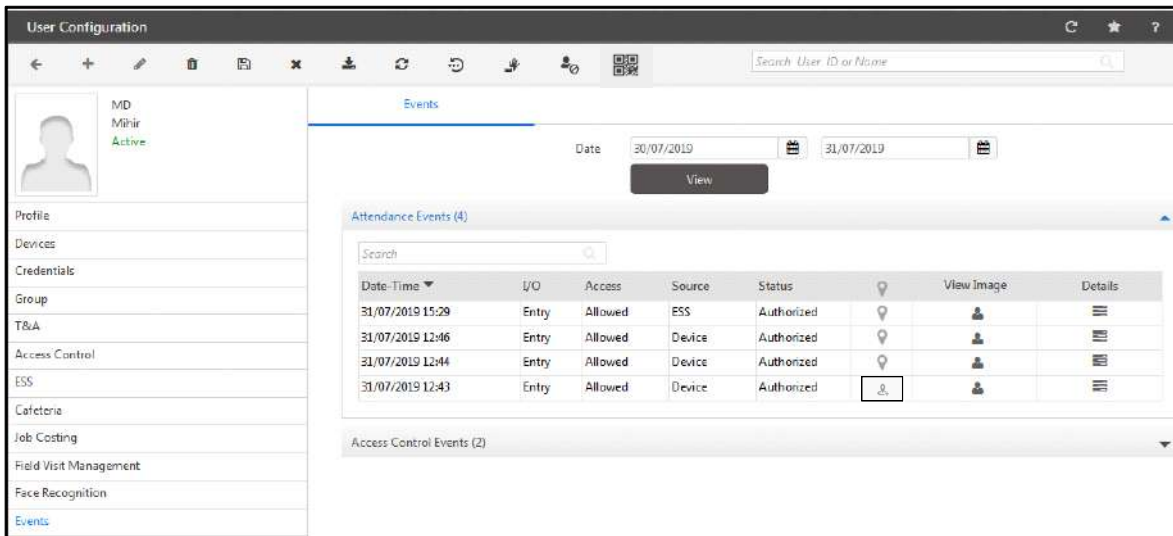

The Events tab is used for the security purpose by monitoring the users in the organization. The Attendance Events and Access Control Events can be viewed by filtering the date range.

In cases of infringement or suspicion; the security supervisor can blacklist, delete or inactivate the user creating problems in the organization.

The screenshot displays the 'User Configuration' window. On the left, a sidebar lists various configuration options: Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Events (which is currently selected). The main area shows the 'Events' tab. At the top of this tab, there are date selection fields: 'Date' with a start date of '01/04/2019' and an end date of '24/04/2019', followed by a 'View' button. Below the date range, there are two expandable sections: 'Attendance Events (06)' and 'Access Control Events (0)'. A search bar at the top right of the main area is labeled 'Search User ID or Name'.

**Date:** Select the date range for which events are to be viewed.

Click on **View** button to view the Attendance events and Access Control events.

The Attendance Events shows the Date and time when the event is generated along with the I/O, Access, Source, Status and Location details. It also displays Image and Details of the punch.

The location details will display Latitude/Longitude or MAC address from where event has generated.

- You can view the location on Map if the GPS/GSM location is configured in Location Master by clicking on View Map icon.
- If the location is not configured in Location Master then you can add this location by clicking on **Add this Location**  icon shown in above figure.

Now click on **Add Location** button which will redirect to Location Master page from where you can add this location.

You can view the image captured by the Built-In Camera by clicking on **View Image** icon.

If there is camera to capture the image of the user punching on door; then his image will be captured and can be viewed for that event by clicking on View Image icon.

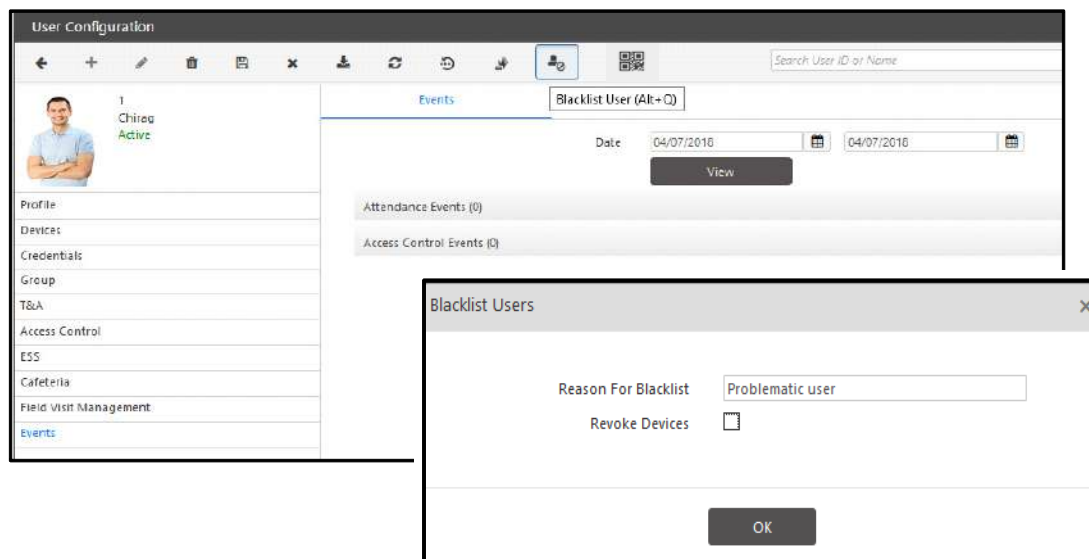

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

The Reason for punching from unassigned location can be known by clicking on Details icon  as shown in the figure below:

## Blacklist

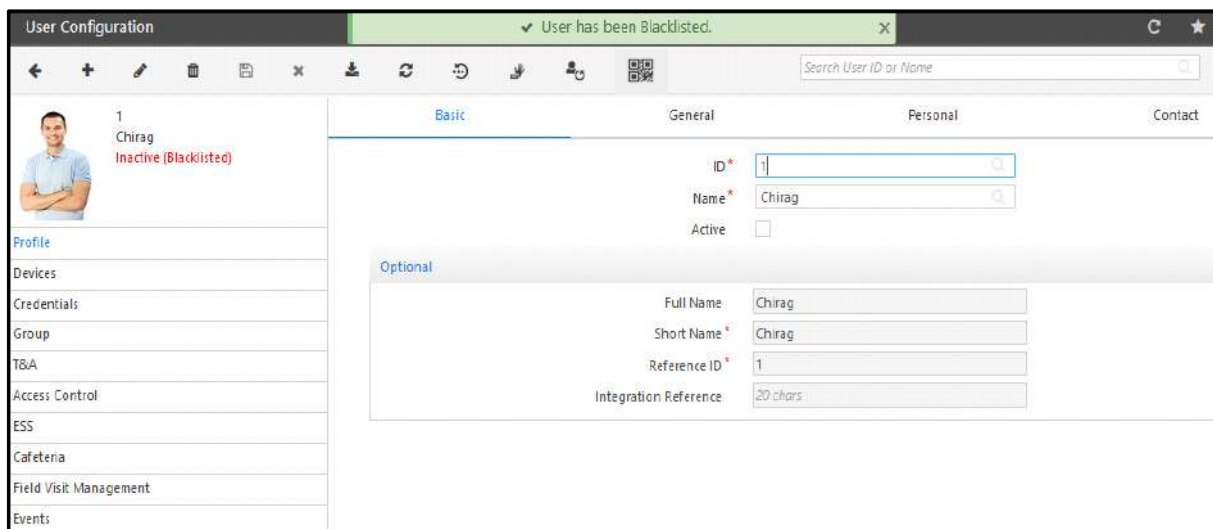

Click on the **Blacklist User** button. The Blacklist Users window appears.

Enter the **Reason** for Blacklisting the user.

Click on **Revoke Devices** to remove the assignment of devices from the user.

Click **OK** and **Save** button to save the changes. The user will be blacklisted and Inactive as shown below.

The blacklisted user can be revoked by clicking **Restore and Activate User** button. It will make the user active.

# Temporary Users

---

Temporary Users are users which can be auto-added from the desired devices connected with the system, with bare minimum parameters without the intervention of the Admin. Hence, this reduces the burden on the Admin to add as well as allow access to such users. Temporary Users can also be deleted/de-activated automatically after a desired time interval or converted into Normal Users.

Devices that support Temporary Users include the following Direct Doors and Panel Doors — ARGO, VEGA, ARGO FACE.

*The license consumption for Temporary Users will be the same as for Normal Users.*

*Temporary User is not applicable for Cafeteria mode of devices.*

*Make sure you enable the check box **Confirm before adding Temporary User** under **Temporary User** in the respective device, so that you get a confirmation message before enrolling a Temporary User.*

To add Temporary Users, you need to:

- Enable Temporary User and configure its parameters. For details refer to [“Temporary User”](#) in [“ARGO Door”](#), [“Temporary User”](#) in [“VEGA Door”](#) and [“Temporary User”](#) in [“ARGO FACE Door”](#).
- For Panel Doors, configure the Temporary User parameters in the Panel as well as Panel Doors. For details refer to [“Temporary User”](#) in [“Panel200”](#), [“Temporary User”](#) in [“ARGO Door”](#), [“Temporary User”](#) in [“VEGA Door”](#) and [“Temporary User”](#) in [“ARGO FACE Door”](#)
- Make sure the credentials (Finger) of the unknown user are presented on the desired device 3 times consecutively for enrollment.
- For Direct Doors make sure the User Access Mode in Device Configuration (of the respective device) > Profile is selected as — Face, Biometrics or Card.
- For Panel Doors, you need to set the User Access Mode (Door) in Panel Configuration > Zones as — Face, Biometrics or Card.
- Configure the Auto Generate User ID in Global Policy, if required. For details refer to [“Generate User ID”](#).
- Configure the Alerts to receive notifications when the Temporary User is added, if required. To do so, click Admin > Alert Message Configuration, in *Alert Filter* select *System* and in *Event* select *Temporary User/ Worker Added*. For details refer to [“Configuring Alert Messages”](#).
- Configure the Task Scheduler to delete/de-activate Temporary Users automatically or convert Temporary Users to Normal Users automatically. For details refer to [“For Schedule Parameter: Temporary User/ Worker”](#).
- When the Temporary Users are deleted/de-activated or converted to Normal Users using Task Schedulers the logs of these tasks can be seen in the Scheduler Log. For details, refer to [“Scheduler Log”](#).

After such users are enrolled, to view the list of Temporary Users, click **Users > Temporary User**.

*You can also view Temporary Users from the User List. For details, refer to [“User List”](#).*

The **Temporary User** page appears.

## Setting the Filters

- **Date:** Select the desired date range to display the temporary users created during that duration.
- **Filter:** Select the desired option — All, Device or Group Wise — as per which you wish to view the temporary users.

Select **All**, if you wish to view all the temporary users added during the selected date range

Select **Device**, if you wish to view the temporary users added using a particular device. Click the picklist to select the desired device.

Select **Group Wise**, if you wish to view the temporary users as per the desired Enterprise Group. Click the picklist to select the desired group.

- Click **View**. The temporary users will appear as per the set filters.

## Filtered Records

The grid displays the temporary users with the following details:

- **ID:** Displays the ID assigned to the temporary user. This can be auto-generated, if required. To auto-generate the ID, you must enable the **Auto Generate User ID** check box in Global Policy.  
Only if you have enabled this check box the **Auto-Generate as per Global Policy**  icon appears here. For details refer to “[Generate User ID](#)” in Global Policy.
- **Name:** Displays the name of the temporary user.
- **Photo:** Displays the image of the temporary user.

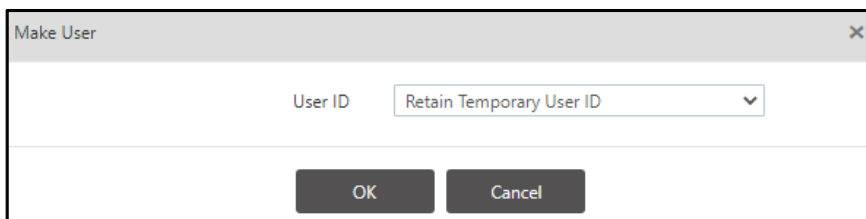

If GDPR is enabled a dummy photo will be displayed as Photo. For details refer to “[GDPR Reflections](#)”.

- **Status:** Displays the Status of the temporary user — Active, Inactive.

- **Auto-Registered Date & Time:** Displays the auto-registration date and time of the temporary user.
- **Auto-Registered via Device:** Displays the name of the device via which the temporary user is auto-registered.
- **Auto-Registered via Credential:** Displays the credential using which the temporary user is auto-registered.
- **Make User:** You can convert a temporary user to a normal user, if required.

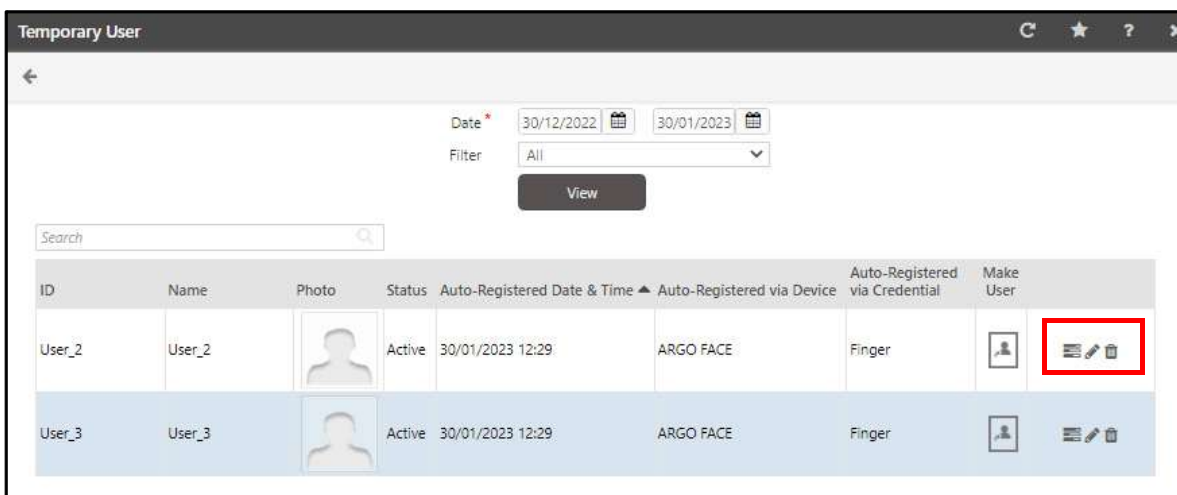

To do so, click **Make User** .

If you have enabled **Auto Generate User ID**, then the **Make User** pop-up appears.

The 'Make User' dialog box has a title bar with a close button. It contains a 'User ID' label and a dropdown menu currently showing 'Retain Temporary User ID'. At the bottom are 'OK' and 'Cancel' buttons.

- Select the desired **User ID** option — Retain Temporary User ID, Auto Generate as per Global Policy — from the drop-down list.
- Click **OK** to save the changes or click **Cancel**.
- The temporary user is added as a normal user and appears in the User List.
- You can also perform the following actions on each record — Details, Edit, Delete.

The 'Temporary User' interface includes a search bar, date range filters (30/12/2022 to 30/01/2023), a filter dropdown set to 'All', and a 'View' button. Below is a table with columns: ID, Name, Photo, Status, Auto-Registered Date & Time, Auto-Registered via Device, Auto-Registered via Credential, and Make User. The 'Make User' column contains icons for Details, Edit, and Delete. The Edit and Delete icons for the first two rows are highlighted with a red box.

ID	Name	Photo	Status	Auto-Registered Date & Time	Auto-Registered via Device	Auto-Registered via Credential	Make User
User_2	User_2		Active	30/01/2023 12:29	ARGO FACE	Finger	  
User_3	User_3		Active	30/01/2023 12:29	ARGO FACE	Finger	  

- Click **Details**  of the desired temporary user, if you wish to edit various user parameters. The User Configuration page appears with the relevant details of temporary user. You can edit the parameters as per your requirement.
- Click **Edit**  of the desired temporary user, if you wish to edit the:
  - Name

- ID, that is, you can click **Auto-Generate as per Global Policy**  , if required.
- Click **OK**  to save the changes or click **Cancel**  to discard.
- Click **Delete**  , if you wish to delete the temporary user.

*You can also Edit the parameters of the Temporary Users or Delete Temporary Users from the User List. To do so, Click Users > User. Click on the desired entry. You can edit or delete it. For details, refer to [“User List”](#).*

# Multi-User Configuration

COSEC provides the option for an HR administrator to apply a common configuration to multiple users at one go. This is not only convenient, but also saves the time required to configure each user individually. This feature can be useful when the same user configuration is applicable to more than one user defined in the COSEC database.

To access this functionality, select the **Users module > Multi-User Options > User Configuration**.

The **Multi-User Configuration** page opens as shown below.

## User Selection

Select the users based on the filters of

- **User Wise:** Select random users by selecting the user from picklist.
- **Group Wise:** Select all users in an enterprise group using the **Select Group** drop down list.
- **All:** Select all active users in the system.

Click the **Update** button to apply all configurations on the selected users.

Configurable parameters on the **Multi-User Configuration** page can be activated using the **Update** checkbox for each option. Selecting this checkbox will make the parameter enabled for modification using the **Set New Value** column.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Active	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Birthday Message	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Personal Mobile	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Personal Email	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Official Mobile	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Official Email	<input checked="" type="checkbox"/>

The **Multi-User Configuration** page is divided into following sections. Select the individual sections and set the necessary configuration for the selected multiple users. The detailed configuration has been explained in the following sections.

- [“Profile”](#)
- [“Devices”](#)
- [“Credentials”](#)
- [“Group”](#)
- [“T&A”](#)
- [“Access Control Basic”](#)
- [“Access Control Advance”](#)
- [“ESS”](#)
- [“Cafeteria”](#)
- [“Job Costing”](#)
- [“Field Visit Management”](#)
- [“Face Recognition”](#)
- [“Visitor Management”](#)

To configure the parameters of the following tabs, you need to first select the **Update** checkbox of the desired parameter.

## Profile

To update the profile of multiple users, select **Multi-User Configuration > Profile**.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Active	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Birthday Message	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Personal Mobile	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Personal Email	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Official Mobile	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Official Email	<input checked="" type="checkbox"/>

**Update**

1. Select the **Active** checkbox to activate all selected users.
2. Enable the **Birthday Message** checkbox for the selected users to receive a birthday message on NGT direct door.
3. Select the appropriate checkboxes to specify which contact details must be enabled for alert messages to be sent to selected users.
4. Click on **Update** to update the profile for selected users.

## Devices

The **Devices** section enables the administrator to add and assign/revoke a device group and/or randomly selected devices to multiple users at the same time.

To access this configuration, On the **Multi-User Configuration** page, select the **Devices** section as shown below.

To assign Device/Device Group to multiple users at the same time,

- Select the **Assign Device/Device Group** option.
- Under **Update**, select the **Device Group** check box to enable.

Under **Set New Value**, you can assign particular groups or all the groups to the users.

To do so, click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

You can either select particular device groups or can select all the device groups at once.

To select particular groups, select the check boxes of the desired groups.

The screenshot shows a dialog box titled "Picklist For Device Group". At the top, a green bar indicates "Total Selected: 2 Records". Below this is a search bar and a "Show Selected" link. A "Select All" checkbox is unchecked. A table lists 10 device groups. The first two, "ACTA Devices" (DGID 1) and "RnD1Visitor" (DGID 2), are selected with blue checkmarks. The remaining groups (3-10) are not selected. At the bottom, it shows "1 - 10 of 12 records" and a pagination control with "1" selected. "OK" and "Cancel" buttons are at the bottom.

<input type="checkbox"/>	DGID ▲	Name
<input checked="" type="checkbox"/>	1	ACTA Devices
<input checked="" type="checkbox"/>	2	RnD1Visitor
<input type="checkbox"/>	3	Device Group 3
<input type="checkbox"/>	4	Device Group 4
<input type="checkbox"/>	5	Device Group 5
<input type="checkbox"/>	6	Device Group 6
<input type="checkbox"/>	7	Device Group 7
<input type="checkbox"/>	8	Device Group 8
<input type="checkbox"/>	9	Device Group 9
<input type="checkbox"/>	10	Device Group 10

OR

To select all the groups at once, select the **Select All** check box. The devices on all the pages will be selected.

The screenshot shows the same dialog box, but now the "Select All" checkbox is checked. The table shows all 10 device groups selected with blue checkmarks. The green bar at the top now indicates "Total Selected: 12 Records". The pagination control still shows "1 - 10 of 12 records" with "1" selected. "OK" and "Cancel" buttons are at the bottom.

<input checked="" type="checkbox"/>	DGID ▲	Name
<input checked="" type="checkbox"/>	1	ACTA Devices
<input checked="" type="checkbox"/>	2	RnD1Visitor
<input checked="" type="checkbox"/>	3	Device Group 3
<input checked="" type="checkbox"/>	4	Device Group 4
<input checked="" type="checkbox"/>	5	Device Group 5
<input checked="" type="checkbox"/>	6	Device Group 6
<input checked="" type="checkbox"/>	7	Device Group 7
<input checked="" type="checkbox"/>	8	Device Group 8
<input checked="" type="checkbox"/>	9	Device Group 9
<input checked="" type="checkbox"/>	10	Device Group 10

- Click **Update**.

The Device Groups appear in a grid.

✓ Process Completed

Assign Device/Device Group    Revoke Device/Device Group

Update	Field Name	Set New Value

- Click **Update**.

The selected devices appear in a grid.

The screenshot shows a window titled 'Process Completed' with a green header bar. Below the header, there are two radio buttons: 'Assign Device/Device Group' (selected) and 'Revoke Device/Device Group'. Below these, there is a table with columns 'Update', 'Field Name', and 'Set New Value'. The 'Update' column has a checked checkbox. The 'Field Name' column has 'Device Group' and 'Device'. The 'Set New Value' column has input fields for 'ID', 'Name', and 'Name'. Below the table, there is a search bar and a table of devices. The table has columns 'Device Name', 'Type', and 'Delete'. The devices listed are 'ARCDC100\_DD\_Door' and 'ARCDC100\_DD\_Door'.

Device Name	Type	Delete
ARCDC100_DD_Door	Panel200 Door	
ARCDC100_DD_Door	Panel200 Door	

- Click **Configure** to configure the selected device for multiple users.

The Configuration page of the selected Device appears.

The screenshot shows a dialog box titled 'Panel Lite V2 - Configuration'. It contains the following fields and controls:

- Device: Panel Lite V2
- Type: Panel Lite V2
- Active: ☒
- VIP: ☐
- Absentee Rule: ☐
- Absent Day(s) Count: 60
- Access Profile: Group-1
- Functional Group: Staff
- Home Zone: Zone-1
- Visit Zone: Select
- Access Route: Select

At the bottom, there are 'OK' and 'Close' buttons.

*The Device and Type will be shown as per the device selected from the grid.*

You can enable and configure Access Control features from the Configuration page.

- Click **OK**.
- You can also delete the desired device. To do so, click **Delete** of the respective device.
- Click **Update** to assign the selected devices/device groups with configuration to multiple users.

Similarly to revoke Device/Device Group from multiple users at the same time,

- Select the **Revoke Device/Device Group** option.

- While Revoking Devices, if they are a part of any Access Rule/s assigned to User/s, then such devices will be retained.
- While Revoking Device Groups, if the devices within the group are a part of any Access Rule/s assigned to User/s, then such devices will be retained however the Device Group will be revoked.

- Under **Update**, select the **Device Group** check box to enable.

Under **Set New Value**, you can revoke particular groups or all the groups from the users.

To do so, click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

You can either select particular device group or can select all the device groups at once.

To select particular groups, select the check boxes of the desired groups.

Under **Set New Value**, you can revoke particular devices or all the devices from the selected users.

To do so, click the **Device** picklist. The **Select Device** pop-up appears.

The 'Select Device' pop-up window displays a search bar, a 'Show Selected' link, and a table of devices. The 'Total Selected' status is 0 Records. The table lists 10 devices, all of type 'Panel200 Door'. The 'Select All' checkbox is unchecked. The pagination shows '1 - 10 of 89 records'.

<input type="checkbox"/>	Name	Type
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_SD_Door	Panel200 Door
<input type="checkbox"/>	ARGO_PANEL	Panel200 Door
<input type="checkbox"/>	DoorV3	Panel200 Door
<input type="checkbox"/>	DoorV3_Door	Panel200 Door
<input type="checkbox"/>	DOORV4_PANEL	Panel200 Door
<input type="checkbox"/>	dummy	Panel200 Door
<input type="checkbox"/>	PATHV2_PANEL	Panel200 Door
<input type="checkbox"/>	VEGA_PANEL	Panel200 Door

You can either select particular devices or can select all the devices at once.

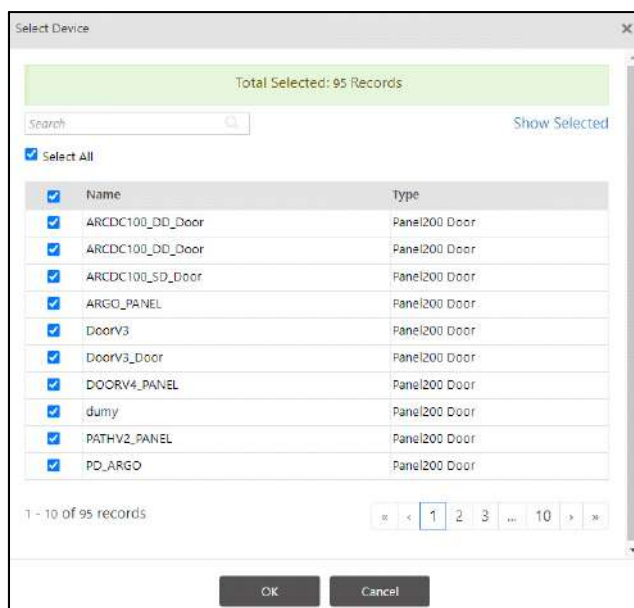

To select particular devices, select the check boxes of the desired groups.

The 'Select Device' pop-up window displays a search bar, a 'Show Selected' link, and a table of devices. The 'Total Selected' status is 2 Records. The table lists 10 devices, all of type 'Panel200 Door'. The 'Select All' checkbox is unchecked. The first two rows are selected. The pagination shows '1 - 10 of 89 records'.

<input type="checkbox"/>	Name	Type
<input checked="" type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input checked="" type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_SD_Door	Panel200 Door
<input type="checkbox"/>	ARGO_PANEL	Panel200 Door
<input type="checkbox"/>	DoorV3	Panel200 Door
<input type="checkbox"/>	DoorV3_Door	Panel200 Door
<input type="checkbox"/>	DOORV4_PANEL	Panel200 Door
<input type="checkbox"/>	dummy	Panel200 Door
<input type="checkbox"/>	PATHV2_PANEL	Panel200 Door
<input type="checkbox"/>	VEGA_PANEL	Panel200 Door

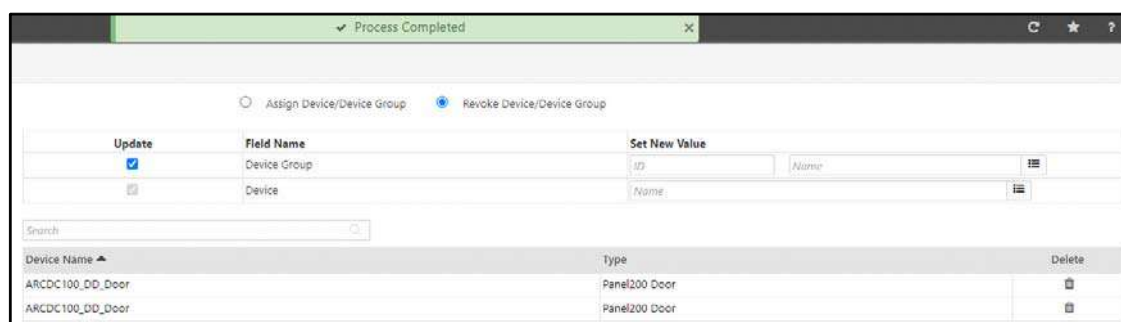

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

- Click **Update**.

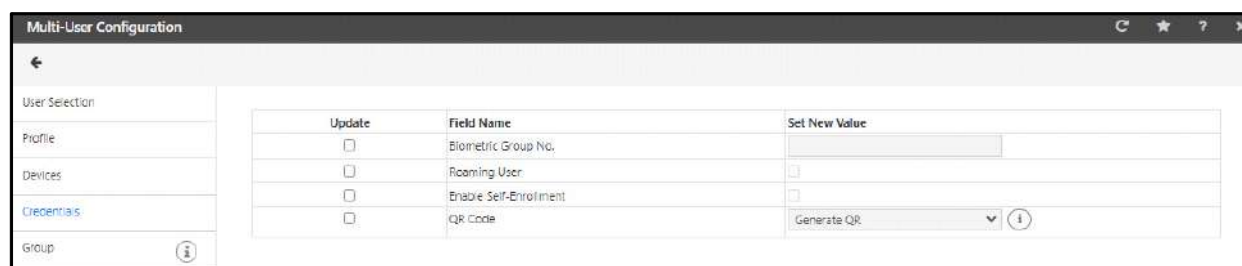

The selected devices appear in a grid.

- You can also delete the desired device. To do so, click **Delete**  of the respective device.
- Click **Update** to revoke the selected devices/device groups from multiple users.

## Credentials

To update the credentials for multiple user, select the **Credentials** section as shown below.

1. Enter the **Biometric Group No.** to be assigned to the users. It is a number allotted to a group of users assigned on a device. This enables the device to match a finger/palm credential against only those users who are part of the same Biometric Group thus reducing processing time.

This value is used for Finger/Palm Identification of user on Identification Server in shorter time span considering user first specifies Group No and then punches on the device.

Identification Server will be allocating templates to its child threads on the basis of this field.

2. You can mark the user as **Roaming user** for the users who are field engineers, partners etc who report to office rarely. When such users mark their punch after pressing 0 on door, then they will be identified from the Roaming user group.

The Identification server will maintain a list of users along with their templates to be considered as roaming/remote users.

3. Select the **Enable Self-Enrollment** check box to allow users to enroll themselves in COSEC using already provided access cards/PIN. The self-enrollment feature can be especially beneficial for organizations with large number of employees.
4. Users can access the device using **QR Code**. For QR Code functionality, make sure:
  - you have enabled **Allow Access Via QR** in the desired ARGO FACE (Direct Door / Panel Door) device as well as configured the Image Setting parameters. For details refer to "[Face/Image Settings](#)".
  - enabled the Alert, so that the generated/re-generated QR can be sent to the desired users/workers using SMS/Email/WhatsApp. Make sure you select the Alert Filter as **Users** and Event as **User Access - QR Credentials**. For details, refer to "[Configuring Alert Messages](#)".

*Access Via QR feature is not applicable for Temporary Users.*

If you wish to provide access to multiple users using **QR Code**, select the desired option — Generate QR, Regenerate QR.

After you click **Update**,

- if you have selected the **Generate QR** option, for all the selected users the QR will be generated and it will be displayed as a value in Users > User Configuration > Credentials > Access Card2.
- if you have selected the **Regenerate QR** option, then for all the selected users the QR will be regenerated and the value in Users > User Configuration > Credentials > Access Card2 will be over-written with this new value.

Alerts with the QR Code will be sent to users/workers using which they can access the devices.

## Group

This section enables the administrator to select Enterprise groups, Reporting group, Approval Policy, Leave group and Week off for assigning to multiple users. To access this configuration, select the **Group** section as shown.

The screenshot shows the 'Multi-User Configuration' window with the 'Group' section selected in the left sidebar. The main area displays a table for configuring groups. The table has columns for 'Update', 'Field Name', and 'Set New Value'. The 'Set New Value' column is further divided into 'ID' and 'Name' sub-columns. The 'Group' section is highlighted with an information icon (i).

Update	Field Name	ID	Name
<input type="checkbox"/>	Organization	ID	Name
<input type="checkbox"/>	Branch	ID	Name
<input type="checkbox"/>	Department	ID	Name
<input type="checkbox"/>	Section	ID	Name
<input type="checkbox"/>	Category	ID	Name
<input type="checkbox"/>	Grade	ID	Name
<input type="checkbox"/>	Designation	ID	Name
<input type="checkbox"/>	Custom Group 1	ID	Name
<input type="checkbox"/>	Custom Group 2	ID	Name
<input type="checkbox"/>	Custom Group 3	ID	Name
<input checked="" type="checkbox"/>	Reporting Group	2	ACTA Group
<input checked="" type="checkbox"/>	Approval Policy	5	Matrix Approval Policy
<input type="checkbox"/>	Leave Group	ID	Name
<input type="checkbox"/>	Week Off Group	ID	Name

An 'Update' button is located at the bottom right of the configuration area.

1. Select a group from the respective group picklist to be assigned to the user.
2. Click on **Update** to update the group change for the users.

The **Leave Group** and **Week Off Group** option is available for multi-user configuration only with the **T&A** add-on module.

For detailed description refer to User Configuration> Group

The picklist options that appear in each enterprise group will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

## T&A

The T&A section enables the administrator to set attendance configuration for multiple users and to specify T&A policies to be assigned. This section is available only with a *Time and Attendance* add-on module license.

To access this configuration, select the **T&A** section as shown below.

User Selection	Update	Field Name	Set New Value

**Update**

1. Select the **Enable Attendance Calculation** checkbox to enable attendance calculation on the system for the selected users. This option has to be enabled for configuring any of the other parameters in this section.
2. In case the attendance calculation is enabled then the user needs to select the **Attendance Marking Type** from the drop down list.

The following options are available:

- **Normal:** This type will be default for all users.

- **First Punch Only:** This type users need only entry punch at the start of the shift. In this case the system will assume that the shift end time is the last out Punch for the day. All other calculations remain the same as for normal type users.
  - **Executive:** This type users will be marked full day present if at least one punch (entry/exit) is available in the day. There will not be any late/early & overtime calculation like it is done for normal and single punch type users.
  - **Flexible:** This category of users working will be checked against required minimum working and if it is more than required, full day attendance will be marked. In this case the minimum working hours required in a day for full day attendance and half day attendance can also be defined for each user as explained below.
  - **Present:** category users do not require any punch for them to be marked full day present. All users belonging to this category are marked present by default.
3. The **Min Working Hours Required** section is enabled for configuration only when the *Flexible* Attendance Marking type is selected for a user. The administrator can specify the minimum working hours required in a day for users to be marked *Full Day* or *Half Day* present. Specify the hours in *HH:MM* format as shown below.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Enable Attendance Calculation	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Attendance Marking Type	Flexible
<input checked="" type="checkbox"/>	Min Working Hours Required For Full Day	08:00
<input checked="" type="checkbox"/>	Min Working Hours Required For Half Day	04:00
<input type="checkbox"/>	Max Punches To Be Considered	Select

4. The **Max Punches to be Considered** parameter specifies the maximum entry/exit events per user to be considered in a day for attendance calculation.

<input checked="" type="checkbox"/>	Max Punches To Be Considered	Select	
<input type="checkbox"/>	Bypass Finger/Palm/Face For Attendance	Select	
<input type="checkbox"/>	Max Short Leaves Allowed	2	
<input type="checkbox"/>	OT/C-OFF Eligibility	4	
<input type="checkbox"/>	Authorize C-OFF On	6	
<input type="checkbox"/>	Bus Route	8	
<input type="checkbox"/>	Enable Site Based Auto Tour Application	10	
<input type="checkbox"/>	Tour	12	
		N-Punch	
		Select	

☐ WO/PH  
☐ Normal Day

Specify a value in this field if the value defined at the global level is to be overridden for this user. The options available are 2, 4, 6, 8, 10, 12 and N-Punch. N-Punch allows unlimited number of punches in IN/OUT pair.

5. On checking the **Bypass Finger/Palm/Face For Attendance** option, the user can punch IN or OUT using any of the assigned credentials and the same will be considered for attendance calculation. On selection of this option, finger/palm /face identification is no longer must for marking attendance.
6. The **Max Short Leaves Allowed** parameter specifies the maximum number of short leaves (personal hours) to be allowed to selected users in an attendance period. This parameter is also defined at the global

system configuration level and can be overridden for specific users using this option. The administrator can specify a value of a maximum of two digits in this field.

7. The **OT/C-OFF Eligibility** parameter enables the administrator to define whether the overtime authorization for this user is to be done as:

- None
- Only Overtime
- Only Compensatory Off
- Both

For **Both** option you can select the days on which C-OFF is to be authorized.

8. Click the **Bus Route** picklist button and select the bus route to be assigned to selected users.
9. **Enable Site Based Auto Tour Application:** Select this check box so that tour application will be automatically applied for a particular user, if he punches from some site other than the Base Site.

<input checked="" type="checkbox"/>	Enable Site Based Auto Tour Application	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Tour	T1 - tour1
<input checked="" type="checkbox"/>	Base Site Selection	ID <input type="text"/> Name <input type="text"/>
<input checked="" type="checkbox"/>	Auto Authorize Site Based Tour Application	1 Site(s) are Selected

- **Tour:** Select the tour application from the drop-down list which will be automatically applied.
- **Base Site Selection:** Select the base site to be assigned to the user. You can select particular sites or can select all the sites at once.

Click the **Base Site Selection** picklist. The **Picklist for Site** pop-up appears.

## Access Control Basic

This section enables the administrator to configure basic access control parameters for multiple users. To access this configuration, select the **Access Control Basic** section as shown below.

The screenshot shows the 'Multi-User Configuration' interface. On the left is a sidebar menu with options: User Selection, Profile, Devices, Credentials, Group (with an info icon), T&A, Access Control Basic (highlighted in blue), Access Control Advance, ESS, Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Visitor Management. The main area displays a table with three columns: 'Update', 'Field Name', and 'Set New Value'. The table contains the following rows:

Update	Field Name	Set New Value
<input type="checkbox"/>	Bypass Finger	<input type="checkbox"/>
<input type="checkbox"/>	Bypass Palm	<input type="checkbox"/>
<input type="checkbox"/>	Access Validity	<input type="checkbox"/>
<input type="checkbox"/>	Access Validity Date	<input type="text"/>
<input type="checkbox"/>	Access Level For Smart Identification (SI)	8
<input type="checkbox"/>	Shift Schedule	Schedule Group
<input type="checkbox"/>	Start Shift	General Shift
<input type="checkbox"/>	Holiday Schedule	Schedule 1
<input type="checkbox"/>	Access Cluster Checking	<input type="checkbox"/>

An 'Update' button is located at the bottom right of the configuration area.

1. The **Bypass Finger** option can be enabled in the event of the Finger Print image not being in order and the system thus has problems identifying the user. In such cases, the system administrator can disable the Finger Print check for the user thus enabling the user to gain access using either the assigned pin or card.
2. The **Bypass Palm** option can be enabled in the event of the Palm Vein image not being in order and the system thus has problems identifying the user. In such cases, the system administrator can disable the Palm vein check for the user thus enabling the user to gain access using either the assigned pin or card.
3. Enable the **Access Validity** option if the user credential is to be activated for a predefined period.

Specify the end date of the validity in the **Access Validity Date** field.

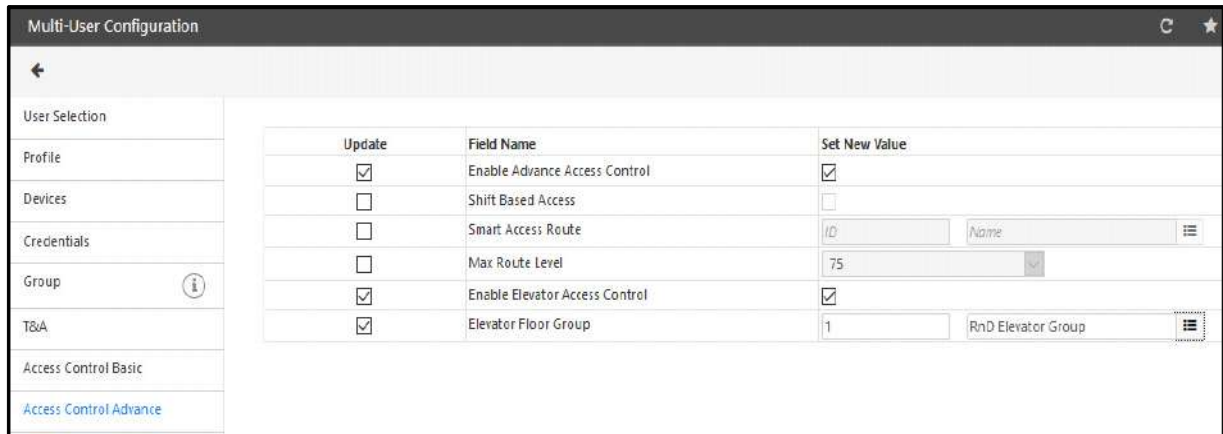

4. Specify an access level from the **Access Level For Smart Identification (SI)** drop down list, for which the Smart Identification feature will be applicable to the selected users.
5. Assign a **Shift Schedule** to the selected users from the dropdown list.

In case of multiple shifts in the schedule group, the **Start Shift** needs to be selected from the drop down list.

6. Select the **Holiday Schedule** to be assigned to the user from the drop down list.
7. Select the **Access Cluster Checking** option to enable checking for access cluster restrictions for the selected users.

## Access Control Advance

This section enables the administrator to set advance access control parameters for multiple users. The **Access Control Advance** section is available only with the *Access Control* add-on module license. To access this configuration, select the **Access Control Advance** section as shown below.

The screenshot shows the 'Multi-User Configuration' window with the 'Access Control Advance' section selected. The window contains a table for configuring access parameters for multiple users.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Enable Advance Access Control	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Shift Based Access	<input type="checkbox"/>
<input type="checkbox"/>	Smart Access Route	ID <input type="text"/> Name <input type="text"/>
<input type="checkbox"/>	Max Route Level	75 <input type="text"/>
<input checked="" type="checkbox"/>	Enable Elevator Access Control	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Elevator Floor Group	1 <input type="text"/> RnD Elevator Group <input type="text"/>

1. **Enable Advance Access Control:** Check this box to enable the advance access control feature.
2. The **Shift Based Access** parameter allows the administrator to enable user access based on the shift working time of the users.

*In the event of not selecting the **Shift Based Access** option, the system will apply the default access settings applicable to the user.*

3. Select the **Smart Access Route** to be assigned to the user from the *Access Route* picklist.
4. Select the route level up to which the user is to be allowed access from the **Max Route Level** drop down list.
5. **Enable Elevator Access Control:** Check this box to enable the Elevator access control feature for the users.
6. **Elevator Floor Group:** Click the picklist and select the Elevator floor group to be assigned to the users. The users can access the floors of the Elevators included in Elevator Floor Group. The Elevator Floor group is created from Access Control> Elevator Access Control> Elevator floor group

*Some parameters, when configured for a specific user, may over-ride corresponding parameters pre-defined at the Global Policy level.*

## ESS

The **ESS** section is available only with the ESS add-on module license. It enables the administrator to set up ESS accounts for new users. To access this configuration, select the **ESS** section as shown.

The screenshot shows the 'Multi-User Configuration' window. On the left is a sidebar with a 'User Selection' section containing a list of categories: Profile, Devices, Credentials, Group, TBA, Access Control Basic, Access Control Advance, **ESS** (highlighted), Cafeteria, Job Costing, Field Visit Management, Face Recognition, and Visitor Management. The main area is divided into three columns: 'Update', 'Field Name', and 'Set New Value'. The 'Update' column contains checkboxes for various settings. The 'Field Name' column lists the corresponding settings. The 'Set New Value' column contains input fields and dropdown menus for configuring these settings. At the bottom right of the main area is an 'Update' button.

Update	Field Name	Set New Value
<input type="checkbox"/>	Enable Account	<input type="checkbox"/>
<input type="checkbox"/>	Edit Basic Details	<input type="checkbox"/>
<input type="checkbox"/>	Punch Marking Via ESS	<input type="checkbox"/>
<input checked="" type="checkbox"/>	Punch Marking Via API	<input checked="" type="checkbox"/>

<input type="checkbox"/>	Preferred Language	English

1. Select the **Enable Account** check-box to enable ESS account access for the selected users.
2. Select the **Edit Basic Details** check-box to enable the selected users to edit basic details on their respective ESS accounts.
3. Select the **Punch Marking Via ESS** check-box to enable users to mark their attendance manually from their respective ESS accounts.
4. Select the **Punch Marking Via API** check-box to enable user to mark punches by firing API. Auto-Punch and Manual-Punch marking check-box will be activated only if Punch marking via API is enabled.
5. Select the **Mark Punch As Per** check-box to select the time zone which is to be applied for punch time (punch marked from API)
  - **Server Time Zone**- The date- time of the punch will be as per the server time zone.
  - **Local Time Zone**- The date-time of the punch will be as per the time zone of the place from where the punch is marked.
6. Select the **Auto-Punch Marking** check-box to enable the auto-attendance marking feature for the selected user from the COSEC APTA mobile application. On enabling this feature, if the user's current location matches any of the assigned locations; a punch will be marked automatically for the user from the mobile application.

Locations can be configured from *COSEC Web Application > Admin > System Configuration > Location Master*.

- **Location Assignment**- Select the option as “All” or “Selected” for assigning location to users.

- For **All** option; all the locations configured in Location Master will be assigned to the users. When new location is added to Location master then it will be automatically assigned to the users if “All” is selected.
- For **Selected** option; **Location** and **Location Group** will be enabled for the selection which is to be assigned to the users.
- If you select **Selected**, you can assign Locations as well as Location Group/s to the user.
- **Location**: Click the **Location** picklist. The **Picklist for Location** pop-up appears.

Picklist For Location

OK Cancel

You can either select particular location or can select all the location at once.

To select particular locations, select the check boxes of the desired locations.

The screenshot shows a dialog box titled "Picklist For Location". At the top, a green bar indicates "Total Selected: 1 Records". Below this is a search bar with the placeholder "Search" and a "Show Selected" link. A "Select All" checkbox is present and unchecked. A table lists four location groups: "I8" (Location 6), "I9" (Location 7), "RnD2GP" (RnD2 GPS), and "RnDGPS" (RnD1 GPS). The checkbox for "I8" is checked. At the bottom, there are "OK" and "Cancel" buttons. A pagination bar shows "11 - 14 of 14 records" and a page selector with "2" highlighted.

<input type="checkbox"/>	Code ▲	Name
<input checked="" type="checkbox"/>	I8	Location 6
<input type="checkbox"/>	I9	Location 7
<input type="checkbox"/>	RnD2GP	RnD2 GPS
<input type="checkbox"/>	RnDGPS	RnD1 GPS

OR

To select all the locations, select the **Select All** check box. The location on all the pages will be selected.

This screenshot shows the same "Picklist For Location" dialog box, but now the "Select All" checkbox is checked. The green bar at the top now indicates "Total Selected: 14 Records". In the table, all four location groups ("I8", "I9", "RnD2GP", and "RnDGPS") have their checkboxes checked. The "OK" and "Cancel" buttons remain at the bottom, and the pagination bar still shows "11 - 14 of 14 records" with "2" highlighted.

<input checked="" type="checkbox"/>	Code ▲	Name
<input checked="" type="checkbox"/>	I8	Location 6
<input checked="" type="checkbox"/>	I9	Location 7

1 - 10 of 12 records

OK Cancel

- Click **OK**.

Hover over the **Info**  icon. It displays the number of Location Groups selected.

7. Select the **Manual Punch Marking** check-box to enable manual punch marking from the COSEC APTA mobile application.
8. **Face Mandatory For Punch** - When Manual Punch Marking and Face Recognition feature is enabled for user then you can select the specific option for which face is to be made mandatory for the punch. The options are **Attendance**, **Access Control**, **Both** and **None**.

For Access Control and Both option; you must enable “Allow Door Access Through API” checkbox.

9. **APTA Face Anti-Spoofing**: When **Manual Punch Marking** is enabled and **Face Mandatory For Punch** is selected as — **Attendance**, **Access Control** or **Both** — then select **APTA Face Anti-Spoofing** checkbox to enable **Face Anti-Spoofing** feature via COSEC APTA Application to prevent false face verification by using a photo, video, mask or a different substitute for an unauthorized person’s face.
10. **Capture Photo**- This checkbox is activated only when **Punch marking via API** and **Manual Punch Marking** are enabled. This allows the user to capture snapshot while punching through COSEC APTA.
11. **Allow Offline Punch** - This checkbox is activated only when **Punch marking via API** and **Manual Punch Marking** are enabled. This allows users to apply for offline punches.

In Mobile devices, when there is no connectivity between server and the Mobile device, the punches, with their timings can be stored through offline punch and send to server when connectivity is restored.

12. The **Location Mandatory For Punch** field determines if information regarding the source location from where the punch has been marked should accompany a punch marking by user. Select None if location information should not accompany a punch. For *Manual Punch Marking*, select Any Location (locations

need not be configured). For *Auto-Punch Marking* (auto-attendance feature), select **Configured Locations Only** (locations must be configured on "Location Master").

13. **Reason For Punching From Unassigned Location:** This checkbox will be activated only when 'Location Mandatory For Punch' has either **None** or **Any Location** as values. By enabling this checkbox, the Incharge Users can know the reason for which the punch is made from unassigned location by the employee users.
14. **Location Assignment-** Select the option as "All" or "Selected" for assigning location to users.
  - For **All** option; all the locations configured in Location Master will be assigned to the users. When new location is added to Location master then it will be automatically assigned to the users if "All" is selected.
  - For **Selected** option; Location and Location Group will be enabled for the selection which is to be assigned to the users.
    - **Location-** Select the Location pick-list and select the locations to be assigned to the users.
    - **Location Group-** Select the Location group pick-list and select the groups to be assigned to the users. If Selected Location groups are assigned to users and whenever new location is added to the location group then newly added location in location group will also be assigned to the users.
15. Select the **Allow Door Access Through API** to allow the access to device through API.
16. Select the **PIN Authentication For Door Access** for Dual Authentication with PIN when Bluetooth or QR based access is used for Access control feature in COSEC APTA mobile application.
17. Specify the Active Directory domain name in the **Domain** field for Active Directory login.
18. Select the **Auto-Authorize IMEI Registration** checkbox to enable automatic authorization of IMEI numbers newly registered on COSEC, for the selected users.
19. The administrator can click the **Reset Password** button to reset the selected ESS users' login password.
20. Specify the **Preferred Language** for the selected ESS Users as *English, Arabic, Spanish, Albanian, Turkish or Vietnamese*.

## Cafeteria

This section is available only with the Cafeteria add-on module license. To access this configuration, select the **Cafeteria** section as shown.

Update	Field Name	Set New Value
<input type="checkbox"/>	Enable Account	<input type="checkbox"/>
<input checked="" type="checkbox"/>	Enable Offline Transaction	None
<input checked="" type="checkbox"/>	Discount Level	None
<input checked="" type="checkbox"/>	Account Type	Pre-Paid
<input type="checkbox"/>	Balance Management	Device Based
<input type="checkbox"/>	Device-Server Balance Check	<input type="checkbox"/>
<input checked="" type="checkbox"/>	Cafeteria Usage Policy	ID <input type="text"/> Name <input type="text"/>

1. Select the **Enable Account** checkbox to enable Cafeteria account access for the selected user.
2. Select the desired option to perform offline transaction from the **Enable Offline Transaction** drop down list.
  - Select **None**, if you do not want to allow transactions to be made by the users when the device is in offline mode.
  - Select **Allow With Discount**, if you want to allow transactions with discount to be made by the users, when the device is in offline mode.
  - Select **Allow Without Discount**, if you do not want to allow transactions without discount to be made by the users, when the device is in offline mode.
3. Select the appropriate discount level from the **Discount Level** drop down list.
4. Select the **Account Type** as **Pre-Paid** or **Post-Paid**.
  - For **Pre-Paid** account type, specify whether the **Balance Management** should be Device-based or Server-based.
  - When Balance Management is selected as **Server based**, then you can enable **Device-Server Balance Check**. This will allow Device to check Server-side balance before allowing transaction. For this, Device and Server must be connected.
  - For **Post-Paid** account type, enter the **Allowed Usage Per Month** based on which monthly dues for the user can be calculated.
5. **Cafeteria Usage Policy**- Select the cafeteria usage policy to assign to the multiple users based on which cafeteria transaction restrictions will be applied to the users.

## Job Costing

*In case the job added is same as existing job assigned to the user and the date range provided is also the same, then only the ESS Assignment flag is updated for users through Multi User Configuration.*

*To assign new job through Multi User Configuration, make sure that the new job does not fall within the date range of already assigned job(s).*

This section is available with Job Processing and Costing license.

To set Job costing related parameters for multiple users, click **User Module >Multi-User Options >User Configuration >Job Costing**.

The screenshot shows the 'Multi-User Configuration' window with the 'Job Costing' option selected in the left sidebar. The main area contains a table with columns 'Update', 'Field Name', and 'Set New Value'. The 'Update' checkbox for 'Job Costing' is currently unchecked. The 'Set New Value' dropdown for 'Job Costing' is set to 'Disabled'. Other fields like 'Device Based Job Assignment', 'Job', 'Assignment Date', and 'ESS Assignment' are also listed with their respective update checkboxes and value settings.

Update	Field Name	Set New Value
<input type="checkbox"/>	Job Costing	Disabled
<input type="checkbox"/>	Device Based Job Assignment	<input type="checkbox"/>
<input type="checkbox"/>	Job	ID: <input type="text"/> Name: <input type="text"/>
<input type="checkbox"/>	Assignment Date	Start Date: <input type="text"/> End Date: <input type="text"/>
<input type="checkbox"/>	ESS Assignment	<input type="checkbox"/>

- **Job Costing:** Select the check box under **Update** to enable. Select **Enabled** from the drop-down under **Set New Value**.

The screenshot shows the 'Multi-User Configuration' window with the 'Job Costing' option selected in the left sidebar. The main area contains a table with columns 'Update', 'Field Name', and 'Set New Value'. The 'Update' checkbox for 'Job Costing' is now checked. The 'Set New Value' dropdown for 'Job Costing' is set to 'Enabled'. Other fields like 'Device Based Job Assignment', 'Job', 'Assignment Date', and 'ESS Assignment' are also listed with their respective update checkboxes and value settings.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Job Costing	Enabled
<input type="checkbox"/>	Device Based Job Assignment	<input type="checkbox"/>
<input type="checkbox"/>	Job	ID: <input type="text"/> Name: <input type="text"/>
<input type="checkbox"/>	Assignment Date	Start Date: <input type="text"/> End Date: <input type="text"/>
<input type="checkbox"/>	ESS Assignment	<input type="checkbox"/>

- **Device Based Job Assignment:** Select the check box under **Update** to enable. Select the check box under **Set New Value**. Job codes will be assigned to the user as per device configuration on which user punches.

The screenshot shows the 'Multi-User Configuration' window. On the left is a sidebar with various configuration categories. The main area displays the 'Job Assignment Type' configuration. It includes a table with columns for 'Update' (checkboxes), 'Field Name', and 'Set New Value' (checkboxes and input fields). The 'Job Assignment Type' and 'Device Based Job Assignment' rows have their 'Update' checkboxes checked. The 'Set New Value' section for 'Device Based Job Assignment' has its checkbox checked, and the 'Job' field is selected from a picklist. Below the table is an 'Update' button.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Job Assignment Type	Enabled
<input checked="" type="checkbox"/>	Device Based Job Assignment	<input checked="" type="checkbox"/> <input type="text" value="Job"/>
<input type="checkbox"/>	Job	<input type="text" value="ID"/> <input type="text" value="Name"/>
<input type="checkbox"/>	Assignment Date	<input type="text" value="Start Date"/> <input type="text" value="End Date"/>
<input type="checkbox"/>	ESS Assignment	<input type="checkbox"/>

- **Job:** Click the **Job** picklist to select the desired jobs.

The **Picklist For Job** appears.

The screenshot shows the 'Picklist For Job' dialog box. It has a search bar, a filter for 'Ended Days (1-999)', and a dropdown for 'Active'. Below is a table with columns for 'Job Code', 'Name', 'Start', and 'End'. The table lists three jobs: J5, J6, and J7. A 'Cancel' button is at the bottom.

Job Code	Name	Start	End
J5	J5	01/12/2023	09/12/2023
J6	J6	10/12/2023	16/12/2023
J7	J7	22/12/2023	23/12/2023

- By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter. Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Date:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- **ESS Assignment:** Select the check box to Enable. This job will be displayed in the list of Jobs assigned to the user through the ESS login. If you do not want this job to be displayed, clear the check box.

The ESS Assignment check box will not be displayed if the **Show All Jobs while Punching** check box is enabled. For details, refer to [“Job Costing”](#) in [“Defining Global Policies”](#).

- Click **Update** to apply **Job Costing** configurations for the selected user.

The screenshot shows the 'Multi-User Configuration' window. On the left is a sidebar with a 'User Selection' section containing a list of categories: Profile, Devices, Credentials, Group (with an info icon), TSA, Access Control Basic, Access Control Advance, ESS, Cafeteria, Job Assignment Type (highlighted in blue), Field Visit Management, Face Recognition, and Visitor Management. The main area displays a configuration table for 'Job Assignment Type'.

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Job Assignment Type	Enabled
<input checked="" type="checkbox"/>	Device Based Job Assignment	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Job	J1
<input type="checkbox"/>	Assignment Date	05/12/2023 - 10/01/2024
<input checked="" type="checkbox"/>	ESS Assignment	<input checked="" type="checkbox"/>

At the bottom right of the main area is an 'Update' button.

Jobs are created from **Job Processing and Costing module > Project Management> Job**.

## Field Visit Management

In this module, you can assign schedules to the users and keep a track of their activities, while on site and also check if the assigned tasks are being fulfilled correctly or not.

The screenshot shows the 'Multi-User Configuration' window with a sidebar menu on the left. The 'Field Visit Management' option is selected and highlighted in blue. The main content area contains a table with the following structure:

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Enable FVM	<input checked="" type="checkbox"/>

Below the table, there is an 'Update' button.

Check the **Enable FVM** box to consider multiple user as FVM user.

## Face Recognition

In this feature, user can access the device or mark the attendance by verifying his Face as the credential. The Face Recognition tab appears as shown below:

The screenshot shows the 'Multi-User Configuration' window with a sidebar menu on the left. The 'Face Recognition' option is selected and highlighted in blue. The main content area contains a table with the following structure:

Update	Field Name	Set New Value
<input checked="" type="checkbox"/>	Enable Face Recognition	<input checked="" type="checkbox"/>

Below the table, there is an 'Update' button.

**Enable Face Recognition:** Check this box to enable Face Recognition feature for the user.

## Visitor Management

In this feature you can authorize a host user, restrict the visitor pre-registration on the basis of no.of days and assign device groups and devices to the visitors.

Update	Field Name	Set New Value
<input type="checkbox"/>	Authorized Host User	<input type="checkbox"/>
<input type="checkbox"/>	Minimum Days Before Allowing Visit	<input type="text" value="Days"/>
<input type="checkbox"/>	Maximum Days Before Allowing Visit	<input type="text" value="Days"/>

☒ Assign Device/Device Group
 ☐ Revoke Device/Device Group

Update	Field Name	Set New Value
<input type="checkbox"/>	Device Group	<input type="text" value="ID"/> <input type="text" value="Name"/> <input type="button" value="⋮"/>
<input checked="" type="checkbox"/>	Device	<input type="text" value="Name"/> <input type="button" value="⋮"/>

- Under **Update**, select the **Authorized Host User** check box to enable. Under **Set New Value**, select the check box to enable the selected users to function as Authorized Host Users.
- To restrict the visitor pre-registration on the basis of number of days,
  - Under **Update**, select the **Minimum Days Before Allowing Visit** check box to enable. Under **Set New Value** configure the desired number of days.
  - Under **Update**, select the **Maximum Days Before Allowing Visit** check box to enable. Under **Set New Value** configure the desired number of days.
- To assign Device/Device Group to multiple users at the same time,
  - Select the **Assign Device/Device Group** option.

☒ Assign Device/Device Group

- You can also select individual devices. By default, under **Update** the **Device** check box is enabled.

Under **Set New Value** from the **Device** picklist, select the desired devices you wish to revoke from the selected users.

The selected devices appear in the grid. You can also delete the desired device group. To do so, click **Delete**  of the respective device group.

- Click **Update** to revoke the selected devices/device groups from multiple users.

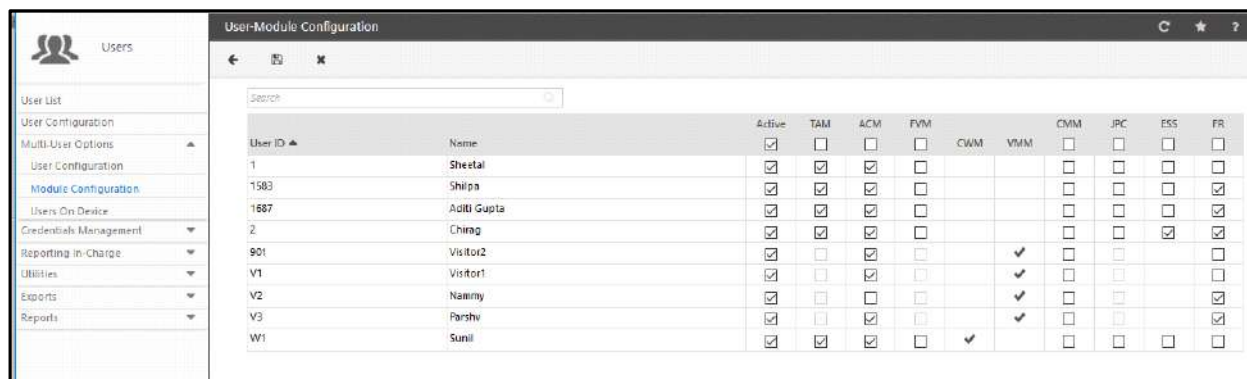

For more information about the configurations, refer "[Visitor Management](#)" in *Users> User Configuration> Visitor Management*.

# User-Module Configuration

COSEC provides the option to activate/deactivate different modules for multiple users at the same time. You can Enable/Disable Attendance Calculation, Cafeteria Account, Job Costing Account, FVM Account, ESS and Face Recognition for multiple users.

To access this functionality, select the **Users module > Multi-User Options > Module Configuration**.

The **Module Configuration** page opens as shown below.

User ID	Name	Active	TAM	ACM	FVM	CWM	VMM	CMM	JPC	ESS	FR
1	Sheetal	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1583	Shilpa	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
1687	Aditi Gupta	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2	Chirag	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
901	Visitor2	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
V1	Visitor1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
V2	Naminy	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
V3	Panshi	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
W1	Sunil	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Check the **Active** box to configure the module for the user. The ACM box will get checked. Now you can enable TAM and ESS module.

If TAM module license is activated then you can enable FVM and JPC module.

For a user, when check box is checked but disabled in grid for a particular module; then it indicates that user does not have rights for accessing that module.

For visitor; if Active box is enabled; then you can enable CWM module.

You can also enable CMM module and FR module for the required user.

When check-box of FR is enabled for a user then Face Recognition check-box will get enabled for that user in User Configuration > Face Recognition and “Face Recognition For” drop down will be set as “**For Both**” for the user.

# Users on Device

The **Users** module allows the system administrator to assign multiple users to a selected Panel200 or Direct Door device at a time.

To do this, Select the **Users module > Multi-User Options > Users On Device**.

## Assign Users

The **Users On Device** page appears on your screen as follows:

The screenshot shows the 'Users On Device' page. On the left, there is a sidebar with 'Assign Users' and 'Revoke Users' buttons. The main area contains a form with the following fields: 'Device' (with ID and Name sub-fields), 'Device Type', 'Users On Device', 'Select Users' (with a dropdown set to 'User Wise'), and 'User' (with ID and Name sub-fields). An 'Add' button is located below the 'User' fields.

**Device:** Select a Device from the picklist to which users are to be assigned.

On selection of a device, the **Device Type** and **Users On Device** (number of users on the device) will be displayed in the respective fields as shown below.

The already assigned users on the device is also shown in the grid.

The screenshot shows the 'Users On Device' page with the form filled. The 'Device' field is set to '3' and 'NGT Ground Floor'. The 'Device Type' is 'NGT Direct Door' and 'Users On Device' is '4/10000'. The 'Select Users' dropdown is still 'User Wise'. Below the form, there is a table of assigned users:

User ID	Name
07	Aditi
1	Shailini
101	Khushbu
2	Chirag

**Select Users:** Select the users from the filter options of User Wise, Group Wise or All.

You can edit and save the *Device Options*, if required.

Click the **Save** button to assign the selected users on device successfully.

## Revoke Users

To revoke a user from the selected device, select the **Revoke Users** tab.

The screenshot shows the 'Users On Device' window with the 'Revoke Users' tab selected. The sidebar on the left has 'Assign Users' and 'Revoke Users' tabs. The main area contains the following fields and controls:

- Device**: A text field with the value 'Name' and a dropdown arrow.
- Device Type**: A text field.
- Users On Device**: A text field.
- Select Users**: A dropdown menu with 'User Wise' selected.
- User**: A text field with 'ID' and 'Name' options, and a dropdown arrow.
- Select**: A button at the bottom.

**Device:** Select a Device from the picklist from which users are to be removed.

On selection of a device, the **Device Type** and **Users On Device** (number of users on the device) will be displayed in the respective fields as shown below.

The assigned users on the device is shown in the grid.

The screenshot shows the 'Users On Device' window with the 'Revoke Users' tab selected. The sidebar on the left has 'Assign Users' and 'Revoke Users' tabs. The main area contains the following fields and controls:

- Device**: A text field with the value '4' and a dropdown arrow.
- Device Type**: A text field with the value 'Vega Direct Door'.
- Users On Device**: A text field with the value 'Vega Controller'.
- Select Users**: A dropdown menu with 'User Wise' selected.
- User**: A text field with 'ID' and 'Name' options, and a dropdown arrow.
- Select**: A button at the bottom.

Below the 'Select' button, a table displays the assigned users on the device:

User ID	Name	Revoke
07	Aditi	<input type="checkbox"/>
1	Shalini	<input type="checkbox"/>
101	Khushbu	<input type="checkbox"/>
2	Chirag	<input type="checkbox"/>

**Select Users:** Select the users from the filter options of User Wise, Group Wise or All.

Now click on **Revoke** button for the user who is to be revoked from the device.

User ID	Name	Revoke
07	Aditi	<input checked="" type="checkbox"/>
1	Shalini	<input type="checkbox"/>
101	Khushbu	<input type="checkbox"/>
2	Chirag	<input type="checkbox"/>

Click the **Save** button to revoke the selected users successfully. The user will be removed from the assigned list as shown below.

Matrix COSEC System Manual

# Enrolling Users

Once the users have been added to the database the administrator can start the enrollment process and assign credentials to the users. Enrollment can be defined as a process wherein the COSEC system accepts and stores the user credentials against a particular user. The COSEC access control system supports enrollment of user cards, finger print templates, palm templates and special cards.

The enrollment process can be initiated either from the COSEC application as described here or from the Door Controller by using special cards or Menu. However, the administrator needs to ensure that the **COSEC Monitor** application is running before starting the enrollment process.

*The Smart Card Detail section will not be available with the COSEC Application basic platform license.*

To start the enrollment process, select the **Users module > Credentials Management > Enrollment**.

## User Enrollment

Select the **User** tab for enrolling user credentials on selected device.

The page opens as follows:

A screenshot of the 'Enrollment' web application interface. The interface has a dark header with the title 'Enrollment' and navigation icons. On the left is a sidebar with two tabs: 'User' (selected) and 'Special Card'. The main content area is divided into sections. The top section is labeled 'Door' and contains a pick-list for selecting a door. Below this is a section labeled 'Device Readers' with a scrollable list of readers. The next section is labeled 'User' and contains a pick-list for selecting a user. Below that is a section labeled 'User Enrollment Status' with a scrollable list. The bottom section contains several dropdown menus for configuring enrollment: 'Enrollment Type' (Set to 'Select'), 'Number of Cards' (Set to 'One'), 'Number of Fingers' (Set to 'One'), 'Number of Palms' (Set to 'Two'), 'Access Card Selection' (Set to 'Access Card 1'), and 'Number of Faces' (Set to '1'). At the bottom center is a large 'Enroll' button.

- **Door:** Select the desired door from the pick-list on which the enrollment is to done.

### Device Readers

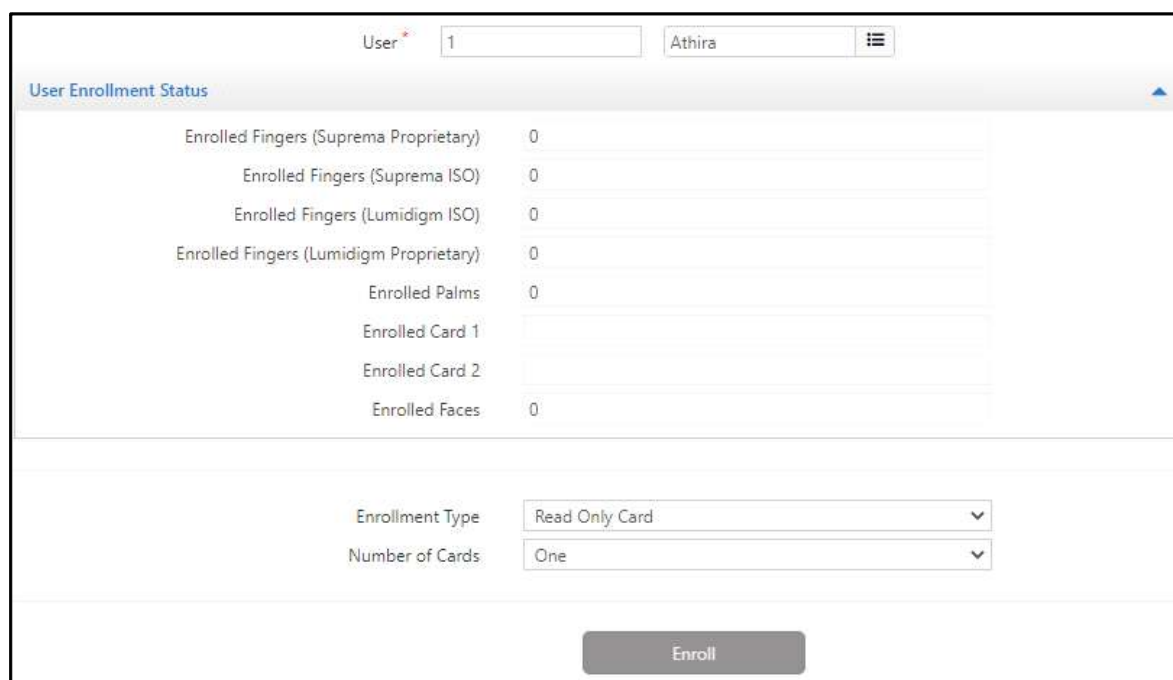

Device Readers displays the information of the readers configured in the selected **Door**.

Card Reader	MiFare Reader
Biometric Reader	None
External Reader	MiFare-U Reader

Card Reader, Biometric Reader and External Reader information are displayed here.

- **User:** Select the desired user from the pick-list for whom the enrollment is to be done.

User	1	Athira
------	---	--------

Enrolled Fingers (Suprema Proprietary)	0
Enrolled Fingers (Suprema ISO)	0
Enrolled Fingers (Lumidigm ISO)	0
Enrolled Fingers (Lumidigm Proprietary)	0
Enrolled Palms	0
Enrolled Card 1	
Enrolled Card 2	
Enrolled Faces	0

Enrollment Type	Read Only Card
Number of Cards	One

### User Enrollment Status

User Enrollment Status displays the information related to the number of already enrolled credentials of the user like fingers, palms, cards and faces.

Details like — **Enrolled Fingers (Suprema Proprietary)**, **Enrolled Fingers (Suprema ISO)**, **Enrolled Fingers (Lumidigm ISO)**, **Enrolled Fingers (Lumidigm Proprietary)**, **Enrolled Palms**, **Enrolled Card 1**, **Enrolled Card 2** and **Enrolled Faces** — are displayed here.

- **Enrollment Type:** From the dropdown list, select the desired enrollment type — **Read Only Card**, **Smart Card**, **Face**, **Biometrics**, **BiometricsThenCard**, **Mobile**, or **Duress Finger**.

Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

*When Enrollment Type selected is Smart card or BiometricThenCard, Duress Finger Templates will not be written in the Smart Card.*

*Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.*

## 1. Enrollment Type = Read Only Card

**Number of Cards:** Select the desired number of cards from the drop-down list.

Enrollment Type	Read Only Card
Number of Cards	One

## 2. Enrollment Type = Smart Card

**Number of Cards:** Select the desired number of cards from the drop-down list.

### Details on Smart Card

Select the desired check boxes of the parameters — **User ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop-down list.

If **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store the palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name, Branch, Department, Designation, Emergency Contact, Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

**3. Enrollment Type = Face**

**Number of Faces:** Select the desired number of face from the dropdown list.

Enrollment Type	Face
Number of Faces	1

**4. Enrollment Type = Biometrics**

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the dropdown list.

Enrollment Type	Biometrics
Number of Fingers	One

Enrollment Type	Biometrics
Number of Palms	One

**5. Enrollment Type = BiometricsThenCard**

**Number of Cards:** Select the desired number of cards from the drop-down list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop-down list.

### Details on Smart Card

Select the desired check boxes of the parameters — **User ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop-down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name**, **Branch**, **Department**, **Designation**, **Emergency Contact**, **Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

## 6. Enrollment Type = Mobile

To select **Enrollment Type** as **Mobile**, the particular device must have **BLE** support and ensure **Bluetooth** is **ON** in the mobile.

**Access Card Selection:** Select the desired Access Card from the drop-down list.

Enrollment Type: Mobile  
Access Card Selection: Access Card 1  
Facility Code (FC): ☐

Facility Code (FC): Select this check box to enroll the Facility Code (FC) against the user.

#### 7. **Enrollment Type** = Duress Finger

**Number of Fingers:** Select the desired number of fingers that you want to enroll as **Duress Finger** from the drop-down list— **One** or **Two**.

Enroll

**Click Enroll to initiate the enrollment process.**

After the enrollment process, the user must tap on **Tap to Register > Matrix Device** from the ACS Application installed on respective mobile phone and select the same configured Door from **Available Doors**. Thereafter, that user can access the device through ACS application for Access Control purpose.

The value in Access Card selected will be consider as Access ID of the user. If Access Card selected has no value i.e blank, then after the enrollment process, the system will auto-generate 18 digits number as user Access ID and store the same value as shown below:

**User Configuration**

Search User ID or Name

user1  
user1  
Active

**Credentials**

PIN:

Biometric Group No.: 33

Roaming User: ☐

Access Card 1: 154574845265985

Access Card 2:

Enrolled Fingers (Suprema Proprietary): 0

Enrolled Fingers (Suprema ISO): 0

Enrolled Fingers (Lumidigm ISO): 0

Enrolled Fingers (Lumidigm Proprietary): 0

Enrolled Palm: 0

Enrolled Face: 0

Enable Self-Enrollment: ☐

Click **Enroll** to initiate the enrollment process and the enrollment command is sent to the Door.

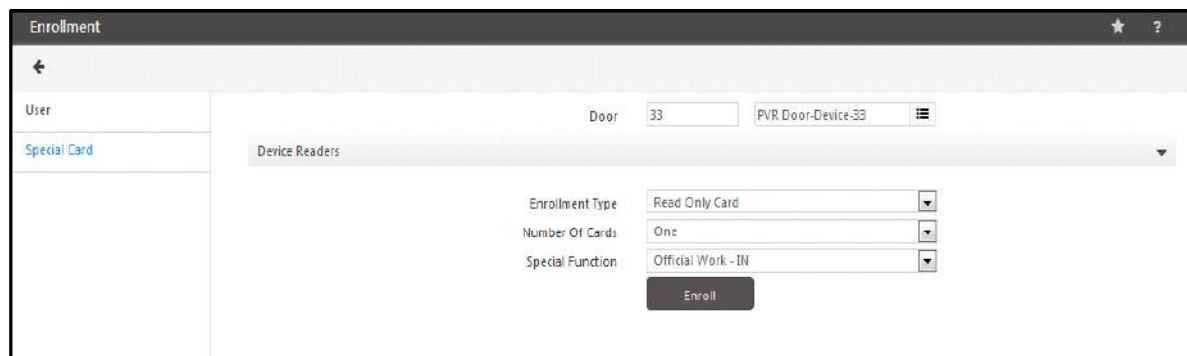

For Panel Door the command is sent to the Panel200 which will communicate further to the Door.

Once all the required credentials of an user are enrolled, the number of credentials enrolled will be displayed in the *Users > User Configuration (Select the particular user) > Credentials*.

## Enrolling Special Cards

This functionality enables the Administrator to enroll special cards for activated special functions. To know more about special cards, refer to [“Special Cards”](#).

To enroll *Special Cards*, select the **Special Card** tab as shown below:

The screenshot shows a web application window titled "Enrollment". On the left is a sidebar with a "Special Card" tab selected. The main area contains a form for enrolling a special card. At the top, there's a "Door" field with the value "33" and a dropdown menu showing "PVR Door-Device-33". Below this is a "Device Readers" section with a dropdown arrow. Further down are three fields: "Enrollment Type" with a dropdown menu showing "Read Only Card", "Number Of Cards" with a dropdown menu showing "One", and "Special Function" with a dropdown menu showing "Official Work - IN". At the bottom of these fields is an "Enroll" button.

Select a **Door** on which the special card enrollment is to be performed.

Expand the **Device Readers** panel to view the Internal and External Reader information for the selected device.

In the **Enrollment Type** drop-down list, specify whether a **ReadOnlyCard** or **SmartCard** is to be enrolled as a special card.

Specify the **Number of Cards** to be enrolled for a special function from the drop-down list. A maximum of upto four cards can be enrolled for a single special function.

Select a **Special Function** from the drop-down list for which the special card is to be enrolled.

Click the **Enroll** button to initiate the Enrollment process at the selected Panel200 or door.

# Set and Sync Credentials

The COSEC system has six major types of user credentials which can be assigned to users:

- PIN
- Cards (Read only and Smart Cards)
- Fingerprint Templates (Finger print and Duress)
- Palm Templates
- User Photo
- Face Template

The **Set and Sync Credential** option provides a simple method of setting user credentials to devices. However the administrator needs to ensure that the users have been created on the system using the **User Configuration** option of the Basic module.

To access this functionality, Select the **Users module > Credential Management> Set and Sync Credentials**.

The **Set and Sync Credentials** page appears on your screen as follows:

## Single User

Set And Sync Credentials

Set And Sync Credentials

- Sync To Device**- Select the devices where the specified credentials are to be set for the selected user. The options available will depend on the credential selected or the Sync Type.
- Click the **Set and Sync Credentials** button to set the user credential successfully on all the specified devices.

## Multiple Users

The screenshot shows the 'Set And Sync Credentials' window. On the left, there's a sidebar with 'Single User' and 'Multiple Users' tabs. The main content area has a 'Credential' dropdown menu currently set to 'FP Template'. Below it is a 'Select Users' dropdown menu set to 'User Wise'. There are two input fields for 'User', labeled 'ID' and 'Name'. A search bar is located below the input fields. A table displays a list of users with columns 'User ID' and 'Name'. The table contains three rows: '03 Arushi', '1320 SHRUTI SAGAR PATKI', and '1421 Isha Shah'. At the bottom of the form, there is a 'Sync To' dropdown menu set to 'All Allotted Devices' and a 'Set And Sync Credentials' button.

User ID	Name
03	Arushi
1320	SHRUTI SAGAR PATKI
1421	Isha Shah

- **Credential** - This option supports following types of user credentials:
  - FP Template (Finger print and Duress)
  - Palm Template
  - User Photo
  - Face Template
- **Select User** - Specify multiple users using this dropdown list. Choose from the following options -
  - **User Wise** - Select random users from the user picklist.
  - **Group Wise** - Select a group of users from the **Select Group** drop down list.
  - **ALL** - Select all users active on the system.
- **Sync To** - Use this drop down list to specify the devices where the specified credentials are to be set for the selected user. The options available will depend on the credential selected or the Sync Type.
  - **All Allotted Devices** - This option appears for FP Template only. Select this to set credentials on all allotted devices.
  - **All Allotted PVR Devices** - This option appears for Palm Template only. Select this to set credentials on all allotted PVR devices.
  - **All Allotted NGT & Vega Controllers** - This option appears for User Photo only. Select this to set credentials on all allotted NGT and Vega controllers.
  - **All Allotted MODE, Vega and FMX Devices** - This option appears for Face Template only. Select this to set face credential on all MODE, Vega and FMX devices.
- Click the **Set** button to set the user credential successfully on all the specified devices for the selected multiple users.

# Delete Credentials

The **Delete Credential** option provides a simple method of Deleting user credentials from devices. To access this functionality, Select the **Users** module. Select **Credential Management > Delete Credentials**.

The **Delete Credentials** page appears on your screen as follows:

The screenshot shows the 'Delete Credentials' interface. On the left, there is a sidebar with 'Single User' (selected) and 'Multiple Users'. The main area contains a 'User' field with '1' and 'Sheetal'. Below it, a 'Credential' dropdown menu is open, showing options: 'Face Template', 'PIN', 'Cards', 'FP Template' (highlighted), 'Palm Template', 'User Photo', and 'Face Template'. There is also an 'Enrolled Faces' field and a 'Delete From' field.

## Single User

The screenshot shows the 'Delete Credentials' interface for a single user. The 'User' field is filled with 'ID' and 'Name'. Below it, a 'Credential' dropdown menu is open, showing options: 'FP Template', 'All' (highlighted), 'Suprema Proprietary', 'Suprema ISO', 'Lumidigm ISO', and 'Lumidigm Proprietary'. There is also an 'FP Template Type' field and a 'Delete From' field. A 'Delete' button is visible at the bottom.

- **User** - Select a user from the user picklist whose credentials are to be deleted.
- **Credential** - Select a user credential from this drop down list which is to be deleted for the selected user.  
The options are -
  - PIN
  - Cards
  - FP Template (Finger print and Duress)
  - Palm Template
  - User Photo
  - Face Template

- **FP Template Type-** If Credential is selected as FP Template; then you can select the Type of FP Template which is to be deleted. The options of template are Suprema Proprietary, Suprema ISO, Lumidigm ISO, Lumidigm Proprietary and All. This will include the finger templates of Duress Finger also.

The screenshot shows the 'Delete Credentials' interface for a single user. The sidebar on the left has 'Single User' selected. The main form contains the following fields:

- User \***: 1687, Aditi Gupta
- Credential**: FP Template
- FP Template Type**: Suprema Proprietary
- FP Templates (Suprema Proprietary)**: 1
- FP Templates (Suprema ISO)**: 0
- FP Templates (Lumidigm ISO)**: 0
- Delete From**: Entire System

A 'Delete' button is located at the bottom of the form.

- **Enrolled Faces-** If Credential is selected as Face Template; then the number of enrolled face templates for the selected user will be displayed.
- **Delete From-** Use this drop down list to specify the devices from where the specified credentials are to be deleted for the selected user.
- Click the **Delete** button to delete the user credential successfully on all the specified devices.

## Multiple Users

The screenshot shows the 'Delete Credentials' interface for multiple users. The sidebar on the left has 'Multiple Users' selected. The main form contains the following fields:

- Credential**: FP Template
- FP Template Type**: All
- Select Users**: All
- Delete Credentials For**: Active Users
- Delete From**: All Allotted Devices

A 'Delete' button is located at the bottom of the form.

- **Credential** - This option supports the deleting of following user credentials -
  - PIN
  - Cards
  - FP Template (Finger print and Duress)
  - Palm Template
  - User Photo
  - Face Template
- **FP Template Type-** If Credential is selected as FP Template; then you can select the Type of FP Template which is to be deleted. The options of template are Suprema Proprietary, Suprema ISO, Lumidigm ISO, Lumidigm Proprietary and All. This will include the finger templates of Duress Finger also.

- **Select User** - Specify multiple users using this dropdown list. Choose from the following options -
  - **User Wise** - Select random users from the user picklist.
  - **Group Wise**- Select a group of users from the **Select Group** drop down list.
  - **ALL** - Select all users active on the system.
- **Delete From** - Use this drop down list to specify the devices from where the specified credentials are to be deleted for the selected user. The options available will depend on the credential selected.
- Click the **Delete** button to delete the user credential successfully on all the specified devices for the selected multiple users.

# Sync from Device

This feature enables the COSEC system to synchronize user credentials between the COSEC database and the devices as well as to other compatible devices. This is useful in case of discrepancies or loss of credential data which might occur in case of system errors or data handling issues.

This functionality enables:

- the system to sync the selected credential from the selected Device
- these credentials fetched from the selected devices will also be synchronized with other compatible devices connected with the server.

**Sync From Device** is applicable for devices with FR Mode as **Local**.

For Panel200, **Sync From Device** is applicable for Face Sync in Panel Door mode as **Via Panel**.

To ensure smooth functioning of this feature, make sure the Server and the devices are upgraded to the same and latest version. Face Images as Credential is supported from Software Version V20R06 and later.

Make sure the **Enable Face Recognition** check box is selected for the user whose Face Images are to be synced.

- Click **Users module > Credentials Management > Sync From Device**.

The screenshot shows the 'Sync From Device' interface with the 'Single User' tab selected. On the left, there are two tabs: 'Single User' and 'Multiple Users'. The main area is titled 'Sync From Device'. It contains two rows of input fields. The first row is for 'Device', with 'ID' and 'Name' fields, and a 'Credential' dropdown menu set to 'Cards'. The second row is for 'User', with 'ID' and 'Name' fields. A 'Sync' button is located at the bottom right of the form.

The Sync From Device page consists of two tabs — “Single User” and “Multiple Users”.

## Single User

This tab enables you to sync the credentials of a single user from the device.

This screenshot shows the 'Sync From Device' interface with the 'Single User' tab selected. The 'Device' field is filled with '3' and 'ARGO Direct Door'. The 'Credential' dropdown is set to 'Cards'. The 'User' field is filled with '1' and 'SALIM ANSARI'. The 'Sync' button is visible at the bottom.

Configure the following parameters:

- **Device:** Click the **Device** picklist. The **Picklist For Panel Doors and Direct Doors** appears.

MID	Name	Type	Status
1	PVR Device_Direct Door	PVR Door	Enable
1	PVR Panel Door	Panel200 Door	Enable
1	ARGO Panel Door	Panel200 Door	Enable
2	ARGO FACE_Direct Door	ARGO FACE	Enable
3	ARGO Direct Door	ARGO	Enable
4	VEGA Direct Door	Vega Controller	Enable

- Select the desired device.
- **Credential:** Select the relevant user credential from the drop-down list according to the selected device. The following credentials are supported:
  - Cards
  - FP Templates (Finger Print and Duress)
  - Palm Templates
  - Face Images

## Sync From Device

- **User:** Click the **Users** picklist. The **Picklist For All Users** pop-up appears.

User ID	Name
1	SALIM ANSARI
10	RAJENDRA GOSWAMI
1001	ANIKTUMAR SOHALIYA
1002	MEGHA H SHUKLA
1003	UMESH M TALANPURI
1004	DARSHAK B PATEL
1007	DHAVAL I PATEL
1008	MAYANK K KORAT
1009	DIPTI K RATHWA
1010	RAHUL S SHAH

- Select the desired user whose credentials are to be synchronized.
- Click **Sync**. The credentials of the selected user will sync to the COSEC database from the selected device and then the same credentials will be synchronized to the other compatible devices.

*If **Sync From Device** is done for **FP Templates** including **Duress Detection** templates from the Duress supported devices (V4, VEGA, ARGO, PATH V2 and ARC DC200 Direct Doors and V4, VEGA, ARGO, PATH V2 and ARC DC200 Panel Doors) to devices that do not support Duress, then the synced templates will be overwritten as normal templates.*

*And, if the **FP Templates** are synced from devices that do not support Duress, then all the templates will be synced as normal templates only, to all the devices.*

## Multiple Users

This tab enables you to sync the credentials of multiple users from the device.

The screenshot shows the 'Sync From Device' window. On the left, there's a sidebar with 'Single User' and 'Multiple Users' (selected). The main area has a title 'Sync From Device'. It contains several input fields: 'Device' with a value of '3' and a dropdown showing 'ARGO Direct Door'; 'Credential' with a dropdown showing 'Cards'; 'Select Users' with a dropdown showing 'User Wise'; and 'User' with two input fields, 'ID' and 'Name'. A 'Sync' button is located at the bottom right of the main area.

Configure the following parameters:

- **Device:** Click the **Device** picklist. The **Picklist For Panel Doors and Direct Doors** appears.

The screenshot shows a dialog box titled 'Picklist For Panel Doors and Direct Doors'. It has a search bar at the top. Below it is a table with the following data:

MID	Name	Type	Status
1	PVR Device_Direct Door	PVR Door	Enable
1	PVR Panel Door	Panel200 Door	Enable
1	ARGO Panel Door	Panel200 Door	Enable
2	ARGO FACE_Direct Door	ARGO FACE	Enable
3	ARGO Direct Door	ARGO	Enable
4	VEGA Direct Door	Vega Controller	Enable

At the bottom of the dialog is a 'Cancel' button.

- Select the desired device.
- **Credential:** Select the relevant user credential from the drop-down list according to the selected device. The following credentials are supported:
  - Cards
  - FP Templates (Finger print and Duress)
  - Palm Templates
  - Face Images

## Sync From Device

- **Select Users:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

4	ELSENGARD	Organization	

- You can also delete particular group. To do so, click **Delete**  of the respective group.
- If you select **All**, then all the users will be selected.
- Click **Sync**. The credentials of the selected users will sync to the COSEC database from the selected device and then the same credentials will be synchronized to the other compatible devices.

*If **Sync From Device** is done for **FP Templates** including **Duress Detection** templates from the Duress supported devices (V4, VEGA, ARGO, PATH V2 and ARC DC200 Direct Doors and V4, VEGA, ARGO, PATH V2 and ARC DC200 Panel Doors) to devices that do not support Duress, then the synced templates will be overwritten as normal templates.*

*And, if the **FP Templates** are synced from devices that do not support Duress, then all the templates will be synced as normal templates only, to all the devices.*

# Reporting In-Charge

A large number of organizations are structured in a way that employees are grouped functionally and each group of employees is assigned to report everyday to a designated officer for efficient management purposes. This *Reporting In-Charge*, also known as Officer In-Charge or Reporting Manager, is responsible for overseeing and managing the reporting group assigned under him/her. COSEC allows the system administrator to assign employees to such reporting groups and also to define reporting in-charges from amongst active COSEC users.

Once defined, this in-charge can perform certain authorizations and sanctioning to all users who are in the same reporting group. A Reporting In-Charge can manage multiple *Reporting Groups* but a user can belong to only one reporting group as a member. There is a provision to add upto five Reporting In-Charges for a Reporting Group along with its Approval Policy.

## Reporting Group

To configure the Reporting Group parameters,

Click **Users > Reporting In-Charge > Reporting Group**.

The **Reporting Group** page appears.

Click **New**, to create a new Reporting Group. You can create upto 9999 Reporting Groups.

- **Reporting Group:** Enter a Name for the Reporting Group. The ID will be displayed after you save the Reporting Group.
- **Approval Policy:** Click the picklist to select the desired Approval Policy or enter the ID/Name of the Approval Policy manually.

*If no Approval Policy is selected then, Reporting Group will work as per Any One Authorization Mode.*

*Reporting Group will work on AnyOne Authorization Mode irrespective of policy selected if selected in-charge from Approval Policy is not configured on this page.*

- **In-Charge Configuration:** You can assign upto five in-charges for a single Reporting Group.

Selecting at least one Group In-Charge is mandatory.

Make sure the desired Reporting In-Charge/s (RIC) are configured as Users. For details, refer to [“Configuring Users”](#).

- **Group In-Charge 1 to Group In-Charge 5:** To assign each group in-charge, click the picklist to select the desired group in-charge or enter the ID/Name of the group in-charge manually.

The applications will be sent for approval to the Reporting Group In-Charge/s as per the Authorization Mode selected. The sequence in which it will be sent will depend on the configuration done in **Group In-Charge 1 to Group In-Charge 5**.

Click **Save**, to save the new Reporting Group.

The new Reporting Group will appear in the right pane of the page.

If the application is Pending and any Reporting In-Charge is deleted/deactivated from the system, then the application will still remain Pending with all the remaining Reporting In-Charge/s.

If the application is Approved/Rejected and any Reporting In-Charge is deleted/deactivated from the system, then there will be no change in the application as the final verdict has already been given.

If set of Reporting In-Charge configured in Reporting Group Page and Approval Policy page matches exactly with each other, then the application will be processed based on Approval Policy.

If set of Reporting In-Charge configured in Reporting Group Page has more In-Charge than set of Reporting In-Charge configured in Approval Policy Page then system will check if set of Reporting In-Charge configured in Approval Policy page is same as configured in Reporting Group page.

- If yes, then application will be processed based on Approval Policy selected for both pending and new application.
- If no, then all new applications process will get updated to Any One Authorization Mode (and the application will be sent to RIC configured in respective Reporting Group).

If number of Reporting In-Charge configured in Reporting Group page is less than number of Reporting In-Charge configured in Approval Policy. If yes, then application flow for all applications will get updated to Any One Authorization Mode (and application will be sent to Reporting In-Charge configured in respective Reporting Group).

If set of Reporting In-Charge configured in Reporting Group page and set of Reporting In-Charge configured in Approval Policy page for exception application does not match exactly with each other then application flow for exceptions application will get updated to Any One Authorization Mode (application will be sent to Reporting In-Charge configured in respective Reporting Group).

# Approval Policy

Approval Policy enables to create different Approval Policies and to select the applications for which the Policy will be applicable.

To configure the Approval Policy parameters,

Click **Users > Reporting In-Charge > Approval Policy**.

The Approval Policy page appears.

ID	Name
1	AnyOne
2	All Sequential
3	All Final-1
4	All Final-2

By default there are four policies created — AnyOne, All Sequential, All Final-1, All Final-2.

*If you are upgrading the system and you have existing users, then the Approval Policies (default as well as custom created) will remain the same. That is, the default policies will be — AnyOne, 1then2, Both Final-1 and Both Final-2.*

*For the default policies — All Sequential, All Final-1, All Final-2 — Short Leave/Official In-Out and Daily Attendance are listed in exception with Authorization Mode as Any One.*

You can select the default policies and Edit the same by clicking **Edit**  or you can add a new policy.

To add a new policy,

Click **New**  . You can create upto 999 Approval Policies.

- **Approval Policy:** Enter a Name for the Approval Policy. The ID will be displayed after you save the Approval Policy.
- **Authorization Mode:** Select the Authorization Mode from the drop-down list — Any One, All, All Sequential

- **Any One:** If you select this option, then the authorization is done by any In-Charge among the selected associated Reporting In-Charge/s. The application will be sent to all the selected Reporting In-Charges and any In-Charge can provide the verdict. The In-Charge who gives the verdict first will be considered as the final verdict and the application status changes to the respective state as per the provided verdict. The verdict details will be displayed in the respective approval page. If you select this option, you also need to configure the **Reporting In-Charge**.
- **Reporting In-Charge:** Select the Reporting In-Charge/s from the drop-down list. Click **Check All** if you wish to select all the Reporting In-Charges. The application will be sent to the selected Reporting In-Charge/s.
- **All:** If you select All, the application will be sent to all the Reporting In-Charges for authorization and the verdict of the Final In-Charge will be considered as the final verdict. The application status changes to the respective state as per the provided verdict. The verdict details will be displayed in the respective approval page. If you select this option, you also need to configure the **Reporting In-Charge** and the **Final In-Charge**.
- **Reporting In-Charge:** Select the Reporting In-Charge/s from the drop-down list. Click **Check All** if you wish to select all the Reporting In-Charges. The application will be sent to the selected Reporting In-Charge/s.
- **Final In-Charge:** Select the Final In-Charge from the selected associated Reporting In-Charges. After the Final In-Charge provides the verdict, the application status changes to the respective state as per the provided verdict. The verdict details will be displayed in the respective approval page.
- **All Sequential:** If you select All Sequential, the application will be sent to all the Reporting In-Charges for authorization in the defined sequence. The application will only be sent from first Reporting In-Charge to the second Reporting In-Charge after the verdict of the first Reporting In-Charge is received and so on.

There is a provision to Auto Forward the application to the next Reporting In-Charge also. In this case, if the verdict is not provided by a Reporting In-Charge within the defined days, then the application will automatically be forwarded to the next Reporting In-Charge.

If you select this option, you also need to configure the **Reporting In-Charge** as well as **Auto Forward** parameters.

- **Reporting In-Charge:** Select the Reporting In-Charges from the drop-down list. Click **Check All** if you wish to select all the Reporting In-Charges. The application will be sent to all the selected Reporting In-Charges in a sequential manner.
- **Auto Forward:** To enable Auto Forward, configure the following parameters.

Reporting In-Charge	Auto Forward	Auto Forward After (Days)	Action
In-Charge 1	<input type="checkbox"/>		Approve <span>▼</span>
In-Charge 2	<input type="checkbox"/>		Approve <span>▼</span>
In-Charge 3	<input type="checkbox"/>		Approve <span>▼</span>
In-Charge 4	<input type="checkbox"/>		Approve <span>▼</span>
In-Charge 5	<input type="checkbox"/>		Approve <span>▼</span>

- **Reporting In-Charge:** It displays the name of the Reporting In-Charge in a sequential manner.
- **Auto Forward:** Select the check box to enable the Auto Forward for the Reporting In-Charge.

- **Auto Forward After (Days):** Specify the duration in days after which the application should be sent to the next Reporting In-Charge if the verdict is not provided by this Reporting In-Charge.
- **Action:** Configure the Action from the drop-down list — Approve or Reject to be provided for the application.

After the last Reporting In-Charge has provided the verdict, the application status changes to the respective state as per the last Reporting In-Charge's verdict. The verdict details will be displayed in the respective approval page.

*An application will be forwarded automatically after the specified days with the logic; [Application Date + Auto Forward configured days + 1]. For example: The application date=10 and configured Auto Forward days=1 then, the application will be forwarded automatically on date [10 + 1 + 1 = 12] =12.*

*For Reporting In-Charge 2, the date on which an application is received will be considered as the application date.*

*If the Reporting In-Charge 1, has Approved/Rejected an application manually before the specified Auto Forward days then, the application date for Reporting In-Charge 2 will be the date on which an application is approved or rejected.*

*If any Reporting In-Charge has rejected the application and the previous Final Reporting In-Charge is deactivated/deleted from the system and later the Reporting In-Charge who has rejected the application changes his/her verdict then the final application verdict will be of System Administrator.*

## Exceptions

Click **Add +** if you wish to add any applications in **Exceptions** list i.e. the applications for which Authorization Mode is to be set other than the default mode.

- **Application(s):** Select the desired Application(s) from the drop-down list to be added in Exceptions.
- **Customize Based On:** Select the field from the drop-down list to display the basis on which application needs to be customized.
- **Range:** Enter the From and To (Hours/ Days) on the basis of which the application will be selected.

The parameters **Customize Based On** and **Range** are visible depending upon the application which you select.

- **Authorization Mode:** Select the desired Authorization Mode from the drop-down list— Any One, All, All Sequential. Refer to the details mentioned above in Authorization Mode.

Click **Add** to add the application to the **Exceptions** table.

Click **Cancel** if you wish to remove all the configurations.

The **Exceptions** table displays the following parameters:

Exceptions						
<div>Search <input type="text"/></div>						
<div><div></div></div>						
Application(s) ▲	Range	Authorization Mode	Reporting In-Charge	Final In-Charge		
Unpaid Leave - UP UnpaidLeave	1.0 - 3.0 Days	All Sequential	In-Charge 1, In-Charge 3, In-Charge 5	In-Charge 5	<div></div>	<div></div>
Unpaid Leave - UP UnpaidLeave	5.0 - 6.0 Days	All Sequential	In-Charge 2, In-Charge 3, In-Charge 4, In-Charge 5	In-Charge 5	<div></div>	<div></div>
Unpaid Leave - UP UnpaidLeave	>= 6.0 Days	All Sequential	In-Charge 1, In-Charge 2, In-Charge 3, In-Charge 4, In-Charge 5	In-Charge 5	<div></div>	<div></div>

- **Application(s):** It displays the Application(s) added in **Exceptions**.
- **Range:** It displays the From and To (Days/Hours) on the basis of which the application will be selected.
- **Authorization Mode:** It displays the selected pattern of approval for any application— Any One, All, All Sequential.
- **Reporting In-Charge:** It displays the selected Reporting In-Charge/s from whom approval needs to be taken.
- **Final In-Charge:** It displays the selected Final In-Charge when authorization mode is selected as **All** or **All Sequential**.
- **Delete:** Click **Delete**, if you wish to delete the particular application from the **Exceptions** table.

After creation of the Approval Policy, it can be assigned to the Reporting Group from **Reporting In-Charge >Reporting Group**. For more details, refer ["Reporting Group"](#).

# In-Charge Permissions

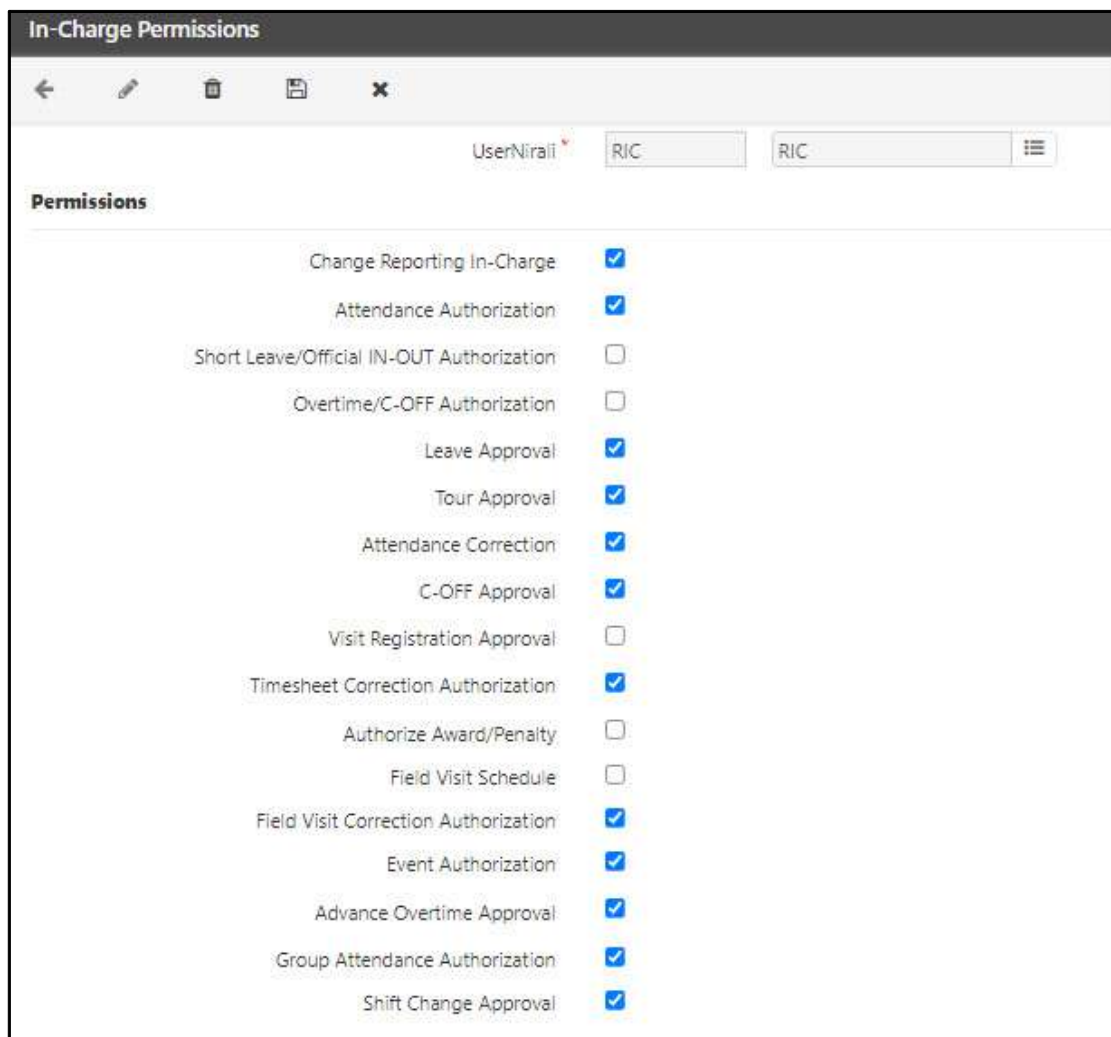

This functionality facilitates the administrator to assign specific permissions to a particular Reporting In-charge defined on the system.

To assign In-Charge Permissions, Select the **Users module > Reporting In-Charge > In-Charge Permissions**.

The **In-Charge Permissions** page appears as shown below.

In-Charge Permissions	
Change Reporting In-Charge	<input type="checkbox"/>
Attendance Authorization	<input type="checkbox"/>
Short Leave/Official IN-OUT Authorization	<input type="checkbox"/>
Overtime/C-OFF Authorization	<input type="checkbox"/>
Leave Approval	<input type="checkbox"/>
Tour Approval	<input type="checkbox"/>
Attendance Correction	<input type="checkbox"/>
C-OFF Approval	<input type="checkbox"/>
Visit Registration Approval	<input type="checkbox"/>
Timesheet Correction Authorization	<input type="checkbox"/>
Authorize Award/Penalty	<input type="checkbox"/>
Field Visit Schedule	<input type="checkbox"/>
Field Visit Correction Authorization	<input type="checkbox"/>
Event Authorization	<input type="checkbox"/>
Advance Overtime Approval	<input type="checkbox"/>
Group Attendance Authorization	<input type="checkbox"/>
Shift Change Approval	<input type="checkbox"/>

- Select a Reporting In-Charge from the list on the right.

Permissions	Enabled
Change Reporting In-Charge	<input checked="" type="checkbox"/>
Attendance Authorization	<input checked="" type="checkbox"/>
Short Leave/Official IN-OUT Authorization	<input type="checkbox"/>
Overtime/C-OFF Authorization	<input type="checkbox"/>

Shift Change Approval	<input checked="" type="checkbox"/>

- Under **Permissions**, select the desired check boxes for the relevant permissions which are to be enabled for the selected Reporting In-Charge. This will permit the Reporting In-Charge to authorize the applications.
- Click **Save** button to save the permissions for the Reporting In-Charge.

# Import Users

The COSEC application has an inbuilt utility for enabling users to import data from *Excel* files with predefined format. This would thus save the end user a lot of time and effort in having to make individual data entries at the application level.

Make sure you have **View** and **Edit** rights for the Import Users page to import the users.

The parameter **Birth Date** will be mandatory in the Import sheet if set as mandatory in the [“Minimum Age Requirement for Users”](#) in [“User Policy”](#).

To import user data from a file, select the **Users module > Utilities > Import Users**

The **Import Data** page appears as shown.

Configure the following parameters:

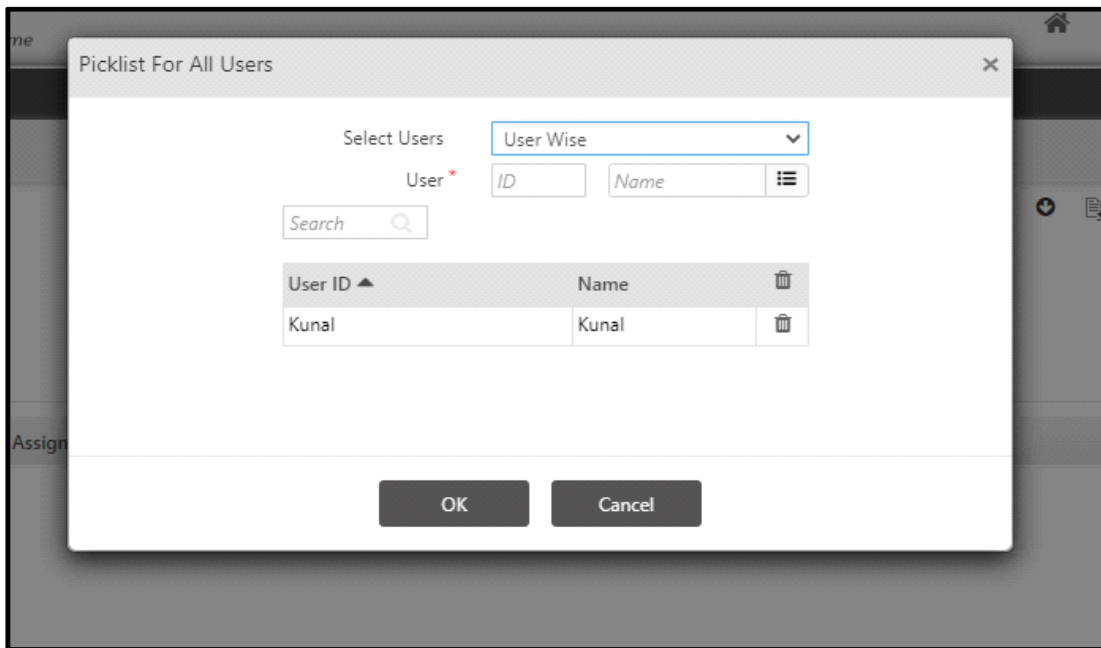

- **Import Data For** - Select the option from the drop-down list for which the data is to be imported.

You can download sample import file by clicking on **Download Sample Import file**  button. The import sheet displays the fields required for importing specific data.

The mandatory fields list is given in **Document guidelines** section of the Import sheet.

	BK	BL	BM	BN	BO	BP	BQ	BR	BS	BT	BU	BV	BW	BX	BY
1	WorkProfileID	RosterPolicyID	HourExceptionID	LeaveGroup	WeekOffGroupID	Field1	Field2	Field3	Field4	Field5	Field6	Field7	Field8	Field9	Field10
2	1	452		22	6										
3	2	565		33	5										
4	3	899		44	4										
5	4	555		55	2										
6	5	454		66	1										

To download detailed sheet, click on **Download Detailed Data Sheet**  button. On clicking this button, a pop-up appears:

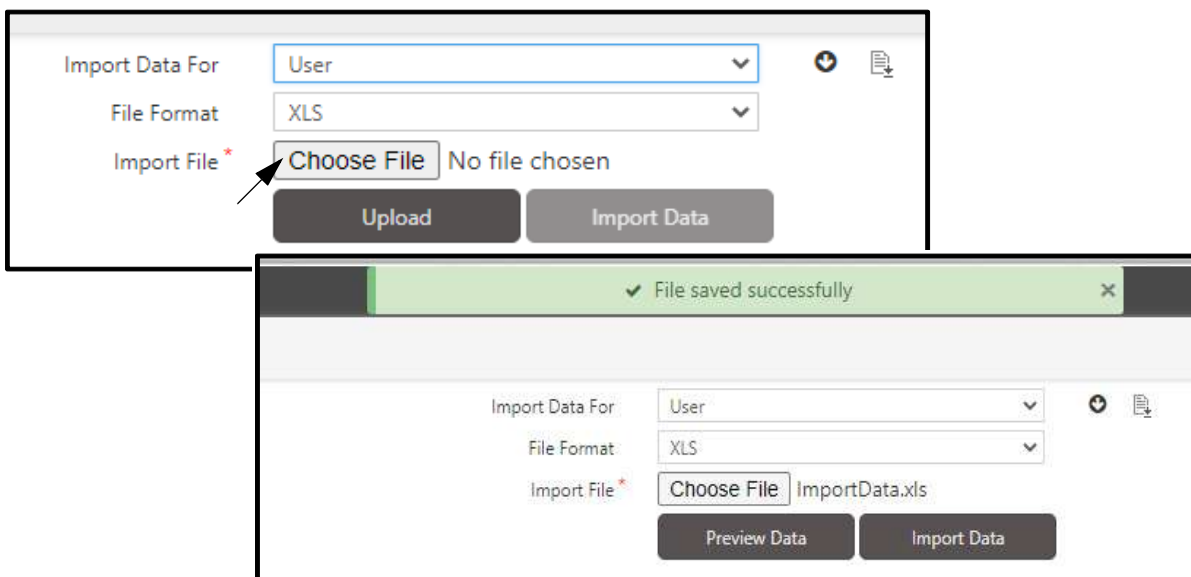

**Select Users:** Select the desired option — User Wise, Group Wise or All. If you select User Wise or Group Wise the select the desired users/groups from the picklist.

Click **OK** button to download the Data Sheet or click on **Cancel** button to abort the process.

The Detailed Data Sheet will be as per the selected option.

- **File Format** - Select the file format of the specific file from the drop-down list. The options available are XLS or CSV.
- **Import File** - Browse the path of the file from which the data is to be imported.

Click on **Upload** to save the file.

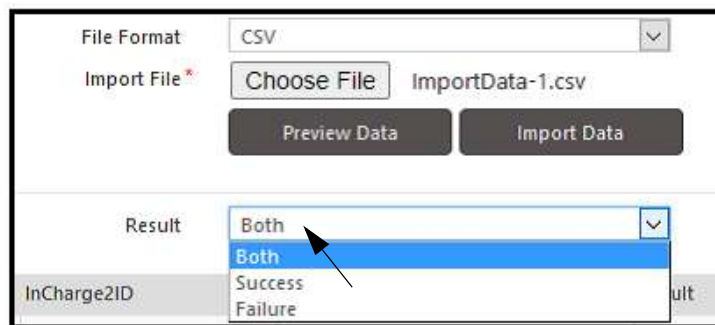

Click on **Preview Data** button to view the data in the respective worksheets to confirm that the data is in order prior to giving the import command.

Now click on **Import Data** to start importing the uploaded data. The result of import is shown as Success or Failure along with result description.

Select the device controllers to be assigned to the imported users by checking the boxes against the relevant controllers and click on **Import**. The system will import all the relevant valid entries from the sheet and will display the status in the bottom grid.

You can also filter import result records on the basis of their Success, Failure or Both using the **Result** drop-down options.

The screenshot shows a web interface for importing data. At the top, there is a 'File Format' dropdown set to 'CSV'. Below it, an 'Import File' section contains a 'Choose File' button and the filename 'ImportData-1.csv'. Two buttons, 'Preview Data' and 'Import Data', are positioned below the filename. Further down, a 'Result' dropdown menu is open, showing three options: 'Both' (highlighted in blue), 'Success', and 'Failure'. An arrow points to the 'Both' option. At the bottom left, the text 'InCharge2ID' is visible, and at the bottom right, a partial view of a table with a 'Result' column is shown.

Once the data is imported successfully, data will be added or updated in User Profile in COSEC Web.

*Administrator needs to ensure that the ASP.NET user has full rights on the folder containing the Excel or .csv file for the import data operation.*

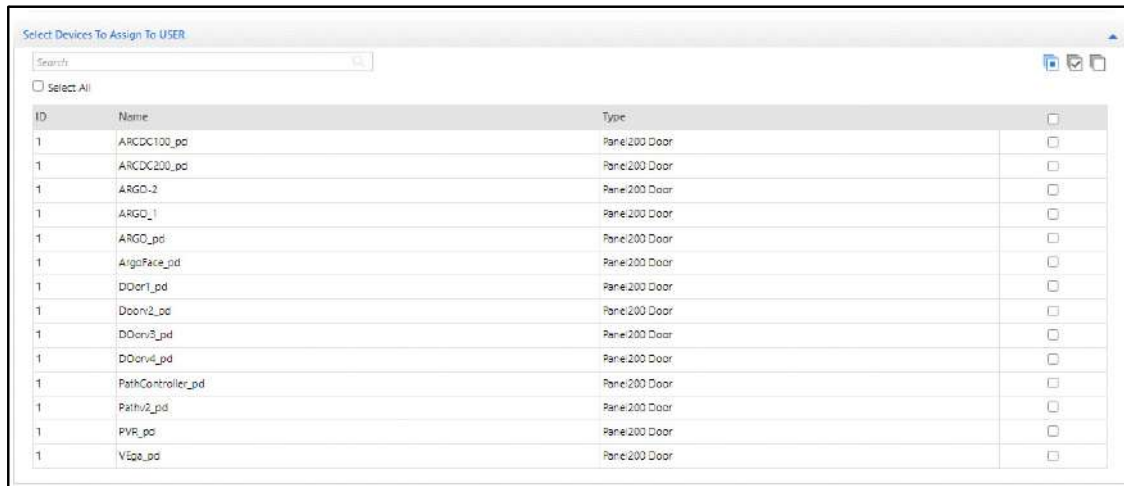

*When new user is added or existing user's Enterprise group is changed. Then if user is assigned to the Enterprise group with which Job costing parameters are associated, then the configured job costing parameters will be assigned to the User.*

*When a new User/ Worker is created via Import Data for User and Worker then the user and worker configuration will be set according to the configuration set in Association Groups assigned to the user and worker.*

### Select Devices to Assign to USER

Click the **Select Devices to Assign to USER** collapsible panel.

You can assign particular devices or all the devices at once.

To assign particular devices, select the check boxes of the desired devices.

**OR**

To assign all the devices, select the **Select All** check box.

### Select Device Groups to Assign to USER

Click the **Select Device Groups to Assign to USER** collapsible panel.

You can assign particular device groups or all the device groups at once.

To assign particular device groups, select the check boxes of the desired device groups.

**OR**

To assign all the device groups, select the **Select All** check box.

Click **Upload**. The Devices/Device Groups will be assigned to the users.

# Invite User

---

The Employee On Boarding Portal enables you to collect all the required details of the on boarding employees prior to their physically joining the organization.

To collect the required information, you need to:

- pre-determine all the details that you need to collect from the new on boarding employee. Refer to [“Invite User”](#).
- create a link that will be sent to the new on boarding employee for the collection of the details. For details refer to [“Generating the Invite Link”](#).
- set the alerts, refer to [“Configuring Alert Messages”](#).
  - To configure an alert message, click **Admin Module >System Configuration > Alert Message Configuration**. In Alert Filter make sure that you select *Users* from the drop-down list and in Event select *Invite User* from the drop down list.
  - To generate an OTP alert, click **Admin Module >System Configuration > Alert Message Configuration**. In Alert Filter make sure that you select *System* from the drop-down list and in Event select *OTP Generated* from the drop down list.
  - To configure an alert message for **User Onboarding- On Submit**, click **Admin Module >System Configuration > Alert Message Configuration**. In Alert Filter make sure that you select *Users* from the drop-down list and in Event select *User Onboarding- On Submit* from the drop down list. The alert message can also be configured from **Users Module> Utilities >Alert Assignment**, refer [“Assigning Alerts To Users”](#).
  - To configure an alert message for **User Onboarding- Schedule Time**, click **Admin Module >System Configuration > Alert Message Configuration**. In Alert Filter make sure that you select *Users* from the drop-down list and in Event select *User Onboarding- Schedule Time* from the drop down list. The alert message can also be configured from **Users Module> Utilities >Alert Assignment**, refer [“Assigning Alerts To Users”](#).

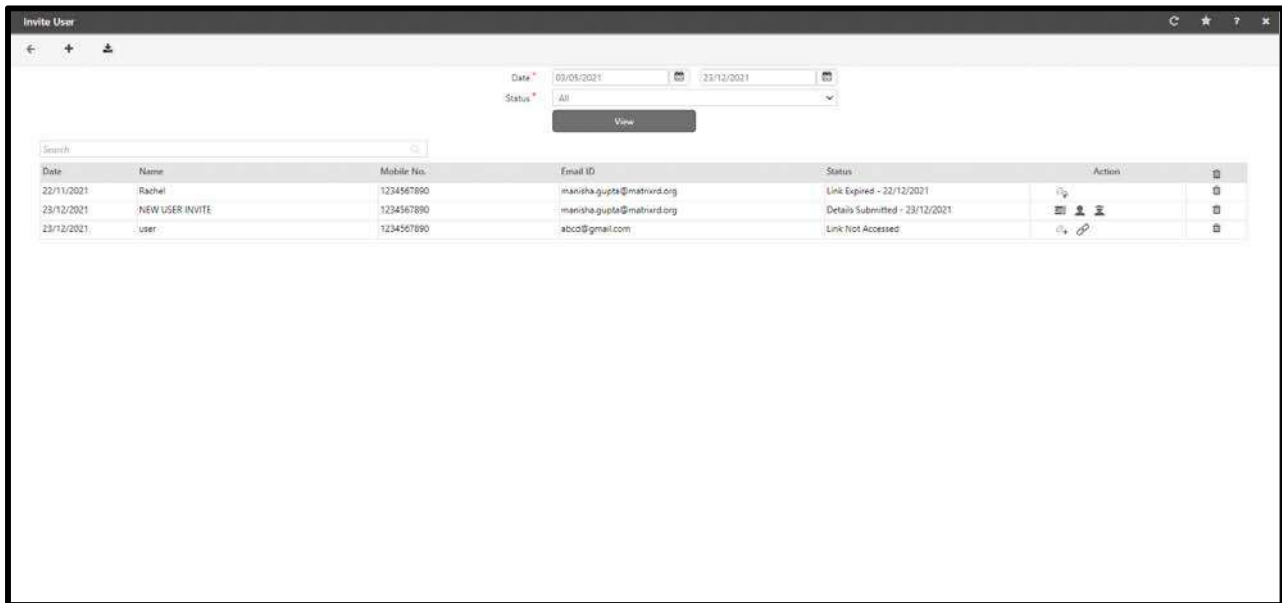

*For the Invite Link to be accessible from the external network, make sure you have configured the COSEC Web URL (external) while installing the COSEC software.*

*Make sure you have configured COSEC Web URL (external) in System Configuration > General Settings in the Admin Web Portal.*

## Generating the Invite Link

- Click **Invite User**.

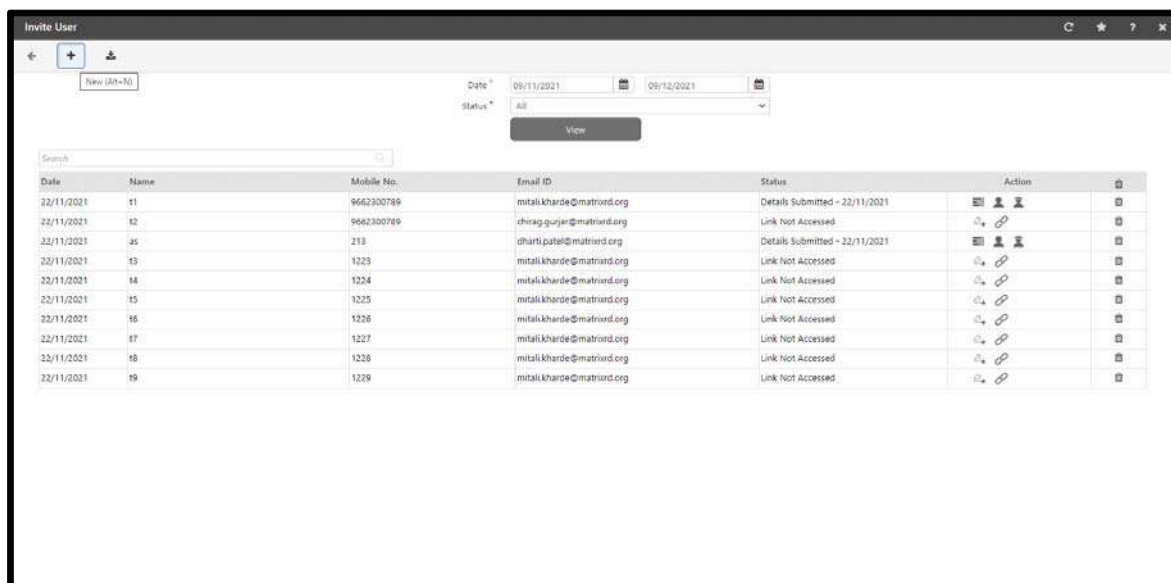

The **Invite User** page appears.

- You can enter the data manually or you can import a file.

#### Entering the data manually,

- To create a new invite link, click **New** .

- The **Invite User** pop-up appears.

- Click **Add** 

- Enter the details - **Name**, **Mobile Number** and **Email ID**.

Click **OK** to save or **Cancel** to abort the changes.

Click **Send Link**. The link will be created and sent to the new on boarding employee.

**To import the file,**

- Click **Import** .

The screenshot shows a window titled "Invite User" with a search bar and filters for Date (22/09/2021 to 22/10/2021) and Status (All). Below is a table with columns: Date, Name, Mobile No., Email ID, Status, and Actions.

Date	Name	Mobile No.	Email ID	Status	Actions
19/10/2021	abcd	1234567890	abcd@gmail.com	Link Not Accessed	
19/10/2021	xxxx	9876543210	abcd@gmail.com	Link Not Accessed	
20/10/2021	SB	2325211254	smita.saria@matrixindia.org	Link Not Accessed	
21/10/2021	New jinnar	1234567890	manisha.gupta@matrixindia.org	Link Not Accessed	

- The **Import Invite User** pop-up appears.

The screenshot shows the "Import Invite User" pop-up window. It has a "File Format" dropdown set to "XLS". Below it is an "Import File" section with a "Choose File" button and a note "No file chosen". There are "Upload", "Preview Data", "Send Link", and "Cancel" buttons. A note at the bottom states: "Note : Please ensure UTF8 encoding for Multi-Language data import file".

- Select the desired **File Format** as - **XLS**, **CSV** or **XLSX**.

This screenshot is similar to the previous one, but the "File Format" dropdown menu is open, showing the options "XLS", "CSV", and "XLSX". The "XLS" option is currently selected.

- Click **Download Sample Import File**  . A sample file will be downloaded with the name, **Import Data**.

- Open the file.
- Click the **Invite User Sheet**.
- Enter the **Name**, **Mobile No** and **Email ID** of the new on boarding employee.
- Save the details.

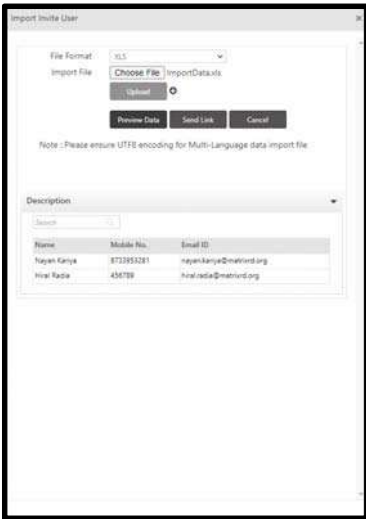

- Now, click **Choose File** and select the **Import Data** file from the location on the PC.
- The selected file name appears as shown below. Click **Upload**.

- The confirmation message appears.

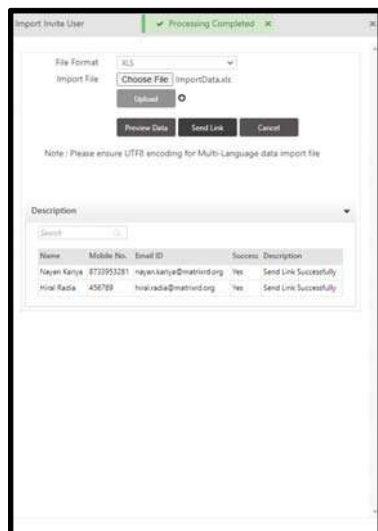

- Click **Preview Data**. The details are displayed under **Description**.

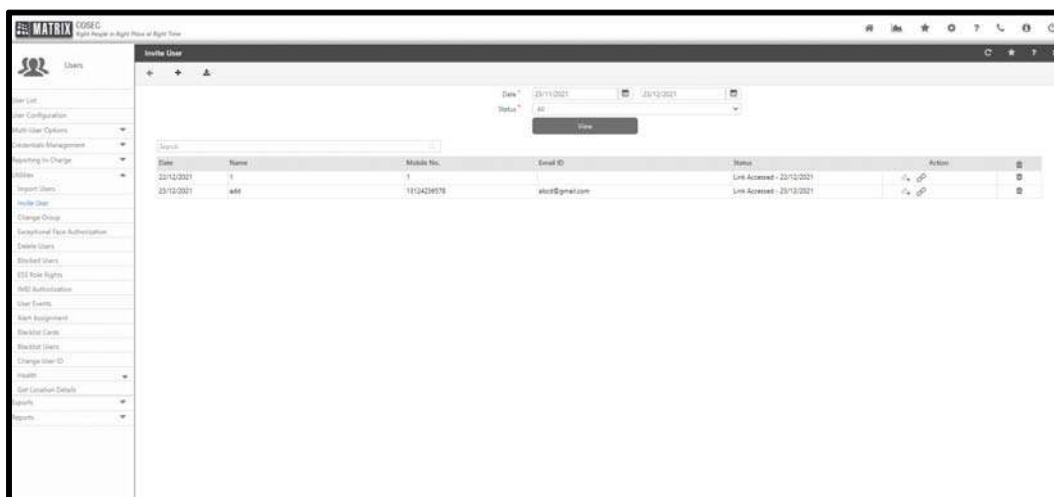

- Click **Send Link** to send the on boarding employee invite link to the **Mobile No.** and **Email ID**.
- The confirmation message appears.

- After the link is sent, the **status** of the links will update in the grid below.

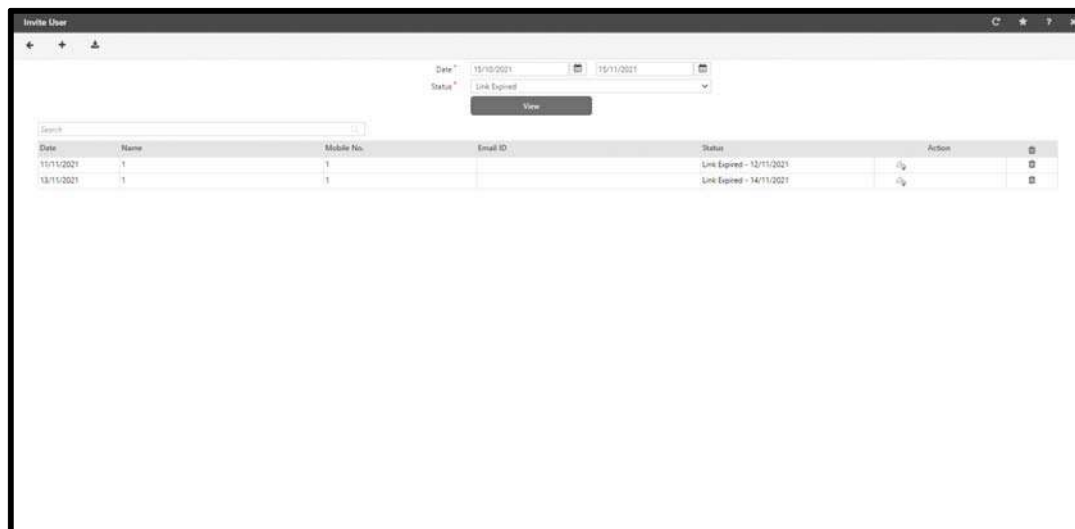

## Filtering the records as per Status

You can filter the records by setting the following parameters as per your requirement:

**Date:** Select the start and end date.

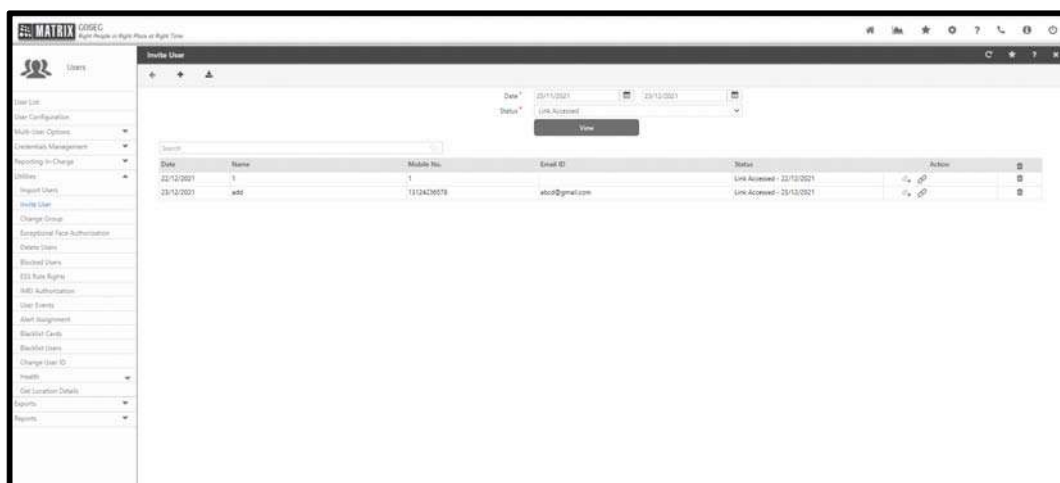

**Status:** Select the desired status from the drop down list — All, Link Not Accessed, Link Expired, Link Accessed, Details Submitted.

If you select **Link Expired** and click **View**.

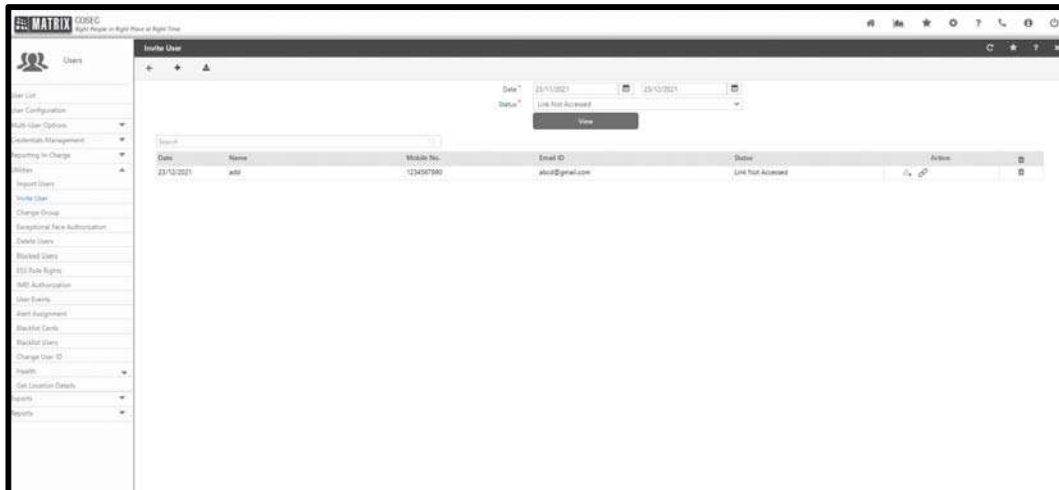

- The records whose links have expired will be displayed.
- If you wish to regenerate the link, click **Regenerate** .

If you select **Link Accessed** and click **View**.

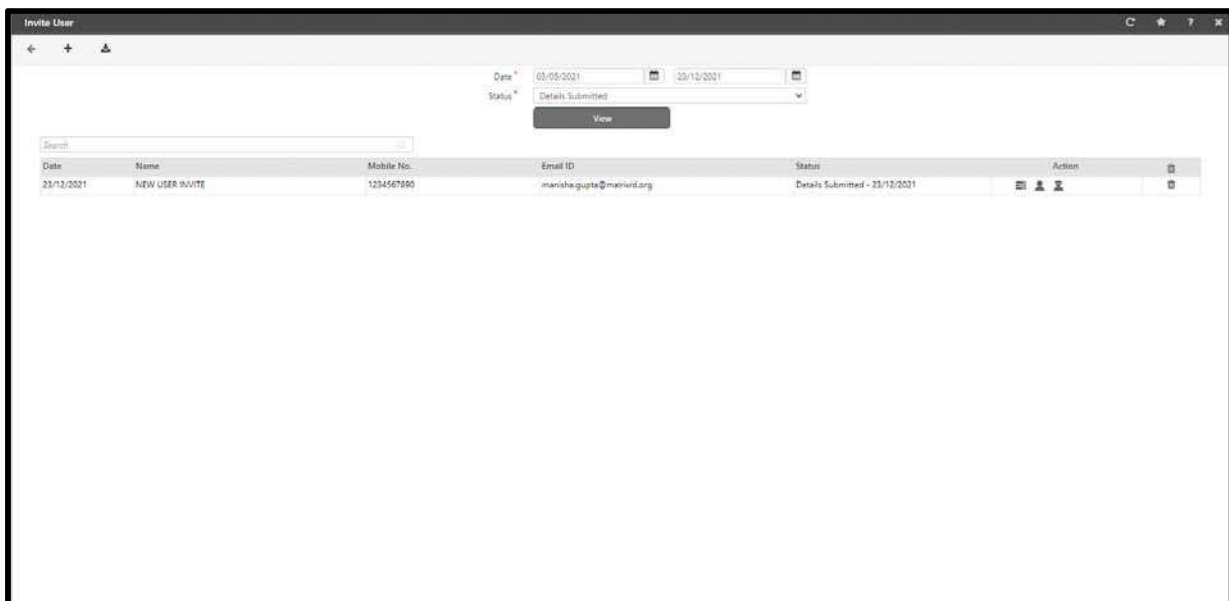

- The records of accessed links will be displayed.
- If you wish to resend the link, click **Resend** or if you wish to copy the link, click **Copy** .

If you select **Link Not Accessed** and click on **View**

- The records whose links have not been accessed will be displayed.
- If you wish to resend the link, click **Resend**  or if you wish to copy the link, click **Copy** .

If you select **Details Submitted** and click **View**.

- The records whose documents have been submitted will be displayed.
- If you wish to view the submitted details, click **Details** .
- If you wish to add the on boarding employee as a new user, click **Add User** .
- OR**
- if you wish to add the on boarding employee as a worker, click **Add Worker** .

If you select **All** and click **View**.

Date	Name	Mobile No.	Email ID	Status	Action
23-12-2021	NEER USER A07TE	1234567890	manish.gupta@matrixind.org	Details Submitted - 23-12-2021	[Icons]
23-12-2021	user	1234567890	abcd@gmail.com	Details Submitted - 23-12-2021	[Icons]
23-12-2021	Abd User	1234567890	mnk@matrix.com	Details Submitted - 23-12-2021	[Icons]
23-12-2021	ab5	1234567890	abcd@gmail.com	Link Not Accessed	[Icons]

- All the records will be displayed.

## Accessing the Link

### New Employee

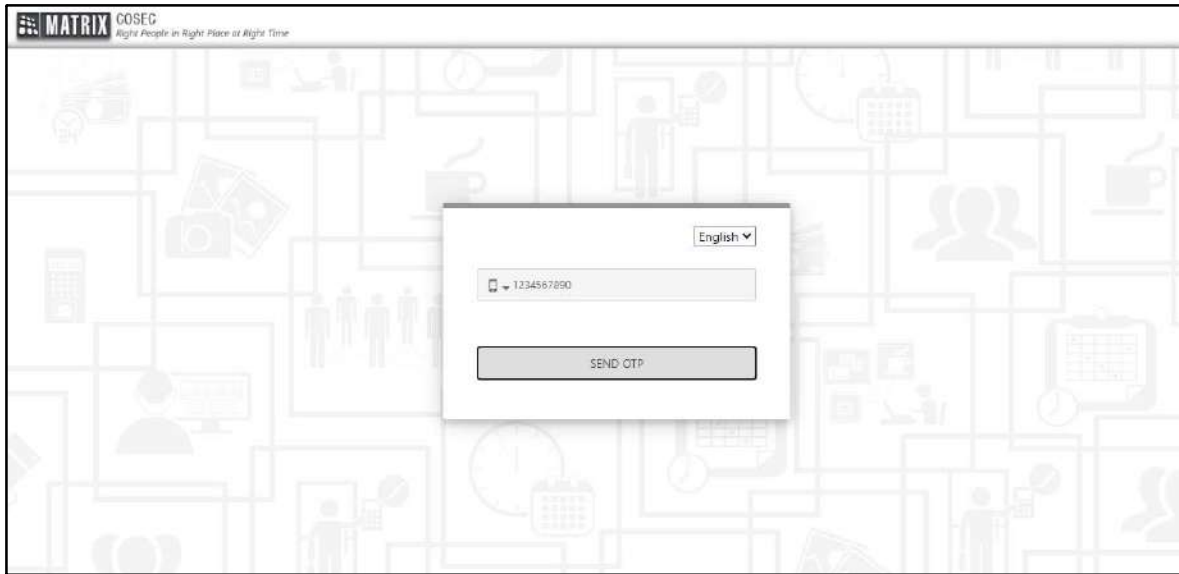

The new on boarding employee will receive an invitation link on the Mobile Number/ Email ID.

- Click the link received on the Mobile/Email.

Sample for Email is given below:

- The new on boarding employee is directed to the following page.

You can select the desired language in which you wish to view the login page. To do so,

- Select the desired language from the dropdown list. The default language is English.

The language set from **Global Language For Login** will be applicable to the login page. For details, refer to **Global Language For Login** in [“Basic Policy”](#). If you wish to view the pages in another language post login, click **Account Settings > Set Language> Preferred Language**. For details, refer to [“Account Setting”](#).

- Select the option - **Mobile** or **Email** on which the OTP is to be sent.
- Click **Send OTP**.
- The following page appears.

- Enter the received **OTP**.
- Click **LOGIN**.

- The new employee on boarding details page appears.
- The new employees must enter the **Basic**, **General**, **Personal** and **Contact** details.

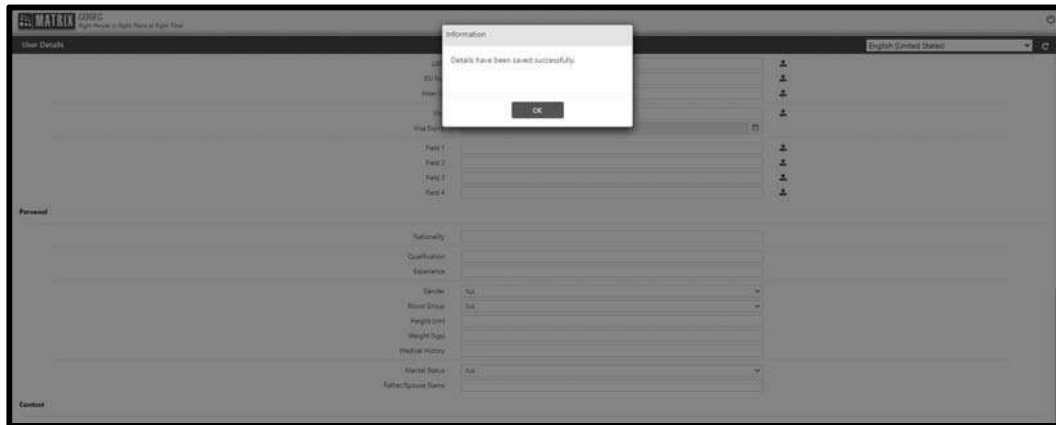

**Face Image:** You can **Upload** the image directly from the local PC or you can **Capture** the image first and then click **Upload**.

At most four images can be Uploaded/ Captured.

*To capture the image, make sure the camera is connected.*

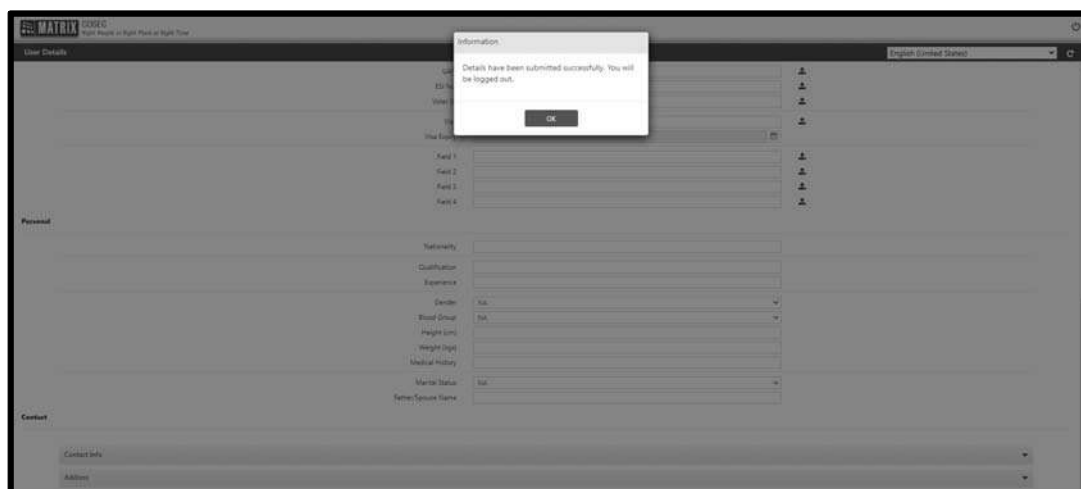

- Click **Save** to save all the details.
- The **Information** pop-up appears. Click **OK**.

- The filled details are displayed.

 A screenshot of the Matrix COSEC User Details form with all fields filled. The General section includes: Date of Birth, Joining Date, Vehicle Registration No., Driving License, Driving License Expiry, Passport No., Passport Expiry, NIN, Aadhaar No., PAN No., UAN, ESI No., Voter ID, and Visa Expiry. The Personal section includes: Nationality, Qualification, Experience, Gender, Blood Group, Height (cm), Weight (kg), Medical History, Marital Status, and Partner/Spouse Name. The Contact section includes: Contact Info and Address.

- Click **Submit**.
- **Information** pop-up appears. Click **OK**.

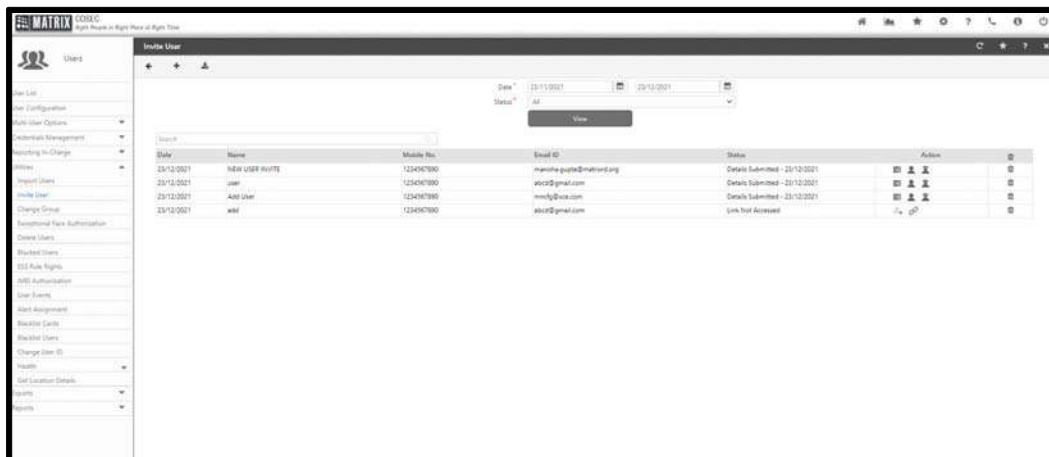

- The new on boarding employee is logged out.

- Confirmation message appears.

## Admin

To view **Status** of links, click **Users > Utilities > Invite Users**.

You can filter the records by settings the following parameters as per your requirement:

**Date:** Select the start and end date to specify the duration.

**Status:** Select the desired status from the drop down list. Refer [“Filtering the records as per Status”](#).

# Changing Group

The Users Module provides a functionality whereby the user has the option to change the groups like Organization, Branch, Department, Section, Category, Grade, Designation, Custom Groups and Reporting Group to which an employee is currently linked. This change can be applied for a user-definable time period. The system also maintains the group change records for each user. User group changes can be assigned both for a single user or multiple users at a time.

*The Group of any user can be changed **99999** times.*

## Single User

To change group for a single user, Select the **Users module > Utilities > Change Group**.

The **Change Group** page will open as follows:

**User ID:** Select a user from the user selection picklist, for whom the group change should apply.

Select the **Additional Details** section to view the group details for the selected user as shown below.

**Change Group:** Select the group from the options of Enterprise groups and Reporting Group to be changed for the selected user.

**Date:** Select the start and end date to specify the duration for which the group change is to be done.

**New Group:** Select the new group from the picklist to be assigned to the user.

**Remark:** You can add a Remark for the change to be done.

Click **Apply** to apply the changes for the selected user.

The changes can be viewed by clicking **User Group Change Records** as shown below.

The screenshot shows a web interface for managing user group changes. At the top, there is a form with the following fields: 'User ID' (1687), 'User Name' (Aditi Gupta), 'Change Group' (Company), 'Date' (03/10/2017 to 31/10/2017), 'New Group' (1, Matrix), and 'Remark' (Organization change for October). Below the form are 'Apply' and 'Clear' buttons. Underneath is a section titled 'User Group Change Records' with a search bar and a table.

User ID	Group Type	From	To	New Group
1687	Company	01/01/2009	31/12/2099	Organization2
1687	Company	09/05/2017	31/12/2099	Organization2
1687	Company	03/10/2017	31/10/2017	Matrix
1687	ReportingGroup	28/03/2017	31/12/2099	ri1

*When existing user's Enterprise group is changed. Then if user is assigned to the Enterprise group with which **Job costing** parameters are associated, then the configured job costing parameters will be assigned to the user.*

## Multiple Users

To change group for multiple users, Select the **Users Module > Utilities > Change Group > Multi User**

The **Multi User** page will appear as follows:

The screenshot shows the 'Change Group' form with the 'Multi User' tab selected. The form contains the following fields:

- Group Type:** ReportingGroup (dropdown)
- Date:** 04/07/2017 (start) to 12/31/2099 (end) (date range picker)
- New Group:** 3 (picklist)
- Remark:** (text area)
- Select Users:** User Wise (dropdown)
- User:** ID and Name (searchable list)
- Apply:** (button)

**Group Type:** Select a group type from the dropdown list for which the change is to be done.

**Date:** Select the start and end date to specify the duration for which the group change is to be done.

**New Group:** Select the new group from the picklist to be assigned to the user.

**Remark:** You can add a Remark for the change to be done.

The screenshot shows the 'Change Group' form with the 'Multi User' tab selected. The 'Select Users' section is expanded, showing a list of users:

User ID	Name	
2	Chirag	
3	Isha	
4	Sweta	

The 'Apply' button is visible at the bottom of the form.

**Select Users:** Select the users by filtering the option of User Wise, Group Wise or All.

Click the **Apply** button to apply the changes.

# Unidentified Face Authorization

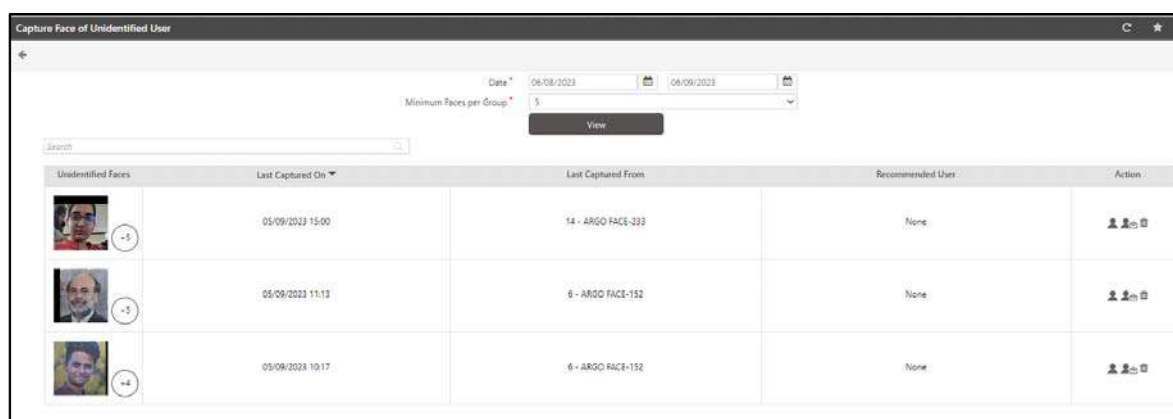

During face recognition, if a user is not identified by his/her face credential, the system will consider this face as an Unidentified Face. These unidentified faces are stored in the database.

The system may store a single face or multiple faces of the same user (known as cluster).

The System Admin can view the details and accordingly perform action— enrolling these unidentified faces against an existing/new user/visitor or can delete them.

To view unidentified faces, click **Users > Utilities> Unidentified Face Authorization**.

The **Capture Face of Unidentified User** page appears.

## Setting the Filters

- **Date:** Select the desired date range to display the captured unidentified faces during that duration.
- **Minimum Faces per Group:** There can be multiple images of a single unidentified user stored in a cluster. There can be multiple clusters of different unidentified users.

Select the desired value in **Minimum Faces per Group**. As per the number set here, the system will filter records of clusters equal to and greater than this number.

- Click **View**. The records will appear as per the set filters.

## Filtered Records

The grid displays the unidentified faces of unidentified users with the following details:

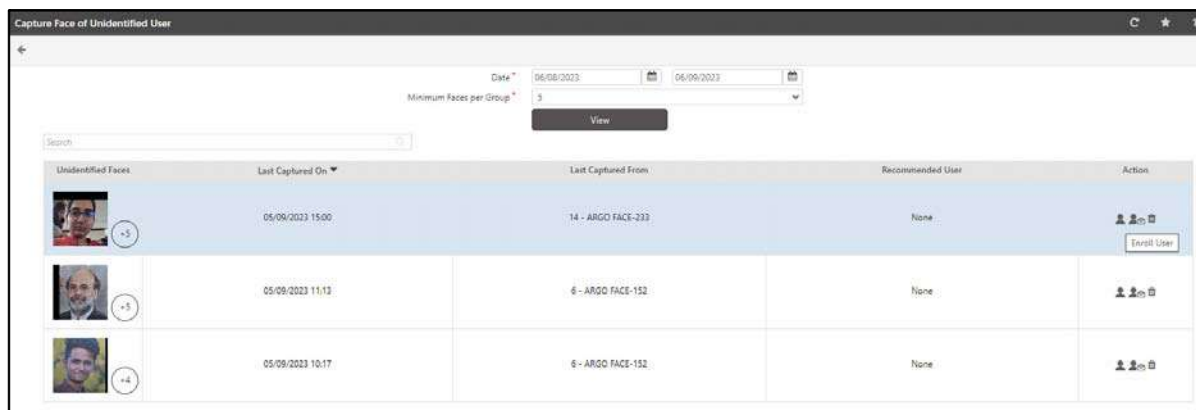

- **Unidentified Faces:** It displays the latest captured image of the user in the cluster along with the total count of captured unidentified faces.
- **Last Captured On:** Displays the date and time of the last captured image.
- **Last Captured From:** Displays the Device ID and the Device Name from which the last image has been captured.

- **Recommended User:** Displays the best match found User ID and User Name from the database for the unidentified user.  
If there is no match found for the unidentified user image in the database, then it displays **None**.
- **Action:** The System Admin can perform the following actions:
  - **Enroll User/Visitor:** Unidentified faces in a cluster can be enrolled against an existing or new user/visitor. Refer “[Enrolling Users](#)” and “[Enrolling Visitor](#)” under “[Enrolling the Unidentified Face](#)”.
  - **Remove:** Unidentified faces from the cluster can be removed or deleted. Refer “[Deleting the Unidentified Face](#)”.

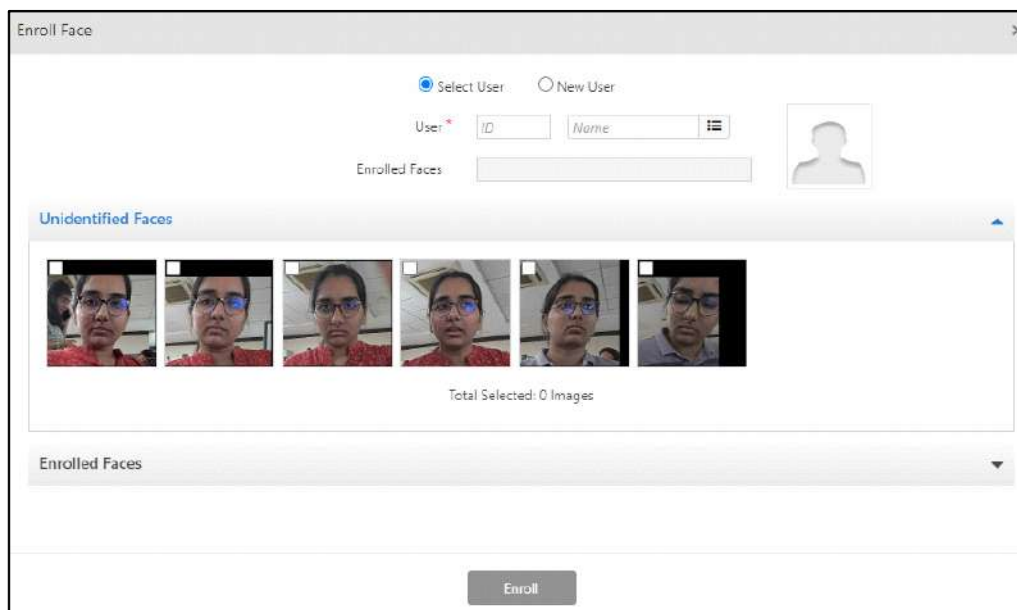

## Enrolling the Unidentified Face

### Enrolling Users

- Click **Enroll User**  to enroll a User.

- The **Enroll Face** pop-up appears.

- If you want to enroll the images against an existing user, select **Select User**.

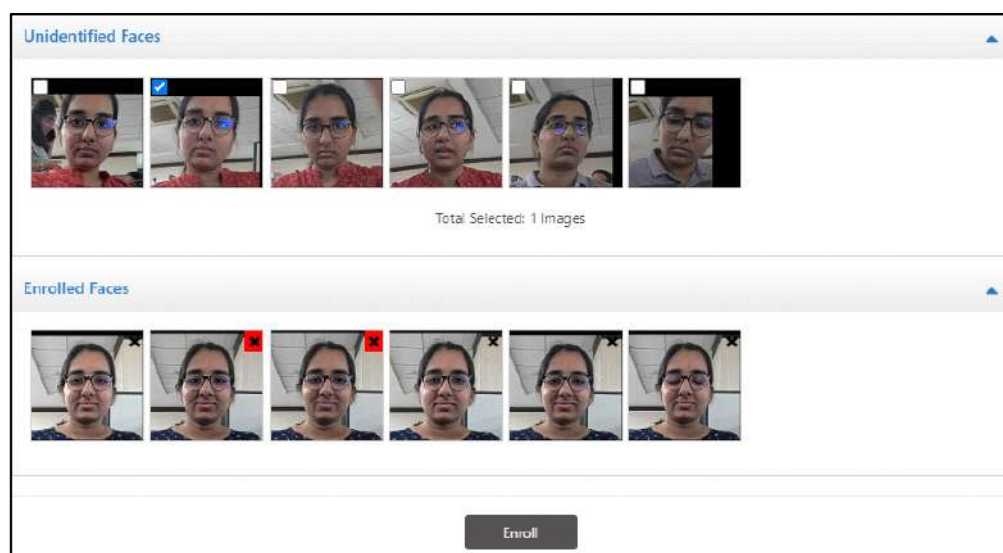

- **User:** Select the desired user from the pick list.
- **Enrolled Faces:** It displays the number of already enrolled faces against the user in the database.
- **Unidentified Faces:** Click the **Unidentified Faces** collapsible panel. It displays all the captured unidentified faces against this user. Select the check boxes of the desired unidentified face images that you wish to add to the list of enrolled face of the user.

The number of unidentified face images selected will be displayed as the **Total Selected** images.

*Make sure the number of faces you consider for enrollment is lesser than or equal to the defined value in **Maximum No. of Faces** in Admin >System configuration> Global Policy >User.*

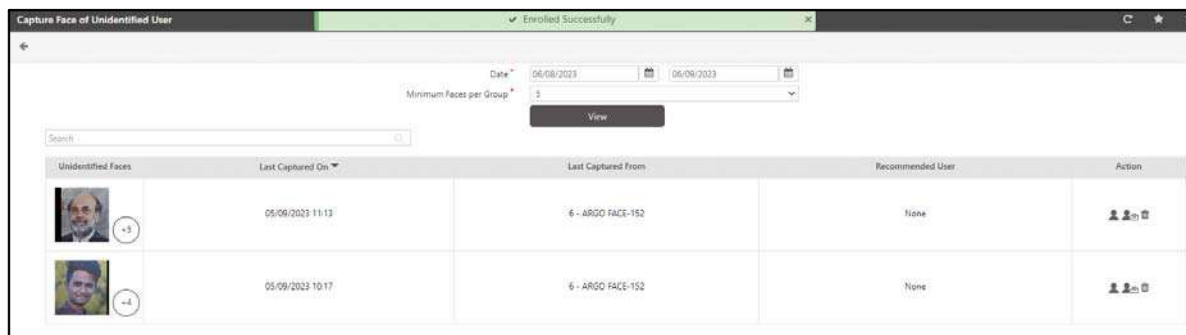

- **Enrolled Faces:** Click the **Enrolled Faces** collapsible panel. It displays the enrolled images of the user currently in the database.

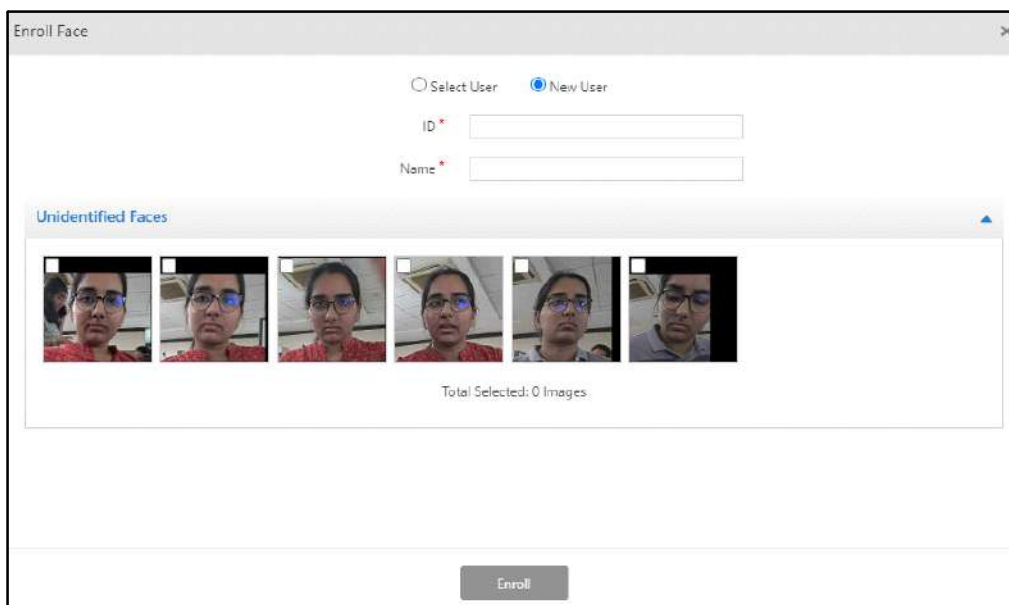

You can either enroll the Unidentified Faces directly or replace the Enrolled Faces with Unidentified Faces.

- To enroll the Unidentified Faces, click **Enroll**. The selected Unidentified Faces will now be added to the Enrolled Faces.
- To replace an existing Enrolled Face,
  - Click on the desired image under **Enrolled Faces**. The red cross icon appears on the top right corner of the image.
  - Select the check box of the desired image under **Unidentified Faces** that you wish to add.
  - Click **Enroll**.

The image with the cross icon in Enrolled Faces will be replaced with the desired Unidentified Face image.

- If you want to enroll the images against a new user, select **New User**.

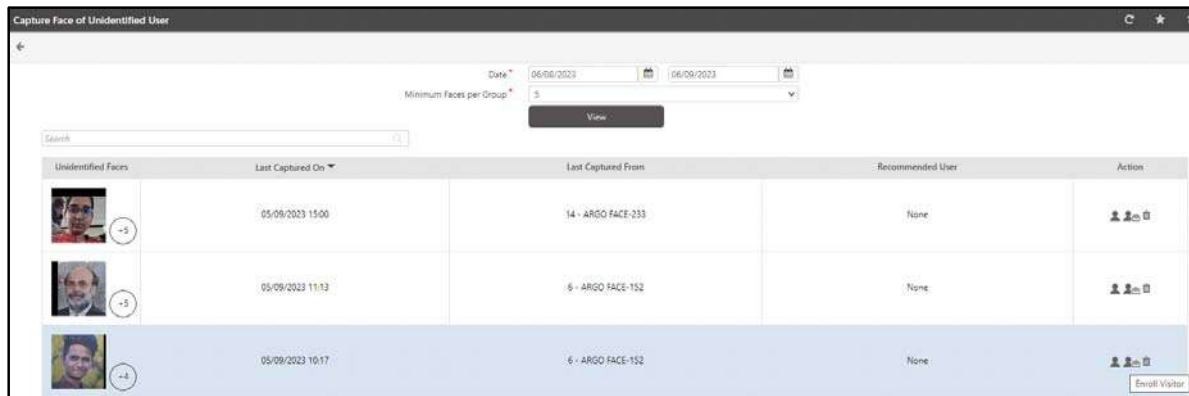

- **ID:** Enter the ID of the new user.
- **Name:** Enter the name of the new user.
- **Unidentified Faces:** Click the **Unidentified Faces** collapsible panel. It displays all the captured unidentified faces against this user. Select the check boxes of the desired unidentified face images that you wish to add to the list of enrolled face of the user.

The number of unidentified face images selected will be displayed as the **Total Selected** images.

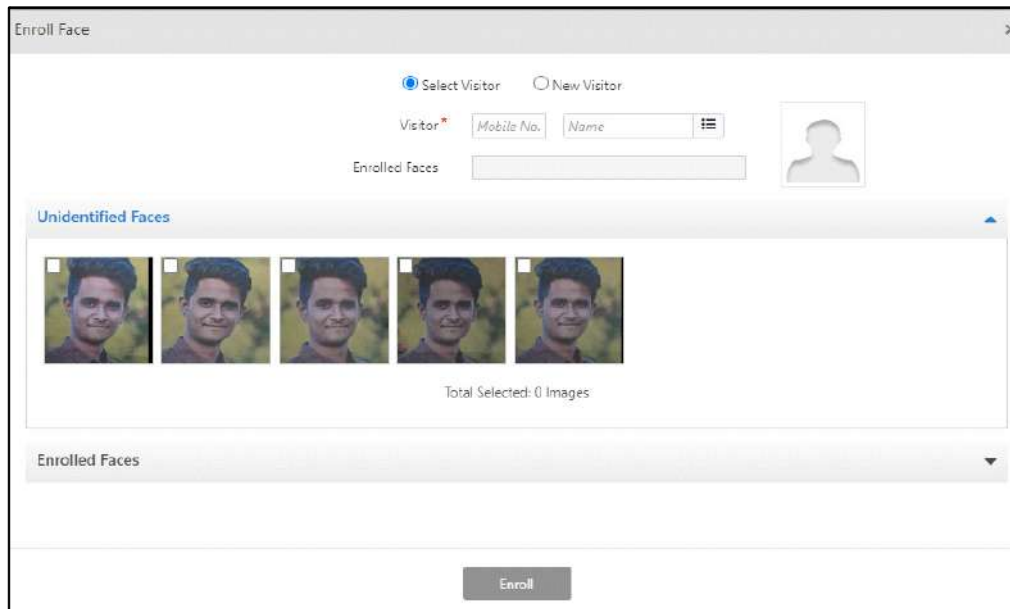

- Click **Enroll**. The selected Unidentified Faces will now be considered as Enrolled Faces.

## Enrolling Visitor

- Click **Enroll Visitor**  to enroll a Visitor.

- The **Enroll Face** pop-up appears.

- If you want to enroll the images against an existing visitor, select **Select Visitor**.
  - Visitor:** Select the desired visitor from the pick list.
  - Enrolled Faces:** It displays the number of already enrolled faces against the visitor.
  - Unidentified Faces:** Click the **Unidentified Faces** collapsible panel. It displays all the captured unidentified faces against this visitor. Select the check boxes of the desired unidentified face images that you wish to add to the list of enrolled face of the visitor.

The number of unidentified face images selected will be displayed as the **Total Selected** images.

- Enrolled Faces:** Click the **Enrolled Faces** collapsible panel. It displays the enrolled images of the visitor currently in the database.

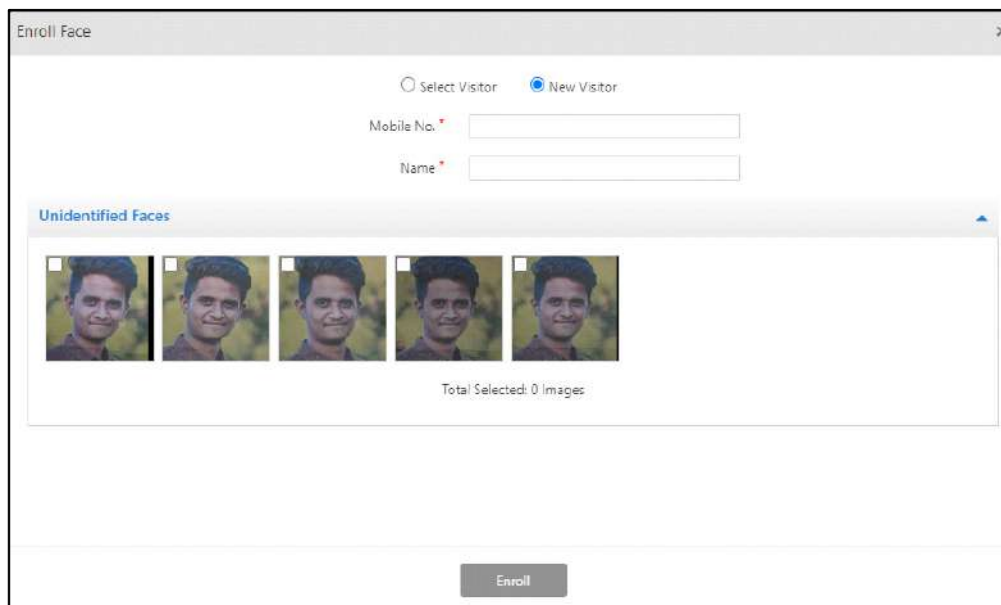

You can either enroll the Unidentified Faces directly or replace the Enrolled Faces with Unidentified Faces.

- To enroll the Unidentified Faces, click **Enroll**. The selected Unidentified Faces will now be added to the Enrolled Faces.
- To replace an existing Enrolled Face,
  - Click on the desired image under **Enrolled Faces**. The red cross icon appears on the top right corner of the image.
  - Select the check box of the desired image under **Unidentified Faces** that you wish to add.
  - Click **Enroll**.

The image with the cross icon in Enrolled Faces will be replaced with the desired Unidentified Face image.

- If you want to enroll the images against a new Visitor, select **New Visitor**.

- **Mobile No:** Enter the mobile number of the new visitor.
- **Name:** Enter the name of the new visitor.
- **Unidentified Faces:** Click the **Unidentified Faces** collapsible panel. It displays all the captured unidentified faces against this visitor. Select the check boxes of the desired unidentified face images that you wish to add to the list of enrolled face of the visitor.

The number of unidentified face images selected will be displayed as the **Total Selected** images.

- Click **Enroll**. The selected Unidentified Faces will now be considered as Enrolled Faces.

## Deleting the Unidentified Face

- Click **Delete**  to remove an unidentified face.

- The unidentified face will be successfully deleted from the database.

# Deleting Users

This option enables the administrator to delete single or multiple users from the COSEC database.

*This is an irreversible process. Proceed with caution.*

To delete users from the system, Select the **Users Module > Utilities > Delete Users**.

The **Delete Users** page appears as follows:

The user needs to re-enter the logged in user credentials to access this critical functionality as shown.

The administrator can now select the user or the group of users to be deleted from the COSEC database using the **User Filter** drop down list as shown.

The **User Filter** section allows you the following options for multiple user selection:

- **User Wise:** Enables administrator to randomly select users by clicking the **Select Users** button.
- **Group Wise:** Enables the administrator to select all users belonging to a particular group.
- **All:** Enables administrator to select all active users in the database.

To apply all the changes made, click the **Apply** button.

The system will successfully delete all the selected users from the COSEC database.

# Blocked Users

Users whose credentials have been temporarily blocked due to inactivity for prolonged periods are referred to as *Blocked Users*. This could happen in the event of the Absentee rule being applied to the user or unauthorized access attempts exceeding the defined limit.

Blocking a user only deactivates the credential and does not result in the deletion of user information from the database.

*This functionality is available only with the **Access Control** add on module.*

*The Alert Service must be running to generate the Block User event.*

To access this functionality, Select the **Users module > Utilities > Blocked Users**.

The **Blocked Users** page appears as shown:

ID	Name	Panel/Direct Door	Block DateTime	Reason for Block	Remark	Restore
1	Shinjini	PVR Door-Device-1	08/11/2017 23:59:27	Absentee Rule		
2	Nikita	PVR Door-Device-1	09/11/2017 00:00:00	Absentee Rule		

Suppose Absentee rule is configured for user Shinjini for 15 days. And she is absent for 15 days; when she punches on 16th day (roll-over of date) then she will be denied access with reason: “User is Blocked”. And she will be listed in the Blocked user list as shown above.

- Click the **Blocked User** section to view details of blocked users such as name of the user, name of the door, block date and time, reason for blocking etc. along with the option to restore selected users from their “blocked” status.
- The administrator can re-activate any of the users in the blocked list by clicking on the **Restore** option against the selected user in the list.
- There is a provision for adding **remarks** which can be viewed later for reporting and analysis as well as deciding the future course of action.

Blocked User						
Blocked User (2)						
Search						
ID	Name	Panel/Direct Door	Block DateTime	Reason for Block	Remark	Restore
1	Shinjini	PVR Door-Device-1	08/11/2017 23:59:27	Absentee Rule	User is restored	
2	Nikita	PVR Door-Device-1	09/11/2017 00:00:00	Absentee Rule		
Restored User (0)						

The restored user will be shown in **Restored User** list as shown below.

Blocked User						
Blocked User (1)						
Restored User (1)						
Search						
ID	Name	Panel/Direct Door	Application Restore DateTime	Controller Restore DateTime	Remark	
1	Shinjini	PVR Door-Device-1	09/11/2017 16:04:36		User is restored	

- The reason for the de-activation of the user credential is displayed in the **Reason for Block** column. The possible reasons for deactivation are:

#### 1. Absentee rule being applied to user

2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> March: Absent

2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup> March: Absent

Maximum Absenteeism Count Allowed = 3

2. The Use Count Control rule has been violated.

Time - 11:01  
Attempt - 1

Time - 11:01  
Attempt - 4

Maximum Attempts Allowed Per Minute = 3

3. Failed Access attempts.

1<sup>st</sup> Attempt

6<sup>th</sup> Attempt

Maximum Attempts Allowed at an Unauthorized Zone = 5

For other conditional violations that may lead to blocking of a user, go to **Device Configuration (Panel200) > Features > Set 1 > Block Users**. Also, [See "Enabling Access Control Features" on page 21.](#)

# ESS Role Rights

The ESS Role Rights is used to restrict user(s) access for some options in ESS login. (Like viewing other User's basic details, attendance correction applications etc.). The administrator can create up to 99 role rights configurations, which will specify the pages to be enabled for ESS users and can choose which rights configuration should be applicable to a user.

To configure the rights for ESS pages, select the **Users module > Utilities > ESS Role Rights**.

The **ESS Role Rights** page appears as shown below.

The screenshot shows the 'ESS Role Rights' page. At the top, there is a search bar and a table with two columns: 'ID' and 'Name'. The table contains one row with '1' in the ID column and 'Default Rights' in the Name column. Below the table, there is a 'Configuration' section with a search bar and a table with two columns: 'Menu' and 'Parent Menu'. The table contains five rows: 'Account Details' (Parent Menu: Cafeteria), 'Attendance Correction' (Parent Menu: Time Attendance), 'Attendance Details' (Parent Menu: Time Attendance), 'Attendance Summary' (Parent Menu: Time Attendance), and 'C-OFF Application' (Parent Menu: Leave Management). Each row has an 'Enable' checkbox. The 'Attendance Correction', 'Attendance Details', and 'Attendance Summary' rows have their checkboxes checked. Below the table, there is a 'User Filter' section.

Click on **New** button to create the new role rights.

**ESS Role Rights:** Enter the name of the Rights. For Eg: attendance correction rights can be given to specific users. Cafeteria access rights can be given to some users.

**Default:** Enable the checkbox to make the particular ESS role rights as default.

## Configuration

Enable/Disable the check-box for the options mentioned in the configuration list to assign/deny the role rights to the respective user.

Eg1: For Attendance Correction rights, Attendance Correction, Attendance Details and Attendance Summary are enabled as shown below. The users assigned to Attendance Correction Rights can access these features.

The screenshot shows the 'ESS Role Rights' page. At the top, there is a search bar and a table with two columns: 'ID' and 'Name'. The table contains one row with '1' in the ID column and 'Attendance Correction Rights' in the Name column. Below the table, there is a 'Configuration' section with a search bar and a table with three columns: 'Menu', 'Parent Menu', and 'Enable'. The table contains five rows: 'Account Details' (Parent Menu: Cafeteria), 'Attendance Correction' (Parent Menu: Time Attendance), 'Attendance Details' (Parent Menu: Time Attendance), 'Attendance Summary' (Parent Menu: Time Attendance), and 'C-OFF Application' (Parent Menu: Leave Management). Each row has an 'Enable' checkbox. The 'Attendance Correction', 'Attendance Details', and 'Attendance Summary' rows have their checkboxes checked. Below the table, there is a 'User Filter' section.

The User Basic Details page in the collapsible Configuration panel provides the option of **Advanced Rights Configuration** from where you can hide or show the Attendance Status and Last Punch related details of the user from the ESS > Basic > User Basic Details.

2	Attendance Correction Rights

Hence the user Aditi when logs into her ESS account will have rights for Attendance Correction, Attendance Details and Attendance Summary as shown below.

In the same way, other role rights can be assigned/denied to the required users from the configuration panel of ESS Role rights tab.

# IMEI Authorization

ESS Mobile Apps can be used on mobile devices. To ensure that a user can install and use the app from a single authenticated device, the device IMEI number is stored in the Database. An ESS user can apply for an IMEI number authorization request, and a System Account user can authorize or reject these requests.

You can view all the pending request at one go as well as you can authorize/reject the IMEI request of ESS mobile users.

Select the **Users module > Utilities > IMEI Authorization**.

The **IMEI Authorization** page appears as shown.

You can either:

- view all the pending applications for IMEI Authorization
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Authorized** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Specify the start and end dates by clicking the respective date selection buttons. This defines the period for which IMEI Applications approval status is to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click **View**. The Pending, Authorized and Rejected collapsible panels appear.

## Pending Applications

- Click the **Pending** collapsible panel. All the applications in pending state appear.

Request Date	User ID	Name	IMEI Number	Approve	Reject
01/09/2022	MVR5	MVR5	39de45fd-f9c0-49cb-bb44-f26315635dab	<input type="checkbox"/>	<input type="checkbox"/>

- To approve the application, select the **Approve** check box of the desired entry. This application will then appear under the **Authorized** collapsible panel.
- To reject the application, select the **Reject** check box of the desired entry. This application will then appear under the **Rejected** collapsible panel.

## Authorized Applications

Click the **Authorized** collapsible panel. All the authorized applications with their details are displayed.

Request Date	User ID	Name	IMEI Number	Authorization Date
31/08/2022	MVR1	MVR1	40abac71-7f63-4b67-b60e-d432c14c5937	31/09/2022
31/08/2022	MVR2	MVR2	a8d5bb0a-6731-4889-a327-24983b1caa88	31/08/2022
31/09/2022	MVR3	MVR3	39de45fd-f9c0-49cb-bb44-f26315635dab	31/09/2022

# User Events

This functionality enables the COSEC system administrator to view the attendance events, access events as well as visitor events (if any) for one or more selected users. Details of entry and exit punches, allowed/denied status of access as well as the source details of a punch (*Device, App, ESS* etc.) can be viewed.

To view the User Events, Select the **Users module > Utilities > User Events**.

The **User Events** page appears as shown below.

The screenshot shows the 'User Events' interface. At the top, there are date pickers for 'Date' set to '21/03/2017'. Below this is a 'Filter By' dropdown menu set to 'Individual'. Underneath, there are input fields for 'User' with 'ID' and 'Name' labels, and a 'View' button. At the bottom, there are three expandable sections: 'Attendance Events (0)', 'Access Control Events (0)', and 'Visitor Events (0)'.

Specify the **date** range for which events are to be viewed.

Select the **user** based on Filter options of *Individual, Device or Department*.

Click the **View** button to get the specified records. Select the **Attendance Events** section to view the attendance events of employees.

The screenshot shows the 'User Events' interface with the 'Attendance Events (7)' section expanded. It displays a table of attendance events for user '2' (Anmol) on 31/07/2019. The table has columns for User ID, User Name, Date-Time, I/O, Access, Source, Status, Location, View Image, and Details. The events are as follows:

User ID	User Name	Date-Time	I/O	Access	Source	Status	Location	View Image	Details
2	Anmol	31/07/2019 16:11:50	Entry	Allowed	App	Unauthorized			
2	Anmol	31/07/2019 16:05:08	Entry	Allowed	ESS	Unauthorized			
2	Anmol	31/07/2019 12:52:06	Entry	Allowed	ESS	Authorized			
2	Anmol	31/07/2019 12:49:43	Entry	Denied	Device	NA			
2	Anmol	31/07/2019 12:48:53	Entry	Denied	Device	NA			

Below the table, it says '1 - 5 of 7 records' and has pagination controls showing '1' and '2'.

The Attendance Events shows the Date and time when the event is generated along with the I/O, Access, Source, Status and Location. It also displays Image and Details of the punch.

The Status of event, i.e. whether it is Authorized or Unauthorized is displayed under Status.

- If the status is Unauthorized, it will display a link which on clicking will be redirected to **Events Authorization** Page as per login user's rights.
- If the status is shown as NA, then Authorized status will be Null and the access will be shown as **Denied**.

Click the  button to view source location details for an entry or exit event.

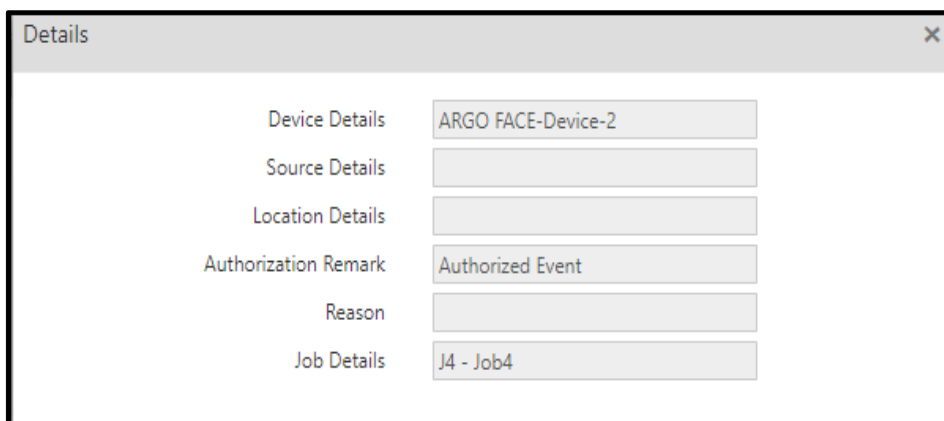

*If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

Clicking on View Image icon will display the captured image of user as shown below. If no image is captured, then on clicking icon nothing will be displayed.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

On clicking  icon, **Details** regarding user event will be displayed.

# Assigning Alerts To Users

The **Alert Assignment** function enables you to assign multiple alerts for a particular active user in the COSEC system. To know more about Alert messages, refer to [“Configuring Alert Messages”](#).

For example, this functionality can be used to enable a user to receive SMS/Email/WhatsApp/App Notifications whenever the events — leave application approved, missing punches, changes in shifts etc — are generated.

To assign alerts to users, click **Users module > Utilities > Alert Assignment**.

The **Alert Assignment** page appears.

The screenshot shows the 'Alert Assignment' interface. On the left, a form displays details for 'User1': ID, Name, Type (T&A), and Reporting In-Charge (No). Below this is a search bar and a table of alerts. The table has columns for 'Assigned' (checkbox), 'Alert', 'SMS' (checkbox), 'Email' (checkbox), 'App Notification' (checkbox), and 'WhatsApp' (checkbox). The alerts listed are: 1. Monthly Attendance, 2. Leave Approval, 3. Leave Rejection, 4. User Events, and 5. Missing In Punch - Users. On the right, a sidebar shows a list of users: User1 and User2, with User1 selected. At the bottom, there is a pagination bar showing '1 - 5 of 40 records' and a 'Receive Alerts on' dropdown.

To assign the alerts to users,

- Select the desired user from the right grid, for example: User1.
- The user details are displayed on the left. The details displayed are User ID, Name, Type and Reporting In-charge.

If the selected user is a Reporting In-charge of any group, then Yes will be displayed else it displays No.

- A grid with all the alerts and their respective message sending modes is also displayed.

In this grid, for the respective alert, select the check box under Assigned, to assign this alert to the user

For this alert, select the check boxes of the desired mode/s — SMS, Email, WhatsApp— via which you wish to send this alert.

1 - 5 of 40 records

« < 1 2 3 ... 8 > »

*The ESS rights must be allocated to the user to access the COSEC APTA mobile application and receive the alert.*

- For example, the User1 will get:
  - SMS alerts for Monthly Attendance, User Events, Leave Application as well as Missing In Punch - Users event
  - Email alerts for Monthly Attendance, User Events, Missing In Punch - Users events.
  - PUSH Notifications on COSEC APTA Application on the smartphone for Approval/Rejection of the applied leave.
  - WhatsApp alerts for Leave Rejection and User Events.

## Receive Alerts on

Click the **Receive Alerts on** collapsible panel.

**Receive Alerts on**

Personal Cell ☒

Personal Email ☒

Official Cell ☒

Official Email ☒

Select the check boxes of the desired contact options — Personal Cell, Personal Email, Official Cell, Official Email— which you wish to consider for sending the alerts.

*Make sure the contact details are configured for the selected user. For details, refer to [“Configuring Users”](#).*

Click **Save** to assign the selected alerts to this user.

# Blacklist Cards

In COSEC, various credentials such as finger print templates, palm templates as well as access cards can be associated with a user. Each user can be assigned two access cards. In case a user's access card is stolen or lost, the blacklisting feature enables the administrator to add this card to a Watchlist and track its usage.

To blacklist a card, Select the **Users module > Utilities > Blacklist Cards**.

The page will open as shown below.

# Blacklisting Users

This page allows blacklisting users, thereby limiting their rights, access, etc., until the user is restored. You can also restore a blacklisted user from the same page. Along with this, you can also view the list of users who have been blacklisted/ restored.

To blacklist a user, Select **Users module > Utilities> Blacklist Users**

The screenshot shows the 'Blacklist Users' interface. At the top, there's a 'Select Users' dropdown set to 'User Wise'. Below it, there are input fields for 'User' (with sub-fields for ID and Name) and 'Reason' (with a '50 Char' limit). An 'Add To Blacklist' button is present. Below the form, there's a section for 'Blacklisted Users (0)' with a search bar and a table. The table has columns: User ID, Name, Blacklist Date-Time, Reason For Blacklisting, and Restore. It currently shows 'No Data'. At the bottom, there's a section for 'Restored Users (1)'.

**User:** You can select the user by filtering the user as **User Wise**, **Group Wise** or **All**. According to the filter selected You can

- select the user randomly from the picklist,
- select the enterprise group and select particular groups or

**Reason:** You can specify the reason behind blacklisting a user.

This screenshot shows the 'Blacklist Users' interface with a user selected. The 'User' field shows ID '1578' and Name 'Supriya'. The 'Reason' field contains the text 'user has mishandled data'. The 'Add To Blacklist' button is visible at the bottom.

Then click on **Add to Blacklist** button. A warning appears.

The screenshot shows a 'Warning' dialog box with the text: 'Would you like to revoke devices (as per device-wise rights)?'. There are two buttons: 'Yes' and 'No'.

If you select **Yes**, then user will become inactive and user's data will be removed from the devices.  
If you select **No**, then user will become inactive but user data will still be there on assigned devices.

The user will get listed in Blacklisted Users section as shown below.

Blacklisted Users (1)				
Search				
User ID	Name	Blacklist Date-Time	Reason For Blacklisting	Restore
1678	Supriya	04/25/2017 12:00:27	user has mishandled data	
Restored Users (1)				

The blacklisted user will be made inactive in the system. The user profile displays the user being Inactive and blacklisted as shown below.

AP	Aakash	03/29/2017 11:55:25	Caught stealing company property	

The restored user remains inactive. You have to enable the checkbox to make him active user.

# Changing User ID

Certain firms have the practice of assigning temporary User IDs to new employees for a certain period of time before they can be given a permanent ID. COSEC provides the option for HR administrators to assign a temporary User ID to new users. These users can later be migrated to a new COSEC User ID for permanent use. The *Change User ID feature* ensures that none of the existing user data is erased on assigning a new ID.

To change User ID for a user, select the **Users module > Utilities > Change User ID**.

The page will open as shown below.

# Health

---

The Health tab enables you to view and modify the Health Declaration of users, view the Health Records of users and also Import Health Declaration.

Make sure:

- the **Enable** check box for **Temperature Configuration** and **Symptom Configuration** under [“Temperature and Symptoms Configuration”](#) in [“User Policy”](#) under [“Defining Global Policies”](#) is enabled.
- you assign the **Health Records** and **Self Declaration** page rights to the users under [“ESS Role Rights”](#), to ensure these users can declare their Health Parameters from their ESS login and the same can be viewed/modified from this page.

*If you disable only Temperature Configuration, then you will only be able to view the Symptom details of the users from Health Declaration as well as users will be able to declare only their Symptom status via ESS login and vice versa is applicable.*

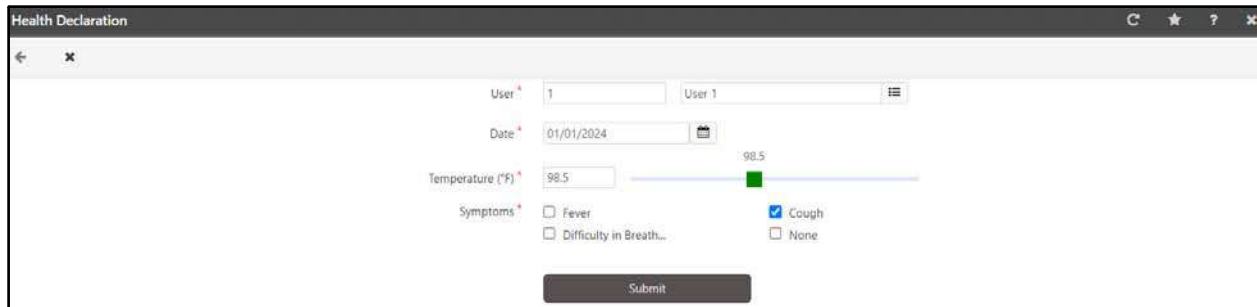

Health tab includes the following:

- [“Health Declaration”](#)
- [“Health Records”](#)
- [“Import Health Declaration”](#)

# Health Declaration

You can view and modify the health parameters of the users declared from their ESS login. To view/modify:

- Click **Users module > Utilities > Health > Health Declaration** and the following screen appears.

- **User:** Click the picklist and select the desired user whose Health Declaration you wish to view.
- **Date:** Select the date from the calendar to view the Health Declaration of the selected user on that date.
- **Temperature (°F):** The Temperature declared by the user appears. Enter the temperature manually or set the temperature using the slider to change it, if required. Drag the slider towards the left to decrease the temperature or drag the slider to the right to increase the temperature.
- **Symptoms:** The check boxes for the symptoms as declared by the user appear as selected. Select or clear the desired check boxes to change the declared symptoms, if required.
- Click **Submit** to submit the Health Declaration of the selected user, if modified. The submitted declaration is displayed on the Health Records page.

The symptoms displayed for selection will appear as configured in [“Temperature and Symptoms Configuration”](#) under [“User Policy”](#) in [“Defining Global Policies”](#).

*If the Health Declaration is submitted/modified more than once on same day, then the system will consider only the last declared health parameters and the same will reflect in the Health Record.*

# Health Records

To view the submitted Health Declarations,

- Click **Users module > Utilities > Health > Health Records** and the following screen appears.

The screenshot shows the 'Health Records' interface. At the top, there are filters for 'User' (set to '1') and 'Date' (range from '27/12/2023' to '03/01/2024'). Below these is a 'View' button. A search bar is also present. The table below has columns: Date, Temperature Source, Temperature (°F), Symptoms Source, Symptoms, and Details. The table is currently empty, displaying 'No Data'.

- User:** Click the picklist and select the desired user whose Health Records you wish to view.
- Date:** Select the From and To date from the calendar to view the Health Records of the selected user.
- Click **View**. A list of all the Health Declarations submitted by the user and modified by the admin during the selected date range appear in a list.

This screenshot shows the 'Health Records' screen with data. The filters remain the same. The table now contains three entries:

Date	Temperature Source	Temperature (°F)	Symptoms Source	Symptoms	Details
01/01/2024	ESS	98.2	ESS	None	[Details Icon]
02/01/2024	SA	98.9	SA	None	[Details Icon]
03/01/2024	ESS	98.4	ESS	None	[Details Icon]

The following details appear — Date, Temperature Source, Temperature (°F), Symptoms Source, Symptoms and Details.

- Click **Details** [Details Icon] corresponding to the desired date to view additional details. The following pop-up appears.

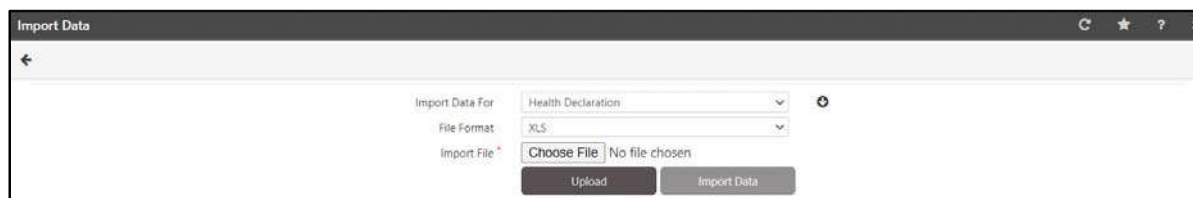

The 'View Health Records' pop-up shows detailed information for a specific record. It includes filters for 'User' (set to '2') and 'Date' (set to '01/01/2024'). The table below shows the details for the record on 02/01/2024 at 16:59:

Date-Time	Temperature Source	Temperature (°F)	Symptoms Source	Symptoms
02/01/2024 16:59	SA	100	SA	Cough

# Import Health Declaration

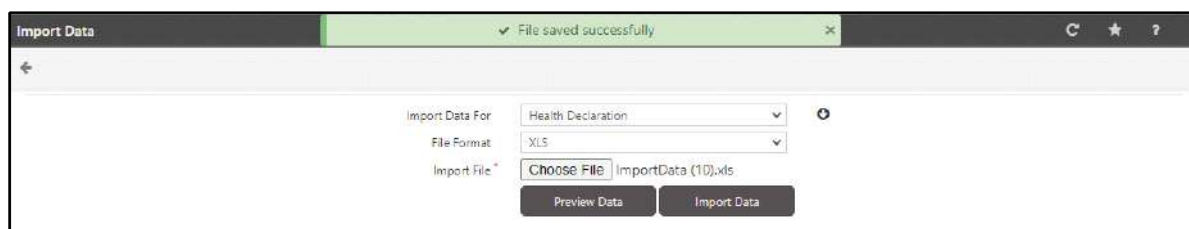

If you wish to import health records of multiple users at one go, you can use the Import option. To import Health Declaration parameters,

- Click **Users module > Utilities > Health > Import Health Declaration** and the following screen appears.

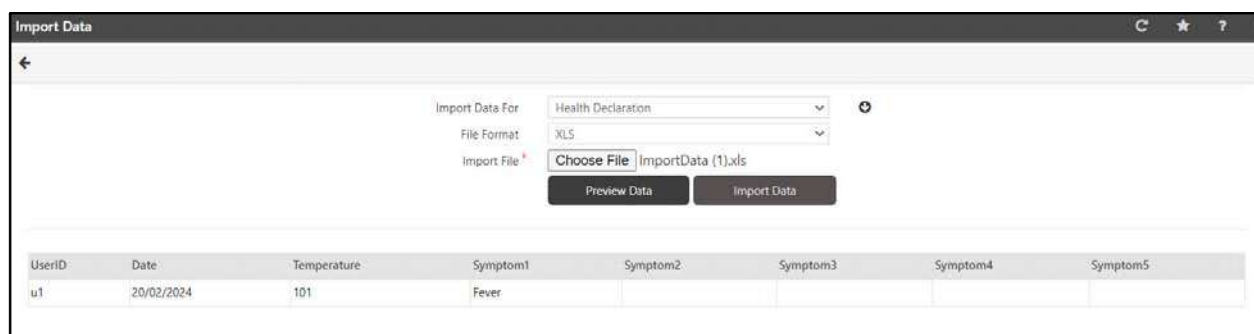

Configure the following parameters:

- Import Data For:** To download sample import file, click **Download Sample Import file** . The downloaded import sheet displays the details required for importing data. Enter the details to be imported in the **Health Declaration** sheet in this sample file and save the file at the desired location.
- File Format:** Select the desired option from the drop-down list options — XLS or CSV.
- Import File:** Browse the saved file path from where you wish to import the file. Click **Choose File**. It displays all folders which are in the drive. Select the desired file from the folder.
- Click **Upload** to upload the data. The file will be saved and you can preview the data.

- Click **Preview Data** to preview the data before importing. The data in the uploaded file is displayed as follows.

UserID	Date	Temperature	Symptom1	Symptom2	Symptom3	Symptom4	Symptom5
u1	20/02/2024	101	Fever				

*Administrator needs to ensure that the user has full rights on the folder containing the Excel or CSV file for the import data operation.*

- Click **Import Data** to import the Health Declaration data. The result of import is shown as Success or Failure along with Result Description.

You can also filter the result records.

- Result:** Select the desired option from the drop-down list — Both, Success or Failure— to view the import result.

UserID	Date	Temperature	Symptom1	Symptom2	Symptom3	Symptom4	Symptom5	Result	Result Description
u1	20/02/2024	101	Fever					Success	User Health Declaration Data Added
u2	20/02/2024	101	Fever					Failure	Enter valid value for UserID
u3								Failure	Enter valid value for UserID
u4								Failure	Enter valid value for UserID
u5								Failure	Enter valid value for UserID
u6								Failure	Enter valid value for UserID
u7								Failure	Enter valid value for UserID
u8								Failure	Enter valid value for UserID
u9								Failure	Enter valid value for UserID
u10								Failure	Enter valid value for UserID

Once the data is imported successfully, data will be added or updated for the specific user in:

- “[Health Declaration](#)”
- “[Health Records](#)”
- Self Declaration and Health Records page in ESS Login.

# Get Location Details

---

To access this page, make sure you enable **Get Location Details** checkbox from *Admin > System Configuration > Global Policy > Basic Policy*.

Admin is unable to understand the exact location of his users/ workers with the help of GPS latitude and longitude coordinates. S/He needs to enter these coordinates on Maps to search the location details manually which is quite time consuming and even tedious to check location details for multiple events.

To overcome this issue, COSEC is providing **Get Location Details** page.

In this page, the system performs **Reverse Geo Coding** process using Google Maps (Internet required).

**Reverse Geo Coding:** It is process of converting a latitude and longitude coordinates into corresponding street address or human readable address.

To perform this process, following things are required:

- Longitude and Latitude Coordinates
- Google API Key

## Longitude and Latitude Coordinates:

There are 2 types of Longitude and Latitude Coordinates — GPS Latitude-Longitude and GSM Latitude-Longitude.

- For events having GPS latitude-longitude, GPS latitude-longitude will be consider for processing.
- For events having GSM latitude-longitude, GSM latitude-longitude will be consider for processing.
- For events having both GPS and GSM latitude-longitude, GPS latitude-longitude will be consider for processing.
- For events having GPS latitude or GPS longitude and GSM latitude-longitude, GPS latitude/longitude will be consider for processing.

## Google API Key

Enable the **Get Location Details** checkbox from *Admin > System Configuration > Global Policy > Basic Policy*.

Then enter the **Google API Key**.

This page then displays the converted location to the Admin.

To access this functionality, select *Users > Utilities > Get Location Details* and the following page appears:

Configure the following parameters:

- **Date:** Select a desired date range to define the period for which location details are to be processed.

*To avoid long processing time, it is recommended to select the date range as per the events available with your system.*

- **Process:** Select a desired option — Pending Events or All Events.

**Pending Events:** Select this option to consider the pending events available with the system which do not have the location address against the coordinates during get location process.

**All Events:** Select this option to consider all the events available with the system during get location process. When you run the get location process for all events, the events which are already processed, will also be reprocessed.

### User Selection

- **Select Users:** Select a desired option — User-wise, Group-wise or All for whom the location is to be processed.

If you select the User-wise, select the desired User from the picklist.

If you select the Group-wise, select the desired Group from the picklist.

Click **Process** to start processing location details for selected users.

Once processed, the details will be displayed in the **Result** table.

The **Result** table displays details like — User ID & Name, Event Date & Time, Coordinates, Location, Status (Success or Failure) and Status Description.

# User Details Export

This functionality enables the administrator to export user profile data such as the user's personal information, contact information, official information etc. in the Excel format. The administrator can either use a system-defined format or customize the export format by selecting the required user fields.

To access this functionality, Select the **Users module > Exports > User Details**

## Export

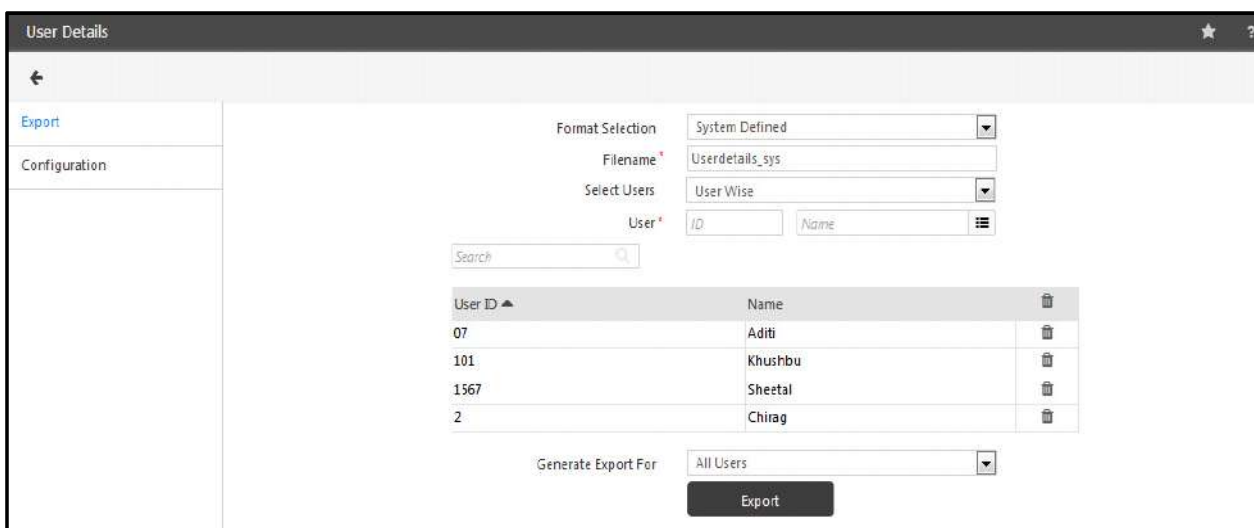

The **User Details** page opens as follows:

The screenshot shows the 'User Details' page with the 'Export' tab selected. The 'Format Selection' dropdown is set to 'Custom'. The 'Filename' field is empty. The 'Select Users' dropdown is set to 'User Wise'. The 'User' field shows 'ID' and 'Name' as selected fields. The 'Generate Export For' dropdown is set to 'All Users'. An 'Export' button is visible at the bottom.

**Format Selection:** In the Export tab, Select the format as **Custom** or **System Defined**. To configure the custom export template, [See "Configuration" on page 688](#).

## System Defined Format

The screenshot shows the 'User Details' page with the 'Export' tab selected. The 'Format Selection' dropdown is set to 'System Defined'. The 'Filename' field is set to 'Userdetails\_sys'. The 'Select Users' dropdown is set to 'User Wise'. The 'User' field shows 'ID' and 'Name' as selected fields. A search bar is visible above a table of users. The table has columns for 'User ID' and 'Name'. The 'Generate Export For' dropdown is set to 'All Users'. An 'Export' button is visible at the bottom.

User ID	Name
07	Aditi
101	Khushbu
1567	Sheetal
2	Chirag

**Filename:** Enter an appropriate Filename for the export file as shown.

**Select Users:** Select the user based on following filters:

- **User Wise-** To select users randomly using the user picklist.

- **Group Wise** - To select all users associated with a particular enterprise group using the Group Wise dropdown list.
- **ALL** - To select all users in the system.

**Generate Export for:** You can Generate Export For All Users, Active Users or Inactive users.

Click the **Export** button. You can open or save the exported file at a desired location.

The **System defined** exported file for the selected users is shown below. It displays all the details like User ID, User Name, ReferenceID, ShortName, BloodGroup etc.

Userdetails_sys (Compatibility Mode) - Microsoft Excel														
UserID	UserName	ReferenceID	ShortName	Gender	BloodGroup	BirthDate	JoiningDate	LeavingDate	LocAddress1	LocAddress2	LocStreet	LocCity	LocStat	LocCountry
07	Aditi	7	Aditi	Female	AB+	02/09/1993	12/07/2016							
101	Khushbu	101	Khushbu	Female	B+	11/16/1993			D-91, Nandanvan Soc.	Vadsar	GIDC-Makarpura	Varodar	Gujarat	India

1567	Sheetal
2	Chirag

Generate Export For: All Users

Export

The configuration of custom export template is done in Configuration section. See [“Configuration” on page 688](#).

Once the configuration is done, configure the fields in Export section and click on **Export** button.

The custom export file is shown as below. Here the fields will be displayed as per the selection in Configuration section.

User ID	User Name	Birth Date	Joining	Gender	Marital Status	Personal	Personal Mobile	Personal Email	Official Mobile	Official Email
07	Aditi	02/09/1993	12/07/2016	Female		8722212444	9612362302			
101	Khushbu	11/16/1993		Female	Married		9686423523		9787624826	khushbu.g@matrxrd.org
1567	Sheetal	05/12/1987	06/11/2013	Female	Married	9878675678	9682634526	sheetal.raval@gmail.com	8699926301	sheetal.raval@matrxrd.org
2	Chirag	05/09/1990	04/01/2016	Male	UnMarried	9872433367				

## Configuration

The User Details Export can be customized to determine which data appears in the exported file (applicable only for the **Custom** Format Selection).

To do this, click **Users module > Exports > User Details > Configuration** tab.

Click the **Personal Info** collapsible panel.

The screenshot shows the 'User Details' configuration interface. On the left, there is a sidebar with 'Export' and 'Configuration' tabs. The 'Configuration' tab is active. The main area is titled 'Personal Info' and contains a 'Select Fields To Export' section. This section has a search bar, a 'Select All' checkbox, and a table of fields. The 'User ID' field is selected, while 'User Name', 'Reference ID', 'Birth Date', and 'Joining Date' are not. Below the table, it says '1 - 5 of 23 records'. At the bottom, there are expandable sections for 'Contact Info' and 'Official Info', and a 'Save' button.

Fields	
User ID	<input checked="" type="checkbox"/>
User Name	<input type="checkbox"/>
Reference ID	<input type="checkbox"/>
Birth Date	<input type="checkbox"/>
Joining Date	<input type="checkbox"/>

You can select desired fields or can select all the fields at once.

Select the check boxes of the desired fields to be included in the new custom export template.

This screenshot is similar to the previous one, but in the 'Select Fields To Export' table, the 'User Name' and 'Reference ID' fields are now selected (checked), while 'User ID', 'Birth Date', and 'Joining Date' are not. The rest of the interface remains the same.

Fields	
User ID	<input type="checkbox"/>
User Name	<input checked="" type="checkbox"/>
Reference ID	<input checked="" type="checkbox"/>
Birth Date	<input type="checkbox"/>
Joining Date	<input type="checkbox"/>

OR

Select the **Select All** check box to select all the fields on all the pages at once and to include them in the new custom export template.

The screenshot shows a web application window titled "User Details". On the left is a sidebar with "Export" and "Configuration" tabs. The main area displays the "Personal Info" section, which is expanded to show a "Select Fields To Export" table. The table has a search bar, a "Select All" checkbox (checked), and a list of fields with checkboxes. The fields listed are Fields, User ID, User Name, Reference ID, Birth Date, and Joining Date. All checkboxes are checked. Below the table is a pagination control showing "1 - 5 of 23 records" and a set of navigation buttons. At the bottom of the main area are two collapsed sections: "Contact Info" and "Official Info". A "Save" button is located at the bottom center of the window.

Fields	
User ID	<input checked="" type="checkbox"/>
User Name	<input checked="" type="checkbox"/>
Reference ID	<input checked="" type="checkbox"/>
Birth Date	<input checked="" type="checkbox"/>
Joining Date	<input checked="" type="checkbox"/>

Similarly, click the **Contact Info** and **Official Info** collapsible panels and follow the same steps as mentioned in **Personal Info**.

All the selected fields will be included in the new custom export template.

Click **Save** to save the configuration. Now click the **Export** tab to export the user details in excel file.

# User Reports

---

These reports can be obtained using the **Reports** section under the **Users** module. The Reports can be categorized as follows:

“Device-wise Reports”

“User Info”

“Others”

“User Events”

## Device-wise Reports

### Panel Wise Users

This report displays the Panel wise details of the selected users for along with the panel doors on which users are assigned in the system.

The screenshot shows a web application window titled "Panel-Wise Users". Inside, there is a "User Selection" section. It includes a "Select Users" dropdown menu currently set to "User Wise". Below this, there are input fields for "User ID" and "User Name". At the bottom of the selection area, there is a "Generate Report For" dropdown menu set to "All Users". A "Generate Report" button is located at the bottom center of the window.

Configure the following parameters:

#### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

Picklist For All Users

## Retirement Info

This report displays the details of selected users who are going to retire in the selected time period and specified retirement age.

The screenshot shows a web-based configuration window titled "Retirement Info". It contains several input fields and dropdown menus for setting report parameters. At the top, there are date pickers for "Date" (set to 06/21/2023) and "Retirement Age" (set to 06/21/2023). Below these is a section titled "Optional Parameters" which includes a "Group By" dropdown (set to "Organization") and an "Organization Name in Header As Per" dropdown (set to "User Selection"). Further down is a "User Selection" section with "Select Users" (set to "Group Wise"), "Select Group" (set to "Organization"), and "Organization" (with "ID" and "Name" sub-fields). At the bottom, there is a "Generate Report For" dropdown (set to "All Users") and a "Generate Report" button.

Configure the following parameters:

### Optional Parameters

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Change Group

This report displays the details of the selected users whose reporting groups have been changed within the selected date range.

The screenshot shows the 'Change Group' report interface. At the top, there's a header bar with a back arrow, a search icon, and a star icon. Below the header, there's a 'Date' section with two date pickers set to '06/21/2023'. Underneath, there's a 'User Selection' section with a 'Select Users' dropdown menu set to 'User Wise'. Below this, there's a 'User' section with two input fields: 'ID' and 'Name'. At the bottom, there's a 'Generate Report For' dropdown menu set to 'All Users' and a 'Generate Report' button.

Configure the following parameters:

**Date:** Select the **To** and **From** date for which the report is to be generated.

### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

The screenshot shows the 'Picklist For All Users' pop-up window. At the top, there's a green header bar with the text 'Total Selected: 0 Records'. Below the header, there's a search bar with the placeholder text 'Search' and a 'Show Selected' button. Underneath, there's a table with two columns: 'User ID' and 'Name'. The table contains 10 rows of data, each with a checkbox in the 'User ID' column. The data is as follows:

User ID	Name
<input type="checkbox"/> 1	SALIM ANSARI
<input type="checkbox"/> 10	RAJENDRA GOSWAMI
<input type="checkbox"/> 1001	ANKITKUMAR SOHLIYA
<input type="checkbox"/> 1002	MEGHA H SHUKLA
<input type="checkbox"/> 1003	UMESH M TALANPURI
<input type="checkbox"/> 1004	DARSHAK B PATEL
<input type="checkbox"/> 1007	DHAVAL I PATEL
<input type="checkbox"/> 1008	MAYANK K KORAT
<input type="checkbox"/> 1009	DIPTI K RATHWA
<input type="checkbox"/> 1010	RAHUL S SHAH

Below the table, there's a pagination bar showing '1 - 10 of 1986 records' and a set of navigation buttons: '<', '<', '1', '2', '3', '...', '199', '>', '>'.

At the bottom, there are two buttons: 'OK' and 'Cancel'.

Select the desired check boxes of the desired profiles. Click **OK**.

The selected profiles appear in the grid.

Search

## User Events

### In/Out Event

This report displays the details of the Entry and Exit events for the selected users.

The screenshot shows a web-based configuration window titled "IN/OUT Event". At the top, there are date and time pickers. The date range is set from 06/21/2023 to 06/21/2023, and the time is set from 00:00 to 22:59. Below this is a section titled "Optional Parameters" which contains several dropdown menus: "Group By" (set to Organization), "Group By" (set to Date), "New Page For Each Date/User" (unchecked), "Status" (set to Both), and "Organization Name in Header As Per" (set to User Selection). There is also a checkbox for "Group Needed in Report" which is unchecked. Below the optional parameters is a section titled "User Selection" which includes a "Select Users" dropdown (set to User Wise), a "User" field with a search icon, and a "Generate Report For" dropdown (set to All Users). At the bottom center is a "Generate Report" button.

Configure the following parameters:

**Date:** Select the **To** and **From** date for which the report is to be generated.

**Time:** Select the time duration from which In/Out Event report is to be generated.

#### Optional Parameters

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Group Needed in Report:** Select the check box to display the name of the selected group in the generated report.

**Group By:** Select the desired option— **Date** or **User**

**New Page For Each Date /User:** Select this check box if you wish the report to start from a new page for every user/date.

**Status:** Select the desired option— **Both**, **Allow** or **Denied**.

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

#### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

11	VDS	1	0	1

## Access Denied

This report displays the details of the denied Events along with the credentials for the selected users.

The screenshot shows the 'Access Denied' report configuration interface. It includes a date range selector at the top. The 'Optional Parameters' section contains a dropdown for 'Enterprise Group In Report' (set to 'Organization'), a list of 'Denied Events' with checkboxes for 'Invalid Input' (checked), 'Occupancy Control', '2-Person Rule', 'Time Out', and 'Visitor Escort', a dropdown for 'Organization Name in Header As Per' (set to 'User Selection'), and a list of credential types with checkboxes for 'PIN' (checked), 'Card', 'Card + PIN', 'Finger', 'Finger + PIN', and 'Finger + Card'. The 'User Selection' section includes a dropdown for 'Select Users' (set to 'User Wise'), a table with columns 'ID' and 'Name', and a dropdown for 'Generate Report For' (set to 'All Users'). A 'Generate Report' button is located at the bottom left.

Configure the following parameters:

**Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

**Enterprise Group In Report:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Denied Events:** Select the check boxes for the desired denied Events and the credentials for which the report is to be generated.

**Card Type:** If you have selected the Credentials as any one of the following — Card, Card + PIN, API + Card, Card + Face, BLE + Card, Finger + Card, Finger + Card + PIN, Palm + Card, Palm + Card + PIN — then you can select the desired **Card Type** — RFID, QR — option.

**Card Selection:** If you have selected the Credentials as any one of the following — Card, Card + PIN, API + Card, Card + Face, BLE + Card, Finger + Card, Finger + Card + PIN, Palm + Card, Palm + Card + PIN, BLE, BLE + PIN, BLE + Finger, BLE + Palm — then you can select the desired **Card Selection** — Access Card 1, Access Card 2 — option.

*The options Card Type and Card Selection are applicable to ARGO, VEGA, ARGO FACE, PATH V2, ARC DC 200 Direct Doors as well as Panel Doors.*

*For other devices the filters Card Type and Card Selection will not be applicable. If any option is selected in these filters then the same will be ignored and the system will display all the events as per the selected Credential option.*

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

## User Selection

**Select User:** Select the desired option — **User Wise**, **Door-Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Door Usage

This report displays the details of the devices accessed by the selected users for the selected date range.

The screenshot shows a web application window titled "Door Usage". It features a date range selector at the top with "Date" and "06/22/2023" displayed. Below this is a "User Selection" section with a "Select Users" dropdown menu set to "User Wise". There are input fields for "User ID" and "Name", and a "Generate Report For" dropdown menu set to "All Users". A "Generate Report" button is located at the bottom right of the form.

Configure the following parameters:

**Date:** Select the **To** and **From** date for which the report is to be generated.

### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

The screenshot shows a pop-up window titled "Picklist For All Users". It has a green header bar with the text "Total Selected: 0 Records". Below the header is a search bar with the placeholder text "Search" and a "Show Selected" button. The main area contains a table with two columns: "User ID" and "Name". The table lists 10 users, each with a checkbox in the "User ID" column. The users listed are: 1 (SALIM ANSARI), 10 (RAJENDRA GOSWAMI), 1001 (ANKITKUMAR SOHLIYA), 1002 (MEGHA H SHUKLA), 1003 (UMESH M TALANPURI), 1004 (DARSHAK B PATEL), 1007 (DHAVAL I PATEL), 1008 (MAYANK K KORAT), 1009 (DIPTI K RATHWA), and 1010 (RAHUL S SHAH). At the bottom of the table, it says "1 - 10 of 2476 records". Below the table is a pagination control with buttons for "«", "<", "1", "2", "3", "...", "248", ">", and "»". At the bottom of the window are "OK" and "Cancel" buttons.

1 - 10 of 13 records

OK Cancel

You can either select particular device group or can select all the device groups at once.

To select particular Device Groups, click the check boxes of the desired Device Groups.

The screenshot shows a dialog box titled "Select Device Groups". At the top, a green bar indicates "Total Selected: 3 Records". Below this is a search bar and a "Show Selected" link. A "Select All" checkbox is unchecked. A table lists 10 device groups. The first three are selected with blue checkmarks. The bottom of the dialog shows "1 - 10 of 13 records" and a pagination control with "1" highlighted. "OK" and "Cancel" buttons are at the bottom.

The Devices module is available to all users of the COSEC Basic Platform License. You can view, define and configure all the parameters related to COSEC Devices in this module. It is important to configure this module correctly because it precedes the process of user enrollment and formulation of advanced HR policies such as *Time and Attendance* or *Access Control* policies.

VEGA Series

DOOR Series

PATH Series

ARC Series

The various COSEC devices have capacity to support the following number of users:

S. No.	COSEC Device	No. of Users Supported
1	Direct Door V1	500
2	Direct Door V2	2000
3	Direct Door V3	50,000
4	Direct Door V4	50,000
5	NGT Direct Door	10,000
6	Wireless Door	50,000
7	PVR Door	50,000
8	PATH Door	10,000
9	ARC DC100	10,000
10	ARC DC200	50,000
10	ARC IO 800	NA

S. No.	COSEC Device	No. of Users Supported
11	Panel	10,000
12	Panel-Lite	25,000
13	Panel200	25,000
14	Vega Controller	50,000
15	Door FMX	50,000
16	MODE Device	50,000
17	ARGO	50,000
18	ARGO FACE	50,000

*The Direct Door V1, Direct Door V2, PATH Door, ARC DC100, ARC DC200, ARC IO 800, Panel and Panel lite are not supported in COSEC VYOM.*

You can access the COSEC Devices using PIN Number, Biometric Credentials, Smart Cards, Mobile based Access like QR Code Access and Bluetooth based Access. You can also open COSEC Doors using Matrix SARVAM UCS by dialing a number from the keypad. To know more refer to *COSEC Integration* in the SARVAM UCS System Manual.

#### **PIN, Biometric Credentials, Card**

### QR based Access

### Bluetooth based Access

### Access using SARVAM UCS

## Face Recognition

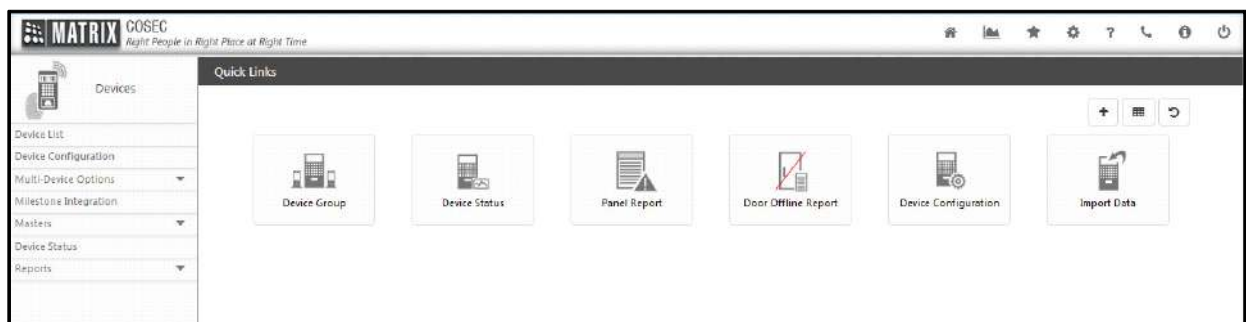

Face Recognition today is the need of the hour and Matrix offers the following devices to choose from as per your requirement:

- The ARGO FACE with built-in facial recognition and liveness detection support for Access Control, Time Attendance & Cafeteria. For details refer to [“ARGO FACE Door”](#).
- The MODE Device is designed for Face Recognition feature which uses in-built camera of the Mobile device for capturing the face. For details, refer to [“MODE Door”](#).
- COSEC Vega, COSEC FMX and COSEC ARGO supports face recognition by using IP camera for capturing the face. For details refer to [“ARGO Door”](#), [“Door FMX”](#) and [“VEGA Door”](#).

To access the **Devices** module,

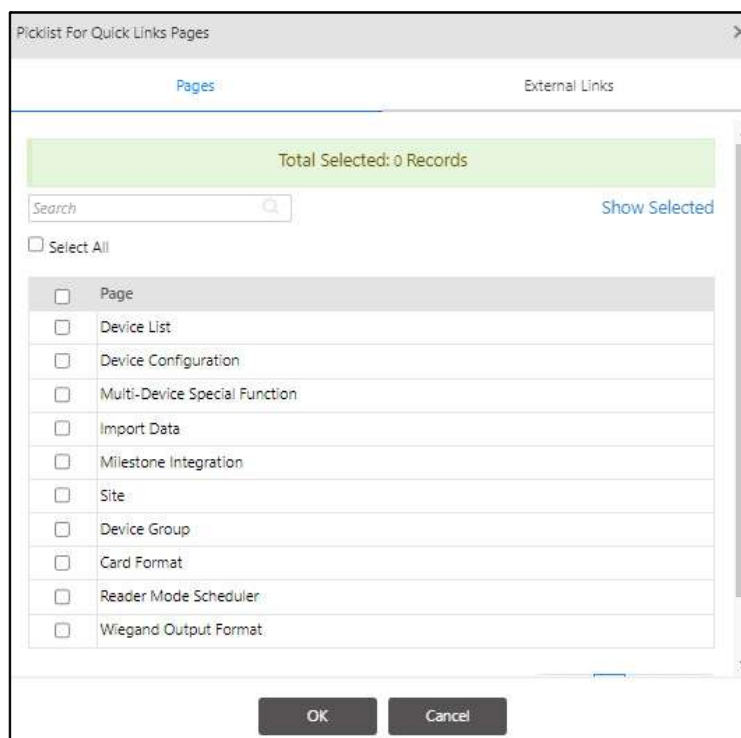

- Click **Devices**  module on the Home page. The **Devices** page appears.

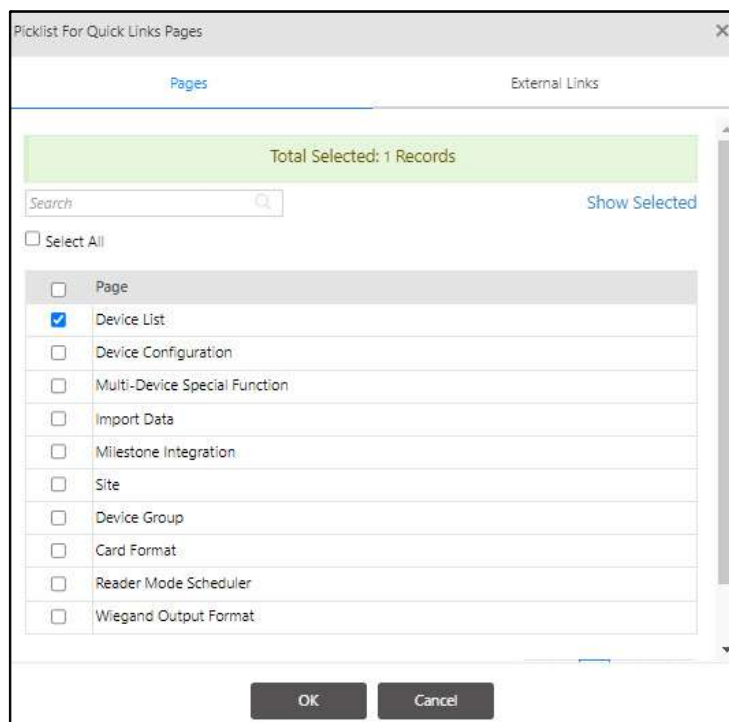

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist for Quick Links Pages** pop-up appears.

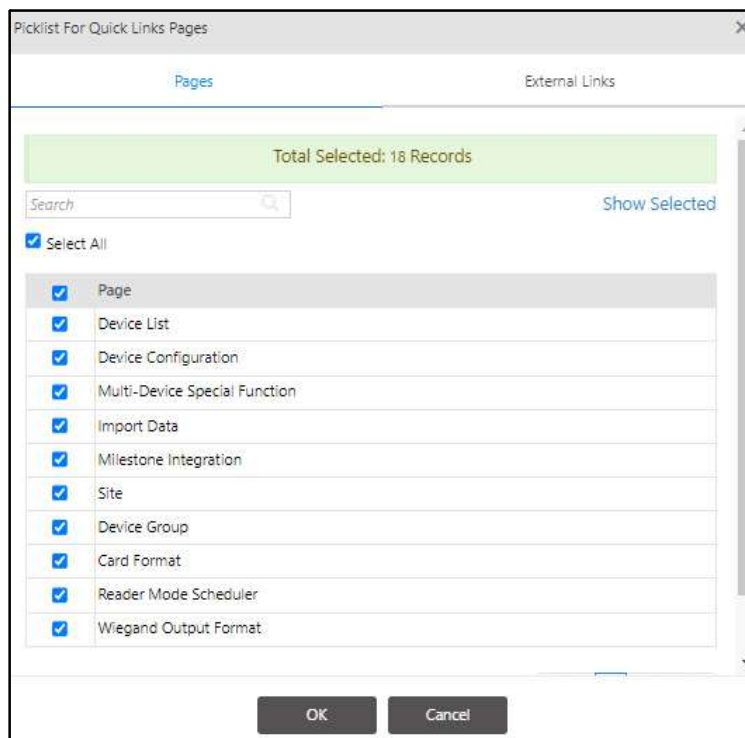

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

**OR**

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

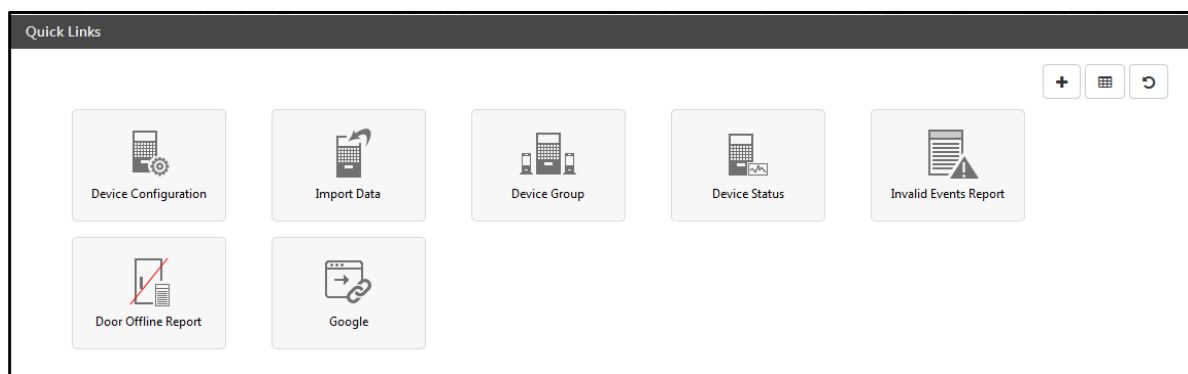

#### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

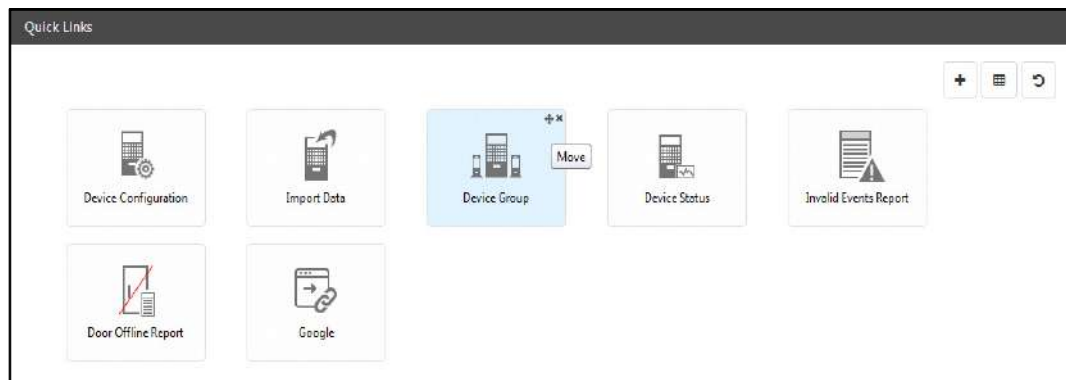

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

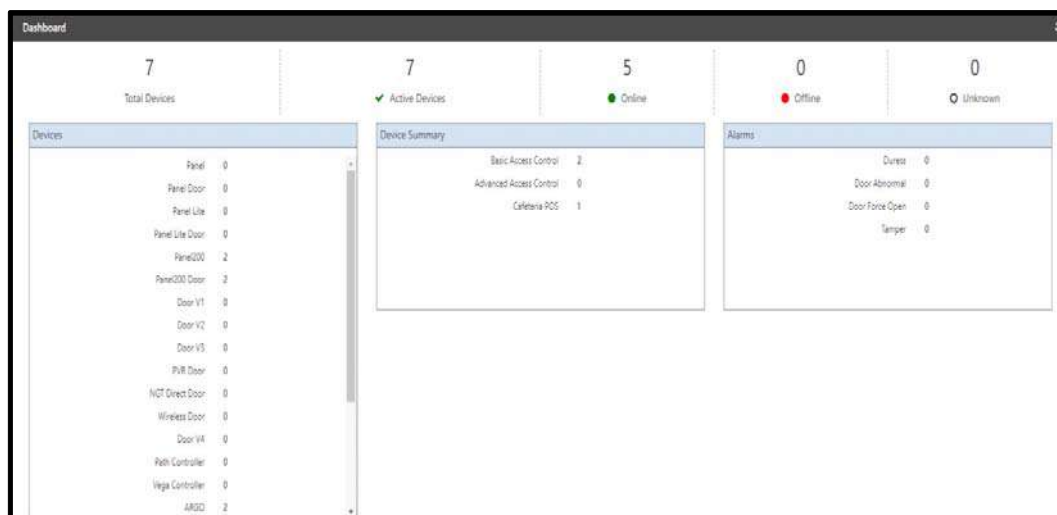

*Quick links are displayed as per rights given to System Account and ESS users.*

## Devices Dashboard

To view the Dashboard,

- Click **Dashboard**  on the **Devices** page.

It displays the following information of the Devices — Device Status, List of Devices, Device Summary and Device Alarms.

## Device Status

- Total Devices: Total number of devices configured in COSEC.
- Active Devices: Total number of devices that are currently active.
- Online Devices: Total number of devices that are currently online with server.
- Offline Devices: Total number of devices that are currently offline with server.
- Unknown Devices: Total number of devices whose status is not known to the server.

## Devices

- This displays the list of various device types configured on the system, along with their individual counts.

## Device Summary

- Basic Access Control: Total number of devices that are configured for Basic Access Control.
- Advanced Access Control: Total number of devices that are configured for Advanced Access Control.
- Cafeteria POS: Total number of devices that are configured for Cafeteria application.

## Alarms

- Duress: Total number of Duress Alarm that are currently unacknowledged.
- Door Abnormal: Total number of currently unacknowledged Door Abnormal events of the doors.
- Door Force Open: Total number of currently unacknowledged Force Open events of the doors.
- Tamper: Total number of currently unacknowledged tampering events of the doors.

To configure an alert message for **Duress** click **Admin Module > System Configuration > Alert Message Configuration**. In Alert Filter, make sure that you select **All/Devices** from the drop-down list and in Event select **Duress** from the drop-down list. For more details, refer "[Configuring Alert Messages](#)".

Maximum 2 fingers can be enrolled as Duress Fingers. To configure the **Maximum No. of Fingers** enrolled click **Admin Module > System Configuration > Global Policy > Maximum No. of Fingers**.

For more information on the above Dashboard options, click the respective information links on the Dashboard.

Clicking **Refresh**  , to update the values on the Dashboard.

The **Devices** Module allows you to add and configure different devices and their corresponding variants. These are as follows:

#### **Direct Doors**

- Door V1
- Door V2
- Door V3
- Door V4
- NGT Direct Door
- Wireless Door
- PVR Door
- Vega Controller
- Door FMX
- Path Controller
- ARC DC100
- ARC DC200
- ARC IO800
- ARGO
- ARGO FACE

#### **Panels**

- Panel
- Panel Lite
- Panel200

#### **Panel Doors**

- Path Panel Door
- PVR Panel Door
- Vega Controller Panel Door
- ARC DC100 Panel Door
- ARC DC200 Panel Door
- ARC IO800 Panel Door
- Door V1/V2/V3/V4 Panel Door
- ARGO Panel Door
- ARGO FACE Panel Door

Although the basic configuration of all devices is a generic process, certain functionalities or configurations may not be available for all devices or all user licenses. For example, Cafeteria configurations are available only for Door V2, Door V3, Door V4, NGT Direct Door, Wireless Door, Door FMX, Vega and ARGO, ARGO FACE devices with a Cafeteria module license. Please refer to the respective device configuration topics for further details.

*For all existing Panel200 devices, it is must for the Admin to update firmware before using PVR as a Panel Door.*

## **Auto Adding New Devices**

It is necessary to add a new device in the COSEC application before proceeding further with configuring it. These devices can be added manually as well as automatically using the **Auto Add New Devices** option.

To add the devices automatically, the administrator must enable the **Auto Add New Devices** check box in Admin Module > System *Configurations* > *Global Policy* > Device. The new devices connected with the COSEC Server

are automatically detected and defined in the COSEC database with a default ID and Name. For details, refer to [“Device”](#) in Global Policy.

For a new device to be auto-detected by the COSEC Server, the administrator must configure the **Server IP Address**, **LAN Settings** and **Port** configurations for the device from the physical Device Menu or Device Web page. For more information, refer to the respective device documents.

You can also auto-add devices that are to be assigned to a particular Device Group by default. Hence, any user and user credentials assigned to the default Device Group can be inherited by the new device automatically without manual intervention.

*If you wish to add a device as a Panel Door, we recommend you to add the same manually in the system if you have enabled **Auto Add New Devices**. This is to prevent the device from being added automatically as a Direct Door when the device comes online.*

*While adding a device make sure the Monitor Service is running.*

*After a new device is added, you must upgrade its firmware, set it to Default factory settings and then Restore the Configurations.*

# Getting Door Online

Devices will be online when their connectivity is established with the Server.

## Server - COSEC CENTRA

Let us consider the following example, to connect COSEC Door V3 with COSEC Server (CENTRA),

- Log into the **Admin Portal** (to do so, enter the following in the web browser: 192.168.101.88/cosecadmin/login. Then, enter the set Username and Password.)
- Click **Monitor Configuration**. The Monitor Configuration page appears.

ID	Monitor Name	Total no. Of Devices
3	MonitorService - 309C23443DA7	67

- If the Monitor Settings have been configured, the details of the Monitor Service appears. Make sure the Monitor Service is running.

*Make sure the Master Service and Admin Portal Service configurations are done and these are running. For details refer to the **Services User Guide**.*

- Click **Service Configuration**, the details of the various services including Monitor Service are displayed.

For details refer to the **Services User Guide**.

- Click **Company Configuration > License and Services**.

The **License and Services** page appears.

- Under **Services**, select the configured Monitor Service. For details refer to the **Admin Mgt Portal User Guide**.
- Now, enter the Default IP Address of COSEC DOOR V3 in the web browser and press the Enter Key.
- Select the **User Name** as **Admin** and enter the set **Password**.
- Click **Settings > LAN Settings**.

The **LAN Settings** page appears.

- The default IP Address appears. You can change the IP Address, if required. Enter the **IP Address** you wish to assign to the door.
- Click **Settings > Basic Profile**.

The **Basic Profile** page appears.

**MATRIX V3 Door - COSEC Door V3 (18)**

**Server Settings - COSEC CENTRA**

This will be used to communicate with Monitor Service

Connectivity Status: ● **Via Ethernet**

Encryption (SSL): ☐

Configuration: ☒ Basic ☐ Custom

URL:

**Web Server**

Encryption (HTTPS): ☐

Interface Selection: ☒ Auto ☐ Manual

Network Interface:

URL:

Directory Name:

**Panel**

Connectivity Status: ● **Disconnected**

Connect to Panel: ☐

Interface Selection: ☒ Auto ☐ Manual

Network Interface:

IP Address:

**Submit Cancel Default**

- In **URL**, enter the COSEC CENTRA IP Address and Port.

Once the connection with the Server is established, the **Connectivity Status** will turn Green.

Now, enter the **COSEC Server IP Address** in the address bar of the web browser and press the Enter Key.

- Click **Device Module > Device Status**.

*Make sure you have enabled the **Auto Add New Devices** check box in Admin Module > System Configurations > Global Policy > Device.*

The **Device Status** page appears.

**Device Status**

Search:

Filter List:  Device Type:  Device Status:  Group By:

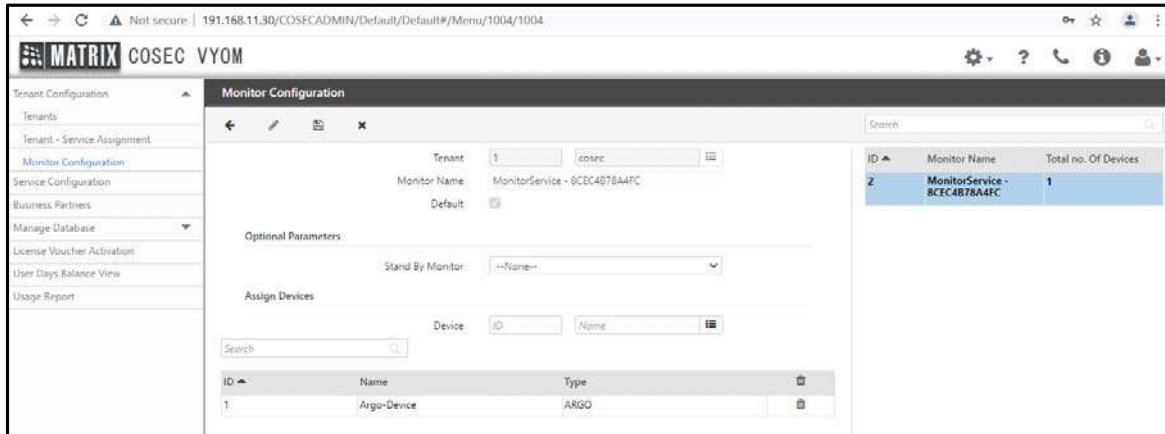

Name	Status	IP	MAC Address	Device Type	Site
Door V3	<span style="color: green;">●</span> Connected	192.168.10.100	00:1B:09:02:66:F3	Door V3	Site-1

- Refresh the Device Status page. The device Status displays Connected and the device will be online.

## Server - COSEC VYOM

Let us consider the following example, to connect COSEC ARGO Door with COSEC Server (VYOM),

- Log into the **Admin Portal** (to do so, enter the following in the web browser: 192.168.101.88/cosecadmin/login. Then, enter the set Username and Password.)
- Click **Monitor Configuration**. The Monitor Configuration page appears.

ID	Monitor Name	Total no. Of Devices
2	MonitorService - BCEC4B78A4FC	1

- If the Monitor Settings have been configured, the details of the Monitor Service appears. Make sure the Monitor Service is running.

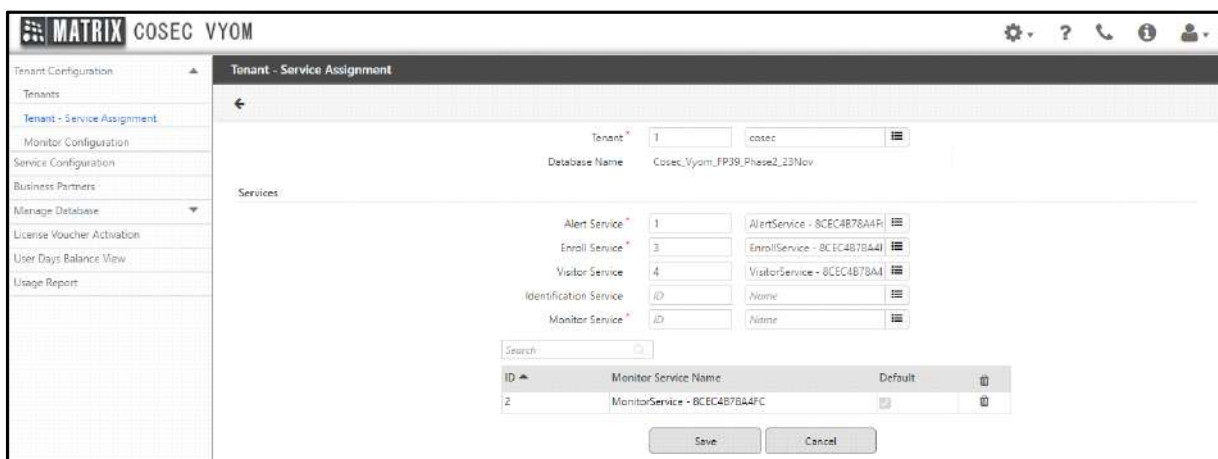

*Make sure the Master Service and Admin Portal Service configurations are done and these are running. For details refer to the **Services User Guide**.*

- Click **Service Configuration**, the details of the various services including Monitor Service are displayed.

For details refer to the **Services User Guide**.

- Click **Tenant Configuration > Tenant - Service Assignment**.

The **Tenant Service Assignment** page appears.

ID	Monitor Service Name	Default
2	MonitorService - BCEC4B78A4FC	

- Under **Services**, select the configured Monitor Service. For details refer to the **Admin Mgt Portal User Guide**.
- Now, enter the Default IP Address of COSEC DOOR V3 in the web browser and press the Enter Key.
- Select the **User Name** as **Admin** and enter the set **Password**.
- Click **Settings > LAN Settings**.

The **LAN Settings** page appears.

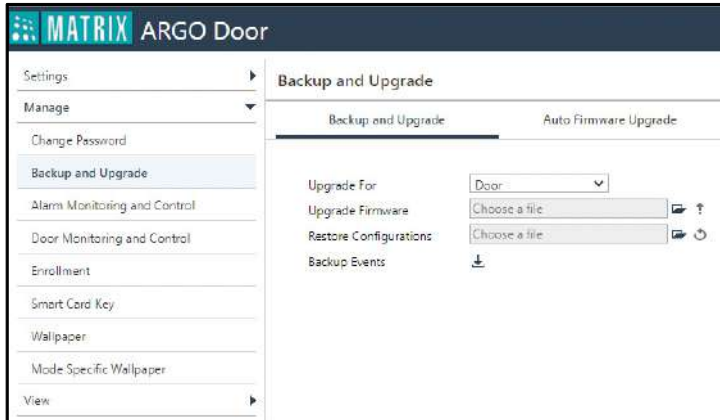

- The default IP Address appears. You can change the IP Address, if required. Enter the **IP Address** you wish to assign to the door.
- Click **Settings > Basic Profile**.

The **Basic Profile** page appears.

Readers	Mode	Configured Reader	Detected Reader
Internal - Card	Entry	EM Prox Reader - Inactive	HID iCLASS-U Reader
Internal - Finger	Entry	Finger Reader - Active	Finger Reader
External - Card	Exit	None	None
External - Finger	Exit	None	None
External - BLE	Exit	None	None

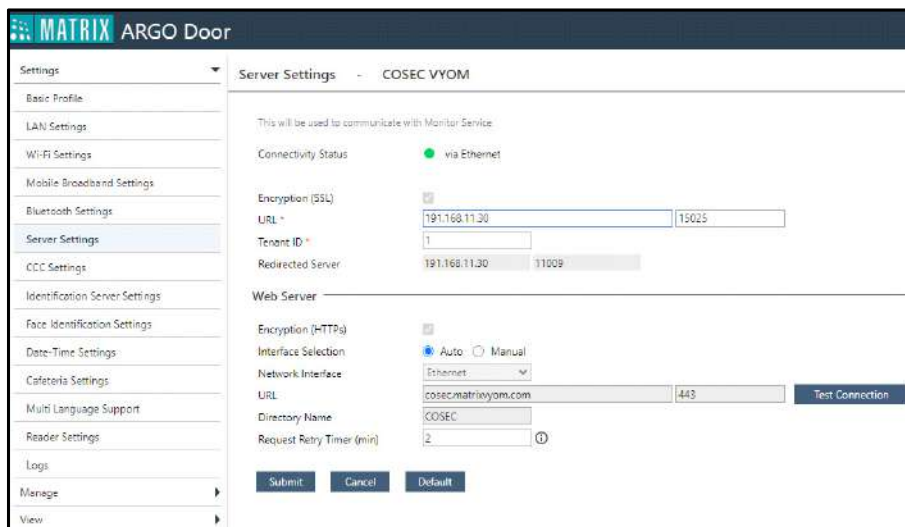

- In **Server Connection**, select the **COSEC VYOM** option.
- Click **Manage > Backup and Update**.

The **Backup and Update** page appears.

The device firmware must be upgraded. To do so, select the file and click **Update**.

- Click **Settings > Server Settings**. The **Server Settings** page appears.

- In **URL**, enter the COSEC VYOM IP Address and Port.
- In **Tenant ID**, enter the ID provided to you.

Once the connection with the Server is established, the **Connectivity Status** will turn Green.

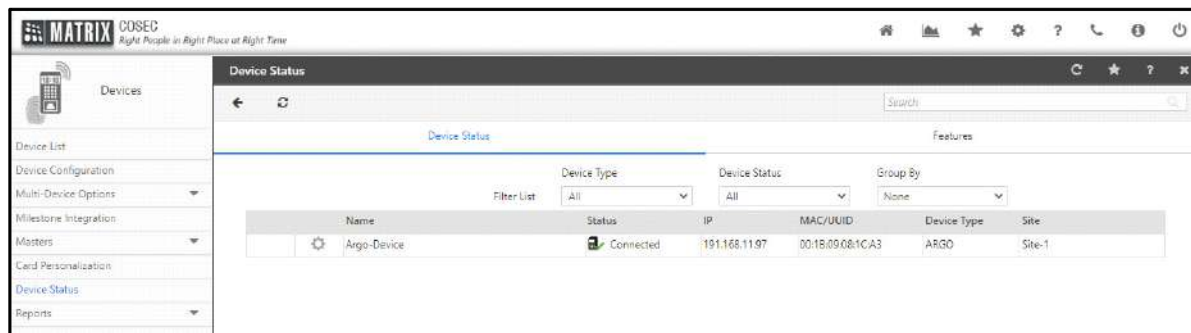

Now, enter the **COSEC Server IP Address** in the address bar of the web browser and press the Enter Key.

- Click **Device Module > Device Status**.

**Make sure you have enabled the *Auto Add New Devices* check box in Admin Module > System Configurations > Global Policy > Device.**

The **Device Status** page appears.

- Refresh the Device Status page. The device Status displays Connected and the device will be online.

# Device List

---

The configuration procedure for every COSEC device is unique and depends on the type of device to be configured and the properties or regulations to be assigned to it.

Both Direct Door and Panel Door devices have considerably different configuration procedures as both follow separate approaches for communicating with the Server and other devices. While Direct Doors are independent doors that communicate individually with the COSEC Server.

Doors can also be connected as Panel Doors via Panel200. The Panel200 is a controlling device that can establish a centralized communication between the Server and other Panel Doors.

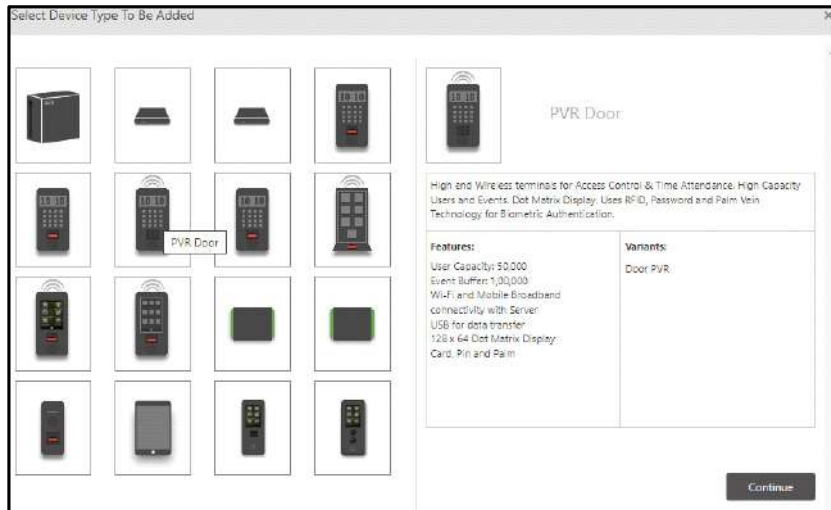

You can configure a COSEC Door as Direct Door or Panel Door.

*Here, Panel refers to Panel/Panel Lite/Panel200.*

## Adding and Configuring Doors

- **For Direct Door:** You can select any door from the options of Door Controller V1/V2/V3/V4, PATH Door, ARC Door, ARC IO800, PVR Door, NGT Door, Wireless Door, Vega Controller, ARGO or ARGO FACE and configure the door directly.
- Click **New**. Then click on the desired device.

- **For Panel Door:** You have to configure Panel200 first. Once Panel200 is configured, you can add the desired door by clicking the Panel Door option.
  - Click **New**, then click **Panel Door**.

- Select the desired **Panel200** from the drop-down list.

- Select the desired **Door Type** from the drop-down list— Door V1, Door V2, Door V3, Door V4, Path Controller, Vega Controller, PVR Door, ARC DC 100, ARC IO 800, ARC DC 200, ARGO, Path V2, ARGO FACE.

To configure doors,

- Click **Devices module > Device List**.

The **Device List** page appears.

- Click **New**.

The **Select Device Type To Be Added** pop-up appears.

- Click on the desired Door Type.
- Click **Continue** to proceed.

The Device Configuration page appears.

Refer to the respective topic for details.

- “NGT Door”
- “PVR Door”
- “ARC Door”
- “ARC IO-800”
- “PATH Door”
- “Door Controllers”
- “Door FMX”
- “VEGA Door”
- “Wireless Door”
- “ARGO Door”

- “ARGO FACE Door”
- “Panel200”
- “MODE Door”

After configuring the devices, the **Device List** appears.

ID	Name	Device Type	Site	Status	Copy Configuration To
12	ARGO_Device	ARGO	Site-1	Active	
11	ARC DC200_1	ARC DC 200	Site-1	Active	
10	VEGA_12	Vega Controller	Site-1	Active	
9	NGT_Device 1	NGT Direct Door	Site-1	Active	
8	Wireless Door	Wireless Door	Site-1	Active	
7	PVR Door	PVR Door	Site-1	Active	
6	DoorV4_Device	Door V4	Site-1	Active	
5	DoorV3_Device	Door V3	Site-1	Active	
4	DoorV2_Device	Door V2	Site-1	Active	
3	DoorV1_Device	Door V1	Site-1	Active	
2	PATH V2_1	Path V2	Site-1	Active	
2	ARGO FACE_PD	Panel200 Door	Site-1	Active	
1	PathV2_2	Path V2	Site-1	Active	
1	Argo_1Device	Panel200 Door	Site-1	Active	

1 - 14 of 15 records

You can also copy the configurations of a device to other devices from the Device List. For details refer to “[Copy Configurations To](#)”.

You can view the Device list based on the filters — **Device Type**, **Device Status** and **Site**.

You can connect **External Readers** to the door controller and configure it from **Device > Device Configuration > Profile > Readers > External Readers**.

**Device Configuration**

21 PVR\_Ground Fl...  
PVR Door  
0/10000

**Readers**

Auto Detect Readers ☐

**Internal Readers**

Mode: Entry  
Card Reader Type: None

Search:

Member No	Card Format	Configurable Bits
1	Default Format	0

Palm Reader Type: None  
Enable Scheduling: ☐  
Reader Mode Schedule: ID Name

**External Readers**

Mode: Exit  
External Reader Type: 

- None
- None
- EM Prox Reader
- HID Prox Reader
- MIFare-U Reader
- HID iClass-U Reader
- HID iClass-W Reader
- UHF Reader
- MIFare-W Reader
- PN-W Reader

Exit Switch: ☐

These Readers are used to read and detect cards and finger templates enrolled for the user.

You can use Read Only Card as well as Smart Card.

The External Reader type selection depends on the available card/credentials with you.

### ***Reader Types and supported credentials***

- **EM Prox Reader:** EM Prox Read Only Card
- **HID Prox Reader:** HID i-class Low Frequency Read Only Card.
- **MiFare-U Reader:** Mifare Smart Card.
- **HID iClass-U Reader:** HID i-class Smart Card.
- **HID iClass-W Reader:** HID i-class at Wiegand Interface; Read Only Card.
- **UHF Reader:** UHF Card at Wiegand Interface.
- **Combo Exit Reader:** Finger and any card (Type of Card is automatically detected by the Reader).
- **MiFare-W Reader:** Mifare at Wiegand Interface; Read Only Card.
- **PIN-W Reader:** Pin Reader.
- **CB U Reader:** Reader with BLE support.
- **CB W Reader:** Reader CB at Wiegand Interface.
- **ATOM RD300:** Pin, RFID Card, Mobile Credential over BLE and Fingerprint.
- **ATOM RD200:** RFID Card, Mobile Credential over BLE and Finger.
- **ATOM RD100:** Card and Mobile Credential over BLE.

### **COSEC PATH Readers**

The variants; RDCE, RDCEP, RDCI, RDCM can be used as Combo Exit Readers, that is, you can use finger as well as card as the credential.

- **COSEC PATH Reader:** RDCE - EM Prox Cards  
RDCP - HID- Prox Cards  
RDCI - HID-iClass Cards  
RDCM- Mifare Cards  
RDCE - Finger and EM Prox Cards  
RDCEP - Finger and HID- Prox Cards  
RDCI - Finger and Mifare/EM Prox /HID-iClass Cards  
RDCM - Finger and Mifare Cards
- **COSEC ATOM Readers:** The type of card supported in each COSEC ATOM variants — RD300, RD200 and RD100 is dependent upon their sub-variants as described below.
  - **ATOM RD300**
    - ATOM RD300SFM - Mifare / Desfire / NFC / Combo Cards
    - ATOM RD300SFI - HID i - Class, Mifare / Desfire / NFC / Combo Cards
    - ATOM RD300SFE - Proximity Card

- **ATOM RD200**
  - ATOM RD200SFM - Finger and Mifare / Desfire / NFC / Combo Cards
  - ATOM RD200SFI - Finger and HID i - Class, Mifare / Desfire / NFC / Combo Cards
  - ATOM RD200SFE - Finger and Proximity Card
- **ATOM RD100**
  - ATOM RD100KM - Mifare / Desfire / NFC / Combo Cards
  - ATOM RD100KI - HID i - Class, Mifare / Desfire / NFC / Combo Cards
  - ATOM RD100M - Mifare / Desfire / NFC / Combo Cards
  - ATOM RD100I - HID i - Class, Mifare / Desfire / NFC / Combo Cards
  - ATOM RD100E - Proximity Card
  - ATOM RD100KE - Proximity Card

## Copy Configurations To

After the devices are added, the Device List displays all these devices. If you wish to copy the configurations from a device to multiple devices, you can do so using **Copy Configurations To**  option.

The **Copy Configurations To**  option will be visible only against those device for which rights have been provided. For details, refer to [“Assigning Device Rights”](#) under [“System Accounts”](#).

*Copy Configurations To is applicable to the following devices — Panel 200, Direct Doors - VEGA, ARC DC200, ARC IO800, Path V2, MODE, ARGO, ARGO FACE, Panel Doors - VEGA, ARC DC200, ARC IO800, Path V2, ARGO, ARGO FACE.*

*If certain parameters are configured and Copy Parameters To option is clicked, then:*

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters To option is clicked, then*

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#).*

To do so,

- Click **Copy Configurations To**  of the device whose configurations you wish to copy to other devices.

- The **Applicable Devices** pop-up appears.

The screenshot shows a window titled 'Applicable Devices' with a close button (X) in the top right corner. At the top, a green bar displays 'Total Selected: 0 Records'. Below this is a search bar with the placeholder text 'Search' and a magnifying glass icon, followed by a 'Show Selected' button. Underneath, there is a checkbox labeled 'All Devices'. The main area contains a table with three columns: a checkbox, 'ID', and 'Name'. The table lists three devices: ID 10 (VEGA\_12), ID 13 (Vega\_2), and ID 14 (VEGA\_Device\_12). At the bottom, there are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	ID	Name
<input type="checkbox"/>	10	VEGA_12
<input type="checkbox"/>	13	Vega_2
<input type="checkbox"/>	14	VEGA_Device_12

The devices that appear in the **Applicable Devices** pop-up will be of the same family and device type. Let us understand this:

- In case of Direct Door, for example if you click the Copy Parameters To corresponding to a Vega device, then the pop-up will display other Vega Direct Doors only. If in the Device List you have direct door devices — ARGO1, ARGO2, Vega1 and Vega2, then this pop-up will display only Vega1 and Vega2.
- In case of Panel Door, for example if you click the Copy Parameters To corresponding to the Vega Panel Door device, then the pop-up will display other Vega Panel Doors connected with the same Panel only. If in the Device List you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, ARGOPD1, ARGOPD2. In Panel2 the Panel Doors connected are Vega PD3 and Vega PD4. Then, if you are click the Copy Parameters To of PanelPD3, then this pop-up will display VegaPD4 only.

You can select the particular devices or you can select all the devices at once.

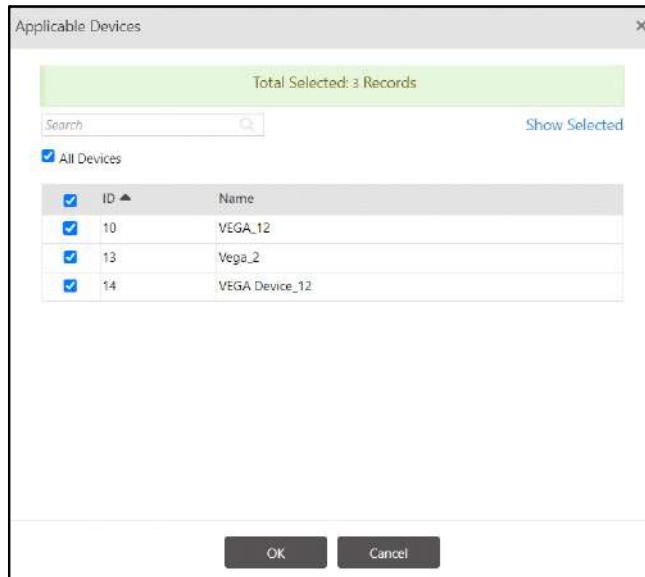

- To select the particular devices, click the check boxes of the desired devices.

This screenshot shows the same 'Applicable Devices' window, but now the checkbox for ID 10 (VEGA\_12) is checked. The green bar at the top now displays 'Total Selected: 1 Records'. The rest of the interface, including the search bar, 'All Devices' checkbox, and 'OK/Cancel' buttons, remains the same.

<input type="checkbox"/>	ID	Name
<input checked="" type="checkbox"/>	10	VEGA_12
<input type="checkbox"/>	13	Vega_2
<input type="checkbox"/>	14	VEGA_Device_12

OR

- To select all the devices, select the **All Devices** check box. All the devices on all the pages are selected.

- Click **OK**.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

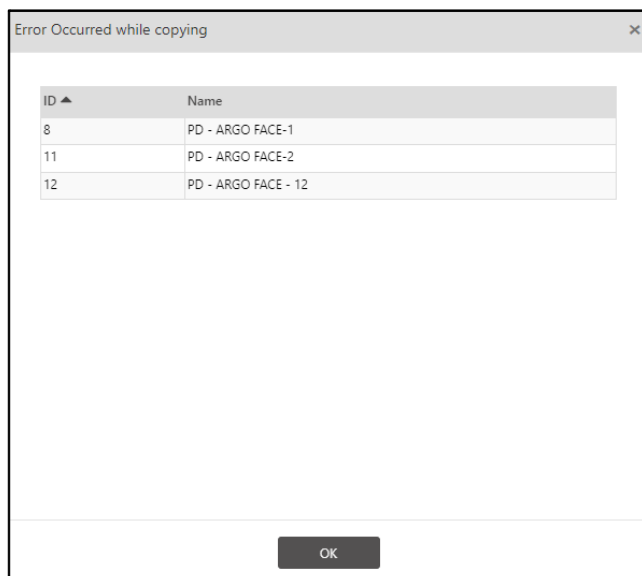

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

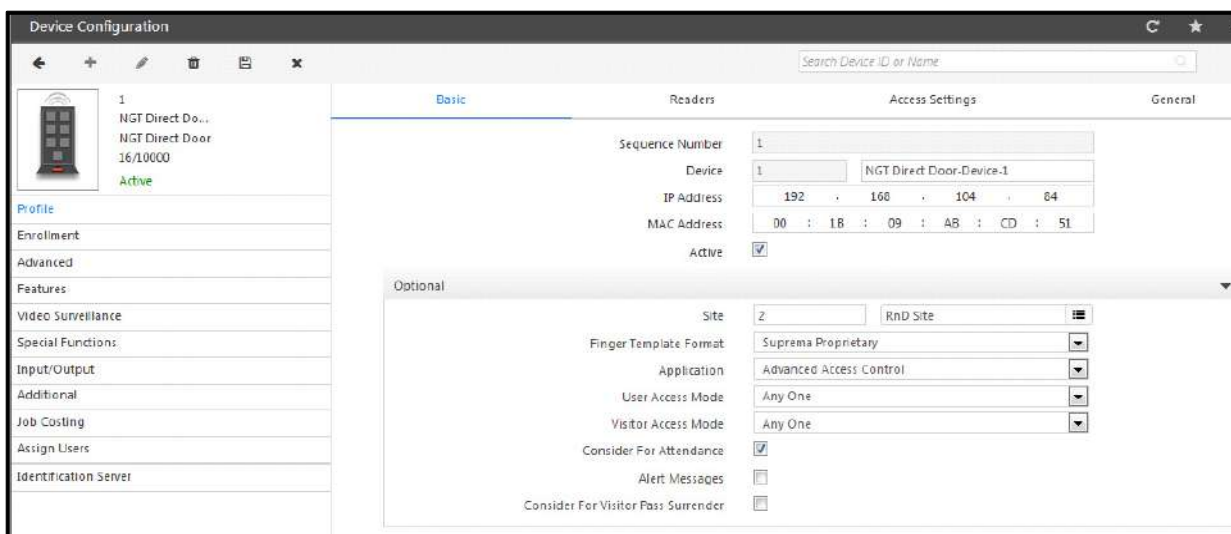

If all applicable parameters are copied successfully to all the devices/selected devices, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed as well as the Error occurred while Copying pop-up will appear with the details — Device ID, Device Name — of the devices to which the configurations were not copied.

# NGT Door

The Device Configuration page for NGT Door appears as shown below.

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes Online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “Auto Add New Devices” check-box. Once the device is connected in network, it will come Online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

Once the device is configured, click the **Save** button to save the configuration.

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)

- *“Assign Users”*
- *“Cafeteria”*
- *“Identification Server”*

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

- “Basic”
- “Readers”
- “Access Settings”
- “General”

## Basic

The **Basic** section for “NGT door” is shown below:

The screenshot shows the 'Device Configuration' window with the 'Basic' tab selected. The left sidebar lists various configuration sections: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area displays the configuration for 'NGT Direct Door-Device-1'. Fields include Sequence Number (1), Device (1), IP Address (192.168.104.84), and MAC Address (00:18:09:AB:CD:51). There is an 'Active' checkbox which is checked. Below these fields is an 'Optional' section with dropdown menus for Site (Z), RnD Site, Finger Template Format (Suprema Proprietary), Application (Advanced Access Control), User Access Mode (Any One), and Visitor Access Mode (Any One). At the bottom of the optional section are checkboxes for 'Consider For Attendance' (checked), 'Alert Messages', and 'Consider For Visitor Pass Surrender'.

Configure the following options as required:

- **Sequence Number** - This is a system generated sequence number for each new device.
- **Device**- Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address** - This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address** - Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active** - Check the box to activate the device on the network.

To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the **“Auto Add New Devices”** checkbox.

The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.

The **Basic** page also offers an **Optional** tab which provides optional configurations as shown below:

- **Site** - Select the site to which this door is to be assigned from the site pick list window. Site is created from Devices> Masters> Site.
- **Finger Template Format** - Select the format as Suprema Proprietary or Suprema ISO according to which the templates will be enrolled. For globally setting the template format, you can set from Global policy.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.

The available license is ACS and Application is set to Basic Access Control. If this ACS voucher exhausts, then while dispatching Basic Configuration of device, application type will be sent as 'Advance Access Control'.

- **User/Visitor Access Mode** - Defines the type and combination of credentials required to identify and validate a user/visitor at the Door Controller. Select the appropriate credential combination from the drop down list.

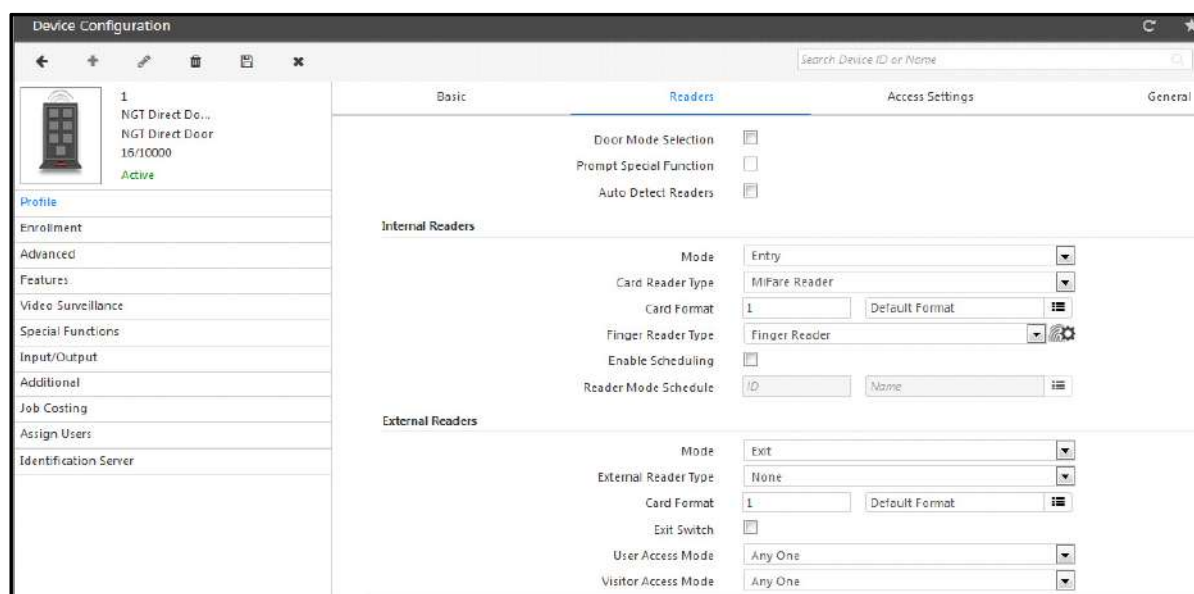

The options available are:

- Any one
  - Card
  - Card + Biometrics
  - Card + Biometrics + PIN
  - Card + PIN
  - Biometrics
  - Biometrics + PIN
  - Biometrics then Card
- **Consider for Attendance** - Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.

- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Check the box to consider the selected device for visitor pass surrender. The Visitor can show his credential on this device to surrender the pass.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

**Door Mode Selection** - If this option is enabled, then user will be prompted to select punch type as IN or OUT while punching on the device.

Eg: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in ext mode then you can select the door mode if “Door Mode Selection” is enabled.

If not selected, user will need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler**.

**Prompt Special Function-** This will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted. This can be enabled only when “Door Mode Selection” is enabled.

**Auto Detect Readers** - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

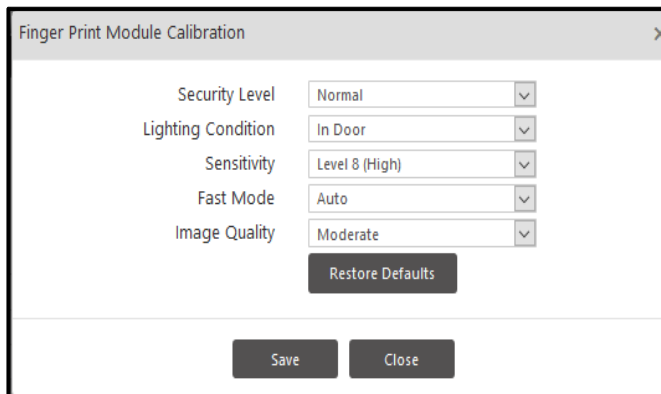

### Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type;** Select the Card Reader Type from the following options:

- EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader
- **Card Format:** Select a card format to be applicable for internal readers of the device.
    - See Devices> Master> Card Format
  - Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level**, **Lighting Condition**, **Sensitivity**, **Fast Mode**, **Image Quality** and **Restore Defaults** for the selected FP Reader as shown.

### Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels.

For regular Time-Attendance system “**Normal**” level can be selected. For high security areas requiring complete or maximum matching of template, “**Highly Secure**” level must be selected. For approximate matching of template, “**Secure**” level can be selected.

- **Lighting Condition:** Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment. Select the In Door or Out Door option based on the device location.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Fast Mode parameter can be used to shorten the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. There is also an Auto mode.
- **Image Quality:** When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest option might lead to higher number of finger rejections during the enrollment process.

*Good quality of enrollment( around 70-75% quality) is recommended for proper identification of enrolled templates.*

- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.
- Click on the **Save** button.
- **Enable Scheduling:** Select this check box to **Enable Scheduling** to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler**.

## External Readers

This option allows the configuration of the External Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.

*Using PIN-W Reader; user can change their PIN number through devices.*

- **Card Format** - Select a card format to be applicable for external readers of the device. This is applicable for all direct doors.
- **Exit Switch** - Select this check box to enable the use of **Exit Switch**.
- **User/Visitor Access Mode** - Select the access mode from the options shown below:
  - Any One
  - Card
  - Biometrics
  - Card + Biometrics
  - Biometrics then Card
- **Access Control On Exit Mode** - Select this check box to enable the checking of the following access control policies on door when the external reader is in the 'exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group

When this parameter is unchecked, all the following access control features will be checked on door (which are applicable and configured).

- User enabled
- Blocked user
- Time Based Access Check
- ASC
- User Access Group
- Deadman
- Door application mode

- Use count
- Mantrap
- Anti-pass back
- Panel Route access
- Smart card based route access
- 2-person
- Access mode
- Occupancy control
- Visitor escort rule

## Access Settings

The **Access Settings** page appears as shown below:

The screenshot shows the 'Access Settings' tab in the 'Device Configuration' window. The left sidebar lists various configuration categories, and the main area displays settings for the selected device (NGT Direct Door 4/10000, Active). The settings include:

- Universal Time Zone:** A dropdown menu showing '(GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai'.
- Time Format:** A dropdown menu showing '24 Hours'.
- Auto Synchronize with NTP:** A checked checkbox.
- Preferred NTP Server:** An empty text input field.
- Working Days:** A grid of checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday, all of which are checked.
- Working Hours(HH:MM):** Two text input fields showing '00:00' and '23:59'.
- Holiday Schedules:** A table with four rows, each containing a 'Holiday Schedule' number (1-4) and a corresponding 'Schedule' name (Schedule 1-4).

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.

If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.

If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.

If it receives updated Date and Time then Updated Date and Time will be reflected on device web-page and display screen.

2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
3. If user has manually entered Date and Time from web- page or Device Menu then those values of Date and Time will be reflected on device web-page and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule pick list.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

## General

The **General** page appears as follows. Enter all general details applicable to the device in this section.

The screenshot shows the 'Device Configuration' window with the 'General' tab selected. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, and Assign Users. The main area displays settings for a device named '7 NGT door' (NGT Direct Door, Q/10000, Active). The 'Mute Buzzer' checkbox is unchecked. Below it, four display messages are configured, each with a checked 'Display Message' checkbox, a 'Schedule' range, and a 'Message' text field. The messages are: 'Good Morning' (00:00 to 11:59), 'Good Afternoon' (12:00 to 15:59), 'Good Evening' (16:00 to 20:59), and 'Good Night' (21:00 to 23:59). A search bar at the top right allows searching by device ID or name.

Display Message	Schedule	Message
<input checked="" type="checkbox"/>	00:00 - 11:59	Good Morning
<input checked="" type="checkbox"/>	12:00 - 15:59	Good Afternoon
<input checked="" type="checkbox"/>	16:00 - 20:59	Good Evening
<input checked="" type="checkbox"/>	21:00 - 23:59	Good Night

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively.
- **Voice Guidance** - Select this check box to enable Voice Guidance feature on door which will guide the user through voice.
- **Enable Display Messages** - This feature allows the user to enable display messages to be displayed on the door device. Upto 4 display messages can be configured for a door.
- **Display Message** - Enable each display message individually by selecting this checkbox.
- **Schedule** - For each message, the user needs to define the time period between which this message is to be displayed.
- **Message** - Enter the message to be displayed in this field. Maximum 21 characters allowed.
- **Multi-Language Support** - Select this check box to enable multi-language support for the selected device.

The **Display From** field shall display the reading order for the selected language.

# Enrollment

The Enrollment page appears as shown below.

- **Enroll from Device** - Select this check-box to enable the enrollment of user from the door controller. When this check-box is enabled, 'Enroll User' special function on that device will get active as shown below.

If 'Enroll User' special function & 'Enroll From Device' check-box both are inactive in device configuration, then on activating 'Enroll User' special function, 'Enroll From Device' check-box will be enabled.

No.	Function Name	Active	JOB Selection	User Group	Card-1
1	Official Work - IN	Yes	Yes	All	
2	Official Work - OUT	Yes	Yes	All	
3	Short Leave - IN	Yes	Yes	All	
4	Short Leave - OUT	Yes	Yes	All	
5	Regular - IN	Yes	Yes	All	
6	Regular - OUT	Yes	Yes	All	
7	Break End	Yes	Yes	All	
8	Break Start	Yes	Yes	All	
9	Overtime - IN	Yes	Yes	All	
10	Overtime - OUT	Yes	Yes	All	
11	Enroll User	Yes	No	All	
12	Enroll Special Card	Yes	No	All	

- **Enrollment Mode** - Select the credential from the drop-down list that can be enrolled using the special function at the door. The options are **ReadOnlyCard**, **SmartCard**, **Biometrics** and **BiometricsThenCard**.
- **Template Per Finger** - This parameter displays the values as configured at the global level. This field is not user editable from this page.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level. This field is not user editable from this page.

- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the Enrollment Mode parameter.
- **Enable Self-Enrollment** - Select this check-box to enable the self-enrollment feature on this door

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following two sections:

- “Settings”
- “Timers”

## Settings

The **Settings** page appears on your screen as shown below:

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events everytime the exit switch is used.

- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.
- **Generate Sequential IN-OUT Events** - Select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.
- **Two Credentials Required**- Select this checkbox to enable the feature of verifying 2 credentials mandatorily for users allowed to By-pass finger/palm.
- **Show Pin**- Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Alarms** - Select this checkbox to set all door-based alarms as active.
- **Tamper Alarm** - Select this checkbox to activate the Tamper Alarm.
- **Enable Additional Security**- Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.

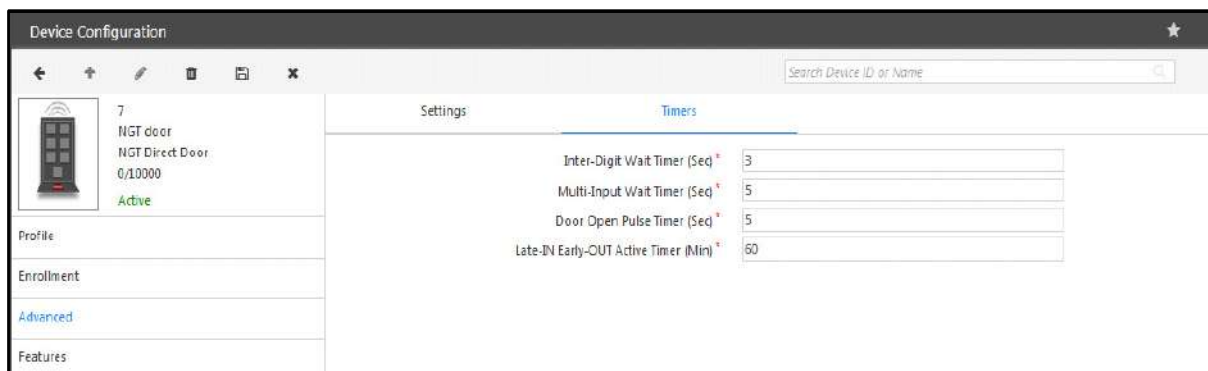

- **Enable Smart Identification** - Select this check box to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this check box to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.

Allow Access Through Mobile	<input type="checkbox"/>
Mobile Entry Access Mode	Mobile Only ▼
Mobile Exit Access Mode	Mobile Only ▼

- **Mobile Entry/Exit Access Mode-** Select the entry and exit door access mode from the options of **Mobile Only** and **Mobile then Biometrics**.

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behaviour and for triggering alarms. The **Timers** page appears on your screen as shown below:

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (1 to 65535) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.
- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

## Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitute the details of the COSEC door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now you can show the mobile camera to scan the QR code. The COSEC door will get opened after verifying the security key and access policies of the user.

## Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1a.** If door is in direct door mode enter IP & port of the direct door

b. If door is a panel door, then enter IP & port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license.*

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- "Set1"
- "Set2"

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**. The page appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Set1'. The left sidebar lists various configuration categories, with 'Features' currently selected. The main panel displays the configuration for 'Set1' (an NGT door). It includes three rule sections: 'Absentee Rule' with an 'Enable' checkbox checked; 'Occupancy Control' with an 'Enable' checkbox checked, 'Maximum Occupancy Limit' set to 9, 'Minimum Occupancy Limit' set to 1, and 'Zero Occupancy' checked; and 'Use Count Control' with an 'Enable' checkbox checked and 'Use Count Limit (Per minute)' set to 5.

- **Absentee Rule** - Select this check box to **enable** this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
For configuring the rule See *Access Control> Absentee Rule*.
- **Occupancy Control** - Select this check box to **enable** the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule See *Access Control> Occupancy Control*.
- **Use Count Control** - Select this check box to **enable** the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule See *Access Control> Use Count Control*.

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. The page appears as shown below.

The screenshot shows the 'Device Configuration' window with a sidebar on the left containing a list of devices and a 'Features' section. The main area is titled 'Set2' and contains three rule configurations:

- First-IN User Rule:**
  - Enable: ☒
  - Reset On: ☒ Day Change ☐ Timer Expiry
  - Access Timer (Sec): 3
  - First-IN User Group: 1 (List 1)
- Anti-Pass-Back (APB):**
  - On Entry: ☒
  - On Exit: ☒
  - Forgiveness: ☒
  - Hard/Soft: Soft
- 2-Person Rule:**
  - Enable: ☒
  - Mode: Primary Must
  - Primary Group: Select
  - Secondary Group: None
  - 2nd Person Wait Timer (Sec): 5

- **First-IN User Rule** -Select this check box to enable the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule See *Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select this check box to enable the feature at the direct door.  
For configuring the rule See *Access Control> Anti-Pass Back*
- **2-Person Rule** - Select this check box to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule See *Access Control> 2- Person Rule*

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device.

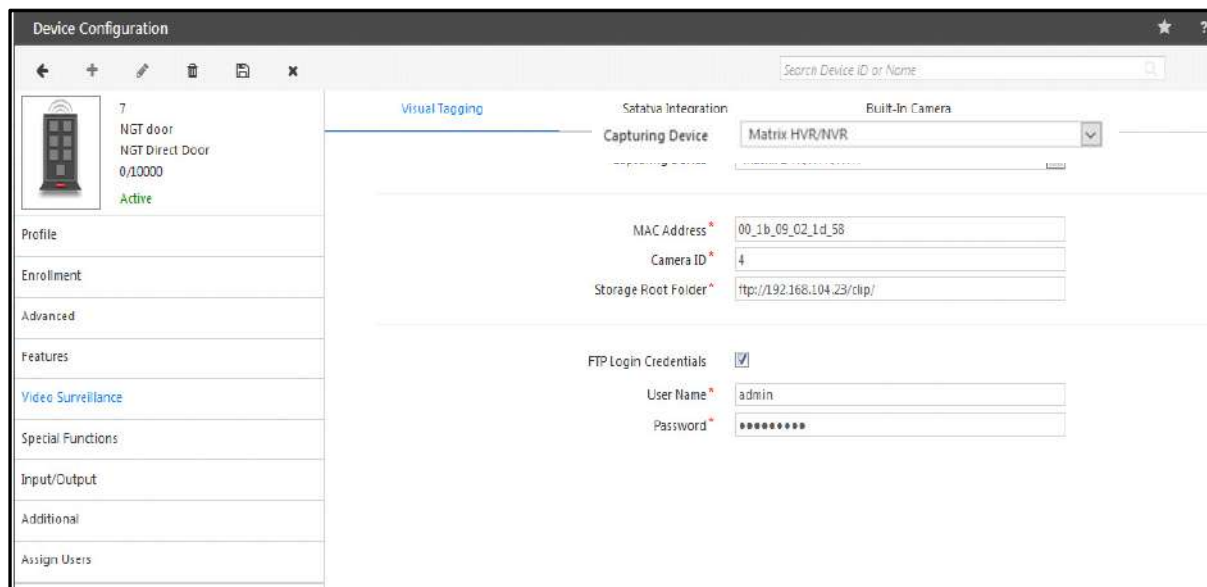

It is available in Basic License.

To access this, Go to **Device Configuration> Video Surveillance**.

- “Visual Tagging”
- “Satatya Integration”
- “Built-In Camera”

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

The screenshot shows the 'Device Configuration' window with the 'Visual Tagging' tab selected. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, and Assign Users. The main area displays settings for a device named '7' (NGT door, 0/10000, Active). Under the 'Capturing Device' section, 'Matrix HVR/NVR' is selected from a dropdown. Below this, fields for 'MAC Address' (00\_1b\_09\_02\_1d\_58), 'Camera ID' (4), and 'Storage Root Folder' (ftp://192.168.104.23/clip/) are visible. The 'FTP Login Credentials' section has a checked checkbox and fields for 'User Name' (admin) and 'Password' (masked with dots).

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu.

The compatible device types are:

- Matrix HVR/NVR
- Built-In Camera
- Milestone

For more information on integration with **Milestone** devices, refer to “[Milestone Integration](#)”.

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** - Specify the FTP server password.

Some COSEC devices do not support all the network connection options.

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya configuration page appears as shown below:

- **Integration type-** Select the integration type from the options of Wired and Network. In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **Network Connection-** Select the Network connection from the options of Ethernet, Broadband, Wireless.
- **IP Address-** Specify the IP address of HVR/NVR if device is connected with Ethernet.
- **Port Number-** Specify the port number of HVR/NVR.
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule -** Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.

- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-** Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.
- **Camera-** Select the relevant camera channels depending on the action selected.

**Example1:** For Access allowed event on COSEC Device, the video pop up of Camera 12 will be shown for 10 seconds.

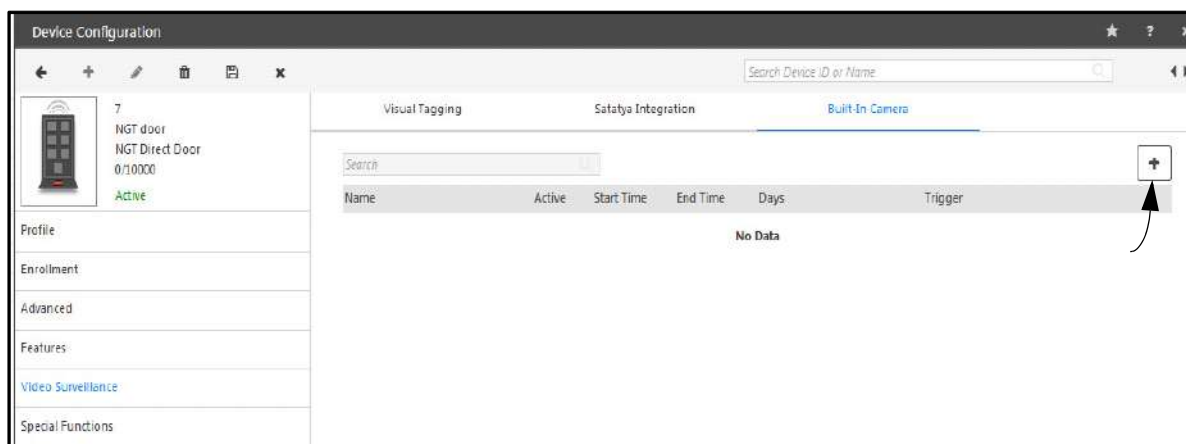

The screenshot shows a configuration window with the following settings:

- Event:** Access Allowed (selected from a dropdown)
- Mode:** Both (selected from a dropdown)
- Action:** Video Pop-Up (selected from a dropdown)
- Duration Sec.:** 10 (entered in a text box)
- Camera:** A grid of checkboxes for cameras 1 through 24. Camera 12 is checked.

- Click the **Add** button to finish the process of linking the event to the action. The user may configure another event-action linkage if required.

## Built-In Camera

This functionality enables configuration and scheduling of image capturing using the in-built camera of an NGT door. The **Built-In Camera** configuration page appears as shown below.

 This functionality is not available in the **Edit**  mode for devices.

The NGT Built-In Camera can be scheduled to capture images during scheduled periods and triggered by specific user events.

To configure a schedule click **Add** button as shown above.

- Specify the function **Name** and select the **Active** check box to enable it on the system.
- Specify a schedule by entering **Start** and **End Time**.
- Select the Applicable **days**.
- Select the user events from the drop down list by which the image capturing should be **triggered**. The options are Access Allowed, Access Denied and Both.

- Click the **OK** and **Save** button to save the schedule for the selected device.

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

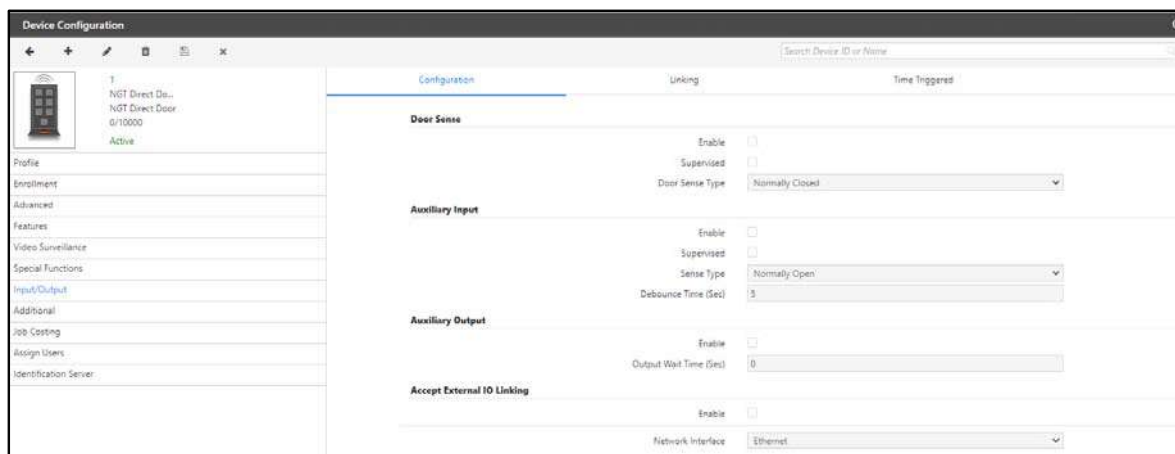

1. This functionality cannot be fully accessed in the Edit  mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- “Configuration”
- “Linking”
- “Time Triggered”

## Configuration

The **Configuration** section for a NGT Door appears as shown below.

The following parameters are available for configuration:

- **Door Sense** - The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as **Normally Closed** or **Normally Open** (Default: Normally Closed).

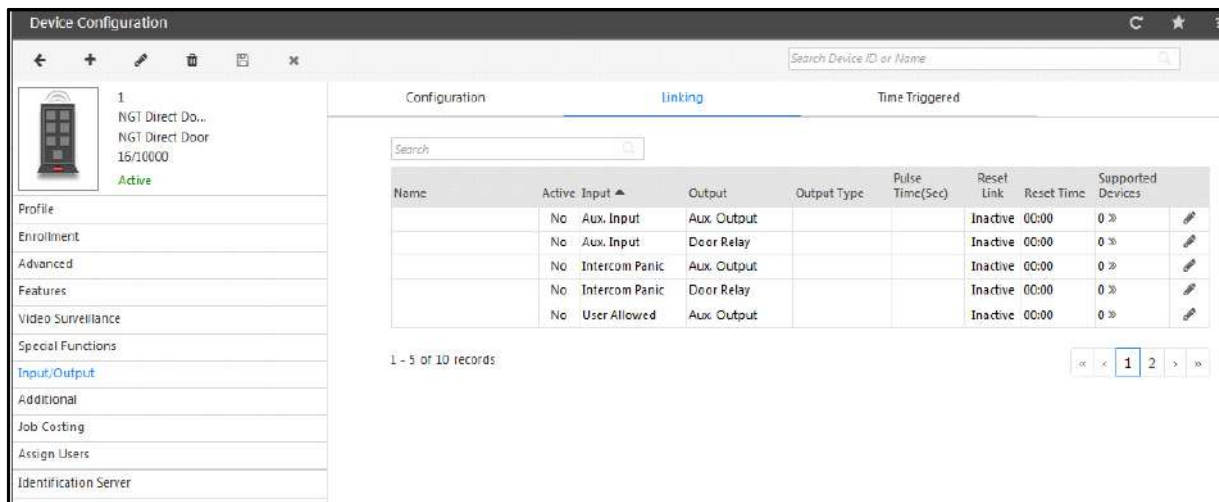

- **Auxiliary Input** - Select the **Enable** checkbox option for Auxiliary Input (e.g. Smoke Detectors) depending on normal or supervised door state monitoring as described above.

**Debounce Time (Sec)** - Specify the Debounce time in seconds. Default value is 3 sec and range should be 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- **Auxiliary Output** - Select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.
- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface-** Select the interface option for IO linking with external devices. The options are
  - Ethernet
  - Wireless
  - Mobile Broadband

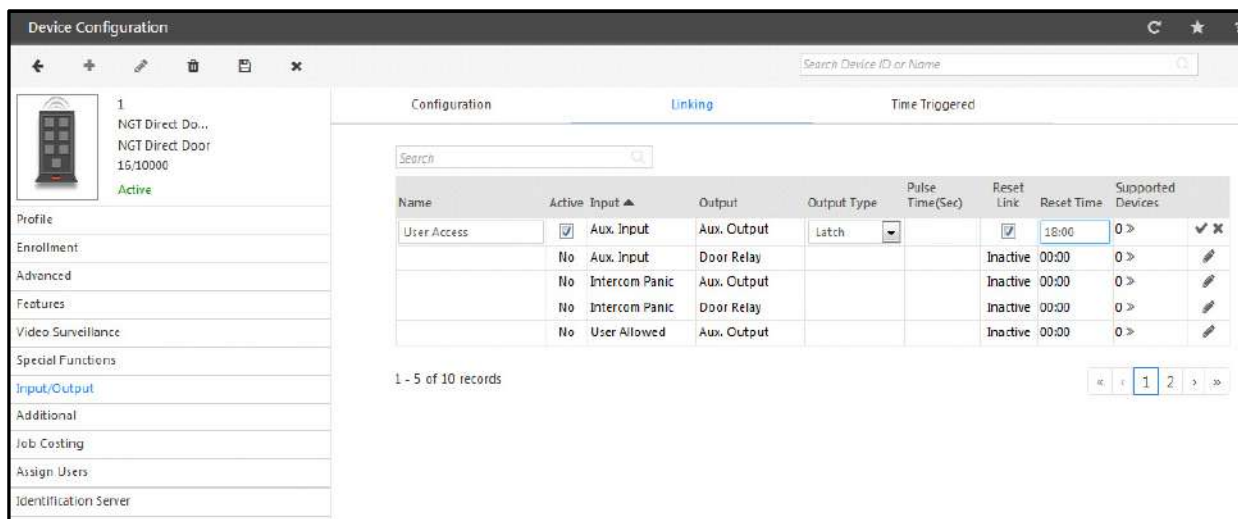

## Linking

The **Linking** section appears as shown below.

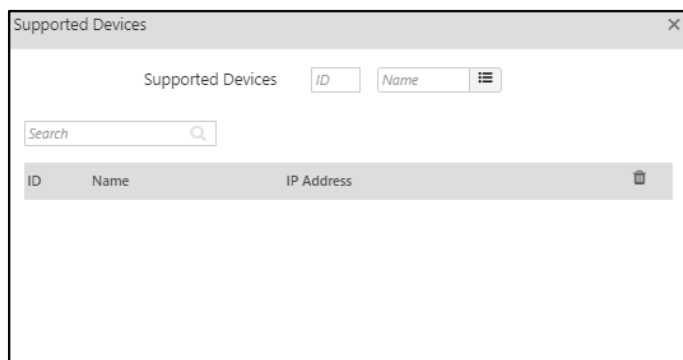

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row and click edit button.

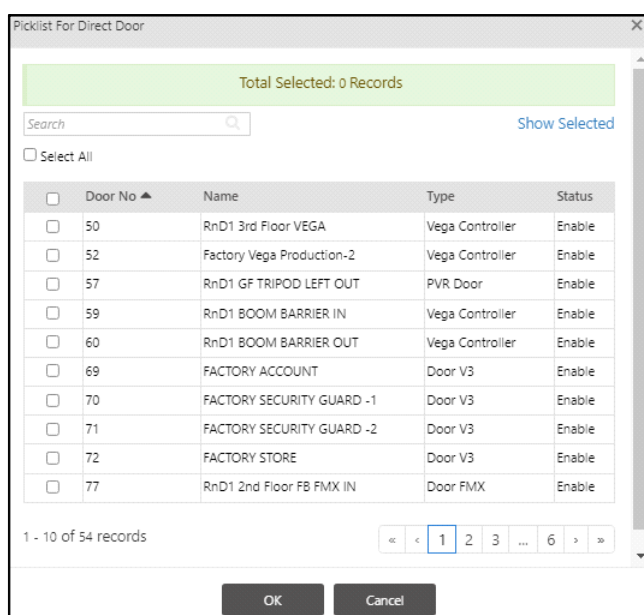

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - **Pulse**: With this type of output, the user needs to define the Pulse time in seconds.
  - **Interlock**: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - **Latch**: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - **Toggle**: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Active** - Select this check box to activate this linking program.
- **Reset Link**- Select this check box to reset the link automatically after a defined time period.
- **Reset Time**- Enter the time period in hh:mm format at which the link will get reset automatically. Suppose, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- **Supported Devices** - All devices supported for external IO Linking will appear in this picklist for selection. Upto 255 external devices can be added by the administrator.

- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The **Supported Devices** pop-up window displays a search bar and a table with columns: ID, Name, and IP Address. The table is currently empty.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The **Picklist For Direct Door** pop-up window displays a search bar, a "Total Selected: 0 Records" status bar, and a table with columns: Door No, Name, Type, and Status. The table contains 10 records. Below the table is a pagination bar showing "1 - 10 of 54 records" and a "Show Selected" button.

Door No	Name	Type	Status
50	RnD1 3rd Floor VEGA	Vega Controller	Enable
52	Factory Vega Production-2	Vega Controller	Enable
57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
69	FACTORY ACCOUNT	Door V3	Enable
70	FACTORY SECURITY GUARD -1	Door V3	Enable
71	FACTORY SECURITY GUARD -2	Door V3	Enable
72	FACTORY STORE	Door V3	Enable
77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

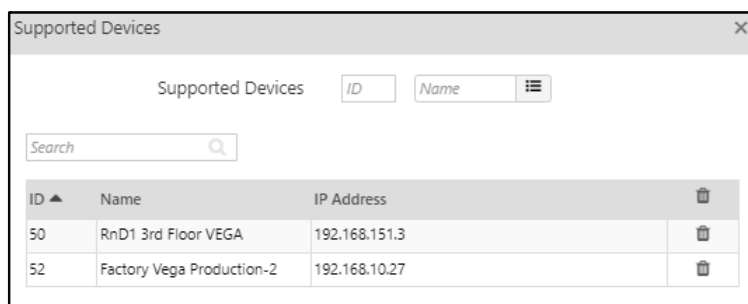

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected,

Click **OK**. You return to the **Supported Devices** pop-up and the selected devices are displayed here.

The **Supported Devices** pop-up window displays the same search bar and table as before, but now the table contains two records, indicating that the selected devices from the picklist have been added.

ID	Name	IP Address
50	RnD1 3rd Floor VEGA	192.168.151.3
52	Factory Vega Production-2	192.168.10.27

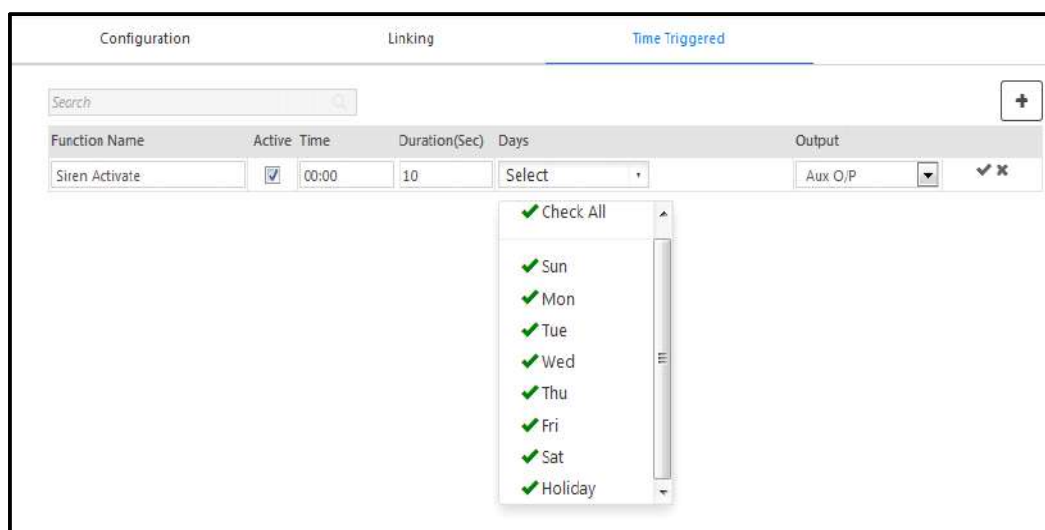

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click **OK** and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional**

The Additional parameters can be set from the following sections:

- [“Greetings”](#)
- [“Daylight Saving”](#)

## Greetings

This functionality enables the administrator to define greeting messages triggered by user access events at the NGT DIRECT DOORS. The greeting messages can be in predefined visual as well as audio formats.

The screenshot shows the 'Device Configuration' window for a door. On the left is a sidebar with a list of doors and a menu. The main area is titled 'Greetings' and contains the following fields:

- Greeting Type:** A dropdown menu set to 'Custom Message'.
- Active:** A checkbox that is checked.
- Message Line1:** A text input field containing 'Welcome to Matrix'.
- Message Line2:** A text input field containing 'Have a Good Day'.
- Date:** A date picker showing '08/12/2016'.
- AV Panel:** A collapsible panel containing:
  - Image:** A dropdown menu set to 'Keep Smiling'.
  - Audio:** A dropdown menu set to 'Sunshine Piano'.
- User Selection:** A dropdown menu.
- Buttons:** 'Add' and 'Cancel' buttons.
- Search:** A search input field.
- Table:** A table with columns: Greeting Type, Message 1, Message 2, AV, Active, and a delete icon. It currently shows 'No Data'.

Configure the following options as required:

- Select the **Greeting Type** from the drop down list. The options available are:
  - Custom Message
  - Birthday Message
- Check the **Active** box to activate the greeting message on the selected door.
- Specify the message in alphanumeric format in the space provided against Message Line1 and Message Line2.
  - In the event of defining a *Custom Message*, select the **Date** on which the message is to be displayed by clicking on the date picklist button. In the event of defining a *Birthday Message*, date selection will be disabled.
- Expand the **AV** collapsible panel and select a predefined image and audio file from the respective drop down lists.
- When defining a *Custom Message*, select all users or specific users from the user picklist. This field will be disabled in the event of a *Birthday Message* and all users will be selected by default.
- Click the **Add** button to save the settings on the door.

Greeting Type	Message 1	Message 2	AV	Active
Custom Message	Welcome to Matrix	Have a Good Day	AV	Yes

## Daylight Saving

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST

settings in *24-hours* format, and specify the **Month**, **Date** and **Time** for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st sunday of January at 10:00 hours, the clock will be reversed or backwarded by 08:00 hours.

- Click the **Save** button.

## Job Costing

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant job code while punching on the device. His/her job hours will be recorded for that job code.

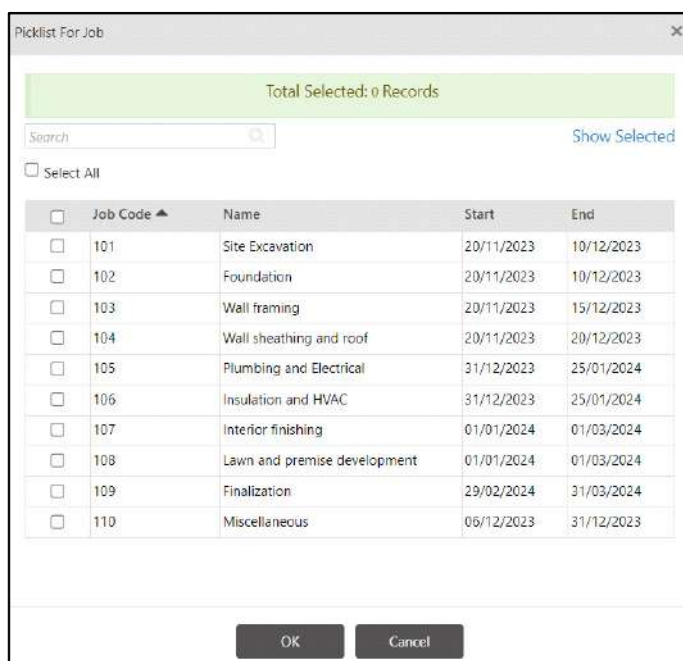

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

Picklist For Job

Total Selected: 0 Records

<input type="checkbox"/>	109	Finalization	29/02/2024	31/03/2024
<input type="checkbox"/>	110	Miscellaneous	06/12/2023	31/12/2023

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

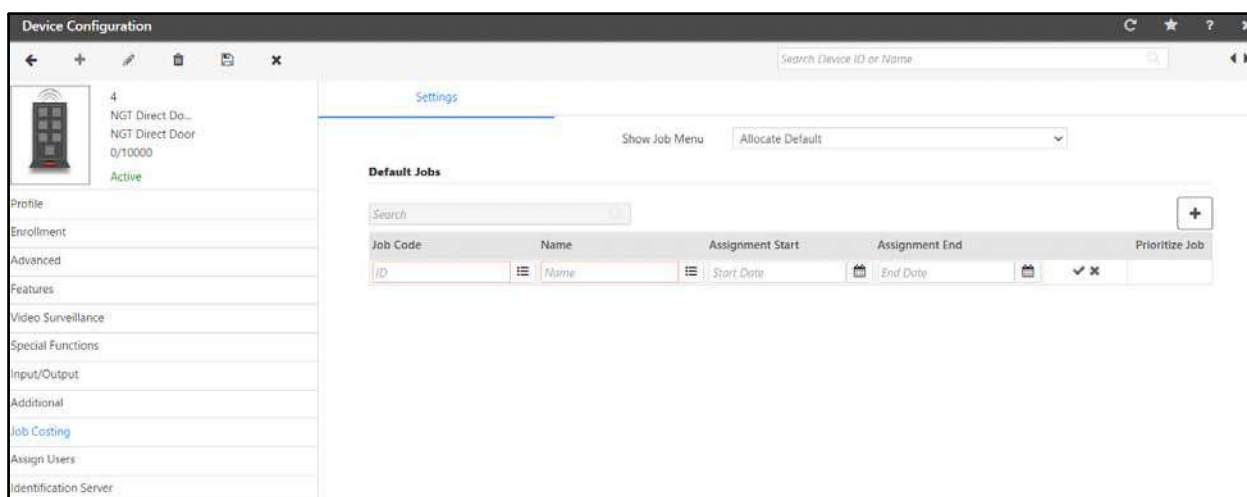

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

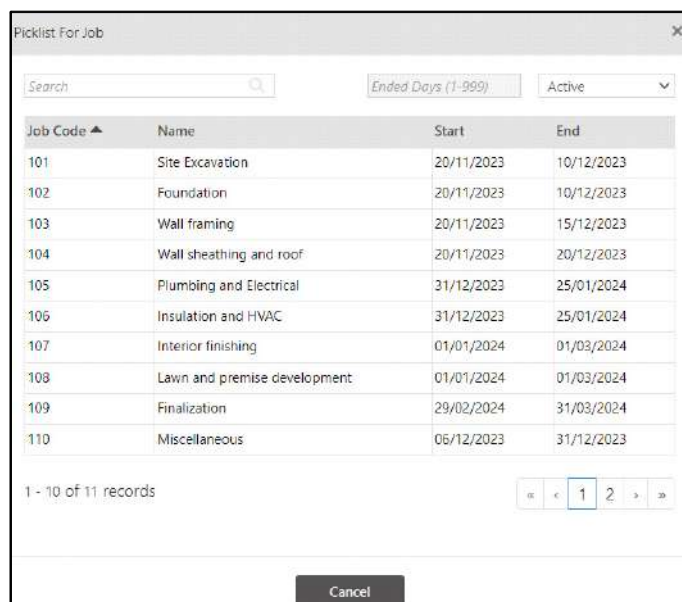

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start and Assignment End:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- Click **Save** to save the configuration.

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device icon and a list of configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default'. Below this is the 'Default Jobs' section, which includes a search bar and a table with the following data:

Job Code	Name	Assignment Start	Assignment End	Prioritize Job
111	Premise cleaning	01/10/2023	01/11/2023	Up/Down arrows
108	Lawn and premise development	01/01/2024	01/03/2024	Up/Down arrows
102	Foundation	20/11/2023	10/12/2023	Up/Down arrows
101	Site Excavation	20/11/2023	10/12/2023	Up/Down arrows

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

**Example:**

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

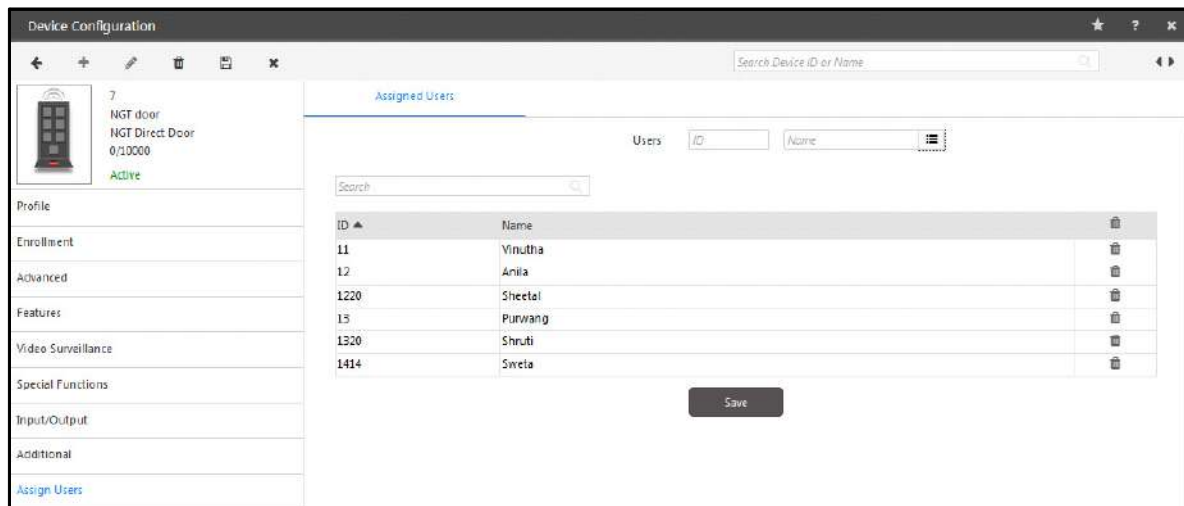

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

To the configured device, you can select and assign the users.

Click the picklist button and select the users.

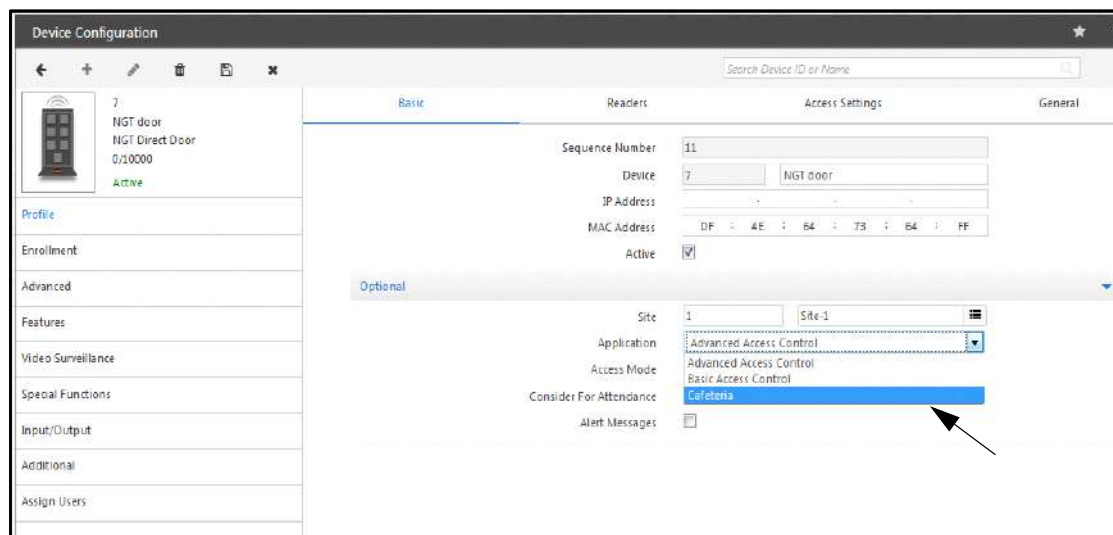

- Click the **Save** button to assign all the added users to the selected door.

## Cafeteria

The COSEC system enables the user to configure devices which will be used by the Cafeteria management module.

To configure a door for Cafeteria application, select **Cafeteria** option in Device Profile> Basic> Application as shown below.

The Cafeteria tab will appear in Device Configuration page.

Select **Device Configuration> Cafeteria> Settings**

## Settings

The Cafeteria configuration for NGT Door is shown as below.

Device Configuration

Device ID: 0/10000  
Device Name: NGT Direct Door  
Active/Inactive

Profile  
Enrollment  
Advanced  
Features  
Video Surveillance  
Special Functions  
Input/Output  
Additional  
Job Costing  
Assign Users  
**Cafeteria**  
Identification Server

Settings Menu

Consecutive Transaction Delay (Sec): 0

**Printer Settings**

Printer: None  
Connection Type: RS232  
Baud Rate: 115200  
Company Name:  
Company Address:  
Punch Line:  
Exclude Price-Cost From Coupon: ☐

- **Consecutive Transaction Delay (Sec):** Enter the time interval between two transactions, wherein any user transaction would be restricted.

## Printer Settings

- **Printer:** Select the printer from the dropdown list based on the site requirements.
- **Connection Type:** Select the printer connection type from the drop down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.
- Select the **Exclude Price-Cost From Coupon** check box if you want to exclude the price from the coupon.

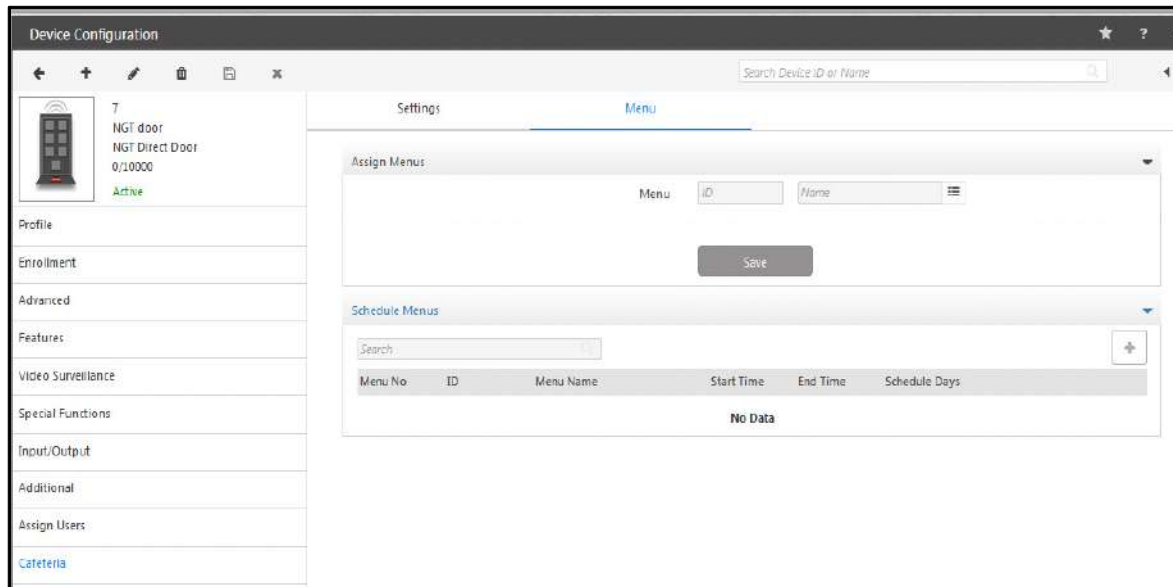

## Menu

COSEC allows the administrator to assign one or more cafeteria menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

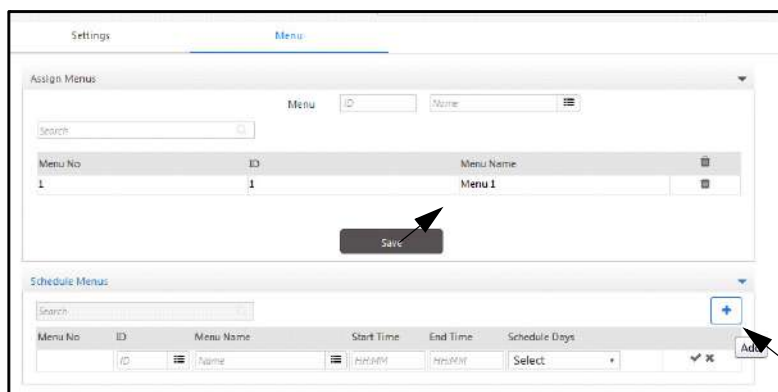

*The Menu is created from Cafeteria module.*

The Menu can be scheduled from Cafeteria module and is displayed in “Schedule Menus” in above screenshot.

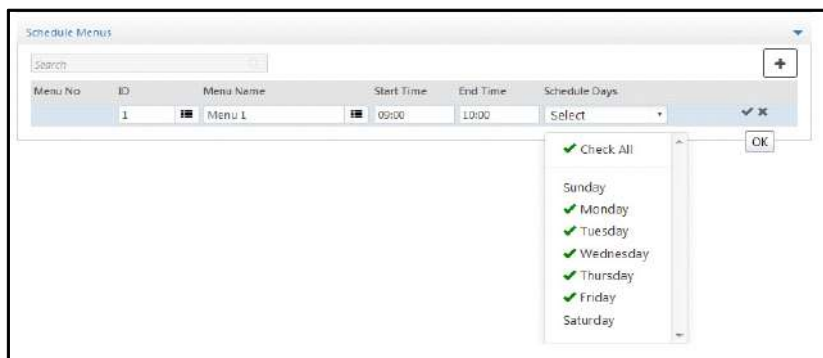

If you have to assign another menu and schedule it on the door then select the Menu from the picklist. The Menu will be shown in the grid as shown below.

Now to schedule the menu click **Add** button as shown above.

Then select the menu to be scheduled from the **ID** picklist. Specify the **Start** and **End time** for which the Menu will be active and is available to users on the selected door. Select the **days** for which this menu will be available i.e. scheduled on the door.

Then click **OK** and **Save** the Menu schedule on the door.

 *Two Menus cannot be scheduled for same timing.*

## Identification Server

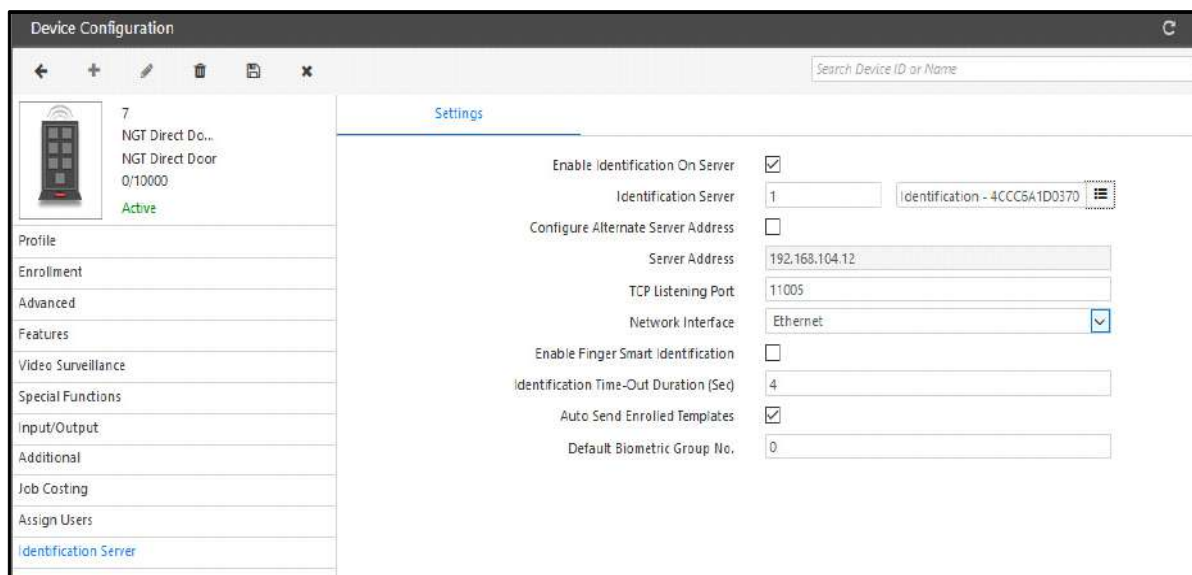

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations,

- On the **Device Configuration** page, select the **Identification Server** tab.

- Enable Identification On Server:** Select the checkbox to enable the identification of palm/finger templates on this device.

- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration**.
- **Server Address:** It displays the IP Address of the selected Identification Server.

- **Configure Alternate Server Address:** Enable this check-box to configure external IP address of Identification Server.
  - **Server Address:** Enter the external network IP address which will be used for accessing identification server.
- **TCP Listening Port:** Enter the TCP port number. The default port number is 11005.
- **Network Interface:** Select the interface through which the server is to be connected to the device. The options are: Ethernet, Wireless and Mobile Broadband.
- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the fingerprint template identification will get time out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Specify the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

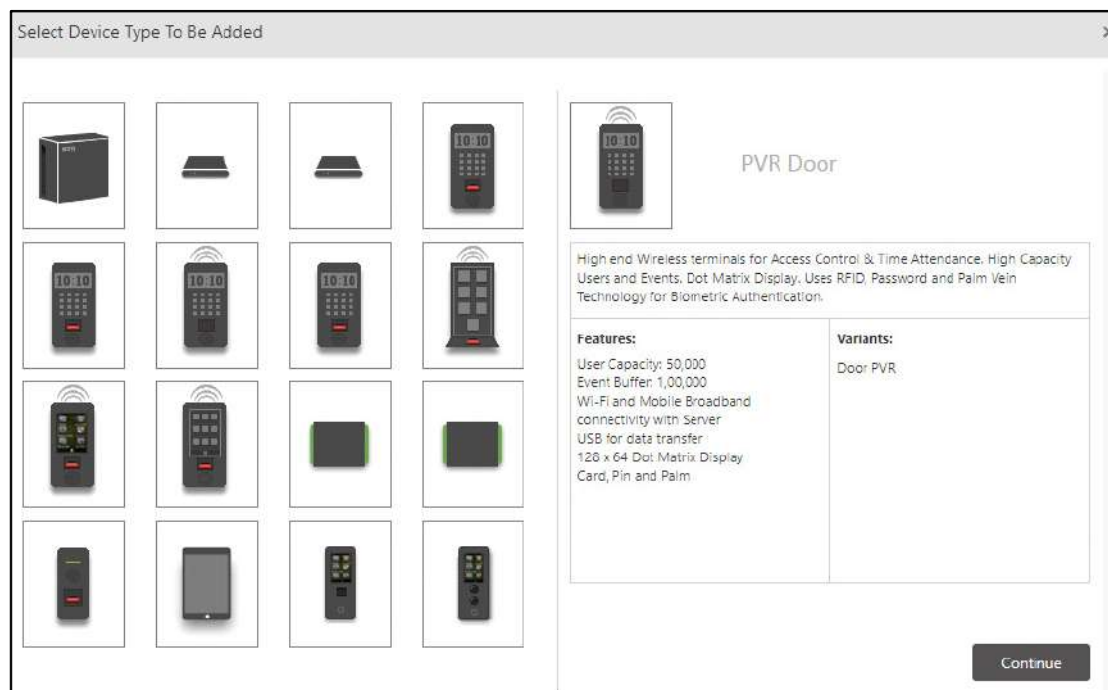

# PVR Door

COSEC PVR Door uses a contactless technology that reads internal vascular pattern of the user palm and gives accurate result to provide utmost security.

PVR Door can be connected as **Direct Door** as well as **Panel Door**.

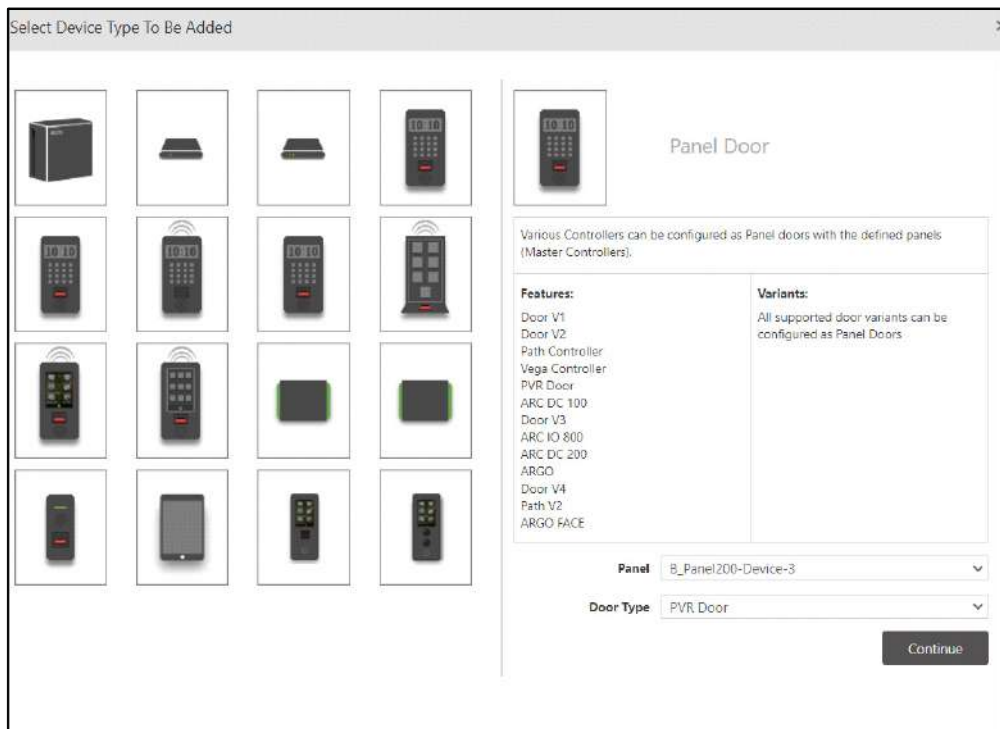

Click the PVR Door device from the Device List to add it as a **Direct Door**.

OR

Click Panel Door to add PVR Door device as a **Panel Door**.

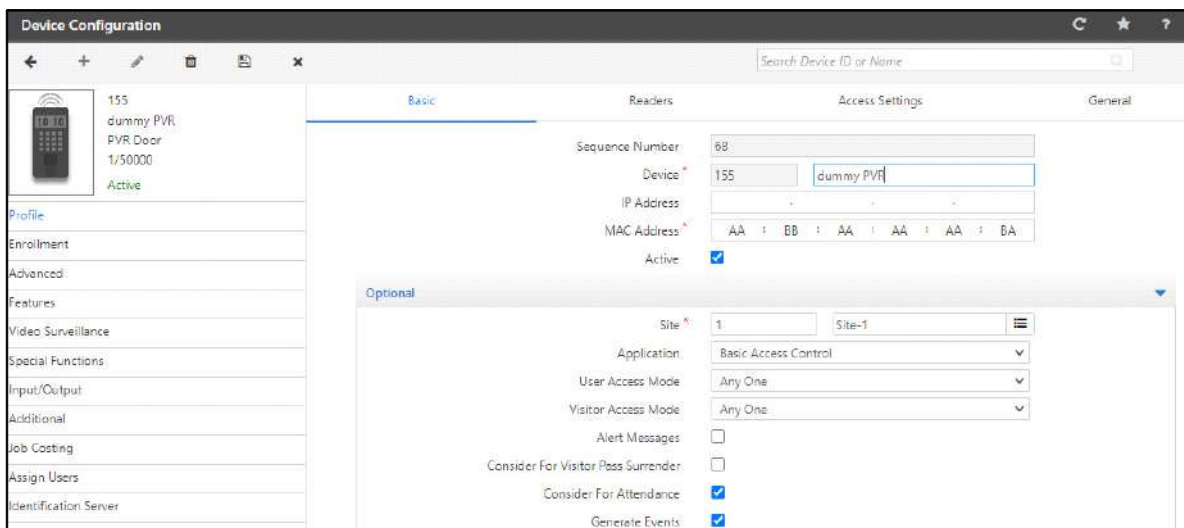

**Panel:** Select the desired Panel from the drop-down list with which you wish to connect the Door.

**Door Type:** Select **PVR Door** from the drop-down list.

Click **Continue**.

The **Device Configuration** page for PVR Door appears.

To add devices automatically, click **Admin Module > System Configuration > Global Policy > Device**. Select the **Auto Add New Devices** check box. Once the device is connected in the network, it comes online in COSEC Monitor.

While adding the device to COSEC Server, make sure the COSEC Monitor Service is running.

To know more about configuring devices, click on the links for different tabs of Device configuration.

- “Profile”
- “Enrollment”
- “Advanced”
- “Features”
- “Video Surveillance”
- “Special Functions”
- “Input/Output”
- “Additional”
- “Job Costing”
- “Assign Users”
- “Identification Server”

## Profile

Setting up a door profile involves configuring basic parameters to set up any door controller device. This section enables the user to set up the basic profile for any new device.

To do this, on the **Device Configuration** page, click the **Profile** tab in the left pane.

The screenshot shows the 'Device Configuration' window with the 'Profile' tab selected in the left sidebar. The main area is divided into 'Basic' and 'Optional' sections. The 'Basic' section includes fields for Sequence Number (68), Device (155), IP Address, MAC Address (AA : BB : AA : AA : AA : BA), and Active (checked). The 'Optional' section includes Site (1), Application (Basic Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages (unchecked), Consider For Visitor Pass Surrender (unchecked), Consider For Attendance (checked), and Generate Events (checked).

Field	Value
Sequence Number	68
Device	155
IP Address	
MAC Address	AA : BB : AA : AA : AA : BA
Active	<input checked="" type="checkbox"/>
Site	1
Application	Basic Access Control
User Access Mode	Any One
Visitor Access Mode	Any One
Alert Messages	<input type="checkbox"/>
Consider For Visitor Pass Surrender	<input type="checkbox"/>
Consider For Attendance	<input checked="" type="checkbox"/>
Generate Events	<input checked="" type="checkbox"/>

To configure the Profile parameters, click the following links:

- [“Basic”](#)
- [“Readers”](#)
- [“Access Settings”](#)
- [“General”](#)

## Basic

Click **Basic** tab. The **Basic** page appears.

*Sequence Number, Device, IP Address, MAC Address and Active are applicable for both Direct Door and Panel Door.*

For PVR as a **Direct Door**.

Configure the following parameters:

- **Sequence Number:** This is a system generated sequence number for each new device.
- **Device:** Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address:** This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address:** Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active:** Select the check box to activate the device in the network.

To add the Device automatically, click **Admin Module > System Configuration > Global Policy > Device**. Select the **Auto Add New Devices** check box.

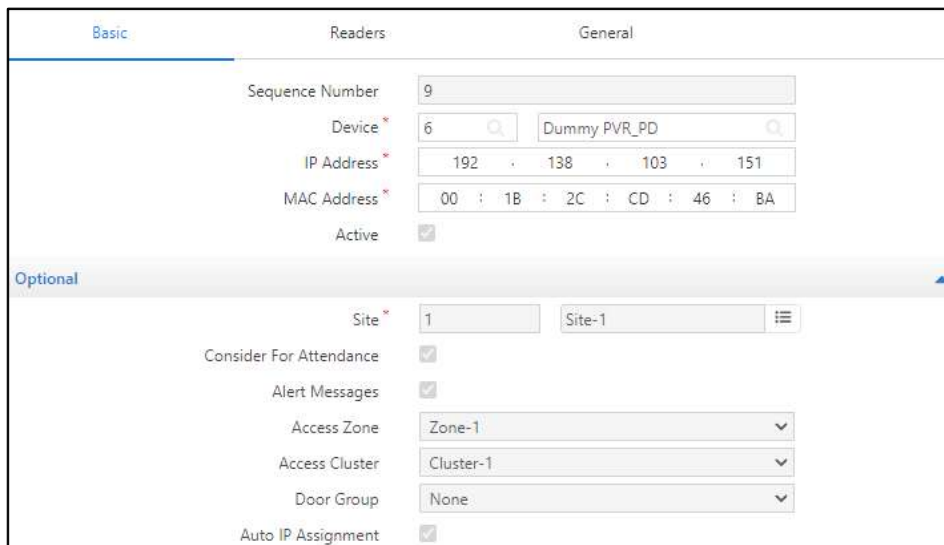

*The device will be added automatically but make sure you enable the **Active** check box in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

Click the **Optional** collapsible tab, to configure the following parameters:

- **Site:** Select the site to which this door is to be assigned from the picklist. Site is created from **Devices > Masters > Site**.
- **Application:** Select the type of application for which the device is to be used from the drop-down list options— **Basic Access Control** or **Advanced Access Control**.
- **User/ Visitor Access Mode:** This defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop-down list.
  - Any one
  - Card
  - Card + PIN
  - Card + Biometrics
  - Card + PIN + Biometrics
  - Biometrics
  - Biometrics + PIN
  - Biometrics + Group
  - Biometrics then Card
  - Card then Biometrics
  - None
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Select this check box to consider the device for visitor pass surrender. The Visitors can show their credentials on this device to surrender their passes.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Generate Events:** By default, this check box is selected. Click to disable, if the server is not required to receive any events from this device.

For PVR as a **Panel Door**.

Field	Value
Sequence Number	9
Device	6
IP Address	192 . 138 . 103 . 151
MAC Address	00 : 1B : 2C : CD : 46 : BA
Active	<input checked="" type="checkbox"/>

**Optional**

Site	1	Site-1
Consider For Attendance	<input checked="" type="checkbox"/>	
Alert Messages	<input checked="" type="checkbox"/>	
Access Zone	Zone-1	
Access Cluster	Cluster-1	
Door Group	None	
Auto IP Assignment	<input checked="" type="checkbox"/>	

Click the **Optional** collapsible panel, to configure the following parameters:

- **Site:** Select the site to which this door is to be assigned from the picklist. Site is created from **Devices > Masters > Site**.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Access Zone:** Select the desired Access Zone to be assigned to the door from the drop-down list.
- **Access Cluster:** Select the desired Access Cluster to be assigned to the door from the drop-down list.
- **Door Group:** The Door Group drop-down includes the list of all configured Door Groups on the corresponding Panel. An additional option as 'None' is available and selected by default. Select the desired Door Group to be assigned to the door from the drop-down list.
- **Auto IP Assignment:** Select this check box to assign the IP to the Panel Door from the device webpage.

*Access Zone is configured while configuring Panel200.*

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the user to configure both internal and external readers for a door.

Click the **Readers** tab. The **Readers** page appears.

Member No	Card Format	Configurable Bits
1	Default Format	0

Configure the following parameters:

*Door Mode Selection, Prompt Special Function and Auto Detect Readers are applicable for Direct Door only.*

- **Door Mode Selection:** Select this check box if you wish the user to select the punch type as IN or OUT while punching on the device.

For example, when a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in Exit mode, you can select the door mode if **Door Mode Selection** check box is enabled.

If not selected, the user needs to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, refer **Devices > Masters > Reader Mode Scheduler**.

- **Prompt Special Function-** Select this check box to enable the selection of special functions on device screen, based on the selection of particular type of special function. This can be enabled only when **Door Mode Selection** is enabled. For more details, refer to “Special Functions”.
- **Auto Detect Readers:** Select this check box to enable the auto detection of Readers on a door controller connected to the server.

## Internal Readers

This option allows the configuration of the Internal Reader for the door.

Click **Internal Readers** collapsible panel and configure the following parameters.

*Mode, Card Reader Type and Card Format are applicable for both Direct Door and Panel Door.*

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop-down list.
- **Card Reader Type:** Select the desired Card Reader Type from the drop-down list.
- **Card Format:** Single or multiple card formats can be assigned to the readers of the door. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device, then this default format will be applied.

*The formatting of card is described in Devices> Master> Card Format.*

### Multiple Card Format

- To assign multiple card formats to device click **Add**. Then click the picklist to select the card format and click **OK** to save the format.

- Similarly, you can add maximum 5 card formats. When the card format is saved, the configured bits of that format as configured from **Masters > Card Format** will be displayed here. Multiple Card format configurations will be sent to the door separated by **Format ID** that is 'Member No.' along with all other format related parameters.

Member No	Card Format	Configurable Bits
1	Default Format	0
2	Format 1	64
3	Format 2	32

*Palm Reader Type is applicable for both Direct Door and Panel Door.*

- **Palm Reader:** Select the **Palm Reader Type** as **Palm Vein Reader**.

Click **Palm Reader Configuration**  to set the Palm identification configuration.

The **Palm Reader Configuration** pop-up appears.

Configure the following parameters:

- **Security Level:** Select the desired Security Level to be set for the Palm Reader Configuration from the drop-down list options—Normal, Highest, High, Low, Lowest. You can select **Normal** level for regular Time and Attendance system. You must select **High/Highest** level for high security areas that require complete or maximum matching of template. You can select **Low/Lowest** level for approximate matching of template.
- **Palm Matching Timeout:** Specify the duration in seconds for which the reader will match and identify the Palm template, after which it will show timeout.
- **Palm Template Quality:** Select the desired Palm Template Quality from the drop-down list options—Good, Moderate, Poor. You can select **Good** quality for Access Control system required in high security areas. You can select **Moderate** quality for normal Time and Attendance system.

Click **Restore Defaults**, to return the field values for this page to default values, if required.

Click **Save** to save the changes or **Close**, if you wish to discard the changes.

*Enable Scheduling and Reader Mode Schedule are applicable for Direct Door only.*

- **Enable Scheduling:** Select the check box to enable the automated control of an Internal Reader. This will set the reader mode of door as Entry or Exit as per user-defined schedules.
- **Reader Mode Schedule:** Select the Schedule for the Reader Mode which is to be assigned to this door from the picklist. With this the same reader can be configured to function both in Entry as well as Exit mode based on scheduled timings.

## External Readers

This option allows the configuration of the External Reader for the door.

*Mode, External Reader Type, Card Format and Exit Switch are applicable for both Panel Door and Direct Door.*

Click **External Readers** collapsible panel and configure the following parameters.

The screenshot shows the 'External Readers' configuration window. At the top, there are dropdown menus for 'Mode' (set to 'Exit') and 'External Reader Type' (set to 'EM Prox Reader'). Below these is a search bar. A table lists two card formats: 'Default Format' (Member No 1, Configurable Bits 0) and 'Format 1' (Member No 2, Configurable Bits 64). Each row has edit and delete icons. Below the table, there is a checked 'Exit Switch' checkbox, and dropdown menus for 'User Access Mode' (set to 'Any One') and 'Visitor Access Mode' (set to 'Any One').

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop-down list.
- **External Reader Type:** Select the desired Card Reader Type from the drop-down list.

*If you are using PIN-W Reader; users will be able to change their PIN number from the devices.*

*User Access Mode, Visitor Access Mode and Access Control on Exit Mode is applicable for Direct Door only.*

- **Card Format:** Single or multiple card formats can be assigned to the readers of the door. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device; then this default format will be applied. This is applicable for all Direct Doors and all Panel Doors. For details, refer ["Multiple Card Format"](#).
- **Exit Switch:** Select this check box to enable the use of **Exit Switch**.
- **User/Visitor Access Mode:** Select the desired **Access Mode** from the drop-down list options—Any One, Card, None, BLE.
- **Access Control On Exit Mode:** Select this check box to enable the checking of the following access control policies on door when the External Reader is in the **Exit** mode.
  - User enabled
  - User validity
  - Blocked user

- Time Based Access Check
- ASC
- User Access Group

## Access Settings

*Access Settings are applicable for Direct Door only.*

Click the **Access Settings** tab. The **Access Settings** page appears.

Configure the following parameters:

- **Universal Time Zone:** Select the geographic time zone in which the door will operate from the drop-down list.
- **Time Format:** Select the time format to be displayed on Door Controller LCD display from the drop-down list options —24 Hours or 12 Hours.
- **Auto Synchronize with NTP:** If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must select the **Auto Synchronize With NTP** check box.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device web page, which will be reflected on device display.

- When **Auto Synchronization with NTP** is disabled, **Preferred NTP Server** field will be disabled.
- When Auto Synchronization with NTP is enabled,
  - You can specify the **Preferred NTP Server** of your choice. In this case, the device will first try to get Date and Time from that server address.

If it does not get Date and Time in three tries, device will check from pre-defined NTP servers.

If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu, time.windows.com, time.nist.gov), then device will first check that server first.

If it receives updated Date and Time, then that Updated Date and Time will be reflected on device web page and display screen.

- You can keep the Preferred NTP Server as blank. In this case device will check for Date and Time from the first NTP server.

*If user has manually entered Date and Time from device web page or Device Menu, then these values of Date and Time will be reflected on device web page and display screen.*

*In the case of the **Manual** option, the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor.*

- **Working Days:** Specify the days on which the default working hours should be applicable. Select the respective check boxes of the relevant days.
- **Working Hours (HH:MM):** Specify the default working hours in HH:MM format.
- **Holiday Schedule:** Select the desired Holiday Schedule from the picklist. The Administrator can assign upto four Holiday Schedules to the device.

*If the same Holiday Schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

## General

Click the **General** tab. The **General** page appears.

Basic Readers Access Settings **General**

Configure the following parameters:

*Mute Buzzer, Allowed Acknowledgment and Denied Acknowledgment are applicable for both Direct Door and Panel Door.*

- **Mute Buzzer:** Select the check box to enable door buzzer muting.
- **Allowed Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Allowed** message should be displayed. Valid Range is 500 to 3000 ms.
  - **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options—Long, Medium, Short.
- **Denied Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Denied** message should be displayed. Valid Range is 500 to 3000 ms.
  - **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options—Long, Medium, Short.

*Enable Display Messages, Custom Birthday Message, Display Message 1 to 4, Schedule, Message and Multi-Language Support are applicable for Direct Door only.*

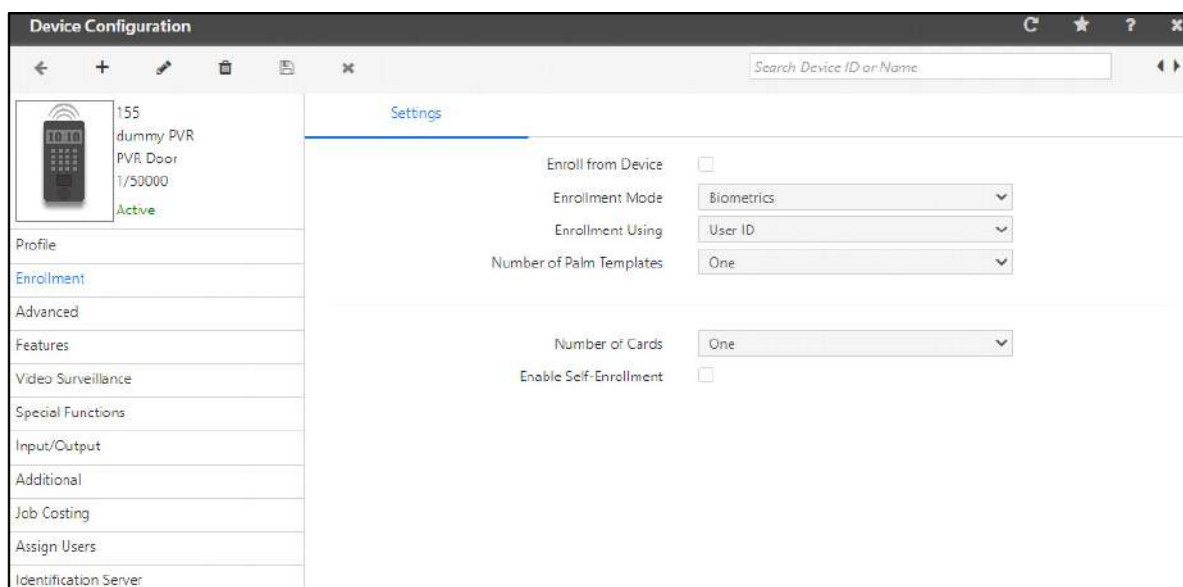

- **Enable Display Messages:** Select this check box, if you wish to customize the messages as well as display them on the device. You can configure and display the Birthday Message and 4 other Messages.
- **Custom Birthday Message:** Enter the birthday message to be displayed on the door to the user, when the user punches on the door on his/her birth date. The valid values are: A-Z a-z 0-9 `~!@#\$%^&\*()\_+~\|/ |;?<>.,\".
- **Display Message 1 to 4:** Select this check box to enable each display message. These check boxes are enabled automatically if you select the **Enable Display Message** check box.
- **Schedule:** Specify the time duration for which the display message should be displayed in HH:MM format.
- **Message:** Enter the message to be displayed. Maximum 21 characters are allowed.
- **Multi-Language Support:** Select this check box to enable multi-language support for the device.

## Enrollment

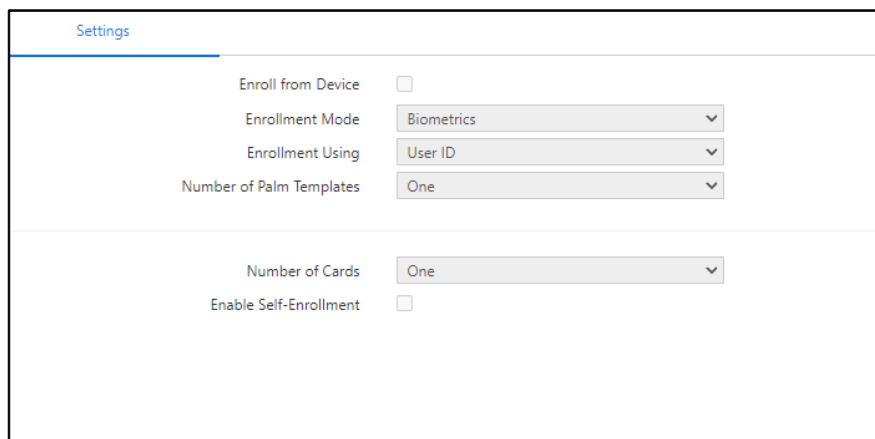

*Enrollment is applicable for Direct Door only.*

On the **Device Configuration** page, click the **Enrollment** tab in the left pane.

## Settings

Click the **Settings** tab. The **Settings** page appears

Settings

Enroll from Device ☐

Enrollment Mode Biometrics ▼

Enrollment Using User ID ▼

Number of Palm Templates One ▼

Number of Cards One ▼

Enable Self-Enrollment ☐

Configure the following parameters:

- **Enroll from Device:** Select this check box to enable the enrollment of user from the door controller. When this check box is enabled, **Enroll User** special function on that device will get activated.

*If **Enroll User** special function & **Enroll From Device** check box both are inactive in device configuration, then on activating **Enroll User** special function, **Enroll From Device** check box will be enabled.*

- **Enrollment Mode:** Select the credential to be enrolled using special function at the door from the drop-down list options —ReadOnlyCard, SmartCard, Biometrics or BiometricsThenCard.
- **Enrollment Using:** Select the desired option to be used for enrollment from the drop-down list options — User ID or Reference No.
- **Number of Palm Templates:** Select the Number of Palm Templates to be enrolled from the drop-down list, if the Enrollment Mode is **Biometrics** or **BiometricsThenCard**.
- **Number of Cards:** Select the Number of Cards to be enrolled from the drop-down list, if the Enrollment Mode is **ReadOnlyCard** or **SmartCard**.
- **Enable Self-Enrollment:** Select this check box to enable the Self-Enrollment feature on the door.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as Access Control Settings, Alarms, Device Timers as well as Wiegand.

To do this, on the **Device Configuration** page, click the **Advanced** tab in the left pane.

The screenshot shows the 'Device Configuration' window with a sidebar on the left and a main settings area on the right. The sidebar lists various configuration sections: Profile, Enrollment, Advanced (highlighted), Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area has four tabs: Settings, Alarms, Timers, and Wiegand. The 'Settings' tab is active, displaying a list of configuration options with checkboxes and input fields.

Settings	Alarms	Timers	Wiegand
Generate Exit Switch Events	<input type="checkbox"/>		
Generate Invalid User Events	<input type="checkbox"/>		
Generate Sequential IN-OUT Events	<input type="checkbox"/>		
Two Credentials Required	<input type="checkbox"/>		
Show PIN	<input type="checkbox"/>		
Allow Exit when Door Lock	<input checked="" type="checkbox"/>		
Auto Relock	<input type="checkbox"/>		
Auto Relock Timer (Sec)	3		
Enable Additional Security	<input type="checkbox"/> Disabled		
Enable Smart Identification	<input type="checkbox"/>		
Access Level	8		
Access Mode	Card		
Auto Acknowledge Alarm	<input type="checkbox"/>		
Auto Acknowledge Alarm (Sec)	10		
Facility Code	1		
Allow Access Through Mobile	<input type="checkbox"/>		
Mobile Entry Access Mode	Mobile Only		
Mobile Exit Access Mode	Mobile Only		

To configure the Advanced parameters click the following links:

- [“Settings”](#)
- [“Alarms”](#)
- [“Timers”](#)
- [“Wiegand”](#)

## Settings

The **Settings** tab differs for both Direct Door and Panel Door.

Click **Settings** tab.

For configuring the settings for **PVR** as a **Direct Door**, refer to [“Settings- Direct Door”](#).

For configuring the settings for **PVR** as a **Panel Door**, refer to [“Settings- Panel Door”](#).

## Settings- Direct Door

For PVR as **Direct Door**.

Settings	Alarms	Timers	Wiegand
Generate Exit Switch Events	<input type="checkbox"/>		
Generate Invalid User Events	<input type="checkbox"/>		
Generate Sequential IN-OUT Events	<input type="checkbox"/>		
Two Credentials Required	<input type="checkbox"/>		
Show PIN	<input type="checkbox"/>		
Allow Exit when Door Lock	<input checked="" type="checkbox"/>		
Auto Relock	<input type="checkbox"/>		
Auto Relock Timer (Sec)	<input type="text" value="3"/>		
Enable Additional Security	<input type="checkbox"/> Disabled		
Enable Smart Identification	<input type="checkbox"/>		
Access Level	<input type="text" value="8"/>

Auto Acknowledge Alarm	<input type="checkbox"/>		
Auto Acknowledge Alarm (Sec)	<input type="text" value="10"/>		
Facility Code	<input type="text" value="1"/>		
Allow Access Through Mobile	<input type="checkbox"/>		
Mobile Entry Access Mode	<input type="text" value="Mobile Only"/>		
Mobile Exit Access Mode	<input type="text" value="Mobile Only"/>		
<b>Temperature Logging</b>			
Enable	<input type="checkbox"/>		
Sensor Type	<input type="text" value="FEVOBOT"/>		
Sensor Interface	<input type="text" value="USB"/>		
Emissivity	<input type="text" value="0.95"/>		
Calibration Parameter	<input type="text" value="+"/> <input type="text" value="0.0"/>		
Approach to Sensor Wait-Timer (Sec)	<input type="text" value="3.0"/>		
Temperature Detection Time Out (Sec)	<input type="text" value="10"/>		
Tolerance between Consecutive Readings	<input type="text" value="0.5"/>		
Consecutive Readings Count within Tolerance	<input type="text" value="5"/>		
Temperature Threshold (°F)	<input type="text" value="99.5"/>		
Minimum Temperature for Access (°F)	<input type="text" value="95.0"/>		
Restriction Type	<input type="text" value="Soft"/>		
Bypass If Sensor Disconnected	<input type="checkbox"/>		

Configure the following parameters:

- **Generate Exit Switch Events:** Select this check box to enable the door to generate events every time the Exit Switch is used.
- **Generate Invalid User Events:** Select this check box to enable the door to generate events for Invalid User inputs.

- **Generate Sequential IN-OUT Events:** Select this check box to enable the door to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which the device is functioning.
- **Two Credentials Required:** Select this check box to enable the feature. If both, **ByPass Finger/Palm/face for Attendance** (User Configuration > T&A > Attendance) and **Two Credentials Required** check boxes are enabled, then two credentials will be mandatory for the users and the door will verify both these credentials.
- **Show Pin:** Select this check box to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock:** Select this check box to enable the users to Exit even when the Door relay is in locked condition.
- **Auto Re-lock:** Select this check box to enable the door to re-lock immediately when the door status changes to close after normal open, irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Re-lock Timer:** Specify the time in seconds for the Timer to Re-lock automatically. Valid Range: 1 to 65535.
- **Enable Additional Security:** Select this check box to enable additional security at the Door.
  - **Additional Security Code:** Specify the Additional Security Code ranging from 1 to 65535.
  - **Re-enter Code:** Re- enter the **Additional Security Code** to confirm.

*Changing this value can affect the SI function. Click **Default Code** to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification:** Smart Identification enables the identification of a user using the Smart Card even though the user is not registered on a device. Select this check box to enable Smart Identification at the door and select the **Access Level** and the **Access Mode** from the drop-down list.

*Door PVR must be in an Adaptive mode (System Configuration > Global Policy > Device > Run PVR Door In Adaptive Mode) to allow the Access through **Card + Biometric** and **Card + Biometric + PIN** mode of the Access.*

- **Auto Acknowledge Alarm:** Select this check box to enable the acknowledgment of all alarms for this device automatically.
- **Auto Acknowledge Alarm (sec):** Specify the time in seconds for the Auto Acknowledge Timer. On expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code:** Specify a value for Facility Code to be set for access modes other than **Card**, if Facility Code is expected in Wiegand Output.
- **Allow Access Through Mobile:** Select this check box to enable the Access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode:** Select the **Entry and Exit** door **Access Mode** from the drop-down list options—Mobile Only, Mobile then Biometrics, Mobile then Card.

If User Access Mode is selected as **None** in Zone Configuration and Mobile Access Mode is selected as **Mobile Then Biometrics** then door can be accessed through Mobile and then Biometric credential.

## Temperature Logging

- **Enable:** Select this check box to enable the temperature logging feature on the zone.
- **Sensor Type:** Select the type of thermal sensor integrated in the device from the drop-down list options—**AST, Web-Based** or **FEVOBOT**.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor from the drop-down list.  
For Sensor Type-AST, the Sensor Interface options will be: RS-232 and USB  
For Sensor Type- Web-Based, the Sensor Interface options will be: HTTP/S  
For Sensor Type-FEVOBOT, the Sensor Interface options will be: USB
- **Emissivity:** Specify the Emissivity for Sensor. This parameter is applicable when the Sensor Type is AST. The default value is 0.95.
- **Calibration Parameter:** Specify the Calibration Parameter for the thermal sensor. This parameter is applicable when Sensor Type is AST or Web-Based. On click of **+** the value increases by 0.1 and on click of **–** it decreases by 0.1.
- **Approach to Sensor Wait-Timer:** Specify the time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** Specify the time till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer, then timeout will be declared.
- **Tolerance between Consecutive Readings:** Specify the time within which the consecutive readings are considered to be valid user temperature readings. This parameter is applicable when Sensor Type is AST or Web-Based.
- **Consecutive Readings Count within Tolerance:** Specify the number of readings within the Tolerance time for which the consecutive readings are considered to be valid user temperature readings. This parameter is applicable when Sensor Type is AST or Web-Based. For example: if the count is set as 5, then 5 readings are taken and the reading with the highest temperature is considered.
- **Temperature Threshold:** Specify the Threshold value of the Temperature.
- **Minimum Temperature for Access:** Specify the Minimum Temperature value for Access that should be detected to be considered as valid temperature.
- **Restriction Type:** Specify the Restriction Type from the drop-down list options —**Soft** or **Hard**.
- **Bypass if Sensor Disconnected:** Select this check box to enable bypassing the feature if sensor connectivity is lost or is disconnected.

## Settings- Panel Door

For PVR as a **Panel Door**.

Settings			Alarms	Timers
Auto Relock	<input type="checkbox"/>			
Auto Relock Timer (Sec)	3			
Tail-Gating	<input type="checkbox"/>			
Reset Wait Timer	On Door Lock			
Man Trap Timer - Internal Reader (Sec) *	0			
Man Trap Timer - External Reader (Sec) *	0			
Enable Man Trap Door Interlocking	<input type="checkbox"/>			
Select Doors for Interlocking	ID	Name		

Configure the following parameters:

- **Auto Re-lock:** Select this check box to enable the door to re-lock automatically when the door status changes to close after normal open, irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Re-lock Timer:** Specify the time in seconds after which the door should re-lock automatically.
- **Tail-Gating:** Tailgating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the Panel Door, the occupancy count of a zone should be increased or decreased considering both the punch as well as the auxiliary input of the Panel Door. Select this check box to enable this feature.
- **Reset Wait Timer:** Select when the Wait Timer should be reset for tailgating from the drop-down list options—On Door Lock or Pulse Wait Timer.
- **Man Trap Timer- Internal Reader (Sec):** Specify the Man Trap Entry Timer within which the user should enter the next sequential door of a man-trap.
- **Man Trap Timer- External Reader (Sec):** Specify the Man Trap Exit Timer within which the user should exit the panel door to enter the next sequential door of a man-trap.
- **Enable Man Trap Door Interlocking:** Select this check box to enable the Door Interlock for the door (say Door1). This means if the Door1 is open, other doors will remain closed.
- **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.

- To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

ID	Name
10	ARCDC100_DD_Door
9	ARCDC100_DD_Door
8	ARCDC100_SD_Door
1	ARGO_PANEL
2	DoorV3
7	DoorV3_Door
3	DOORV4_PANEL
6	dummy
4	PATHV2_PANEL
5	VEGA_PANEL

You can either select particular door or can select all the doors at once.

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box. The doors on all the pages will be selected.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

For example, if Door 2 and Door 3 are selected for interlocking with Door 1, Door 2 and Door 3 will remain locked when Door 1 is open.

*Door Interlocking feature will not work for Degraded mode.*

*For Example, when a door is in abnormal state and for that door interlocking is enabled, then user access to other doors of the interlocking group is allowed.*

## Alarms

Alarms tab differs for Direct Door and Panel Door.

Click **Alarms** tab. The **Alarms** page appears.

For PVR as **Direct Door**.

Settings	Alarms	Timers	Wiegand
	Tamper	<input type="checkbox"/>	
	Door Abnormal	<input type="checkbox"/>	
	Door Force Open	<input type="checkbox"/>	
	Door Fault	<input type="checkbox"/>	
	Panic	<input type="checkbox"/>	
	Temperature Threshold	<input type="checkbox"/>	

For PVR as a **Panel Door**.

Settings	Alarms	Timers
	Duress	<input type="checkbox"/>
	Tamper	<input type="checkbox"/>
	Door Abnormal	<input type="checkbox"/>
	Door Force Open	<input type="checkbox"/>
	Door Fault	<input type="checkbox"/>
	Panic	<input type="checkbox"/>
	Door Held Open	<input type="checkbox"/>
	Dead Man	<input type="checkbox"/>
	Occupancy Violated	<input type="checkbox"/>
	Tail-Gating	<input type="checkbox"/>
	Man Trap Timer Violation	<input type="checkbox"/>
	Access Denied - Anti-Pass Back	<input type="checkbox"/>
	Access Denied - Access Route Violated	<input type="checkbox"/>
	Access Denied - Other Reasons	<input type="checkbox"/>
	User Unidentified	<input type="checkbox"/>
	Multiple Unauthorized Attempts	<input type="checkbox"/>
	Access Denied - Access Route Timer Violated	<input type="checkbox"/>

- Select the check boxes of the desired alarms you wish to enable.

## Timers

This section allows the configuration of various types of predefined device timers which can trigger off specific responses. In COSEC Server, Timers are often used to control door behavior and for triggering alarms.

The **Timers** tab differs for both Direct Door and Panel Door.

Click **Timers** tab. The **Timers** page appears.

For PVR as **Direct Door**.

Settings	Alarms	Timers	Wiegand
Inter Digit Wait Timer (Sec) *			
<input type="text" value="3"/>			
Multi-Input Wait Timer (Sec) *			
<input type="text" value="5"/>			
Door Open Pulse Timer (Sec) *			
<input type="text" value="5"/>			
Late-IN Early-OUT Active Timer (Min) *			
<input type="text" value="60"/>			
Palm Enrollment Time Out (Sec) *			
<input type="text" value="60"/>			

Configure the following parameters:

- **Inter-Digit Wait Timer (sec):** Specify the time in seconds within which two key inputs on the device keypad must be obtained. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec):** Specify the time in seconds for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*It is recommended to set the timer value as greater than or equal to 10 seconds to avoid Access Denial issues to users. This is applicable when the system reads the credentials (Biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec):** Specify the time in seconds (1 to 65535) for the door to remain open for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a **Door Abnormal** alarm.
- **Late-IN Early-OUT Active Timer (min):** Specify the time in minutes for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door.
- **Palm Enrollment Time Out (sec):** Specify the time in seconds for which a Palm Enrollment command will be valid for credential input. Once this timer runs out, a new enrollment command will have to be generated.

For PVR as a **Panel Door**.

Settings	Alarms	Timers
Pulse Time (Sec)		
<input type="text" value="5"/>		

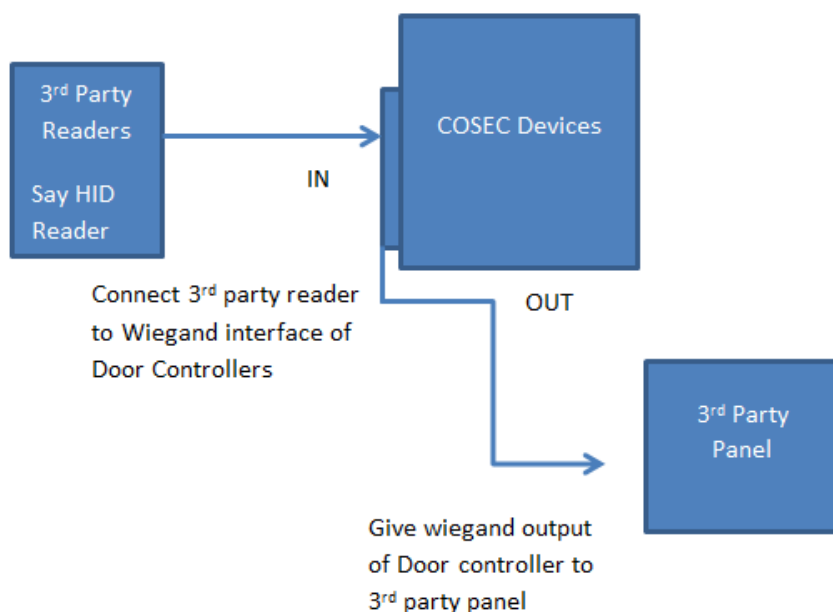

- **Pulse Time (sec):** Specify the time in seconds for the panel door to remain open for a valid credential.

## Wiegand

*Wiegand is applicable for Direct Door only.*

Click the **Wiegand** tab. The **Wiegand** page appears.

- **Wiegand Interface:** The COSEC Device can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown above.

So select the interface of PVR Direct Door as **Output Mode** to work as Wiegand Output to Panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the output mode parameters will be disabled.

If you select Output Mode then configure the **Output Mode Parameters**.

## Output Mode Parameters

- **Wait For Panel Signal:** Select the check box to enable. If this option is enabled the PVR Door will wait for reply from the connected third party device before triggering any output. You need to configure the **Signal Wait Timer (Sec)**.
- **Signal Wait Timer:** Specify the time for which the PVR Door should wait for reply from the connected third party device before triggering any output.
- **Wait For User Verification:** Select the check box to enable. If this option is enabled, user verification will be requested on the third party device before triggering any output.
- **Wiegand Output Format:** Select the desired format — 26 Bit, 37 Bit, Actual or Custom

The screenshot shows a web interface with tabs for Settings, Alarms, Timers, and Wiegand. The Wiegand tab is active. Under 'Wiegand Interface', 'Output Mode' is selected. The 'Output Mode Parameters' section includes: 'Wait For Panel Signal' (checked), 'Signal Wait Timer (Sec)' (20), 'Wait For User Verification' (checked), 'Wiegand Output Format' (26 Bit), and 'Send From' (MSB Bit).

If you select **Custom**, you can configure details of fields to be sent as output from the Wiegand reader that has been added.

The screenshot shows the 'Wiegand Format' configuration page. It lists various events with corresponding 'ID' and 'Name' picklist fields and a 'Send From' dropdown. The events are: For Allowed Events, Allowed Code, For Identified Events, Identified Code, For Denied With Invalid Biometric Events, Invalid Biometric Code, For Denied With Invalid Card Events, Invalid Card Code, For Denied With Invalid PIN Events, Invalid PIN Code, For Denied With Credential Time-Out Events, and Credential Time-Out Code. The 'Send From' dropdown is set to 'MSB Bit'.

- For each of the listed events, click the picklist to select the desired **Wiegand Output Format**.
- Assign an Access **Code** for each communication (for example Invalid PIN Code). This will depend on the number of output bits configured for Access Code in the selected Wiegand Output Format.
- **Send From:** Select the desired sending order for reader data — MSB or LSB Bit.

## Features

*The Features are available only with the Access Control Module license and are applicable for Direct Door only.*

The Features tab enables the user to enable certain Access Control features for the device.

To do this, on the **Device Configuration** page, click the **Features** tab in the left pane.

The screenshot shows the 'Device Configuration' window with the 'Features' tab selected in the left sidebar. The main area is divided into 'Basic' and 'Optional' sections. The 'Basic' section includes fields for Sequence Number (68), Device (155), IP Address, MAC Address (AA : BB : AA : AA : AA : BA), and an Active checkbox (checked). The 'Optional' section includes Site (1), Application (Basic Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages (unchecked), Consider For Visitor Pass Surrender (unchecked), Consider For Attendance (checked), and Generate Events (checked).

To configure the Features parameters, click the following links:

- [“Set1”](#)
- [“Set2”](#)

## Set1

Click **Set1** tab. The **Set1** page appears.

Set1	Set2
<b>Absentee Rule</b>	
Enable	<input type="checkbox"/>
<b>Occupancy Control</b>	
Enable	<input type="checkbox"/>
Maximum Occupancy Limit	<input type="text" value="9"/>
Minimum Occupancy Limit	<input type="text" value="1"/>
Zero Occupancy	<input checked="" type="checkbox"/>
<b>Use Count Control</b>	
Enable	<input type="checkbox"/>
Use Count Limit (Per Minute)	<input type="text" value="5"/>
<b>Duress Detection</b>	
Duress Detection	<input type="checkbox"/> <input type="text"/>

Configure the following parameters:

### Absentee Rule

- **Enable:** Select this check box to enable the feature on the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked. For configuring the rule, refer to [“Absentee Rule”](#).

### Occupancy Control

- **Enable:** Select this check box to enable the feature on the door.
- **Maximum Occupancy Limit:** Specify the maximum number of users to be allowed within the controlled area, after which a user exit is required to enable access to another user.
- **Minimum Occupancy Limit:** Specify the minimum number of occupants to be present within the controlled area.
- **Zero Occupancy:** Select the check box to enable the controlled area to be empty. For configuring the rule, refer to [“Occupancy Control”](#).

### Use Count Control

- **Enable:** Select this check box to enable the feature on the door.
- **Use Count Limit (Per Minute):** Specify the maximum number of times a user is allowed to access an area with valid credentials per minute. For configuring the rule, refer to [“Use Count Control”](#).

### Duress Detection

- **Duress Detection:** Select this check box to enable Duress Detection on the door. The default duress detection code is displayed which is used to generate the duress alarm. Specify the desired duress code.

This code informs that a user is forced to open the door under threat. Once this feature is enabled the system waits for the duress code after the User PIN and the right arrow key input before enabling the duress alarm. The keys have to be pressed in the following order: (User Pin Code) → (Right Arrow Key) → (2 digit Duress Code).

## Set2

Click **Set2** tab. The **Set2** page appears.

The screenshot shows the 'Set2' configuration page with three main sections:

- First IN User Rule:**
  - Enable: ☐
  - Reset On: ☒ Day Change ☐ Timer Expiry
  - Access Timer (Sec):
  - First IN User Group:
- Anti-Pass Back (APB):**
  - On Entry: ☐
  - On Exit: ☐
  - Hard/Soft:
  - Forgiveness: ☒
  - Reset After: ☒ Day Change ☐ Timer Expiry
  - Forgiveness Timer (Min):
- 2-Person Rule:**
  - Enable: ☐
  - Mode:
  - Primary Group:
  - Secondary Group:
  - 2nd Person Wait Timer (Sec):

Configure the following parameters:

### First-IN User Rule

- **Enable:** Select this check box to enable the feature on the door.
- **Reset On:** Select when the First-IN User rule should be reset from the options — **Day Change** or **Time Expiry**.

If you select **Time Expiry**, configure the **Access Timer (Sec)**.

- **Access Timer (sec):** Specify the duration for which the rule should be applied. After the expiry of this timer, the rule will be reset for all the users.
- **First-In User Group:** Select the desired group which should be valid at the door from the picklist. For configuring the rule, refer to "[First In User Assignment](#)".

### Anti-Pass Back (APB)

- **On Entry:** Select this check box to enable the system to monitor the entry reader for APB violation.
- **On Exit:** Select this check box to enable the system to monitor the entry as well as the exit readers for APB violations.

- **Hard/Soft:** Select the restriction type from the drop-down list options—Soft or Hard.

**Hard APB:** If you select Hard APB, access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.

**Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.

- **Forgiveness:** Select this check box to enable the system to reset the APB status.

If **Forgiveness** is enabled, configure the following parameters.

- **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his/her card for entry in the next morning.
- **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of defined time.

If **Reset After Timer Expiry** is selected, configure the following parameter.

- **Forgiveness Timer (Mins):** Specify the time duration in minutes after which Anti-Pass Back status will get reset and the pass will be in original state.

## 2-Person Rule

- **Enable:** Select this check box to enable the feature on the door.
- **Mode:** Select the Mode from the drop-down list options— Primary Must or Primary & Secondary Must.
- **Primary Group:** Select the desired group from the drop-down list.
- **Secondary Group:** Select the desired group from the drop-down list.
- **2nd Person Wait Timer (sec):** Specify the wait time in seconds after which the second person is allowed to punch on the door. For configuring the rule, refer to ["2 Person Rule Assignment"](#).

## Video Surveillance

*Video Surveillance is applicable for both Direct Door and Panel Door.*

The **Video Surveillance** tab enables the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To do this, on the **Device Configuration** page, click the **Video Surveillance** tab in the left pane.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted in blue), Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into two tabs: 'Visual Tagging' (active) and 'Satatya Integration'. Under 'Visual Tagging', there are fields for 'Capturing Device' (set to 'Matrix HVR/NVR'), 'MAC Address', 'Camera ID', and 'Storage Root Folder'. There is also a checkbox for 'FTP Login Credentials' which is unchecked. Below this, there are fields for 'User Name' and 'Password'.

To configure the Video Surveillance parameters, click the following links:

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported Hybrid and Network Video Recorders and grab images triggered by user events at the Doors. The **Visual Tagging** tab enables the administrator to define the video recorder parameters.

Click the **Visual Tagging** tab. The **Visual Tagging** page appears.

To view the user events and related images, click **Admin > Views/Logs > Event View**. To know more about viewing events, refer to [“Event View”](#).

Configure the following parameters:

- **Capturing Device:** Select the video recording device type from the drop-down list options — Matrix HVR/NVR or Milestone.

For more information on integration with **Milestone** devices, refer to [“Milestone Integration”](#).

If you select Matrix HVR/NVR, then configure the following parameters.

- **MAC Address:** Specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID:** Specify the Camera number or Camera ID for IP cameras. For analog cameras, specify the camera number.
- **Storage Root Folder:** Specify the Root Folder path or FTP Path where the uploaded images are to be saved.
- **FTP Login Credentials:** Select this check box to activate the FTP login credentials for authentication.
- **User name:** Specify the FTP Server User Name.
- **Password:** Specify the FTP Server Password.

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** in **Visual Tagging** tab. It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page.

Click **Satatya Integration** tab. The **Satatya Integration** page appears.

Configure the following parameters:

- **Integration Type:** Select the **Integration Type** from the drop-down list options—Wired or Network.

If you select **Wired Integration**, door will be physically connected with the Satatya Device.

If you select **Network Integration**, connection can be by Ethernet, Wireless or Broadband depending upon the COSEC device support. If you select this option you need to configure the below mentioned parameters.

- **Active:** Select this check box to enable the SATATYA Integration functionality.
- **IP Address:** Specify the IP Address of HVR/NVR.
- **Port Number:** Specify the Port Number of HVR/NVR.
- **Schedule Name:** Specify a user friendly Name for the Integration function.
- **Active:** Select this check box to enable the schedule.
- **Schedule:** Specify the Start Time and End Time of the Schedule in HH:MM format.
- **Days:** Select the check boxes for the desired Days on which you wish to apply the Schedule.
- **Event:** Select a COSEC Event for which the action is to be configured from the drop-down list.
- **Mode:** Select the event Mode from the drop-down list options—Entry, Exit, Both if you select the Event as Access Allowed, Access Denied or Invalid User.

- **Action:** Select the Action for the Satatya device from the drop-down list options—Recording, Image Upload, Video Pop-up, PTZ Preset, Mail Image.

If you select **Recording**, specify the **Duration Min..**

If you select **Upload Image**, Images will be uploaded as per the FTP settings.

If you select **Video Pop-up**, specify the **Duration Sec.** The video pop up will be generated on the local client of Satatya device.

If you select **PTZ Preset**, specify the desired **Position No.**

If you select **Mail Image**, specify the **Email ID.**

- **Camera:** Select the check boxes of the desired camera channels depending on the Action selected.

**Example 1:** For Action as Video Pop up and the camera channel selected is 24, then the pop-up of Camera 24 will be shown for 10 seconds.

**Example 2:** For Access Allowed event on COSEC Device and the camera channel selected are 4,6,8 and 10, then recording of these cameras will be done for 10 seconds.

- Click **Add**. All the Events and Actions configured for them appear in a list.

## Special Functions

*Special Functions is applicable for both Direct Door and Panel Door.*

On the **Device Configuration** page, click the **Special Functions** tab in the left pane.

No.	Function Name	Active	Job Selection	User Group	Card 1	Card 2	Card 3	Card 4	
1	Official Work - IN	Yes	Yes	All					
2	Official Work - OUT	Yes	Yes	All					
3	Short Leave - IN	Yes	Yes	All					
4	Short Leave - OUT	Yes	Yes	All					
5	Regular - IN	Yes	Yes	All					
6	Regular - OUT	Yes	Yes	All					
7	Break End	Yes	Yes	All					
8	Break Start	Yes	Yes	All					
9	Overtime - IN	Yes	Yes	All					
10	Overtime - OUT	Yes	Yes	All					
11	Enroll User	Yes	No	All					
12	Enroll Special Card	Yes	No	All					

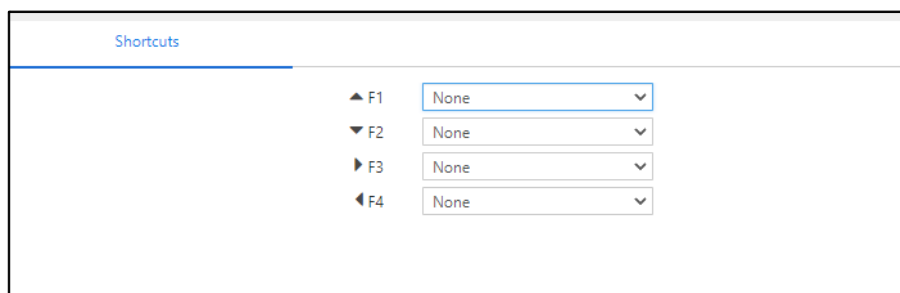

The **Special Functions** page differs for both Direct Door and Panel Door.

For PVR as **Direct Door**.

Configuration		Shortcuts			Schedule

To configure Special Functions for PVR as Panel Door, refer to [“Special Functions Shortcuts”](#).

## Input/Output

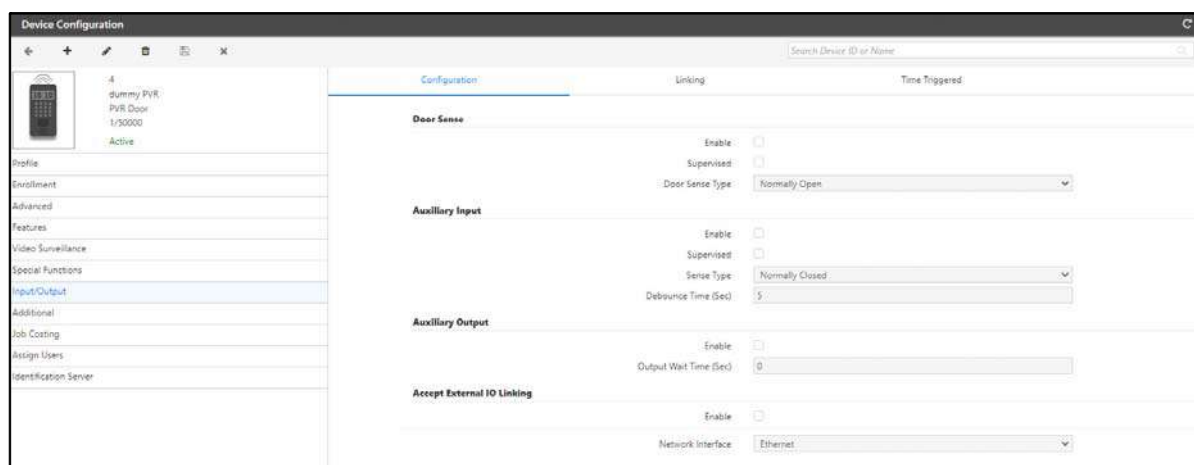

*Input/Output is applicable for both Direct Door and Panel Door.*

*The Configuration Tab is applicable for both Direct Door and Panel Door, whereas Linking and Time Triggered tab is applicable for Direct Door only.*

*This functionality is available only with the Access Control add-on module license.*

The Input/Output (I/O) configuration of a door determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

On the **Device Configuration** page, click the **Input/Output** tab in the left pane.

## Configuration

*Configuration is applicable for both Direct Door and Panel Door.*

Configuration tab differs for Direct Door and Panel Door.

Click **Configuration** tab. The **Configuration** page appears.

For PVR as **Direct Door**.

Configuration	Linking	Time Triggered
<b>Door Sense</b>		
Enable	<input type="checkbox"/>	
Supervised	<input type="checkbox"/>	
Door Sense Type	Normally Open	
<b>Auxiliary Input</b>		
Enable	<input type="checkbox"/>	
Supervised	<input type="checkbox"/>	
Sense Type	Normally Closed	
Debounce Time (Sec)	5	
<b>Auxiliary Output</b>		
Enable	<input type="checkbox"/>	
Output Wait Time (Sec)	0	
<b>Accept External IO Linking</b>		
Enable	<input type="checkbox"/>	
Network Interface	Ethernet	

Configure the following parameters:

### Door Sense

The system by default can sense two states of a door - Normally Open (NO) and Normally Closed (NC) depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a **Door Abnormal** alarm.

- **Enable:** Select the check box to enable the feature.
- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Door Sense Type:** Select the Door Sense Type from the drop-down list options — Normally Open or Normally Closed.

### Auxiliary Input

- **Enable:** Select the check box to enable the feature.

- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Sense Type:** Select the Sense Type from the drop-down list options — Normally Open or Normally Closed.
- **Debounce Time (Sec):** Specify the Debounce Time in seconds. It defines the minimum time for which the door should remain in a given state to enable the system to take action on it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

### Auxiliary Output

- **Enable:** Select the check box to enable the feature.
- **Output Wait Time (Sec):** Specify the time in seconds that will be set as an additional waiting period before the Aux Output signal is sent.

### Accept External IO Linking

- **Enable:** Select the check box to enable device-to-device IO Linking, i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface:** Select the interface option for IO linking with external devices from the drop-down list options—Ethernet, Wireless or Mobile Broadband.

For PVR as a **Panel Door**.

Configuration			
<b>Door Sense</b>

#### Auxiliary Output

- **Enable:** Select the check box to enable the feature.
- **Output Wait Time (Sec):** Specify the time in seconds that will be set as an additional waiting period before the Aux Output signal is sent.

#### Relay Output

- **Output Group Number (Door Unlock):** Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.
- **Output Group Number (Door Lock):** Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

## Linking

*Linking is applicable for Direct Door only.*

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the door.

Click **Linking** tab. The **Linking** page appears.

Configuration
Linking
Time Triggered

Search

Name	Active Input ▲	Output	Output Type	Pulse Time(Sec)	Reset Link	Reset Time	Supported Devices
	No	Aux. Input	Aux. Output		Inactive	00:00	0 »
	No	Aux. Input	Door Relay		Inactive	00:00	0 »
	No	Duress	Aux. Output		Inactive	00:00	0 »
	No	Duress	Door Relay		Inactive	00:00	0 »
	No	Intercom Panic	Aux. Output		Inactive	00:00	0 »

1 - 5 of 12 records

< 1 2 3 > »

Select a Input-Output linking row or click edit button.

- **Name:** Specify a Name for the new I/O linking program to be defined.
- **Active:** Select this check box to enable the IO Linking.
- **Output Type:** Specify the required type of Output from the drop-down list options—Pulse, Interlock, Latch, Toggle.

If you select **Pulse**, the output will be active for the defined pulse time, for example, 5 sec.

If you select **Interlock**, the output follows the input. The output will be active till the input is active, after which it returns to normal state.

If you select **Latch**, the relay output will be in energized condition for infinite period and needs to be reset manually. It means once the input is active, output will be active. It has to be reset manually. For example, during a Fire alarm, door should be unlocked permanently so Latch output can be used.

If you select **Toggle**, the output group toggles its state whenever an input group is activated.

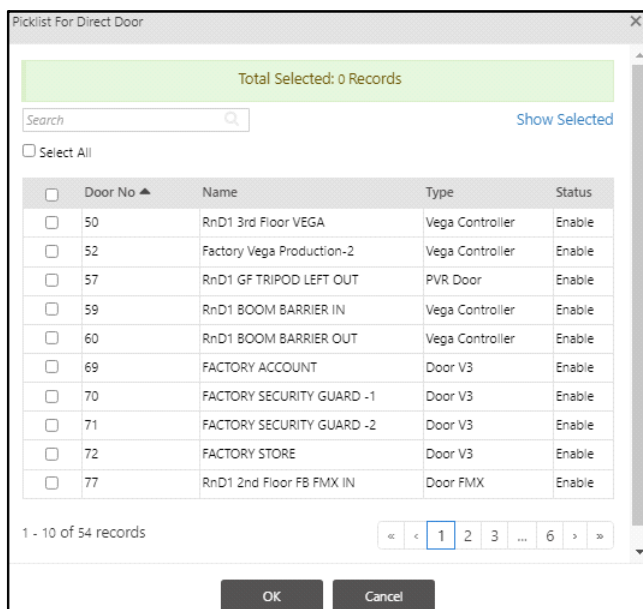

- **Pulse Time (sec):** If you select the Output Type as **Pulse**, specify the time until which the output should be active.
- **Reset Link:** Select this check box to enable the system to reset the IO link.
- **Reset Time:** Specify the time after which the IO link should be reset in HH:MM format.
- **Supported Devices** - All devices supported for external IO Linking will appear in this picklist for selection. Upto 255 external devices can be added by the administrator.

- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The **Supported Devices** pop-up window has a title bar with a close button. Below the title bar, there is a section labeled "Supported Devices" with two input fields: "ID" and "Name", and a list icon. Below this is a search bar with the placeholder text "Search" and a magnifying glass icon. The main area contains a table with the following columns: "ID", "Name", "IP Address", and a trash icon. The table is currently empty.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The **Picklist For Direct Door** pop-up window has a title bar with a close button. Below the title bar, there is a green banner that says "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, and a "Show Selected" link. Below the search bar is a "Select All" checkbox. The main area contains a table with the following columns: "Door No", "Name", "Type", and "Status". The table contains 10 rows of data. Below the table is a pagination bar that says "1 - 10 of 54 records" and a set of navigation buttons: "<<", "<", "1", "2", "3", "...", "6", ">", ">>". At the bottom are "OK" and "Cancel" buttons.

Door No	Name	Type	Status	
<input type="checkbox"/>	50	RnD1 3rd Floor VEGA	Vega Controller	Enable
<input type="checkbox"/>	52	Factory Vega Production-2	Vega Controller	Enable
<input type="checkbox"/>	57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
<input type="checkbox"/>	59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
<input type="checkbox"/>	60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
<input type="checkbox"/>	69	FACTORY ACCOUNT	Door V3	Enable
<input type="checkbox"/>	70	FACTORY SECURITY GUARD -1	Door V3	Enable
<input type="checkbox"/>	71	FACTORY SECURITY GUARD -2	Door V3	Enable
<input type="checkbox"/>	72	FACTORY STORE	Door V3	Enable
<input type="checkbox"/>	77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

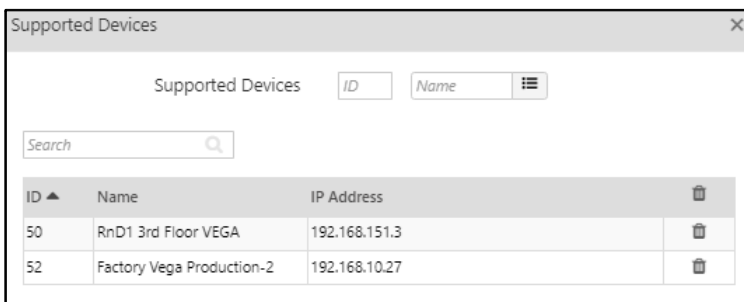

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices** pop-up and the selected devices are displayed here.

The **Supported Devices** pop-up window is shown with the selected devices. The table now contains two rows of data. The columns are "ID", "Name", "IP Address", and a trash icon.

ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

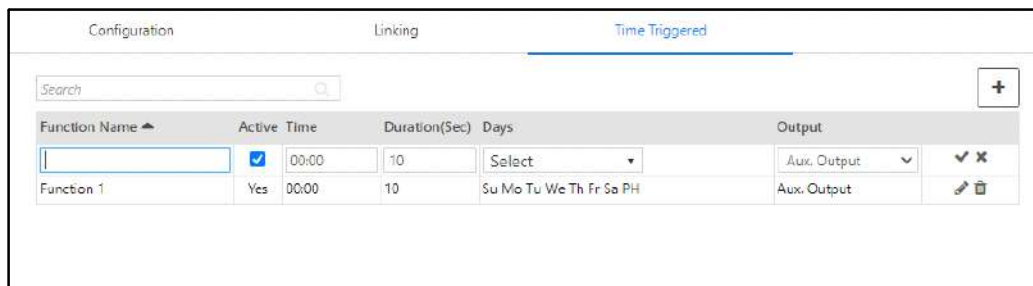

*Time Triggered is applicable for Direct Door only.*

This functionality enables the user to control the activity of an Output without manual intervention. The output gets active without the status of input, i.e. the selected output is triggered based on the configured time and not the IO link.

The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to trigger outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

Click **Time Triggered** tab. The **Time Triggered** page appears.

Function Name	Active	Time	Duration(Sec)	Days	Output
<input type="text"/>	<input checked="" type="checkbox"/>	00:00	10	Select	Aux. Output
Function 1	Yes	00:00	10	Su Mo Tu We Th Fr Sa PH	Aux. Output

Click **Add**.

Configure the following parameters:

- **Function Name:** Specify a user friendly Function Name.
- **Active:** Select this check box to enable the Time Triggered function.
- **Time:** Specify the time when the Time Triggered function should be activated.
- **Duration:** Specify the time duration for which the Time Triggered function should be active.
- **Days:** Select the check boxes for the desired days on which you wish to apply the Time Triggered function from the drop-down list. Click **Check All**, if you wish to select all the days.
- **Output:** Select the Output on which the Time Triggered function should be applied from the drop-down list options—Aux Output or Door Relay.

Click **OK** and then **Save** to save the settings.

## Additional

*Additional is applicable for Direct Door only.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes

On the **Device Configuration** page, click the **Additional** tab in the left pane.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration tabs: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, **Additional** (selected), Job Costing, Assign Users, and Identification Server. The main area is titled 'Daylight Saving' and contains the following fields:

- DST Type:** A dropdown menu set to 'Day-Month wise'.
- Time Period:** A text field containing '00:00'.
- Forward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.
- Backward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.

A 'Save' button is located at the bottom right of the configuration area.

The **Daylight Saving** configuration can be done in 2 ways — Day-Month wise or Date-Month wise.

- **DST Type:** Select the **DST Type** as Day-Month wise or Date-Month wise. Select Disable, if you wish to disable the application of DST on the system time.

If you select the **Day-Month wise** option, configure the following parameters.

This is a detailed view of the 'Daylight Saving' configuration form. It includes the same fields as the screenshot above:

- DST Type:** A dropdown menu set to 'Day-Month wise'.
- Time Period:** A text field containing '00:00'.
- Forward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.
- Backward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.

A 'Save' button is located at the bottom center of the form.

- **Time Period:** Specify the time period by which the time period will be set forward or backward to achieve Daylight Saving.

#### Forward Clock

- **Month:** Select the month when the DST starts for the Forward Clock from the drop-down list.
- **Week No.:** Select the week of the month when the DST starts for the Forward Clock from the drop-down list. For example, if DST starts from 4th week of March, select 4th.
- **Day of Week:** Select the day of the week when the DST starts for the Forward Clock from the drop-down list.
- **Time:** Specify the time when the DST starts for the Forward Clock in HH:MM format.

#### Backward Clock

- **Month:** Select the month when the DST ends for the Backward Clock from the drop-down list.
- **Week No.:** Select the week of the month when the DST ends for the Backward Clock from the drop-down list. For example, if DST starts from 4th week of March, select 4th.
- **Day of Week:** Select the day of the week when the DST ends for the Backward Clock from the drop-down list.
- **Time:** Specify the time when the DST ends for the Backward Clock in HH:MM format.

Click **Save** to save the configurations.

If you select the **Date-Month wise** option, configure the following parameters.

Daylight Saving

DST Type
Date-Month wise
Time Period
00:00

**Forward Clock**
Month
January
Date
1
Time
00:00

**Backward Clock**
Month
January
Date
1
Time
00:00

Save

- **Time Period:** Specify the time period by which the time period will be set forward or backward to achieve Daylight Saving.

### Forward Clock

- **Month:** Select the month when the DST starts for the Forward Clock from the drop-down list.
- **Date:** Select the date of the month when the DST starts for the Forward Clock from the drop-down list.
- **Time:** Specify the time when the DST starts for the Forward Clock in HH:MM format.

### Backward Clock

- **Month:** Select the month when the DST ends for the Backward Clock from the drop-down list.
- **Date:** Select the date of the month when the DST ends for the Backward Clock from the drop-down list.
- **Time:** Specify the time when the DST ends for the Backward Clock in HH:MM format.

Click **Save** to save the configurations.

Suppose, the DST period in a region is from Sunday, 27 March at 02:00:00 hours till Sunday, 30 October at 03:00:00. If DST is configured according to this period and the **Time Period** is specified as 1 hour, the clock will be forwarded by 01:00 hours on 27 March at 02:00:00 hours. The clock will be set back by 01:00 hours on 30 October at 03:00:00.

## Job Costing

*Job Costing is applicable for Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Administrator to show or hide Job Code selection on device. It also enables the Administrator to assign default jobs on device.

On the **Device Configuration** page, click **Job Costing** tab in the left pane.

The screenshot shows the 'Device Configuration' window with the 'Job Costing' tab selected in the left sidebar. The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default' and a 'Retain Job Selection' checkbox. Below this is a 'Default Jobs' section with a search bar and a table with columns: Job Code, Name, Assignment Start, Assignment End, and Prioritize Job. The table currently shows 'No Data'.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

## Settings

The **Settings** page appears by default.

- **Show Job Menu:** Select the Job Menu to be displayed from the drop-down list options— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

This screenshot shows the 'Device Configuration' window with the 'Job Costing' tab selected. The 'Show Job Menu' dropdown is now set to 'Show List', and the 'Retain Job Selection' checkbox is checked. Below the settings, there is an 'Assign Jobs' section with input fields for 'Job Group' (ID and Name) and 'Job' (ID and Name). A search bar is also present. At the bottom, there is a table with columns: Job Code, Name, Assignment Start, Assignment End, and a delete icon. The table currently shows 'No Data'.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

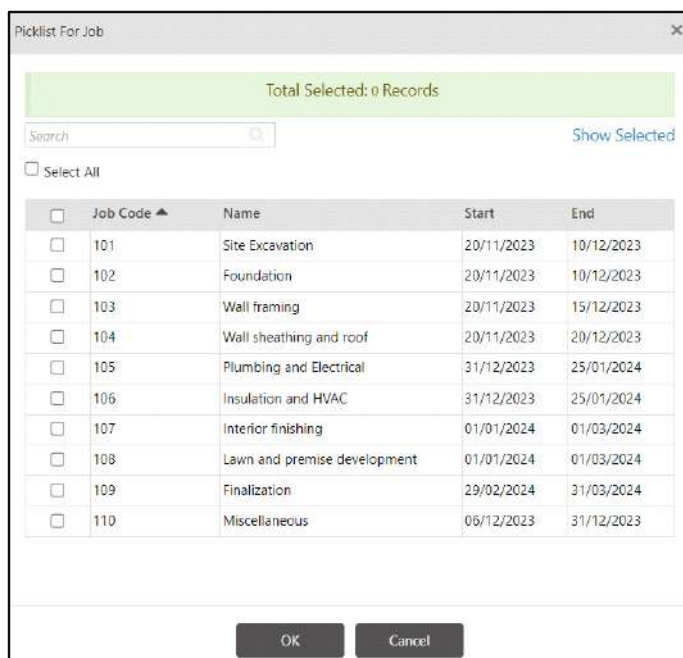

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist. The **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click Save. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  icon and then click the **Delete**  icon of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

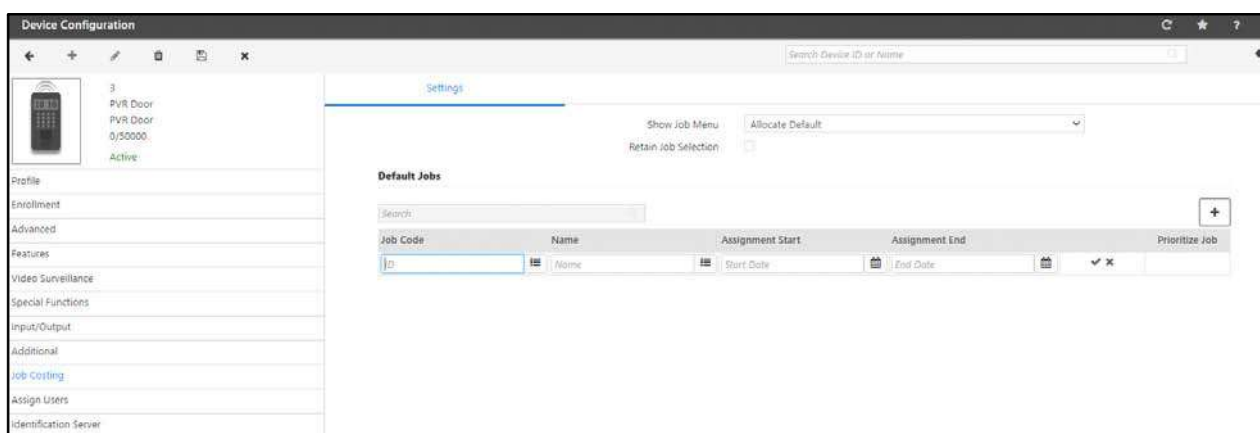

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

Picklist For Job

Search  Ended Days (1-999)  Active

1 - 10 of 11 records

1 2

Cancel

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter. If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- Click **Save** to save the configuration.

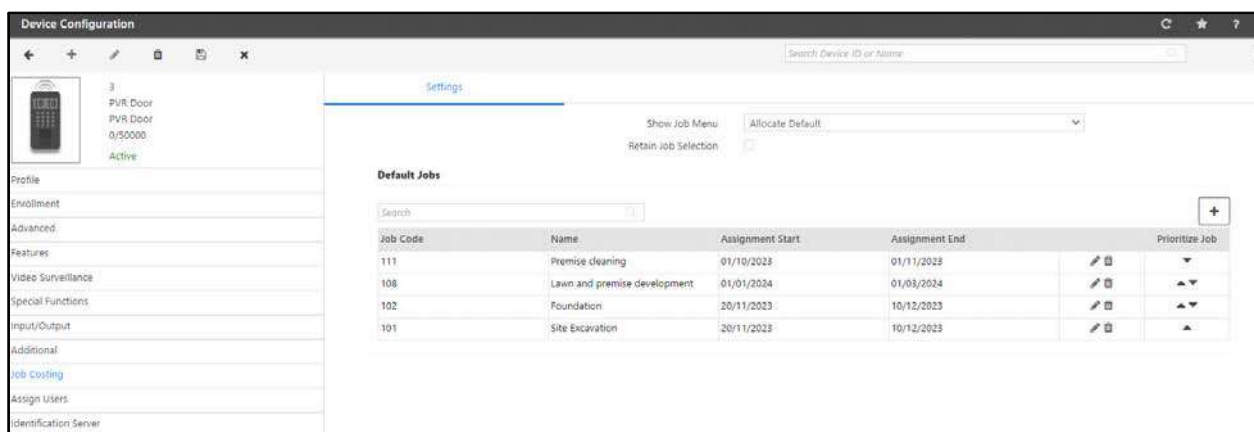

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

ID	Name	
1111	Test_08	
105	Test_105	
1000	test_15	
1	ar3	

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

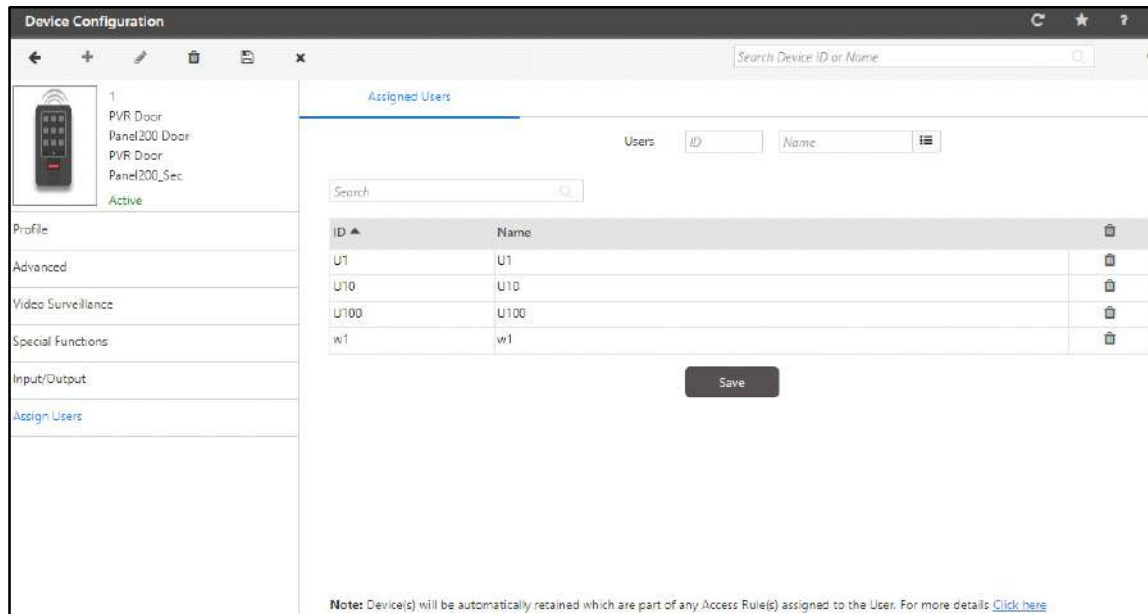

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

## For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

User ID ▲	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Identification Server

This tab enables the device to be assigned to a pre-defined Identification Server.

The door has a limited memory capacity for storage of templates so, we can assign an Identification Server which will store the templates for the door and will respond to the door when asked for identification.

For more information on Identification Servers, refer to [“Identification Server”](#).

On the **Device Configuration** page, click the **Identification Server** tab in the left pane.

**Device Configuration**

**Other Biometric Credentials**

Enable Identification On Server ☒

Identification Server 1 Identification - 309C239A9457

Configure Alternate Server Address ☒

Server Address 192.168.103.88

Server Port 11005

Enable Palm Smart Identification ☒

Wait For Server Response ☒

Wait For Device Response ☒

Auto Send Enrolled Templates ☒

Maximum Template Count For Sequential Identification 0

Default Biometric Group No. 0

## Settings

Configure the following parameters:

### Other Biometric Credentials

- **Enable Identification On Server:** Select this check box to enable identification of palm/finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of Identification Server is done from **Admin module > System Configuration > Identification Server Configuration** and make sure you start the Identification Service from the service tray. This IP Address of this Identification Server is displayed in **Server Address**.
- **Configure Alternate Server Address:** Select this check box to configure an external IP Address of the FR Identification Server and configure the Server Address.
  - **Server Address:** By default it displays the IP Address of the selected Identification Server. Enter the external network IP address which will be used for accessing Identification Server.
- **Server Port:** Enter the TCP Port number. Default: 11005.
- **Enable Palm Smart Identification:** Select this check box to enable Palm templates Identification through Identification Server for this device.
- **Wait For Server Response:** Select this check box if the Identification Server should wait for response from the COSEC Server before identifying a user. If enabled, the Identification Server will request the device as well as the COSEC Server to search for the template and wait till the response is received from the COSEC Server (even if a matching palm template is found locally).
- **Wait For Device Response:** Select this check box if the Identification Server should wait for response from the COSEC Device before identifying a user. If enabled, the Identification Server will request the device as well as the COSEC Server to search for the template and wait till the response is received from the device.
- **Auto Send Enrolled Templates:** Select this check box to enable any enrolled templates to be saved both in the COSEC database as well as saved locally in the configured Identification Server. This enables prompt identification of user on enrollment.
- **Maximum Template Count for Sequential Identification:** Specify the Maximum number of Templates upto which identification will be done locally through device after which the request will be forwarded to the Identification Server. For details, "[Device](#)" in Global Policy.
- **Default Biometric Group No.:** Specify the default Biometric Group Number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces false detection as well time to search template.

## Accessing the Door using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and access to this device is allowed to the user, then he can use his mobile device to scan the QR code which constitute the details of the door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now using the mobile camera you can scan the device QR code. The COSEC door will open after verifying the security key and access policies assigned to the user.

## Steps to create a QR code

**Step 1:** Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

### Notes for Step1

- If door is in direct door mode enter IP and port of the direct door
- If door is a panel door, then enter IP and port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

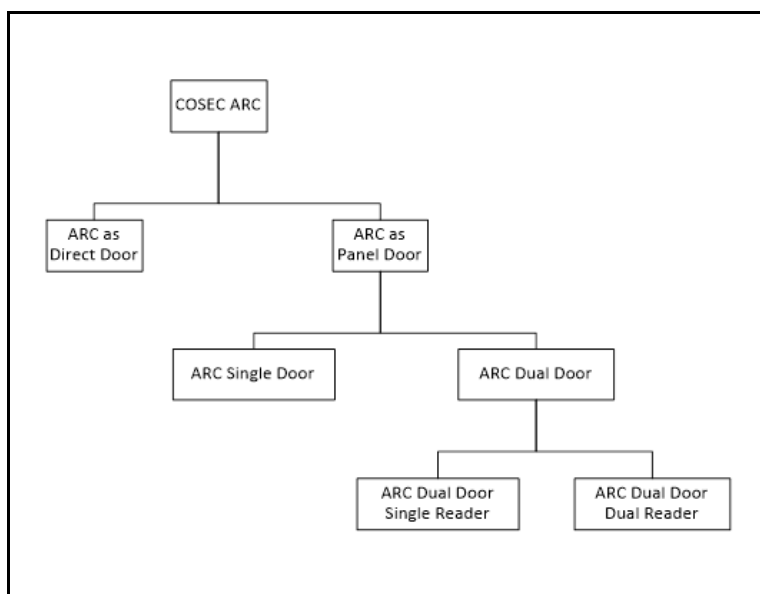

**Step 4:** Use this string to generate QR code through any third party software.

# ARC Door

---

COSEC ARC is an intelligent compact panel with PoE for two doors. The COSEC ARC can control two readers on Wiegand or RS-485, door lock and other auxiliary devices making it an ideal solution for any access control installation. **ARC DC100** and **ARC DC200** can be connected as **Direct Door** as well as **Panel Door**.

## ARC DC100 and ARC DC200

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#) (applicable to ARC DC200 Direct Door only)  
**OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device. It is applicable to ARC DC200 Direct Door only.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

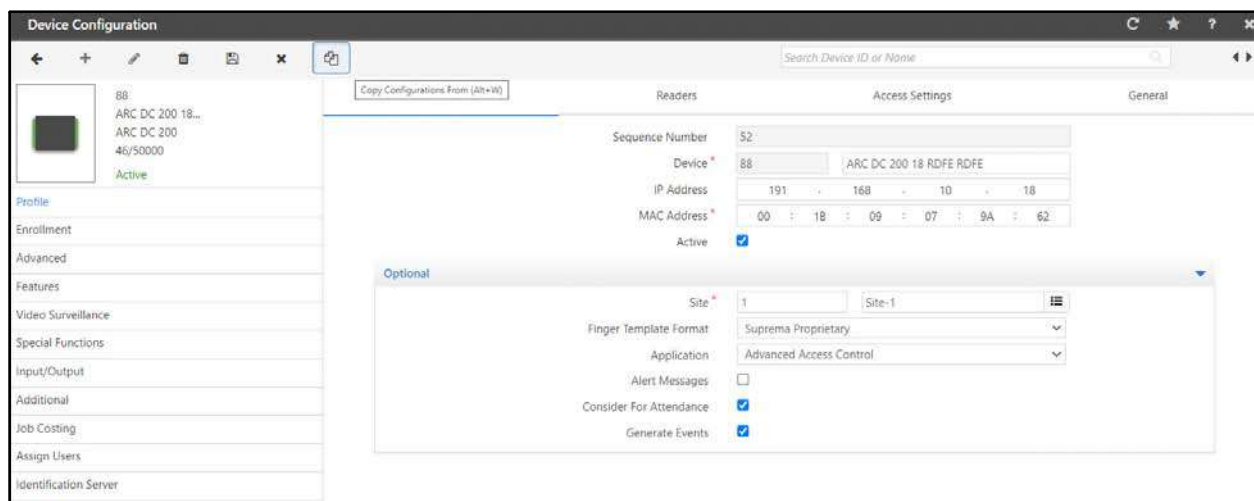

- the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- all the applicable parameter values will be copied from the selected device.*
- the values of the other parameters will be their default values.*

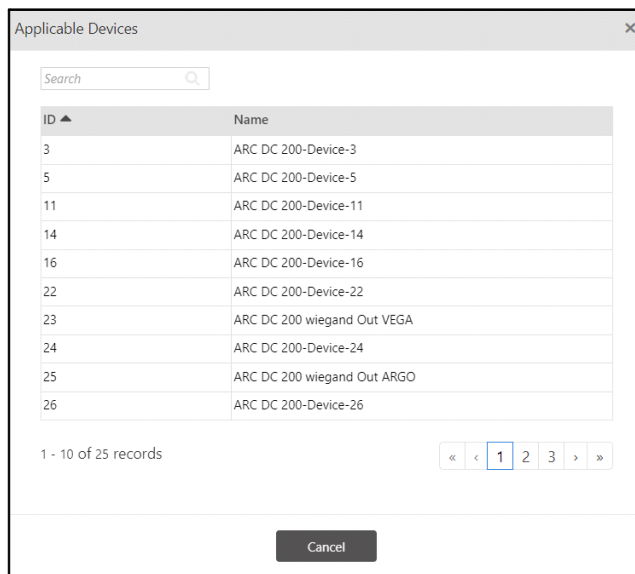

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The screenshot shows the 'Device Configuration' window with a sidebar on the left containing a list of devices and a main panel on the right. The sidebar lists devices like '88: ARC DC 200 18...', 'ARC DC 200', and '46/50000' with an 'Active' status. The main panel has tabs for 'Readers', 'Access Settings', and 'General'. The 'Readers' tab is active, showing fields for 'Sequence Number' (52), 'Device' (88), 'IP Address' (191.168.10.18), and 'MAC Address' (00:18:09:07:9A:62). Below these is an 'Optional' section with fields for 'Site' (1), 'Finger Template Format' (Suprema Proprietary), 'Application' (Advanced Access Control), 'Alert Messages' (unchecked), 'Consider For Attendance' (checked), and 'Generate Events' (checked). A 'Copy Configurations From (Alt+W)' button is visible at the top of the main panel.

The **Applicable Devices** pop-up appears.

ID ▲	Name
3	ARC DC 200-Device-3
5	ARC DC 200-Device-5
11	ARC DC 200-Device-11
14	ARC DC 200-Device-14
16	ARC DC 200-Device-16
22	ARC DC 200-Device-22
23	ARC DC 200 wiegand Out VEGA
24	ARC DC 200-Device-24
25	ARC DC 200 wiegand Out ARGO
26	ARC DC 200-Device-26

1 - 10 of 25 records

« < 1 2 3 > »

Cancel

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- *In case of Direct Door, the pop-up will display other ARC DC200 Direct Doors only. For example, if you have direct door devices — ARC DC1, ARC DC2, Vega1 and Vega2, then this pop-up will display only ARC DC1 and ARC DC2.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
  - [“ARC as Panel Door”](#)
  - [“ARC as Direct Door”](#)
- [“Enrollment”](#)
- [“Advanced”](#)

- *“Features”*
- *“Video Surveillance”*
- *“Special Functions”*
- *“Input/Output”*
- *“Additional”*
- *“Job Costing”*
- *“Assign Users”*
- *“Identification Server”*

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

### “ARC as Panel Door”

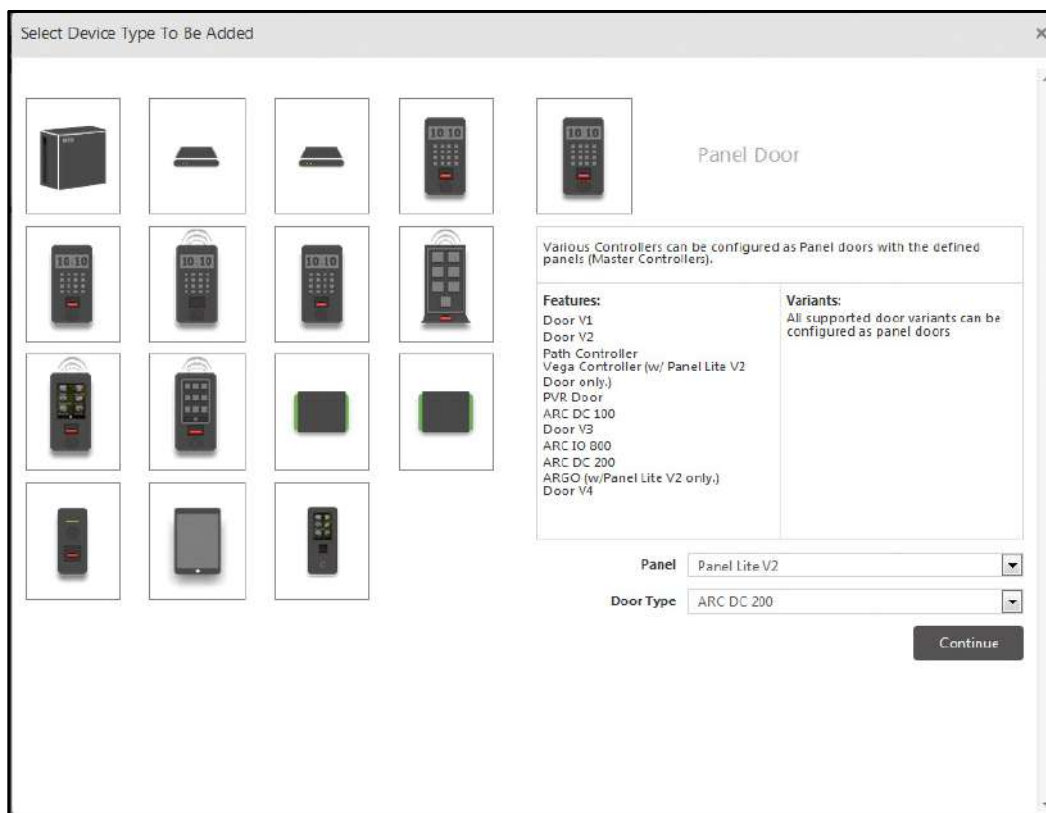

- “Basic”
- “Readers”
- “General”

### “ARC as Direct Door”

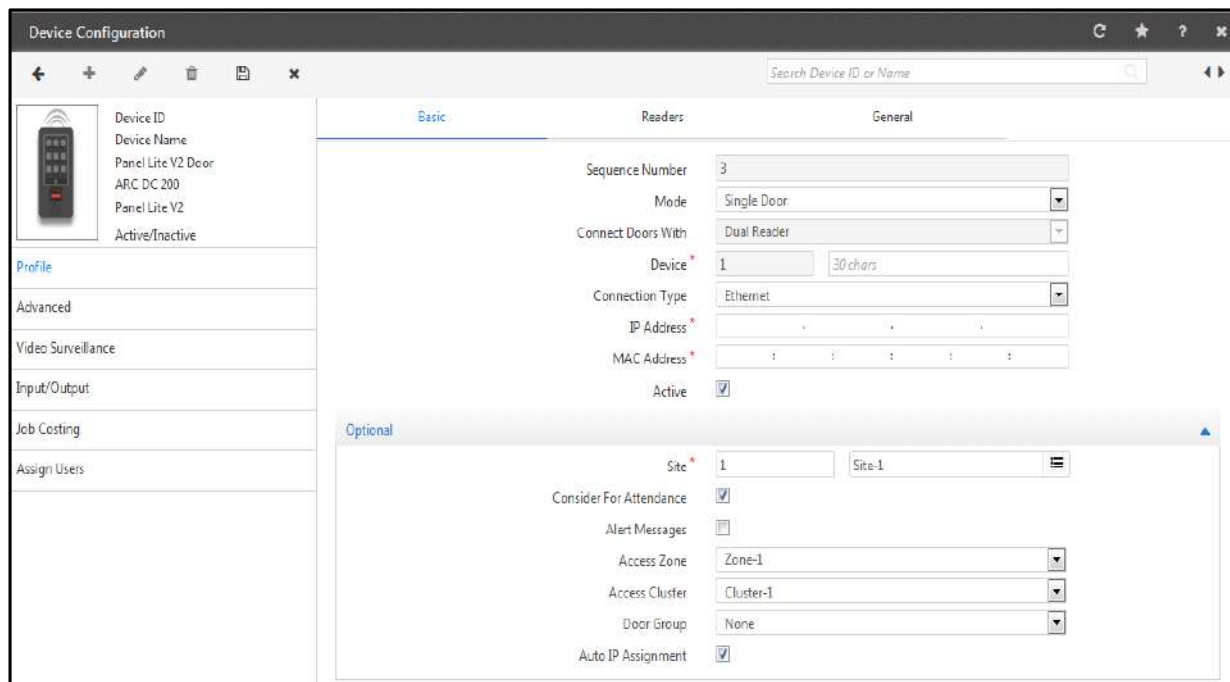

- “Basic”
- “Readers”
- “Access Settings”
- “General”

## ARC as Panel Door

To add ARC as Panel Door, click Panel Door from the device selection window and select the Panel as Panel Lite/ Panel200 and the door type as ARC DC100/ARC DC200. Then click Continue.

The Device Configuration window appears as shown below.

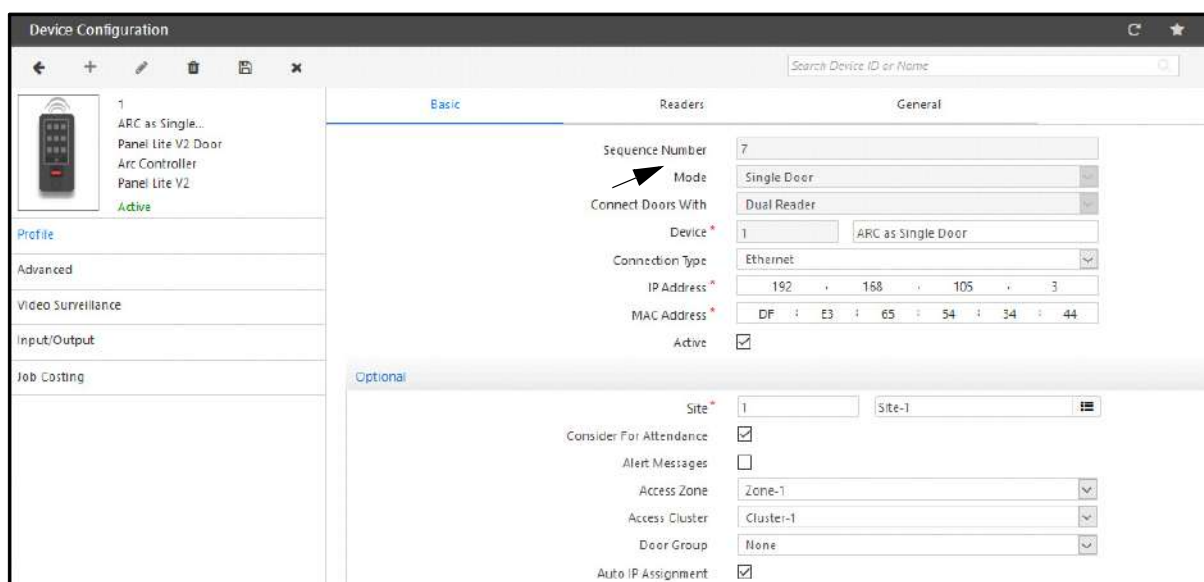

The Monitor Service must be running while adding the device to COSEC.

## Basic

**Sequence Number** - This is a system generated sequence number for each new device.

**Mode:** For connecting ARC as single door, select the mode as **Single Door**. For connecting ARC as dual door (ARC as 2door) select the Mode as **Dual Door**.

## Connecting ARC as Single Door

**Connect Doors with:** When Dual Door Mode is selected, you can connect doors with either **Single reader** or **Dual reader**.

**Device:** Specify the name of the door. The ID of the door is auto generated by the system.

**Connection Type:** Specify the connection type as Ethernet or RS485.

**IP Address/MAC address:** Enter the IP Address and MAC Address respectively of ARC DC100/ARC DC200. The IP address and MAC address of both the doors of ARC-2 door is same.

*MAC address of door is required while manually adding the door to the COSEC Monitor. You can note the MAC address from the device web page.*

**Active:** Check the box to activate the device on the network.

*To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “**Auto Add New Devices**” checkbox.*

*The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

Click **Save** button to save the configuration.

## Optional

The optional tab shows the following configuration.

- **Site:** Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Consider for Attendance:** Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages:** Select this checkbox to enable the application to send alerts based on events from this door.
- **Access Zone** (only for panel doors): Assign an access zone to the door by selecting from the drop down menu.

*Access Zone, Access Cluster, Door Group are configured while configuring Panel/Panel lite/Panel200.*

- **Access Cluster** (only for panel doors): Assign an access cluster to the door by selecting from the drop down menu.
- **Door Group**: Door Group drop down includes list of all configured Door groups on corresponding panel. An additional option as 'None' is available and selected by default.
- **Auto IP Assignment**: There is option where panel door can be assigned its IP from device webpage. To enable this check the Auto IP Assignment box.

## Connecting ARC as Dual Door

ARC-2 door can be connected as Panel door only. The 2 doors will have the same IP address and MAC address.

### 1. ARC Dual Door- Dual Reader- Working

Two readers connected to ARC-2-Door will point to 2 separate Panel doors virtually by the system so as to control two separate physical doors using a single arc-controller. You can connect PATH readers or any other supported readers to ARC DC100/ARC DC200.

- Both the readers will have the same MAC and IP Address.
- Both the readers can be assigned different zones, polices as per choice.
- As there will be only one reader per physical door hence both ENTRY/EXIT cannot be monitored on a physical door.
- The exit reader can only be connected with the reader1 since there is only one PIN available for this purpose.

**Device Configuration**

Device ID: [Icon]  
 Device Name: Panel Lite V2 Door  
 ARC DC 200  
 Panel Lite V2  
 Active/Inactive

**Basic**

Sequence Number: 3  
 Mode: Dual Door  
 Connect Doors With: Dual Reader  
 Device: 1  
 Connection Type: Ethernet  
 IP Address: 192 . 168 . 104 . 112  
 MAC Address: 00 : 1B : 09 : 03 : E5 : 29  
 Active: ☒

**Optional**

Site: 1  
 Consider For Attendance: ☒  
 Alert Messages: ☐  
 Access Zone: Zone-1  
 Access Cluster: Cluster-1  
 Door Group: None  
 Auto IP Assignment: ☒

Once the door is added and connected, it will be shown in Device Status as shown below. The IP address and MAC address of both the doors of ARC-2 door is same.

**Device Status**

Filter List: All | Device Type: All | Device Status: All | Group By: None

Name	Status	IP	MAC Address	Device Type	Site
Panel Lite V2			EF:54:76:8D:87:BF	Panel Lite V2	
Panel Lite V2-Device-4		192.168.104.111	00:1B:09:03:F3:83	Panel Lite V2	
PVR as Panel door		192.168.104.113	00:1B:09:03:F2:80	Panel Lite V2 Door	Waghodia Site
Path as Panel door		192.168.105.2	54:76:8F:46:76:87	Panel Lite V2 Door	Waghodia Site
ARC as Single Door		192.168.105.3	DF:34:64:75:56:E3	Panel Lite V2 Door	Waghodia Site
ARC as Dual Door		192.168.104.112	00:1B:09:03:E5:29	Panel Lite V2 Door	Waghodia Site
ARC as Dual Door		192.168.104.112	00:1B:09:03:E5:29	Panel Lite V2 Door	Waghodia Site

### Connection Example:

When a reader (eg: PATH reader) is connected to ARC DC100/ARC DC200, connect the cables as mentioned below.

#### ARC Reader2 terminal

A+  
 B-  
 12V  
 GND

#### PATH RDFI terminal

Small connector - Blue  
 Small connector - Brown  
 Big connector- Red  
 Big connector- Black

Aux o/p port in ARC DC must be used as door relay for reader 2.  
 Aux i/p port in ARC DC must be used as door status for reader 2.  
 Unused pin in ARC DC must be used as exit switch for reader 2.

Both the doors of Arc as dual door will act as individual doors.

Thus, 2 sets of configurations will be generated and dispatched every-time whenever any of the parameters in one of the two door's (Dual Door) Configuration gets changed.

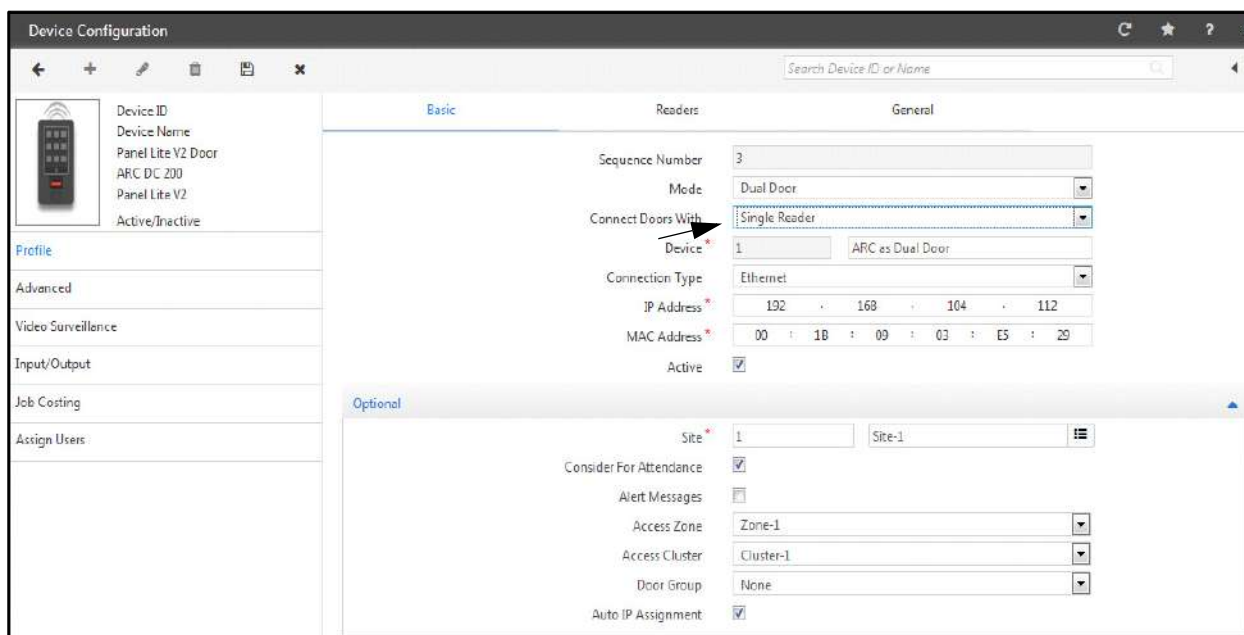

## 2. ARC Dual Door- Single Reader: Working

Single reader (Door controller) connected to ARC-2-Door will point to 2 separate Panel doors virtually by the system so as to control two separate physical doors using a single arc-controller. In this both the door will have same Reader Configuration except Exit Switch checkbox.

You can connect PATH readers or any other supported readers to ARC DC100/ARC DC200.

- The Door controller or the Reader must be connected to Reader1 port of ARC.
- LOCK Relay is connected to physical Door 1 and AUX Relay is connected to physical Door 2.
- As there is only 1 reader; If user punches on reader 1 and user is allowed on both doors then both doors will be opened simultaneously.
- If User1 is assigned Access Route1; then only Door1 will be opened when he punches on Reader1. similarly User 2 who is assigned Access Route2 can access Door2 only when he punches on Reader1.

**Device Configuration**

Device ID: 3

Device: 1  
Connection Type: Ethernet  
IP Address: 192.168.104.112  
MAC Address: 00:1B:09:03:E5:29  
Active: ☒

**Optional**

Site: 1  
Consider For Attendance: ☒  
Alert Messages: ☐  
Access Zone: Zone-1  
Access Cluster: Cluster-1  
Door Group: None  
Auto IP Assignment: ☒

## Readers

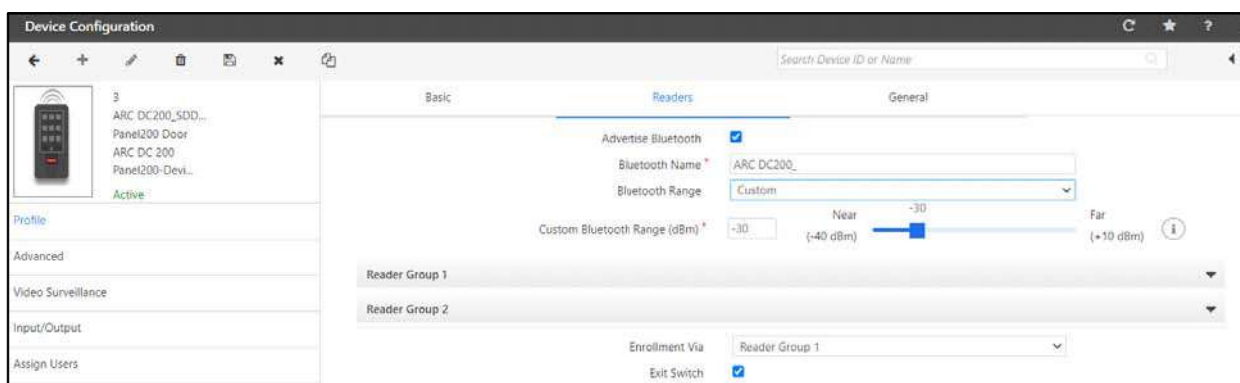

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

For ARC DC100, refer to “ARC DC100 as Single Door- Dual Reader”, “ARC DC100 as Dual Door- Single Reader” and “ARC DC100 as Dual Door- Dual Reader”.

For ARC DC200, refer to “ARC DC200 as Single Door- Dual Reader”, “ARC DC200 as Dual Door- Single Reader” and “ARC DC200 as Dual Door- Dual Reader”.

### ARC DC200 as Single Door- Dual Reader

Configure the following parameters for ARC DC200 as Single Door- Dual Reader:

**Device Configuration**

Device ID: 3  
Device Name: ARC DC200\_SDD...  
Panel200 Door  
ARC DC 200  
Panel200-Devi...  
Active: Active

**Readers**

Advertise Bluetooth: ☒  
Bluetooth Name: ARC DC200\_  
Bluetooth Range: Custom  
Custom Bluetooth Range (dBm): -30  
Near: -40 dBm  
Far: +10 dBm  
Reader Group 1  
Reader Group 2  
Enrollment Via: Reader Group 1  
Exit Switch: ☒

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of ARC DC200 and it will be visible to others. Then configure the following parameters.
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here.

If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance. Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.
- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

## Reader Group1/ Reader Group2

Configure the following parameters for Reader 1 or Reader 2:

The screenshot displays the configuration interface for two reader groups.   
**Reader Group 1:** RS-485 Interface Protocol is set to 'Matrix Proprietary', Matrix Reader Type is 'None', and Wiegand Reader is 'Short - Range Reader'. The table below has one row with Member No '1', Card Format 'Default Format', and Configurable Bits '0'. The Mode is set to 'Entry'.   
**Reader Group 2:** RS-485 Interface Protocol is 'Matrix Proprietary', Matrix Reader Type is 'EM Prox Reader', and Wiegand Reader is 'Short - Range Reader'. The table has one row with Member No '1', Card Format 'Default Format', and Configurable Bits '0'. The Mode is set to 'Exit'.   
 At the bottom of the Reader Group 2 panel, 'Enrollment Via' is set to 'Reader Group 1' and 'Exit Switch' is checked.

- **RS-485 Interface Protocol:** Select the desired option — Matrix Proprietary, OSDP.

If you select RS-485 Interface Protocol as Matrix Proprietary, you can configure the parameters for Matrix Reader Type as well as Wiegand Reader. For details, refer to [“Matrix Reader Type and Wiegand Reader”](#).

If you select RS-485 Interface Protocol as OSDP, you need to configure the OSDP Parameters. OSDP Protocol is supported for 3rd Party Readers only. For details refer to [“OSDP Parameters”](#).

## Matrix Reader Type and Wiegand Reader

- **Matrix Reader Type:** Select the desired reader type to be connected on RS-485 interface.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#).

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Wiegand Reader:** You can select **Short-Range Reader**, **Long-Range Reader**, **PIN-W Reader** or **CB W Reader**.

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long range reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

**CB W Reader** is a slave reader that works over BLE module.

Example: Punching on door via bluetooth technology of mobile.

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters > Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for the reader group from the drop down list.
- **Configure Bluetooth from Server:** When you select **Matrix Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature of aforementioned readers.

The screenshot displays the configuration interface for two reader groups in the Matrix COSEC System. Both groups are configured with the following parameters:

- RS-485 Interface Protocol:** Matrix Proprietary
- Matrix Reader Type:** ATOM RD200
- Wiegand Reader:** Long - Range Reader
- Search:** (Empty search bar)
- Member No:** 1
- Card Format:** Default Format
- Configurable Bits:** 0
- Mode:** Entry (for Reader Group 1) and Exit (for Reader Group 2)
- Configure Bluetooth From Server:** ☒
- Advertise Bluetooth:** ☒
- Bluetooth Name:** ARC DC200\_
- Bluetooth Range:** Custom
- Custom Bluetooth Range (dBm):** -30 (Near: -40 dBm, Far: +10 dBm)
- Enrollment Via:** Reader Group 1
- Exit Switch:** ☒
- Re-Detection Delay:** (Empty field) mins

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the reader. Then configure the following parameters
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement. The **Bluetooth Name** can be a maximum of 20 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **Matrix Reader Type** option as ATOM RD200/300, only then you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

Similarly, configure the parameters of Reader Group 2.

- **Enrollment Via:** Select the preferred enrollment option — Reader Group1, Reader Group2 or Device.

*Make sure you have configured the desired Readers (as per the credentials you wish to enroll) in Reader Group 1 and Reader Group 2. To configure the Readers, refer [“Reader Group1/ Reader Group2”](#).*

- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**.
- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

## ARC DC200 as Dual Door- Single Reader

*In ARC as dual door; changing any of the control value in Reader of one Door will also change the value of this control in Reader of second door.*

### DOOR 1

Configure the following bluetooth parameters for ARC DC200 Door 1:

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of ARC DC200 Door 1 and configure the following parameters.
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here.

If required, you can configure the bluetooth name as per your requirement. The **Bluetooth Name** can be a maximum of 10 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

## Door Group

- **RS-485 Interface Protocol:** Select the desired option — Matrix Proprietary, OSDP.

If you select RS-485 Interface Protocol as Matrix Proprietary, you can select the Matrix Reader Type as well as Wiegand Reader. For details, refer to [“Matrix Reader Type and Wiegand Reader”](#).

If you select RS-485 Interface Protocol as OSDP, you need to configure the OSDP Parameters. OSDP Protocol is supported for 3rd Party Readers only. For details refer to [“OSDP Parameters”](#).

## Matrix Reader Type and Wiegand Reader

- **Matrix Reader Type:** Select the desired reader type to be connected on RS-485 interface.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#).

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Wiegand Reader:** You can select **Short-Range Reader**, **Long-Range Reader**, **PIN-W Reader** or **CB W Reader**.

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long range reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

**CB W Reader** is a slave reader that works over BLE module.

Example: Punching on door via bluetooth technology of mobile.

While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters > Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for the Door Group from the drop down list.
- When you select **Matrix Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature of aforementioned external readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the reader. Then configure the following parameters:
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the name of bluetooth as per your requirement. The **Bluetooth Name** can be a maximum of 20 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **Matrix Reader Type** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- **Enrollment Via:** Select the preferred enrollment option — Reader Group1 or Device.
- **Exit Switch:** You can enable the **Exit Switch** if required. For Dual door with single reader, **Exit Switch** checkbox can be set differently for both doors i.e. for one door it can be enabled, while for the other door it can be disabled. Select **Exit Switch** checkbox so that the door can be opened without checking for any access policies.

- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

Click on the **Save** button.

## DOOR 2

The DOOR 2 parameter configurations are similar to that of Door 1. For details refer to “[DOOR 1](#)”.

Click **Save**.

## ARC DC200 as Dual Door- Dual Reader

Configure the following parameters of ARC DC200 as Dual Door - Dual Reader:

The screenshot shows the configuration interface for the ARC DC200 device. The 'Readers' tab is selected, displaying various settings. At the top, there are checkboxes for 'Advertise Bluetooth' and 'Configure Bluetooth From Server', both of which are checked. Below these are fields for 'Bluetooth Name' (set to 'ARC DC200') and 'Bluetooth Range' (set to 'Custom'). A slider for 'Custom Bluetooth Range (dBm)' is shown, ranging from -40 dBm to +10 dBm, with a blue bar indicating the current range. Below this is a 'Door Group' section containing a table with columns for 'Member No', 'Card Format', and 'Configurable Bits'. Member 1 is listed with 'Default Format' and '0' bits. Below the table, there are settings for 'Mode' (set to 'Entry'), 'Advertise Bluetooth' (checked), 'Bluetooth Name' (set to 'ARC DC200 DDDR-IN'), and 'Bluetooth Range' (set to 'Custom'). At the bottom, there are settings for 'Enrollment Via' (set to 'Reader Group 1'), 'Exit Switch' (checked), and 'Re-Detection Delay' (set to 0 mins).

- **Advertise Bluetooth-** Select this checkbox to enable Bluetooth of ARC DC200 and it will be visible to others. Then configure the following parameters.
- **Bluetooth Name-** By default, if the Device Name is configured then it will be displayed here.

If required, you can configure the bluetooth name as per your requirement. It can be a maximum of upto 10 characters.

- **Bluetooth Range-** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.

- **Custom Bluetooth Range (dBm)**- If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

## Door Group

- **RS-485 Interface Protocol:** Select the desired option — Matrix Proprietary, OSDP.

If you select RS-485 Interface Protocol as Matrix Proprietary, you can select the Matrix Reader Type as well as Wiegand Reader. For details, refer to [“Matrix Reader Type and Wiegand Reader”](#).

If you select RS-485 Interface Protocol as OSDP, you need to configure the OSDP Parameters. OSDP Protocol is supported for 3rd Party Readers only. For details refer to [“OSDP Parameters”](#).

### Matrix Reader Type and Wiegand Reader

- **Matrix Reader Type:** Select the desired reader type to be connected on RS-485 interface.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#).

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Wiegand Reader:** You can select **Short-Range Reader**, **Long-Range Reader**, **PIN-W Reader** or **CB W Reader**.

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long range reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

**CB W Reader** is a slave reader that works over BLE module.

Example: Punching on door via bluetooth technology of mobile.

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters > Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for both the reader groups from the drop down list.

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **Configure Bluetooth from Server:** When you select **Matrix Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature of aforementioned readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth-** Select this checkbox to enable Bluetooth of the reader. Then configure the following parameters:
- **Bluetooth Name-** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the name of bluetooth as per your requirement. The **Bluetooth Name** can be a maximum of 20 characters.

- **Bluetooth Range-** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance. Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **Matrix Reader Type** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.
- **Custom Bluetooth Range (dBm)-** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- **Enrollment Via:** Select the preferred enrollment option — Reader Group1 or Device.

*Make sure you have configured the desired Readers (as per the credentials you wish to enroll) in Reader Group 1.*

- **Exit Switch** - Select this checkbox to enable the use of **Exit Switch**. Select Exit Switch checkbox so that the door can be opened without checking for any access policies.
- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

Similarly, configure the parameters for the second door.

Click **Save**.

### OSDP Parameters

If you select **RS-485 Interface Protocol** as **OSDP**, you need to configure the OSDP Parameters. OSDP Protocol is supported for 3rd Party Readers only.

Configure the following parameters:

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters > Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

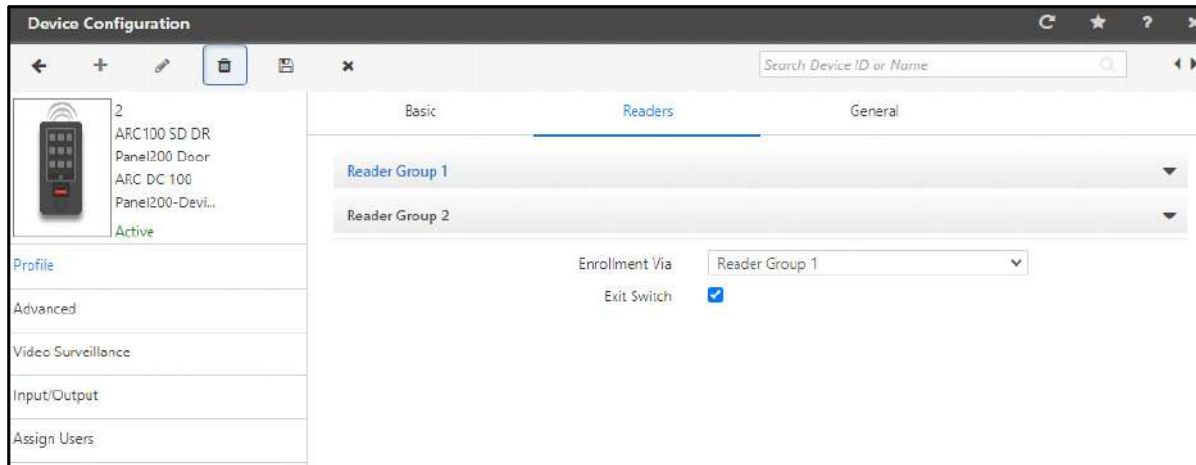

- **Mode:** Select the Mode as **Entry** or **Exit** for both the reader groups from the drop down list.
- **OSDP Address:** Configure the unique identifier assigned to the 3rd Party Reader (Peripheral Device - PD). This allows the Device (Control Panel - CP) to communicate and manage individual readers in the same network.
- **Baud Rate:** Configure the Baud Rate of the 3rd Party Reader. This is the rate at which data will be transmitted/received between the Device and 3rd Party Reader.
- **Enable OSDP Secure Channel:** If you wish that the Device and the 3rd Party Reader should utilize the Secure Channel Protocol (SCP) for communication using encryption and authentication mechanism select the **Enable OSDP Secure Channel** check box and configure the Encryption Key.
- **Encryption Key:** Configure the value which will be used as the key. This is a cryptographic value used in encryption algorithms to convert and transmit data in encrypted form or vice versa. Encryption Keys are used within Secure Channel Protocol (SCP) to encrypt or decrypt the transmitted data between Device and 3rd Party Readers.

Click **Save**.

For list of Commands and Responses supported in OSDP, refer [“Supported OSDP Commands and Responses”](#).

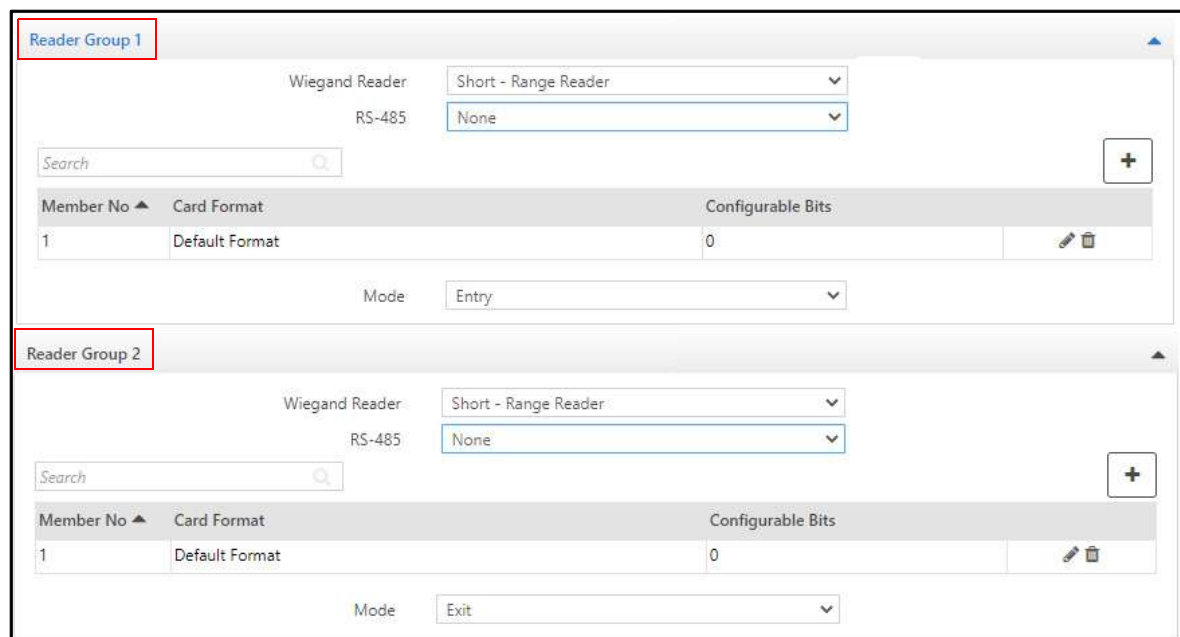

## ARC DC100 as Single Door- Dual Reader

Configure the following parameters for ARC DC100 as Single Door- Dual Reader

### Reader Group 1/ Reader Group 2

Configure the following parameters for Reader 1 and Reader 2.

- **Wiegand Reader:** You can select **Short-Range Reader**, **Long-Range Reader**, **PIN-W Reader**.

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long range reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

- **RS-485:** Select the desired reader type to be connected on RS-485 port.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#).

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for both the reader groups from the drop down list.
- **Enrollment Via:** Select the preferred enrollment option — Reader Group1 or Reader Group 2.

*Make sure you have configured the desired Readers (as per the credentials you wish to enroll) in Reader Group 1 and Reader Group 2. To configure the Readers, refer [“Reader Group1/ Reader Group2”](#).*

- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**.
- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

## ARC DC100 as Dual Door- Single Reader

*In ARC as dual door; changing any of the control value in Reader of one Door will also change the value of this control in Reader of second door.*

### Door Group

- **Wiegand Reader:** Select a desired Wiegand Reader — **Short-Range Reader, Long-Range Reader, PIN-W Reader.**

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long Range Reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

- **RS-485:** Select the desired reader type to be connected on RS-485 port.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#)

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here.

Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for the door groups from the drop down list.
- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**. Select **Exit Switch** checkbox so that the door can be opened without checking for any access policies. For Dual door with single reader, **Exit Switch** checkbox can be set differently for both doors i.e. for one door it can be enabled, while for the other door it can be disabled.
- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

Click on the **Save** button.

## ARC DC100 as Dual Door- Dual Reader

Configure the following parameters of ARC DC100 as Dual Door - Dual Reader:

### Door Group

- **Wiegand Reader:** Select a desired Wiegand Reader — **Short-Range Reader, Long-Range Reader, PIN-W Reader**.

Select **Short-Range Reader** to identify the user from a short distance.

Select **Long-Range Reader** to identify the user from a long distance.

Long Range Reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

Select **PIN-W Reader** to support PIN pad device and accept the PIN from pin pad for identifying the user.

- **RS-485:** Select the desired reader type to be connected on RS-485 port.

For the type of the supported Card/Credentials in the variants of each reader, refer [“Reader Types and supported credentials”](#)

- **Card Format:** For ARC as panel door; you can assign multiple card format.

To assign multiple card formats to device click **Add**  button. Then click the picklist to select the card format. And click **OK**  to save the format and to discard the format, click **Cancel** .

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here.

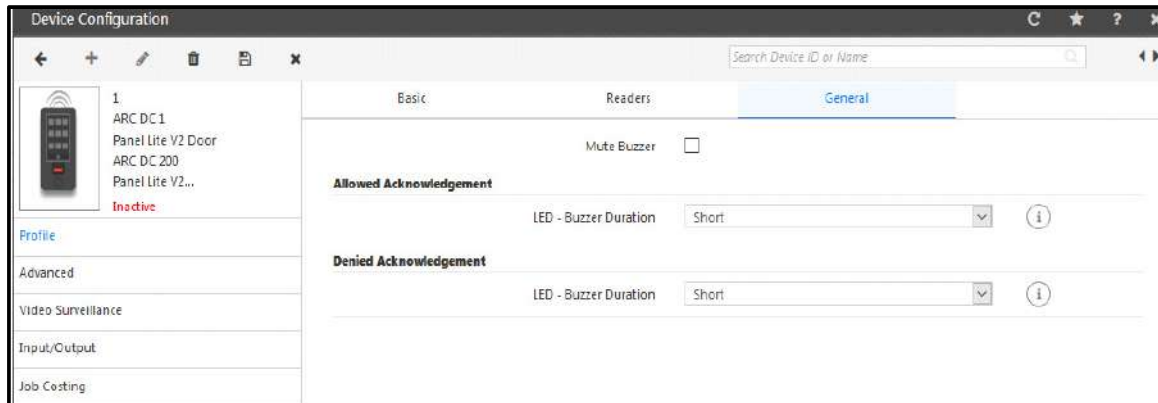

Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** for the door groups from the drop down list.
- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**.
- **Re-Detection Delay:** If you selected **Long-Range Reader** as the **Wiegand Reader** option configure the Re-Detection Delay. Configure the time in minutes after which the card must be detected again after the previous detection.

Similarly, configure the parameters for the second door.

## General

The **General** page for ARC DC200 appears as follows.

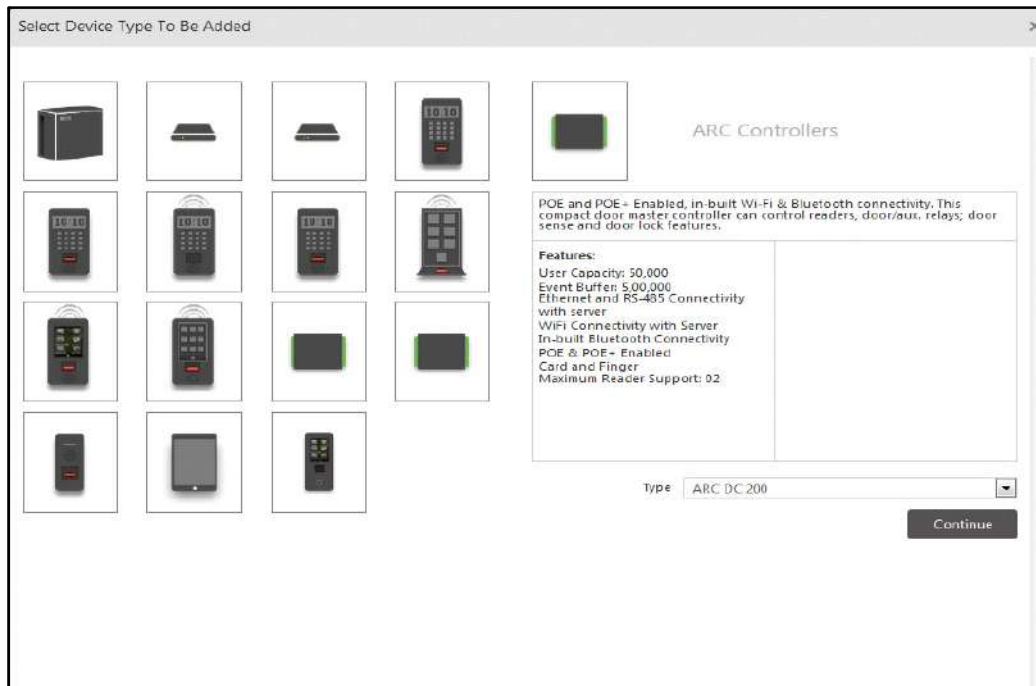

- **Mute Buzzer:** Select the check box to enable door buzzer muting.
- **Allowed Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Allowed** message should be displayed. Valid Range is 250 to 3000 ms.
  - **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options—Long, Medium, Short, Shortest.
- **Denied Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Denied** message should be displayed. Valid Range is 250 to 3000 ms.
  - **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options—Long, Medium, Short, Shortest.

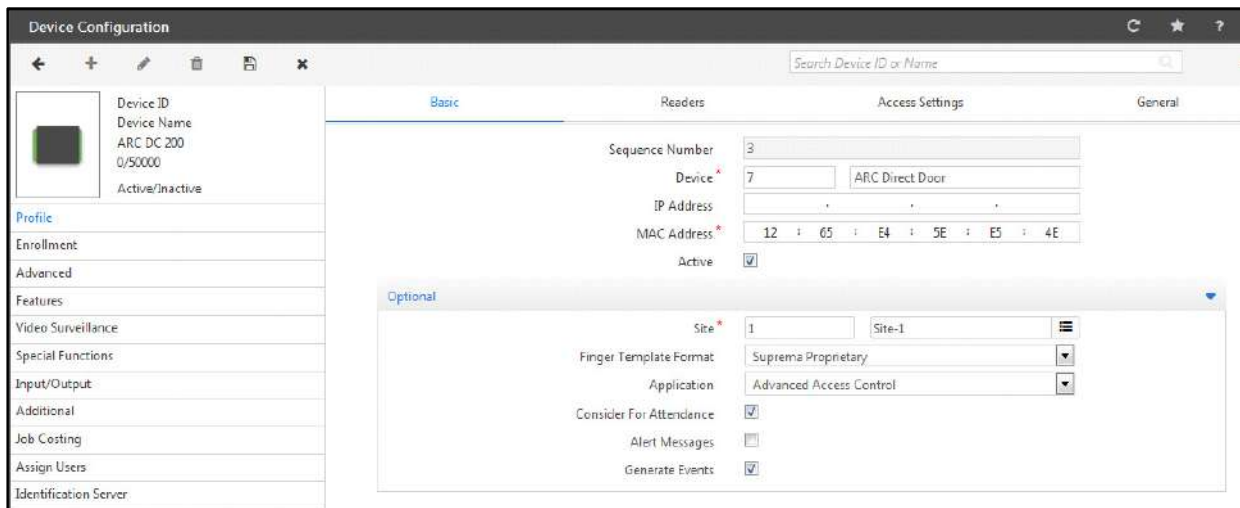

*If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/ Denied Acknowledgment will be applicable to these readers as well.*

## ARC as Direct Door

The Device Configuration page for ARC Door appears as shown below.

## Basic

**Sequence Number** - This is a system generated sequence number for each new device.

**Device:** Specify the name of the door. The ID of the door is auto generated by the system.

Enter the **MAC address** of the door. The **IP address** will be displayed automatically once the device comes online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the "Auto Add New Devices" check-box. Once the device is connected in network, it will come online in COSEC Monitor.

**Active** - Check the box to activate the device on the network.

Click **Save** button to save the configuration.

*The Monitor Service must be running while adding the device to COSEC.*

The **Basic** page also has an **Optional** tab which provides optional configurations as shown below:

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Finger Template Format** - Select the format as Suprema Proprietary or Suprema ISO according to which the templates will be enrolled. For globally setting the template format, you can set from Global policy.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control** and **Advanced Access Control**.

*The available license is ACS and Application is set to Basic Access Control. If this ACS voucher exhausts, then while dispatching Basic Configuration of device, application type will be sent as 'Advance Access Control'.*

- **Consider for Attendance** - Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.
- **Generate Events**: For ARC DC200, this check-box is enabled by default. You can disable the check-box if the server is not required to receive any events from the respective devices.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

For ARC as Direct Door, configuration must be set separately for Reader Group 1 and Reader Group 2.

The screenshot displays the 'Readers' configuration page, which is divided into four tabs: 'Basic', 'Readers', 'Access Settings', and 'General'. The 'Readers' tab is currently active.

**Global Settings:**

- Auto Detect Readers:** ☐
- Advertise Bluetooth:** ☒
- Bluetooth Name:** ARC\_DC\_200
- Bluetooth Range:** Custom
- Custom Bluetooth Range (dBm):** -30. A slider is shown with 'Near' at -40 dBm and 'Far' at +10 dBm, with a blue marker at -30 dBm.

**Reader Group 1:**

- Wiegand Reader:** Short - Range Reader
- RS-485:** ATOM RD200
- Search:** [Search bar]
- Member No:** 1
- Card Format:** Default Format
- Configurable Bits:** 0
- Mode:** Entry
- User Access Mode:** Any One
- Visitor Access Mode:** Any One
- Configure Bluetooth From Server:** ☒
- Advertise Bluetooth:** ☒
- Bluetooth Name:** ARC\_DC\_200\_112-IN
- Bluetooth Range:** Custom
- Custom Bluetooth Range (dBm):** -30. A slider is shown with 'Near' at -40 dBm and 'Far' at +10 dBm, with a blue marker at -30 dBm.

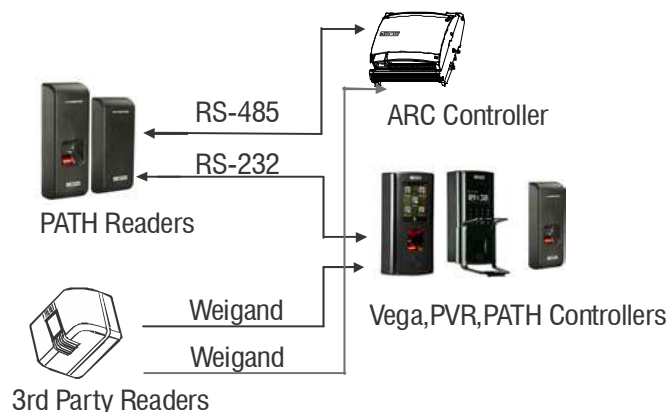

**Reader Group 2:**

- Wiegand Reader:** Short - Range Reader
- RS-485:** ATOM RD200
- Search:** [Search bar]
- Member No:** 1
- Card Format:** Default Format
- Configurable Bits:** 0
- Mode:** Exit
- User Access Mode:** Any One
- Visitor Access Mode:** Any One
- Configure Bluetooth From Server:** ☒
- Advertise Bluetooth:** ☒
- Bluetooth Name:** ARC\_DC\_200\_112-OUT
- Bluetooth Range:** Custom
- Custom Bluetooth Range (dBm):** -30. A slider is shown with 'Near' at -40 dBm and 'Far' at +10 dBm, with a blue marker at -30 dBm.

**Enrollment Via:** Reader Group 1

**Exit Switch:** ☒

**Access Control On Exit Mode:** ☐

**Auto Detect Readers** - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

**Advertise Bluetooth**- Select this checkbox to enable Bluetooth of ARC DC200 Door 1. Then configure the following parameters

**Bluetooth Name**- By default, the **Device** Name assigned is displayed along with the set **Mode**. You can change it as per your requirement. Name can be a maximum of 10 characters.

**Bluetooth Range**- The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.

**Custom Bluetooth Range (dBm)**- If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

## Reader Group1/ Reader Group2

- **Wiegand Reader:** You can select **Short-Range Reader**, **Long-Range Reader**, **PIN-W Reader** or **CB W Reader**.

The short-range reader is used where the user can access the door at short distance i.e. where the short distance identification can be done. Eg: Punching on the door by showing user credential on door. Long range reader is used at boom barriers where the user vehicle is identified by reading the tag on vehicle.

*While connecting Matrix ATOM Reader with Matrix COSEC ARC200 DC, we recommend you to use RS-485 interface, as security concerns may arise if connecting via Wiegand interface.*

- **RS-485:** Based on the COSEC PATH Reader (RDFM, RDFE, RDFI, RDFP, RDCM, RDCE, RDCI) and Reader CB; select the reader type to be connected on RS-485 port. (M- MiFare, E-EM Prox, I- HID iClass, P-HID Prox,CB U Reader). You can also connect ATOM Readers.

*If Auto Detect Reader is enabled, then **Wiegand Reader** and **RS-485** parameters will not be visible.*

- **Card Format:** Only Single card format is applicable to ARC as direct door. The default card format is applied to ARC as direct door. To assign another card format for internal readers of the device; delete the default format and select another format from the picklist. **See Devices> Master> Card Format**
- **Mode:** Select the Mode as **Entry** or **Exit** for both the Reader groups.
- **User/Visitor Access Mode** - Select the desired user and visitor access mode for both reader groups.
- **Configure Bluetooth from Server:** When you select **RS-485** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature of aforementioned readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth-** Select this checkbox to enable Bluetooth of the reader. Then configure the following parameters:
- **Bluetooth Name-** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the name of bluetooth as per your requirement. The **Bluetooth Name** can be a maximum of 20 characters.

- **Bluetooth Range-** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **RS-485** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm)-** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- **Enrollment Via:** Select the preferred enrollment option — Reader Group1, Reader Group2 or Device.

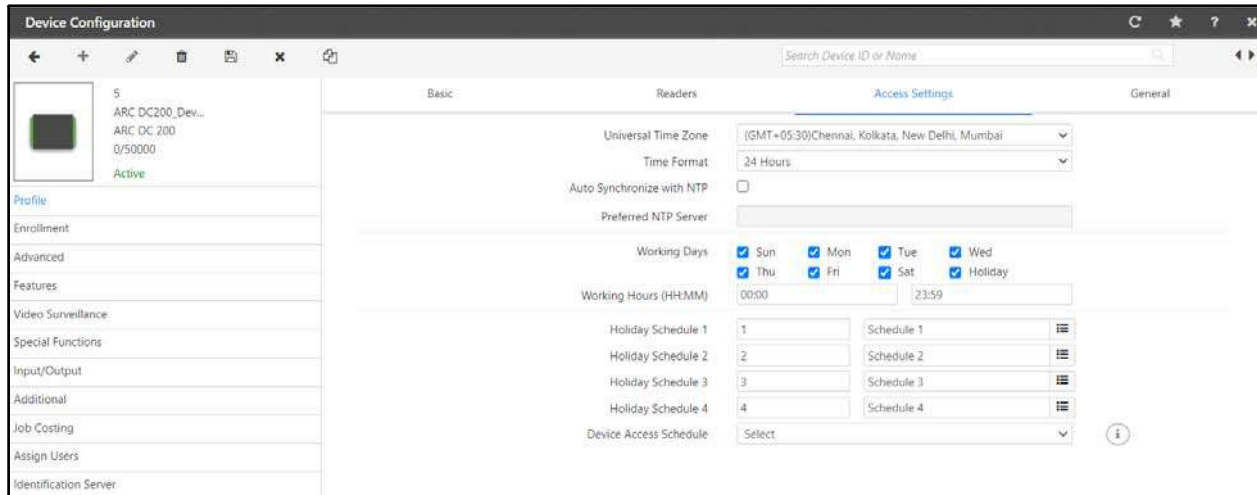

*Make sure you have configured the desired Readers (as per the credentials you wish to enroll) in Reader Group 1 and Reader Group 2. To configure the Readers, refer "[Reader Group1/ Reader Group2](#)".*

- **Exit Switch** - Select this checkbox to enable the use of Exit Switch.
- **Access Control On Exit Mode** - Select this check box to enable the checking of the following access control policies on door when the external reader is in the 'exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below:

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
  3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

*Device Access Schedule is applicable for ARC DC200 only.*

- **Device Access Schedule:** All the Access Schedules created from the "[Access Schedules](#)" page appear in the drop-down list. By default, the Access Schedule, if assigned from the Access Schedule page is displayed here. If you wish to change the Access Schedule, select the desired Access Schedule to be assigned to the device from the drop-down list.

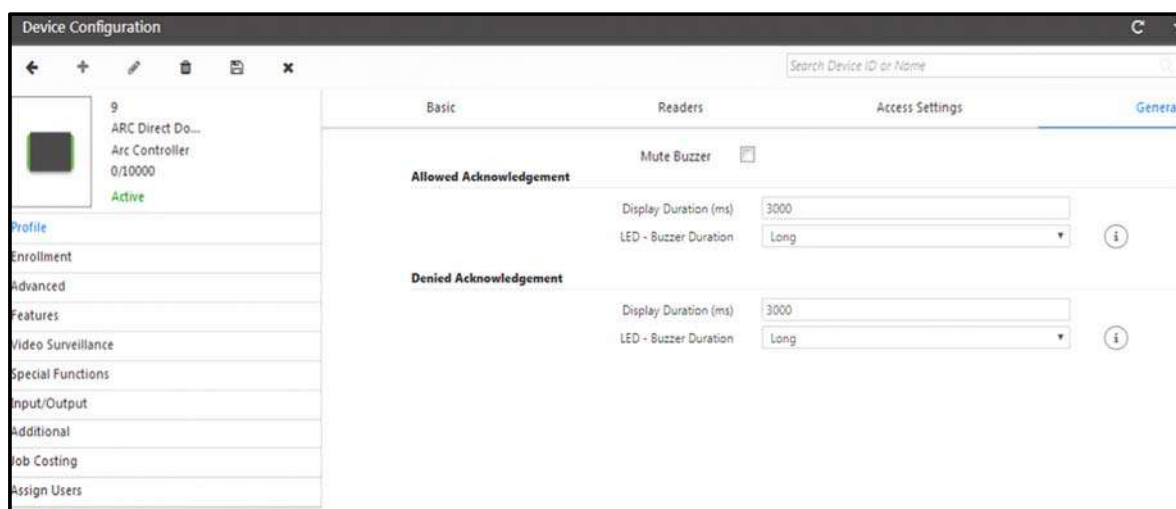

If an Access Schedule is selected, it will override the Working Days configuration.

If an Access Schedule is already assigned from "[Access Schedules](#)" page and a different schedule is selected here, it will override the schedule assigned from "[Access Schedules](#)" page and vice versa.

To revoke an Access Schedule, select the **Select** option from the list. The device will be removed from the Access Schedule under the "[Assign Doors](#)" section on the "[Access Schedules](#)" page.

## General

The **General** page appears as follows.

- **Mute Buzzer** - You can mute the door buzzer by selecting the check box.

- **Allowed Acknowledgment**

- **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
- **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.

- **Denied Acknowledgment**

- **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.
- **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.

*The range (250-3000ms) for Allowed/Denied Acknowledgment Display Duration and Shortest option for LED-Buzzer Duration is applicable for ARC DC200 only.*

*If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/Denied Acknowledgment will be applicable to these readers as well.*

## Enrollment

*The Enrollment section is not available for panel doors.*

The Enrollment page appears as shown below.

The screenshot shows the 'Device Configuration' window for an 'ARC DC 200' device. The 'Enrollment' tab is selected in the sidebar. The main configuration area includes the following settings:

- Enroll From Device:** A checkbox that is checked.
- Enrollment Mode:** A dropdown menu set to 'Biometrics'.
- Template Per Finger:** A dropdown menu set to 'Single Template/Finger'.
- Max Number Of Fingers:** A dropdown menu set to 'Two'.
- Number of Fingers:** A dropdown menu set to 'One'.
- Number Of Cards:** A dropdown menu set to 'One'.

- **Enroll From Device** - Select this checkbox to enable the feature. This allows the user to specify the user credential that can be enrolled by using the enrollment devices such as DOOR Controllers.
- **Enrollment Mode** - Select the Credential from the drop-down list that can be enrolled using the special function at the DOOR. The options are **ReadOnlyCard**, **SmartCard**, **Biometric** and **BiometricthenCard**, and

**DuressFinger.** Refer “Enroll Credentials” or “Enrolling Users” to enroll User/Worker. Refer “Enrollment” or “Enroll Credentials” to enroll Worker. Refer “Enroll Credentials” to enroll a Visitor.

*DuressFinger is only applicable for User and Worker.*

- **Template Per Finger** - This parameter displays the values as configured at the global level. This field is not user editable from this page.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level. This field is not user editable from this page.
- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the Enrollment Mode parameter.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following two sections:

- “Settings”
- “Alarms”
- “Timers”

## Settings

The **Advanced Settings** page for ARC as **Direct Door** appears on your screen as shown below:

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events every time the exit switch is used.
- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.

- **Generate Sequential IN-OUT Events** - In ARC DC200; select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of the mode in which device is functioning.
- **Show PIN** - Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Enable Additional Security** (for direct door) - Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

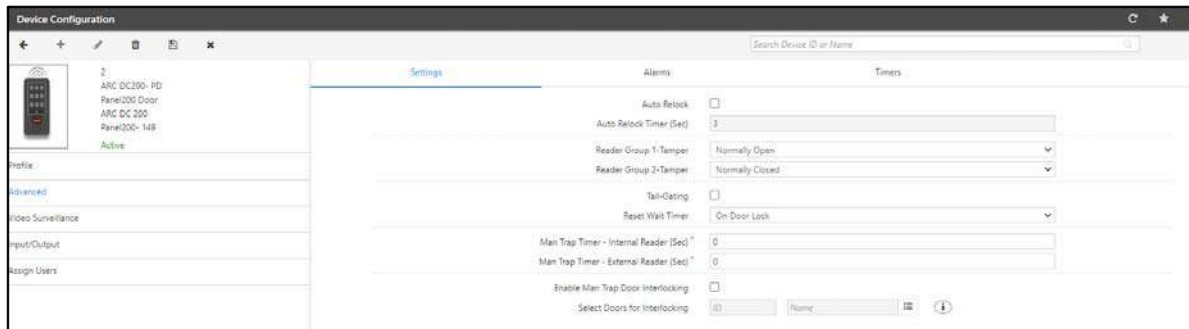

- **Reader Group 1&2 - Tamper** - For **ARC Door** this option allows the configuration of tamper input for Reader Group 1 and Reader Group 2 and setting the default signal type as Normally Open (NO) or Normally Closed (NC).
- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this checkbox to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - In ARC DC200, Set a value for Facility Code to be set for access modes other than "Card", if Facility Code is expected in Wiegand Output.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics**, **Mobile then Card** and **Mobile then PIN**.

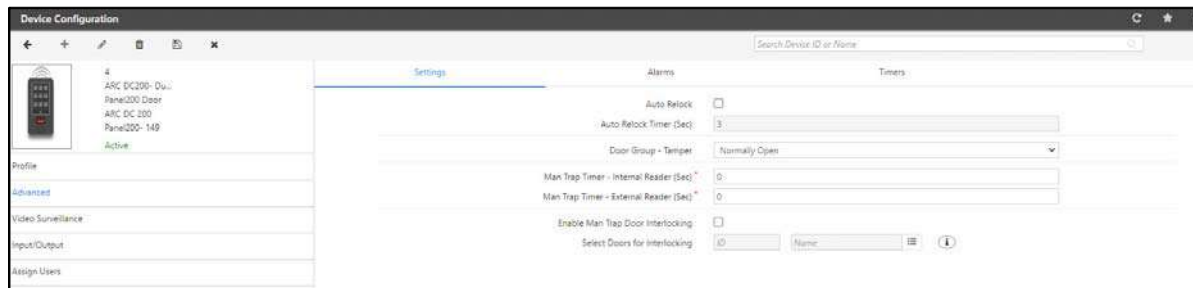

*If User Access Mode is selected as "None" in Zone Configuration and Mobile Access Mode is selected as "Mobile Then Biometrics" then door can be accessed through Mobile and then Biometric credential.*

The **Advanced Settings** for ARC as **Panel door** is shown below:

### For Single Door

### For Dual Door

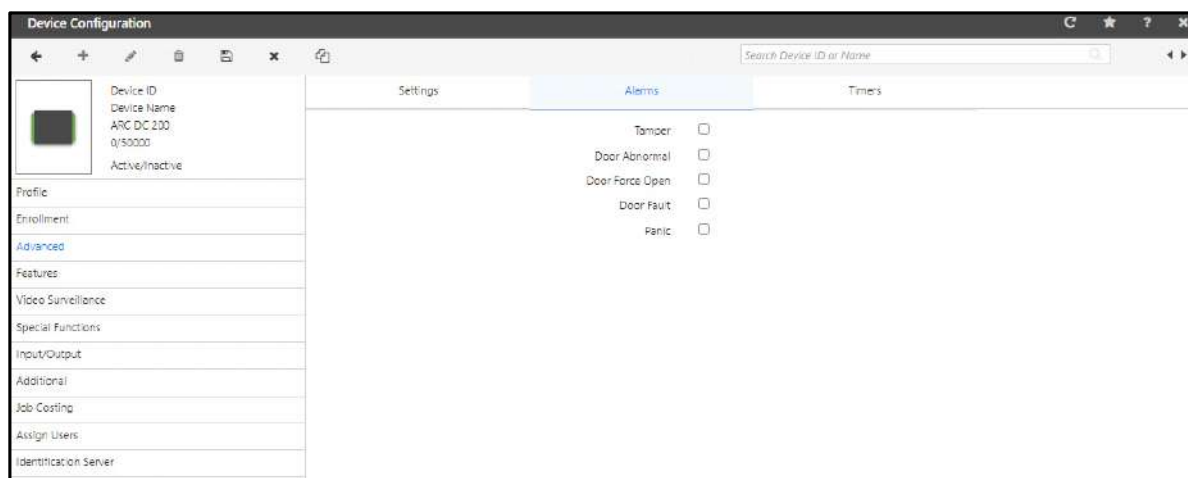

- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation.
- **Reader Group 1&2 - Tamper** - For **ARC as Single door**; this option allows the configuration of tamper input for Reader Group 1 and Reader Group 2 and setting the default signal type as Normally Open (NO) or Normally Closed (NC).
- **Door Group -Tamper** - For **ARC as Dual door**; this option allows the configuration of tamper input for dual doors and setting the default signal type as Normally Open (NO) or Normally Closed (NC).
- **Tail-Gating (For ARC as Single Door)**- Tail-gating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the panel door, the occupancy count of a zone should be incremented or decremented considering both the punch as well as the auxiliary input port of the panel door (say, input from a beam-counter). Set the wait timer for resetting the tailgating count (**Reset Wait Timer**) based on the door lock status or the door pulse wait timer (as configured).
- **Man Trap Timer -Internal Reader (Sec)** - This checkbox enables an alarm wait timer on the panel door to ensure that the user enters the next sequential door of a man-trap within a specific time-frame.
- **Man Trap Timer External Reader (Sec)** - This checkbox enables an alarm wait timer on the panel door to ensure that the user exits the panel door to enter the next sequential door of a man-trap within a specific time-frame.

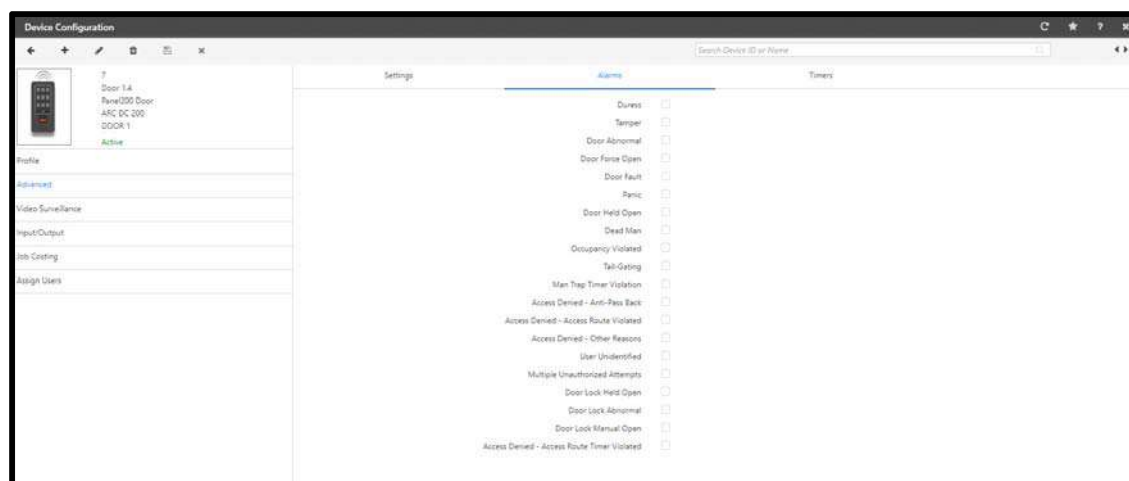

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

### For Direct Door

### For Panel Door

Select the respective checkbox of alarms which you want to enable.

*The above list of alarms is available for the ARC DC200. For ARC DC100, the number of supported alarms may differ.*

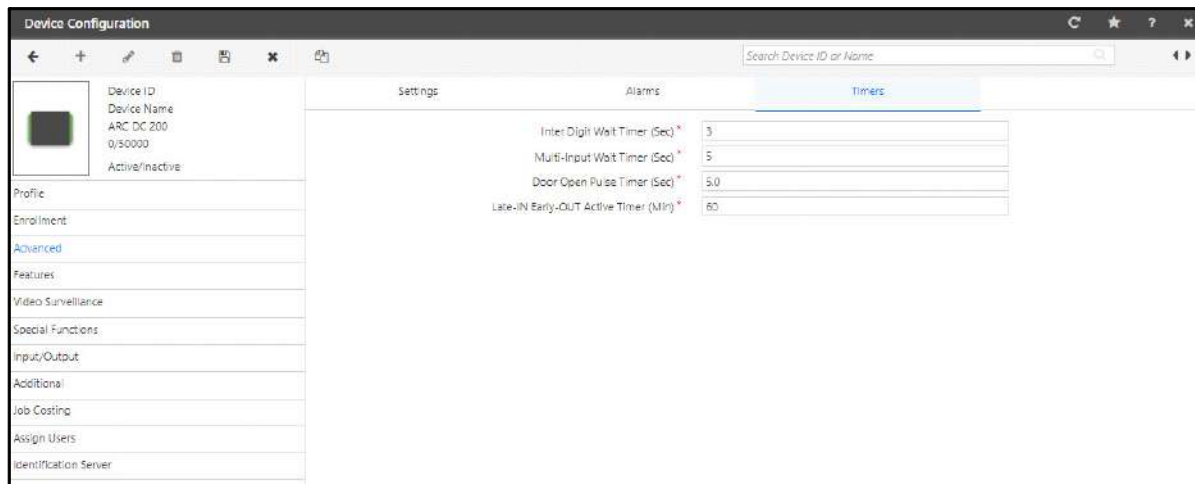

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms.

The Timers parameters differ for ARC DC200 as Direct Door and Panel Door.

### Timers - Direct Door

Click the **Timers** tab. The **Timers** page for **ARC DC200** as a **Direct Door** appears.

- **Inter-Digit Wait Timer (sec) Applicable only for ARC DC200** - Specify the time period in seconds (1 to 99) between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds (3 to 99) for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (0.1 to 65535.0) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.

*The range (0.1 to 65535.0) seconds for **Door Open Pulse Timer** is applicable for ARC DC200 Direct Door only.*

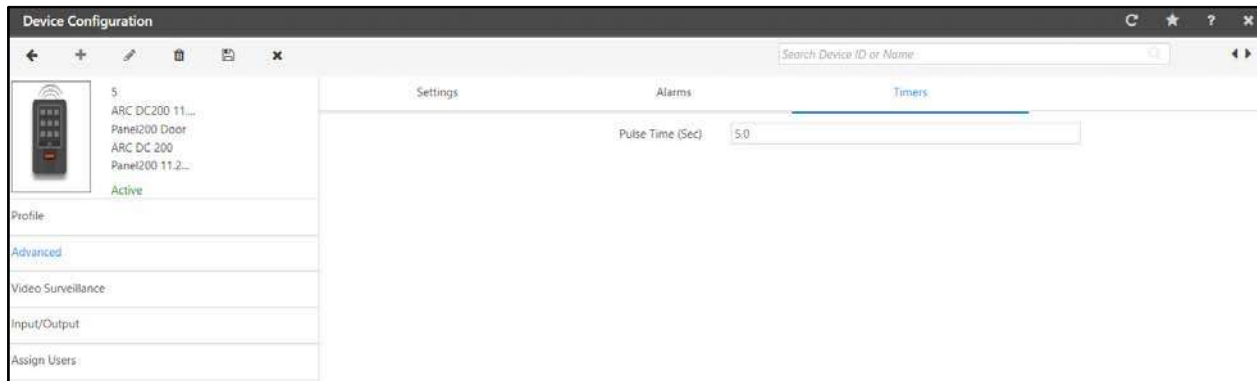

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes (1 to 99) for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

## Timers - Panel Door

Click the **Timers** tab. The **Timers** page for **ARC DC200** as a **Panel Door** appears.

- **Pulse Time (sec)** - Specify the time in seconds (0.1 to 65535.0) for the panel door to be energized for a valid credential.

*The range (0.1 to 65535.0) seconds for **Door Open Pulse Timer** is applicable for ARC DC200 Panel Door — Dual Door Single Reader and Dual Door Dual Reader— only.*

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license and is applicable only for Direct Doors.*

To access this, After selecting the device, Select **Device Configuration> Features**.

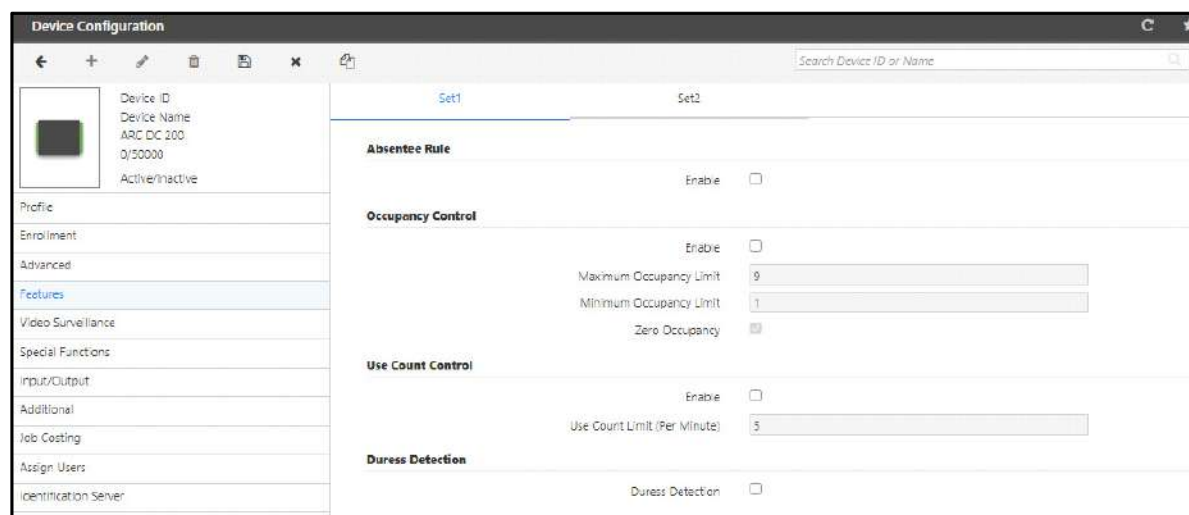

The access control features for the device can be set from the following two sections:

- “Set1”
- “Set2”

### Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**.

The page appears as shown below.

- Absentee Rule** - Select this checkbox to enable this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
 For configuring the rule *See Access Control> Absentee Rule*.
- Occupancy Control** - Select this checkbox to enable the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
 For configuring the rule *See Access Control> Occupancy Control*.
- Use Count Control** - Select this checkbox to enable the feature at the door and specify the maximum number of uses per minute.  
 For configuring the rule *See Access Control> Use Count Control*.
- Duress Detection** - Select the checkbox to enable the feature. Duress Detection is used to generate the duress alarm which informs that the user is forced to open the door under threat.

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**.

The page appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Set2'. On the left is a sidebar with a device icon and details: Device ID, Device Name (ARC DC 200), and a status indicator (Active/Inactive). Below this are tabs for Profile, Enrollment, Advanced, Features (selected), Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into three sections for rule configuration:

- First-IN User Rule:** Includes an 'Enable' checkbox, 'Reset On' options (Day Change, Timer Expiry), 'Access Timer (Sec)' set to 3, and 'First IN User Group' set to 1.
- Anti-Pass Back (APB):** Includes 'On Entry' and 'On Exit' checkboxes, 'Hard/Soft' mode set to Soft, 'Forgiveness' checkbox, 'Reset After' options (Day Change, Timer Expiry), and 'Forgiveness Timer (Min)' set to 1.
- 2-Person Rule:** Includes an 'Enable' checkbox, 'Mode' set to Primary Must, 'Primary Group' set to 1, 'Secondary Group' set to ID, and '2nd Person Wait Timer (Sec)' set to 5.

- **First-IN User Rule** - Select this checkbox to enable the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule *See Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select this checkbox to enable the feature at the direct door.  
For configuring the rule *See Access Control> Anti-Pass Back*
- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule *See Access Control> 2- Person Rule*.

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device.

It is available in Basic License.

To access this, Go to **Device Configuration> Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

The screenshot shows the 'Device Configuration' window with the 'Visual Tagging' tab selected. On the left, a sidebar lists configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, and Assign Users. The main area shows settings for a device with ID '4' (ARC direct door, Arc Controller, 0/10000, Active). Under 'Visual Tagging', the 'Capturing Device' is a dropdown menu set to 'Matrix DVR/NVR/HVR'. Below this, there are input fields for 'MAC Address' (00\_1b\_09\_02\_1d\_58), 'Camera ID' (4), and 'Storage Root Folder' (ftp://192.168.104.23/dip/). Further down, the 'FTP Login Credentials' checkbox is checked, and there are input fields for 'User Name' (admin) and 'Password' (masked with asterisks).

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown. The compatible device types are:

- Matrix HVR/NVR
- Milestone

### Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** - Specify the FTP server password.

Some COSEC devices do not support all the network connection options.

## Milestone

Event ID	Name	User-Defined Event ID	User-Defined Event Name
No Data			

Camera Name	GUID	Host Name	Port
MATRIX COMSEC CIDR20VL12CW-P (192.168.112.193) - Camera 1	ac5c0e92-9acd-410d-b21f-f593c2a9d33f	ketanpaliya	7563

For more information on integration with **Milestone** devices, refer to "[Milestone Integration](#)".

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya configuration page appears as shown below:

Integration Type	Active	Network Connection	IP Address	Port Number
Network	<input checked="" type="checkbox"/>	Ethernet	192 . 168 . 104 . 30	8000

Name	Active	Schedule	Days	Event	Mode	Action	E-mail ID
ARC HVR Integration	<input checked="" type="checkbox"/>	09:00 - 12:00	Sun <input type="checkbox"/> Mon <input checked="" type="checkbox"/> Tue <input checked="" type="checkbox"/> Wed <input checked="" type="checkbox"/> Thu <input type="checkbox"/> Fri <input type="checkbox"/> Sat <input type="checkbox"/> Holiday <input type="checkbox"/>	Access Allowed	Both	Mail Image	sheetalponnya2012@gmail.com

Camera	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Integration type-** Select the integration type from the options of Wired and Network.

In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by Ethernet, wireless or broadband depending upon the COSEC device support.

- **Active-** Check the box to activate the connection.
- **Network Connection-** Select the Network connection from the options of Ethernet, Broadband, Wireless.
- **IP Address-** Specify the IP address of HVR/NVR if device is connected with Ethernet.
- **Port Number-** Specify the port number of HVR/NVR
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule -** Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-**Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the FTP settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.
- **Camera-** Select the relevant camera channels depending on the action selected.

**Example:** For action as Mail Image, the image of Camera 8 will be mailed to the mentioned Email ID.

The screenshot shows a configuration form with the following fields and values:

- Event:** Access Allowed (dropdown)
- Mode:** Both (dropdown)
- Action:** Mail Image (dropdown)
- E-mail ID \*:** sheetalpandya2012@gmail.com (text input)
- Camera \*:** A grid of checkboxes for cameras 1 through 24. Camera 8 is selected.

- Click the **Add** button to finish the process of linking the event to the action. The user may configure another event-action linkage if required.

Name	Event	Action	Start Time	End Time	Active	
ARC HVR Integration	Access Allowed	Mail Image	09:00	12:00	Yes	

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

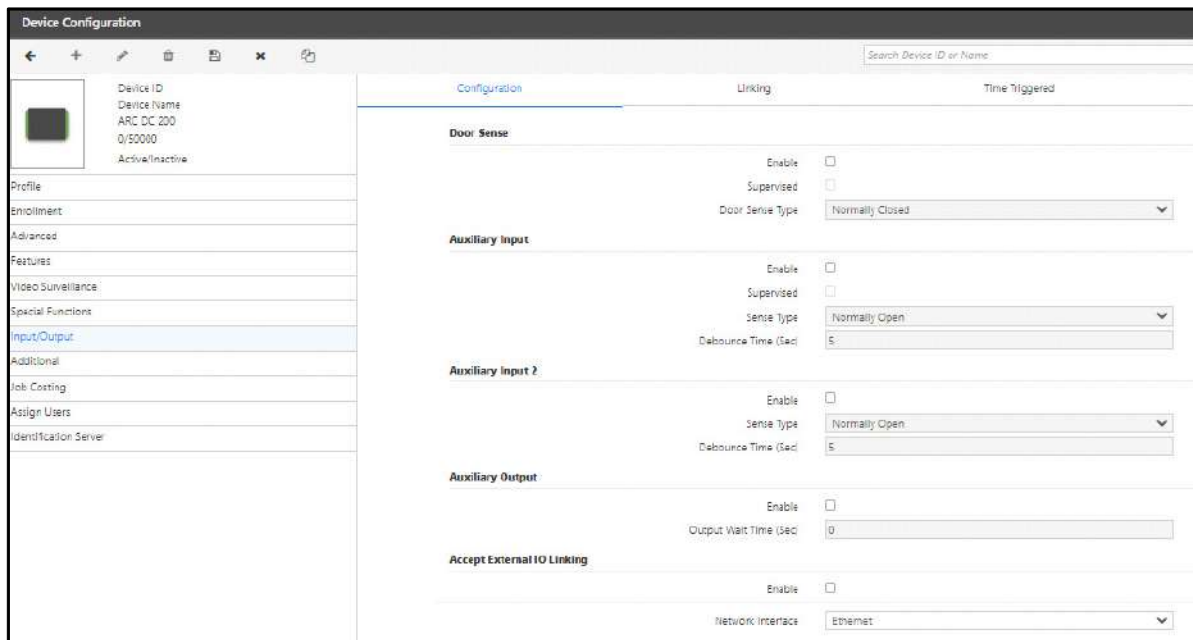

1. This functionality cannot be fully accessed in the Edit  mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- “Configuration”
- “Linking”
- “Time Triggered”

## Configuration

The **Configuration** section for a **ARC DC100 - Direct Door** appears as shown below.

The screenshot displays the 'Device Configuration' window for an 'ARC DC100 - Direct Door'. The left sidebar shows a list of configuration sections: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, **Input/Output** (selected), Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into three tabs: Configuration, Linking, and Time Triggered. The 'Configuration' tab is active, showing the following settings:

- Door Sense:** Enable (checkbox), Supervised (checkbox), Door Sense Type (dropdown menu set to 'Normally Closed').
- Auxiliary Input:** Enable (checkbox), Supervised (checkbox), Sense Type (dropdown menu set to 'Normally Open'), Debounce Time (Sec) (input field set to '5').
- Auxiliary Input 2:** Enable (checkbox), Sense Type (dropdown menu set to 'Normally Open'), Debounce Time (Sec) (input field set to '5').
- Auxiliary Output:** Enable (checkbox), Output Wait Time (Sec) (input field set to '0').
- Accept External I/O Linking:** Enable (checkbox), Network Interface (dropdown menu set to 'Ethernet').

The **Configuration** section for a **ARC DC200 - Panel Door** appears as shown below.

The screenshot shows the 'Device Configuration' window for an 'ARC DC200 - Panel Door'. The left sidebar contains a device icon and a list of tabs: Profile, Advanced, Video Surveillance, Input/Output, and Assign Users. The main area is titled 'Configuration' and contains several sections:

- Door Sense:** Includes 'Enable' (checkbox), 'Supervised' (checkbox), and 'Door Sense Type' (dropdown menu set to 'Normally Closed').
- Lock Sense:** Includes 'Enable' (checkbox), 'Supervised' (checkbox), and 'Lock Sense Type' (dropdown menu set to 'Normally Open').
- Auxiliary Input:** Includes 'Enable' (checkbox), 'Supervised' (checkbox), 'Sense Type' (dropdown menu set to 'Normally Open'), and 'Debounce Time (Sec)' (input field set to 5).
- Auxiliary Input 2:** Includes 'Enable' (checkbox), 'Sense Type' (dropdown menu set to 'Normally Open'), and 'Debounce Time (Sec)' (input field set to 5).
- Auxiliary Output:** Includes 'Enable' (checkbox) and 'Output Group' (dropdown menu set to 1).
- Relay Output:** Includes 'Output Group Number (Door Unlock)' (input field set to 2), 'Output Group Number (Door Lock)' (input field set to 10), and 'Name' (input field set to 'Door Unlock').

The following parameters are available for configuration in both Direct door and Panel door:

- **Door Sense** - The system by default can sense two states of a door - **Normally Open (NO)** and **Normally Closed (NC)** depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a **Door Abnormal** alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for **door fault** and **door disconnection**. Specify the **Door Sense Type** as **Normally Closed** or **Normally Open**. Default value is **Normally Closed**.

- **Lock Sense** - The system by default can sense two states of lock - **Normally Open (NO)** and **Normally Closed (NC)** depending on which the output is determined. For example, any deviation of the lock from its normal state may lead to the trigger of a **Lock** event.

Select the **Enable** checkbox to enable the lock sense. When Lock Sense is enabled, then Exit Switch in Readers tab will get disabled.

1. The Lock Sense must be connected with Exit Switch-2.

2. For Single Door, the configuration of Lock must be considered as: Lock Sense 1 & Lock Sense Type 1.

For Dual Door, the configuration of Lock is

- For first device it will be: Lock Sense 1 & Lock Sense Type 1
- For second device it will be: Lock Sense 2 & Lock Sense Type 2

- **Auxiliary Input** - Select the **Enable** checkbox option for **Auxiliary Input** (e.g. Smoke Detectors) depending on normal or supervised door state monitoring as described above.

Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for **door fault** and **door disconnection**.

Specify the **Door Sense Type** as **Normally Closed** or **Normally Open**. Default value is **Normally Closed**.

**Debounce Time (Sec)** - Specify the **Debounce Time** in seconds. Default value is **5 sec** and valid range is 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- **Auxiliary Input 2**- Select the **Enable** checkbox option for **Auxiliary Input 2**.

Specify the **Door Sense Type** as **Normally Closed** or **Normally Open**. Default value is **Normally Open**.

**Debounce Time (Sec)** - Specify the **Debounce Time** in seconds. Default value is **5 sec** and valid range is 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

**Auxiliary Input 2** is only applicable for **ARC DC200 Direct** door and **ARC DC200 Single Door Dual Reader Panel** door.

- **Auxiliary Output** - Select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.
- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface** - Select anyone network interface out of **Ethernet**, **Wireless** and **Mobile Broadband**.
- **Relay Output**

**Output Group Number (Door Unlock)**- Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.

**Output Group Number (Door Lock)**- Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

The **Accept External IO Linking** is applicable to both **ARC DC100/200 Direct Door** and **Network Interface** is applicable to **ARD DC200 Direct Door** only.

For **ARC DC200 Dual Door Single\Dual Reader Panel** door; only **Door Sense**, **Lock Sense** and **Relay Output** are applicable.

## Linking

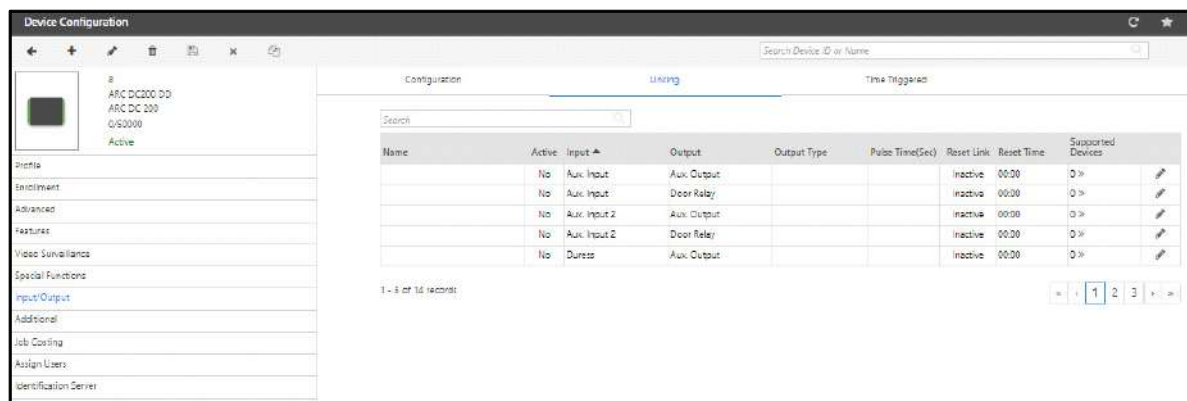

Linking is applicable for Direct Door only.

The **Linking** section for **ARC DC100** door appears as shown below.

The **Linking** section for **ARC DC200** door appears as shown below.

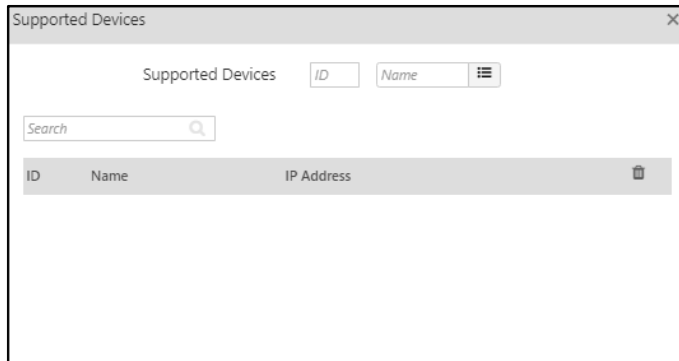

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

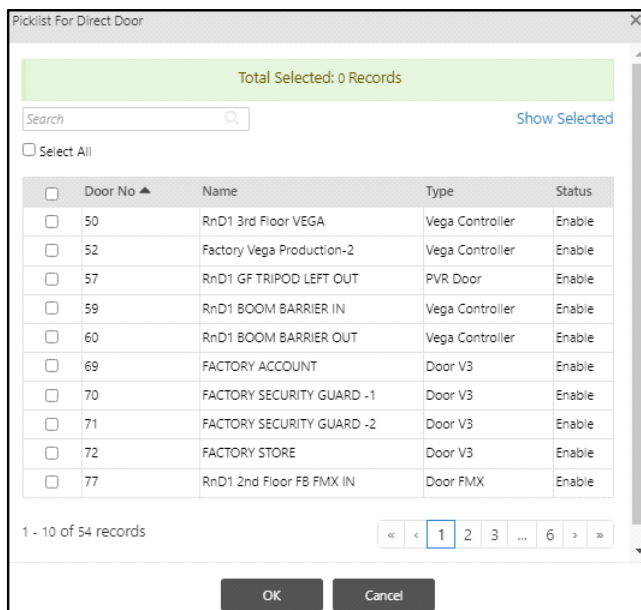

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - **Pulse**: With this type of output, the user needs to define the Pulse time in seconds.
  - **Interlock**: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - **Latch**: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - **Toggle**: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Reset Link** - Select this checkbox to activate this linking program as well as set the time from **Reset Time**.

- **Reset Time**- Enter the time period in hh:mm format at which the link will get reset automatically. Suppose, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- **Supported Devices** - All devices supported for external IO Linking will appear in this picklist for selection.
- Click **Supported Devices**  icon. The **Supported Devices pop-up** appears.

The 'Supported Devices' pop-up window contains a search bar, a table with columns 'ID', 'Name', and 'IP Address', and a close button in the top right corner.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The 'Picklist For Direct Door' pop-up window displays a table of devices with columns: Door No, Name, Type, and Status. It includes a search bar, a 'Show Selected' button, a 'Select All' checkbox, and pagination controls at the bottom.

<input type="checkbox"/>	Door No ▲	Name	Type	Status
<input type="checkbox"/>	50	RnD1 3rd Floor VEGA	Vega Controller	Enable
<input type="checkbox"/>	52	Factory Vega Production-2	Vega Controller	Enable
<input type="checkbox"/>	57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
<input type="checkbox"/>	59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
<input type="checkbox"/>	60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
<input type="checkbox"/>	69	FACTORY ACCOUNT	Door V3	Enable
<input type="checkbox"/>	70	FACTORY SECURITY GUARD -1	Door V3	Enable
<input type="checkbox"/>	71	FACTORY SECURITY GUARD -2	Door V3	Enable
<input type="checkbox"/>	72	FACTORY STORE	Door V3	Enable
<input type="checkbox"/>	77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

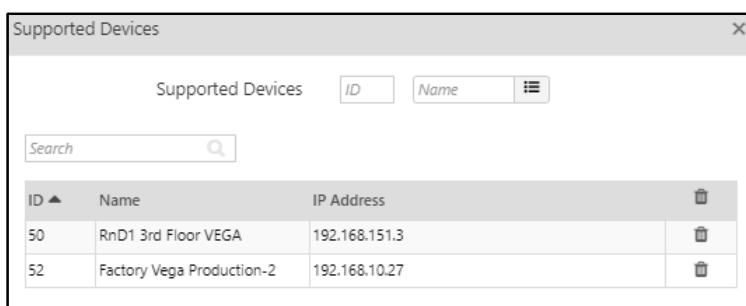

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices pop-up** and the selected devices are displayed here.

The 'Supported Devices' pop-up window displays a table of supported devices. At the top, there are filters for 'ID' and 'Name', and a search bar. The table has columns for ID, Name, IP Address, and a delete icon. Two devices are listed: 'RnD1 3rd Floor VEGA' with IP 192.168.151.3 and 'Factory Vega Production-2' with IP 192.168.10.27.

ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

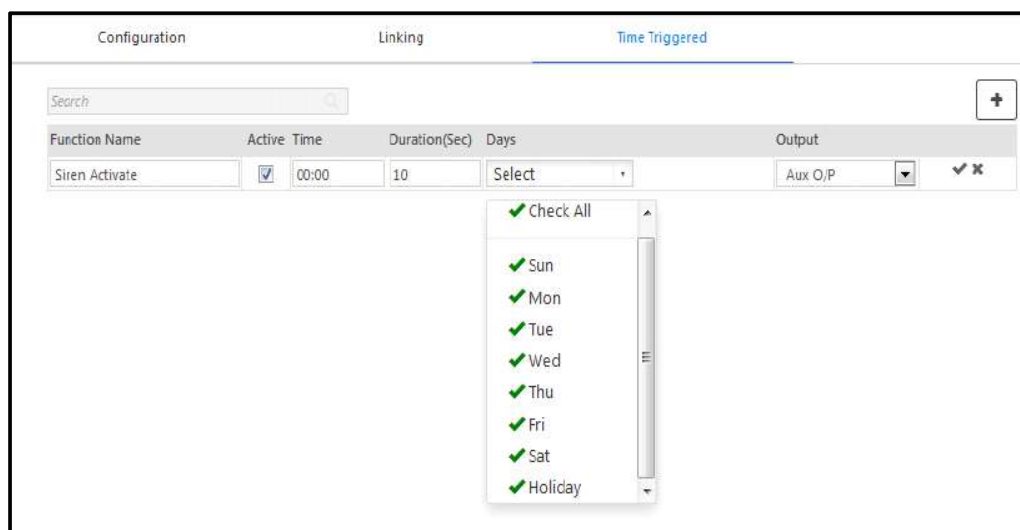

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

The 'Time Triggered' configuration window shows a table for setting up time-triggered functions. The table has columns for Function Name, Active, Time, Duration(Sec), Days, and Output. A dropdown menu is open for the 'Days' column, showing options for all days of the week and holidays, each with a green checkmark.

Function Name	Active	Time	Duration(Sec)	Days	Output
Siren Activate	<input checked="" type="checkbox"/>	00:00	10	Select	Aux O/P

- ✓ Check All
- ✓ Sun
- ✓ Mon
- ✓ Tue
- ✓ Wed
- ✓ Thu
- ✓ Fri
- ✓ Sat
- ✓ Holiday

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

Search Device ID or Name						
Configuration      Linking      Time Triggered						
Search						
Function Name	Active	Time	Duration(Sec)	Days	Output	
Siren Activate	Yes	00:00	10	Su Mo Tu We Th Fr Sa Ph	Aux O/P	

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

*This section is available only for Direct Doors.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

The screenshot shows the 'Device Configuration' window with the 'Daylight Saving' tab selected. On the left is a sidebar with various configuration categories. The main area contains the following settings:

- DST Type:** A dropdown menu set to 'Day-Month wise'.
- Time Period:** A text field containing '00:00'.
- Forward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.
- Backward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Week No.:** A dropdown menu set to '1st'.
  - Day of Week:** A dropdown menu set to 'Sunday'.
  - Time:** A text field containing '00:00'.
- Save:** A button at the bottom right.

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST settings in **24-hours** format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed or set backwards by 08:00 hours.

The screenshot shows the 'Device Configuration' window for an 'ARC DC200 DD' device. The 'Daylight Saving' tab is selected. The settings are as follows:

- DST Type:** Date-Month wise
- Time Period:** 08:00
- Forward Clock:**
  - Month: January
  - Date: 1
  - Time: 09:00
- Backward Clock:**
  - Month: January
  - Date: 1
  - Time: 10:00

A 'Save' button is located at the bottom right of the configuration area.

- Click the **Save** button.

## Job Costing

*Job Costing is applicable for ARC DC200 Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

The screenshot shows the 'Device Configuration' window for an 'ARC DC200 DD' device. The 'Settings' tab is selected. The 'Job Costing' section is visible, with the following settings:

- Show Job Menu:** Allocate Default

Below the settings is a table titled 'Default Jobs' with the following columns: Job Code, Name, Assignment Start, Assignment End, and Prioritize Job. The table is currently empty, displaying 'No Data'.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

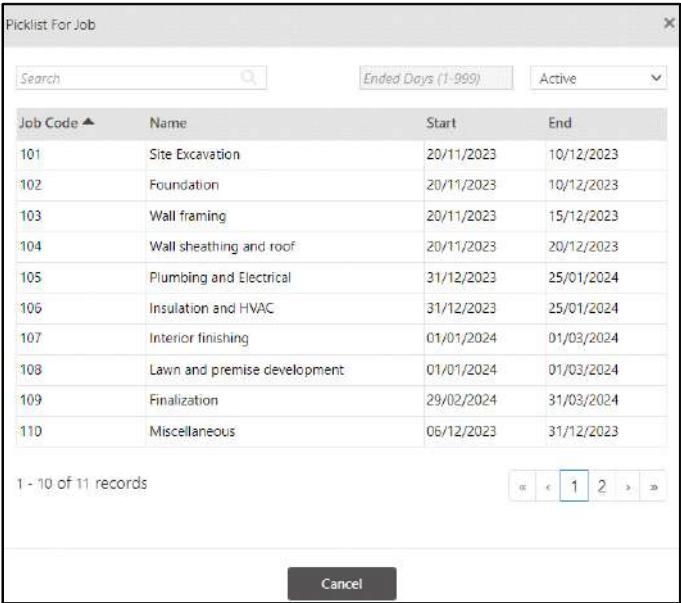

**Show Job Menu:** It is disabled for ARC DC200.

# Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

Job Code	Name	Start	End
101	Site Excavation	20/11/2023	10/12/2023
102	Foundation	20/11/2023	10/12/2023
103	Wall framing	20/11/2023	15/12/2023
104	Wall sheathing and roof	20/11/2023	20/12/2023
105	Plumbing and Electrical	31/12/2023	25/01/2024
106	Insulation and HVAC	31/12/2023	25/01/2024
107	Interior finishing	01/01/2024	01/03/2024
108	Lawn and premise development	01/01/2024	01/03/2024
109	Finalization	29/02/2024	31/03/2024
110	Miscellaneous	06/12/2023	31/12/2023

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- Click **Save** to save the configuration.

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

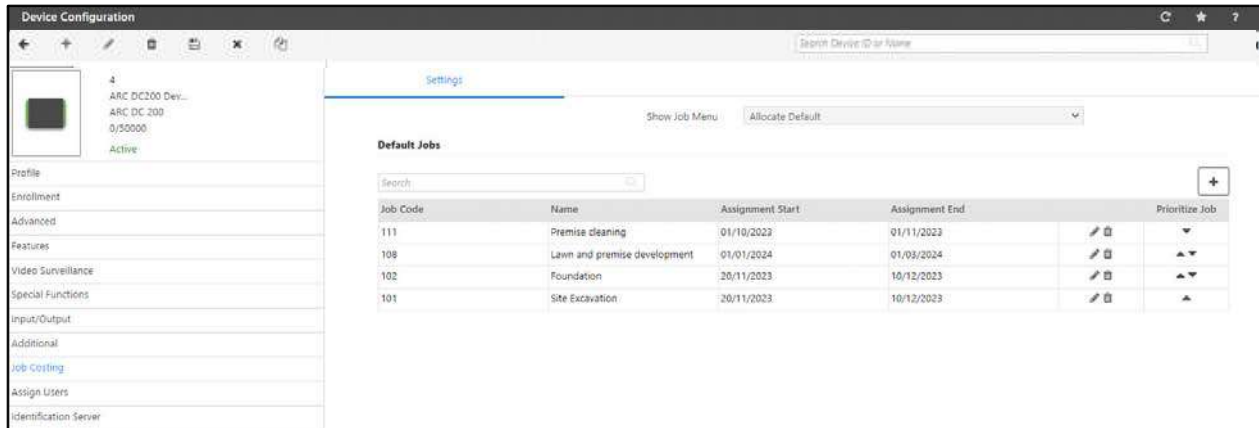

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** pop-up appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

### For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

Device Configuration

Assigned Users

Users:

Search:

ID	Name
1	1
sa1	sa1

Save

Note: Device(s) will be automatically retained which are part of any Access Rule(s) assigned to the User. For more details [Click here](#).

- **Users:** Click the picklist. The **Picklist For All Users** pop-up appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

Access Rule List

Search:

User ID	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Identification Server

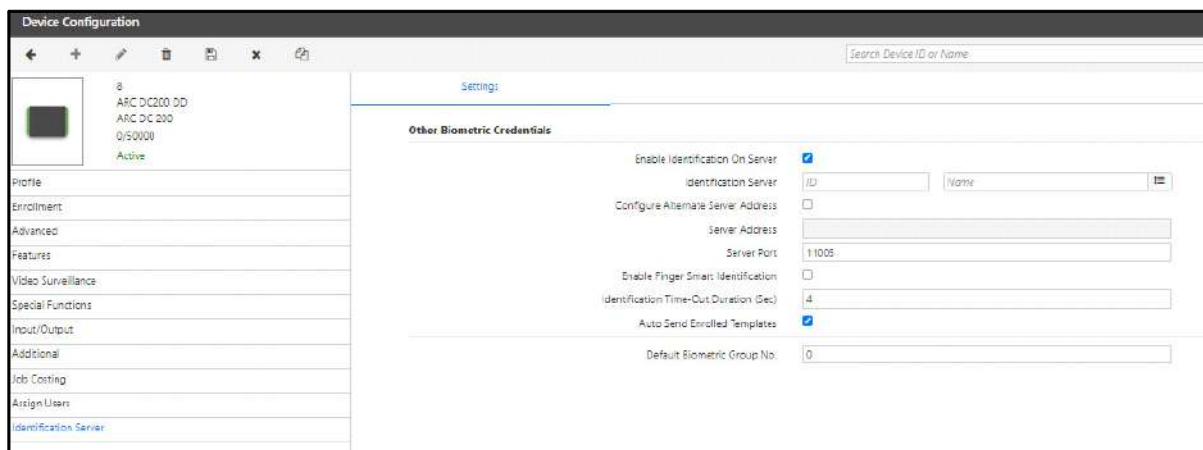

This tab enables the ARC DC200 to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations,

- On the **Device Configuration** page, select the **Identification Server** tab.

## Other Biometric Credentials

- **Enable Identification On Server:** Select the checkbox to enable the identification of finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray.
- **Configure Alternate Server Address:** Enable this checkbox to configure the alternate Server Address.
- **Server Address:** It displays the IP Address of the selected Identification Server.
- **Server Port:** Enter the server port number. The default port number is 11005.
- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the fingerprint template identification will get time out.

**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.

- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Specify the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

# ARC IO-800

COSEC ARC IO800 is an input and output controller to control multiple inputs and outputs of third party devices to perform multiple applications. ARC IO800 can be connected as **Direct Door** as well as **Panel Door**.

The Device Configuration page for ARC IO-800 appears as shown below.

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the "Auto Add New Devices" check-box. Once the device is connected in network, it will come online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

*ARC IO 800 (Direct door) is restricted to be added to the configured Device group even if the checkbox "Auto Assign New Device To Device Group". is enabled.*

To configure the parameters, you can:

- copy the parameters from another device, refer to ["Copy Parameters From"](#).
- OR
- can click each link to configure the parameters, refer to ["Selective Configuration"](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

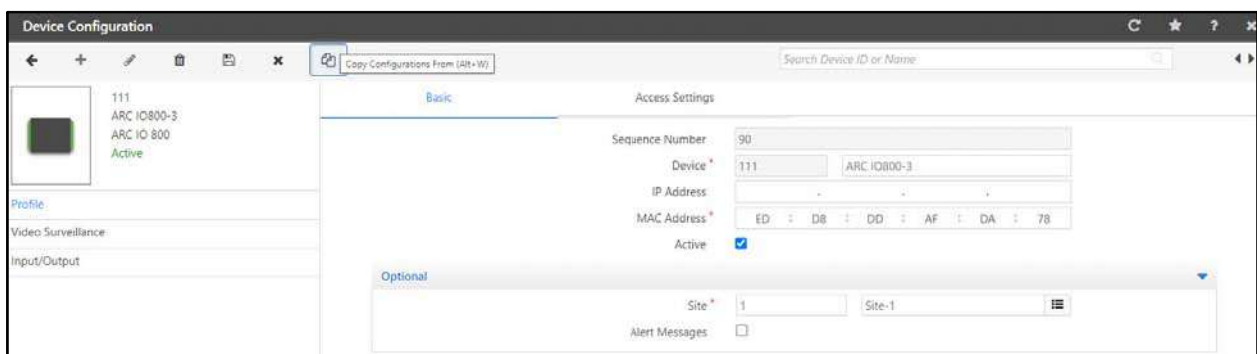

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

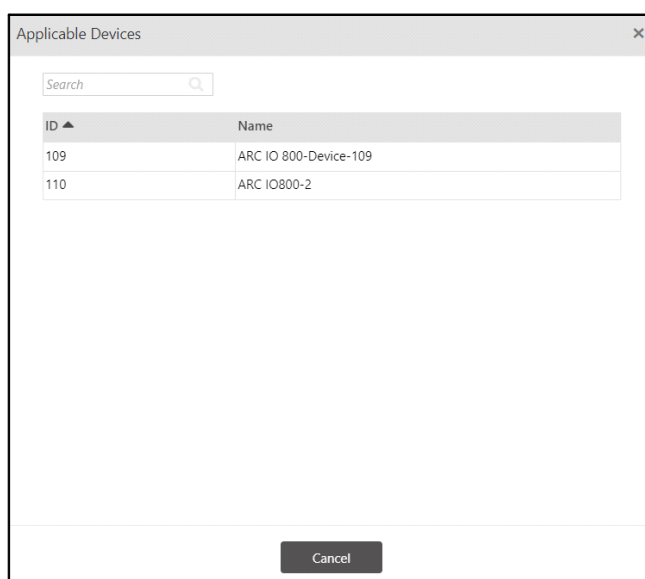

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- *In case of Direct Door, the pop-up will display other ARC IO800 Direct Doors only. For example, if you have direct door devices — ARCIO1, ARCIO2, Vega1 and Vega2, then this pop-up will display only ARC IO1 and ARC IO2.*
- *In case of Panel Door, the pop-up will display other ARC IO800 Panel Doors connected with the same Panel only. For example if you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, ARCPD1, ARCPD2. In Panel2 the Panel Doors connected are ARCPD3 and ARCPD4. Then, if you are adding the new ARGO Panel Door to Panel1, then this pop-up will display ARCPD1 and ARCPD2 only.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Video Surveillance”](#)
- [“Input/Output”](#)

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

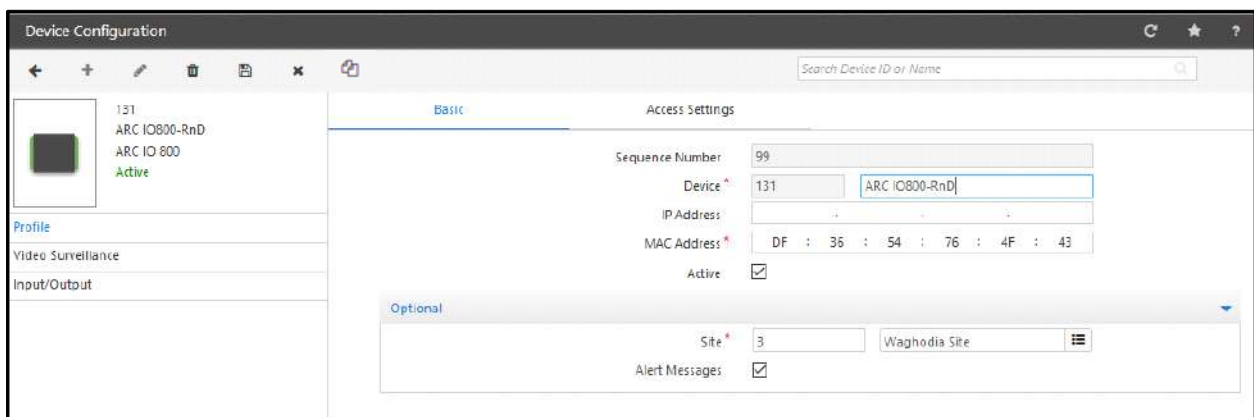

To do this, On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

- “Basic”
- “Access Settings”

## Basic

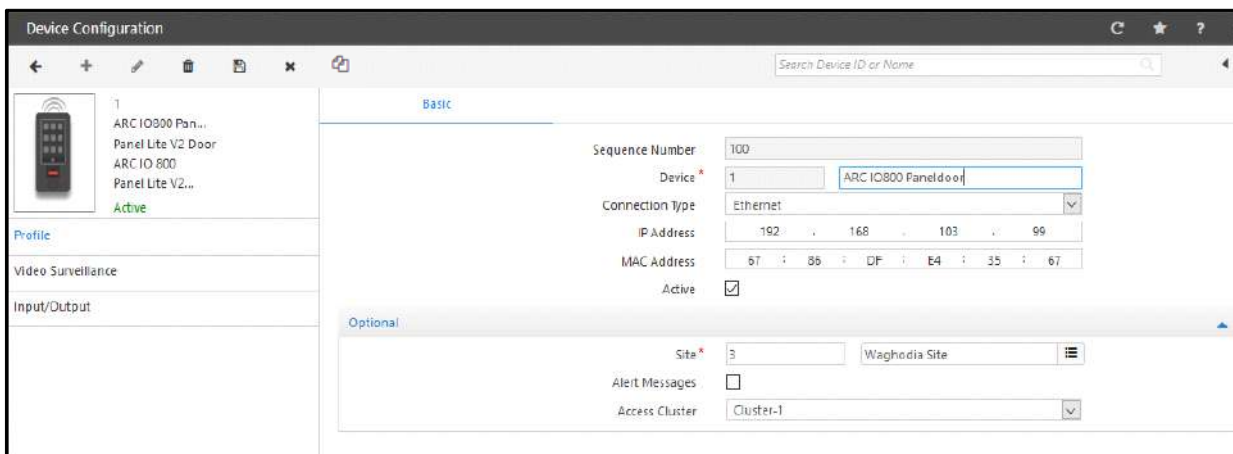

The **Basic** section for “ARC IO800 as Direct door and Panel door” is shown below:

### ARC IO800 as Direct Door

The screenshot shows the 'Device Configuration' window for an ARC IO800-RnD device. The 'Basic' tab is selected. The 'Sequence Number' is 99. The 'Device' field is 131. The 'IP Address' field is empty. The 'MAC Address' is DF : 35 : 54 : 76 : 4F : 43. The 'Active' checkbox is checked. The 'Optional' section shows 'Site' as 3 and 'Alert Messages' as checked.

### ARC IO800 as Panel Door

The screenshot shows the 'Device Configuration' window for an ARC IO800 Panel door device. The 'Basic' tab is selected. The 'Sequence Number' is 100. The 'Device' field is 1. The 'Connection Type' is Ethernet. The 'IP Address' is 192 : 168 : 103 : 99. The 'MAC Address' is 67 : 85 : DF : E4 : 35 : 67. The 'Active' checkbox is checked. The 'Optional' section shows 'Site' as 3, 'Alert Messages' as unchecked, and 'Access Cluster' as Cluster-1.

Configure the following options as required:

**Sequence Number** - This is a system generated sequence number for each new device.

**Device:** Specify the name of the door. The ID of the door is auto generated by the system.

**Connection Type** - Applicable only for Panel Doors. Specify the connection type as Ethernet or RS485.

**IP address/MAC address:** Enter the IP address and MAC address respectively of ARC IO800.

MAC address of door is required while manually adding the door to the COSEC Monitor. You can note the MAC address from the device web page.

**Active** - Check the box to activate the device on the network.

To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the **“Auto Add New Devices”** checkbox.

The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.

Click **Save** button to save the configuration.

The **Basic** page also has an **Optional** tab which provides optional configurations as shown below:

The screenshot shows the 'Optional' configuration tab. It contains three main settings: 'Site' with a value of '3' and a dropdown menu showing 'Waghodia Site'; 'Alert Messages' with an unchecked checkbox; and 'Access Cluster' with a dropdown menu showing 'Cluster-1'.

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.
- **Access Cluster** (only for panel doors) - Assign an access cluster to the door by selecting from the drop down menu.

Access Cluster is configured while configuring Panel/Panel lite/Panel200.

## Access Settings

This section is available for direct door only. The **Access Settings** page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Access Settings' tab selected. On the left, a sidebar shows the device '131' with details 'ARC IO800-RnD' and 'ARC IO 800', and a status 'Active'. The main area contains settings for 'Universal Time Zone' (set to '(GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai'), 'Time Format' (set to '24 Hours'), 'Auto Synchronize with NTP' (unchecked), and 'Preferred NTP Server' (empty field).

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
 If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
 If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
 If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
  3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required.

## Video Surveillance

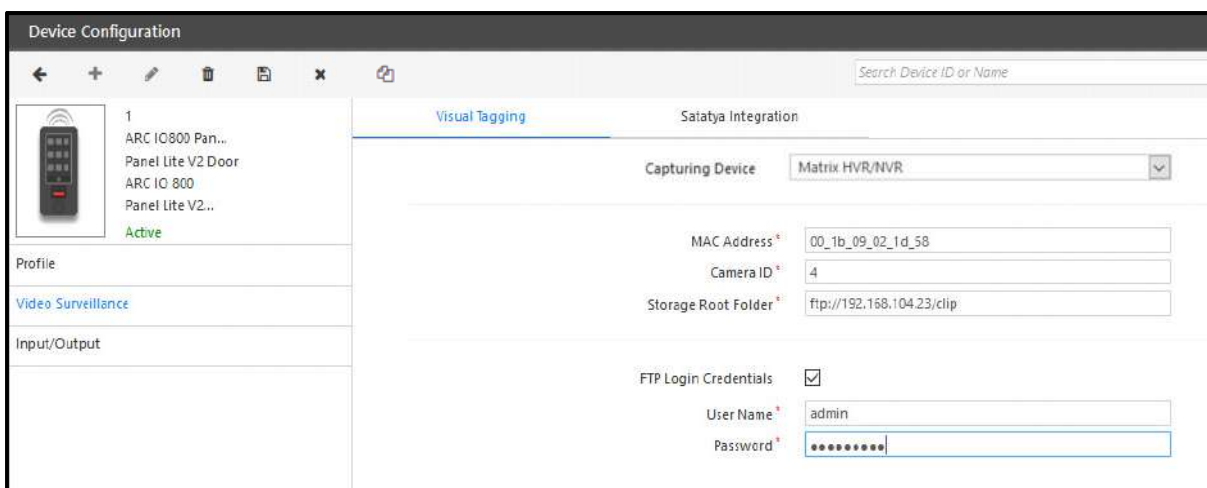

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To access this, Go to **Device Configuration > Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown.

The compatible device types are:

- Matrix HVR/NVR
- Milestone

For more information on integration with **Milestone** devices, refer to [“Milestone Integration”](#).

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.

- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** -Specify the FTP server password.

Some COSEC devices do not support all the network connection options.

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya configuration page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Satatya Integration' tab selected. The sidebar on the left lists devices: '1 ARCIO800 Pan...', 'Panel Lite V2 Door', 'ARCIO 800', and 'Panel Lite V2...', with the first device marked as 'Active'. The main configuration area includes the following fields:

- Active:** A checked checkbox.
- Network Connection:** A dropdown menu set to 'Ethernet'.
- IP Address:** A field showing '192 . 168 . 104 . 30'.
- Port Number:** A field showing '8000'.
- Name:** A text field containing 'ARCIO800HVR Integration'.
- Active:** A checked checkbox.
- Schedule:** Two time input fields showing '09:00' and '12:00'.
- Days:** A grid of checkboxes for days of the week: Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday. Tue, Wed, and Fri are checked.
- Event:** A dropdown menu set to 'Aux. Input 1'.
- Mode:** A dropdown menu set to 'Both'.
- Action:** A dropdown menu set to 'Mail Image'.
- E-mail ID:** A text field containing 'sheetalpandya2012@gmail.com'.
- Camera:** A 5x5 grid of checkboxes numbered 1 to 25. Box 8 is checked.

At the bottom right of the configuration area are 'Add' and 'Cancel' buttons.

- **Integration type-** Select the integration type from the options of Wired and Network. In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **Network Connection-** Select the Network connection from the options of Ethernet, Broadband, Wireless.
- **IP Address-** Specify the IP address of HVR/NVR if device is connected with Ethernet.
- **Port Number-** Specify the port number of HVR/NVR
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule** - Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.

- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-** Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.
- **Camera-** Select the relevant camera channels depending on the action selected.

**Example:** For action as Mail Image, the image of Camera 8 will be mailed to the mentioned Email ID.

The screenshot shows a configuration form with the following fields:

- Event:** Access Allowed (dropdown)
- Mode:** Both (dropdown)
- Action:** Mail Image (dropdown)
- E-mail ID \*:** sheetalpandya2012@gmail.com (text input)
- Camera \*:** A grid of checkboxes for cameras 1 through 24. Camera 8 is selected.

- Click the **Add** button to finish the process of linking the event to the action. The user may configure another event-action linkage if required.

Name	Event	Action	Start Time	End Time	Active	
ARCIO800HVR Integration	Aux. Input 1	Mail Image	09:00	12:00	Yes	

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

1. This functionality cannot be fully accessed in the Edit mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- **“Configuration”**

- “Linking”
- “Time Triggered”

## Configuration

In ARC IO800 as Direct door- Configuration, Linking and Time Triggered sections are available. In ARC IO800-Panel200 Door- only Configuration section is available.

The **Configuration** section for **ARC IO800 - Direct Door** appears as shown below.

Device Configuration

6 ARC IO800-DD  
ARC IO 800  
Active

Profile  
Video Surveillance  
Input/Output

Configuration Linking Time Triggered

**Auxiliary Input**

Auxiliary Input Port	Enable	Supervised	Sense Type	Debounce Time (Sec)
Aux. Input 1	Disabled	No	Normally Open	5
Aux. Input 2	Disabled	No	Normally Open	5
Aux. Input 3	Disabled	No	Normally Open	5
Aux. Input 4	Disabled	No	Normally Open	5

1 - 4 of 8 records

**Auxiliary Output**

Auxiliary Output Port	Enable	Output Wait Time (Sec)
Aux. Output 1	Disabled	0
Aux. Output 2	Disabled	0
Aux. Output 3	Disabled	0
Aux. Output 4	Disabled	0

1 - 4 of 8 records

**Accept External IO Linking**

Enable ☐

The **Configuration** section for **ARC IO800 - Panel Door** appears as shown below.

Device Configuration

1 ARC IO800-PD  
Panel200 Door  
ARC IO 800  
Panel200-149  
Active

Profile  
Video Surveillance  
Input/Output

Configuration Linking Time Triggered

**Auxiliary Input**

Auxiliary Input Port	Enable	Supervised	Sense Type	Debounce Time (Sec)
Aux. Input 1	Disabled	No	Normally Open	5
Aux. Input 2	Disabled	No	Normally Open	5
Aux. Input 3	Disabled	No	Normally Open	5
Aux. Input 4	Disabled	No	Normally Open	5

1 - 4 of 8 records

**Auxiliary Output**

Auxiliary Output Port	Enable	Output Group	Name	Elevator ID	Name	Floor ID	Name
Aux. Output 1	Disabled	1	DC Aux Ports				
Aux. Output 2	Disabled	1	DC Aux Ports				
Aux. Output 3	Disabled	1	DC Aux Ports				
Aux. Output 4	Disabled	1	DC Aux Ports				

1 - 4 of 8 records

## Auxiliary Input

- Click the **Edit** button and select the **Enable** checkbox to enable the system for such two-state monitoring.
- Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as **Normally Closed** or **Normally Open**.
- **Debounce Time (Sec)** - Specify the Debounce time in seconds. Default value is 3 sec and range should be 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state

before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- Click **OK** and **Save** to save the Auxiliary Input settings.

## Auxiliary Output

- Click the **Edit** button and select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.

## Direct Door

### Auxiliary Output

Auxiliary Output Port	Enable	Output Wait Time (Sec)	
Aux. Output 1	<input checked="" type="checkbox"/>	5	✓ ✕
Aux. Output 2	Disabled	0	
Aux. Output 3	Disabled	0	
Aux. Output 4	Disabled	0	

1 - 4 of 8 records

« < 1 2 > »

**Accept External IO Linking**

Enable ☒

- Click **OK** and **Save** to save the Auxiliary Output settings.
- Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.

**Accept External IO Linking** is applicable for Direct Door only.

## Panel Door

### Auxiliary Output

Auxiliary Output Port	Enable	Output Group	Name	Elevator ID	Name	Floor ID	Name	
Aux. Output 1	Disabled	1	DC Aux Ports	1	Elevator1	1	Ground Floor	
Aux. Output 2	Disabled	1	DC Aux Ports	1	Elevator1	3	Telecom Floor	
Aux. Output 3	Disabled	1	DC Aux Ports	2	Elevator2	2	Surveillance Fl	
Aux. Output 4	Disabled	1	DC Aux Ports					

1 - 4 of 8 records

« < 1 2 > »

The Auxiliary Output ports are mapped with floors of same or different Elevators as shown above.

If multiple floors are mapped with one Auxiliary Output port; then one floor mapping will be shown in Floor ID- Name column and other mappings will be shown on hovering over Info icon.

**Example:** Ground Floor and Canteen Floor of Elevator1 are mapped with Aux Output1 so the Floor column shows Ground Floor and Info icon shows Canteen Floor as shown below.

Auxiliary Output							
Auxiliary Output Port	Enable	Output Group	Name	Elevator ID	Name	Floor ID	Name
Aux. Output 1	Disabled	1	DC Aux Ports	1	Elevator1	1	Ground Floor
Aux. Output 2	Disabled	1	DC Aux Ports	1	Elevator1	3	Telecom Floor
Aux. Output 3	Disabled	1	DC Aux Ports	2	1-Elevator1 : 2-Canteen Floor	2	Surveillance FI
Aux. Output 4	Disabled	1	DC Aux Ports				

1 - 4 of 8 records

1. If the Auxiliary Output port is not mapped with any floor; then Elevator ID= Name and Floor ID-Name will be blank.

2. If Auxiliary Output port is mapped with more than 1 floors of same Elevator; then Floor No.- Name will be shown as the first entry data as per Floor No.

3. If Auxiliary Output port is mapped with more than 1 floors of different Elevator; then Elevator ID - Name will be shown as the first entry data as per Elevator ID and display its corresponding floor ID - Name.

## Linking

This section is available in Direct Door only.

The **Linking** section appears as shown below.

Device Configuration

Linking

Time Triggered

Search

Name	Active	Input	Output	Output Type	Pulse Time(Sec)	Reset Link	Reset Time
Emergency Door	<input checked="" type="checkbox"/>	Aux. Input 1	Aux. Output 1	Latch		<input type="checkbox"/>	00:00

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Active** - Select this checkbox to activate this linking program.
- **Input/Output-** Select the **Auxiliary Input** and **Auxiliary Output** for which the IO link is to be set.

- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - Pulse: With this type of output, the user needs to define the Pulse time in seconds.
  - Interlock: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - Latch: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - Toggle: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Time (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Reset Link**- Select this checkbox to reset the link automatically after a defined time period.
- **Reset Time**- Enter the time period in hh:mm format at which the link will get reset automatically. Suppose, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

The screenshot shows the 'Time Triggered' configuration window. The 'Days' dropdown menu is open, showing a list of days with green checkmarks: Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday. The table below shows a single row for 'Siren Activate' with 'Active' checked, 'Time' set to '00:00', 'Duration(Sec)' set to '10', 'Days' set to 'Select', and 'Output' set to 'Aux O/P'.

Function Name	Active	Time	Duration(Sec)	Days	Output
Siren Activate	<input checked="" type="checkbox"/>	00:00	10	Select	Aux O/P

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

# PATH Door

Compact, robust and cost-effective PATH series door controllers; '**PATH V1**' and '**PATH V2**' assure reliable and long term performance as at the building gates and doors for Access Control application. PATH Doors can be connected as **Direct Door** as well as **Panel Door**.

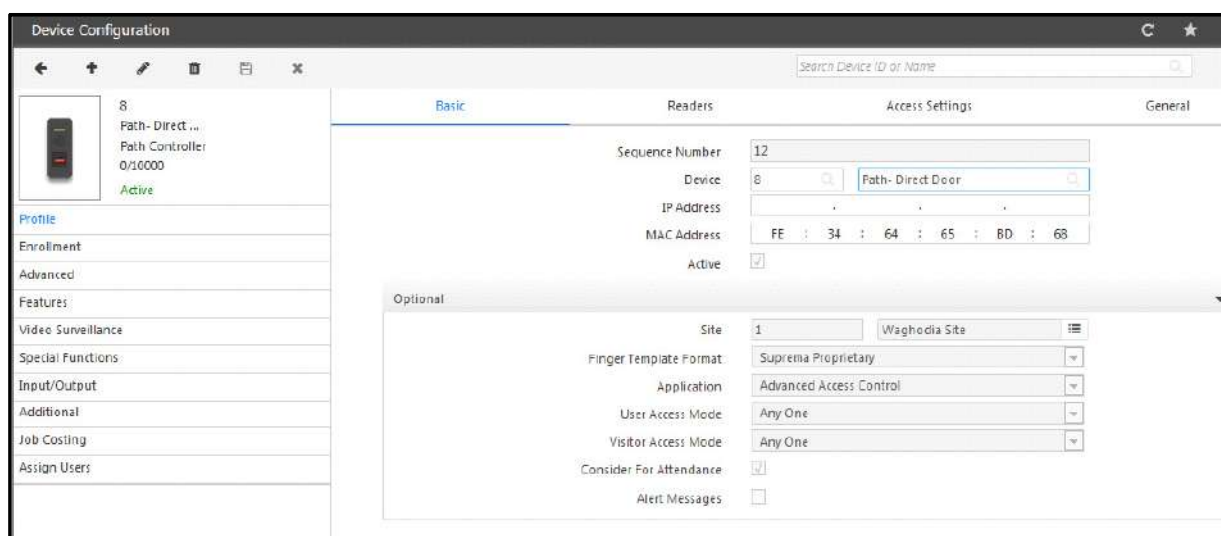

*The Configuration of PATH Controller and PATH V2 is similar. In this manual; configuration of PATH Controller (V1) is explained for reference.*

*The difference between PATH V1 and PATH V2 is the number of 'user capacity' and 'event storage'. PATH V1 supports 10,000 storage capacity and PATH V2 supports 50,000 user storage capacity. Also PATH V2 supports the Wi-fi as well as Bluetooth connectivity.*

*In addition, the PATH V1 contains PIC32 processor whereas PATH V2 runs with the AM3352 processor.*

The Device Configuration for Path Controller V1 appears as shown below.

The screenshot shows the 'Device Configuration' window for a 'Path- Direct Door' controller. The interface includes a sidebar with navigation options like Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, and Assign Users. The main area is divided into tabs: Basic, Readers, Access Settings, and General. The 'Basic' tab is active, showing fields for Sequence Number (12), Device (8), IP Address, and MAC Address (FE : 34 : 64 : 65 : BD : 68). There is an 'Optional' section with fields for Site (1), Finger Template Format (Suprema Proprietary), Application (Advanced Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Consider For Attendance (checked), and Alert Messages (unchecked).

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes online in Monitor.

To add devices automatically, click **Admin Module > System Configuration > Global Policy > Device**. Select the **Auto Add New Devices** check box. Once the device is connected in the network, it comes online in COSEC Monitor.

*While adding the device to COSEC Server, make sure the COSEC Monitor Service is running.*

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#) (this is applicable to PATH V2 Direct Door/Panel Door only).
- OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device. It is applicable to PATH V2 (Direct Door and Panel Door) only.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

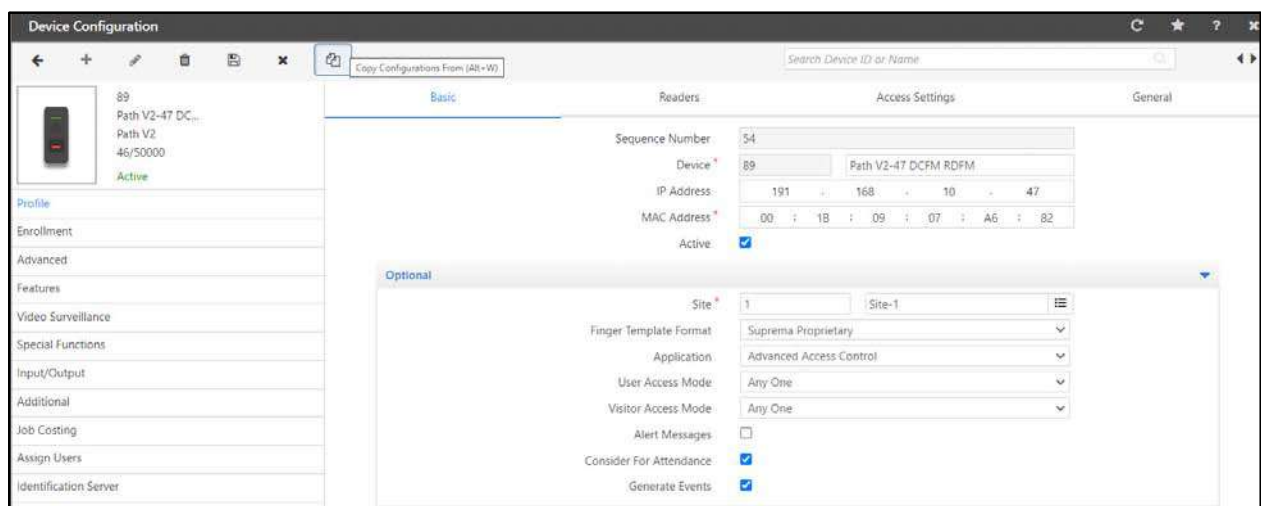

- the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.
- the values of other parameters that are configured will remain as they are.

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- all the applicable parameter values will be copied from the selected device.
- the values of the other parameters will be their default values.

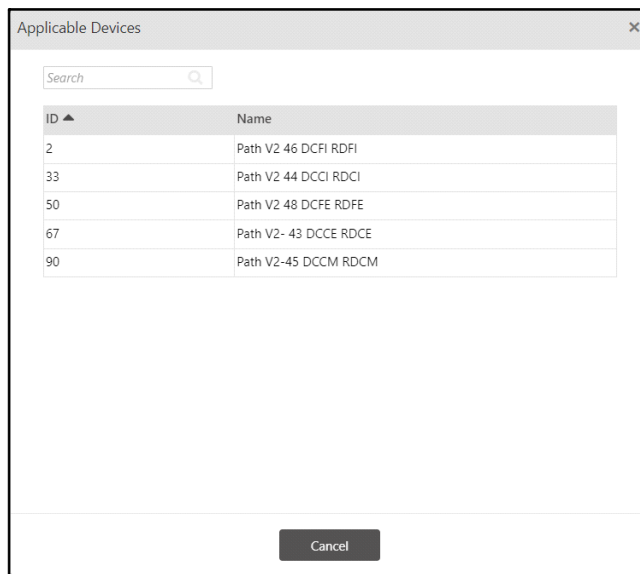

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The screenshot shows the 'Device Configuration' window. On the left, there is a sidebar with a list of configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into tabs: Basic, Readers, Access Settings, and General. The 'Basic' tab is currently selected. Within the 'Basic' tab, there are fields for 'Sequence Number' (54), 'Device' (89), 'Path V2-47 DCFM RDPM', 'IP Address' (191.168.10.47), 'MAC Address' (00:1B:09:07:A6:82), and 'Active' (checked). Below these fields is an 'Optional' section with a 'Site' dropdown (set to '1'), 'Finger Template Format' (Suprema Proprietary), 'Application' (Advanced Access Control), 'User Access Mode' (Any One), 'Visitor Access Mode' (Any One), 'Alert Messages' (unchecked), 'Consider For Attendance' (checked), and 'Generate Events' (checked).

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- *In case of Direct Door, the pop-up will display other PATH V2 Direct Doors only. For example, if you have direct door devices — PATH1, PATH2, Vega1 and Vega2, then this pop-up will display only PATH1 and PATH2.*
- *In case of Panel Door, the pop-up will display other Vega Panel Doors connected with the same Panel only. For example if you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, PATHPD1, PATHPD2. In Panel2 the Panel Doors connected are PATHPD3 and PATHPD4. Then, if you are adding the new PATH Panel Door to Panel1, then this pop-up will display PATHPD1 PD1 and PATHPD2 only.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [\*“Profile”\*](#)
- [\*“Enrollment”\*](#)
- [\*“Advanced”\*](#)
- [\*“Features”\*](#)
- [\*“Video Surveillance”\*](#)
- [\*“Special Functions”\*](#)
- [\*“Input/Output”\*](#)
- [\*“Additional”\*](#)
- [\*“Job Costing”\*](#)
- [\*“Assign Users”\*](#)
- [\*“Identification Server”\*](#)

## Profile

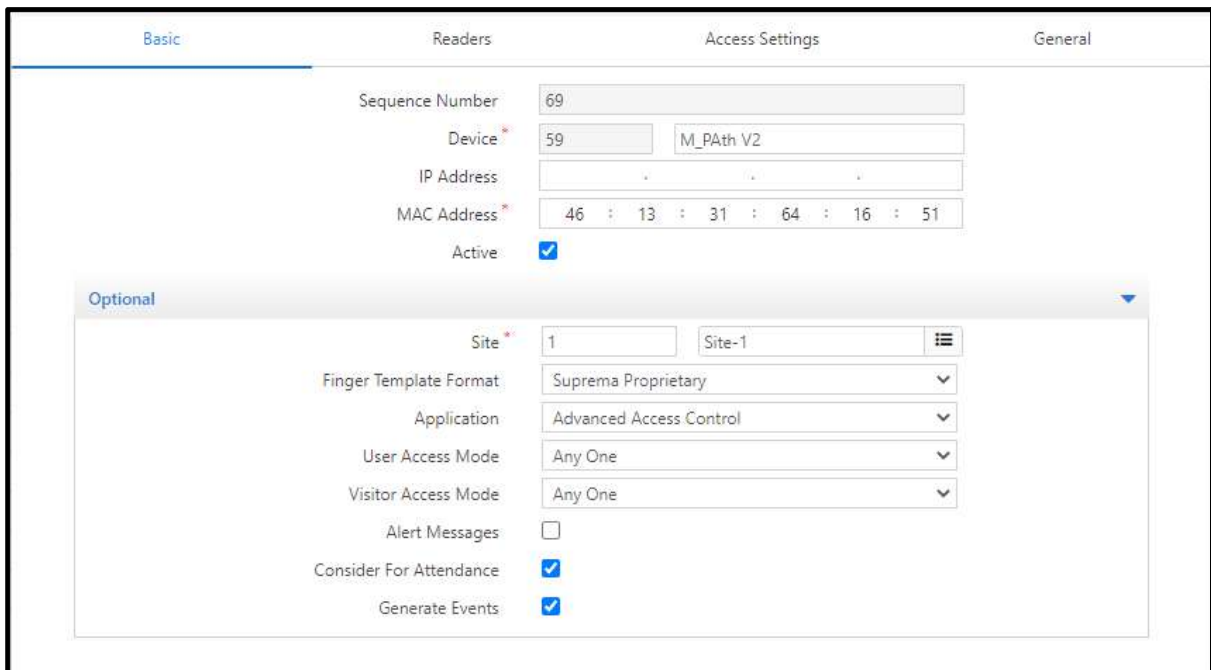

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, select **Device Configuration> Profile**. The Profile can be configured in the following sections:

- “Basic”
- “Readers”
- “Access Settings”
- “General”

## Basic

The **Basic** section for PATH as Direct door is shown below:

The screenshot displays the 'Basic' configuration tab for a door profile. The main configuration area includes the following fields:

- Sequence Number:** 69
- Device:** 59
- IP Address:** (empty field)
- MAC Address:** 46 : 13 : 31 : 64 : 16 : 51
- Active:** ☒

Below the main fields is an 'Optional' section, which is currently expanded. It contains the following fields:

- Site:** 1
- Finger Template Format:** Suprema Proprietary
- Application:** Advanced Access Control
- User Access Mode:** Any One
- Visitor Access Mode:** Any One
- Alert Messages:** ☐
- Consider For Attendance:** ☒
- Generate Events:** ☒

Configure the following options as required:

- **Sequence Number** - This is a system generated sequence number for each new device.
- **Device**- Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **Connection Type** - Applicable only for Panel Doors. Specify the connection type as **Ethernet** or **RS485**.
- **IP Address** - This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address** - Specify the MAC Address of the door.

MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.

- **Active** - Check the box to activate the device on the network.

To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “**Auto Add New Devices**” checkbox.

The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.

For PATH as Direct door, the **Optional** tab shows the following configuration.

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Finger Template Format** - Select the format as Suprema Proprietary or Suprema ISO according to which the templates will be enrolled. For globally setting the template format, you can set from Global policy.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** or **Enrollment**.

The available license is ACS and Application is set to Basic Access Control. If this ACS voucher exhausts, then while dispatching Basic Configuration of device, application type will be sent as ‘Advance Access Control’.

- **User/Visitor Access Mode** - Defines the type and combination of credentials required to identify and validate a user/visitor at the Door Controller. Select the appropriate credential combination from the drop down list.

The options available are:

- Any one
- Card
- Card + Biometrics
- Card + Biometrics + PIN
- Card + PIN
- Biometrics
- Biometrics + PIN
- Biometrics then Card
- Card then Biometric
- **Consider for Attendance** - Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.

- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.
- **Generate Events:** This check-box is enabled by default. You can disable the check-box if the server is not required to receive any events from the respective devices.

*'Generate Events' option is available only for PATH V2 variants.*

For PATH as Panel door, the **Optional** tab shows the following configuration.

The screenshot shows the 'Optional' configuration window. It contains the following fields and values:

- Site: 1
- Waghodia Site: (selected from a dropdown menu)
- Consider For Attendance: ☒
- Alert Messages: ☐
- Access Zone: Zone-1 (selected from a dropdown menu)
- Access Cluster: Cluster-1 (selected from a dropdown menu)
- Door Group: None (selected from a dropdown menu)
- Auto IP Assignment: ☒

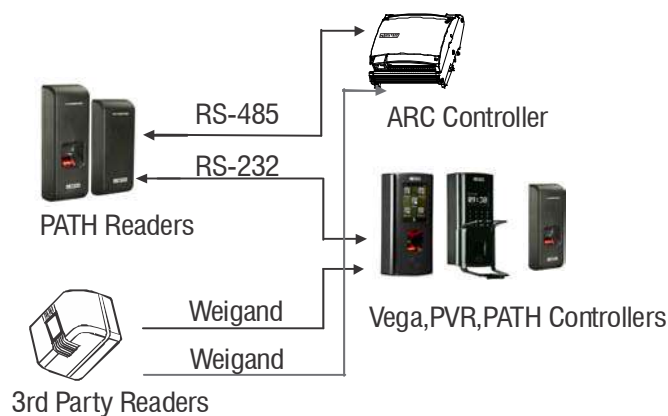

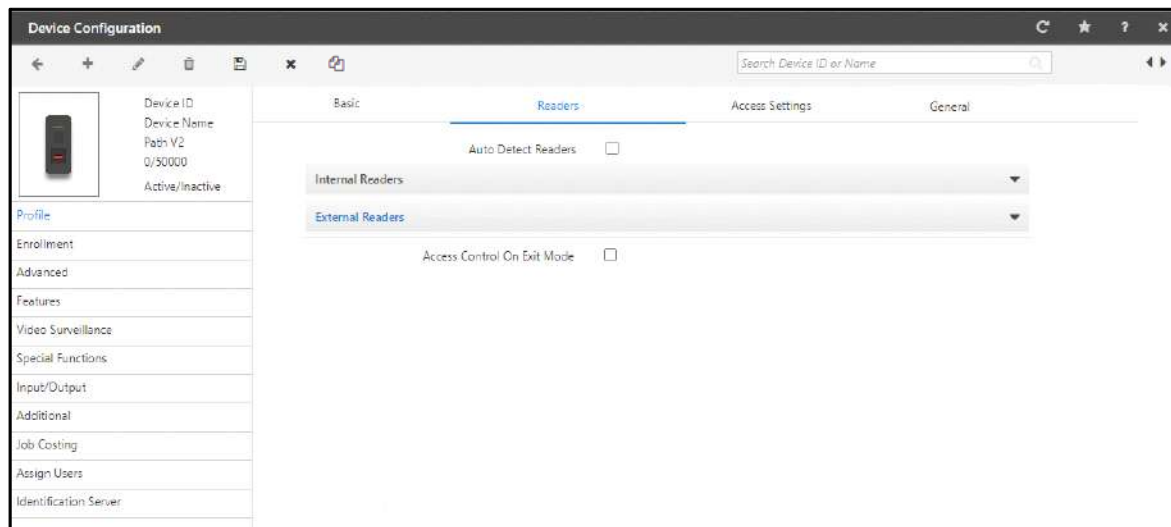

- **Access Zone** (only for panel doors) - Assign an access zone to the door by selecting from the drop down menu.
- **Access Cluster** (only for panel doors) - Assign an access cluster to the door by selecting from the drop down menu.
- **Door Group:** Door Group drop down includes list of all configured Door groups on corresponding panel. An additional option as 'None' is available and selected by default.
- **Auto IP Assignment:** There is option where panel door can be assigned its IP from device webpage. To enable this check the Auto IP Assignment box.

*Access Zone and Access Cluster are configured while configuring Panel200.*

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

- **Auto Detect Readers** (for direct doors only) - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

## Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

*Mode, Card Reader Type and Card Format are applicable for both Direct Door and Panel Door.*

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type;** Select the Card Reader Type from the following options:
  - EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader
- **Card Format:** Only Single card format is applicable to PATH as direct door. The default card format is applied to PATH as direct door. To assign another card format for internal readers of the device; delete the default format and select another format from the picklist. To know more about Card Formatting, refer ["Card Formats"](#).

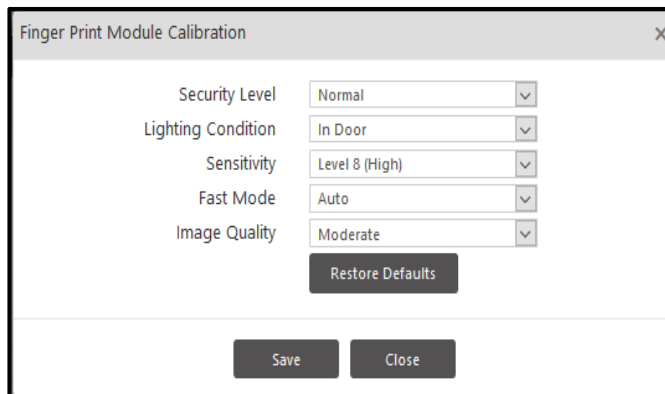

### Multiple Card Format

For PATH as panel door; you can assign multiple card format. To assign multiple card formats to device click on **Add** button. Then click the picklist to select the card format. And click **OK** to save the format.

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here. Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

- Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level**, **Lighting Condition**, **Sensitivity**, **Fast Mode**, **Image Quality** and **Restore Defaults** for the selected FP Reader as shown.

### Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels.

For regular Time-Attendance system “**Normal**” level can be selected. For high security areas requiring complete or maximum matching of template, “**Highly Secure**” level must be selected. For approximate matching of template, “**Secure**” level can be selected.

- **Lighting Condition:** Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment. Select the In Door or Out Door option based on the device location.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Fast Mode parameter can be used to shorten the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. There is also an Auto mode.
- **Image Quality:** When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest option might lead to higher number of finger rejections during the enrollment process.

*Good quality of enrollment (around 70-75% quality) is recommended for proper identification of enrolled templates.*

- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.

*Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters.

- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.

*Custom option for Bluetooth Range is applicable for PATH V2 only.*

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

Click **Save** to save all the configurations.

## External Readers

This option allows the configuration of the External Reader for the selected door.

*Mode, External Reader Type, Card Format and Exit Switch are applicable for both Panel Door and Direct Door.*

Member No	Card Format	Configurable Bits
1	Default Format	0

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.
- **Card Format:** Select a card format to be applicable for external readers of the device. See Internal Readers section for details.
- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**.

*User Access Mode, Visitor Access Mode and Access Control on Exit Mode is applicable for Direct Door only.*

- **User/ Visitor Access Mode** (not for Panel Doors): Select the desired user/ visitor access mode applicable for external readers.

*Configure Bluetooth From Server, Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- **Configure Bluetooth from Server:** When you select **External Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature for the mentioned external readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the PATH device by which the device will be visible to others. Then configure the following parameters
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement.

The Bluetooth Name can be a maximum of 20 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **External Reader Type** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

If Auto Detect Reader is enabled, then External Reader Bluetooth parameters will not be visible.

- **Access Control On Exit Mode:** Select this check box to enable the checking of the following access control policies on door when the external reader is in the 'exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group

When this parameter is unchecked, all the following access control features will be checked on door (which are applicable and configured).

- User enabled
- Blocked user
- Time Based Access Check
- ASC
- User Access Group
- Deadman
- Door application mode
- Use count
- Mantrap
- Anti-pass back
- Panel Route access
- Smart card based route access
- 2-person
- Access mode
- Occupancy control
- Visitor escort rule

Click **Save** to save all the configurations.

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below.

The screenshot displays the 'Device Configuration' window with the 'Access Settings' tab selected. The left sidebar shows a list of configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main content area is divided into sections for 'Basic', 'Readers', 'Access Settings', and 'General'. The 'Access Settings' section includes the following fields:

- Universal Time Zone: (GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai
- Time Format: 24 Hours
- Auto Synchronize with NTP: ☐
- Preferred NTP Server:
- Working Days: ☒ Sun, ☒ Mon, ☒ Tue, ☒ Wed, ☒ Thu, ☒ Fri, ☒ Sat, ☒ Holiday
- Working Hours (HH:MM): 00:00 to 23:59
- Holiday Schedule 1: 1, Schedule 1
- Holiday Schedule 2: 2, Schedule 2
- Holiday Schedule 3: 3, Schedule 3
- Holiday Schedule 4: 4, Schedule 4
- Device Access Schedule: Select

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
  3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule pick-list.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

*Device Access Schedule is applicable for PATH V2 only.*

- **Device Access Schedule:** All the Access Schedules created from the “Access Schedules” page appear in the drop-down list. By default, the Access Schedule, if assigned from the Access Schedule page appears here. If you wish to change the Access Schedule, select the desired Access Schedule to be assigned to the device from the drop-down list.

If an Access Schedule is selected, it will override the Working Days configuration.

If an Access Schedule is already assigned from “Access Schedules” page and a different schedule is selected here, it will override the schedule assigned from “Access Schedules” page and vice versa.

To revoke an Access Schedule, select the **Select** option from the list. The device will be removed from the Access Schedule under the “Assign Doors” section on the “Access Schedules” page.

## General

The **General** page appears as follows.

*Mute Buzzer, Allowed Acknowledgment and Denied Acknowledgment are applicable for both Direct Door and Panel Door.*

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively. This is applicable for both Direct and Panel door.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the ‘Acknowledgment Allowed’ message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the ‘Acknowledgment Denied’ message will be displayed.

- **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.

The range (250-3000ms) for Allowed/Denied Acknowledgment Display Duration and Shortest option for LED-Buzzer Duration is applicable for PATH V2 only.

If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/Denied Acknowledgment will be applicable to these readers as well.

## Enrollment

The Enrollment section is not available for panel doors.

The Enrollment page appears as shown below.

- **Enrollment through Special Function** - Select this check-box to enable the feature. This allows the user to specify the user credential that can be enrolled by using the enrollment special function from the DOOR Controllers.
- **Enrollment Mode** - Select the Credential from the drop-down list that can be enrolled using the special function at the DOOR. The options are **ReadOnlyCard**, **SmartCard**, **Biometric** and **BiometricthenCard**, and **DuressFinger**. Refer “[Enroll Credentials](#)” or “[Enrolling Users](#)” to enroll User/Worker. Refer “[Enrollment](#)” or “[Enroll Credentials](#)” to enroll Worker. Refer “[Enroll Credentials](#)” to enroll a Visitor.

*DuressFinger is only applicable for User and Worker.*

- **Template Per Finger** - This parameter displays the values as configured at the global level. It shows the number of templates per finger getting enrolled.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level.

- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the Enrollment Mode parameter.

## Advanced

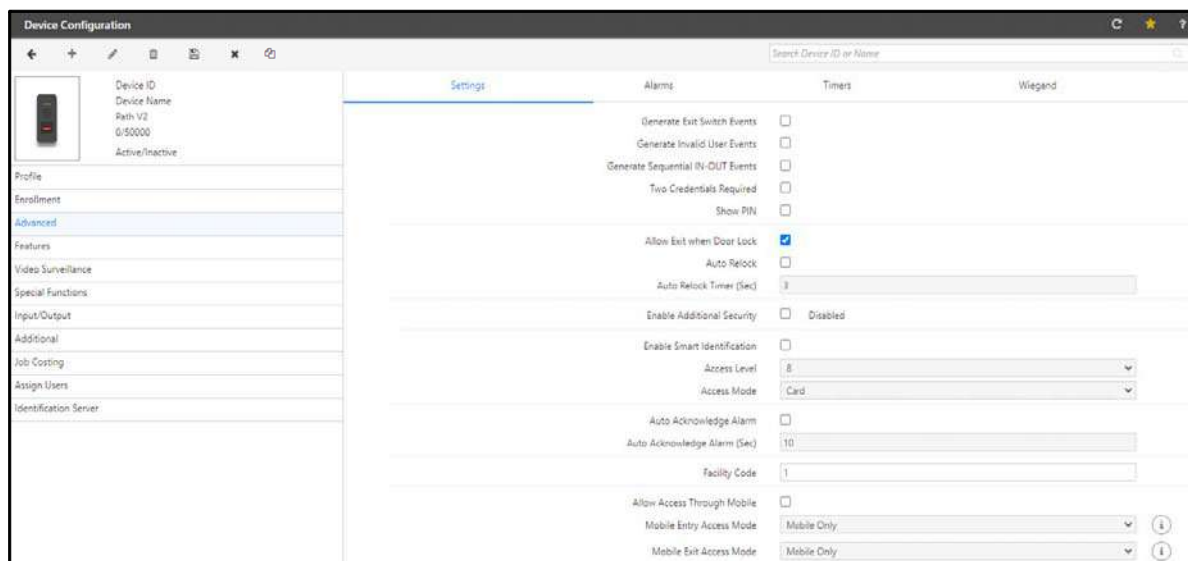

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- *“Settings”*
- *“Alarms”*
- *“Timers”*
- *“Wiegand”*

## Settings

The **Advanced Settings** page for PATH Door as a **Direct Door** appears on your screen as shown below:

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events every time the exit switch is used.
- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.
- **Generate Sequential IN-OUT Events** - Select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.

- **Two Credentials Required**- Select this checkbox to enable the feature of verifying 2 credentials mandatory for users allowed to By-pass finger/palm.
- **Show PIN** - Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Enable Additional Security**- Select this checkbox to enable additional security at the selected Door Controller.

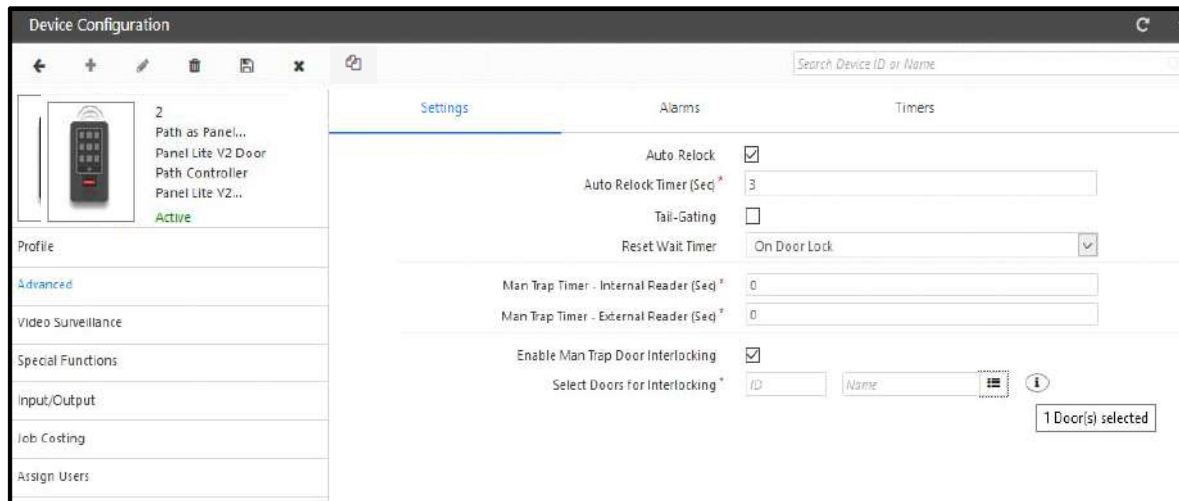

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this checkbox to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics**, **Mobile then Card** and **Mobile then PIN**.

*If User Access Mode is selected as “None” in Zone Configuration and Mobile Access Mode is selected as “Mobile Then Biometrics” then door can be accessed through Mobile and then Biometric credential.*

The **Advanced Settings** page for **PATH** as a **Panel door** will appear on screen as shown below:

1. **Tail-Gating** - Tail-gating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the panel door, the occupancy count of a zone should be incremented or decremented considering both the punch as well as the auxiliary input port of the panel door (say, input from a beam-counter). Set the wait timer for resetting the tailgating count (**Reset Wait Timer**) based on the door lock status or the door pulse wait timer (as configured).
2. **Man Trap Entry Timer (Sec)** - This check-box enables an alarm wait timer on the panel door to ensure that the user enters the next sequential door of a man-trap within a specific time-frame.
3. **Man Trap Exit Timer (Sec)** - This check-box enables an alarm wait timer on the panel door to ensure that the user exits the panel door to enter the next sequential door of a man-trap within a specific time-frame.
4. **Enable Man Trap Door Interlocking:** Select this check-box to activate the Door Interlock for the selected door (say Door1). This means if the Door1 is open then other doors will remain close.
5. **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.

- To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

Picklist For Panel Door

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID	Name ▲
<input type="checkbox"/>	10	ARCDC100_DD_Door
<input type="checkbox"/>	9	ARCDC100_DD_Door
<input type="checkbox"/>	8	ARCDC100_SD_Door
<input type="checkbox"/>	1	ARGO_PANEL
<input type="checkbox"/>	2	DoorV3
<input type="checkbox"/>	7	DoorV3_Door
<input type="checkbox"/>	3	DOORV4_PANEL
<input type="checkbox"/>	6	dumy
<input type="checkbox"/>	4	PATHV2_PANEL
<input type="checkbox"/>	5	VEGA_PANEL

OK Cancel

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

Suppose Door2 and Door3 are selected for Interlock with Door1. So When Door1 opens; Door2 and Door3 will remain close.

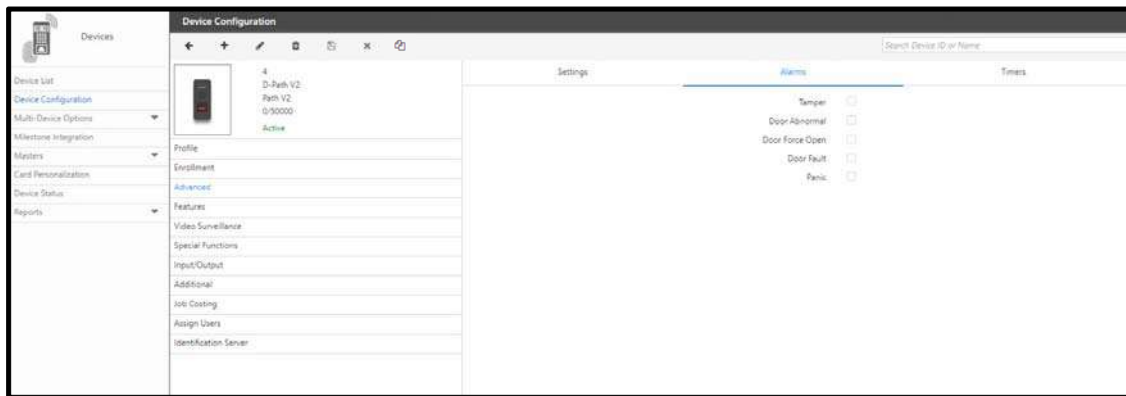

*For Degrade mode Door Interlocking feature will not work.*

*Whenever a door is in abnormal state and for that door interlocking is enabled then user access in other doors of the interlocking group is allowed.*

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

## For Direct Door

## For Panel Door

Select the respective checkbox of alarms which you want to enable.

**Duress Alarm** is only configurable for **Panel200 Path V2 Door**.

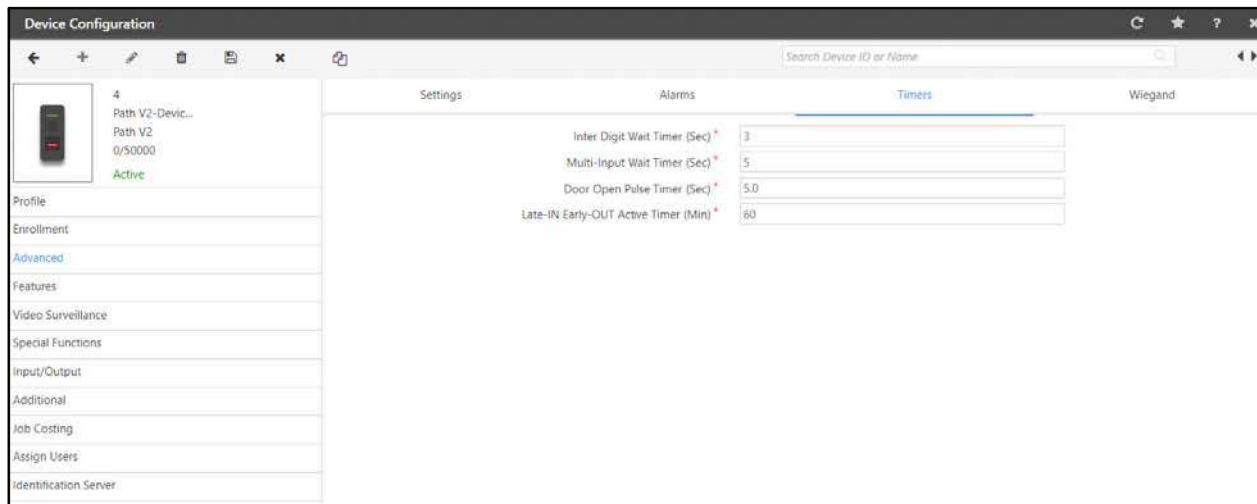

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms.

The Timers parameters differ for PATH as Direct Door and Panel Door.

### Timers - Direct Door

Click the **Timers** tab. The **Timers** page for **PATH** as a **Direct Door** appears.

Configure the following parameters:

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds (1 to 99) between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.

***Inter-Digit Wait Timer** is applicable for PATHV2 Door only.*

- **Multi-Input Wait Timer (sec)** - Specify the time in seconds (3 to 99) for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (0.1 to 65535.0) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.

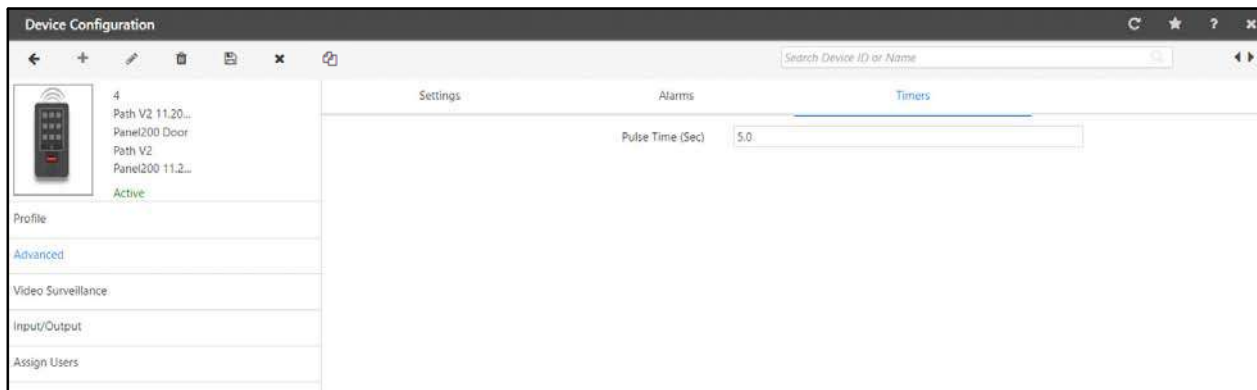

*The range (0.1 to 65535.0) seconds for **Door Open Pulse Timer** is applicable for PATH V2 Direct Door only.*

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes (1 to 99) for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

## Timers - Panel Door

Click the **Timers** tab. The **Timers** page for **PATH** as a **Panel Door** appears.

- **Pulse Time (sec)** - Specify the time in seconds (0.1 to 65535.0) for the panel door to be energized for a valid credential.

*The range (0.1 to 65535.0) seconds for **Pulse Time** is applicable for PATH V2 Panel Door only.*

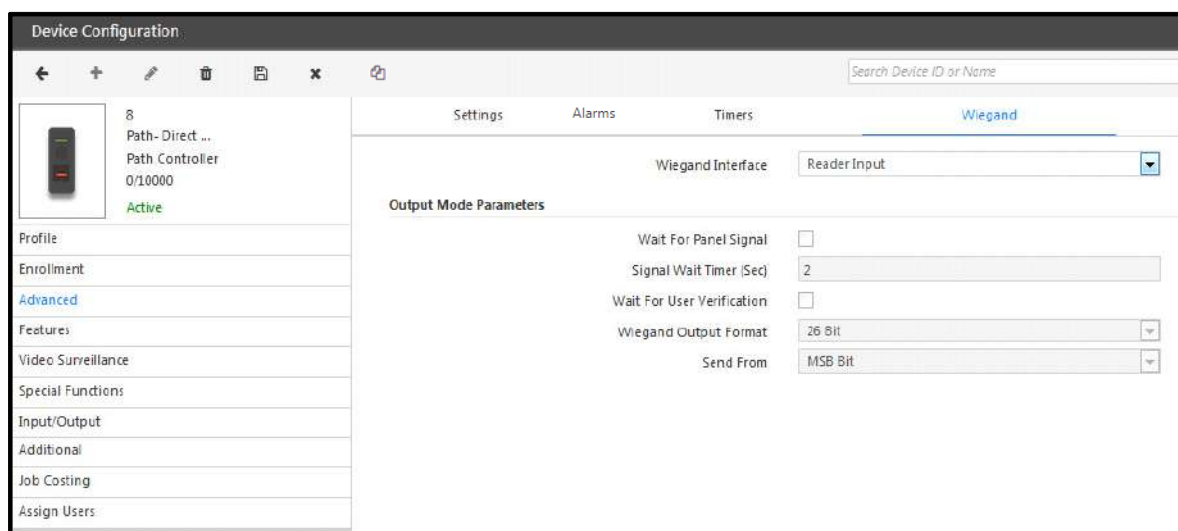

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

## Wiegand

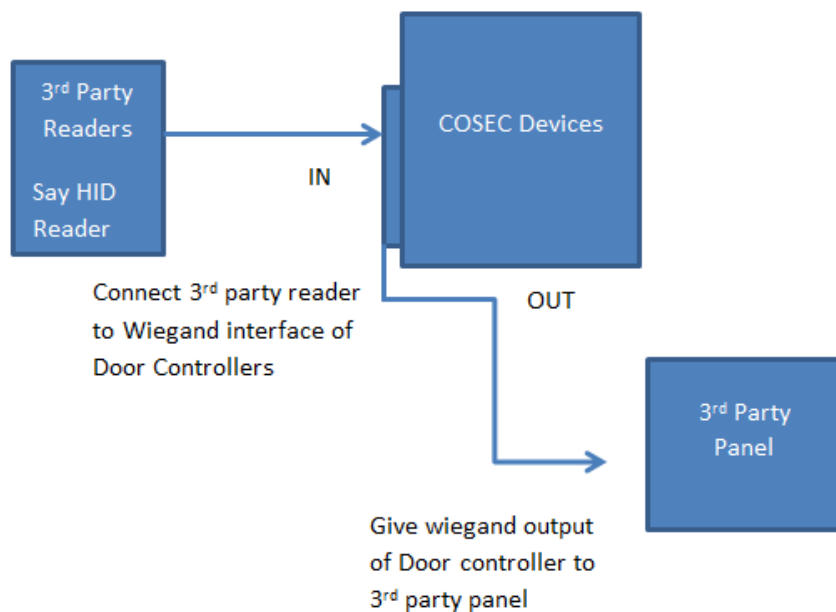

*Wiegand is applicable for Direct Door only.*

Click the **Wiegand** tab. The **Wiegand** page appears:

- **Wiegand Interface** -The PATH Controllers can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown below.

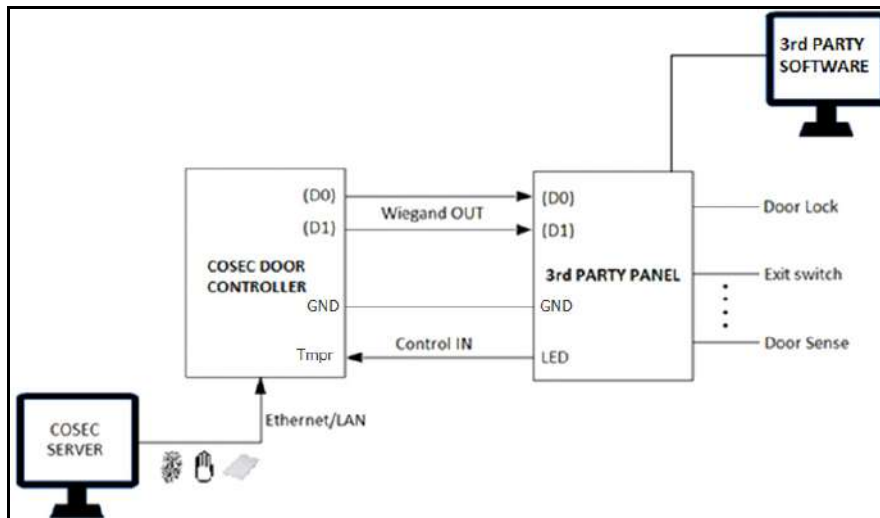

So select the interface of Door controller as **Output Mode** to work as wiegand output to panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the output mode parameters will be disabled.

If you select Output mode then configure the **Output Mode Parameters**.

- **Wait For Panel Signal** - If this option is enabled the door will wait for reply from the connected third party device before triggering any output, as per the defined **Signal Wait Timer (Sec)**.
- **Wait For User Verification** - If this option is enabled, user verification will be requested on the third party device before triggering any output.
- Specify the **Wiegand Output Format** and sending order for reader data as MSB or LSB Bit in the **Send From** field.

## Wiegand Out Interface

- Also for the **Custom** format, user can configure details of fields to be sent as output from the Wiegand reader that has been added.

For each of the listed events, a custom Wiegand Output Format can be selected using the picklist button. Also an access code can be assigned for each communication (e.g. Invalid PIN Code). This will depend on the number of output bits configured for Access Code in the selected Wiegand Output Format. Also, See Devices> Masters> Wiegand Output Format.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license and is applicable only for direct doors.*

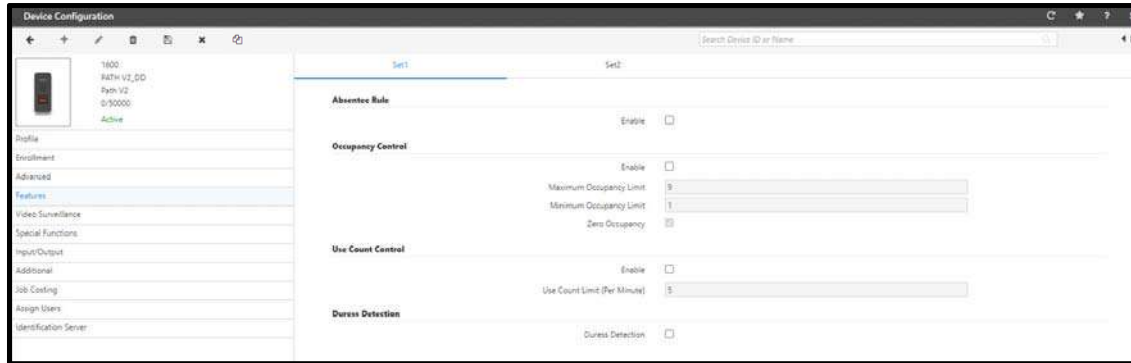

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- "Set1"
- "Set2"

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**.

The page appears as shown below.

- **Absentee Rule** - Select this checkbox to enable this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
For configuring the rule See *Access Control> Absentee Rule*.
- **Occupancy Control** - Select this checkbox to enable the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule See *Access Control> Occupancy Control*.
- **Use Count Control** - Select this checkbox to enable the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule See *Access Control> Use Count Control*.
- **Duress Detection** - Select the checkbox to enable the feature. Duress Detection is used to generate the duress alarm which informs that the user is forced to open the door under threat.

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**.

The page appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Set2'. On the left is a sidebar with a device icon and a list of configuration tabs: Profile, Enrollment, Advanced, Features (selected), Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, and Assign Users. The main area is titled 'Set2' and contains three rule configurations:

- First-IN User Rule:**
  - Enable: ☒
  - Reset On: ☒ Day Change ☐ Timer Expiry
  - Access Timer (Sec): 3
  - First-IN User Group: 1 (with a list icon)
- Anti-Pass-Back (APB):**
  - On Entry: ☒
  - On Exit: ☒
  - Forgiveness: ☒
  - Hard/Soft: Soft (dropdown menu)
- 2-Person Rule:**
  - Enable: ☒
  - Mode: Primary Must (dropdown menu)
  - Primary Group: Select (dropdown menu)
  - Secondary Group: None (dropdown menu)
  - 2nd Person Wait Timer (Sec): 5

- **First-IN User Rule** -Select this checkbox to enable the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule *See Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select this checkbox to enable the feature at the direct door.  
For configuring the rule *See Access Control> Anti-Pass Back*
- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule *See Access Control> 2- Person Rule*

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device.

It is available in Basic License.

To access this, Go to **Device Configuration> Video Surveillance**.

- “Visual Tagging”
- “Satatya Integration”

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown.

The compatible device types are:

- Matrix HVR/NVR
- Milestone

### Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.

- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder PATH or FTP PATH where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** -Specify the FTP server password.

Some COSEC devices do not support all the network connection options.

## Milestone

For more information on integration with **Milestone** devices, refer to [“Milestone Integration”](#).

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya configuration page appears as shown below:

- **Integration type-** Select the integration type from the options of Wired and Network. In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **Network Connection-** Select the Network connection from the options of Ethernet, Broadband, Wireless.
- **IP Address-** Specify the IP address of HVR/NVR if device is connected with Ethernet.
- **Port Number-** Specify the port number of HVR/NVR
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule** - Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-**Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.

- **Camera-** Select the relevant camera channels depending on the action selected.

**Example1:** For action as Video Pop up, the pop up of Camera 24 will be shown for 10 seconds.

**Example2:** For Access allowed event on COSEC Device, recording of camera channel 4,6,8 and 10 will be done for 10 seconds.

The first screenshot shows the configuration for 'Video Pop-Up' action. The 'Event' is 'Access Allowed', 'Mode' is 'Both', 'Duration Sec.' is '10', and 'Camera' 24 is selected.

The second screenshot shows the configuration for 'Recording' action. The 'Event' is 'Access Allowed', 'Mode' is 'Both', 'Duration Min.' is '10', and cameras 4, 6, 8, and 10 are selected. 'Add' and 'Cancel' buttons are at the bottom.

- Click the **Add** button to finish the process of linking the event to the action. The user may now configure another event-action linkage if required.

Name	Event	Action	Start Time	End Time	Active	
Path HVR Intergration	Access Allowed	Recording	09:00	12:00	Yes	

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

*‘Special Function’ section is available only for PATH V1 variants.*

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

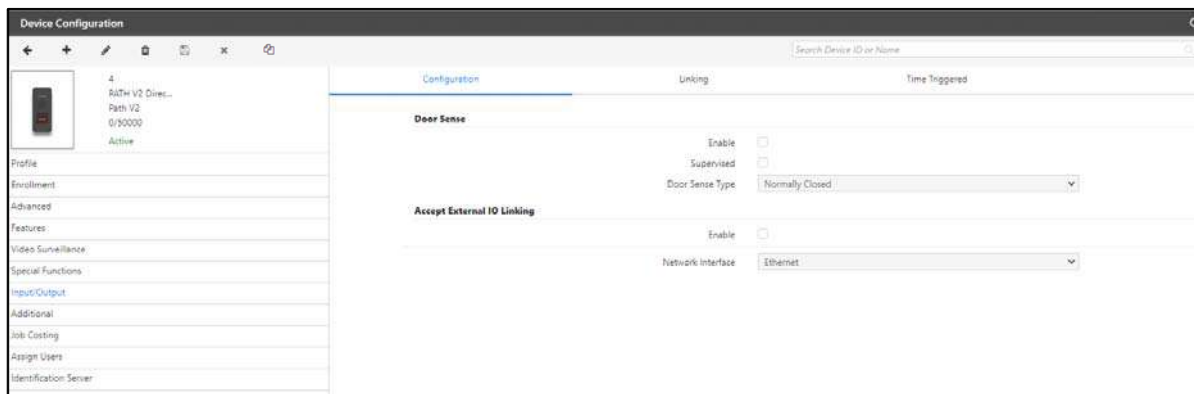

1. This functionality cannot be fully accessed in the Edit mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

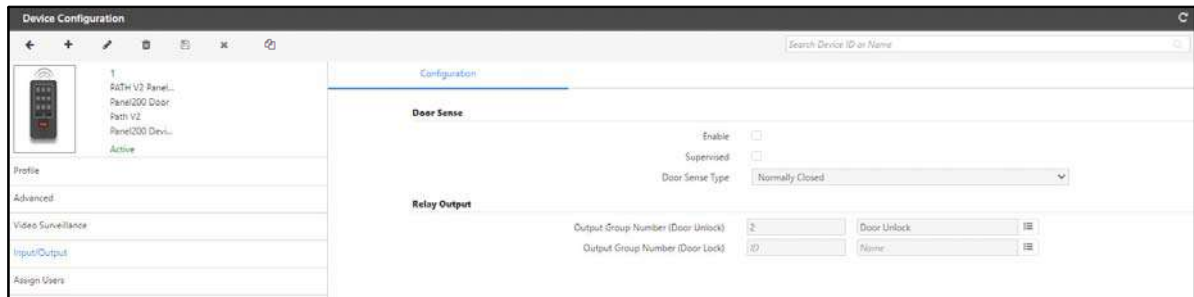

- “Configuration”
- “Linking”
- “Time Triggered”

## Configuration

The **Configuration** section for **PATH - Direct Door** appears as shown below.

The **Configuration** section for **PATH- Panel Door** appears as shown below.

The following parameters are available for configuration:

- **Door Sense** - The system by default can sense two states of a door - *Normally Open* and *Normally Closed* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as **Normally Closed** or **Normally Open** (Default: Normally Closed).

- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface**- Select the interface option for IO linking with external devices. The options are

- Ethernet
- Wireless
- Mobile Broadband

**Accept External IO Linking** is applicable for Direct Door only.

**Network Interface** is applicable for Direct Doors and PATH V2 only.

#### • Relay Output

**Output Group Number (Door Unlock)**- Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.

**Output Group Number (Door Lock)**- Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

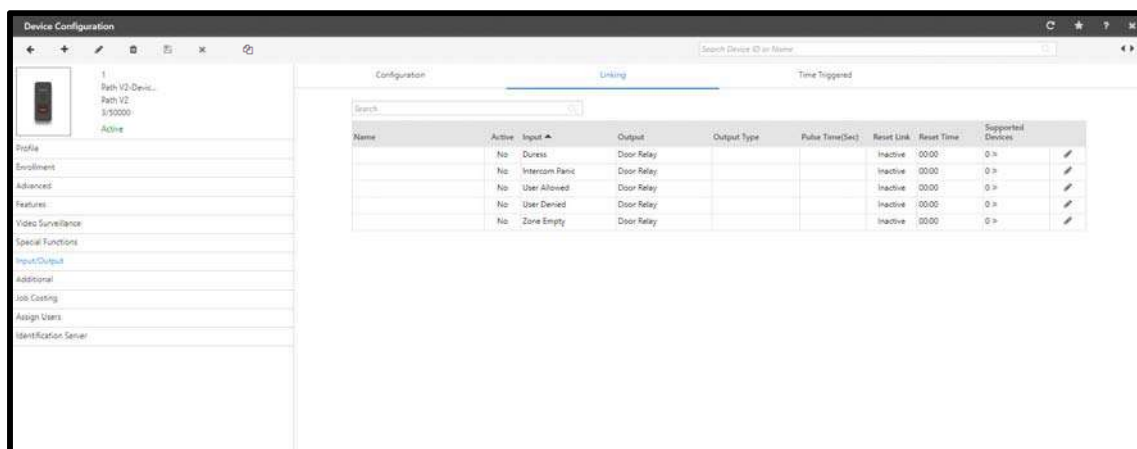

**Relay Output** is applicable for Panel Door only.

## Linking

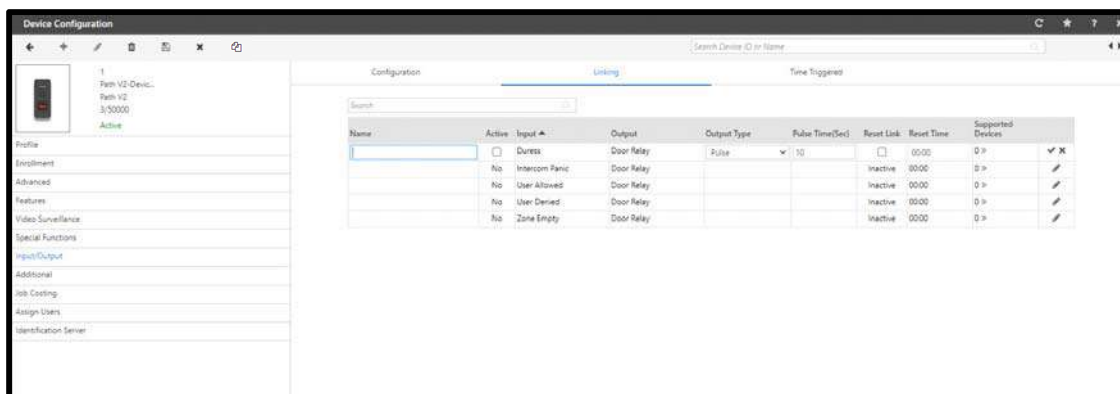

**Linking** is applicable for Direct Door only.

The **Linking** section appears as shown below.

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

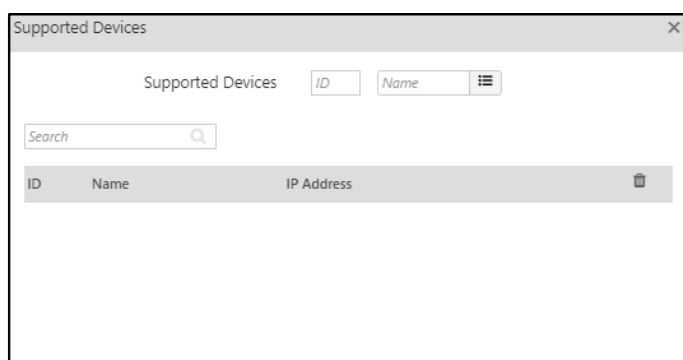

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Active** - Select this checkbox to activate this linking program.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - **Pulse**: With this type of output, the user needs to define the Pulse time in seconds.
  - **Interlock**: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - **Latch**: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - **Toggle**: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.

**Reset Link, Reset Time and Supported Devices** is applicable for Path V2 only.

- **Reset Link** - Select this check box to activate this linking program as well as set the time from **Reset Time**.
- **Reset Time**- Enter the time period in hh:mm format at which the link will get reset automatically. Suppose, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- **Supported Devices** - All devices supported for external IO Linking will appear in this picklist for selection.
- Click **Supported Devices**  icon. The **Supported Devices pop-up** appears.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

OK Cancel

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all pages will be selected.

Click **OK**. You return to the **Supported Devices pop-up** and the selected devices are displayed here.

Supported Devices

Supported Devices ID Name

Search

ID ▲	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

You can also delete the desired devices. To do so, click the **Delete**  icon of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

# Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

The screenshot shows the 'Time Triggered' configuration window. At the top, there are tabs for 'Configuration', 'Linking', and 'Time Triggered'. Below the tabs is a search bar and a table with the following columns: 'Function Name', 'Active', 'Time', 'Duration(Sec)', 'Days', and 'Output'. The first row in the table is 'Siren Activate', with 'Active' checked, 'Time' set to '00:00', 'Duration(Sec)' set to '10', 'Days' set to 'Select', and 'Output' set to 'Aux O/P'. A dropdown menu is open for the 'Days' column, showing a list of days with green checkmarks: 'Check All', 'Sun', 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', and 'Holiday'.

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

The screenshot shows the 'Time Triggered' configuration window. At the top, there are tabs for 'Configuration', 'Linking', and 'Time Triggered'. Below the tabs is a search bar and a table with the following columns: 'Function Name', 'Active', 'Time', 'Duration(Sec)', 'Days', and 'Output'. The first row in the table is 'Siren Activate', with 'Active' set to 'Yes', 'Time' set to '00:00', 'Duration(Sec)' set to '10', 'Days' set to 'Su Mo Tu We Th Fr Sa Ph', and 'Output' set to 'Aux O/P'. The 'Days' column has a small interface with a plus icon and a minus icon.

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

*This section is available only for Direct Doors.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST settings in **24-hours** format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed or set backwards by 08:00 hours.

- Click the **Save** button

## Job Costing

*Job Costing is applicable for PATH V2 and PATH Controller Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

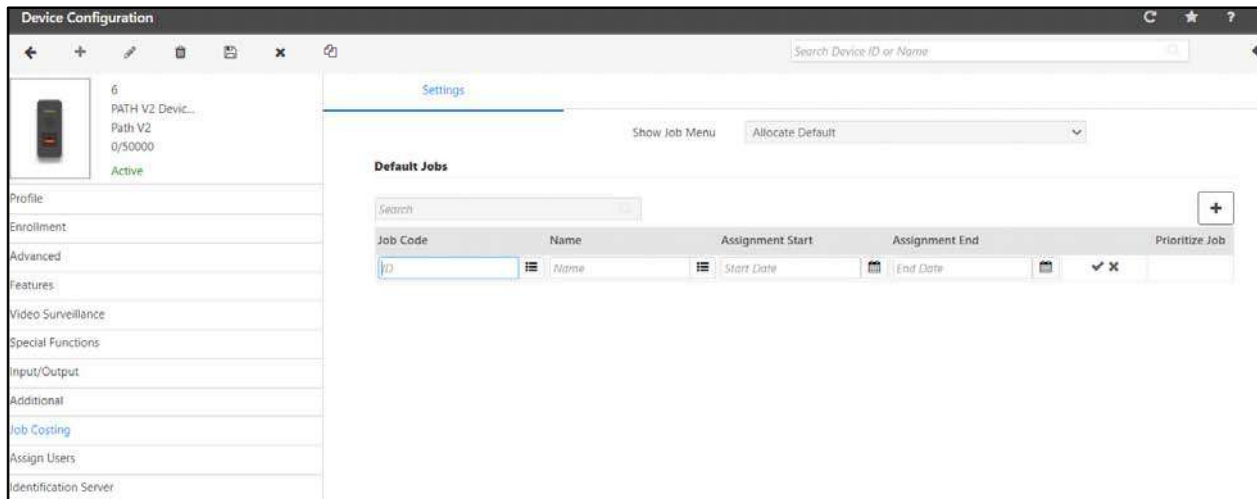

**Show Job Menu:** It is disabled for PATH Controller and PATH V2.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

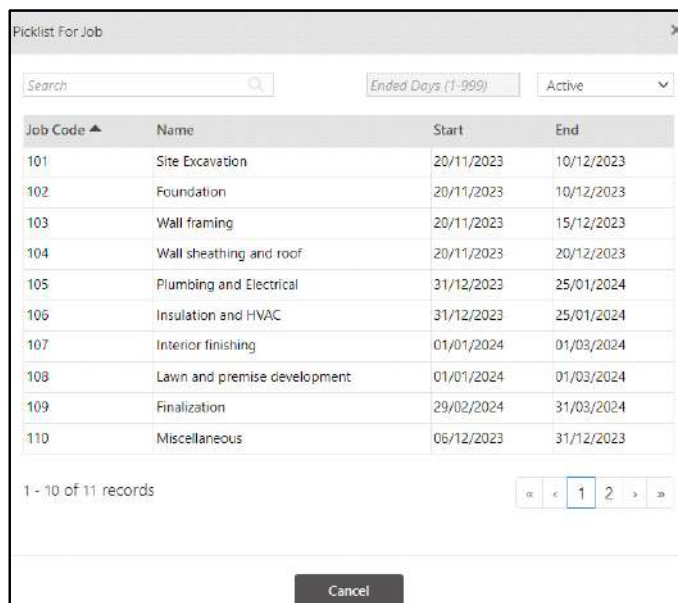

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.

- Click **Save** to save the configuration.

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device icon and a list of configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default'. Below this is the 'Default Jobs' section, which includes a search bar and a table with the following data:

Job Code	Name	Assignment Start	Assignment End		Prioritize Job
111	Premise cleaning	01/10/2023	01/11/2023		
108	Lawn and premise development	01/01/2024	01/03/2024		
102	Foundation	20/11/2023	10/12/2023		
101	Site Excavation	20/11/2023	10/12/2023		

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

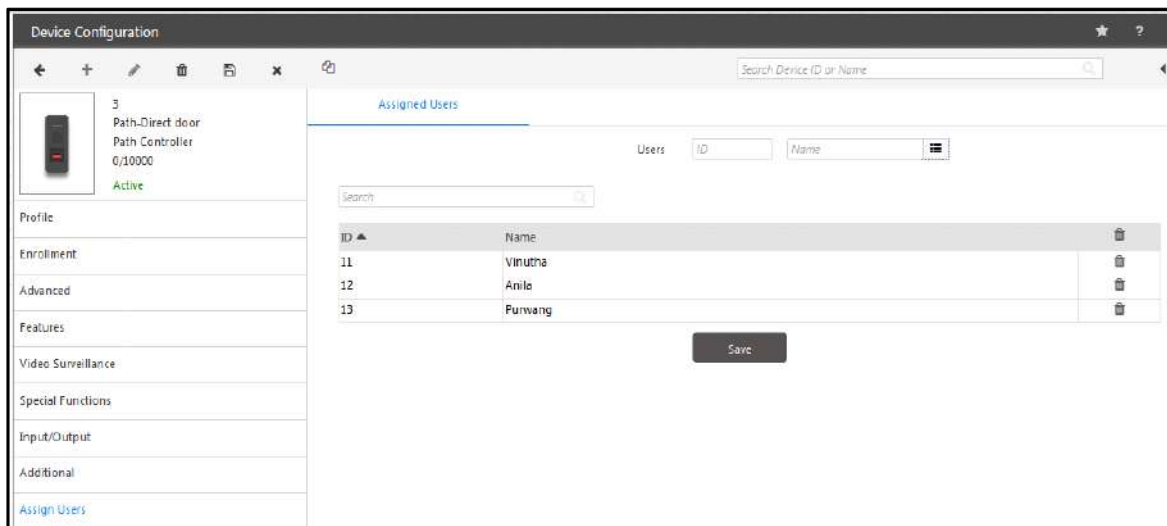

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

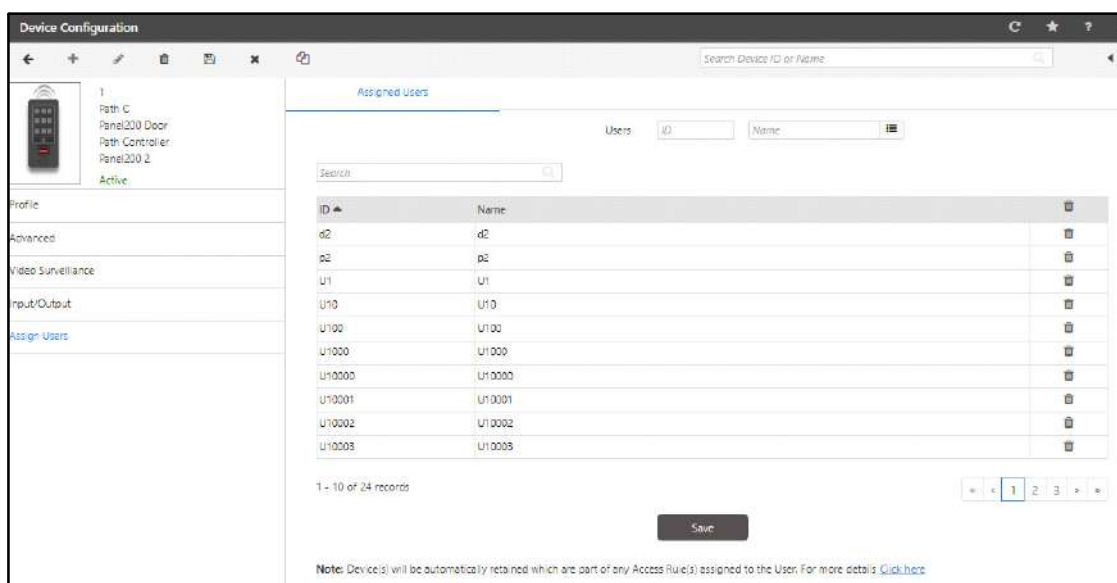

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

## For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

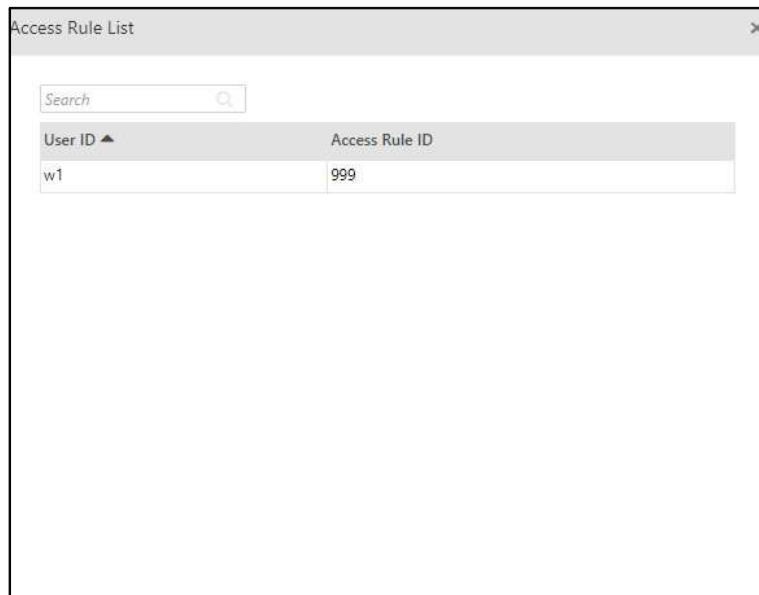

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The image shows a pop-up window titled "Access Rule List" with a close button (X) in the top right corner. Inside the window, there is a search bar with the placeholder text "Search" and a magnifying glass icon. Below the search bar is a table with two columns: "User ID" and "Access Rule ID". The table contains one row with the values "w1" and "999".

User ID	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Identification Server

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations, select the **Identification Server** tab.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server (selected). The main panel shows the 'Settings' for the 'Identification Server' tab. Under 'Other Biometric Credentials', the following settings are visible:

- Enable Identification On Server:** ☒
- Identification Server:** A dropdown menu showing 'ID' and 'Name' options.
- Configure Alternate Server Address:** ☐
- Server Address:** A text input field.
- Server Port:** A text input field with the value '11005'.
- Enable Finger Smart Identification:** ☐
- Identification Time-Out Duration (Sec):** A text input field with the value '4'.
- Auto Send Enrolled Templates:** ☒
- Default Biometric Group No.:** A text input field with the value '0'.

## Other Biometric Credentials

- **Enable Identification On Server:** Select the checkbox to enable the identification of palm/finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray.
- **Server Address:** It displays the IP Address of the selected Identification Server.

This is a close-up view of the configuration section shown in the previous image. The settings are as follows:

- Enable Identification On Server:** ☒
- Identification Server:**
- Configure Alternate Server Address:** ☐
- Server Address:**
- Server Port:**
- Enable Finger Smart Identification:** ☐
- Identification Time-Out Duration (Sec):**
- Auto Send Enrolled Templates:** ☒
- Default Biometric Group No.:**

- **Configure Alternate Server Address:** Enable this check-box to configure external IP address of Identification Server.
- **Server Address:** Enter the external network IP address which will be used for accessing identification server.
- **Server Port:** Enter the server port number. The default port number is 11005.

- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the fingerprint template identification will get time out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Specify the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

# Door Controllers

DOOR series controllers are versatile devices designed for reliability, modularity, and performance. These doors come in multiple variants specifically targeted at Time-Attendance and Access Control applications. The **Door V3** and **Door V4** can be connected as **Direct Door** as well as **Panel Door**.

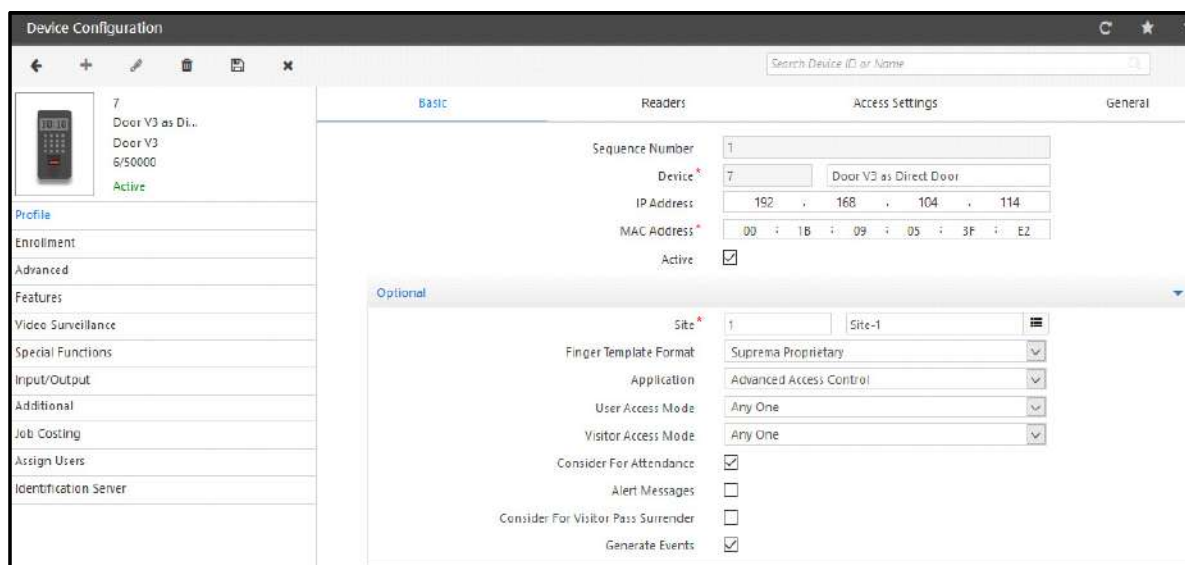

*The Configuration of Door V1 and Door V2 is similar to Door V3/Door V4. In this manual; configuration of Door V3 is explained for reference.*

*The basic difference between Door V1, Door V2, Door V3 and Door V4 is the support of user capacity and event buffer. Also Door V4 supports Wiegand Out feature.*

*The Door V3 uses 400 MHz ARM 9 based processors (ATMEL 9G45) while Door V4 uses 800MHz ARM CORTEX A8 based processors(AM3352).*

The Device Configuration page for Door V3 appears as shown below.

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “Auto Add New Devices” checkbox. Once the device is connected in network, it will come online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

Once the device is configured, click the **Save** button to save the configuration.

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)
- [“Cafeteria”](#)
- [“Identification Server”](#)

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

- *“Basic”*
- *“Readers”*
- *“Access Settings”*
- *“General”*

## Basic

The **Basic** section for “Door V3 as Direct door” is shown below:

The screenshot displays the 'Device Configuration' window with the 'Basic' tab selected. On the left, a sidebar lists various configuration sections: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area shows the configuration for a device named 'M\_DOOR V3' (ID: 56, MAC: 1/50000, Status: Active). The 'Basic' tab includes fields for Sequence Number (65), Device (56), IP Address, and MAC Address (87, 96, 45, 11, 19, 13). The 'Active' checkbox is checked. Below this, an 'Optional' section is expanded, showing settings for Site (1), Finger Template Format (Suprema Proprietary), Application (Advanced Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages (unchecked), Consider For Visitor Pass Surrender (unchecked), Consider For Attendance (checked), and Generate Events (checked).

The **Basic** section for “Door V3 as Panel door” is shown below:

Configure the following options as required:

- **Sequence Number** - This is a system generated sequence number for each new device.
- **Device**- Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **Connection Type** - Applicable only for Panel Doors. Specify the connection type as **Ethernet** or **RS485**.
- **IP Address** - This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address** - Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active** - Check the box to activate the device on the network.

*To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “**Auto Add New Devices**” checkbox.*

*The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

For Door V3 as Direct Door, the **Option** tab is as shown below:

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Finger Template Format** - Select the format as Suprema Proprietary or Suprema ISO according to which the templates will be enrolled. For globally setting the template format, you can set from Global policy.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.

**For Door V2 :** The available license is ACS and Application is set to Basic Access Control. If this ACS voucher exhausts, then while dispatching Basic Configuration of device, application type will be sent as 'Advance Access Control'.

- **User/Visitor Access Mode** - Defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop down list.

The options available are:

- Any one
- Card
- Card + Biometrics
- Card + Biometrics + PIN
- Card + PIN
- Biometrics
- Biometrics + PIN
- Biometrics then Card
- Card then Biometric
- None
- **Consider for Attendance** - Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Check the box to consider the selected device for visitor pass surrender. The Visitor can show his credential on this device to surrender the pass.

- **Generate Events:** This check-box is enabled by default. You can disable the check-box if the server is not required to receive any events from the respective devices.

For Door V3 as Panel door, the **Optional** tab shows the following configuration

- **Access Zone** (only for panel doors) - Assign an access zone to the door by selecting from the drop down menu.
- **Access Cluster** (only for panel doors) - Assign an access cluster to the door by selecting from the drop down menu.
- **Door Group:** Door Group drop down includes list of all configured Door groups on corresponding panel. An additional option as 'None' is available and selected by default.
- **Auto IP Assignment:** There is option where panel door can be assigned its IP from device webpage. To enable this check the Auto IP Assignment box.

Access Zone is configured while configuring Panel200.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

**Door Mode Selection** - If this option is enabled, then user will be prompted to select punch type as IN or OUT while punching on the device.

Eg: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in exit mode then you can select the door mode if "Door Mode Selection" is enabled.

If not selected, user will need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler**.

**Prompt Special Function**- This will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted. This can be enabled only when "Door Mode Selection" is enabled.

**Auto Detect Readers** (for direct doors only) - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

#### Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type;** Select the Card Reader Type from the following options:
  - EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader
- **Card Format:** The single or multiple card formats can be assigned to the readers of both direct and panel doors. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device; then this default format will be applied.

*The formatting of card is described in Devices> Master> Card Format*

#### Multiple Card Format

To assign multiple card formats to device click on **Add** button. Then click the picklist to select the card format. And click **OK** to save the format.

Member No ▲	Card Format	Configurable Bits
1	Default Format	0

Member No ▲	Card Format	Configurable Bits
1	Default Format	0
2	Format1	0

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here. Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

Mode: Entry  
Card Reader Type: EM Prox Reader

Member No ▲	Card Format	Configurable Bits
1	Default Format	0
2	Format1	26
3	Format2	32

- Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level**, **Lighting Condition**, **Sensitivity**, **Fast Mode**, **Image Quality** and **Restore Defaults** for the selected FP Reader as shown.

Security Level: Normal  
Lighting Condition: In Door  
Sensitivity: Level 8 (High)  
Fast Mode: Auto  
Image Quality: Moderate

Restore Defaults

Save Close

### Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels.

For regular Time-Attendance system “**Normal**” level can be selected. For high security areas requiring complete or maximum matching of template, “**Highly Secure**” level must be selected. For approximate matching of template, “**Secure**” level can be selected.

- **Lighting Condition:** Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment. Select the In Door or Out Door option based on the device location.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Fast Mode parameter can be used to shorten the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. There is also an Auto mode.
- **Image Quality:** When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest option might lead to higher number of finger rejections during the enrollment process.

*Good quality of enrollment( around 70-75% quality) is recommended for proper identification of enrolled templates.*

- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.
- Click on the **Save** button.
- **Enable Scheduling:** Select this checkbox to **Enable Scheduling** to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler.**

## External Readers

This option allows the configuration of the External Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.

*Using PIN-W Reader; user can change their PIN number through devices.*

- **Card Format** - Select a card format to be applicable for external readers of the device. This is applicable for all direct doors and all Panel doors. For multiple format description [See “Multiple Card Format” on page 997.](#)
- **Exit Switch** - Select this checkbox to enable the use of **Exit Switch**.
- **User/Visitor Access Mode** - Select the access mode from the options shown below:
  - Any One
  - Card
  - Biometrics

- Card + Biometrics
  - Biometrics then Card
  - None
- 
- **Access Control On Exit Mode** - Select this check box to enable the checking of the following access control policies on door when the external reader is in the 'exit' mode.
    - User enabled
    - User validity
    - Blocked user
    - Time Based Access Check
    - ASC
    - User Access Group

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Access Settings' tab selected. The left sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area contains the following settings:

- Universal Time Zone:** A dropdown menu showing '(GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai'.
- Time Format:** A dropdown menu showing '12 Hours'.
- Auto Synchronize with NTP:** A checkbox that is currently checked.
- Preferred NTP Server:** A text input field.
- Working Days:** A grid of checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday, all of which are checked.
- Working Hours(HH:MM):** Two text input fields showing '00:00' and '23:59'.
- Holiday Schedules:** A table with four rows, each containing a 'Holiday Schedule' number (1-4) and a 'Schedule' name (Schedule 1-4).

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.

3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

## General

The **General** page appears as follows. Enter all general details applicable to the device in this section.

Device Configuration

Search Device ID or Name

Basic Readers Access Settings **General**

Mute Buzzer ☐

**Allowed Acknowledgement**

Display Duration (ms) 3000

LED - Buzzer Duration Long

**Denied Acknowledgement**

Display Duration (ms) 3000

LED - Buzzer Duration Long

Enable Display Messages ☒

Custom Birthday Message Happy Birthday

Display Message 1 ☒

Schedule 00:00 11:59

Message Good Morning

Display Message 2 ☒

Schedule 12:00 15:59

Message Good Afternoon

Display Message 3 ☒

Schedule 16:00 20:59

Message Good Night

Multi-Language Support ☐

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.

*The below mentioned features are available in direct door only.*

- **Enable Display Messages** - This feature allows the user to enable custom birthday message and display messages to be displayed on the door device. Upto 4 display messages can be configured for a door.
- **Custom Birthday Message**- Enter the birthday message which would appear on the door when the user punches on the door on his birth date.  
The valid values are

**A-Z**

a-z

0-9

`~!@#\$%^&\*()\_+-{}\\|:;?<>,.\'"

- **Display Message** - Enable each display message individually by selecting this checkbox.
- **Schedule** - For each message, the user needs to define the time period between which this message is to be displayed.
- **Message** - Enter the message to be displayed in this field. Maximum 21 characters allowed.
- **Multi-Language Support** - Select this checkbox to enable multi-language support for the selected device.

The **Display From** field shall display the reading order for the selected language.

*However Door V3 will support languages with english fonts (A-Z,a-z) only.*

## Enrollment

The Enrollment section is not available for panel doors.

The Enrollment page appears as shown below.

The screenshot shows the 'Device Configuration' window for a device named '55 Door V3-Devic...'. The left sidebar lists various configuration sections, with 'Enrollment' selected. The main area displays the 'Settings' tab for enrollment. The 'Enroll From Device' checkbox is checked. The 'Enrollment Mode' is set to 'Biometrics' and 'Enrollment Using' is set to 'User ID'. Below these, 'Template Per Finger' is 'Single Template/Finger', 'Max Number Of Fingers' is 'Ten', and 'Number of Fingers' is 'One'. At the bottom, 'Number Of Cards' is 'One' and 'Enable Self-Enrollment' is unchecked.

- **Enroll from Device** - Select this check-box to enable the enrollment of user from the door controller. When this check-box is enabled, 'Enroll User' special function on that device will get active as shown below.

If 'Enroll User' special function & 'Enroll From Device' check-box both are inactive in device configuration, then on activating 'Enroll User' special function, 'Enroll From Device' check-box will be enabled.

The screenshot shows the 'Device Configuration' window with the 'Special Functions' section selected in the sidebar. The main area displays a table of special functions. An arrow points to the 'Enroll User' function (row 11), which is active.

No.	Function Name	Active	JOB Selection	User Group	Card-1
1	Official Work - IN	Yes	Yes	All	
2	Official Work - OUT	Yes	Yes	All	
3	Short Leave - IN	Yes	Yes	All	
4	Short Leave - OUT	Yes	Yes	All	
5	Regular - IN	Yes	Yes	All	
6	Regular - OUT	Yes	Yes	All	
7	Break End	Yes	Yes	All	
8	Break Start	Yes	Yes	All	
9	Overtime - IN	Yes	Yes	All	
10	Overtime - OUT	No	No	All	897897978767878 97880
11	Enroll User	Yes	No	All	
12	Enroll Special Card	Yes	No	All	

- **Enrollment Mode** - Select the Credential from the drop-down list that can be enrolled using the special function at the DOOR. The options are **ReadOnlyCard**, **SmartCard**, **Biometric** and **BiometricthenCard**, and

**DuressFinger.** Refer [“Enroll Credentials”](#) or [“Enrolling Users”](#) to enroll User/Worker. Refer [“Enrollment”](#) or [“Enroll Credentials”](#) to enroll Worker. Refer [“Enroll Credentials”](#) to enroll a Visitor.

*DuressFinger is only applicable for User and Worker.*

- **Enrollment Using** - Select the option **User ID** or **Reference No.** using which enrollment will be done.
- **Template Per Finger** - This parameter displays the values as configured at the global level. This field is not user editable from this page.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level. This field is not user editable from this page.
- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the Enrollment Mode parameter.
- **Enable Self-Enrollment** - Select this check-box to enable the self-enrollment feature on this door.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- [“Settings”](#)
- [“Alarms”](#)
- [“Timers”](#)
- [“Wiegand”](#)

## Settings

The **Advanced Settings** page for Door V3 as Direct Door appears on your screen as shown below:

The screenshot displays the 'Advanced Settings' page for a device named 'Door V3 as DI...'. The left sidebar contains a list of settings categories: Profile, Enrollment, Advanced (selected), Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main content area is divided into four tabs: Settings, Alarms, Timers, and Wiegand. The 'Settings' tab is active, showing a list of configuration options with checkboxes and input fields. The 'Temperature Logging' section is expanded, showing detailed settings for temperature monitoring.

Setting	Value
Generate Exit Switch Events	<input type="checkbox"/>
Generate Invalid User Events	<input type="checkbox"/>
Generate Sequential IN-OUT Events	<input type="checkbox"/>
Two Credentials Required	<input type="checkbox"/>
Show Pin	<input type="checkbox"/>
Allow Exit When Door Lock	<input type="checkbox"/>
Auto Relock	<input type="checkbox"/>
Auto Relock Timer (Sec)	3
Enable Additional Security	<input type="checkbox"/> Disabled
Enable Smart Identification	<input type="checkbox"/>
Access Level	8
Access Mode	Card
Auto Acknowledge Alarm	<input type="checkbox"/>
Auto Acknowledge Alarm (Sec)	10
Facility Code	1

Temperature Logging	
Enable	<input type="checkbox"/>
Sensor Type	AST
Sensor Interface	USB
Emissivity	0.95
Calibration Parameter	+ 0.0
Approach to Sensor Wait-Time (Sec)	3.0
Temperature Detection Time Out (Sec)	10
Tolerance between Consecutive Readings	0.5
Consecutive Readings Count within Tolerance	5
Temperature Threshold (°F)	99.5
Minimum Temperature for Access (°F)	95.0
Restriction Type	Soft
Bypass If Sensor Disconnected	<input type="checkbox"/>

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this check-box to enable the door to generate events every time the exit switch is used.
- **Generate Invalid User Events** - Select this check-box to enable the door to generate events for invalid user inputs.
- **Generate Sequential IN-OUT Events** - Select this check-box to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.
- **Two Credentials Required**- Select this check-box to enable the feature of verifying 2 credentials mandatorily for users allowed to By-pass finger/palm.
- **Show Pin**- Select this check-box to display the characters of PIN when the PIN is entered on device.

- **Allow Exit when Door Lock** - Select this check-box if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Enable Additional Security** (for direct door) - Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this check-box to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics** and **Mobile then Card**.

*If User Access Mode is selected as “None” in Zone Configuration and Mobile Access Mode is selected as “Mobile Then Biometrics” then door can be accessed through Mobile and then Biometric credential.*

## Temperature Logging

- **Enable:** Enable the temperature logging feature on the zone.
- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *AST*, *Web-Based* and *FEVOBOT*. Default sensor set is *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type-AST  
Sensor Interface options will be: RS-232 and USB  
For Sensor Type- Web-based  
Sensor Interface options will be: HTTP/S  
For Sensor Type-FEVOBOT  
Sensor Interface options will be: USB

- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is AST. Default value is 0.95.

It is used to define accuracy in sensor to detect temperature of different skin or objects.  
Not applicable for FEVOBOT.

- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.  
Not applicable for FEVOBOT.
- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.  
It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.  
The default value, unit and range should be updated based on the Temperature unit set on Panel.
- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

The **Advanced Settings** for **Door V3** as **Panel Door** is shown below:

- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation.
- **Tail-Gating** - Tail-gating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the panel door, the occupancy count of a zone should be incremented or decremented considering both the punch as well as the auxiliary input port of the panel door (say, input from a beam-counter). Set the wait timer for resetting the tailgating count (**Reset Wait Timer**) based on the door lock status or the door pulse wait timer (as configured).
- **Man Trap Entry Timer(Sec)** - This checkbox enables an alarm wait timer on the panel door to ensure that the user enters the next sequential door of a man-trap within a specific time-frame.
- **Man Trap Exit Timer(Sec)** - This checkbox enables an alarm wait timer on the panel door to ensure that the user exits the panel door to enter the next sequential door of a man-trap within a specific time-frame.
- **Enable Man Trap Door Interlocking:** Select this check-box to activate the Door Interlock for the selected door (say Door1). This means if the Door1 is open then other doors will remain close.
- **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.

- To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

Picklist For Panel Door

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID	Name ▲
<input type="checkbox"/>	10	ARCDC100_DD_Door
<input type="checkbox"/>	9	ARCDC100_DD_Door
<input type="checkbox"/>	8	ARCDC100_SD_Door
<input type="checkbox"/>	1	ARGO_PANEL
<input type="checkbox"/>	2	DoorV3
<input type="checkbox"/>	7	DoorV3_Door
<input type="checkbox"/>	3	DOORV4_PANEL
<input type="checkbox"/>	6	dummy
<input type="checkbox"/>	4	PATHV2_PANEL
<input type="checkbox"/>	5	VEGA_PANEL

OK Cancel

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

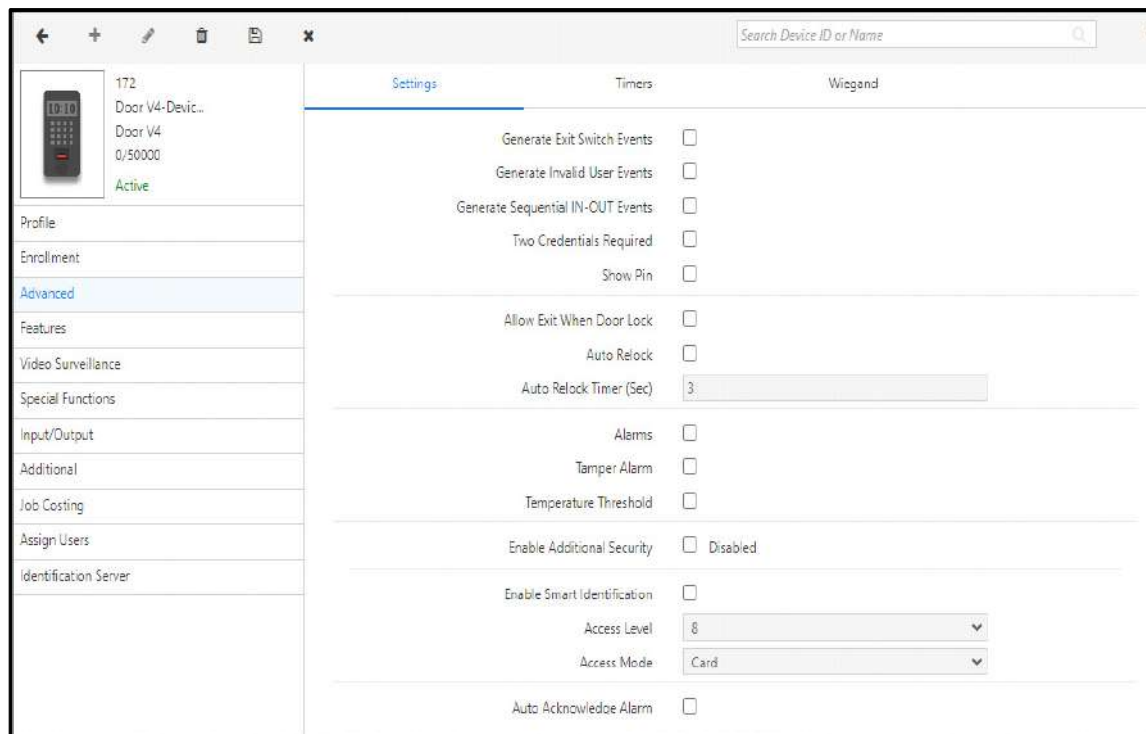

Suppose Door2 and Door3 are selected for Interlock with Door1. So When Door1 opens; Door2 and Door3 will remain close.

*For Degrade mode Door Interlocking feature will not work.*

*Whenever a door is in abnormal state and for that door interlocking is enabled then user access in other doors of the interlocking group is allowed.*

The **Advanced** Setting page for **Door V4** as **Direct Door** appears on screen as shown below:

Consecutive Readings Count within Tolerance 5  
Temperature Threshold (°F) 99.5  
Minimum Temperature for Access (°F) 95.0  
Restriction Type Soft  
Bypass If Sensor Disconnected ☐

In addition to the features same as Door V3, there are 3 more features. They are:

- **Mobile Entry/Exit Access Mode-** Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics**, **Mobile then Card** and **Mobile then PIN**.
- **Advertise Bluetooth-** Check the box to enable Bluetooth of the device by which the device will be visible to others.
- **Bluetooth Name-** When “Advertise Bluetooth” checkbox is enabled, you can enter the bluetooth name. The default name is Matrix.
- **Bluetooth Range-** You can select the bluetooth range as Short, Medium or Long based on which user can mark the attendance. Suppose if you select “Short” range; then user can mark the punch via bluetooth from near by office premises only.
  - Short(1m-2m)
  - Medium(5m-7m)
  - Long (>8m)

By default, the range will be set to “Medium”. If you want to allow punch marking from long distance, then you can select “Long” range.

## Temperature Logging

- **Enable:** Enable the temperature logging feature on the zone.
- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *AST*, *Web-Based* and *FEVOBOT*. Default sensor set is *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type-AST  
Sensor Interface options will be: RS-232 and USB  
For Sensor Type- Web-based  
Sensor Interface options will be: HTTP/S  
For Sensor Type-FEVOBOT  
Sensor Interface options will be: USB
- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is AST. Default value is 0.95.  
It is used to define accuracy in sensor to detect temperature of different skin or objects.  
Not applicable for FEVOBOT.
- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.  
Not applicable for FEVOBOT.
- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature

doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.

Not applicable for FEVOBOT.

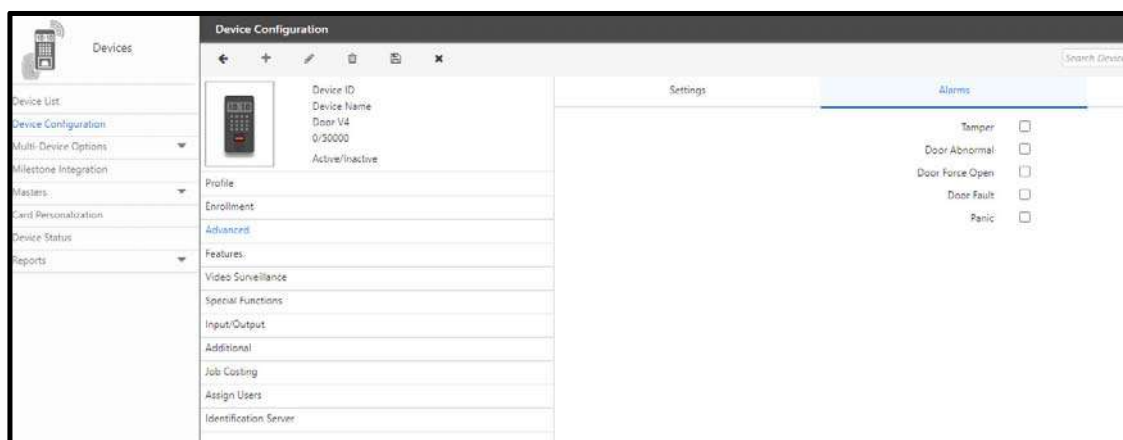

- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.  
It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.  
The default value, unit and range should be updated based on the Temperature unit set on Panel.
- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

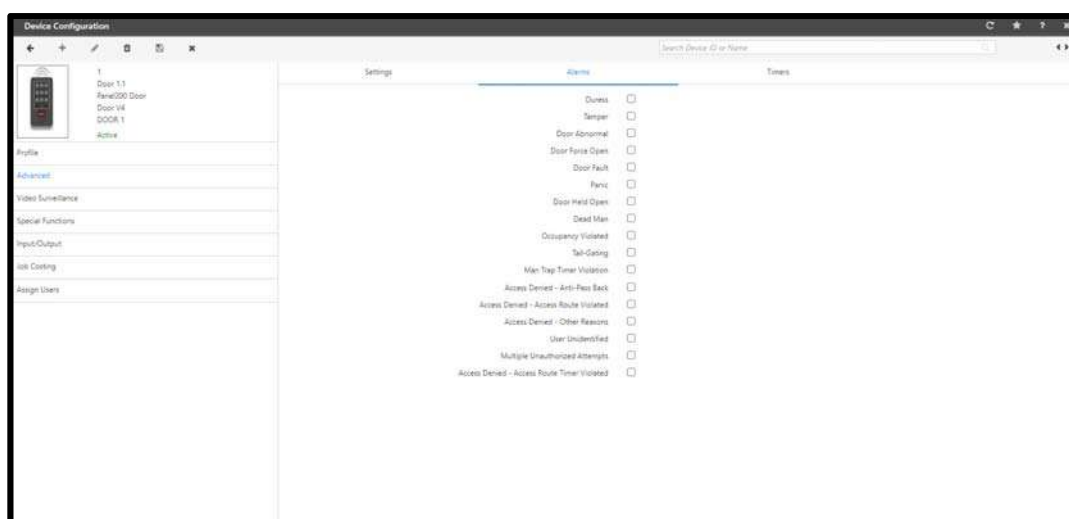

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

### For Direct Door

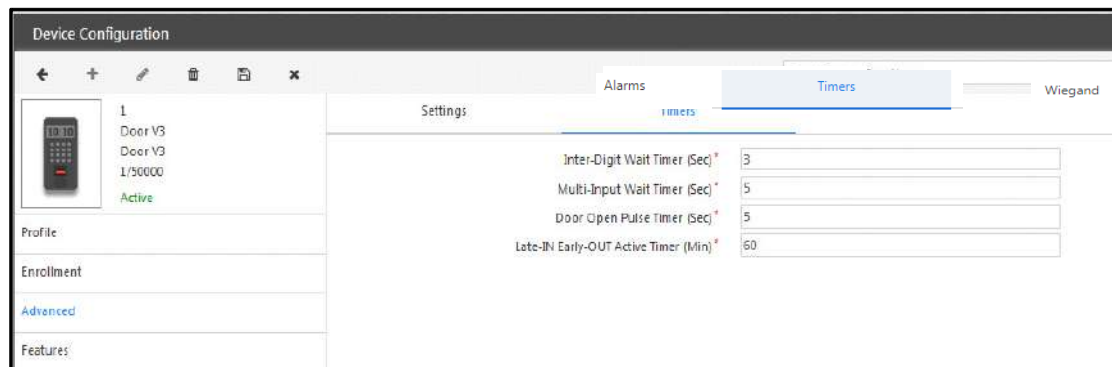

### For Panel Door

Select the respective check-box of alarms which you want to enable.

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behaviour and for triggering alarms. The **Timers** page appears on your screen as shown below:

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (1 to 65535) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.
- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

*The above features are available only for direct doors.*

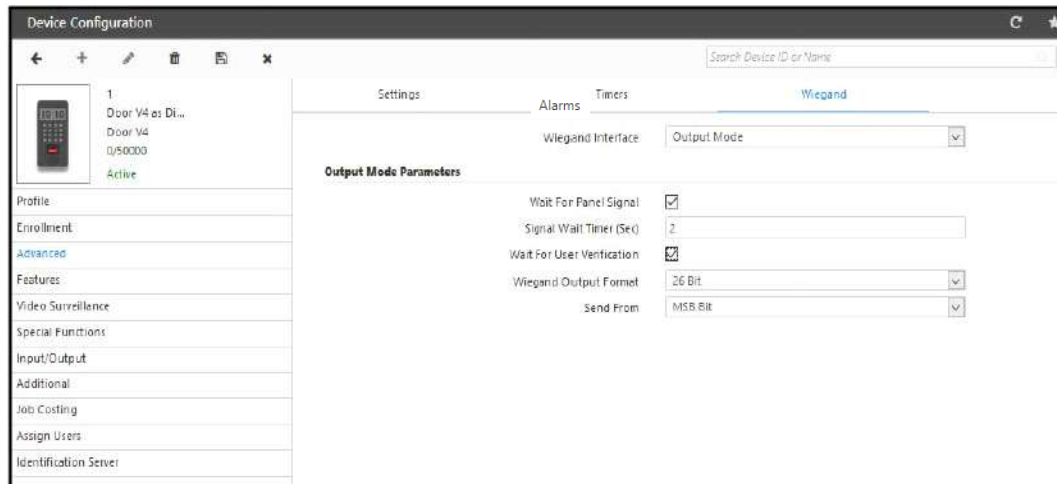

- **Pulse Time (sec)** - Specify the time in seconds for the panel door to be energized for a valid credential.

*This feature is available only for panel doors.*

## Wiegand

Wiegand Interface is available in Door V4 only.

- **Wiegand Interface** - The COSEC device can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown below.

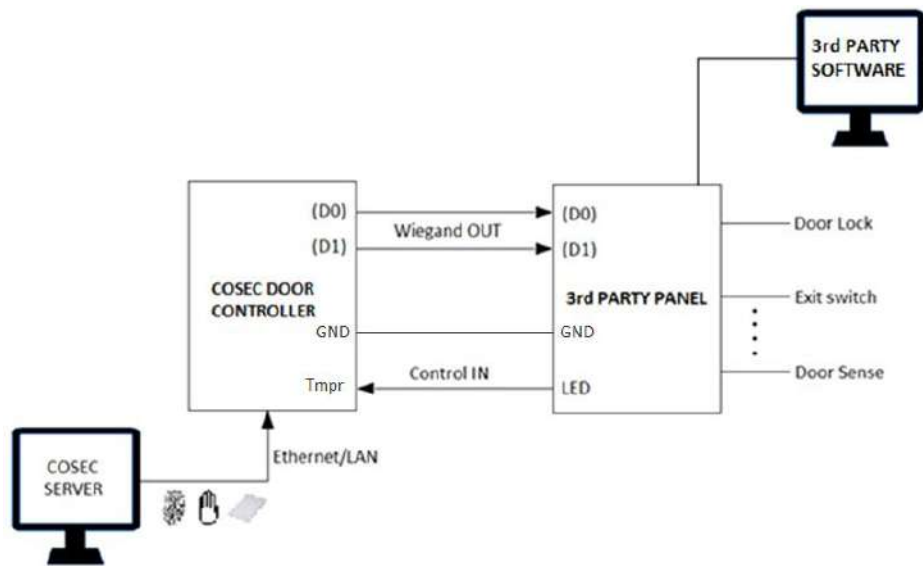

So select the interface of Door controller as **Output Mode** to work as Wiegand output to panel or **Reader Input** to take data from third party Reader. If Reader Input option is selected, all the output mode parameters will be disabled.

If you select Output mode then configure the **Output Mode Parameters**.

- **Wait For Panel Signal** - If this option is enabled the door will wait for reply from the connected third party device before triggering any output, as per the defined Signal Wait Timer (Sec).
- **Wait For User Verification** - If this option is enabled, user verification will be requested on the third party device before triggering any output.
- Specify the **Wiegand Output Format** and sending order for reader data as MSB or LSB Bit in the **Send From** field.

### Wiegand Out Interface

Also for the **Custom** format, user can configure details of fields to be sent as output from the Wiegand reader that has been added.

### Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitute the details of the COSEC door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now you can show the mobile camera to scan the QR code. The COSEC door will get opened after verifying the security key and access policies of the user.

### Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	

Field	Field range	Default Value	Remark
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1a.** If door is in direct door mode enter IP & port of the direct door

b. If door is a panel door, then enter IP & port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license and is applicable only for direct doors.*

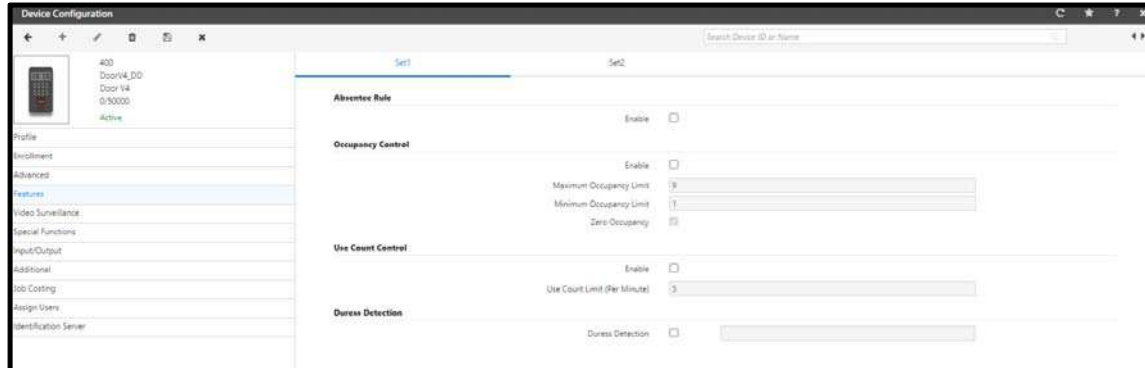

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- "Set1"
- "Set2"

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**.

The page appears as shown below.

- **Absentee Rule** - Select this checkbox to enable this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
For configuring the rule See *Access Control> Absentee Rule*.
- **Occupancy Control** - Select this checkbox to enable the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule See *Access Control> Occupancy Control*.
- **Use Count Control** - Select this checkbox to enable the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule See *Access Control> Use Count Control*.
- **Duress Detection** - Select this checkbox to enable the feature. The default duress detection code is displayed which is used to generate the duress alarm which informs that the user is forced to open the door under threat.

*Duress Detection (PIN+ Finger) is supported only in Door V4.*

*Duress Detection (PIN only) is supported only in Door V3.*

*Duress Detection is not supported in Door V1 and Door V2.*

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. The page appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Set2'. On the left is a sidebar with a list of configuration categories: Profile, Enrollment, Advanced, Features (highlighted), Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. Below the sidebar is a small device icon and status 'Active'. The main panel is titled 'Set2' and contains three rule configurations:

- First-IN User Rule:** Enabled (checkbox checked). Reset On: Day Change (radio selected), Timer Expiry (radio unselected). Access Timer (Sec): 3. First-IN User Group: 1 (dropdown menu).
- Anti-Pass-Back (APB):** Enabled (checkbox checked). On Entry: checked (checkbox). On Exit: unchecked (checkbox). Hard/Soft: Soft (dropdown menu). Forgiveness: checked (checkbox). Reset After: Day Change (radio selected), Timer Expiry (radio unselected). Forgiveness Timer (Mins): 1 (input field).
- 2-Person Rule:** Enabled (checkbox unchecked). Mode: Primary Must (dropdown menu). Primary Group: Select (dropdown menu). Secondary Group: None (dropdown menu).

- **First-IN User Rule** - Select this checkbox to enable the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule See *Access Control > First- In User Rule > Assignment*
- **Anti-Pass Back (APB)** - Select this checkbox to enable the feature at the direct door.
  - **On Entry:** Check this box so that the system monitors the entry reader for APB violation.
  - **On Exit:** Check this box also so that the system monitors the entry as well as the exit readers for APB violations.
  - **Hard/Soft:** Select the restriction type as Hard or Soft option from the drop down options.
    - **Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.
    - **Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.
- **Forgiveness:** Check this box to enable the system to reset the APB status. When forgiveness is enabled, then there will be following options to reset the pass.
  - **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his card for entry in the next morning.
  - **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time.
  - **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-pass back status will get reset and the pass will be in original state.
- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule See *Access Control > 2- Person Rule*

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To access this, Go to **Device Configuration > Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

The screenshot displays the 'Device Configuration' window with the 'Visual Tagging' tab selected. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into two sections: 'Visual Tagging' and 'Satatya Integration'. Under 'Visual Tagging', there are fields for 'MAC Address' (00\_1b\_09\_01\_5c\_25), 'Camera ID' (2), and 'Storage Root Folder' (vw). The 'Satatya Integration' section includes a 'Capturing Device' dropdown menu set to 'Matrix HVR/NVR', an 'FTP Login Credentials' checkbox, and fields for 'User Name' and 'Password'.

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown. The compatible device types are:
  - Matrix HVR/NVR
  - Milestone

### Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.

- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **User name** - Specify the FTP server user name.
- **Password** -Specify the FTP server password.

*Some COSEC devices do not support all the network connection options.*

## Milestone

The screenshot shows the 'Device Configuration' window with the 'Visual Tagging' tab selected. The 'Capturing Device' is set to 'Milestone'. Below this, there is a search bar and a table for 'Event ID', 'Name', 'User-Defined Event ID', and 'User-Defined Event Name'. The table currently shows 'No Data'. Below the table, there is a section for 'Camera' with fields for 'ID' and 'Name'. At the bottom, there is a table with columns for 'Camera Name', 'GUID', 'Host Name', and 'Port'. The table contains one entry: 'MATRIX COMSEC CIDR20VL12CW-P (192.168.112.193) - Camera 1' with GUID 'ac6c0e92-9ecd-410d-b21f-f393c2b9d33f', Host Name 'ketanpipaliya', and Port '7563'.

Event ID	Name	User-Defined Event ID	User-Defined Event Name
No Data			

Camera Name	GUID	Host Name	Port
MATRIX COMSEC CIDR20VL12CW-P (192.168.112.193) - Camera 1	ac6c0e92-9ecd-410d-b21f-f393c2b9d33f	ketanpipaliya	7563

*For more information on integration with **Milestone** devices, refer to "[Milestone Integration](#)".*

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya Integration configuration page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Satatya Integration' tab selected. On the left, a sidebar lists various configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area displays the configuration for a device named '5 Door V3' (0/50000, Active). The 'Satatya Integration' section includes the following fields and options:

- Integration Type:** Network (selected from a dropdown)
- Active:** ☒
- IP Address:** 192 . 168 . 104 . 37
- Port Number:** 8000
- Name:** NR16S Integration
- Active:** ☒
- Schedule:** 00:00 to 23:59
- Days:** ☐ Sun, ☒ Mon, ☒ Tue, ☒ Wed, ☒ Thu, ☒ Fri, ☐ Sat, ☐ Holiday
- Event:** Access Allowed (selected from a dropdown)
- Mode:** Both (selected from a dropdown)
- Action:** Video Pop-Up (selected from a dropdown)
- Duration Sec.:** 20
- Camera:** A grid of checkboxes for cameras 1 through 24. Camera 2 is selected.

At the bottom right, there are 'Update' and 'Cancel' buttons.

- **Integration type-** Select the integration type from the options of Wired and Network.  
In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by Ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **IP Address-** Specify the IP address of HVR/NVR.
- **Port Number-** Specify the port number of HVR/NVR
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule -** Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-**Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.

- Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.
- **Camera-** Select the relevant camera channels depending on the action selected.

**Example1:** For action as Video Pop up, the pop up of Camera 24 will be shown for 10 seconds as configured below.

**Example2:** For Access allowed event on COSEC Device, recording of camera channel 4,6,8 and 10 will be done for 10 seconds.

The left screenshot shows the configuration for 'Video Pop-Up' action. The 'Event' is 'Access Allowed', 'Mode' is 'Both', and 'Duration Sec.' is 10. Under 'Camera', camera 24 is selected.

The right screenshot shows the configuration for 'Recording' action. The 'Event' is 'Access Allowed', 'Mode' is 'Both', and 'Duration Min.' is 10. Under 'Camera', cameras 4, 6, 8, and 10 are selected. 'Add' and 'Cancel' buttons are at the bottom.

- Click the **Add** button to finish the process of linking the event to the action. The user may now configure another event-action linkage if required.

Search						
Name	Event	Action	Start Time	End Time	Active	
NR16S integration	Access Allowed	Video Pop-Up	00:00	23:59	Yes	

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

1. This functionality cannot be fully accessed in the Edit mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- “Configuration”
- “Linking”
- “Time Triggered”

## Configuration

The **Configuration** section for **Door V3- Direct Door** appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Door V3- DD'. The left sidebar lists various configuration sections: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output (selected), Additional, Job Costing, Assign Users, and Identification Server. The main panel displays the 'Configuration' tab with the following settings:

- Door Sense:** Enable (checkbox), Supervised (checkbox), Door Sense Type (Normally Open dropdown).
- Auxiliary Input:** Enable (checkbox), Supervised (checkbox), Sense Type (Normally Closed dropdown), Debounce Time (Sec) (5).
- Auxiliary Output:** Enable (checkbox), Output Wait Time (Sec) (0).
- Accept External IO Linking:** Enable (checkbox), Network Interface (Ethernet dropdown).

The **Configuration** section for **Door V3- Panel Door** appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Door V3- PD'. The left sidebar lists various configuration sections: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output (selected), Additional, Job Costing, Assign Users, and Identification Server. The main panel displays the 'Configuration' tab with the following settings:

- Door Sense:** Enable (checkbox), Supervised (checkbox), Door Sense Type (Normally Open dropdown).
- Auxiliary Input:** Enable (checkbox), Supervised (checkbox), Sense Type (Normally Closed dropdown), Debounce Time (Sec) (5).
- Auxiliary Output:** Enable (checkbox), Output Group (1), DC Aux Ports (checkbox).
- Relay Output:** Output Group Number (Door Unlock) (2), Door Unlock (checkbox), Output Group Number (Door Lock) (10), Door Lock (checkbox).

The following parameters are available for configuration in both Direct door and Panel door:

- **Door Sense** - The system by default can sense two states of a door - *Normally Open* and *Normally Closed* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as **Normally Closed** or **Normally Open**.

- **Auxiliary Input** - Select the **Enable** checkbox option for Auxiliary Input (e.g. Smoke Detectors) depending on normal or supervised door state monitoring as described above.

**Debounce Time (Sec)** - Specify the Debounce time in seconds. Default value is 3 sec and range should be 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- **Auxiliary Output** - Select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.

**Auxiliary Input and Auxiliary Output** is not applicable for Door V1- Direct Door only.

- **Relay Output**

**Output Group Number (Door Unlock)**- Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.

**Output Group Number (Door Lock)**- Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

**Relay Output** is applicable for Door V1/V2/V3/V4- Panel Door only.

- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.

**Accept External IO Linking** is not applicable for Door V1-Direct Door and Door V1/V2/V3/V4- Panel Door.

- **Network Interface**- Select the interface option for IO linking with external devices. The options are
  - Ethernet
  - Wireless
  - Mobile Broadband

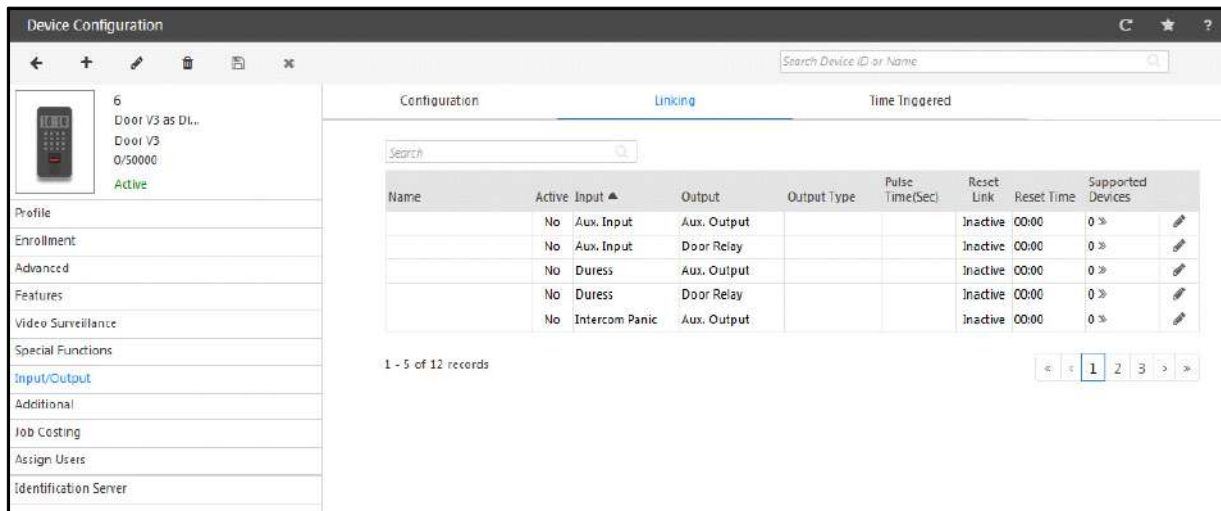

**Network Interface** is applicable for Door V3/V4- Direct Door only.

## Linking

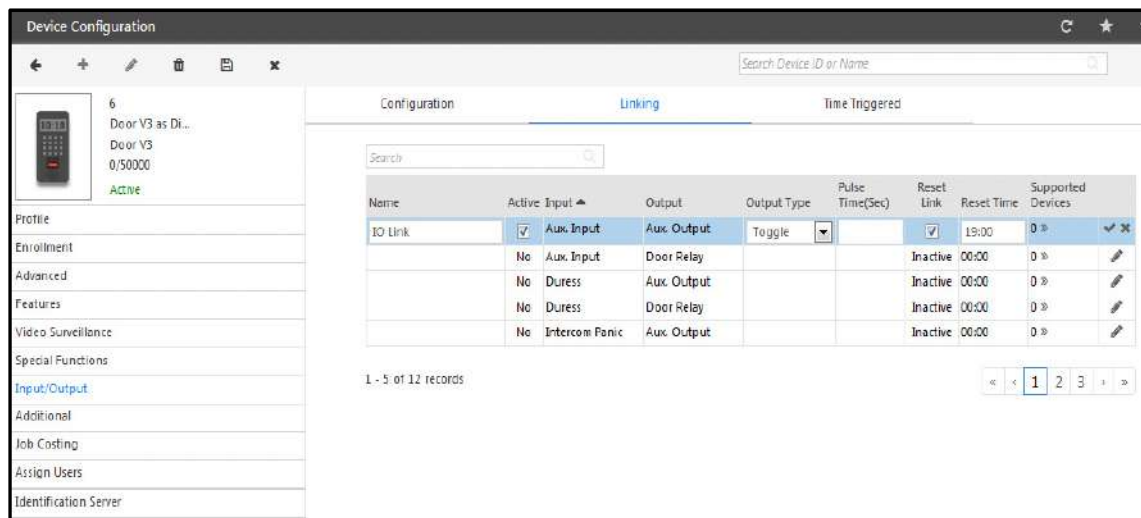

This section is not available for Panel doors.

The **Linking** section appears as shown below.

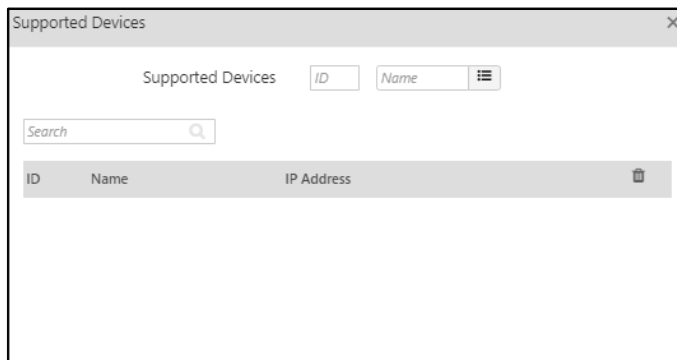

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

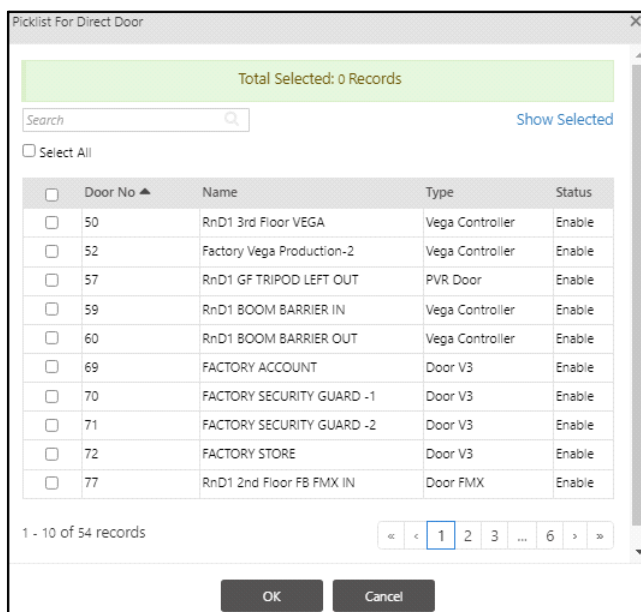

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - Pulse: With this type of output, the user needs to define the Pulse time in seconds.
  - Interlock: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - Latch: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - Toggle: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.

- **Active** - Select this checkbox to activate this linking program.
- **Reset Link**- Select this checkbox to reset the link automatically after a defined time period.
- **Reset Time**- Enter the time period in hh:mm format at which the link will get reset automatically. Suppose, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- **Supported Devices** -All devices supported for external IO Linking will appear in this picklist for selection. Upto 255 external devices can be added by the administrator.
- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The 'Supported Devices' pop-up window has a title bar with a close button. Below the title bar, there are two input fields labeled 'ID' and 'Name', followed by a list icon. A search bar with a magnifying glass icon is located below these fields. The main area contains a table with the following headers: 'ID', 'Name', 'IP Address', and a trash icon. The table is currently empty.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The 'Picklist For Direct Door' pop-up window has a title bar with a close button. Below the title bar, there is a green banner that says 'Total Selected: 0 Records'. A search bar with a magnifying glass icon is located below the banner. To the right of the search bar is a 'Show Selected' button. Below the search bar is a 'Select All' checkbox. The main area contains a table with the following headers: 'Door No', 'Name', 'Type', and 'Status'. The table contains 10 rows of data. Below the table, there is a pagination bar that says '1 - 10 of 54 records'. To the right of the pagination bar are navigation buttons: '<<', '<', '1', '2', '3', '...', '6', '>', '>>'. At the bottom of the window are 'OK' and 'Cancel' buttons.

Door No	Name	Type	Status
<input type="checkbox"/> 50	RnD1 3rd Floor VEGA	Vega Controller	Enable
<input type="checkbox"/> 52	Factory Vega Production-2	Vega Controller	Enable
<input type="checkbox"/> 57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
<input type="checkbox"/> 59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
<input type="checkbox"/> 60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
<input type="checkbox"/> 69	FACTORY ACCOUNT	Door V3	Enable
<input type="checkbox"/> 70	FACTORY SECURITY GUARD -1	Door V3	Enable
<input type="checkbox"/> 71	FACTORY SECURITY GUARD -2	Door V3	Enable
<input type="checkbox"/> 72	FACTORY STORE	Door V3	Enable
<input type="checkbox"/> 77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices pop-up** and the selected devices are displayed here.

ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

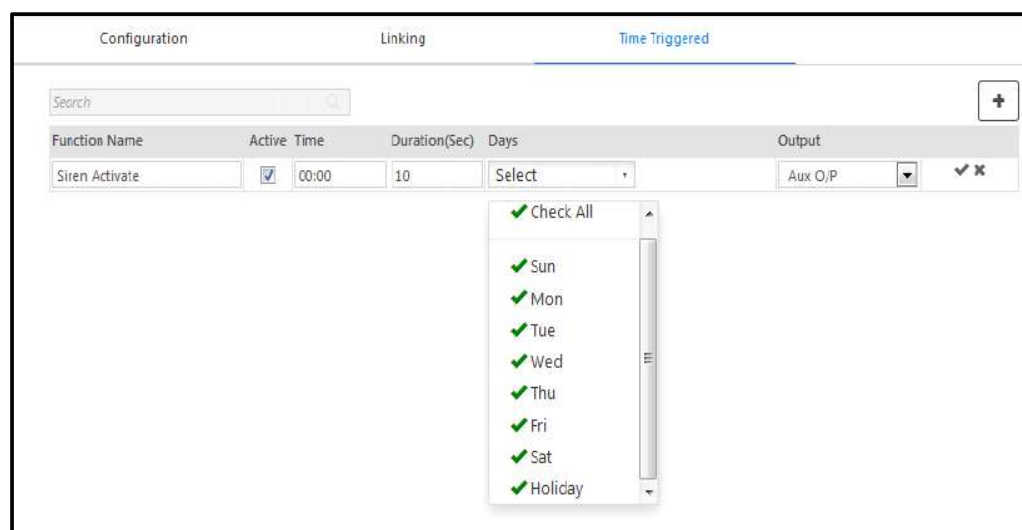

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

Function Name	Active	Time	Duration(Sec)	Days	Output	
Siren Activate	<input checked="" type="checkbox"/>	00:00	10	Select	Aux O/P	

✓ Check All

✓ Sun

✓ Mon

✓ Tue

✓ Wed

✓ Thu

✓ Fri

✓ Sat

✓ Holiday

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

Function Name	Active	Time	Duration(Sec)	Days	Output	
Siren Activate	Yes	00:00	10	Su Mo Tu We Th Fr Sa Ph	Aux O/P	

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

*This section is available only for Direct Doors.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

The screenshot shows the 'Daylight Saving' configuration page in the 'Device Configuration' web interface. The sidebar on the left lists various configuration categories, with 'Additional' currently selected. The main panel displays settings for Daylight Saving Time (DST). The 'DST Type' is set to 'Day-Month wise'. The 'Time Period' is set to '08:00'. Under the 'Forward Clock' section, the 'Month' is 'November', 'Week No.' is '1st', 'Day of Week' is 'Sunday', and 'Time' is '09:00'. Under the 'Backward Clock' section, the 'Month' is 'January', 'Week No.' is '1st', 'Day of Week' is 'Sunday', and 'Time' is '10:00'. A 'Save' button is located at the bottom right of the configuration area.

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST settings in 24-hours format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed by 08:00 hours.

- Click the **Save** button.

## Job Costing

*Job Costing is applicable for Door V3 and Door V4 Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

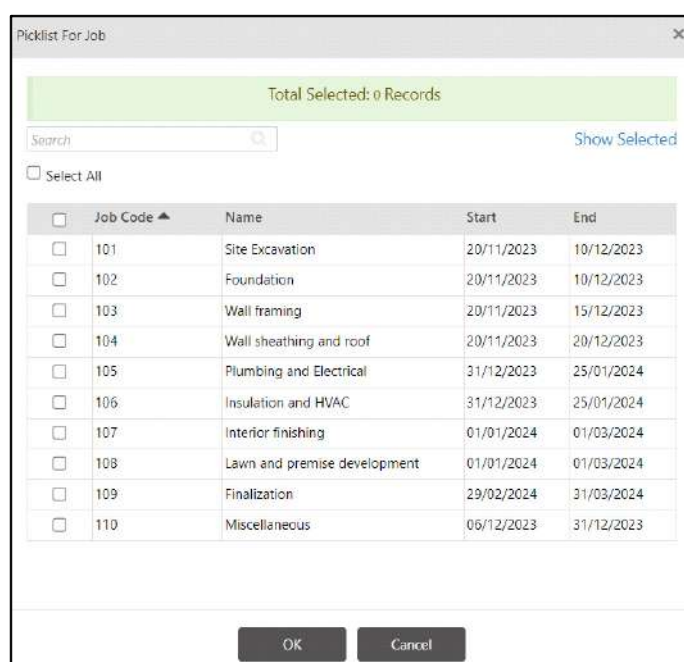

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

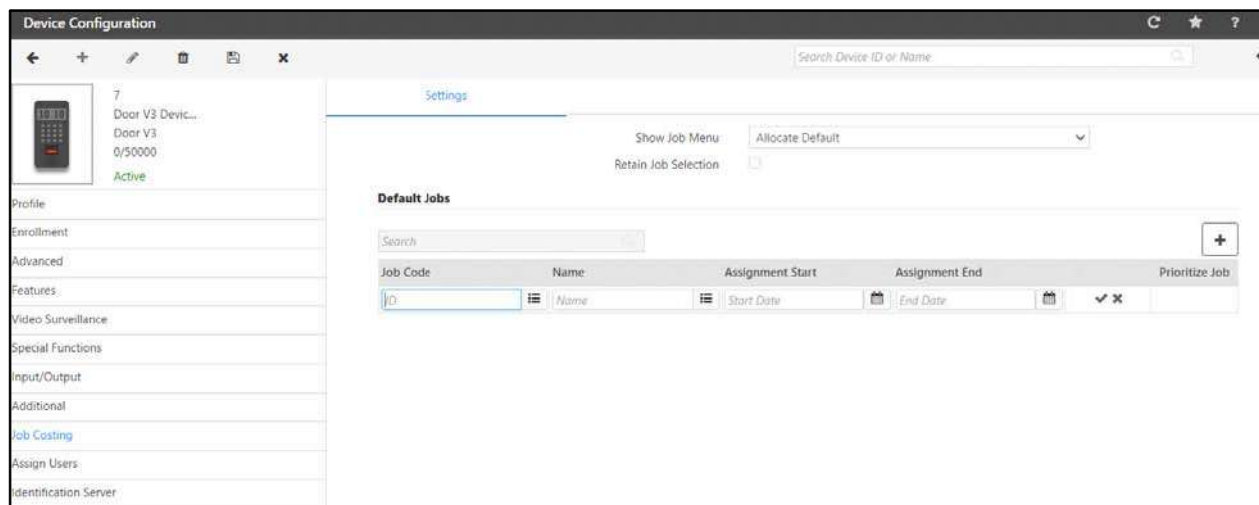

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device icon and a list of settings: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing (highlighted), Assign Users, and Identification Server. The main area is titled 'Settings' and contains a search bar 'Search Device ID or Name'. Below this, there are two dropdowns: 'Show Job Menu' set to 'Allocate Default' and 'Retain Job Selection' with a checkbox. The 'Default Jobs' section features a search bar and a table with columns: Job Code, Name, Assignment Start, Assignment End, and Prioritize Job. The table has one row with values: '10', 'Name', 'Start Date', 'End Date', and a set of icons. A '+' button is in the top right of the table area.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

Picklist For Job

Search  Ended Days (1-999)  Active

108	Lawn and premise development	01/01/2024	01/03/2024
109	Finalization	29/02/2024	31/03/2024
110	Miscellaneous	06/12/2023	31/12/2023

1 - 10 of 11 records

1 2

Cancel

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calender and select the desired start and end dates.
- Click **Save** to save the configuration.

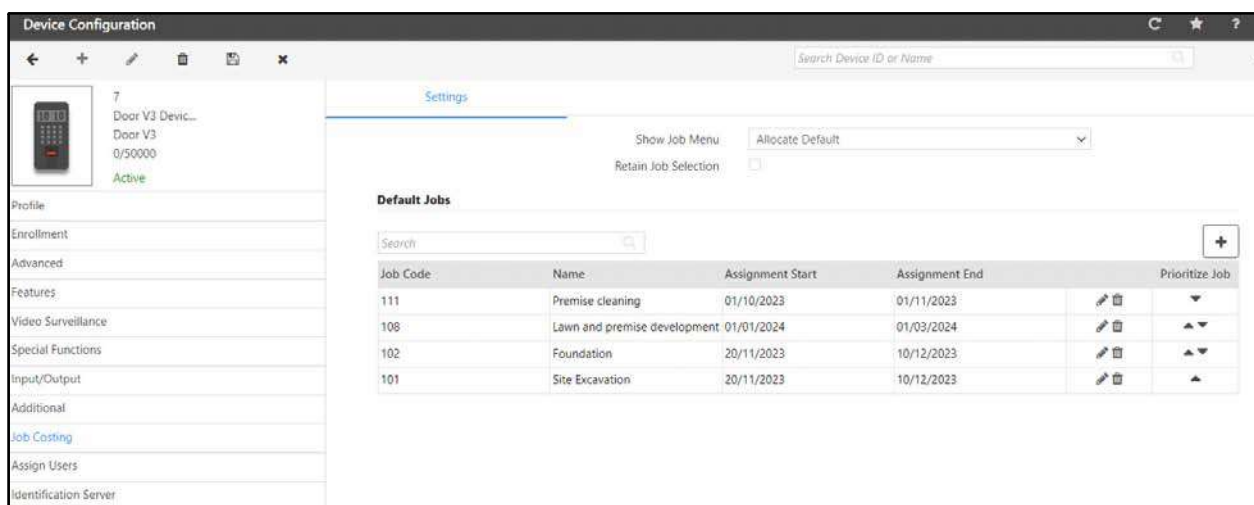

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

ID	Name	
1220	Sheetal	
13	Purwang	
1320	Shruti	

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

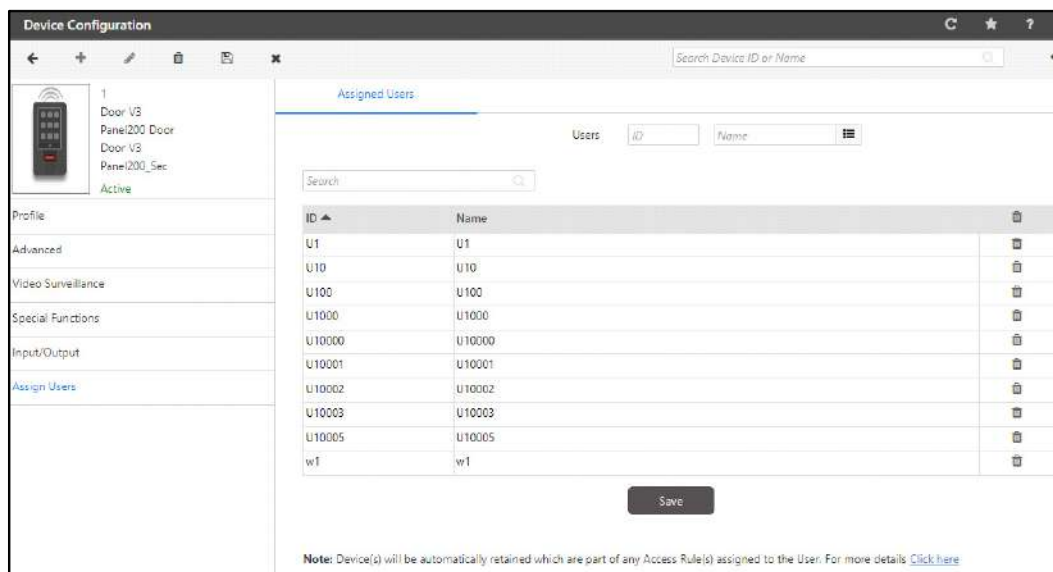

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

### For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

It displays the list of User ID along with the Access Rule ID against which they are assigned.

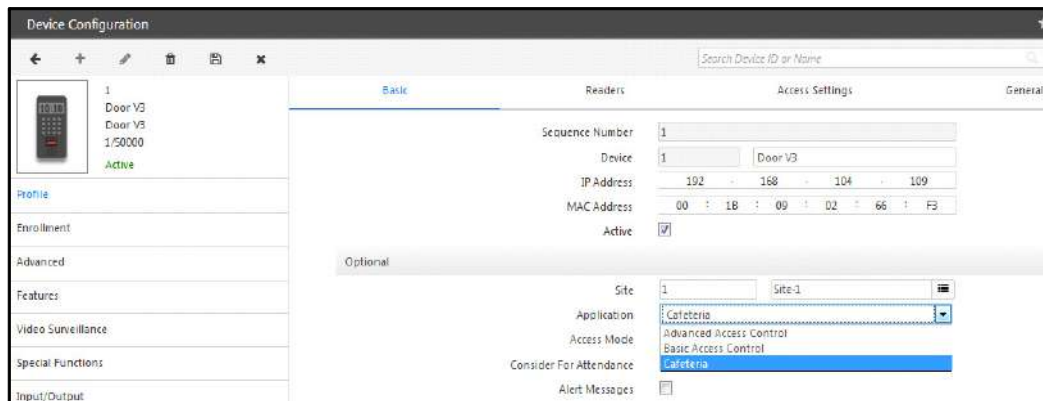

- Click **Save** to assign all the added users to this door.

## Cafeteria

The COSEC system enables the user to configure devices which will be used by the Cafeteria management module.

To configure a door for Cafeteria application, select **Cafeteria** option in Device Profile> Basic> Application as shown below.

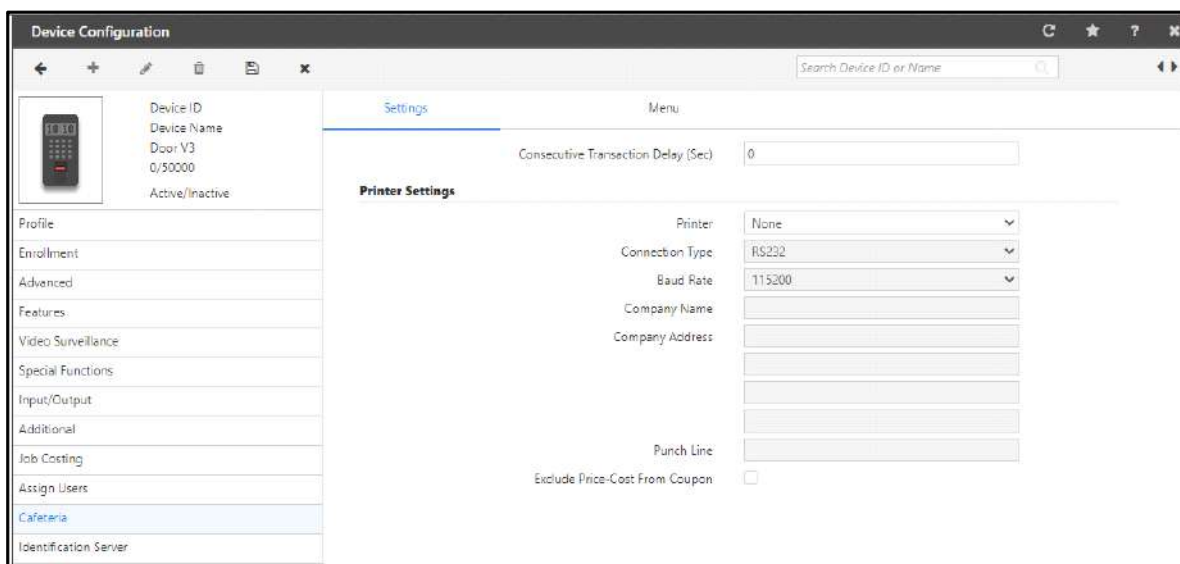

The Cafeteria tab will appear in Device Configuration page.

Select **Device Configuration> Cafeteria> Settings**.

## Settings

The Cafeteria configuration for Door V3 is shown as below.

- **Consecutive Transaction Delay (Sec):** Enter the time interval between two transactions, wherein any user transaction would be restricted.

## Printer Settings

- **Printer:** Select the printer from the dropdown list based on the site requirements.
- **Connection Type:** Select the printer connection type from the drop down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.
- Select the **Exclude Price-Cost From Coupon** check box if you want to exclude the price from the coupon.

## Menu

COSEC allows the administrator to assign one or more cafeteria menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

*The Menu is created from Cafeteria module.*

The Menu can be scheduled from Cafeteria module and is displayed in “Schedule Menu” as shown above.

If you have to assign another menu and schedule it on the door then select the Menu from the picklist. The Menu will be shown in the grid as shown below.

**Assign Menu**

Menu: ID: Name:

Search:

Menu No	ID	Menu Name
1	1	Menu 1
2	2	Menu 2

Save

**Schedule Menu**

Search:

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
1	1	Menu 1	12:00	15:00	Mo Tu We Th Fr Sa

Add

Now to schedule the menu click **Add** button as shown above.

Then select the menu to be scheduled from the **ID** picklist. Specify the **Start** and **End time** for which the Menu will be active and is available to users on the selected door. Select the **days** for which this menu will be available i.e. scheduled on the door.

Then click **OK** and **Save** the Menu schedule on the door.

**Device Configuration**

Settings Menu

Assign Menu

Menu: ID: Name:

Search:

Menu No	ID	Menu Name
1	1	Menu 1
2	2	Menu 2

Save

**Schedule Menu**

Search:

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
1	1	Menu 1	12:00	15:00	Mo Tu We Th Fr Sa
2	2	Menu 2	16:30	23:00	Mo Tu We Th Fr Sa

Add

*Two Menus cannot be scheduled for same timing.*

## Identification Server

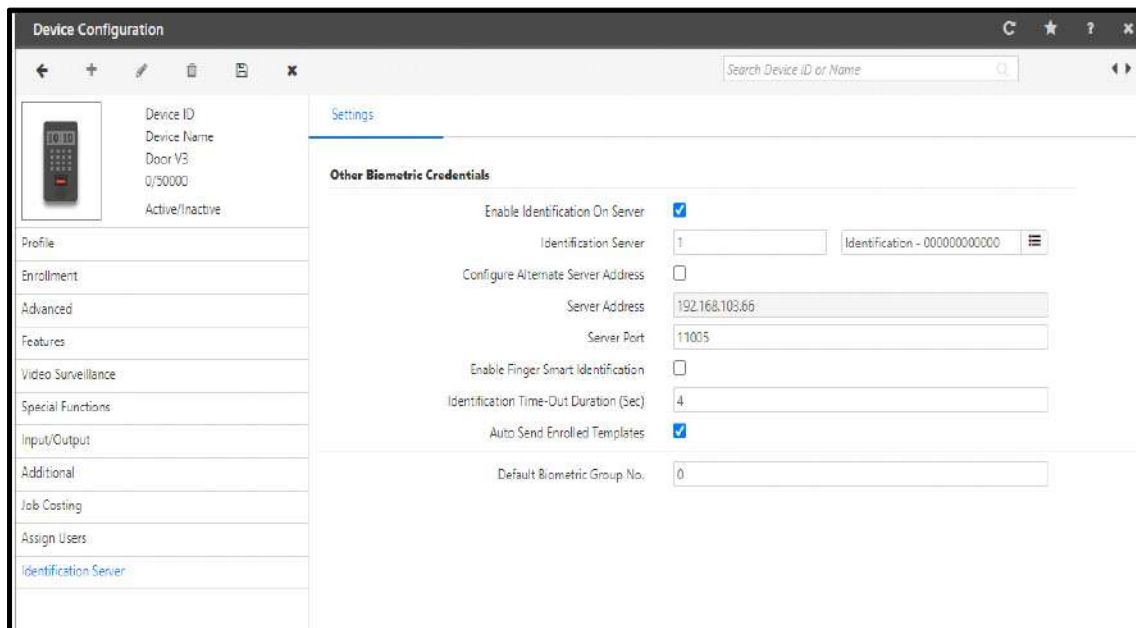

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations,

- On the **Device Configuration** page, select the **Identification Server** tab.

## Other Biometric Credentials

- **Enable Identification On Server:** Select the checkbox to enable the identification of palm/finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray.
- **Configure Alternate Server Address:** Enable this check-box to configure external IP address of Identification Server.
- **Server Address:** It displays the IP Address of the selected Identification Server.
- **Server Port:** Enter the server port number. The default port number is 11005.
- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the fingerprint template identification will get time out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.

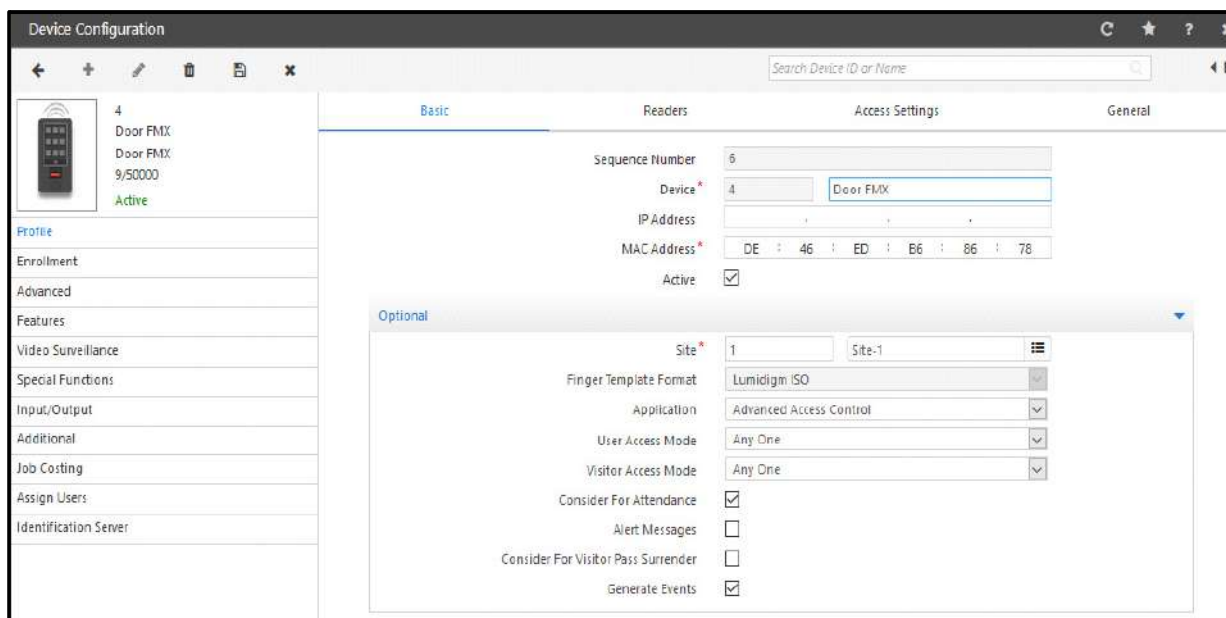

- **Default Biometric Group No.:** Specify the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

# Door FMX

COSEC DOOR FMX makes use of advance multispectral fingerprint sensor. It reads surface and subsurface of a finger and gives very clear and strong image. Door FMX can be connected as **Direct Door** only.

The Device Configuration page for Door FMX appears as shown below:

Device	Sequence Number	Device	IP Address	MAC Address	Active
4 Door FMX Door FMX 9/50000 Active	6	4 Door FMX		DE : 46 : ED : B6 : 86 : 78	<input checked="" type="checkbox"/>

Optional
Site* 1 Site-1
Finger Template Format Lumidigm ISO
Application Advanced Access Control
User Access Mode Any One
Visitor Access Mode Any One
Consider For Attendance <input checked="" type="checkbox"/>
Alert Messages <input type="checkbox"/>
Consider For Visitor Pass Surrender <input type="checkbox"/>
Generate Events <input checked="" type="checkbox"/>

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the "Auto Add New Devices" checkbox. Once the device is connected in network, it will come online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

Once the device is configured, click the **Save** button to save the configuration.

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)
- [“Cafeteria”](#)
- [“Identification Server”](#)

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

- [“Basic”](#)
- [“Readers”](#)
- [“Access Settings”](#)
- [“General”](#)

## Basic

The **Basic** section for “Door FMX” is shown below:

The screenshot shows the 'Device Configuration' window for a 'Door FMX' device. The 'Basic' tab is selected, showing fields for 'Sequence Number' (6), 'Device' (5), 'IP Address', and 'MAC Address' (FD:ED:46:31:12:12). The 'Active' checkbox is checked. The left sidebar shows the device profile and various configuration tabs.

Configure the following options as required:

- **Sequence Number** - This is a system generated sequence number for each new device.
- **Device**- Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address** - This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address** - Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active** - Check the box to activate the device on the network.

*To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “**Auto Add New Devices**” checkbox.*

*The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

The **Basic** page also offers an **Optional** tab which provides optional configurations as shown below:

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Finger Template Format** - For FMX door, the finger templates will be enrolled in Lumidigm ISO format. For globally setting the template format, you can set from Global policy.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.
- **User/Visitor Access Mode** - Defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop down list.

The options available are:

- Any one
  - Card
  - Card + Biometrics
  - Card + Biometrics + PIN
  - Card + PIN
  - Biometrics
  - Biometrics + PIN
  - Biometrics then Card
  - None
  - Face
  - Card+ Face
  - PIN + Face
  - Biometrics+ Face
  - Card then Biometric
- **Cafeteria Face Access Mode** - When Application is set as '**Cafeteria**', only then this configuration is available to the Admin and to add provision of using face as a credential to make transactions on cafeteria devices.
    - Select the mode type from the drop down to allow a user to choose multiple menu items and upon checkout do transaction using face as credential.
    - The options available are **None**, **Default Item** and **Item Selection**.

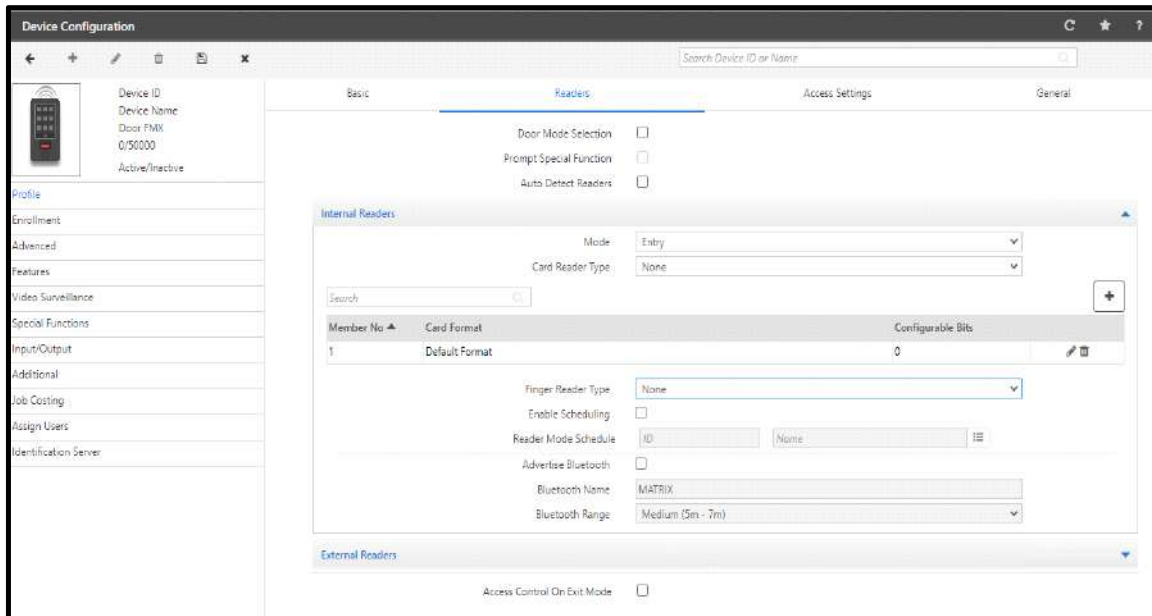

The screenshot shows the 'Optional' configuration window. The settings are as follows:

Setting	Value
Site *	1 Site-1
Finger Template Format	Suprema Proprietary
Application	Cafeteria
User Access Mode	Any One
Visitor Access Mode	Any One
Cafeteria Face Access Mode	None (selected)
Consider For Attendance	None
Alert Messages	Default Item
Consider For Visitor Pass Surrender	Item Selection
Generate Events	<input checked="" type="checkbox"/>

- Default Item mode in cafeteria will allow users a touch less cafeteria experience. In Default Item mode only the transaction for default item is allowed. A default item is assigned in each scheduled menu.
- Item Selection mode in cafeteria will allow users to select the desired menu items and make a transaction using Face as a credential.
- **Consider for Attendance** - Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages** - Select this check box to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Check the box to consider the selected device for visitor pass surrender. The Visitor can show his credential on this device to surrender the pass.
- **Generate Events:** This check-box is enabled by default. You can disable the check-box if the server is not required to receive any events from the respective devices.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

- **Door Mode Selection** - If this option is enabled, then user will be prompted to select punch type as IN or OUT while punching on the device.  
  
E.g.: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in exit mode then you can select the door mode if “Door Mode Selection” is enabled.
- **Prompt Special Function**- This will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted. This can be enabled only when “Door Mode Selection” is enabled.
- **Auto Detect Readers** - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

### Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type;** Select the Card Reader Type from the following options:
  - EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader

- **Card Format:** The single or multiple card formats can be assigned to the readers. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device; then this default format will be applied.

The formatting of card is described in Devices> Master> Card Format

### Multiple Card Format

To assign multiple card formats to device click on **Add** button. Then click the picklist to select the card format. And click **OK** to save the format.

Member No ▲	Card Format	Configurable Bits
1	Default Format	0

Member No ▲	Card Format	Configurable Bits
2	Format1	0
1	Default Format	0

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here. Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

Internal Readers

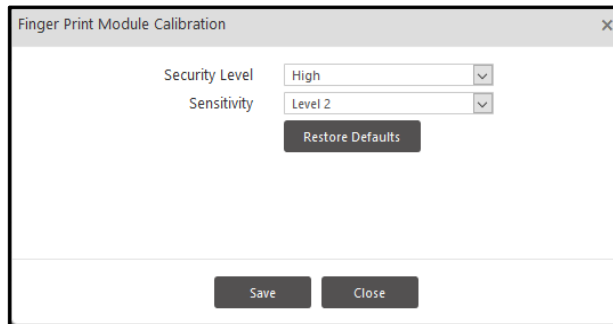

Mode: Entry

Card Reader Type: EM Prox Reader

Member No ▲	Card Format	Configurable Bits
1	Default Format	0
2	Format1	26
3	Format2	32

- Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level** and **Sensitivity** and **Restore Defaults** for the selected FP Reader as shown.

### Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels.  
  
For regular Time-Attendance system “Normal” level can be selected. For high security areas requiring complete or maximum matching of template, “High/Highest” level must be selected. For approximate matching of template , “Low” level can be selected.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 3 has the highest sensitivity.
- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.
- Click on the **Save** button.
- **Enable Scheduling:** Select this checkbox to **Enable Scheduling** to set reader mode of door as entry or exit as per user-defined schedules.
- **Reader Mode Schedule:** Select the schedule from the picklist which is to be assigned to the internal reader of Door FMX. With this the same reader can be configured to function both in Entry as well as Exit mode based on scheduled timings.
- **Advertise Bluetooth-** Select this checkbox to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters
  - **Bluetooth Name-** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.  
  
If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.
  - **Bluetooth Range-** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the bluetooth range as — Short (1m-2m), Medium (5m-7m) or Long (>8m).

## External Readers

This option allows the configuration of the External Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.
- **Card Format** - Select a card format to be applicable for external readers of the device. For multiple format description [See “Multiple Card Format” on page 1050.](#)
- **Exit Switch** - Select this checkbox to enable the use of **Exit Switch**.
- **User/Visitor Access Mode** - Select the access mode from the options shown below:
  - Any One
  - Card
  - Biometrics
  - Card + Biometrics
  - Biometrics then Card
  - None
- **Access Control On Exit Mode** (only for direct door) - Select this checkbox to enable access control on the exit mode.

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below:

The screenshot displays the 'Device Configuration' window with the 'Access Settings' tab active. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into four tabs: Basic, Readers, Access Settings (selected), and General. Under the 'Access Settings' tab, the following settings are visible:

- Universal Time Zone:** A dropdown menu set to '(GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai'.
- Time Format:** A dropdown menu set to '24 Hours'.
- Auto Synchronize with NTP:** A checked checkbox.
- Preferred NTP Server:** An empty text input field.
- Working Days:** A grid of checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday, all of which are checked.
- Working Hours(HHMM):** Two text input fields showing '00:00' and '23:59'.
- Holiday Schedules:** A table with four rows, each containing a 'Holiday Schedule' number (1-4) and a corresponding 'Schedule' dropdown menu.

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 HoursSelect the relevant option from the drop down list as per the site requirements.

## Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
  3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

## General

The **General** page appears as follows. Enter all general details applicable to the device in this section.

Device Configuration

30 Door FMX-Dev...  
Door FMX  
0/50000  
Active

Profile  
Enrollment  
Advanced  
Features  
Video Surveillance  
Special Functions  
Input/Output  
Additional  
Job Costing  
Assign Users  
Identification Server

Basic Readers Access Settings **General**

Mute Buzzer ☐

**Allowed Acknowledgement**

Display Duration (ms) 3000  
LED - Buzzer Duration Long

**Denied Acknowledgement**

Display Duration (ms) 3000  
LED - Buzzer Duration Long

Enable Display Messages ☐

Custom Birthday Message Happy Birthday

Display Message 1 ☒  
Schedule 00:00 11:59  
Message Good Morning

Display Message 2 ☒  
Schedule 12:00 15:59  
Message Good Afternoon

Display Message 3 ☒  
Schedule 16:00 20:59  
Message Good Evening

Display Message 4 ☒  
Schedule 21:00 23:59  
Message Good Night

Multi-Language Support ☐  
Auto Hide Menu Bar ☐

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.
- **Enable Display Messages** - This feature allows the user to enable custom birthday message and display messages to be displayed on the door device. Upto 4 display messages can be configured for a door.
- **Custom Birthday Message**- Enter the birthday message which would appear on the door when the user punches on the door on his birth date.

The valid values are

**A-Z**

**a-z**

**0-9**

`~!@#\$%^&\*()\_+~{}|\\|:;?<>.,\\''

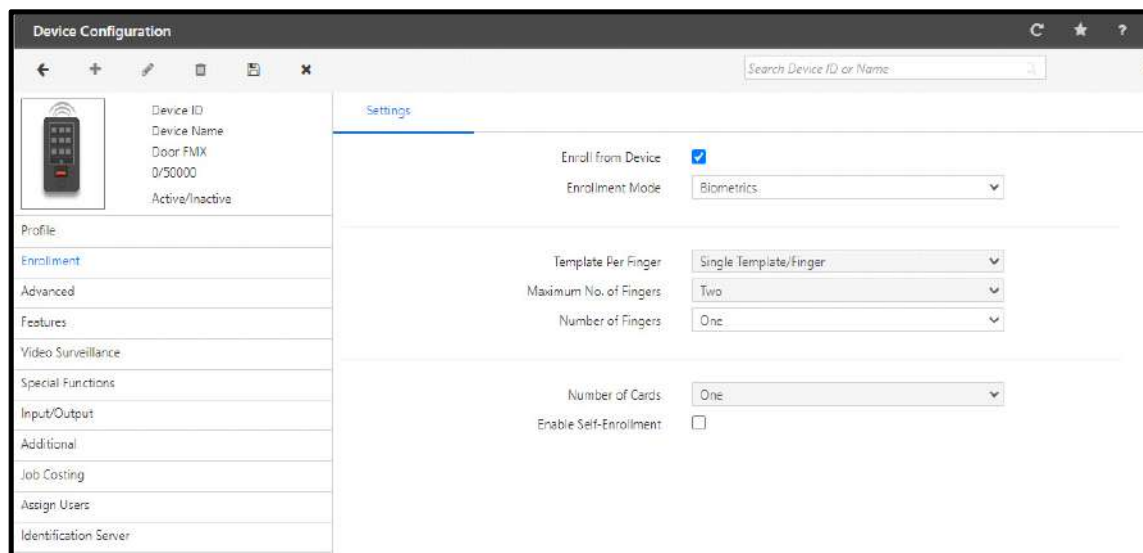

- **Display Message** - Enable each display message individually by selecting this checkbox.
- **Schedule** - For each message, the user needs to define the time period between which this message is to be displayed.
- **Message** - Enter the message to be displayed in this field. Maximum 21 characters allowed.
- **Multi-Language Support** - Select this checkbox to enable multi-language support for the selected device.

The **Display From** field shall display the reading order for the selected language.

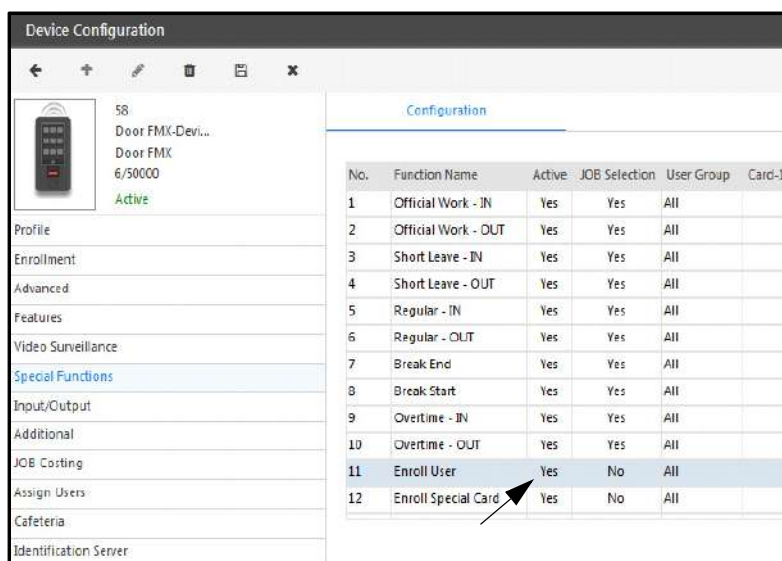

- **Auto Hide Menu Bar**- If a person touches the device screen by mistake and enter into Menu; then the finger sensor will not take the punch when he punches on device till the menu is closed or time out occurs. So in this case; enabling the **Auto hide Menu Bar** check-box will hide the menu and the user will be able to punch on the door. If you want to access the Menu then swipe upwards on the screen which will show the menu.

## Enrollment

The Enrollment page appears as shown below.

- **Enroll from Device** - Select this check-box to enable the enrollment of user from the door controller. When this check-box is enabled, 'Enroll User' special function on that device will get active as shown below.

If 'Enroll User' special function & 'Enroll From Device' check-box both are inactive in device configuration, then on activating 'Enroll User' special function, 'Enroll From Device' check-box will be enabled.

- **Enrollment Mode** - Select the desired type of credential from the dropdown list that can be enrolled using the special function at the DOOR.

The options are — ReadOnlyCard, SmartCard, Biometrics, and BiometricsThenCard

- **Enrollment Using** - Select the option **User ID** or **Reference No.** using which enrollment will be done.
- **Template Per Finger** - This parameter displays the values as configured at the global level. This field is not user editable from this page.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level. This field is not user editable from this page.
- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the Enrollment Mode parameter.
- **Enable Self-Enrollment** - Select this checkbox to enable the self-enrollment feature on this door.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- *“Settings”*
- *“Alarms”*
- *“Timers”*
- *“Wiegand”*

## Settings

The **Advanced Settings** page for Door FMX as **Direct Door** appears on your screen as shown below:

The screenshot displays the 'Device Configuration' window with the 'Settings' tab selected. The left sidebar shows a list of configuration categories: Profile, Enrollment, Advanced (selected), Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into sections: Alarms, Timers, and Wiegand. The Alarms section includes checkboxes for 'Generate Exit Switch Events', 'Generate Invalid User Events', 'Generate Sequential IN-OUT Events', 'Two Credentials Required', and 'Show PIN'. The Timers section includes 'Allow Exit when Door Lock' (checked), 'Auto Relock' (unchecked), 'Auto Relock Timer (Sec)' (set to 3), 'Enable Additional Security' (disabled), 'Enable Smart Identification' (unchecked), 'Access Level' (set to 8), 'Access Mode' (set to Card), 'Auto Acknowledge Alarm' (unchecked), 'Auto Acknowledge Alarm (Sec)' (set to 10), and 'Facility Code' (set to 1). The Wiegand section includes 'Allow Access Through Mobile' (unchecked), 'Mobile Entry Access Mode' (set to Mobile Only), 'Mobile Exit Access Mode' (set to Mobile Only), 'Show Attendance Details' (unchecked), 'Sensor Type' (set to FEVCBOT), 'Sensor Interface' (set to USB), 'Emissivity' (set to 0.95), 'Calibration Parameter' (set to +), 'Approach to Sensor Wait-Time (Sec)' (set to 3.0), 'Temperature Detection Time Out (Sec)' (set to 10), 'Tolerance between Consecutive Readings' (set to 0.5), 'Consecutive Readings Count within Tolerance' (set to 5), 'Temperature Threshold (°F)' (set to 95.5), 'Minimum Temperature for Access (°F)' (set to 95.0), 'Restriction Type' (set to Soft), and 'Bypass if Sensor Disconnected' (unchecked).

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events everytime the exit switch is used.
- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.
- **Generate Sequential IN-OUT Events** - Select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.
- **Two Credentials Required**- Select this checkbox to enable the feature of verifying 2 credentials mandatorily for users allowed to By-pass finger/palm.
- **Show PIN**- Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.

- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Enable Additional Security** - Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this checkbox to enable the auto-acknowledgement of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics**, **Mobile then Card** and **Mobile then PIN**.

*If User Access Mode is selected as “None” in Zone Configuration and Mobile Access Mode is selected as “Mobile Then Biometrics” then door can be accessed through Mobile and then Biometric credential.*

- **Show Attendance Details** - Select this check-box for displaying the Attendance Details of the user on FMX door. This allows user to view his attendance details on FMX door itself and there is no need to login to ESS application to view attendance details.

The attendance details of user will be displayed for a period of 3-4 seconds after the Access Allowed screen.

*1. The user whose Attendance details are to be displayed on FMX door must be enabled for this feature. Enable the check-box **Show Attendance details on Device** from User Configuration> T&A> Attendance.*

*2. While an attendance detail of one user is being displayed on device and second user tries to access the device; new user will be processed.*

*3. Whenever both users of 2-person rule are allowed to get access on device then attendance details screen of second user will be loaded on device.*

- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *AST*, *Web-Based* and *FEVOBOT*. Default sensor set is *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type: *AST*  
Sensor Interface options will be: RS-232 and USB  
For Sensor Type- *Web-based*  
Sensor Interface options will be: HTTP/S  
For Sensor Type-*FEVOBOT*  
Sensor Interface options will be: USB
- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is *AST*. Default value is 0.95.  
It is used to define accuracy in sensor to detect temperature of different skin or objects.  
Not applicable for *FEVOBOT*.
- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.  
Not applicable for *FEVOBOT*.
- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for *FEVOBOT*.
- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for *FEVOBOT*.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.  
It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.  
The default value, unit and range should be updated based on the Temperature unit set on Panel.
- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

### *For Direct Door*

Settings	Alarms	Timers
	Tamper <input type="checkbox"/>	
	Door Abnormal <input type="checkbox"/>	
	Door Force Open <input type="checkbox"/>	
	Door Fault <input type="checkbox"/>	
	Panic <input type="checkbox"/>	
	Temperature Threshold <input type="checkbox"/>	

Enable the respective check-box of alarms which is to be selected.

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms. The **Timers** page appears on your screen as shown below:

The screenshot shows the 'Device Configuration' window with the 'Timers' tab selected. On the left, a sidebar lists 'Profile', 'Enrollment', 'Advanced' (highlighted), 'Features', and 'Video Surveillance'. The main area shows four timer settings:

Timer Name	Value
Inter-Digit Wait Timer (Sec) *	3
Multi-Input Wait Timer (Sec) *	5
Door Open Pulse Timer (Sec) *	5
Late-IN Early-OUT Active Timer (Min) *	60

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

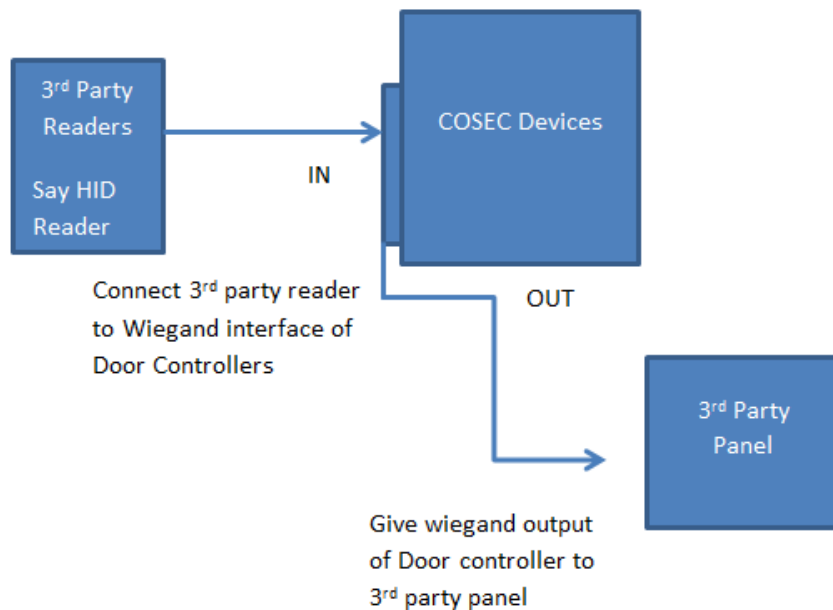

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (1 to 65535) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.
- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

## Wiegand

The screenshot shows the 'Device Configuration' window with the 'Wiegand' tab selected. The sidebar on the left is the same as in the Timers page. The main area shows 'Wiegand Interface' settings:

- Output Mode**: A dropdown menu.
- Output Mode Parameters**:
  - Wait For Panel Signal**: ☒
  - Signal Wait Timer (Sec)**: 2
  - Wait For User Verification**: ☒
  - Wiegand Output Format**: 26 Bit
  - Send From**: MSB Bit

- **Wiegand Interface** - The COSEC device can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown below.

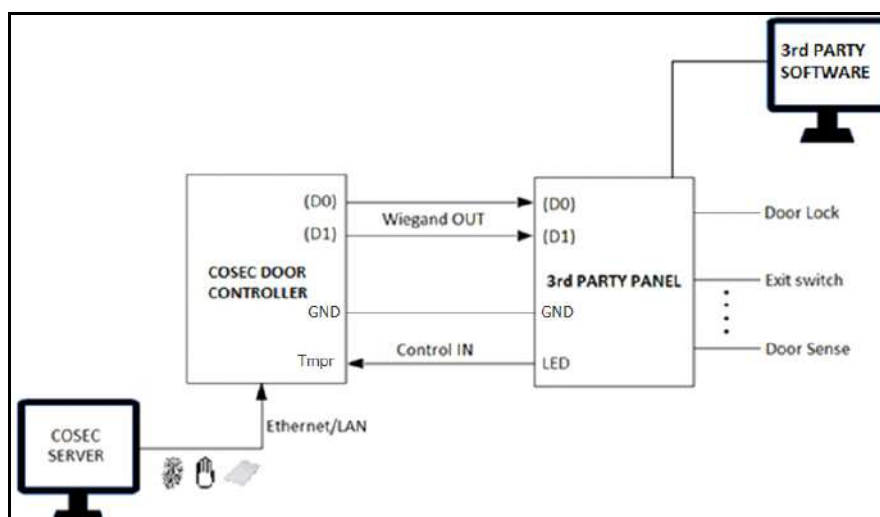

So select the interface of Door controller as **Output Mode** to work as weigand output to panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the output mode parameters will be disabled.

If you select Output mode then configure the **Output Mode Parameters**.

- **Wait For Panel Signal** - If this option is enabled the door will wait for reply from the connected third party device before triggering any output, as per the defined **Signal Wait Timer (Sec)**.
- **Wait For User Verification** - If this option is enabled, user verification will be requested on the third party device before triggering any output.
- Specify the **Wiegand Output Format** and sending order for reader data as MSB or LSB Bit in the **Send From** field.

## Wiegand Out Interface

Also for the **Custom** format, user can configure details of fields to be sent as output from the Wiegand reader that has been added.

## Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitute the details of the COSEC door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now you can show the mobile camera to scan the QR code. The COSEC door will get opened after verifying the security key and access policies of the user.

## Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1a.** If door is in direct door mode enter IP & port of the direct door

b. If door is a panel door, then enter IP & port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license .*

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- "Set1"
- "Set2"

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**. The page appears as shown below.

The screenshot shows the 'Device Configuration' window for 'Set1'. On the left is a sidebar with a list of configuration categories: Profile, Enrollment, Advanced, Features (highlighted), Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main panel is titled 'Set1' and contains three rule configuration sections:

- Absentee Rule:** Includes an 'Enable' checkbox which is checked.
- Occupancy Control:** Includes an 'Enable' checkbox (checked), a 'Maximum Occupancy Limit' field set to 9, a 'Minimum Occupancy Limit' field set to 1, and a 'Zero Occupancy' checkbox (checked).
- Use Count Control:** Includes an 'Enable' checkbox (checked) and a 'Use Count Limit (Per minute)' field set to 5.

- **Absentee Rule** - Select this checkbox to enable this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
For configuring the rule See *Access Control> Absentee Rule*.
- **Occupancy Control** - Select this checkbox to enable the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule See *Access Control> Occupancy Control*.
- **Use Count Control** - Select this checkbox to enable the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule See *Access Control> Use Count Control*.  
You can enable **Duress Detection** on the door. The default duress detection code is displayed which is used to generate the duress alarm which informs that the user is forced to open the door under threat.  
For details See *Device Configuration (Panel200)> Features> Set3> Duress Detection*.

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. The page appears as shown below.

The screenshot displays the 'Device Configuration' window for 'Set2'. The left sidebar lists various configuration categories. The main panel is divided into three sections for rule configuration:

- First-IN User Rule:** Includes an 'Enable' checkbox, 'Reset On' radio buttons (Day Change, Timer Expiry), 'Access Timer (Sec)' set to 3, and 'First-IN User Group' set to 1.
- Anti-Pass-Back (APB):** Includes 'On Entry' and 'On Exit' checkboxes (both checked), 'Hard/Soft' dropdown set to 'Soft', 'Forgiveness' checkbox checked, 'Reset After' radio buttons (Day Change, Timer Expiry) with 'Timer Expiry' selected, and 'Forgiveness Timer (Mins)' set to 34.
- 2-Person Rule:** Includes an 'Enable' checkbox, 'Mode' dropdown set to 'Primary Must', 'Primary Group' set to 888, and 'Secondary Group' set to None.

- **First-IN User Rule** -Select this checkbox to enable the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule See *Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select this checkbox to enable the feature at the direct door.
  - **On Entry:** Check this box so that the system monitors the entry reader for APB violation.
  - **On Exit:** Check this box also so that the system monitors the entry as well as the exit readers for APB violations.
  - **Hard/Soft:** Select the restriction type as Hard or Soft option from the drop down options.
    - **Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.
    - **Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.
- **Forgiveness:** Check this box to enable the system to reset the APB status. When forgiveness is enabled, then there will be following options to reset the pass.
  - **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his card for entry in the next morning.
  - **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time.
  - **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-pass back status will get reset and the pass will be in original state.

- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule *See Access Control> 2- Person Rule*

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To access this, Go to **Device Configuration > Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya/IP Camera Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems as well as IP Cameras and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder and IP Camera parameters. The **Visual Tagging** page appears as shown below.

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown.

The compatible device types are:

- Matrix HVR/NVR
- Milestone
- IP Camera

### Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.

- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.

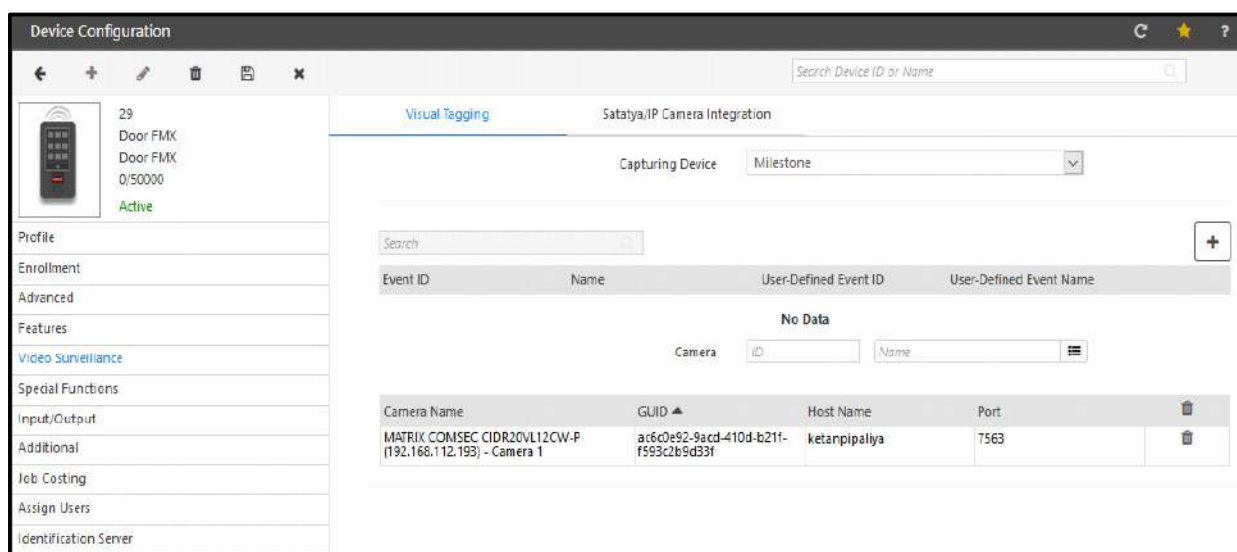

- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** - Specify the FTP server password.

*Some COSEC devices do not support all the network connection options.*

## Milestone

*For more information on integration with **Milestone** devices, refer to "[Milestone Integration](#)".*

## IP Camera

The screenshot shows the 'Device Configuration' window with a sidebar on the left containing a list of device types: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Satatya/IP Camera Integration' and has a 'Visual Tagging' tab. Under 'Capturing Device', 'IP Camera' is selected. The 'Snapshot URL' field contains 'http://192.168.102.191/matrix-cgi/snapshot' with a note below it: 'Note: Mention the protocol http or https in URL.' The 'API Login Credentials' section has 'User Name' set to 'admin' and 'Password' set to '\*\*\*\*\*'.

- **Snapshot URL:** If Capturing device is selected as IP Camera; then enter the API URL for taking the Snapshot through IP camera. You can use any camera for taking the snapshot/photo. The API for capturing snapshot will be available in the API document of camera.
- **User Name:** Enter the Username for accessing API for taking the Snapshot through IP Camera.
- **Password:** Enter the Password for accessing API for taking the Snapshot through IP Camera.

It is the same username and password using which IP camera login is done. Eg: username admin and password admin

The allowed values for snapshot URL, User Name and Password are **A-Z, a-z, 0-9 !\"#\$%&'()\*+,- . / : ; < = > ? @ [ \ ] ^ \_ { | } ~**

## Satatya/IP Camera Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type or IP Camera is selected as the **Capturing Device** (from *Visual Tagging*).

It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices/ IP Camera as per the configuration on this page. The Satatya/IP Camera Integration page appears as shown below:

## SATATYA Integration

Add Cancel

- **Integration type-** Select the integration type from the options of Wired and Network. In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **IP Address-** Specify the IP address of HVR/NVR.
- **Port Number-** Specify the port number of HVR/NVR.
- **Name-** Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.

- **Schedule** - Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event**- Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode**- Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action**-Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.
- **Camera**- Select the relevant camera channels depending on the action selected.
- Click the **Add** button to finish the process of linking the event to the action.

Name	Event	Action	Start Time	End Time	Active	
FMXNVR integration	Access Allowed	Recording	14:00	19:00	Yes	

- The user may now configure another event-action linkage if required.

**Example1:** For action as Video Pop up, the pop up of Camera 24 will be shown for 10 seconds.

**Example2:** For Access allowed event on COSEC Device, recording of camera channel 4,6,8 and 10 will be done for 10 seconds.

## IP Camera Integration

- **Schedule Name**-Specify a user friendly name for the schedule of Device-IP Camera integration.
- **Active**- Check the Active box to activate the schedule for IP Camera.
- **Event**- Select a COSEC event from the drop down list for which the resultant action is to be configured. The Events will appear in the list based on the availability of the license.

*At max. 20 Events or schedules are allowed for configuration for a single device.*

- **Mode**- Select the event mode from the options of Entry, Exit and Both from the drop down list.
- **Schedule Range**- Specify a schedule for the function by specifying the **start** and the **end time (24 Hours format)** as well as checking the boxes against the applicable **days** of the week.

Click **Add** button to add the configured schedule. The schedule will be listed in the grid. Then click **Save** button to save the schedule integration.

Name	Event	Mode	Start Time	End Time	
Denied User Schedule	User Denied	Both	00:00	23:59	

When user event is generated, then snapshot is taken by the configured camera. The events can be viewed in User Events (User module) page and Event view (Admin module) page.

*The capturing of Snapshot is shown in Door FMX section.*

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

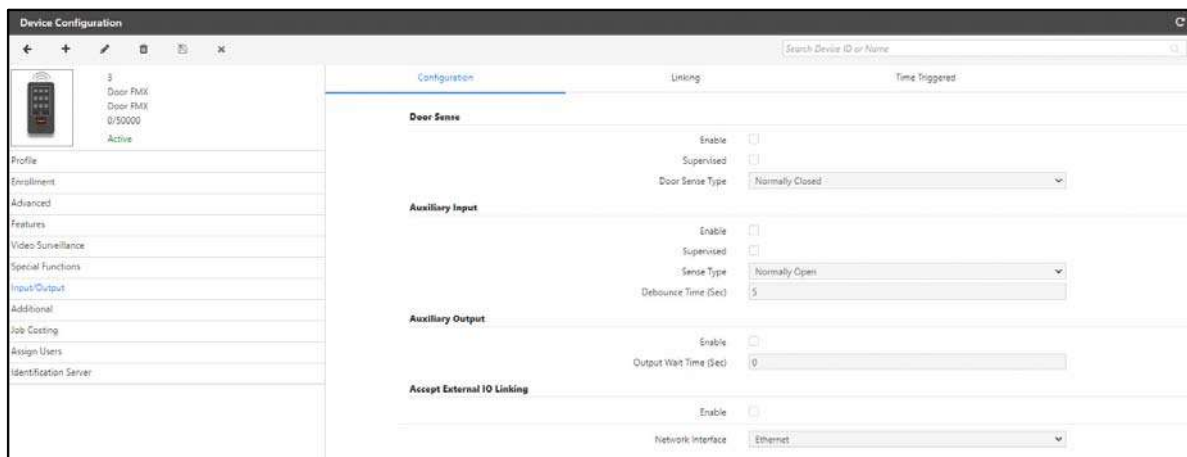

1. This functionality cannot be fully accessed in the Edit  mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- [“Configuration”](#)
- [“Linking”](#)
- [“Time Triggered”](#)

## Configuration

The **Configuration** section for a Door FMX appears as shown below.

The following parameters are available for configuration:

- **Door Sense** - The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

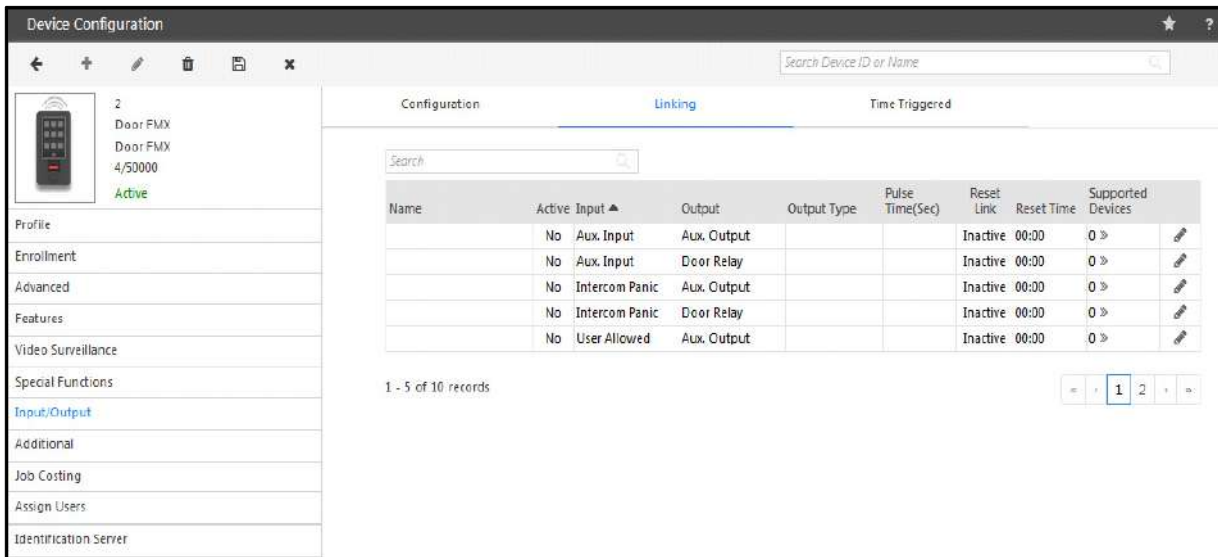

- Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as **Normally Open** or **Normally Closed**. (Default: Normally Closed).
- **Auxiliary Input** - Select the **Enable** checkbox option for Auxiliary Input (e.g. Smoke Detectors) depending on normal or supervised door state monitoring as described above.

**Debounce Time (Sec)** - Specify the Debounce time in seconds. Default value is 3 sec and range should be 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- **Auxiliary Output** - Select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.
- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface-** Select the interface option for IO linking with external devices. The options are
  - Ethernet
  - Wireless
  - Mobile Broadband

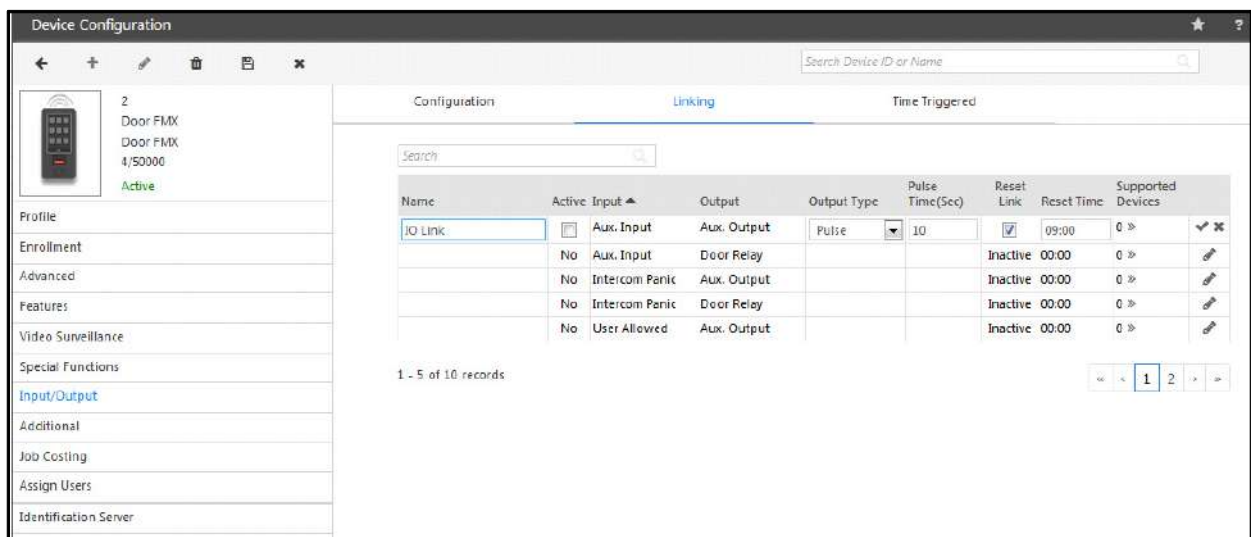

## Linking

The **Linking** section appears as shown below.

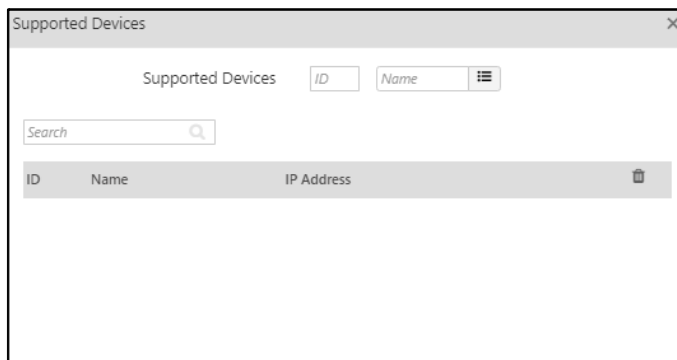

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

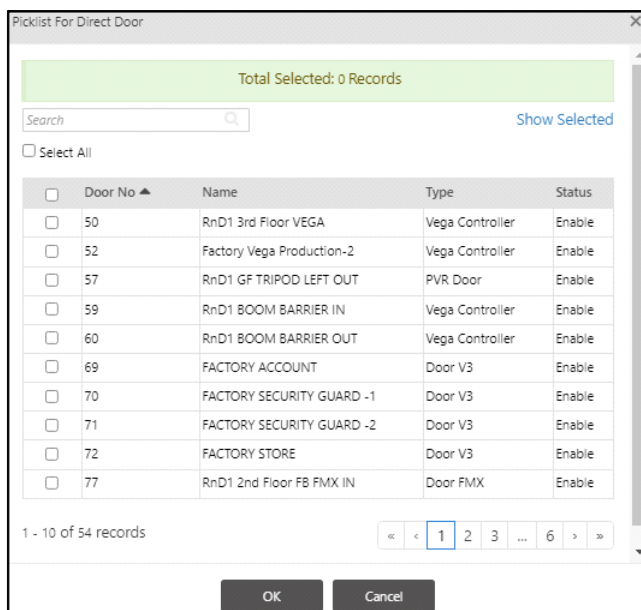

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Active** - Select this checkbox to activate this linking program.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - Pulse: With this type of output, the user needs to define the Pulse time in seconds.
  - Interlock: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.

- **Latch:** With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
- **Toggle:** With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Time (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Reset Link-** Enable the Reset link and enter the time at which the IO link will get reset automatically.
- **Supported Devices** - All devices supported for external IO Linking will appear in this picklist for selection. Upto 255 external devices can be added by the administrator.
- Click **Supported Devices**  icon. The **Supported Devices pop-up** appears.

The 'Supported Devices' pop-up window contains a search bar, a table with columns 'ID', 'Name', and 'IP Address', and a close button in the top right corner.

- In this pop-up, click the **Supported Devices** picklist, the **Picklist For Direct Door** pop-up appears.

The 'Picklist For Direct Door' pop-up window displays a table of devices with columns: Door No, Name, Type, and Status. It includes a search bar, a 'Show Selected' button, a 'Select All' checkbox, and pagination controls at the bottom.

Door No	Name	Type	Status
50	RnD1 3rd Floor VEGA	Vega Controller	Enable
52	Factory Vega Production-2	Vega Controller	Enable
57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
69	FACTORY ACCOUNT	Door V3	Enable
70	FACTORY SECURITY GUARD -1	Door V3	Enable
71	FACTORY SECURITY GUARD -2	Door V3	Enable
72	FACTORY STORE	Door V3	Enable
77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices pop-up** and the selected devices are displayed here.

Supported Devices			
Supported Devices			
<input type="text" value="Search"/>			
ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

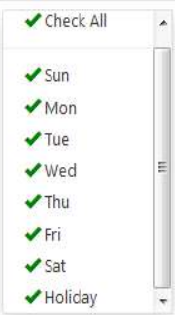

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

Function Name	Active	Time	Duration(Sec)	Days	Output
Siren Activate	<input checked="" type="checkbox"/>	00:00	10	Select	Aux O/P

- ✓ Check All
- ✓ Sun
- ✓ Mon
- ✓ Tue
- ✓ Wed
- ✓ Thu
- ✓ Fri
- ✓ Sat
- ✓ Holiday

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

settings in *24-hours* format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed by 08:00 hours.

- Click the **Save** button.

## Job Costing

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

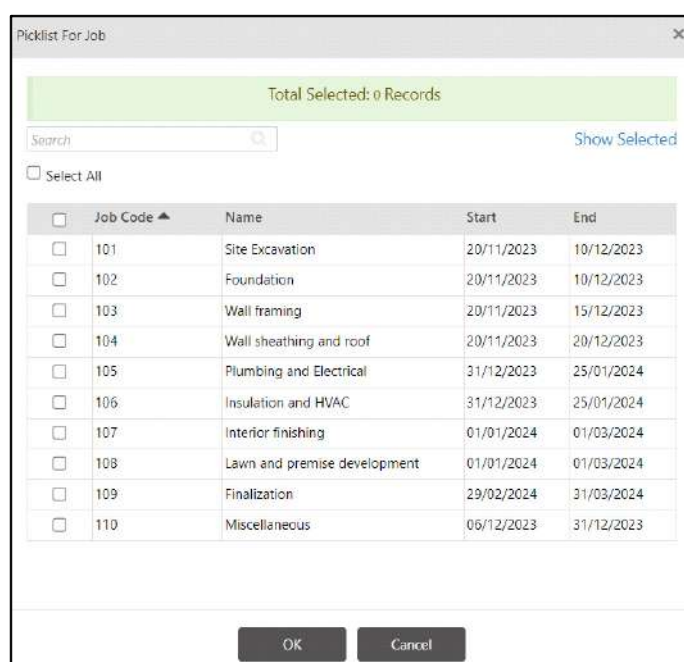

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

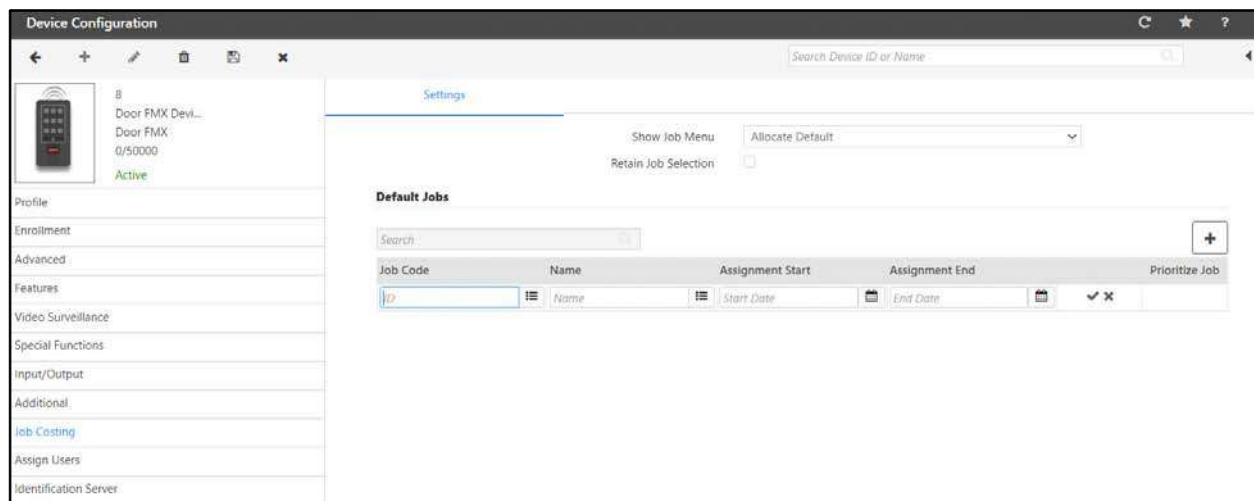

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device icon and a list of settings: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing (highlighted), Assign Users, and Identification Server. The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default' and a 'Retain Job Selection' checkbox. Below this is the 'Default Jobs' section, which includes a search bar and a table. The table has columns for Job Code, Name, Assignment Start, Assignment End, and a 'Prioritize Job' button. The first row shows a job with ID '10' and the name 'Name', with start and end dates. A '+' button is in the top right of the table area.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

1 2

Cancel

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calender and select the desired start and end dates.
- Click **Save** to save the configuration.

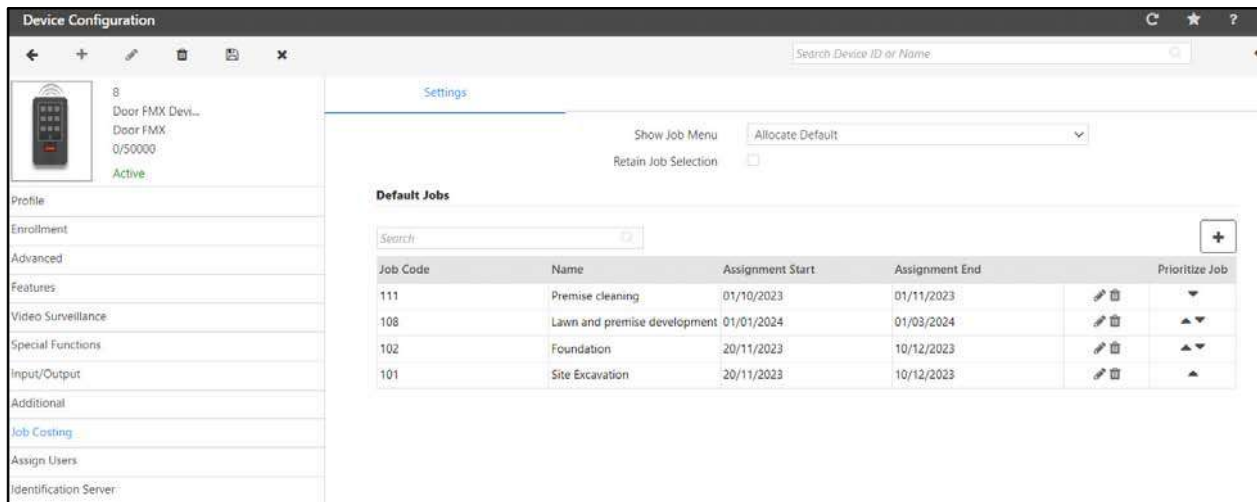

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

To the configured device, you can select and assign the users.

Click the picklist button and select the users.

The screenshot shows the 'Device Configuration' window. On the left sidebar, the 'Assigned Users' option is selected. The main area displays a table of users assigned to the selected device. The table has columns for ID, Name, and a delete icon. The users listed are Shalini (ID 1), Khushbu (ID 101), Chirag (ID 2), and Isha (ID 3). A 'Save' button is located at the bottom right of the table.

ID	Name	
1	Shalini	
101	Khushbu	
2	Chirag	
3	Isha	

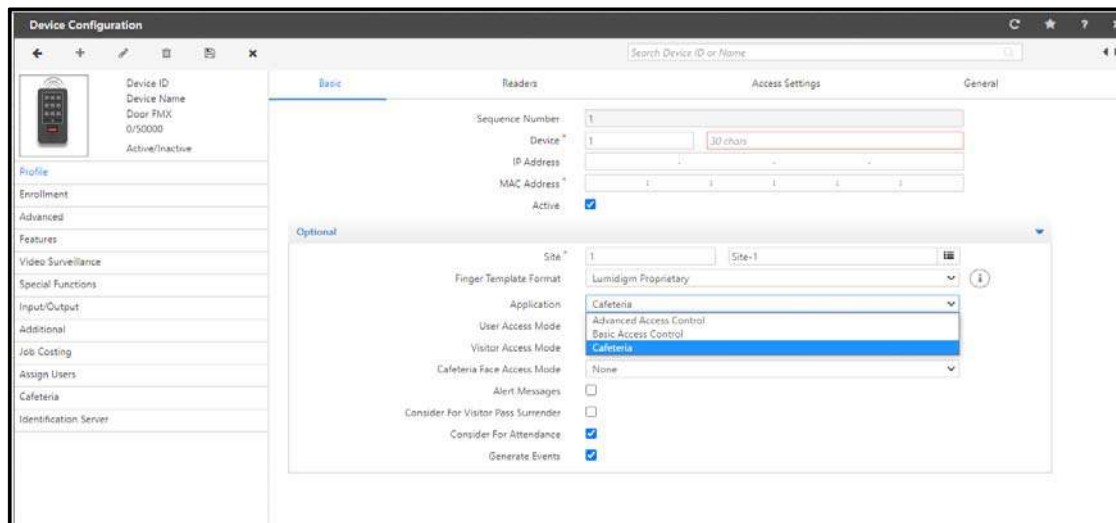

Click the **Save** button to assign all the added users to the selected door.

## Cafeteria

The COSEC system enables the you to configure devices which will be used by the Cafeteria management module.

To configure a door for Cafeteria application, make sure you have selected **Cafeteria** option in **Application**

(Device Profile > Basic > Application) as shown below.

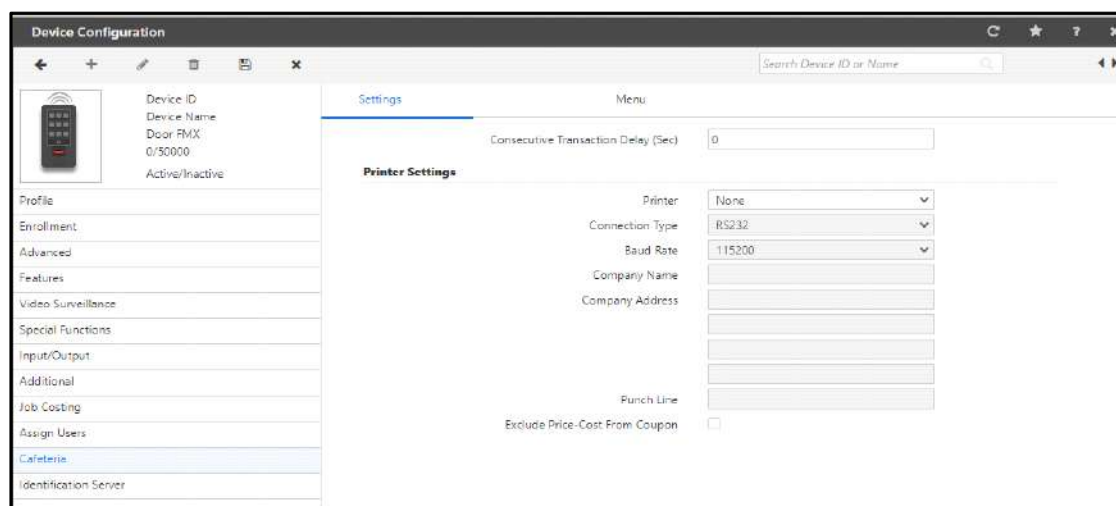

On the **Device Configuration** page, click **Cafeteria** on the left pane.

For the Cafeteria configurations, click the following links

- [“Settings”](#)
- [“Menu”](#)

## Settings

The Cafeteria configuration for Door FMX is shown as below

- **Consecutive Transaction Delay (Sec):** Enter the time interval between two transactions, wherein any user transaction would be restricted.

## Printer Settings

- **Printer:** Select the printer from the dropdown list based on the site requirements.

- **Connection Type:** Select the printer connection type from the drop down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.
- Select the **Exclude Price-Cost From Coupon** check box if you want to exclude the price from the coupon.

## Menu

COSEC allows the administrator to assign one or more cafeteria menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

*The Menu is created from Cafeteria module.*

The Menu can be scheduled from Cafeteria module and is displayed in “Schedule Menus” as shown above.

If you have to assign another menu and schedule it on the door then select the Menu from the picklist. The Menu will be shown in the grid as shown below.

The screenshot displays two sections: 'Assign Menu' and 'Schedule Menu'. The 'Assign Menu' section has a search bar and a table with columns: Menu No, ID, Menu Name, and a delete icon. It contains two rows: Menu 1 (ID 1) and Menu 2 (ID 2). A 'Save' button is below the table. The 'Schedule Menu' section also has a search bar and a table with columns: Menu No, ID, Menu Name, Start Time, End Time, and Schedule Days. It contains one row: Menu 1 (ID 1) with Start Time 12:00, End Time 13:00, and Schedule Days Mo Tu We Th Fr Sa. An 'Add' button is in the bottom right corner of the 'Schedule Menu' section.

Now to schedule the menu click **Add** button as shown above.

Then select the menu to be scheduled from the **ID** picklist. Specify the **Start** and **End time** for which the Menu will be active and is available to users on the selected door. Select the **days** for which this menu will be available i.e. scheduled on the door.

Then click **OK** and **Save** the Menu schedule on the door.

*Two Menus cannot be scheduled for same timing.*

## Identification Server

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations,

- On the **Device Configuration** page, select the **Identification Server** tab.

## Face Recognition

The screenshot shows the 'Device Configuration' web interface. On the left is a sidebar with a device icon and a list of configuration tabs: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server (which is highlighted). The main area is titled 'Settings' and contains the 'Face Recognition' configuration section. This section includes the following fields and controls:

- Enable FR:** A checked checkbox.
- Face Capturing:** A dropdown menu set to 'Tap & Go'.
- Enable Time Out:** An unchecked checkbox.
- Free Scan Time Out (Sec):** A text input field containing '30'.
- IP Camera MJPEG URL:** A text input field containing 'http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4'. A note below it says 'Note: Mention the protocol in URL.'
- User Name:** A text input field containing 'Username'.
- Password:** A password input field containing 'password'.
- FR Mode:** A dropdown menu set to 'Local'.
- Server Address:** A text input field containing '192.168.50.2'.
- Server Port:** A text input field containing '12000'.
- Identification Time-Out Duration (Sec):** A text input field containing '4'.

- **Enable FR:** Select the checkbox to enable the Face Recognition feature on the device.
- **Face Capturing:** Select the desired Face Capturing option — Tap & Go or Free Scan.
  - **Tap and Go:** If you select this option, user needs to tap on the device screen once. The MJPEG, that is motion recording screen appears. The device will capture and then identify the users face. If during working hours device is idle, then user needs to tap device to scan the face and gain access.
  - **Free Scan:** If you select this option, device will display the MJPEG, that is motion recording screen till the expiry of the Free Scan Time Out timer.
- **Enable Time Out:** Select this checkbox to enable the time out.
- **Free Scan Time Out (Sec):** Enter the free scan time out duration. The valid range is 1 to 999 sec.

In Free Scan method, multiple users can mark their attendance easily during peak entry hours.

For example, if the Free Scan Time Out is set as 30sec and if the user is identified in 10S then the system reloads the Free Scan Time Out timer again. Hence, device remains in the scanning mode.

- **IP Camera MJPEG URL:** Enter the URL for accessing the IP camera to receive the motion stream. For example: `http://192.168.104.48:80/matrix-cgi/mjpeg?profile-no=3`
- **User Name:** Enter the user name for accessing the IP camera. For eg: admin
- **Password:** Enter the password for accessing the camera. For eg: admin123

This will fetch the motion stream from camera to device screen. Then the users can show their face on camera. The face will be captured and after identification, the user will be allowed to access the door and punch will be marked.

- **FR Mode:** Select the FR mode as **Local** or **Server Assisted**.
  - **Local:** In this Local mode face templates will be stored in FR hardware module which can store 1 Lakh face templates. The captured face template will be verified with the templates already stored in FR module.
  - **Server Assisted:** In Server Assisted mode, the face templates will be stored directly in the server. You must first configure the Identification Server from where the face templates will be identified.
    - **Free Scan Time Out (Sec):** Enter the Free scan time out duration. The valid range is 1 to 999 sec.

When **FR Mode** is set as Local Mode, configure the following parameters:

- **Server Address/Port:** Enter the IP Address and Port number of the FR Server.
- **Identification Time-Out Duration (Sec):** Enter the identification time-out in seconds, after which the face template identification process will be timed out.

**Example:** If **Identification Time-Out Duration (Sec)** is 5 seconds, then the identification server will try to identify the face template until 5 seconds and if not found then it will show time-out to the user.

If you select FR Mode as **Server Assisted**, you must configure the following parameters

The screenshot shows the 'Face Recognition' settings page. The 'Enable FR' checkbox is checked. 'Face Capturing' is set to 'Free Scan'. 'Enable Time Out' is checked. 'Free Scan Time Out (Sec)' is set to 30. 'IP Camera MJPEG URL' is set to 'http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4'. 'User Name' is set to 'Username' and 'Password' is set to '\*\*\*\*\*'. 'FR Mode' is set to 'Server Assisted'. 'Identification Server' is set to 1. 'Configure Alternate Server Address' is unchecked. 'Server Address' is set to 192.168.103.66. 'Server Port' is set to 11005. 'Identification Time-Out Duration (Sec)' is set to 4. 'Default Biometric Group No.' is set to 0.

- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray.
- **Server Address:** It displays the IP Address of the selected Identification Server.
- **Configure Alternate Server Address:** Select this checkbox to configure external IP address of Identification Server.
- **Server Address:** Enter the external network IP address which will be used for accessing identification server.
- **Server Port:** Enter the TCP port number. The default port number is 11005.
- **Identification Time-Out Duration (Sec):** Enter the duration in seconds after which the fingerprint template identification will get time out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Default Biometric Group No.:** Enter the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

# VEGA Door

---

VEGA series door controllers are engineered with careful blend of aesthetics, size, connectivity, reliability, and ease of use for modern enterprises. The VEGA devices are a perfect fit for Access Control and Time-Attendance solution required by modern organizations.

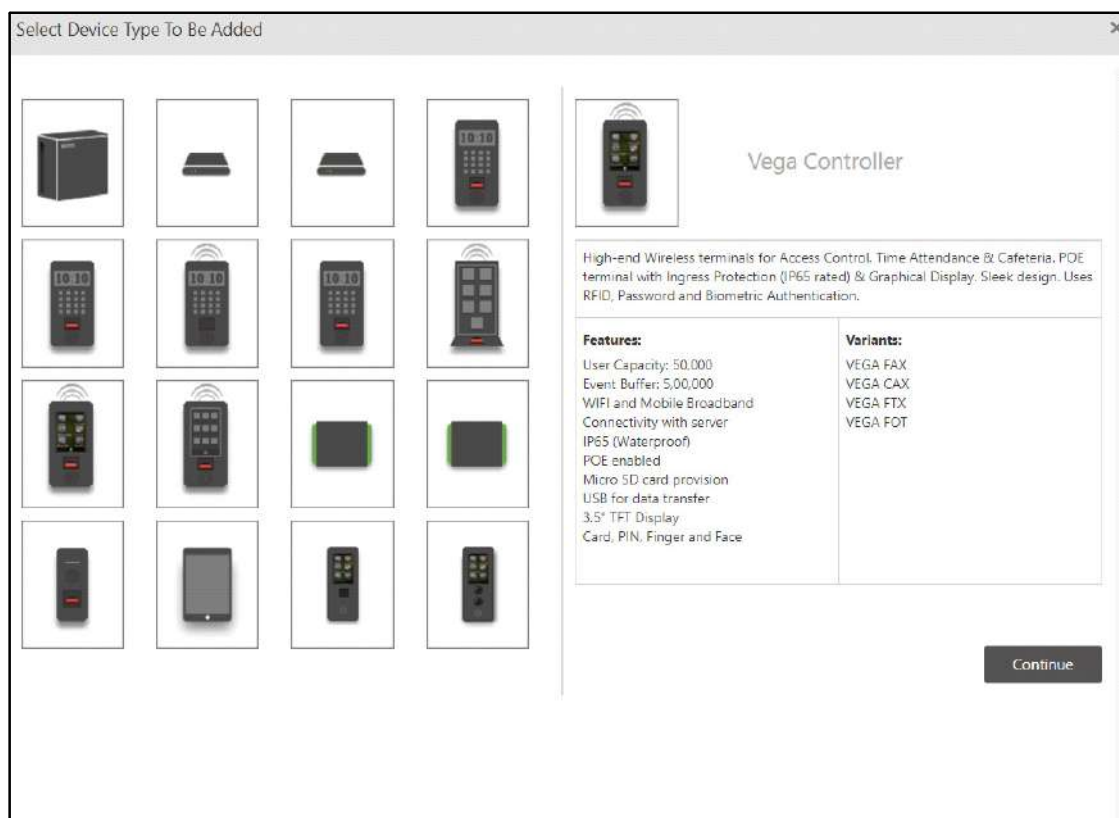

*There are various variants of VEGA— FAX, FAXQ, CAX, FOT— hence the features and functionalities supported will differ as per the variant installed.*

VEGA Door can be connected as **Direct Door** as well as **Panel Door**.

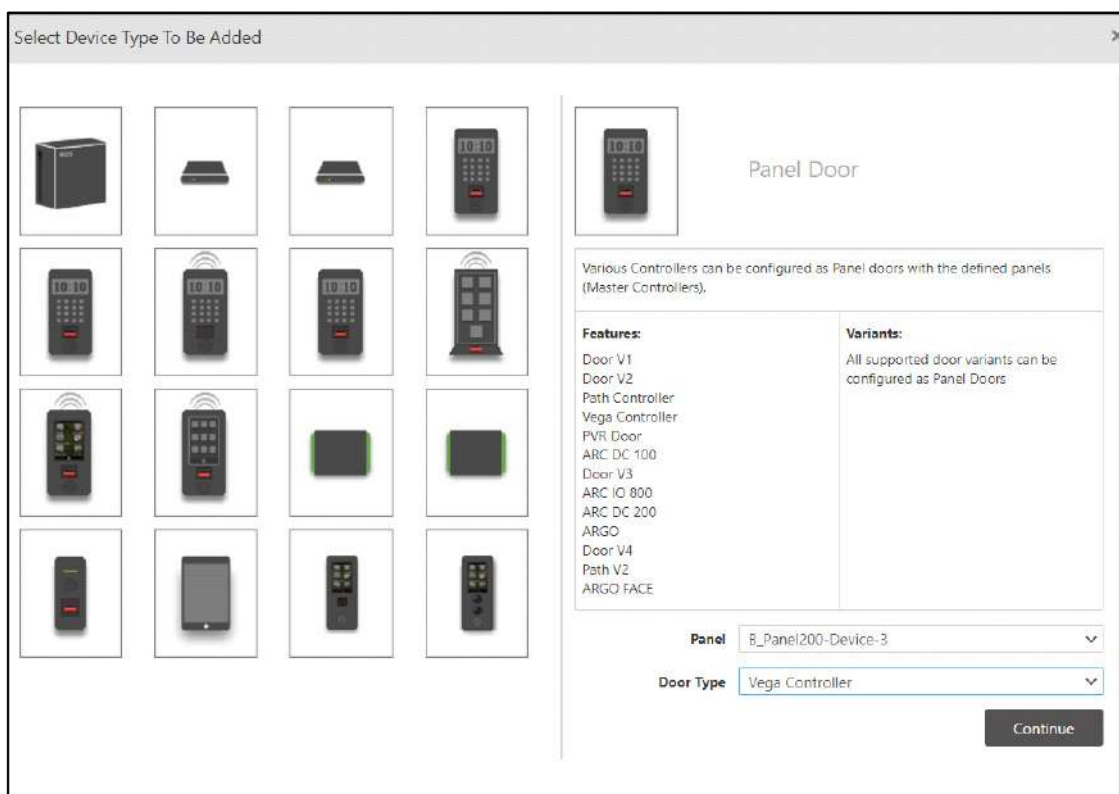

Click the Vega Controller device from the Device List to add it as a **Direct Door**.

OR

Click Panel Door to add VEGA Controller device as a **Panel Door**.

**Panel:** Select the desired Panel from the drop-down list with which you wish to connect the Door.

**Door Type:** Select **Vega Controller** from the drop-down list.

Click **Continue**.

The **Device Configuration** page for VEGA Controller appears.

If you wish to add devices automatically, click **Admin Module > System Configuration > Global Policy > Device**. Select the **Auto Add New Devices** check box. Once the device is connected in the network, it comes online in the COSEC Monitor.

The IP Address of the device will be displayed automatically in **Profile > Basic**.

*While adding devices to the COSEC Server, makes sure the Monitor Service is running.*

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#).
- **OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

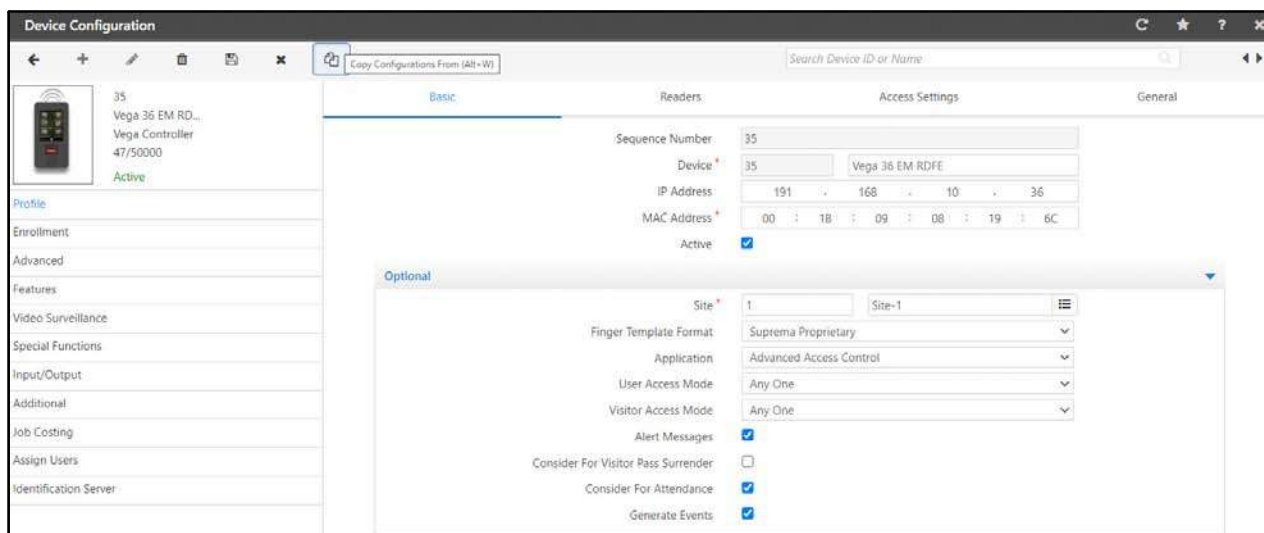

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#).*

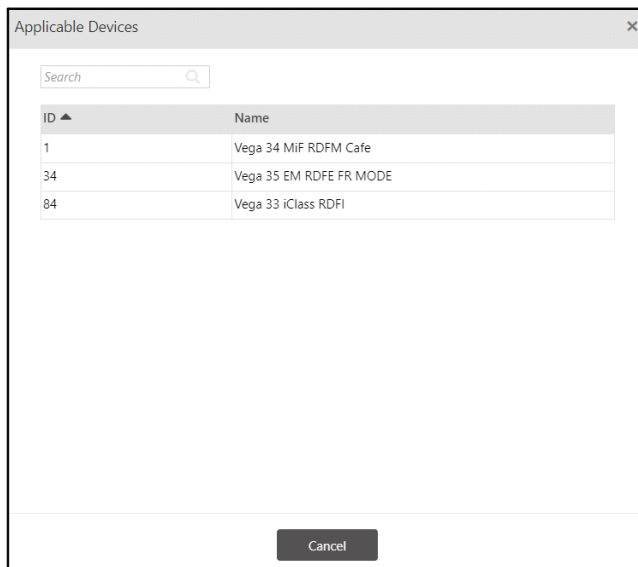

To do so, click **Copy Configuration From** .

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is divided into tabs: Basic, Readers, Access Settings, and General. The 'Basic' tab is active, showing fields for Sequence Number (35), Device (35), IP Address (191.168.10.36), and MAC Address (00:1B:09:08:19:6C). Below these, there's an 'Optional' section with fields for Site (1), Finger Template Format (Suprema Proprietary), Application (Advanced Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages (checked), Consider For Visitor Pass Surrender (unchecked), Consider For Attendance (checked), and Generate Events (checked).

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- *In case of Direct Door, the pop-up will display other Vega Direct Doors only. For example, if you have direct door devices — ARGO1, ARGO2, Vega1 and Vega2, then this pop-up will display only Vega1 and Vega2.*
- *In case of Panel Door, the pop-up will display other Vega Panel Doors connected with the same Panel only. For example if you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, ARGOPD1, ARGOPD2. In Panel2 the Panel Doors connected are Vega PD3 and Vega PD4. Then, if you are adding the new Vega Panel Door to Panel1, then this pop-up will display VegaPD1 and VegaPD2 only.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

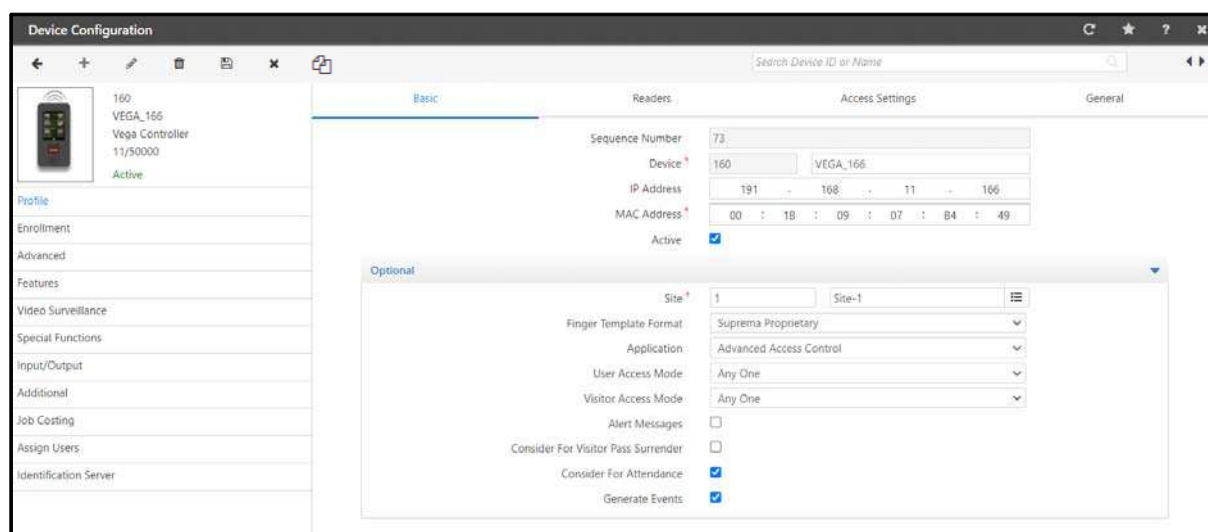

To configure the device parameters, click the following links:

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)
- [“Cafeteria”](#)
- [“Identification Server”](#)

## Profile

Setting up a door profile involves configuring basic parameters to set up any door controller device. This section enables the user to set up the basic profile for any new device.

To do so, on the **Device Configuration** page, click the **Profile** tab in the left pane.

To configure the Profile parameters click the following links:

- [“Basic”](#)
- [“Readers”](#)
- [“Access Settings”](#)
- [“General”](#)

## Basic

Click **Basic** tab. The **Basic** page appears.

*Sequence Number, Device, IP Address, MAC Address and Active are applicable for both Direct Door and Panel Door.*

For VEGA Door as a Direct Door,

Configure the following parameters:

- **Sequence Number:** This is a system generated sequence number for each new device.
- **Device:** Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address:** This is the IP Address assigned to the door. Once the device connection is established with the Server, this field will automatically displays the door IP address.
- **MAC Address:** Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. You can note-down the MAC address from the device when it is powered on.*

- **Active:** Select this check box to activate the device in the network.

*To add the Device automatically, click **Admin Module > System Configuration > Global Policy > Device**. Select the **Auto Add New Devices** check box.*

*The device will be added automatically but make sure you enable the **Active** check box in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

Click the **Optional** collapsible tab, to configure the following parameters:

The screenshot shows the 'Optional' configuration tab with the following settings:

Parameter	Value
Site	1 (Site-1)
Finger Template Format	Suprema Proprietary
Application	Cafeteria
User Access Mode	Face
Visitor Access Mode	Face
Cafeteria Face Access Mode	Item Selection
Alert Messages	None
Consider For Visitor Pass Surrender	<input checked="" type="checkbox"/>
Consider For Attendance	<input checked="" type="checkbox"/>
Generate Events	<input checked="" type="checkbox"/>

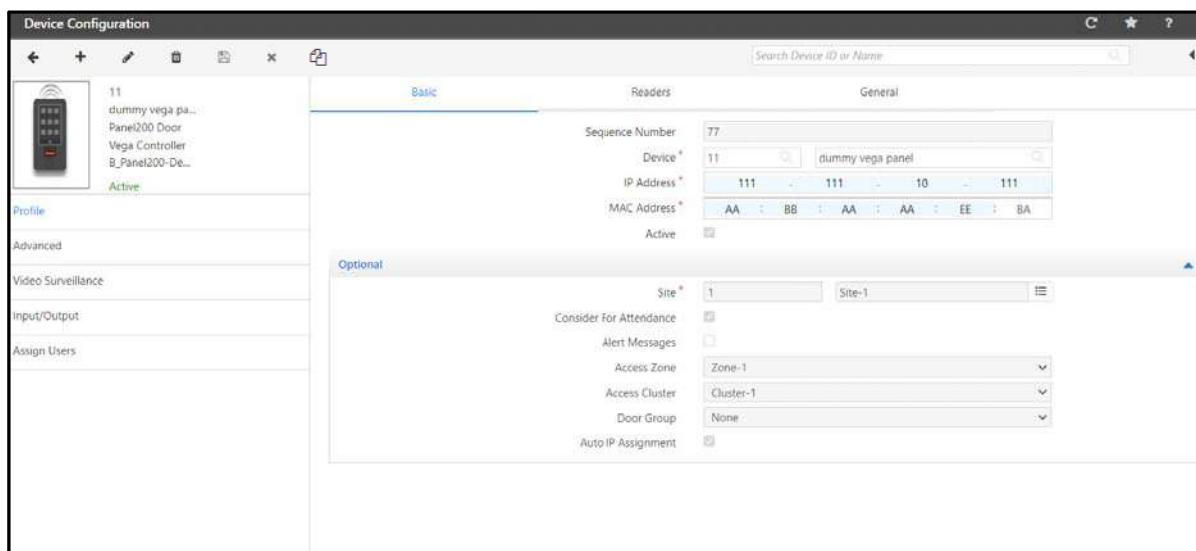

- **Site:** Click the picklist and select the site to which this door is to be assigned. Site is created from **Devices > Masters > Site**.
- **Finger Template Format:** Select the format according to which Finger Templates will be enrolled from the drop-down list— **Suprema Proprietary, Suprema ISO**. You can set the Finger Template Format globally from **System Configuration > Global Policy > Device > Suprema Finger Template Format**.
- **Application:** Select the type of application for which the device is to be used from the drop-down list— **Basic Access Control, Advanced Access Control or Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration. Make sure you configure **Cafeteria Face Access Mode**.
- **User/ Visitor Access Mode:** This defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop- down list:
  - Any one
  - Card
  - Card + PIN
  - Card + Biometrics
  - Card + Biometrics + PIN
  - Biometrics
  - Biometrics + PIN
  - Biometrics + Group
  - Biometrics then Card
  - Card then Biometrics
  - None
  - Face
  - Card + Face
  - PIN + Face
  - Biometrics + Face
- **Cafeteria Face Access Mode:** If you have selected **Cafeteria** as the **Application**, select the desired **Cafeteria Face Access Mode** type from the drop-down list— **None, Default Item, Item Selection**.

Default Item mode in Cafeteria will allow users a touchless cafeteria experience. In Default Item mode only the transaction for default item is allowed. A default item is assigned in each scheduled menu.

Item Selection mode in Cafeteria will allow users to select the desired menu items and allow a transaction using Face as a credential.

- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Select this check box to consider the this door for Visitor Pass Surrender. The Visitors can show their credentials on this device to surrender their passes.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Generate Events:** This check box is selected by default. Click to disable, if the server is not required to receive any events from this device.

For VEGA Door as a **Panel Door**.

Click the **Optional** collapsible panel, to configure the parameters:

- **Site:** Click the picklist and select the site to which this door is to be assigned. Site is created from **Devices > Masters > Site**.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Access Zone:** Select the desired Access Zone to be assigned to the door from the drop-down list.
- **Access Cluster:** Select the desired Access Cluster to be assigned to the door from the drop-down list.
- **Door Group:** The Door Group drop-down includes the list of all configured Door Groups on the corresponding Panel. By Default, None is selected.

- **Auto IP Assignment:** There is an option where the panel door can be assigned its IP from the device webpage. To enable this option, select the Auto IP Assignment check box.

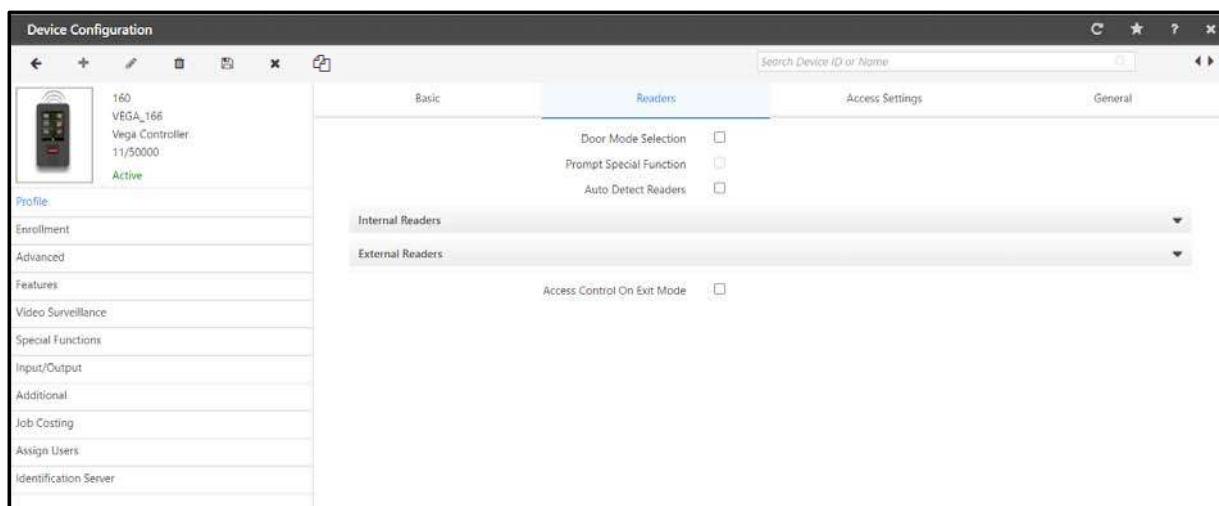

*Access Zone is configured while configuring Panel200.*

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables you to configure both internal and external readers for a door.

Click the **Readers** tab. The Readers page appears.

Configure the following parameters:

*Door Mode Selection, Prompt Special Function and Auto Detect Readers are applicable for Direct Door only.*

- **Door Mode Selection:** Select the check box, if you wish to allow the user to select the punch type — IN or OUT while punching on the device.

For example, when a door is in the Entry mode, the punches will always be in Entry side. But if you wish to mark the punch in Exit mode then you can do so if Door Mode Selection is enabled.

If Door Mode Selection is not enabled, you need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For more information on creating Reader Mode Schedules, refer **Devices > Masters > Reader Mode Scheduler**.

- **Prompt Special Function:** This will provide selection of special function on device screen and based on the selection of particular type of special function. Make sure you have enabled **Door Mode Selection**.
- **Auto Detect Readers:** Select this check box to enable auto detection of Readers on a Door connected with the Server.

## Internal Readers

This option allows the configuration of the Internal Reader for the door.

Click **Internal Readers** collapsible panel.

Configure the following parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop-down list.
- **Card Reader Type:** Select the desired Card Reader Type from the drop-down list — EM Prox Reader, HID Prox Reader, MiFare Reader, HID iClass-U Reader, HID iClass-W Reader.
- **Card Format:** Single or multiple card formats can be assigned to the readers of the door. A Default Format is assigned to the device. If no other card format is assigned to device; then this default format will be applied. For creating Card Formats, click **Devices > Master > Card Format**. For details refer to “[Card Formats](#)”.

#### Assigning Multiple Card Format

- Click **Add**, to assign multiple card formats to the device. Then click the picklist to select the card format and click **OK** to save the format.

Similarly, you can add maximum 5 card formats. When the card format is saved, the Configured bits of that format as configured from **Masters > Card** format are displayed here. Multiple Card format configurations will be sent to the door separated by **Format ID** that is Member No. along with all other format related parameters.

- **Finger Reader Type:** Select the **Finger Reader Type** as **Finger Reader**.

Click **FP Reader Configuration**  to set the Finger Print Module Calibration.

The **Finger Print Module Calibration** pop-up appears.

Configure the following parameters:

- **Security Level:** Select the desired Security Level to be set for the Finger Print Module Calibration from the drop-down list—Normal, Secure, Highly Secure. Security level specifies False Acceptance Ratio (FAR). Since False Acceptance Ratio (FAR) and False Rejection Ratio (FRR) is in inverse proportion to each other, FRR will increase with higher security levels. You can select **Normal** level for regular Time and Attendance system. You must select **Highly Secure** level for high security areas that require complete or maximum matching of template. You can select **Secure** level for approximate matching of template.
- **Lighting Condition:** Select the Lighting Condition to be set for the Finger Print Module Calibration from the drop-down list— **In Door**, **Out Door**. Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment.

- **Sensitivity:** Select the desired level of Sensor Sensitivity from the drop-down list — Level 1 to 8. This specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Select the desired Fast Mode to reduce the matching time with a little degradation of authentication performance from the drop-down list — Auto, Mode 1 to 6. Fast Mode parameter can be used to reduce the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. You can also select the Auto mode.
- **Image Quality:** Select the Image Quality to be set for the fingerprint from the drop-down list—Weak, Moderate, Strong, Strongest. When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest might lead to higher number of finger rejections during the enrollment process.

*Good quality of enrollment (around 70-75% quality) is recommended for proper identification of enrolled templates.*

- Click **Restore Defaults**, to set the values of the all the fields to default, if required.
- Click **Save**, to save the changes or **Close**, if you wish to discard the changes.
- **Enable Scheduling:** Select the check box to enable automated control of an Internal Reader. This will set Reader Mode of door as Entry or Exit as per user-defined schedules.
- **Reader Mode Schedule:** Click the picklist and select the schedule which is to be assigned to the internal reader of VEGA Door. With this the same reader can be configured to function both in Entry as well as Exit mode based on the scheduled timings.

*For configuring Reader Mode Schedule, refer Devices> Masters> Reader Mode Scheduler.*

- **Advertise Bluetooth:** Select this check box to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters:
  - **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.  
  
If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.
  - **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.  
  
Select the Bluetooth Range as — **Short (1m-2m)**, **Medium (5m-7m)**, **Long (>8m)** or **Custom**.
  - **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- Click **Save** to save all the configurations.

## External Readers

This option allows you to configure the External Reader for the door.

*Mode, External Reader Type, Card Format and Exit Switch are applicable for both Panel Door and Direct Door.*

- Click **External Readers** collapsible panel and configure the following parameters:

- Mode:** Select the **Mode** from the drop-down list—**Entry, Exit**.
- External Reader Type:** Select the desired type of External Reader from the drop-down list.

*If you are using PIN-W Reader; user's will be able to change their PIN number from the devices.*

- Card Format:** Select a Card format to be applicable for external readers of the device. This is applicable for all Direct Doors and Panel Doors. For details, refer to [“Card Formats”](#).
- Exit Switch:** Select this check box to enable the use of **Exit Switch**.

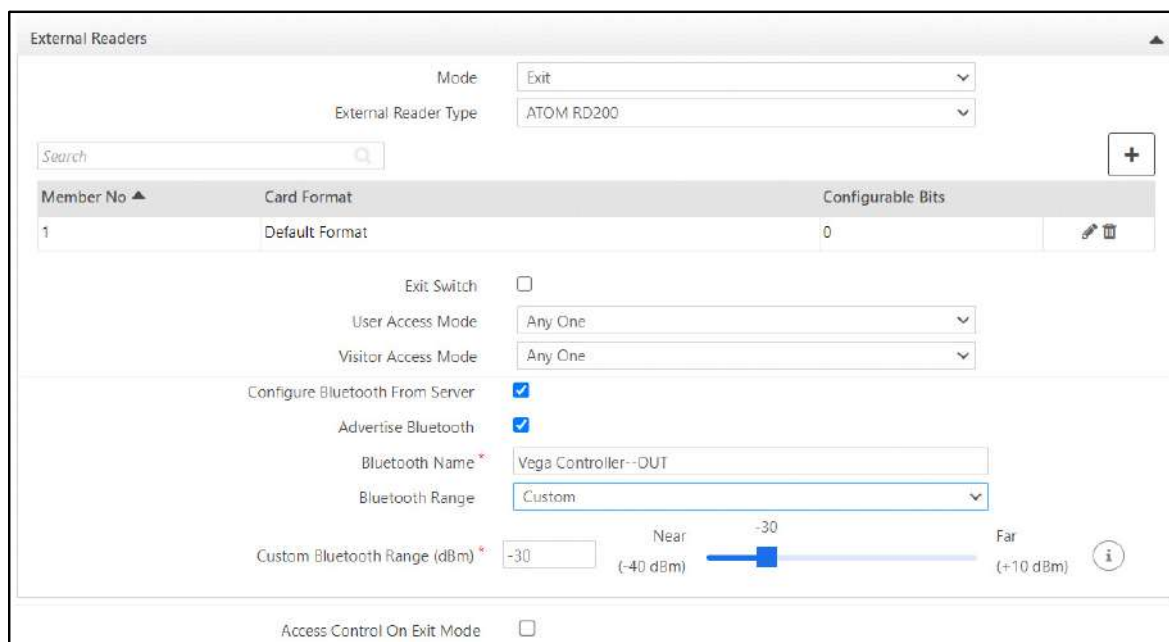

*User Access Mode, Visitor Access Mode and Access Control on Exit Mode is applicable for Direct Door only.*

- User/Visitor Access Mode:** Select the Access Mode from the drop-down list — Any One, Card, Biometrics, Card + Biometrics, Biometrics then Card, Card then Biometrics, None, BLE, Card + PIN, Biometrics + PIN, Card + Biometrics + PIN.

*Configure Bluetooth From Server, Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- Configure Bluetooth from Server:** When you select **External Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** check box to enable Bluetooth feature for the mentioned external readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this check box to enable Bluetooth of the VEGA device by which the device will be visible to others. Then configure the following parameters.
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement.

The Bluetooth Name can be a maximum of 20 characters.

- **Bluetooth Range-** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the bluetooth range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **External Reader Type** as ATOM RD200/300, you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

*If Auto Detect Reader is enabled, then External Reader Bluetooth parameters will not be visible.*

- **Access Control On Exit Mode:** Select this check box to enable the checking of the following access control policies on the door when the External Reader is in the Exit mode.
  - User enabled
  - User validity
  - Blocked user

- Time Based Access Check
- ASC
- User Access Group

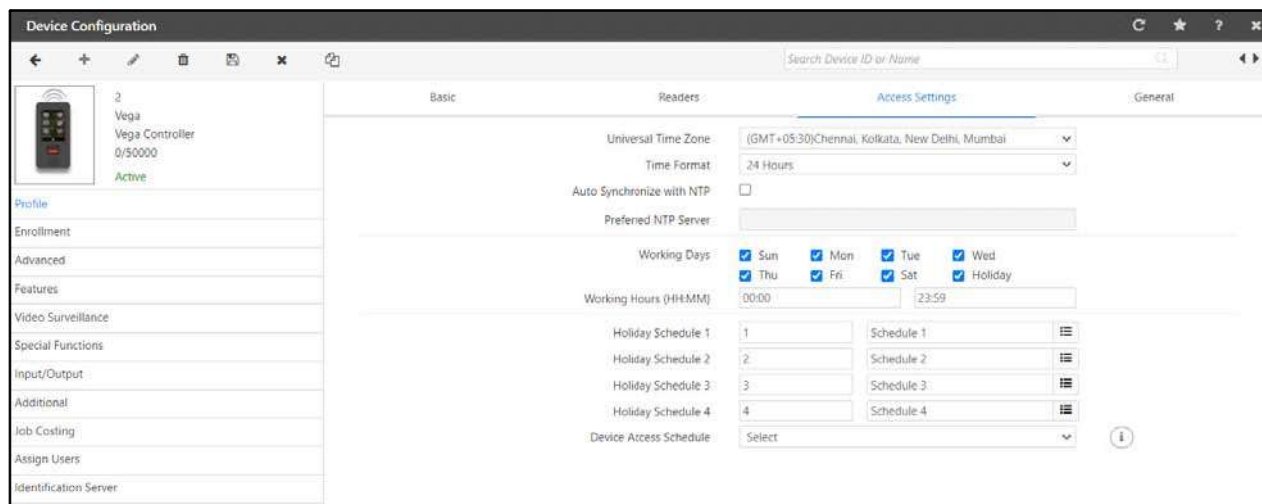

- Click **Save** to save all the configurations.

## Access Settings

*Access Settings are applicable for Direct Door only.*

- Click the **Access Settings** tab. The **Access Settings** page appears.

Configure the following parameters:

- **Universal Time Zone:** Select the desired geographic time zone in which the door will operate from the drop-down list.
- **Time Format:** Select the time format to be displayed on door's LCD display from the drop-down list — 24 Hours or 12 Hours.

**Auto Synchronize with NTP:** If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must select the **Auto Synchronize With NTP** check box to enable.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device web page, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  - You can specify the **Preferred NTP Server** of your choice. In this case device will first try to get Date and Time from that server address.

If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.

If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com, time.nist.gov); then device will first check that server first.

If it receives updated Date and Time then Updated Date and Time will be reflected on device web page and display screen.

- You can keep the Preferred NTP Server as blank. In this case device will check for Date and Time from the first NTP server.

*If user has manually entered Date and Time from the web page or Device Menu then these values of Date and Time will be reflected on device web page and display screen.*

*If you select the **Manual** option, you can manually update the time on the door with that of the system time as and when required. This can be accomplished from the COSEC Monitor.*

- **Working Days:** Specify the days on which the default working hours are applicable. To do so, select the respective check boxes of the relevant days.
- **Working Hours (HH:MM):** Specify the default working hours in HH:MM format.
- **Holiday Schedule:** Click the picklist and select the desired Holiday Schedule. You can assign upto four Holiday Schedules to the device.

*If the same Holiday Schedule is configured for a user and on door which is assigned to the user, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

- **Device Access Schedule:** All the Access Schedules created from the "[Access Schedules](#)" page appear in the drop-down list. By default, the Access Schedule, if assigned from the Access Schedule page appears here. If you wish to change the Access Schedule, select the desired Access Schedule to be assigned to the device from the list.

If an Access Schedule is selected, it will override the Working Days configuration.

If an Access Schedule is already assigned from "[Access Schedules](#)" page and a different schedule is selected here, it will override the schedule assigned from "[Access Schedules](#)" page and vice versa.

To revoke an Access Schedule, select the **Select** option from the list. The device will be removed from the Access Schedule under the "[Assign Doors](#)" section on the "[Access Schedules](#)" page.

## General

- Click the **General** tab. The General page appears.

Schedule 16:00 20:59  
Message Good Evening

Display Message 4 ☒  
Schedule 21:00 23:59  
Message Good Night

Multi-Language Support ☐

Auto Hide Menu Bar ☐

Configure the following parameters:

*Mute Buzzer, Allowed Acknowledgment and Denied Acknowledgment are applicable for both Direct Door and Panel Door.*

*If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/ Denied Acknowledgment will be applicable to these readers as well.*

- Mute Buzzer:** You can mute or unmute the door buzzer. Select the check box to enable or clear the check box to disable.
- Allowed Acknowledgment**
  - Display Duration (ms):** Specify the time duration for which the *Acknowledgment Allowed* message should be displayed. Valid Range: 250 to 3000ms.
  - LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list— **Long, Medium, Short, Shortest**.
- Denied Acknowledgment**
  - Display Duration (ms):** Specify the time duration for which the *Acknowledgment Denied* message should be displayed. Valid Range: 250 to 3000ms.
  - LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list — **Long, Medium, Short, Shortest**.

*Enable Display Messages, Custom Birthday Message, Display Message 1 to 4, Schedule, Message and Multi-Language Support are applicable for Direct Door only.*

- **Enable Display Messages:** Select this check box to enable the Custom Birthday Message and the Display Messages. Upto 4 Display Messages can be configured.
- **Custom Birthday Message:** Configure the birthday message which you wish to display on the door when the user punches on the door on his/her birth date.

The valid values are

**A-Z**

**a-z**

**0-9**

**`~!@#\$%^&\*()\_+-={}|\|:;?<>.,'""**

- **Display Message 1 to Display Message 4:** Select the respective check box of the desired Display Messages from 1 to 4, to enable.
  - **Schedule:** For each **Display Message**, define the time period for which the message is to be displayed.
  - **Message:** For each **Display Message**, configure the message you wish to display on the Panel Door as per the time set in the Schedule. Maximum 21 characters allowed.
- **Multi-Language Support:** Select this check box to enable multi-language support for this door.
- **Auto Hide Menu Bar:** If any user touches the device screen by mistake and enters into the Menu, then users punch will not be accepted by the device till the Menu is closed or till time out occurs. To avoid such a scenario, select this check box. This will hide the Menu, hence users will be able to punch on the door. To access the Menu, swipe upwards on the device screen. The Menu appears.

# Enrollment

On the **Device Configuration** page, click the **Enrollment** tab in the left pane.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration categories: Profile, Enrollment (selected), Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main content area is titled 'Temporary User' and contains the following settings:

- Enroll from Device:** ☐
- Enrollment Mode:** Biometrics (dropdown)
- Template Per Finger:** Single Template/Finger (dropdown)
- Maximum No. of Fingers:** Two (dropdown)
- Number of Fingers:** One (dropdown)
- Number of Cards:** One (dropdown)
- Enable Self-Enrollment:** ☐

To configure the Enrollment parameters click the following links:

- [“Settings”](#)
- [“Temporary User”](#)

## Settings

*Settings is applicable for Direct Door only.*

- Click the **Settings** tab. The **Settings** page appears.

The screenshot shows the 'Settings' tab selected in the 'Temporary User' section. The settings are identical to those shown in the previous screenshot:

- Enroll from Device:** ☐
- Enrollment Mode:** Biometrics (dropdown)
- Template Per Finger:** Single Template/Finger (dropdown)
- Maximum No. of Fingers:** Two (dropdown)
- Number of Fingers:** One (dropdown)
- Number of Cards:** One (dropdown)
- Enable Self-Enrollment:** ☐

Configure the following parameters:

- **Enroll from Device:** Select this check box to enable the enrollment of user from the door. When this check box is enabled, *Enroll User* special function on that device will be activated.

*If both Enroll User special function & Enroll From Device check box are inactive in Device Configuration, then if you enable Enroll User special function, Enroll From Device check box will also be enabled.*

- **Enrollment Mode:** Select the Credential from the drop-down list that can be enrolled using the special function at the door— **ReadOnlyCard, SmartCard, Biometric, BiometricthenCard, DuressFinger, Face**. Refer “[Enroll Credentials](#)” or “[Enrolling Users](#)” to enroll User/Worker. Refer “[Enrollment](#)” or “[Enroll Credentials](#)” to enroll Worker. Refer “[Enroll Credentials](#)” to enroll a Visitor.

*DuressFinger is applicable for User and Worker only.*

- **Template Per Finger:** This displays the values as configured in the Global Policy. This field is not editable. For details refer to “[User Policy](#)”.
- **Max Number of Fingers:** This displays the values of the Maximum Number of Fingers configured in the Global Policy. This field is not editable. For details refer to “[User Policy](#)”.
- **Number of Fingers/Cards:** Select the Number of Cards or Fingerprints to be enrolled based on the credential option selected in Enrollment Mode.
- **Enable Self-Enrollment:** Select this check box to enable the Self-Enrollment feature on this door.

## Temporary User

*Temporary User/Worker is applicable for both Direct Door and Panel Door.*

*Temporary User/Worker is not applicable for Cafeteria mode of devices.*

*For Panel Door to add Temporary User/Worker, make sure*

- *Temporary Addition of Unknown User is enabled from Panel200 > Enrollment > Temporary User.*
- *User Access Mode (Door) in Zones is — Face, Biometric or Card — as per your requirement.*

*For Direct Doors make sure the User Access Mode selected in Profile is — Face, Biometric or Card — as per your requirement.*

Click the **Temporary User** tab. The **Temporary User** page appears.

Grade	1	Grade-1	
Designation	1	Designation-1	
Custom Group 1	1	Custom Group 1	
Custom Group 2	1	Custom Group 2	
Custom Group 3	1	Custom Group 3	

Configure the following parameters.

- Temporary Addition of Unknown User:** Select the option to temporarily add an unknown user from the drop-down list. The options are — Disabled, As Temporary Worker or As Temporary User. By default, **Disabled** is selected. If you select **Disabled**, all the parameters are disabled.

You can add an unknown user either as a temporary user or worker from the device at a time.

If you select As Temporary User, for details refer to. [“As Temporary User”](#).

If you select As Temporary Worker, for details refer to [“As Temporary Worker”](#).

## As Temporary User

Temporary User		
Temporary Addition of Unknown User	Disabled	
Confirm before adding Temporary User	<input type="checkbox"/>	
<b>Auto Generate ID</b>

Category	1	Category-1
Grade	1	Grade-1
Designation	1	Designation-1
Custom Group 1	1	Custom Group 1
Custom Group 2	1	Custom Group 2
Custom Group 3	1	Custom Group 3

If you select **As Temporary User**, configure the following parameters.

- **Confirm before adding Temporary User:** Select the check box if you wish that a confirmation message should be displayed on the device display screen, to confirm a user before adding that user as a temporary user when enrolling the same from the device. . If this is not enabled, no confirmation message will be displayed and the user/worker will be enrolled automatically. You need to check the Temporary User/ Worker list to verify if the user is enrolled in the system.

### Auto Generate ID

- **ID Format:** Configure the required format of the ID as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user.

To select the different format for the ID, Enter the \* in **ID Format** box and the drop-down list containing different Value format list will appears. Select the required one from the drop-down list.

Click **Copy User Format from Global Policy** to copy the ID Format if you have configured the same from Global Policy. For more details, refer to ["Generate User ID"](#).

- **Numeric Value Length:** Enter the desired number of the digits from 1 to 15 till which the 'NUMVAL' will be generated. For example: 4

- **Zero Padding Required:** Select the check box to allow the addition of zeros before the 'NUMVAL' value to reach the configured Numeric value length. For example, if the Numeric value length is configured as 4 and the number assignment starts from a single digit then as explained in above example, the new user id to be generated is 'MATRIX4DOC1' if Zero Padding is enabled, it will generated as 'MATRIXDOC0001'.

## Auto Generate Name

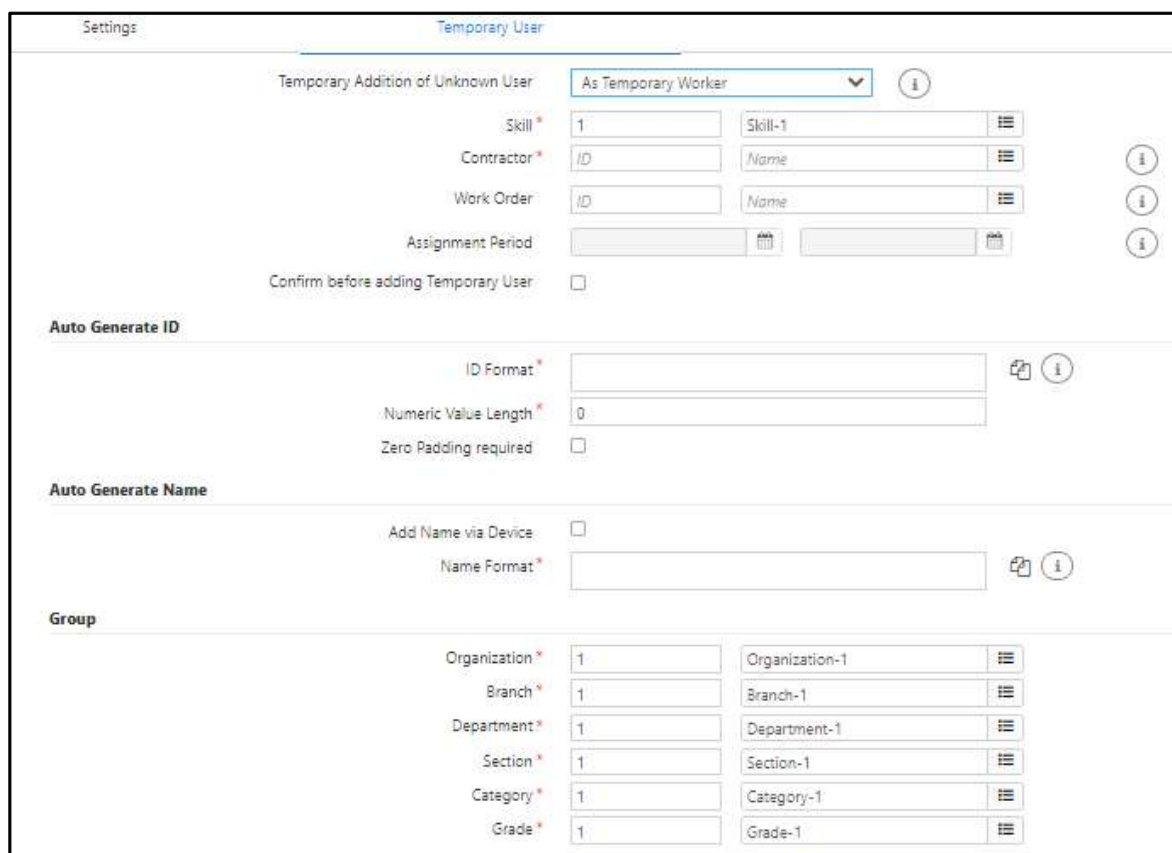

- **Add Name via Device:** Select the check box to enable adding the name of the temporary user through the device display screen while enrolling the user. If enabled, the **Name Format** parameter is disabled.
- **Name Format:** Configure the required format of the Name as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user. To select a different format for the ID, enter \* in **Name Format** box and select the desired format from drop-down list.

You can also copy the Name Format as configured in ID Format. To do so, click **Copy ID Format**  .

## Group

By default, groups for Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1, 2 and 3 are assigned. If you wish to assign different groups to the temporary user, you need to create groups from the Enterprise Module. Create the desired groups and then select the group from the respective picklist. For details on creating groups, refer to ["Configuring Groups"](#).

## As Temporary Worker

Settings Temporary User

Temporary Addition of Unknown User: As Temporary Worker

Skill: 1 Skill-1

Contractor: ID Name

Work Order: ID Name

Assignment Period: [Date Picker] [Date Picker]

Confirm before adding Temporary User: ☐

**Auto Generate ID**

ID Format: [Text Box]  

Numeric Value Length: 0

Zero Padding required: ☐

**Auto Generate Name**

Add Name via Device: ☐

Name Format: [Text Box]  

**Group**

Organization: 1 Organization-1

Branch: 1 Branch-1

Department: 1 Department-1

Section: 1 Section-1

Category: 1 Category-1

Grade: 1 Grade-1

If you select **As Temporary Worker**, configure the following parameters.

- **Skill:** Select the Skill to be assigned to the temporary worker from the picklist.
- **Contractor:** Select the Contractor to be assigned to the temporary worker from the picklist.

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

- **Work Order:** Select the Work Order to be assigned to the temporary worker from the picklist.
- **Assignment Period:** The work order assignment period is auto-displayed based on the work order selected. If you wish to change the assignment period, select the start date and end date of work assignment using the calendar.

The other temporary worker parameters are similar to that of temporary user. For details, refer to "[As Temporary User](#)".

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as Access Control Settings, Alarms, Device Timers as well as Wiegand.

To do so, on the **Device Configuration** page, click the **Advanced** tab in the left pane.

To configure the Advanced parameters click the following links:

- "[Settings](#)"
- "[Alarms](#)"
- "[Timers](#)"
- "[Wiegand](#)"

## Settings

The **Settings** tab differs for both Direct Door and Panel Door.

- Click **Settings** tab.

For configuring the Settings for **VEGA Controller** as a **Direct Door**, refer "[Settings - VEGA as Direct Door](#)".

For configuring the Settings for **VEGA Controller** as a **Panel Door**, refer "[Settings - VEGA as Panel Door](#)".

## Settings - VEGA as Direct Door

The **Settings** page for **VEGA Controller** as a **Direct Door** appears.

Configure the following parameters:

- **Generate Exit Switch Events:** Select this check box to enable the door to generate Events every-time the Exit Switch is used.
- **Generate Invalid User Events:** Select this check box to enable the door to generate Events for Invalid User inputs.

**Generate Invalid User Events** is applicable for all other credentials except **Face**. To generate events for **Face** credentials, make sure **Generate Unidentified Face Event** is enabled under **"Identification Server"**.

- **Generate Sequential IN-OUT Events:** Select this check box to generate user punches on device as IN-OUT sequential events irrespective of the mode in which the device is functioning.
- **Two Credentials Required:** Select this check box to enable the feature. If both, **Bypass Finger/Palm/Face For Attendance** (User Configuration > T&A > Attendance) and **Two Credentials Required** check boxes are enabled, then two credentials will be mandatory for the users and the door will verify both these credentials.
- **Show Pin:** Select this check box to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock:** Select this check box if you wish to allow the users to Exit even when the Door Relay is in locked condition.
- **Auto Re-lock:** Select this check box to allow the door to re-lock immediately when the Door Status changes to close from normal open irrespective of the defined Pulse Time. This will be supported only if a door sense is installed and enabled.

- **Auto Re-lock Timer:** Specify the time in seconds after which the door should re-lock automatically. Valid Range: 1 to 65535.
- **Enable Additional Security:** Select this check box to enable additional security at the door.
  - **Additional Security Code:** Enter a code (ranging from 1 to 65535) you wish to set as the security code.
  - **Re-enter Code:** Re-enter the security code to confirm.

*Changing this value can affect the Smart Identification (SI) function. Click **Default Code** to reset the **Additional Security Code** values as set in the **System Configuration > Global Policy > Device > Smart Identification > General Additional Security Code**.*

- **Enable Smart Identification:** Smart Identification enables the identification of a user using the Smart Card even though the user is not registered on a device. Select this check box to enable Smart Identification at the door and select the **Access Level** and the **Access Mode** from the drop-down list.
- **Auto Acknowledge Alarm:** Select this check box to enable the acknowledgment of all alarms for this device automatically.
- **Auto Acknowledge Alarm (sec):** Specify the time in seconds. When the alarm buzzer rings the timer will start and on expiry of this timer, the alarm buzzer will stop automatically.
- **Facility Code:** Specify a value for **Facility Code** to be set for access modes other than Card, if Facility Code is expected in Wiegand Output.
- **Allow Access Through Mobile:** Select this check box to allow the Access to device using COSEC ACS Application.
- **Mobile Entry/Exit Access Mode:** Select the **Entry and Exit** door **Access Mode** from the drop-down list — Mobile Only, Mobile then Biometrics, Mobile then Card and Mobile then PIN.

*If User Access Mode is selected as **None** and Mobile Access Mode is selected as **Mobile Then Biometrics** then the door can be accessed through Mobile and then Biometric credential.*

- **Show Attendance Details:** Select this check box to display the Attendance Details of the user on the door. This allows the user to view his/her Attendance Details on the door itself and there is no need to login into the ESS application to view the Attendance Details.

The attendance details of user will be displayed for a period of 3-4 seconds after the Access Allowed screen.

*The user whose Attendance Details are to be displayed on the door must be enabled for this feature. Enable the check-box **Show Attendance details on Device** from User Configuration > T&A > Attendance.*

*While an attendance detail of one user is being displayed on device and second user tries to access the device; new user will be processed.*

*Whenever both users of 2-person rule are allowed access on device then attendance details screen of second user will be displayed on the device.*

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

The Duplicate Access Time Interval is not applicable:

- if Duress Finger is detected by the device.
- if the device is in Cafeteria mode.
- to Smart Identification users.

## Temperature Logging

To configure Temperature Logging parameters, make sure the Enable check box for **Temperature Configuration** under “[Temperature and Symptoms Configuration](#)” in “[User Policy](#)” under “[Defining Global Policies](#)” is enabled.

- **Enable:** Select this check box to enable the temperature logging feature.
- **Sensor Type:** Select the type of thermal sensor integrated in the device from the drop-down list— **ASR**, **Web-Based** or **FEVOBOT**.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor from the drop-down list.
  - For Sensor Type-AST, the Sensor Interface options are: RS-232 and USB
  - For Sensor Type-Web-based, the Sensor Interface options are: HTTP/S
  - For Sensor Type-FEVOBOT, the Sensor Interface option is USB
- **Emissivity:** Specify the Emissivity for the Sensor. This parameter will be applicable when Sensor Type is AST. Default value is 0.95.
- **Calibration Parameter:** Specify the Calibration Parameter for the thermal sensor. Select **+**, if you wish the value should increase by 0.1 and select **–** if you wish that the value should decrease by 0.1. This parameter is applicable when Sensor Type is AST or Web-Based.
- **Approach to Sensor Wait-Timer:** Specify the time for which the device should wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** Specify the time till which temperature detection should be done for the user and if valid temperatures are not found till the expiry of timer, then timeout will be declared.

- **Tolerance between Consecutive Readings:** Specify the time within which the consecutive readings are considered to be valid user temperature readings. This parameter is applicable when Sensor Type is AST or Web-Based.
- **Consecutive Readings Count within Tolerance:** Specify the number of readings within the Tolerance time for which the consecutive readings are considered to be valid user temperature readings. This parameter is applicable when Sensor Type is AST or Web-Based. For example: if the count is set as 5, then 5 readings are taken and the reading with the highest temperature is considered.
- **Temperature Threshold:** Specify the Maximum Temperature value for user that should be detected and will be considered as valid temperature.
- **Minimum Temperature for Access:** Specify the Minimum Temperature value for Access that should be detected and will be considered as valid temperature.
- **Restriction Type:** Specify the Restriction Type from the drop-down list—**Soft, Hard**.

If **Soft** is selected the user will be allowed access but the Alert for the same will be sent if configured.

If **Hard** is selected the user will be denied access as well as the Alert for the same will be sent if configured.

- **Bypass if Sensor Disconnected:** Select this check box to allow provision of by-passing the temperature detecting feature if sensor connectivity is lost.

## Face Mask Compulsion

Face Mask Compulsion feature is used to enforce users to wear masks while they are within the premises.

After identifying the user, the Device will prompt the user to show Face with Mask when Face Mask Compulsion is enabled.

Based on identification of the Mask, the user will be allowed or denied access.

Make sure you have enabled **Enable FR** check box in **Devices> Device Configuration> Identification Server> Face Recognition> Enable FR** and configure the below mentioned parameters to avail this feature.

- **Enable:** Select this check box to enable Face Mask Compulsion feature for IDS.
- **Approach to Camera Wait-Timer (Sec):** This defines the time within which the user must approach the camera for face mask detection. Wait-Time Range: 0.0-15.0 seconds. Default: 3.0 seconds.
- **Mask Detection Time Out (Sec):** This defines the maximum time duration for which the system will try to detect the user's face mask. Detection Time out range: 0.0-15.0 seconds. Default: 4.0 seconds.

- **Restriction Type:** Select the type of restriction to be imposed when the face mask is not detected — **Soft or Hard**. Default: **Soft Restriction**.
- **Soft Restriction:** The access will be granted even if the user is identified without wearing a mask; however, an event and a warning are generated that indicates the user has been identified without wearing a mask.
- **Hard Restriction:** The access will be denied if the user is identified without wearing a mask.

Users face enrollments are dependent on the Visible Face parameter value set by you. For more details, refer to [“Face Recognition”](#).

## Settings - VEGA as Panel Door

The **Settings** page for **VEGA Controller** as a **Panel Door** appears.

The screenshot shows the 'Device Configuration' window for a VEGA Controller. The left sidebar contains a list of configuration categories: Profile, Enrollment, Advanced (selected), Video Surveillance, Input/Output, and Assign Users. The main area displays the 'Settings' tab with the following parameters:

- Auto Relock:** A checkbox that is currently unchecked.
- Auto Relock Timer (Sec):** A text input field containing the value '3'.
- Tail-Gating:** A checkbox that is currently unchecked.
- Reset Wait Timer:** A dropdown menu currently set to 'On Door Lock'.
- Man Trap Timer - Internal Reader (Sec):** A text input field containing the value '0'.
- Man Trap Timer - External Reader (Sec):** A text input field containing the value '0'.
- Enable Man Trap Door Interlocking:** A checkbox that is currently unchecked.
- Select Doors for Interlocking:** A section with two input fields labeled 'ID' and 'Name', and a list icon.
- Duplicate Access Time Interval (Sec):** A text input field containing the value '0'.

Configure the following parameters:

- **Auto Re-lock:** Select this check box to enable the door to re-lock automatically when the door status changes to close from normal open, irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Re-lock Timer:** Specify the time in seconds after which the door should re-lock automatically. Valid Range: 1 to 65535.
- **Tail-Gating:** Tailgating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the Panel Door, the occupancy count of a zone should be increased or decreased considering both the punch as well as the auxiliary input of the Panel Door. Select the check box if you wish to enable this feature.
- **Reset Wait Timer:** Select when the Wait Timer should be reset for Tailgating from the drop-down list — On Door Lock or Pulse Wait Timer.
- **Man Trap Timer- Internal Reader (Sec):** Specify the Man Trap Entry Timer within which the user should enter the next sequential door of a man-trap.

- **Man Trap Timer- External Reader (Sec):** Specify the Man Trap Exit Timer within which the user should exit the panel door to enter the next sequential door of a man-trap.
- **Enable Man Trap Door Interlocking:** Select this check box to enable the Door Interlock for the door (for example: Door1). This means if the Door1 is open, other doors will remain closed.
  - **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.
  - To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

Picklist For Panel Door

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID	Name ▲
<input type="checkbox"/>	10	ARCDC100_DD_Door
<input type="checkbox"/>	9	ARCDC100_DD_Door

<input type="checkbox"/>	1	ARGO_PANEL
<input type="checkbox"/>	2	DoorV3
<input type="checkbox"/>	7	DoorV3_Door
<input type="checkbox"/>	3	DOORV4_PANEL
<input type="checkbox"/>	6	dummy
<input type="checkbox"/>	4	PATHV2_PANEL
<input type="checkbox"/>	5	VEGA_PANEL

OK Cancel

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

For example, if Door 2 and Door 3 are selected for interlocking with Door 1, Door 2 and Door 3 will remain locked when Door 1 is open.

*Door Interlocking feature will not work for Degraded mode.*

*For example, when a door is in abnormal state and for that door interlocking is enabled, then user access to other doors of the interlocking group is allowed.*

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

*The Duplicate Access Time Interval is not applicable:*

- *if Duress Finger is detected by the device.*
- *when Panel200 Server mode is in Degraded mode.*
- *to Smart Identification users.*

## Alarms

In **Alarms** tab, you can assign below list of alarms to the door.

Alarms tab differs for Direct Door and Panel Door.

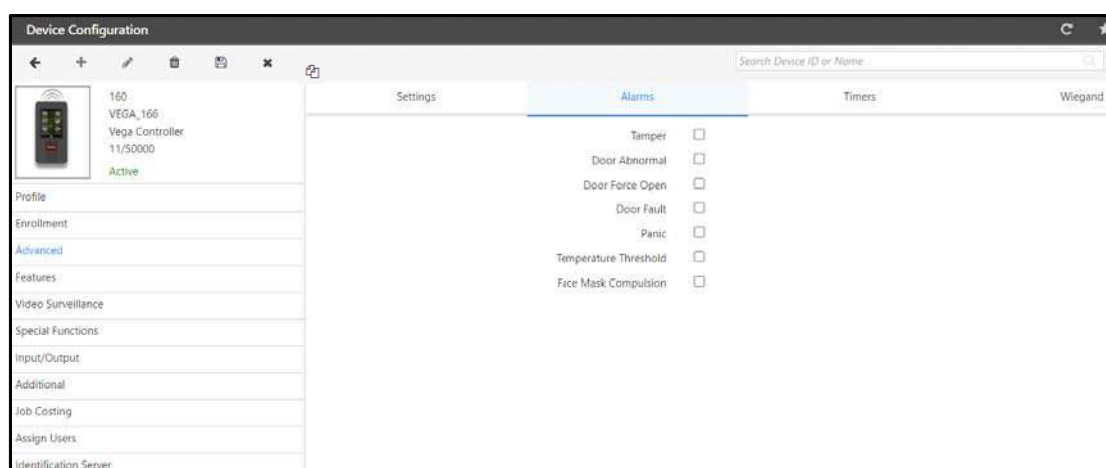

- Click **Alarms** tab.

For configuring the Alarms for **VEGA Controller** as a **Direct Door**, refer [“Alarms - VEGA as Direct Door”](#)

For configuring the Settings for **VEGA Controller** as a **Panel Door**, refer [“Alarms - VEGA as Panel Door”](#)

### Alarms - VEGA as Direct Door

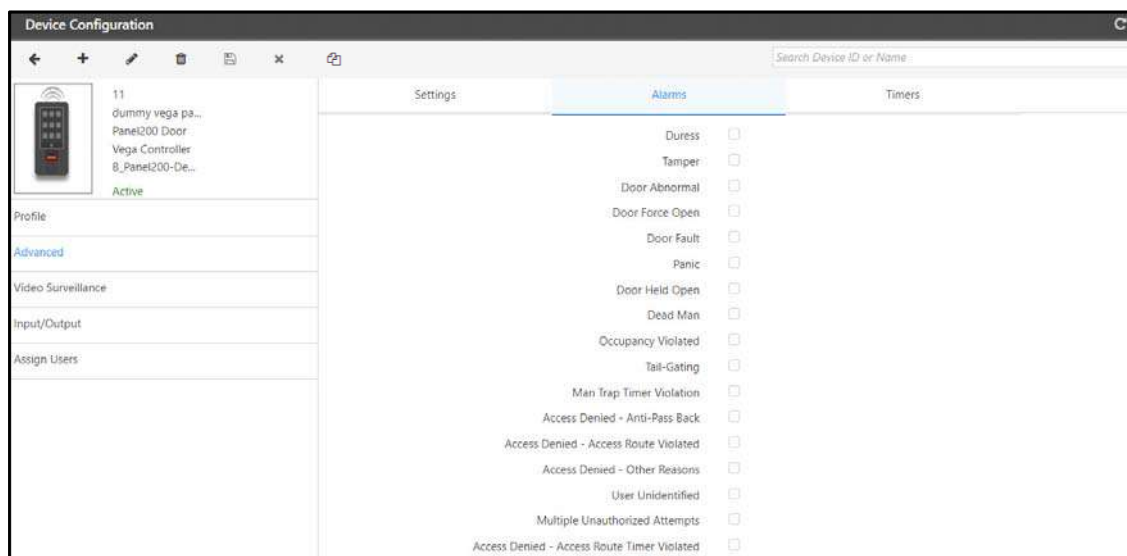

The **Alarms** page for VEGA as a Direct Door appears.

Select the check boxes of the desired alarms you wish to enable.

### Alarms - VEGA as Panel Door

The **Alarms** page for VEGA as a Panel Door appears.

Select the check boxes of the desired alarms you wish to enable.

## Timers

This section allows the configuration of various types of predefined device timers which can trigger off specific responses. In the Server, Timers are often used to control the door behavior and for triggering alarms.

The **Timers** tab differs for Direct Door and Panel Door.

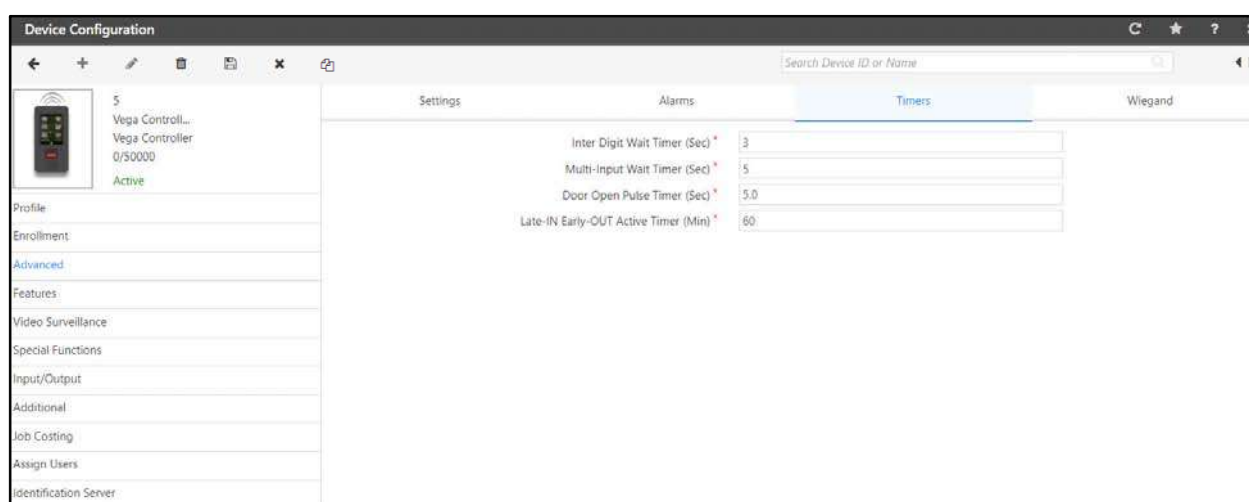

- Click **Timers** tab.

For configuring the Settings for **VEGA Controller** as a **Direct Door**, refer [“Timers - VEGA as Direct Door”](#).

For configuring the Settings for **VEGA Controller** as a **Panel Door**, refer [“Timers - VEGA as Panel Door”](#)

## Timers - VEGA as Direct Door

The **Timers** page for **VEGA** as a **Direct Door** appears.

Configure the following parameters:

- **Inter-Digit Wait Timer (sec):** Specify the time period in seconds (1 to 99) between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec):** Specify the time in seconds (3 to 99) for which system needs to wait for the second credential input from the user when more than one credential is to be used for granting access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec):** Specify the time in seconds (0.1 to 65535.0) for the door to remain open for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a **Door Abnormal** alarm.

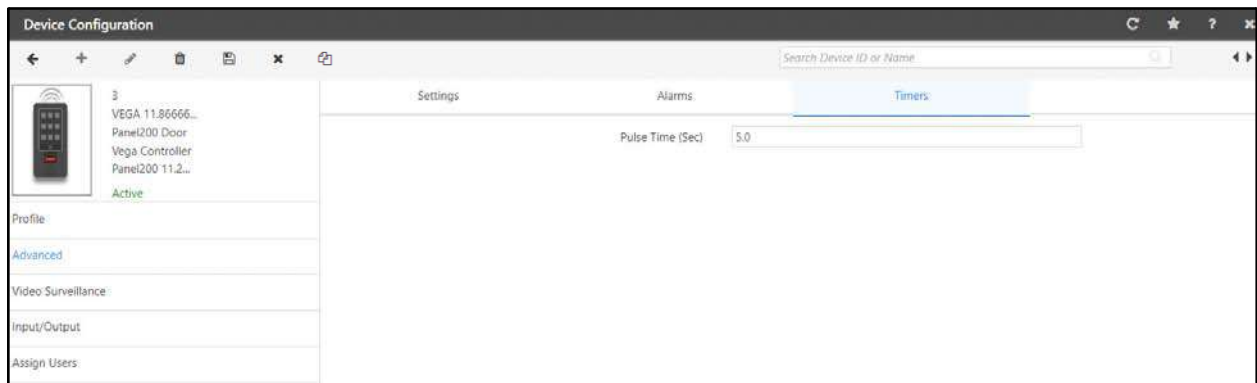

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

- **Late-IN Early-OUT Active Timer (min):** Specify the time in minutes (1 to 99) for which the Late-IN and Early-OUT special functions will remain active after being enabled on the door.

## Timers - VEGA as Panel Door

The **Timers** page for **VEGA** as a **Panel Door** appears.

- **Pulse Time (sec):** Specify the time in seconds (0.1 to 65535.0) for the panel door to remain open for a valid credential.

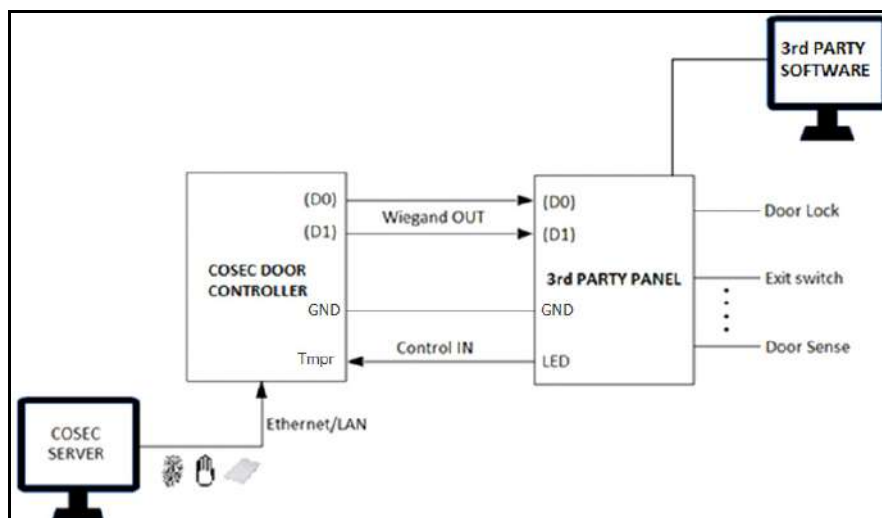

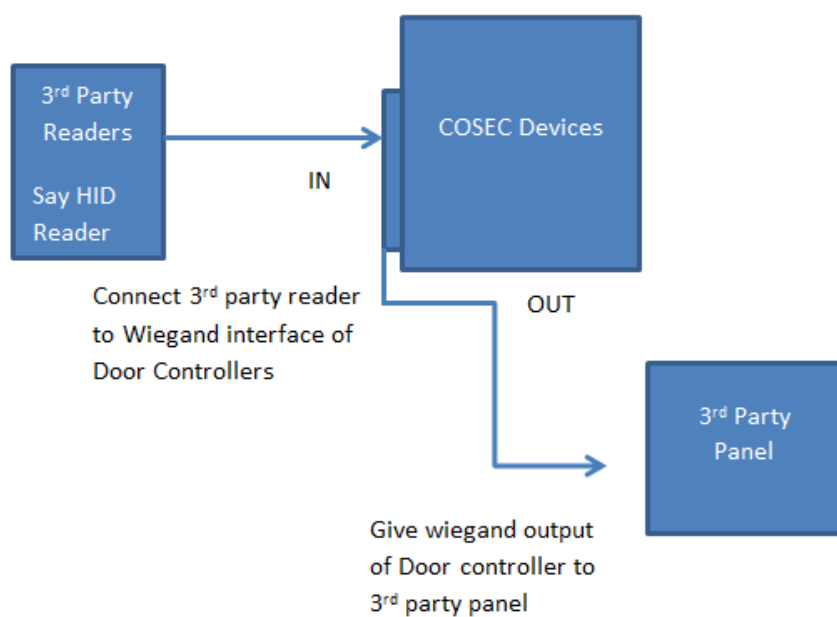

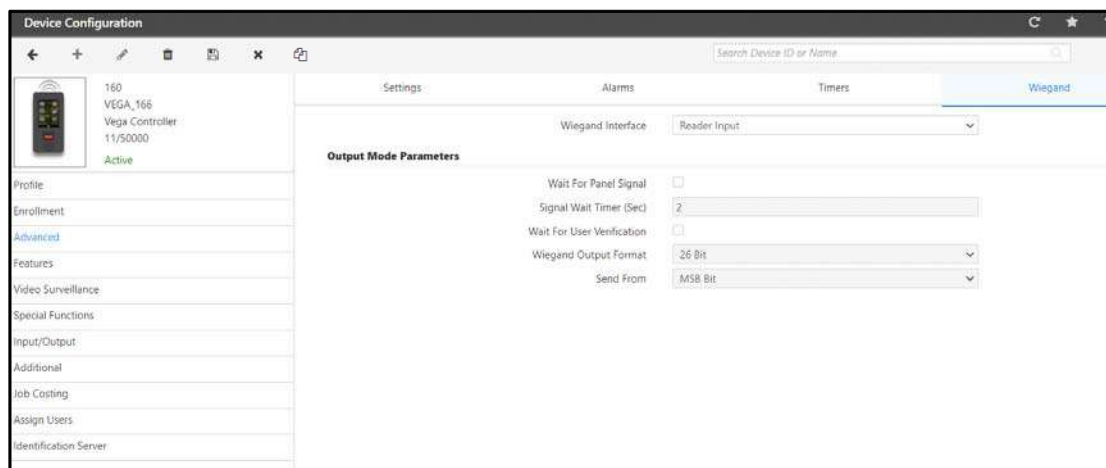

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

## Wiegand

*Wiegand is applicable for Direct Door only.*

- Click the **Wiegand** tab. The Wiegand page appears.

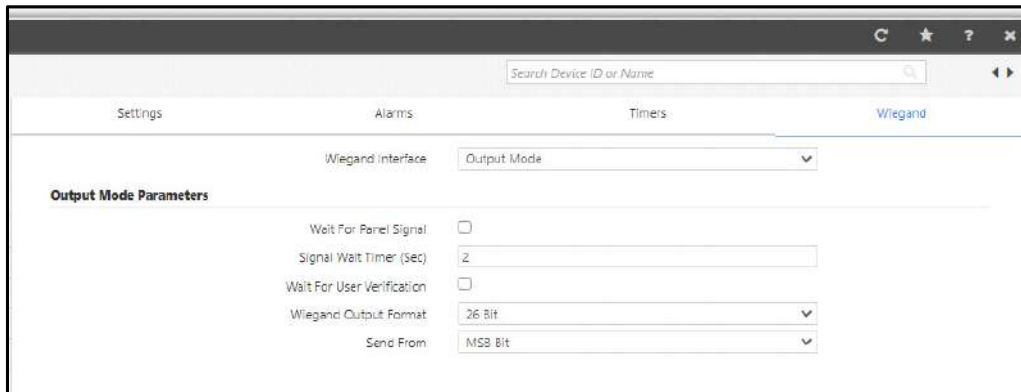

- **Wiegand Interface:** The devices can be connected both as input devices (that is, to receive data from a Wiegand Reader) or output devices (that is, to support output to third party panel) via the Wiegand interface as shown below.

So select the interface of Door controller as **Output Mode** to work as Wiegand Output to Panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the Output Mode parameters will be disabled.

If you select Output mode then configure the **Output Mode Parameters**.

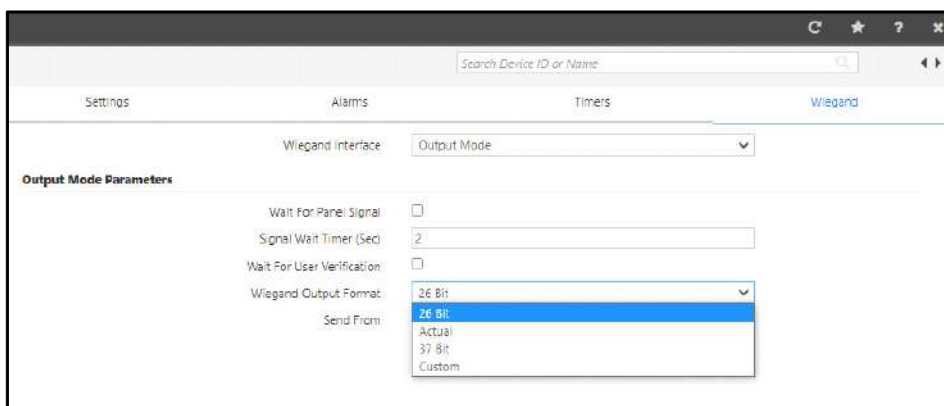

## Output Mode Parameters

The screenshot shows a software window titled 'Wiegand' with tabs for Settings, Alarms, Timers, and Wiegand. The Wiegand tab is active, and the 'Wiegand Interface' dropdown is set to 'Output Mode'. Below this, the 'Output Mode Parameters' section is visible, containing the following settings:

- Wait For Panel Signal: ☐
- Signal Wait Timer (Sec):
- Wait For User Verification: ☐
- Wiegand Output Format:
- Send From:

- **Wait For Panel Signal:** Select the check box to enable. If this option is enabled the Panel Door will wait for reply from the connected third party device before triggering any output. You need to configure the **Signal Wait Timer (Sec)**.
- **Signal Wait Timer:** Specify the time for which the Panel Door should wait for reply from the connected third party device before triggering any output.
- **Wait For User Verification:** Select the check box to enable. If this option is enabled, user verification will be requested on the third party device before triggering any output.
- **Wiegand Output Format:** Select the desired format — 26 Bit, 37 Bit, Actual or Custom.

This screenshot is similar to the previous one, but the 'Wiegand Output Format' dropdown menu is open, showing the following options: 26 Bit, Actual, 37 Bit, and Custom. The '26 Bit' option is currently selected.

If you select **Custom**, you can configure details of fields to be sent as output from the Wiegand reader that has been added.

Wiegand Format		
For Allowed Events	ID	Name
Allowed Code		
For Identified Events	ID	Name
Identified Code		
For Denied With Invalid Biometric Events	ID	Name
Invalid Biometric Code		
For Denied With Invalid Card Events	ID	Name
Invalid Card Code		
For Denied With Invalid PIN Events	ID	Name
Invalid PIN Code		
For Denied With Credential Time-Out Events	ID	Name
Credential Time-Out Code		

- For each of the listed events, click the picklist to select the desired **Wiegand Output Format**.
- Assign an Access **Code** for each communication (for example Invalid PIN Code). This will depend on the number of output bits configured for Access Code in the selected Wiegand Output Format.
- **Send From:** Select the desired sending order for reader data — MSB or LSB Bit.

## Features

*The Features are available only with the Access Control Module license and are applicable for Direct Door only.*

The Features tab enables the user to enable certain Access Control features for the device.

To do this, on the **Device Configuration** page, click the **Features** tab in the left pane.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, **Features** (highlighted), Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, Cafeteria, and Identification Server. The main area displays the 'Features' configuration for two sets, 'Set1' and 'Set2'. The 'Set1' tab is active. The configuration includes sections for 'Absentee Rule', 'Occupancy Control', 'Use Count Control', and 'Duress Detection'. Each section has an 'Enable' checkbox and specific parameter fields. For 'Occupancy Control', the 'Maximum Occupancy Limit' is set to 9, the 'Minimum Occupancy Limit' is set to 1, and 'Zero Occupancy' is checked. For 'Use Count Control', the 'Use Count Limit (Per Minute)' is set to 5. The 'Duress Detection' checkbox is unchecked.

Feature	Enable	Parameter	Value
Absentee Rule	<input type="checkbox"/>		
	<input type="checkbox"/>		
Occupancy Control	<input type="checkbox"/>	Maximum Occupancy Limit	9
		Minimum Occupancy Limit	1
		Zero Occupancy	<input checked="" type="checkbox"/>
	<input type="checkbox"/>		
Use Count Control	<input type="checkbox"/>	Use Count Limit (Per Minute)	5
	<input type="checkbox"/>		
Duress Detection	<input type="checkbox"/>		
	<input type="checkbox"/>		

To configure the Features parameters, click the following links:

- [“Set1”](#)
- [“Set2”](#)

## Set1

- Click **Set1** tab. The **Set1** page appears.

This screenshot is identical to the one above, showing the 'Device Configuration' window with the 'Features' tab selected. The 'Set1' tab is active, and the configuration parameters for 'Occupancy Control' and 'Use Count Control' are visible. The 'Set2' tab is also visible but not active.

Configure the following parameters:

#### Absentee Rule

- **Enable:** Select this check box to enable the feature on the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.

For configuring the rule, refer to [“Absentee Rule”](#).

#### Occupancy Control

- **Enable:** Select this check box to enable the feature on the door.
- **Maximum Occupancy Limit:** Specify the maximum number of users to be allowed within the controlled area, after which a user exit is required to enable access to another user.
- **Minimum Occupancy Limit:** Specify the minimum number of occupants to be present within the controlled area.
- **Zero Occupancy:** Select the check box to enable the controlled area to be empty.

For configuring the rule, refer to [“Occupancy Control”](#).

#### Use Count Control

- **Enable:** Select this check box to enable the feature on the door.
- **Use Count Limit (Per Minute):** Specify the maximum number of times a user is allowed to access an area with valid credentials per minute.

For configuring the rule, refer to [“Use Count Control”](#).

#### Duress Detection

- **Duress Detection:** Select this check box to enable Duress Detection on the door. The default duress detection code is displayed which is used to generate the duress alarm. Specify the desired duress code. This code informs that a user is forced to open the door under threat. Once this feature is enabled the system waits for the duress code after the User PIN and the right arrow key input before enabling the duress alarm. The keys have to be pressed in the following order: (User Pin Code) → (Right Arrow Key) → (2 digit Duress Code).

## Set2

Click **Set2** tab. The **Set2** page appears.

The screenshot shows the 'Set2' configuration page with three main sections:

- First IN User Rule:**
  - Enable: ☐
  - Reset On: ☒ Day Change ☐ Timer Expiry
  - Access Timer (Sec):
  - First IN User Group:
- Anti-Pass Back (APB):**
  - On Entry: ☐
  - On Exit: ☐
  - Hard/Soft:
  - Forgiveness: ☒
  - Reset After: ☒ Day Change ☐ Timer Expiry
  - Forgiveness Timer (Min):
- 2-Person Rule:**
  - Enable: ☐
  - Mode:
  - Primary Group:
  - Secondary Group:
  - 2nd Person Wait Timer (Sec):

Configure the following parameters:

### First-IN User Rule

- **Enable:** Select this check box to enable the feature on the door.
- **Reset On:** Select when the First-IN User rule should be reset from the options — **Day Change** or **Time Expiry**.

If you select **Time Expiry**, configure the **Access Timer (Sec)**.

- **Access Timer (sec):** Specify the duration for which the rule should be applied. After the expiry of this timer, the rule will be reset for all the users.
- **First-In User Group:** Select the desired group which should be valid at the door from the picklist.

For configuring the rule, refer to [“First In User Assignment”](#).

### Anti-Pass Back (APB)

- **On Entry:** Select this check box to enable the system to monitor the entry reader for APB violation.
- **On Exit:** Select this check box to enable the system to monitor the entry as well as the exit readers for APB violations.
- **Hard/Soft:** Select the restriction type from the drop-down list options—Soft or Hard.

**Hard APB:** If you select Hard APB, access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.

**Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.

- **Forgiveness:** Select this check box to enable the system to reset the APB status.

If **Forgiveness** is enabled, configure the following parameters.

- **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his/her card for entry in the next morning.
- **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of defined time.

If **Reset After Timer Expiry** is selected, configure the following parameter.

- **Forgiveness Timer (Mins):** Specify the time duration in minutes after which Anti-Pass Back status will get reset and the pass will be in original state.

## 2-Person Rule

- **Enable:** Select this check box to enable the feature on the door.
- **Mode:** Select the Mode from the drop-down list options— Primary Must or Primary & Secondary Must.
- **Primary Group:** Select the desired group from the drop-down list.
- **Secondary Group:** Select the desired group from the drop-down list.
- **2nd Person Wait Timer (sec):** Specify the wait time in seconds after which the second person is allowed to punch on the door.

For configuring the rule, refer to [“2 Person Rule Assignment”](#).

## Video Surveillance

*Video Surveillance is applicable for both Direct Door and Panel Door.*

The **Video Surveillance** tab enables the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To do this, on the **Device Configuration** page, click the **Video Surveillance** tab in the left pane.

**Device Configuration**

160

FTP Login Credentials ☐

User Name: User Name  
Password: \*\*\*\*\*

To configure the Video Surveillance parameters, click the following links:

- [“Visual Tagging”](#)
- [“Satatya/IP Camera Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported Hybrid and Network Video Recorders and grab images triggered by user events at the Doors. The **Visual Tagging** tab enables the administrator to define the video recorder parameters.

Click the **Visual Tagging** tab. The **Visual Tagging** page appears.

**Visual Tagging**

Satatya Integration

Capturing Device: Matrix HVR/NVR

MAC Address \*  
Camera ID \*  
Storage Root Folder \*

FTP Login Credentials ☐

User Name \*  
Password \*

To view the user events and related images, click **Admin > Views/Logs > Event View**. To know more about viewing events, refer to [“Event View”](#).

Configure the following parameters:

- **Capturing Device:** Select the video recording device type from the drop-down list options — Matrix HVR/NVR, Milestone or IP Camera.

If you select **Matrix HVR/NVR**, refer to [“Configuring Matrix HVR/NVR Parameters”](#).

If you select **Milestone**, refer to [“Milestone Integration”](#).

If you select **IP Camera**, refer to [“Configuring IP Camera Parameters”](#).

## Configuring Matrix HVR/NVR Parameters

If you select Matrix HVR/NVR, then configure the following parameters:

The screenshot shows a configuration window titled "Satatya Integration" with two tabs: "Visual Tagging" (selected) and "Satatya Integration". The "Capturing Device" dropdown is set to "Matrix HVR/NVR". Below this, there are three input fields: "MAC Address" (with a red asterisk), "Camera ID" (with a red asterisk), and "Storage Root Folder" (with a red asterisk). At the bottom, there is a checkbox for "FTP Login Credentials" and two input fields for "User Name" and "Password" (both with red asterisks).

- **MAC Address:** Specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID:** Specify the Camera number or Camera ID for IP cameras. For analog cameras, specify the camera number.
- **Storage Root Folder:** Specify the Root Folder path or FTP Path where the uploaded images are to be saved.
- **FTP Login Credentials:** Select this check box to activate the FTP login credentials for authentication.
- **User name:** Specify the FTP Server User Name.
- **Password:** Specify the FTP Server Password.

## Configuring IP Camera Parameters

If you select IP Camera, then configure the following parameters:

The screenshot shows a 'Device Configuration' window with a sidebar on the left containing a list of menu items: Profile, Enrollment, Advanced, Features, Video Surveillance (highlighted), Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Satatya/IP Camera Integration' and contains the following fields:

- Capturing Device:** A dropdown menu with 'IP Camera' selected.
- Snapshot URL:** A text input field containing 'http://192.168.102.192'. Below it is a note: 'Note: Mention the protocol http or https in URL.'
- API Login Credentials:** A section containing two fields:
  - User Name:** A text input field with the placeholder 'User Name'.
  - Password:** A password input field with masked characters '\*\*\*\*\*'.

- **Snapshot URL:** If Capturing device is selected as IP Camera; then enter the API URL for taking the Snapshot through IP camera. You can use any camera for taking the snapshot/photo. The API for capturing snapshot will be available in the API document of camera.
- **User Name:** Enter the Username for accessing API for taking the Snapshot through IP Camera.
- **Password:** Enter the Password for accessing API for taking the Snapshot through IP Camera.

*It is the same username and password using which IP camera login is done. For example, username admin and password admin*

*The allowed values for snapshot URL, User Name and Password are **A-Z, a-z, 0-9 !\"#\$%&'()\*+,- . / ; : < = > ? @ [ \ ] ^ \_ ` { | } ~***

## Satatya/IP Camera Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type or IP Camera is selected as the **Capturing Device** (from *Visual Tagging*).

It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices/ IP Camera as per the configuration on this page. The Satatya/IP Camera Integration page appears as shown below:

Click **Satatya/IP Camera Integration** tab. The **Satatya/IP Camera Integration** page appears.

Configure the following parameters:

- **Integration Type:** Select the **Integration Type** from the drop-down list options—Wired or Network.

If you select **Wired Integration**, door will be physically connected with the Satatya Device.

If you select **Network Integration**, connection can be by Ethernet, Wireless or Broadband depending upon the COSEC device support.

If you select **Matrix HVR/DVR** as the **Capturing Device** in **Visual Tagging** and selected **Network** as the **Integration Type** in **Satatya/IP Camera Integration**, refer to [“Configuring Network Integration Parameters”](#).

If you select **IP Camera** as the **Capturing Device** in **Visual Tagging**, for configuring the **Satatya/IP Camera Integration** parameters refer to [“Configuring IP Integration Parameters”](#).

## Configuring Network Integration Parameters

- **Active:** Select this check box to enable the SATATYA Integration functionality.
- **IP Address:** Specify the IP Address of HVR/NVR.
- **Port Number:** Specify the Port Number of HVR/NVR.
- **Schedule Name:** Specify a user friendly Name for the Integration function.
- **Active:** Select this check box to enable the schedule.
- **Schedule:** Specify the Start Time and End Time of the Schedule in HH:MM format.
- **Days:** Select the check boxes for the desired Days on which you wish to apply the Schedule.
- **Event:** Select a COSEC Event for which the action is to be configured from the drop-down list.
- **Mode:** Select the event Mode from the drop-down list options—Entry, Exit, Both if you select the Event as Access Allowed, Access Denied or Invalid User.
- **Action:** Select the Action for the Satatya device from the drop-down list options—Recording, Image Upload, Video Pop-up, PTZ Preset, Mail Image.

If you select **Recording**, specify the **Duration Min..**

If you select **Upload Image**, Images will be uploaded as per the FTP settings.

If you select **Video Pop-up**, specify the **Duration Sec.** The video pop up will be generated on the local client of Satatya device.

If you select **PTZ Preset**, specify the desired **Position No.**

If you select **Mail Image**, specify the **Email ID.**

- **Camera:** Select the check boxes of the desired camera channels depending on the Action selected.

**Example 1:** For Action as Video Pop up and the camera channel selected is 24, then the pop-up of Camera 24 will be shown for 10 seconds.

**Example 2:** For Access Allowed event on COSEC Device and the camera channel selected are 4,6,8 and 10, then recording of these cameras will be done for 10 seconds.

- Click **Add**. All the Events and Actions configured for them appear in a list.

## Configuring IP Integration Parameters

If you select IP Camera in Capturing Device under Visual Tagging, then configure the following parameters under IP Camera Integration.

The screenshot shows the 'Device Configuration' window with the 'Satatya/IP Camera Integration' tab selected. On the left, a sidebar lists various configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area contains the following fields:

- Schedule Name \***: A text input field.
- Active**: A checked checkbox.
- Event**: A dropdown menu with 'User Allowed' selected.
- Mode**: A dropdown menu with 'Both' selected.
- Schedule Range \***: Two time input fields, '00:00' and '23:59'.
- Days \***: A grid of checkboxes for days of the week and a 'Holiday' checkbox. All are checked: Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday.
- Add** and **Cancel** buttons.

- **Schedule Name:** Specify a user friendly Name for the Schedule for the Device-IP Camera Integration.
- **Active:** Select this check box to activate the schedule for the IP Camera.
- **Event:** Select the desired Event for which the action is to be configured from the drop-down list. The Events will appear in the list based on the availability of the license.

*You can configure a maximum 20 Events or Schedules for a single device.*

- **Mode:** Select the desired Mode from the drop-down list—Entry, Exit, Both.
- **Schedule Range:** Specify the **Start** and **End Time** for the schedule.
- **Days:** Select the check boxes of the desired days on which you wish run the schedule.

Click **Add** to add the configured schedule. The schedule will be listed in the grid. Then click **Save** to save the schedule integration.

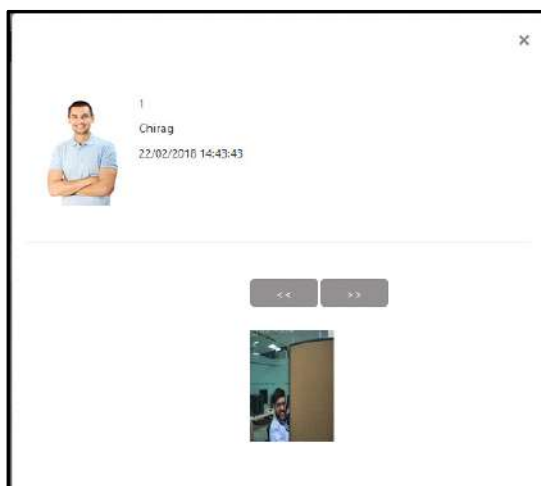

This screenshot shows the same configuration window as above, but with the 'Add' button highlighted. Below the configuration fields, there is a search bar and a table listing existing schedules.

Name	Event	Mode	Start Time	End Time	
User Allowed Schedule	User Allowed	Both	09:00	19:00	

When User Event is generated, then snapshot will be taken by the configured camera. The Events can be viewed in User Events (User Module) page and Event View (Admin Module) page. The User Events page displays the details as shown below:

User ID	User Name	Date-Time	Device Name	I/O	Access	Source	Source Details	Location Details	View Image
1	Chirag	22/02/2018 14:43	Vega Controller-Device-7	Entry	Allowed	Device			
1	Chirag	22/02/2018 14:00	Vega Controller-Device-7	Entry	Allowed	Device			
1	Chirag	22/02/2018 12:52	Vega Controller-Device-7	Entry	Allowed	Device			
1	Chirag	22/02/2018 12:45	Vega Controller-Device-7	Entry	Allowed	Device			
1	Chirag	22/02/2018 12:38	Vega Controller-Device-7	Entry	Allowed	Device			

Click **View Image**, to view the snapshot.

## Special Functions

*Special Functions is applicable for both Direct Door and Panel Door.*

On the **Device Configuration** page, click the **Special Functions** tab in the left pane.

No.	Function Name	Active	Job Selection	User Group	Card 1	Card 2	Card 3	Card 4
1	Official Work - IN	Yes	Yes	All				
2	Official Work - OUT	Yes	Yes	All				
3	Short Leave - IN	Yes	Yes	All				
4	Short Leave - OUT	Yes	Yes	All				
5	Regular - IN	Yes	Yes	All				
6	Regular - OUT	Yes	Yes	All				
7	Break End	Yes	Yes	All				
8	Break Start	Yes	Yes	All				
9	Overtime - IN	Yes	Yes	All				
10	Overtime - OUT	Yes	Yes	All				
11	Enroll User	No	No	All				

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

*Input/Output is applicable for both Direct Door and Panel Door.*

*The Configuration Tab is applicable for both Direct Door and Panel Door, whereas Linking and Time Triggered tab is applicable for Direct Door only.*

*This functionality is available only with the Access Control add-on module license.*

The Input/Output (I/O) configuration of a door determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

On the **Device Configuration** page, click the **Input/Output** tab in the left pane.

## Configuration

*Configuration is applicable for both Direct Door and Panel Door.*

Configuration tab differs for Direct Door and Panel Door.

Click **Configuration** tab. The **Configuration** page appears.

For VEGA as **Direct Door**.

The screenshot shows the 'Device Configuration' window for a VEGA Controller. The sidebar on the left lists various configuration categories, with 'Input/Output' currently selected. The main panel displays the 'Configuration' tab, which is organized into four sections: 'Door Sense', 'Auxiliary Input', 'Auxiliary Output', and 'Accept External IO Linking'. Each section contains settings for enabling the feature, supervising it, and selecting a sense type (where applicable). For 'Door Sense', 'Enable' and 'Supervised' are unchecked, and 'Door Sense Type' is set to 'Normally Open'. For 'Auxiliary Input', 'Enable' and 'Supervised' are unchecked, 'Sense Type' is 'Normally Closed', and 'Debounce Time (Sec)' is 5. For 'Auxiliary Output', 'Enable' is unchecked, and 'Output Wait Time (Sec)' is 0. For 'Accept External IO Linking', 'Enable' is unchecked, and 'Network Interface' is 'Ethernet'.

Configure the following parameters:

### Door Sense

The system by default can sense two states of a door - Normally Open and Normally Closed depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a **Door Abnormal** alarm.

- **Enable:** Select the check box to enable the feature.
- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Door Sense Type:** Select the Door Sense Type from the drop-down list options — Normally Open or Normally Closed.

### Auxiliary Input

- **Enable:** Select the check box to enable the feature.
- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Sense Type:** Select the Sense Type from the drop-down list options — Normally Open or Normally Closed.
- **Debounce Time (Sec):** Specify the Debounce Time in seconds. It defines the minimum time for which the door should remain in a given state to enable the system to take action on it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

## Auxiliary Output

- **Enable:** Select the check box to enable the feature.
- **Output Wait Time (Sec):** Specify the time in seconds that will be set as an additional waiting period before the Aux Output signal is sent.

## Accept External IO Linking

- **Enable:** Select the check box to enable device-to-device IO Linking, i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface:** Select the interface option for IO linking with external devices from the drop-down list options—Ethernet, Wireless or Mobile Broadband.

For VEGA as a **Panel Door**.

The screenshot shows the 'Device Configuration' window for a VEGA device. The left sidebar contains a list of configuration tabs: Profile, Advanced, Video Surveillance, Input/Output (selected), and Assign Users. The main area is titled 'Configuration' and contains four sections:

- Door Sense:** Includes checkboxes for 'Enable' and 'Supervised', and a 'Door Sense Type' dropdown menu set to 'Normally Open'.
- Auxiliary Input:** Includes checkboxes for 'Enable' and 'Supervised', a 'Sense Type' dropdown menu set to 'Normally Closed', and a 'Debounce Time (Sec)' input field set to 5.
- Auxiliary Output:** Includes an 'Enable' checkbox, an 'Output Group' dropdown set to 1, and a 'DC Aux Ports' button with a list icon.
- Relay Output:** Includes two rows of settings. The first row has 'Output Group Number (Door Unlock)' set to 2 and a 'Door Unlock' button with a list icon. The second row has 'Output Group Number (Door Lock)' set to 10 and a 'Name' button with a list icon.

Configure the following parameters:

### Door Sense

The system by default can sense two states of a door - Normally Open and Normally Closed depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a **Door Abnormal** alarm.

- **Enable:** Select the check box to enable the feature.
- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Door Sense Type:** Select the Door Sense Type from the drop-down list options — Normally Open or Normally Closed.

## Auxiliary Input

- **Enable:** Select the check box to enable the feature.
- **Supervised:** Select the check box to enable the door for four-state monitoring, where the door is also monitored for Door Fault and Door Disconnection.
- **Sense Type:** Select the Sense Type from the drop-down list options — Normally Open or Normally Closed
- **Debounce Time (Sec):** Specify the Debounce Time in seconds. It defines the minimum time for which the door should remain in a given state to enable the system to take action on it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

## Auxiliary Output

- **Enable:** Select the check box to enable the feature.
- **Output Wait Time (Sec):** Specify the time in seconds that will be set as an additional waiting period before the Aux Output signal is sent.

## Relay Output

- **Output Group Number (Door Unlock):** Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.
- **Output Group Number (Door Lock):** Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

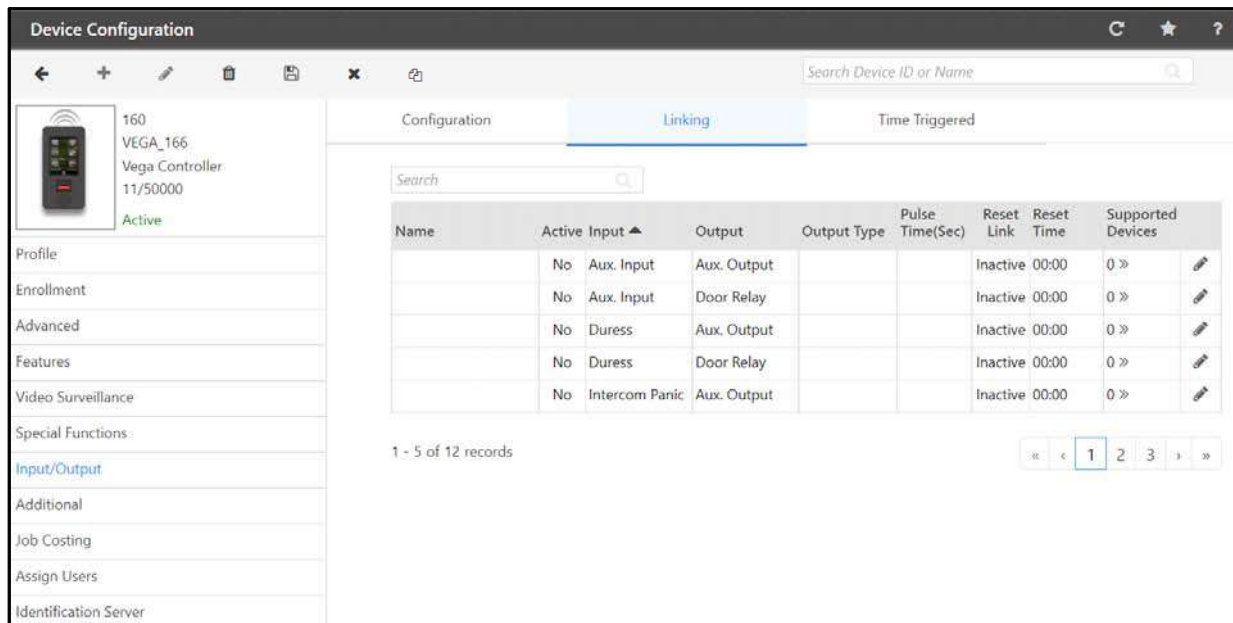

## Linking

*Linking is applicable for Direct Door only.*

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the door.

Click **Linking** tab. The **Linking** page appears.

Select a Input-Output linking row or click edit button.

- **Name:** Specify a Name for the new I/O linking program to be defined.
- **Active:** Select this check box to enable the IO Linking.
- **Output Type:** Specify the required type of Output from the drop-down list options—Pulse, Interlock, Latch, Toggle.

If you select **Pulse**, the output will be active for the defined pulse time, for example, 5 sec.

If you select **Interlock**, the output follows the input. The output will be active till the input is active, after which it returns to normal state.

If you select **Latch**, the relay output will be in energized condition for infinite period and needs to be reset manually. It means once the input is active, output will be active. It has to be reset manually. For example, during a Fire alarm, door should be unlocked permanently so Latch output can be used.

If you select **Toggle**, the output group toggles its state whenever an input group is activated.

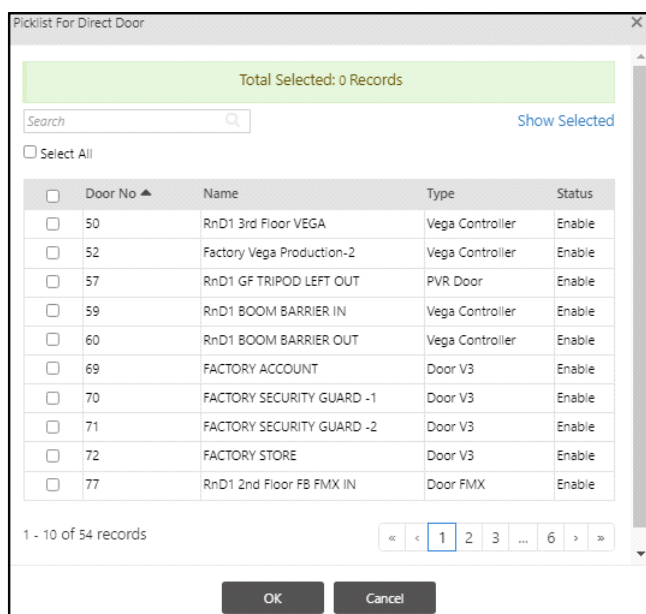

- **Pulse Time (sec):** If you select the Output Type as **Pulse**, specify the time until which the output should be active.
- **Reset Link:** Select this check box to enable the system to reset the IO link.
- **Reset Time:** Specify the time after which the IO link should be reset in HH:MM format.
- **Supported Devices:** All devices supported for external IO Linking will appear in this picklist for selection. Select the required devices from the picklist. Upto 255 external devices can be added.

- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The **Supported Devices** pop-up window has a title bar with a close button. Below the title bar, there is a section labeled "Supported Devices" with two input fields: "ID" and "Name", followed by a list icon. Below this is a search bar with the placeholder text "Search" and a magnifying glass icon. The main area contains a table with the following columns: "ID", "Name", "IP Address", and a trash icon. The table is currently empty.

- In this pop-up, click the **Supported Devices** picklist, the **Picklist For Direct Door** pop-up appears.

The **Picklist For Direct Door** pop-up window has a title bar with a close button. Below the title bar, there is a green bar with the text "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, and a "Show Selected" link. Below the search bar is a "Select All" checkbox. The main area contains a table with the following columns: "Door No", "Name", "Type", and "Status". The table contains 10 rows of data. Below the table is a pagination bar showing "1 - 10 of 54 records" and a set of navigation buttons: "<<", "<", "1", "2", "3", "...", "6", ">", ">>". At the bottom are "OK" and "Cancel" buttons.

Door No	Name	Type	Status
50	RnD1 3rd Floor VEGA	Vega Controller	Enable
52	Factory Vega Production-2	Vega Controller	Enable
57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
69	FACTORY ACCOUNT	Door V3	Enable
70	FACTORY SECURITY GUARD -1	Door V3	Enable
71	FACTORY SECURITY GUARD -2	Door V3	Enable
72	FACTORY STORE	Door V3	Enable
77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

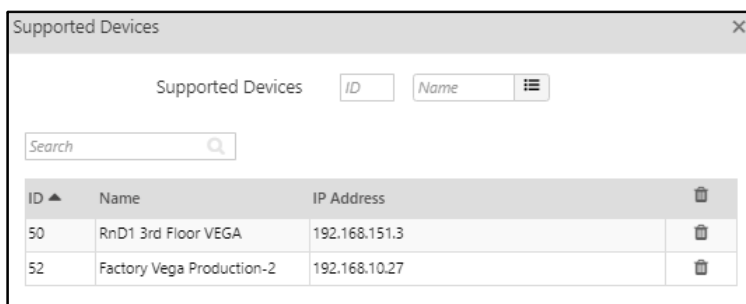

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices** pop-up and the selected devices are displayed here.

The **Supported Devices** pop-up window is shown with the selected devices. The table now contains two rows of data. The columns are "ID", "Name", "IP Address", and a trash icon.

ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

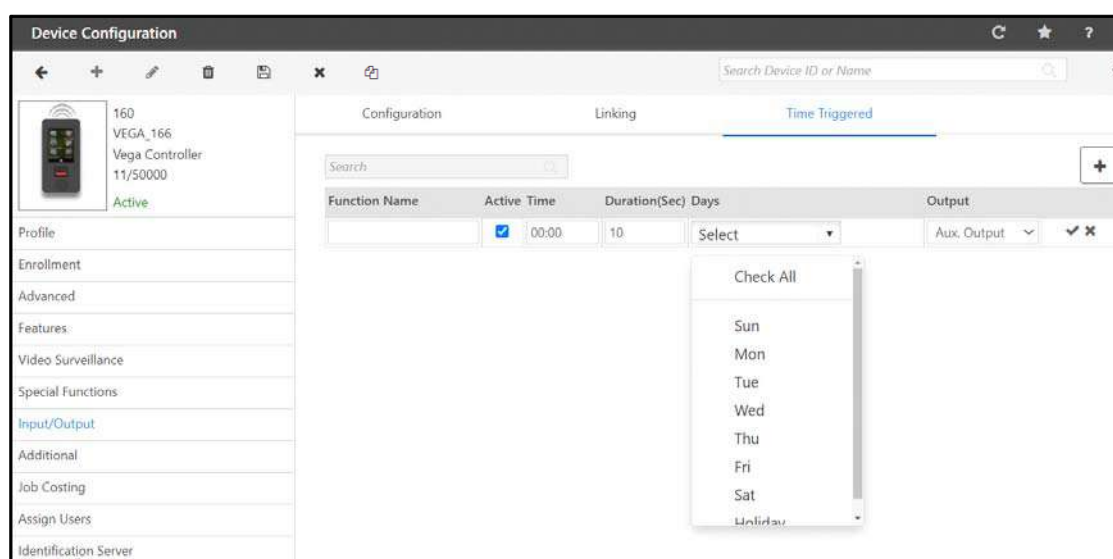

*Time Triggered is applicable for Direct Door only.*

This functionality enables the user to control the activity of an Output without manual intervention. The output gets active without the status of input, i.e. the selected output is triggered based on the configured time and not the IO link.

The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to trigger outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

Click **Time Triggered** tab. The **Time Triggered** page appears.

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

Click **Add**.

Configure the following parameters:

- **Function Name:** Specify a user friendly Function Name.
- **Active:** Select this check box to enable the Time Triggered function.

- **Time:** Specify the time when the Time Triggered function should be activated.
- **Duration:** Specify the time duration for which the Time Triggered function should be active.
- **Days:** Select the check boxes for the desired days on which you wish to apply the Time Triggered function from the drop-down list. Click **Check All**, if you wish to select all the days.
- **Output:** Select the Output on which the Time Triggered function should be applied from the drop-down list options—Aux Output or Door Relay.

Click **OK** and then **Save** to save the settings.

Function Name	Active	Time	Duration(Sec)	Days	Output
Siren Activate	Yes	00:00	10	Su Mo Tu We Th Fr Sa Ph	Aux O/P

## Additional

*Additional is applicable for Direct Door only.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes

On the **Device Configuration** page, click the **Additional** tab in the left pane.

Device Configuration

Search Device ID or Name

Daylight Saving

DST Type: Disable

Daylight Saving Time is disabled

Save

The **Daylight Saving** configuration can be done in 2 ways — Day-Month wise or Date-Month wise.

- **DST Type:** Select the **DST Type** as Day-Month wise or Date-Month wise. Select Disable, if you wish to disable the application of DST on the system time.

If you select the **Day-Month wise** option, configure the following parameters.

Daylight Saving

DST Type: Day-Month wise

Time Period: 00:00

**Forward Clock**

Month: January

Week No.: 1st

Day of Week: Sunday

Time: 00:00

**Backward Clock**

Month: January

Week No.: 1st

Day of Week: Sunday

Time: 00:00

Save

- **Time Period:** Specify the time period by which the time period will be set forward or backward to achieve Daylight Saving.

#### Forward Clock

- **Month:** Select the month when the DST starts for the Forward Clock from the drop-down list.
- **Week No.:** Select the week of the month when the DST starts for the Forward Clock from the drop-down list. For example, if DST starts from 4th week of March, select 4th.
- **Day of Week:** Select the day of the week when the DST starts for the Forward Clock from the drop-down list.
- **Time:** Specify the time when the DST starts for the Forward Clock in HH:MM format.

#### Backward Clock

- **Month:** Select the month when the DST ends for the Backward Clock from the drop-down list.
- **Week No.:** Select the week of the month when the DST ends for the Backward Clock from the drop-down list. For example, if DST starts from 4th week of March, select 4th.
- **Day of Week:** Select the day of the week when the DST ends for the Backward Clock from the drop-down list.
- **Time:** Specify the time when the DST ends for the Backward Clock in HH:MM format.

Click **Save** to save the configurations.

If you select the **Date-Month wise** option, configure the following parameters.

Daylight Saving

DST Type

Date-Month wise

Time Period

00:00

Forward Clock

Month

January

Date

1

Time

00:00

Backward Clock

Month

January

Date

1

Time

00:00

Save

- **Time Period:** Specify the time period by which the time period will be set forward or backward to achieve Daylight Saving.

#### Forward Clock

- **Month:** Select the month when the DST starts for the Forward Clock from the drop-down list.
- **Date:** Select the date of the month when the DST starts for the Forward Clock from the drop-down list.
- **Time:** Specify the time when the DST starts for the Forward Clock in HH:MM format.

#### Backward Clock

- **Month:** Select the month when the DST ends for the Backward Clock from the drop-down list.
- **Date:** Select the date of the month when the DST ends for the Backward Clock from the drop-down list.
- **Time:** Specify the time when the DST ends for the Backward Clock in HH:MM format.

Click **Save** to save the configurations.

Suppose, the DST period in a region is from Sunday, 27 March at 02:00:00 hours till Sunday, 30 October at 03:00:00. If DST is configured according to this period and the **Time Period** is specified as 1 hour, the clock will be forwarded by 01:00 hours on 27 March at 02:00:00 hours. The clock will be set back by 01:00 hours on 30 October at 03:00:00.

## Job Costing

*Job Costing is applicable for Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Administrator to show or hide Job Code selection on device. It also enables the Administrator to assign default jobs on device.

On the **Device Configuration** page, click **Job Costing** tab in the left pane.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

## Settings

The **Settings** page appears by default.

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

### Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who

punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

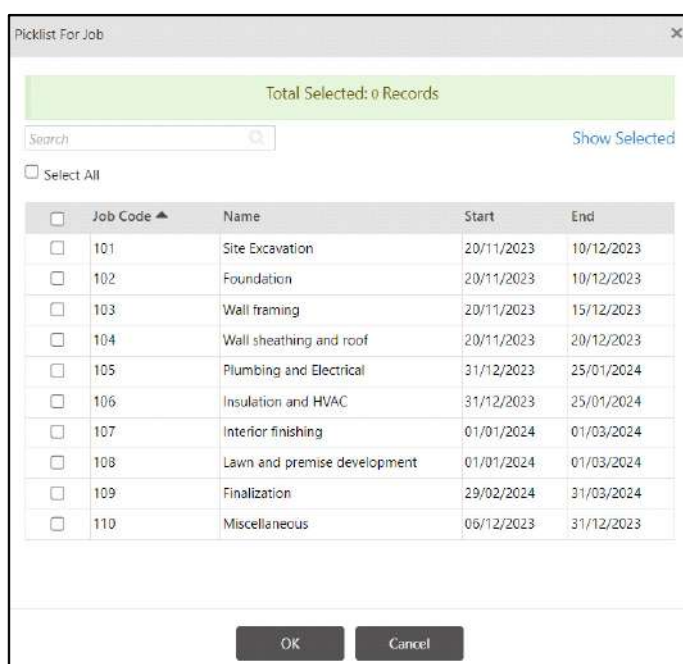

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

<input type="checkbox"/>	Job Code ▲	Name	Start	End
<input type="checkbox"/>	101	Site Excavation	20/11/2023	10/12/2023
<input type="checkbox"/>	102	Foundation	20/11/2023	10/12/2023
<input type="checkbox"/>	103	Wall framing	20/11/2023	15/12/2023
<input type="checkbox"/>	104	Wall sheathing and roof	20/11/2023	20/12/2023
<input type="checkbox"/>	105	Plumbing and Electrical	31/12/2023	25/01/2024
<input type="checkbox"/>	106	Insulation and HVAC	31/12/2023	25/01/2024
<input type="checkbox"/>	107	Interior finishing	01/01/2024	01/03/2024
<input type="checkbox"/>	108	Lawn and premise development	01/01/2024	01/03/2024
<input type="checkbox"/>	109	Finalization	29/02/2024	31/03/2024
<input type="checkbox"/>	110	Miscellaneous	06/12/2023	31/12/2023

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

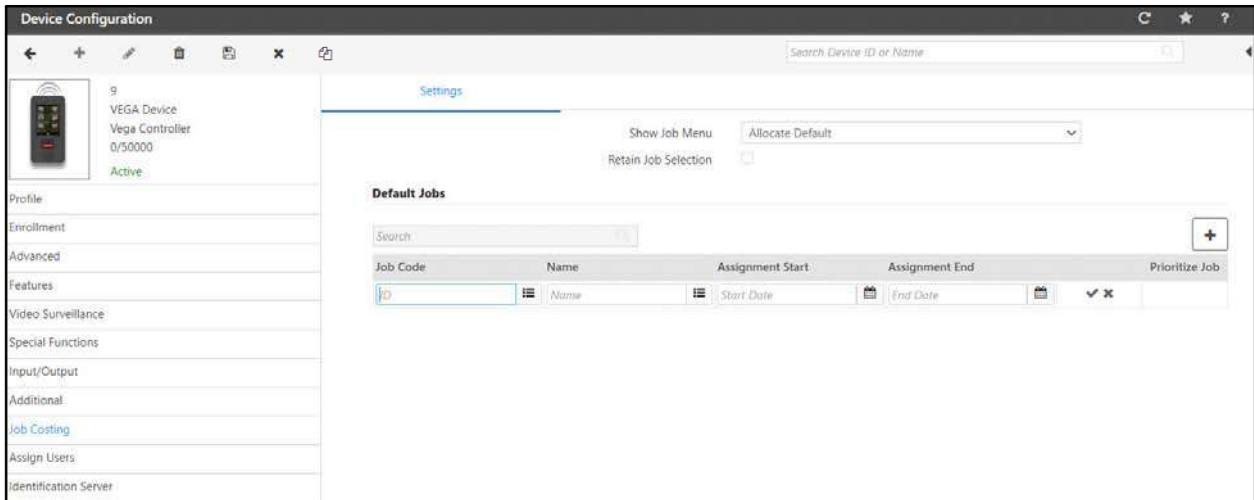

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

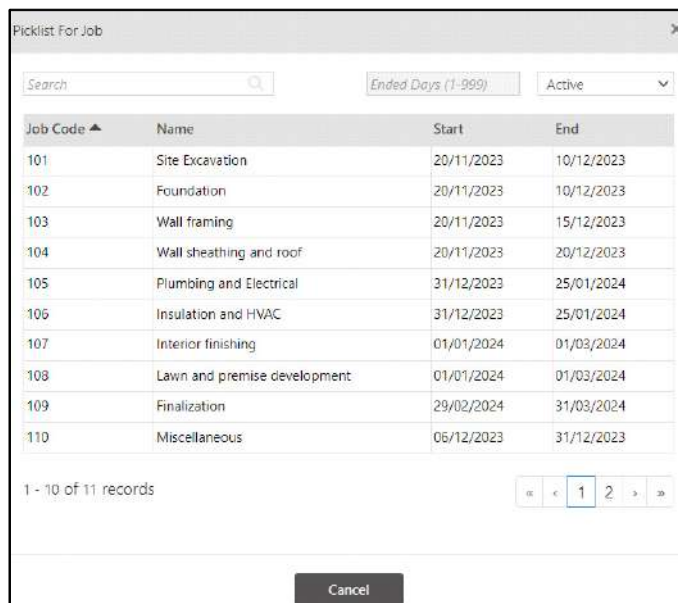

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- Click **Save** to save the configuration.

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device profile for 'VEGA Device' (Vega Controller 0/50000, Active). The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default' and a 'Retain Job Selection' checkbox. Below this is the 'Default Jobs' section, which includes a search bar and a table with the following data:

Job Code	Name	Assignment Start	Assignment End	Prioritize Job
111	Premise cleaning	01/10/2023	01/11/2023	[Up/Down arrows]
108	Lawn and premise development	01/01/2024	01/03/2024	[Up/Down arrows]
102	Foundation	20/11/2023	10/12/2023	[Up/Down arrows]
101	Site Excavation	20/11/2023	10/12/2023	[Up/Down arrows]

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

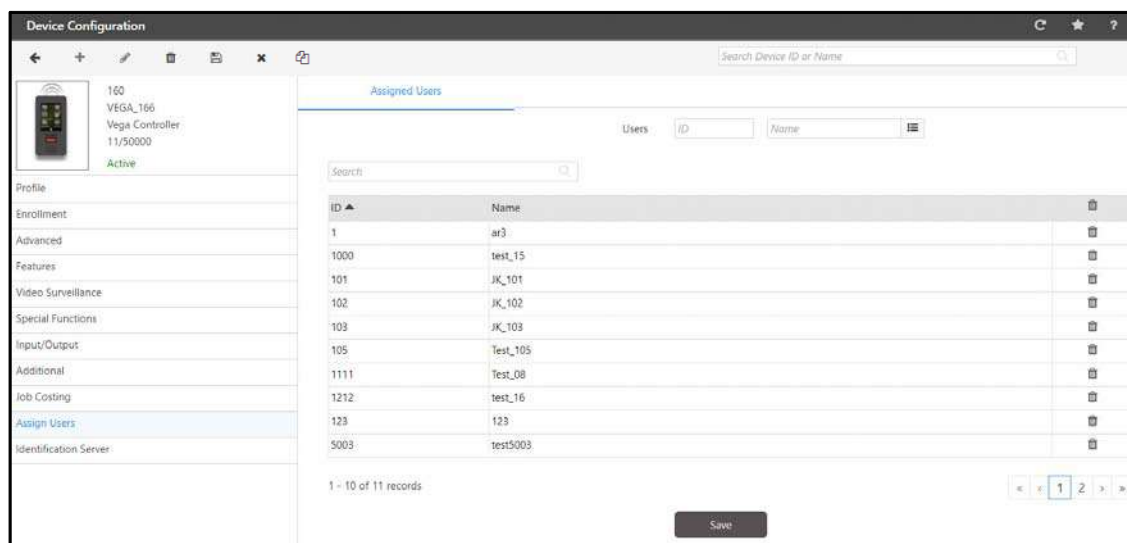

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

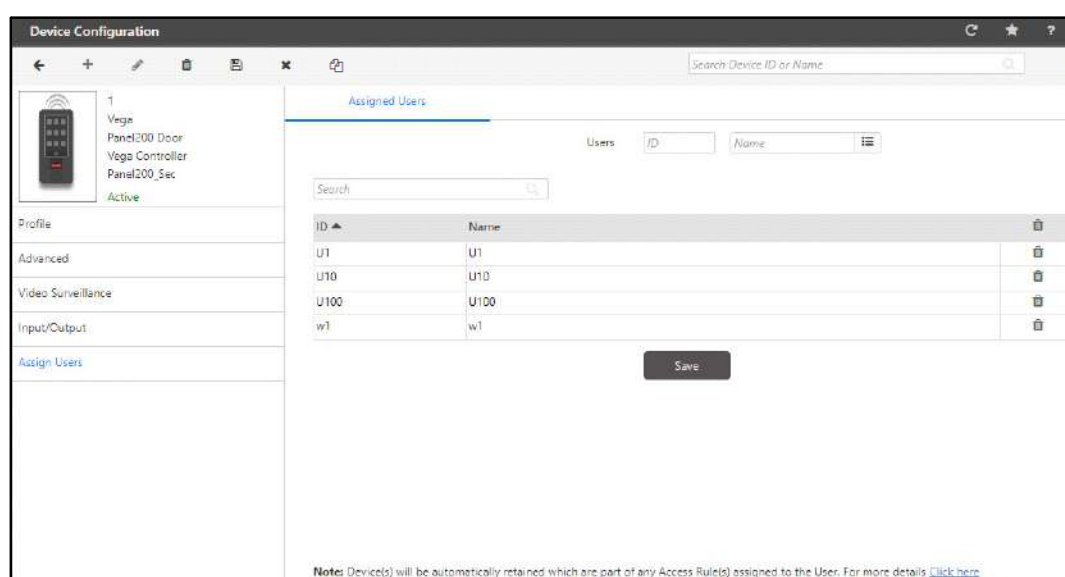

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

## For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

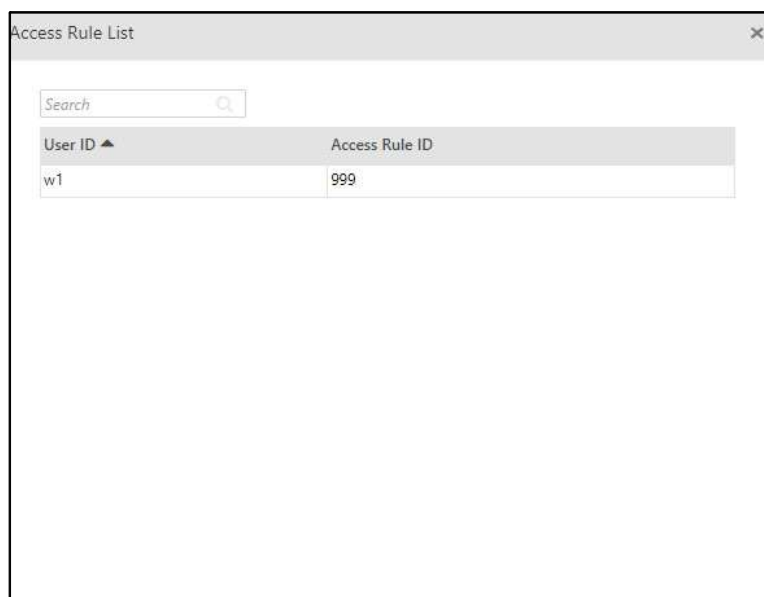

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The image shows a pop-up window titled "Access Rule List". It contains a search bar at the top with the placeholder text "Search". Below the search bar is a table with two columns: "User ID" and "Access Rule ID". The table has one row with the values "w1" and "999".

User ID	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Cafeteria

*Cafeteria is applicable for Direct Door only.*

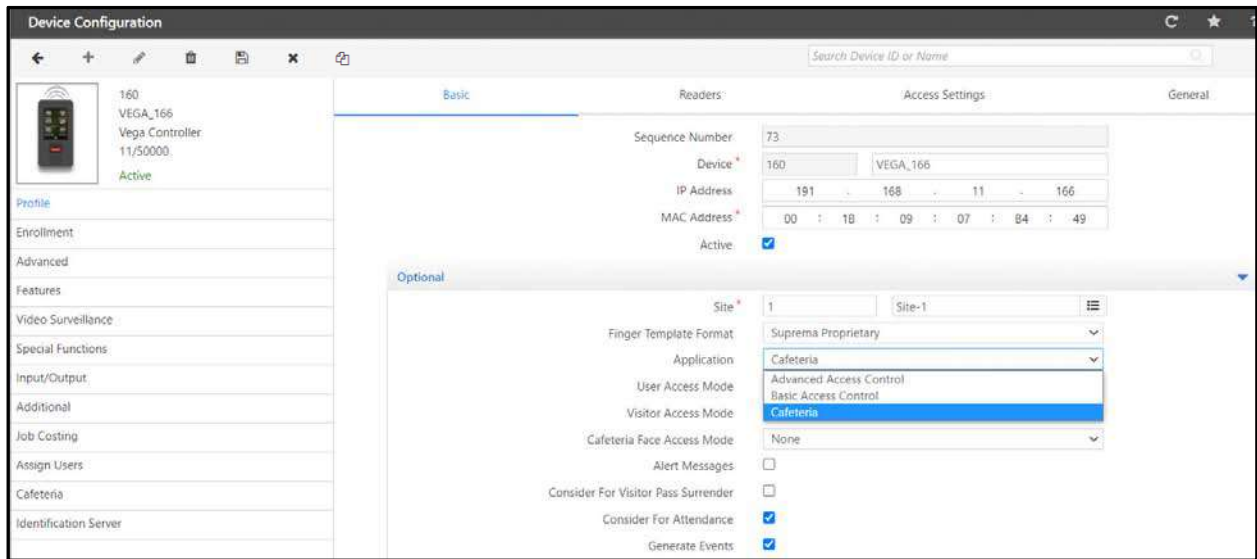

*The Cafeteria tab will be available only if you have selected the **Application** option as **Cafeteria**. For details, refer to ["Profile"](#).*

*View Cafeteria Balance from Device will be functional using Card, QR Code (if Allow Access Via QR is enabled) as well as Face (if Enable FR is enabled) credentials.*

The system enables you to configure devices which will be used for Cafeteria Management. To configure a door for Cafeteria application,

On the Device Configuration page, click **Profile**. Click **Optional** collapsible panel.

Select **Cafeteria** in **Application**.

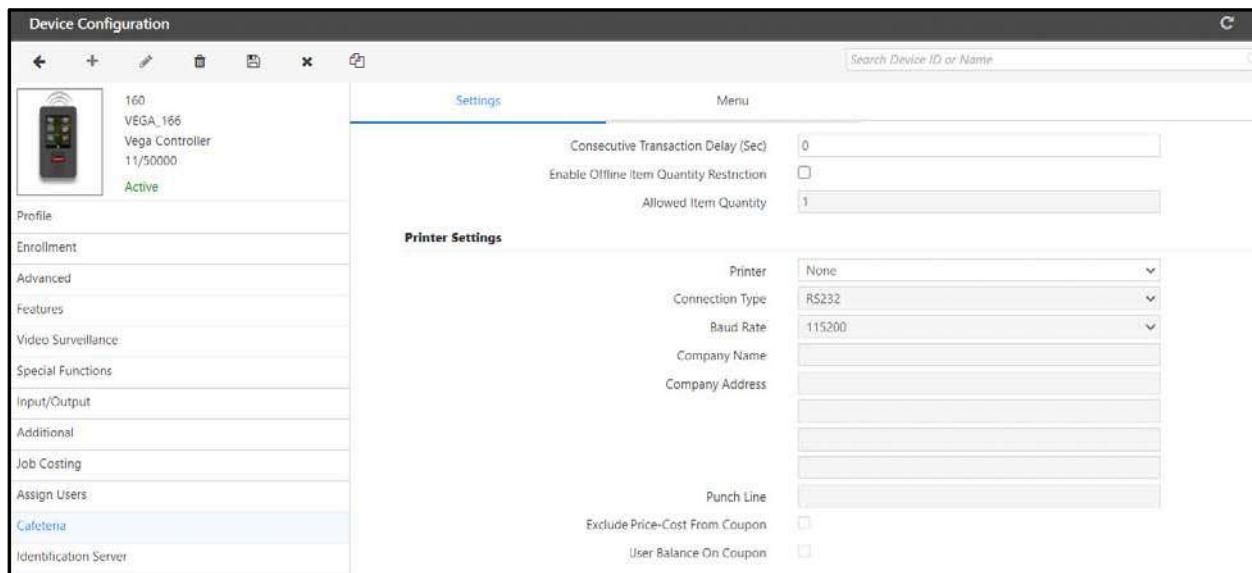

On the Device Configuration page, click the **Cafeteria** tab on the left pane.

To configure the Cafeteria parameters, click the following links:

- [“Settings”](#)
- [“Menu”](#)

## Settings

Click **Settings** tab. The **Settings** page appears.

Configure the following parameters:

- **Consecutive Transaction Delay (Sec):** Enter the time interval after which you wish to allow the second transaction from the same user.

- **Enable Offline Item Quantity Restriction:** Select the check box if you wish to restrict the transaction on exceeding the item quantity while the device is in offline mode.
- **Allowed Item Quantity:** Specify the quantity to be allowed for each item when the device is in offline mode. This will be applicable for each item present in the Menu.

For example, if the Menu has two items Tea and Poha and you have configured the **Allowed Item Quantity** as 2, and if the device is offline, the user/worker will be allowed to consume Tea twice as well as Poha twice.

## Printer Settings

- **Printer:** Select the desired **Printer** as per your site requirements from the drop-down list—EpsonTM88IV, EpsonTM88V, EpsonTMT90, WEPTM400.
- **Connection Type:** Select the Printer **Connection Type** from the drop down list—RS232 (serial), USB.
- **Baud Rate:** Select the appropriate **Baud Rate** from the drop-down list—9600, 19200, 38400, 57600, 115200.
- **Company Name:** Specify the **Company Name** as per your site requirement.
- **Company Address:** Specify the **Company Address** as per your site requirement.
- **Punch Line:** Specify the **Punch Line** as per the site requirements.

The Company Name, Company Address as well as Punch Line will be printed on the Cafeteria receipt dispensed from the selected printer.

- **Exclude Price-Cost From Coupon:** Select this check box, if you wish to exclude the price from the coupon.
- **User Balance On Coupon:** Select this check box, if you wish to print the Current Balance/Current Month Usage and Weekly Remaining Limit on the Cafeteria receipt.

For pre-paid account users, Current Balance and Weekly Remaining Limit will be printed.

For post-paid account users, Current Month Usage and Weekly Remaining Limit will be printed.

For details refer to "[Cafeteria Usage Policy](#)".

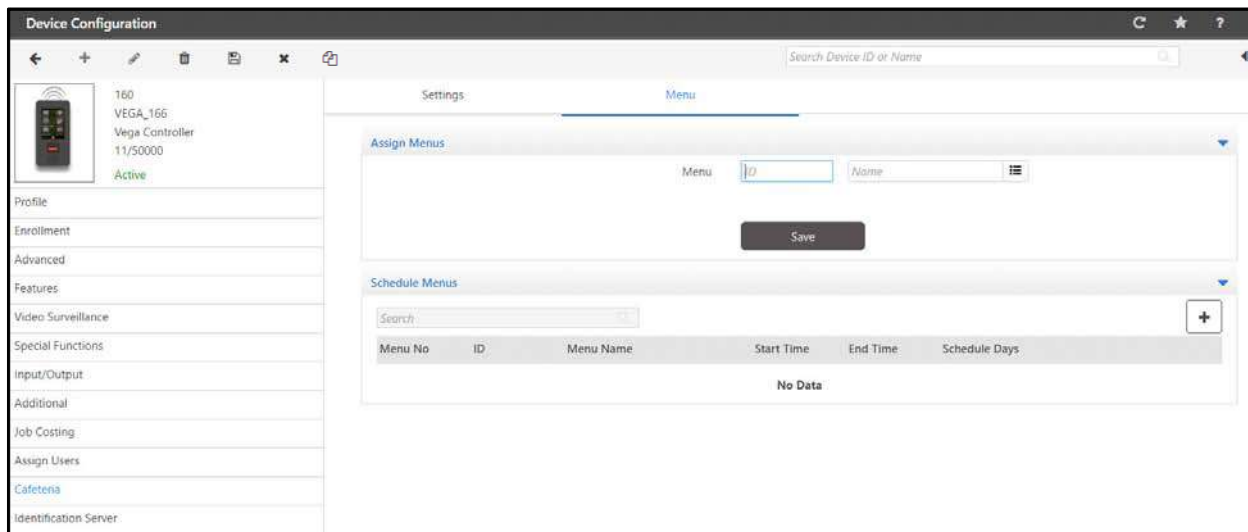

## Menu

COSEC allows the you to assign one or more Cafeteria Menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

To create Menu's, refer to "[Menus](#)" in the Cafeteria Module.

Click **Menu** tab. The **Menu** page appears.

Configure the following parameters:

- **Assign Menus:** Click the **Assign Menus** collapsible panel.
- **Menu:** Click the picklist and select the desired Menu or you can also enter the Menu **ID** or **Name** manually.

Click **Save**.

- **Schedule Menus:** Click the **Schedule Menus** collapsible panel.

Click Add and configure the following:

- **Menu No:** This displays the **Menu No.** after you have saved the Scheduled Menu.
- **ID:** Click the picklist and select the Menu **ID**.
- **Menu Name:** The **Menu Name** is auto-generated.
- **Start Time:** Specify the **Start Time** for which the Menu will be active and is available to users on this door.
- **End Time:** Specify the **End Time** after which the Menu will be not be active and will not be available to users on this door.

*Two Menus cannot be scheduled for the same timing.*

- **Schedule Days:** Select the desired **Days** for which this Menu will be applicable on the door or select **All**, if you wish to apply this Menu for all the days.
- Click **OK** and then click **Save**.

# Identification Server

Identification Server is applicable for Direct Door only.

This tab enables the device to be assigned to a pre-defined Identification Server.

The door has a limited memory capacity for storage of templates so, we can assign an Identification Server which will store the templates for the door and will respond to the door when asked for identification.

For more information on Identification Servers, refer to [“Identification Server”](#).

On the **Device Configuration** page, click the **Identification Server** tab in the left pane.

The screenshot shows the 'Device Configuration' interface. On the left, a sidebar lists various configuration tabs: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, Cafeteria, and Identification Server (highlighted in blue). The main area displays the 'Settings' for the 'Identification Server' tab. It includes sections for 'Face Recognition' and 'Face Enrollment'. The 'Face Recognition' section has fields for 'Enable FR' (checkbox), 'Face Capturing' (dropdown set to 'Tap & Go'), 'Enable Time Out' (checkbox), 'Free Scan Time Out (Sec)' (input field set to 30), 'IP Camera M/PEG URL' (input field), 'User Name' (input field set to 'Username'), 'Password' (input field), 'FR Mode' (dropdown set to 'Local'), 'Server Address' (input field set to '192.168.50.2'), 'Server Port' (input field set to '12000'), and 'Identification Time-Out Duration (Sec)' (input field set to 4). The 'Face Enrollment' section has a 'Conflict Check' checkbox and a 'Conflict Matching Threshold (Face)' input field set to 02.00.

The screenshot shows the 'Device Configuration' interface, specifically the 'Identification Server' tab. The left sidebar is the same as the previous screenshot. The main area displays the 'Settings' for the 'Identification Server' tab. It includes sections for 'Adaptive Face Enrollment', 'Face Anti-Spoofing', and 'Other Biometric Credentials'. The 'Adaptive Face Enrollment' section has fields for 'Adaptive Face Enrollment' (checkbox), 'Threshold Deviation (Face)' (input field set to 02.0), 'Multi-User Matching Score Deviation (Face)' (input field set to 02.0), and 'Confirm Before Adaptive Face Enrollment' (checkbox). The 'Face Anti-Spoofing' section has fields for 'Face Anti-Spoofing' (checkbox), 'Camera Mount' (dropdown set to 'Wall Mount'), 'Face Anti-Spoofing Mode' (dropdown set to 'Advance'), and 'Face Anti-Spoofing Threshold' (input field set to 62.00). The 'Other Biometric Credentials' section has fields for 'Enable Identification On Server' (checkbox), 'Identification Server' (input field set to 'ID'), 'Name' (input field set to 'Name'), 'Configure Alternate Server Address' (checkbox), 'Server Address' (input field), 'Server Port' (input field set to '11005'), 'Enable Finger Smart Identification' (checkbox), 'Identification Time-Out Duration (Sec)' (input field set to 4), 'Auto Send Enrolled Templates' (checkbox), and 'Default Biometric Group No.' (input field set to 0).

## Face Recognition

Make sure “**Enable FR**” check box is selected and **Basic Access Control** application is selected in *Devices > Device Configuration > Profile > Basic > Optional > Application* in order to edit the parameters in *Identification Server Settings*.

- **Enable FR:** Select this check box to enable the Face Recognition feature on the device.
- **Face Capturing:** Select the desired Face Capturing option — **Tap & Go**, **Free Scan**.
  - **Tap and Go:** If you select this option, user needs to tap on the device screen once. The MJPEG, that is motion recording screen appears. Device will capture and then identify the users face. If during working hours device is idle, then user needs to tap device to scan the face and gain access.
  - **Free Scan:** If you select this option, device will display the MJPEG, that is motion recording screen till the expiry of the Free Scan Time Out timer.
- **Enable Time Out:** Select this check box to enable the time out for the Free Scan Mode and set the time in Free Scan Timer Out (Sec).
- **Free Scan Time Out (Sec):** Specify the **Free Scan Time Out** duration. The valid range is 1 to 999 sec.

In Free Scan method, multiple users can mark their attendance easily during peak entry hours.

For example, if the Free Scan Time Out is set as 30 sec and if the user is identified in 10 sec then the system reloads the Free Scan Time Out timer again. Hence, device remains in the scanning mode.

- **IP Camera MJPEG URL:** Specify the URL for accessing the IP camera to receive the motion stream on the door. For example, <http://192.168.104.48:80/matrix-cgi/mjpeg?profile-no=3>.

If the device is auto-added then the default value will be <http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4>.

- **User Name:** Specify the User Name for accessing the IP camera. For example, admin.
- **Password:** Specify the Password for accessing the IP camera. For example, admin123.

This will fetch the motion stream from camera to device screen. When the users show their face on camera, the face will be captured and after identification, the user will be allowed access and the punch will be marked.

- **FR Mode:** Select the desired **FR Mode** from the drop-down list—Local, Server Assisted.
  - **Local:** In this mode the face templates will be stored in the FR hardware module which can store 1 lakh face templates. The captured face template will be verified with the templates already stored in FR module.
  - **Server Assisted:** In this mode, the face templates will be stored directly in the Server. You must first configure the Identification Server from where the face templates will be matched and identified.

Card will be identified and verified locally by the device irrespective of the FR Mode. Whereas, Finger and Face will be identified and verified based on the selected FR Mode.

When FR Mode is selected as **Local** configure the following parameters:

The screenshot shows the 'Face Recognition' configuration page. The 'FR Mode' is set to 'Local'. A red box highlights the 'Local' mode settings: 'Server Address' (192.168.50.2), 'Server Port' (12000), and 'Identification Time-Out Duration (Sec)' (4). Other visible settings include 'Enable FR' (checked), 'Face Capturing' (Tap & Go), 'Free Scan Time Out (Sec)' (30), 'IP Camera MJPEG URL' (empty), 'User Name' (Username), 'Password' (\*\*\*\*\*), 'Group FR' (unchecked), 'Capture Face of Unidentified User' (unchecked), 'Show Feedback for Unidentified Face' (unchecked), and 'Generate Unidentified Face Event' (unchecked).

- **Server Address/Port:** Specify the **IP Address** and **Port** of the FR Server.
- **Identification Time-Out Duration (Sec):** Specify the **Identification Time-Out** in seconds, after which the face template identification process will stop.  
For example, if **Identification Time-Out Duration (Sec)** is 5 seconds, then the Identification Server will try to identify the face template until 5 seconds and if not found then it will stop and display time-out to the user.

When FR Mode is selected as **Server Assisted**, configure the below fields:

User can either assign a separate or a common Identification Server which is shared by other biometric credentials.

The screenshot shows the 'Face Recognition' configuration page with 'FR Mode' set to 'Server Assisted'. A red box highlights the 'Server Assisted' mode settings: 'Identification Server' (ID and Name fields), 'Configure Alternate Server Address' (unchecked), 'Server Address' (empty), 'Server Port' (11005), and 'Identification Time-Out Duration (Sec)' (4). Other visible settings include 'Enable FR' (checked), 'Face Capturing' (Tap & Go), 'Free Scan Time Out (Sec)' (30), 'IP Camera MJPEG URL' (empty), 'User Name' (Username), 'Password' (\*\*\*\*\*), 'Group FR' (unchecked), 'Capture Face of Unidentified User' (unchecked), 'Show Feedback for Unidentified Face' (unchecked), and 'Generate Unidentified Face Event' (unchecked).

- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of Identification Server is done from **Admin module > System Configuration > Identification Server Configuration** and make sure you start the Identification Service from the service tray. This IP Address of this Identification Server is displayed in **Server Address**.
- **Configure Alternate Server Address:** Select this check box to configure an external IP Address of the FR Identification Server and configure the Server Address.
  - **Server Address:** By default it displays the IP Address of the selected Identification Server. Enter the external network IP address which will be used for accessing Identification Server.
- **Server Port:** Enter the TCP Port number. Default: 11005.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the face template identification should stop.

For example, if 5 seconds is specified, then the Identification Server will try to identify the template till 5 seconds and if not found then it will stop the identification process and display time-out to the user.

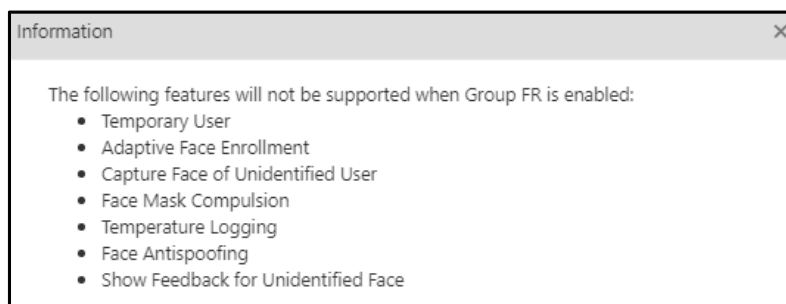

- **Group FR:** Select this check box to enable face recognition feature for multiple users and mark their attendance at the same time via this door. Group FR will be applicable only if you have selected **Free Scan** as the **Capturing Mode**.

*Group FR will work in both FR Modes — Local, Server Assisted Mode.*

*For Group FR (“Mark Group Attendance”) feature to work in Server Assisted Mode, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer, Admin Management Portal User Manual.*

Once you enable Group FR, a pop-up appears.

The features listed in the pop-up will not be functional.

- **Capture Face of Unidentified User:** Select this check box to enroll unidentified faces of users via this door.

*For Capture Face of Unidentified User feature to work, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer, Admin Management Portal User Manual.*

*If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.*

- **Show Feedback for Unidentified Face:** Select this check box, if you wish to display a message on the Device display screen to user's whose face is not identified.

*If you wish that events should be generated for Unidentified Face, enable **Generate Unidentified Face Event**.*

*If you have enabled **Group FR**, **Show Feedback for Unidentified Face** feature will not be functional.*

- **Generate Unidentified Face Event:** Select this check box, if you wish to generate events when a user's face is unidentified.

These events can be viewed from **Admin Module > View/Logs > Event View** as well as **Device Module > Reports > Invalid Events**.

If you wish to view the snapshots in the Events/Logs, make sure you have configured "[Configuring IP Camera Parameters](#)" in "[Visual Tagging](#)". Make sure you select the Event as **User Denied- User Not Identified** to view the snapshots for **User Denied- User Invalid** event.

***Generate Unidentified Face Event** is applicable for **Face** credentials only.*

*For VEGA Direct Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under "[Settings - VEGA as Direct Door](#)" in "[Advanced](#)".*

*For VEGA Panel Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under "[Settings](#)" tab in "[Advanced](#)" in "[Panel200](#)".*

*If you wish that a message should be displayed on the device display screen for Unidentified Face, enable **Show Feedback for Unidentified Face**.*

## Face Enrollment

*If the **FR Mode** is **Server-Assisted** and you wish to enroll faces from the device, make sure **Enable Face Recognition** is selected in **Users > User Configuration > Face Recognition** and/or **Visitor Management > Visitor Profile > Face Recognition** and/or **Contract Worker Management > Worker Profile > Face Recognition**.*

- **Conflict Check:** Select this check box for the system to check the conflict between the new face of a user and the already (existing) enrolled faces of all the users (available in the database) during the face enrollment process.
- **Conflict Matching Threshold:** Enter the desired Conflict Matching Threshold value in percentage.

The system will consider this value while comparing the face with the face templates already present in the database.

If a conflict is found, that is, if the system detects a face template in the database similar to the new face, then a conflict error will be displayed.

Make sure a higher value is set for this parameter, as it will result in less equivalent matches with the face templates available in the database.

*Make sure the **Conflict Matching Threshold** is set lower than **Matching Threshold** in **Admin module > System Configuration > Identification Server Configuration**.*

For example: Face Enrollment of Suresh

- **Conflict Check** check box is selected.
- **Conflict Matching Threshold** is set as 93%.

Now during the face enrollment of Suresh, the system will check in its database if his face matches with faces of other users available in the database.

- **Case 1:** If Suresh's face matches 92% with Ram, then the system will allow to enroll Suresh's face.
- **Case 2:** If Suresh's face matches 94% with Shyam, then the system will display the conflict error while enrolling Suresh's face.

## Adaptive Face Enrollment

- **Adaptive Face Enrollment:** Adaptive Face Enrollment provides automatic real time face enrollment whenever change is experienced in facial features. By enabling Adaptive Enrollment process parameter, an additional slot will be provided internally to store 10 more face templates of a user. IDS will learn from face recognized, adapt and would take decision of storing new template of a user database. Select this check box to enable Adaptive Face Enrollment for Identification Server.

If you enable Adaptive Face Enrollment, configure the following parameters:

- **Threshold Deviation (Face):** Specify the value of deviation from Matching Threshold in percentage. Based on the value entered for deviation, template for Adaptive Face Enrollment will be decided. Value can be set in decimal.

For example, if Deviation entered is 3% and Matching Threshold is 98% then it will classify template which has matching score between 98 - 95.

- **Multi-user Matching Score Deviation (Face):** Enter the value of deviation from matching score between 2 different users while Adaptive Face Enrollment.

Difference between matching scores of templates will be considered, when we have templates of two or more users falling under the specified deviation. Value can be set in decimal.

For example, lets consider the following parameters:

- Threshold Value = 98%
- Threshold Deviation= 3%

So, the result will display all matching templates having matching score between range 98 to 95.

- Now if you have set Multi-user Matching score deviation = 0.5%.

If 5 best templates of 2 users fall between 98 -95% range as follows.

<i>User</i>	<i>Matching Score</i>
<i>User 1</i>	<i>97.8</i>
<i>User 1</i>	<i>97.6</i>
<i>User 1</i>	<i>97.4</i>

User 2	97.25
User 2	97

As we have obtained templates of 2 users in which user 1 is having template of highest matching score, so will make a difference between lowest score template of user 1 and highest matching score template of user 2.

$97.4 - 97.25 = 0.15$ ; this is less than 0.5.

As difference is less than 0.5, user 1's template having matching score 97.8 for adaptive enrollment will not be used.

Both, Threshold Deviation and Multi-user Matching score deviation will act as two filters to fetch appropriate template for Adaptive Enrollment.

*We recommend to set the Multi-user Matching Score Deviation (Face) as a higher percentage.*

*For example, if Multi-user Matching Score Deviation (Face) is set as 2.0, it reduces the probability of enrolling a particular user's face template in some different user's enrolled faces.*

- **Confirm before Adaptive Face Enrollment:** Select this check box, if face enrolled using Adaptive Face Enrollment requires a confirmation.

*Faces enrolled under Adaptive Enrollment process will be synced automatically with the IDS, but when IDS is restarted due to any reason, the adaptive faces which are not synced will be removed by default.*

## Face Anti-Spoofing

- **Face Anti-Spoofing:** To use this feature, make sure **Enable FR** check box is selected in **Devices> Device Configuration> Identification Server > Face Recognition > Enable FR**.

Select the **Face Anti-Spoofing** check box to enable this feature and configure the following parameters:

- **Camera Mount:** Select the desired Camera Mounting option from the drop-down list — **Wall Mount** or **Ceiling Mount**.

There is an impact of Camera Mounting in face liveness detection. Default: Wall Mount.

*For Wall Mount, make sure the distance between camera and user is less than 3 feet for proper detection of face.*

- **Face Anti-Spoofing Mode:** Liveness Detection helps to limit the fierce risk of spoofing attacks by using several anti-spoofing approaches. Along with the configurations to be done for Face Anti-Spoofing, you also need to take care of the recommended settings for Liveness Verification and for Face Recognition as well as the Camera Settings, refer [“Recommendations for Liveness Verification”](#), [“Recommendations for Face Recognition”](#) and [“Recommended Camera Settings for Liveness Verification”](#).

Select the **Face Anti-Spoofing Mode** for liveness detection from the drop-down list—Basic, Moderate, Advance.

*If Ceiling Mount. is selected as the Camera Mount option, only Basic option of Face Anti-Spoofing Mode is applicable.*

**Basic:** The Basic Mode detects face as well as photos from the mobile phones. Select this option, when the distance between Camera and Face is more than 3 feet.

**Moderate:** The Moderate Mode analyzes the texture of face. Select this option, when the distance between Camera and Face is less than 2 feet.

**Advance:** The Advance Mode combines the features of **Basic Mode** and **Moderate Mode** of Face Anti-Spoofing. Select this option, when the distance between Camera and Face is more than 1 feet and less than 2 feet. Default: **Advance**.

- **Face Anti-Spoofing Threshold:** Enter the Face Anti-Spoofing Threshold value in percentage within the range from 1.00 to 99.99 to identify user's face liveness for considering him/her as genuine person. As per the Face Anti-Spoofing Mode that you have selected, the Threshold value will vary.

## Other Biometric Credentials

- **Enable Identification On Server:** Select this check box to enable identification of palm/finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist to which the device is to be assigned. The configuration of Identification Server is done from **Admin module > System Configuration > Identification Server Configuration** and make sure the Identification Service is started from the service tray. The IP Address of this Identification Server is displayed in **Server Address**.
- **Configure Alternate Server Address:** Select this checkbox to configure external IP address of Identification Server.
- **Server Address:** By default it displays the IP Address of the selected Identification Server. Enter the external network IP address which will be used for accessing identification server.
- **Server Port:** Specify the Server Port number. Default:11005.
- **Enable Finger Smart Identification:** Select this check box to enable the identification of fingerprint templates through Identification Server.
- **Identification Time-Out Duration (Sec):** Enter the duration in seconds after which the fingerprint template identification will stop and time out will be displayed to the user. For example, if 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will stop the identification and display time out to the user.
- **Auto Send Enrolled Templates:** Select this check box to enable any enrolled templates to be saved both in the COSEC database as well as saved locally in the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Specify the default Biometric Group Number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces false detection as well time to search template.

## Accessing the Door using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and access to this device is allowed to the user, then he can use his mobile device to scan the QR code which constitute the details of the door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now using the mobile camera you can scan the device QR code. The COSEC door will open after verifying the security key and access policies assigned to the user.

### Steps to create a QR code

**Step 1:** Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

#### Notes for Step1

- If door is in direct door mode enter IP and port of the direct door
- If door is a panel door, then enter IP and port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

# Wireless Door

The Device Configuration page for Wireless Door appears as shown below.

Enter the MAC address of the door. The IP address will be displayed automatically once the device comes online in Monitor.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “Auto Add New Devices” checkbox. Once the device is connected in network, it will come online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

Once the device is configured, click the **Save** button to save the configuration.

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)

- *“Cafeteria”*
- *“Identification Server”*

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, On the **Device Configuration** page, select the **Profile** tab. The Profile can be configured in the following sections:

- “Basic”
- “Readers”
- “Access Settings”
- “General”

## Basic

The **Basic** section for “Wireless Door as Direct door” is shown below:

Configure the following options as required:

- **Sequence Number** - This is a system generated sequence number for each new device.
- **Device**- Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address** - This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address** - Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active** - Check the box to activate the device on the network.

To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the **“Auto Add New Devices”** checkbox.

The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.

The **Basic** page also offers an **Optional** tab which provides optional configurations as shown below:

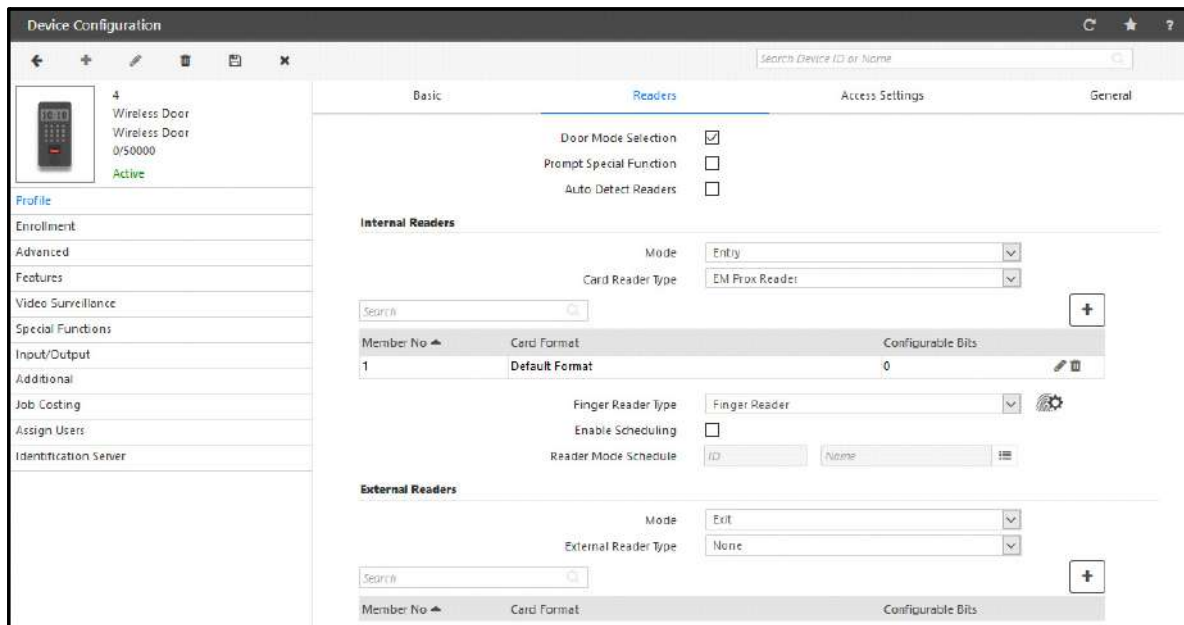

- **Site** - Select the site to which this door is to be assigned from the site picklist window. Site is created from Devices> Masters> Site.
- **Application** - Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.
- **Access Mode** - Defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop down list.

The options available are:

- Any one
- Card
- Card + Biometrics
- Card + Biometrics + PIN
- Card + PIN
- Biometrics
- Biometrics + PIN
- Biometrics then Card
- Card then Biometric
- None
- **Consider for Attendance** - Select this checkbox if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages** - Select this checkbox to enable the application to send alerts based on events from this door.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

**Door Mode Selection** - If this option is enabled, then user will be prompted to select punch type as IN or OUT while punching on the device.

Eg: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in ext mode then you can select the door mode if “Door Mode Selection” is enabled.

If not selected, user will need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler**.

**Prompt Special Function**- This can be enabled only when “Door Mode Selection” is enabled. It will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted.

**Auto Detect Readers** (for direct doors only) - Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

### Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type;** Select the Card Reader Type from the following options:
  - EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader

- **Card Format:** The single or multiple card formats can be assigned to the readers of direct door. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device; then this default format will be applied.

The formatting of card is described in *Devices > Master > Card Format*

### Multiple Card Format

To assign multiple card formats to device click on **Add** button. Then click the picklist to select the card format. And click **OK** to save the format.

Member No ▲	Card Format	Configurable Bits
1	Default Format	0

Member No ▲	Card Format	Configurable Bits
2	Format1	0
1	Default Format	0

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from *Masters > Card format* will be displayed here. Multiple Card format configurations will be dispatched to door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

Internal Readers

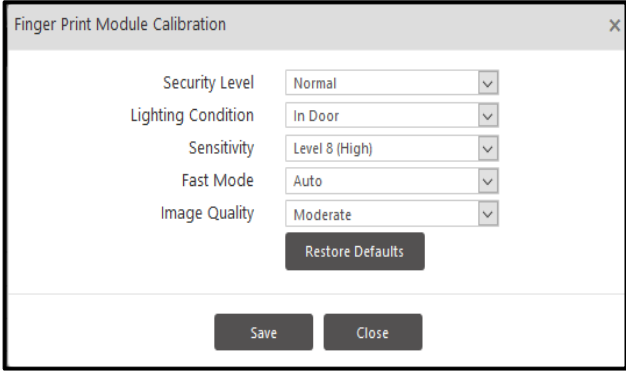

Mode: Entry

Card Reader Type: EM Prox Reader

Member No ▲	Card Format	Configurable Bits
1	Default Format	0
2	Format1	26
3	Format2	32

- Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level**, **Lighting Condition**, **Sensitivity**, **Fast Mode**, **Image Quality** and **Restore Defaults** for the selected FP Reader as shown.

### Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels.  
  
For regular Time-Attendance system “**Normal**” level can be selected. For high security areas requiring complete or maximum matching of template, “**Highly Secure**” level must be selected. For approximate matching of template, “**Secure**” level can be selected.
- **Lighting Condition:** Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment. Select the In Door or Out Door option based on the device location.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Fast Mode parameter can be used to shorten the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. There is also an Auto mode.
- **Image Quality:** When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest option might lead to higher number of finger rejections during the enrollment process.
- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.
- Click on the **Save** button.
- **Enable Scheduling:** Select this checkbox to **Enable Scheduling** to set reader mode of door as entry or exit as per user-defined schedules.

## External Readers

This option allows the configuration of the External Reader for the selected door.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.
- **Card Format** - Select a card format to be applicable for external readers of the device. This is applicable for all direct doors and all Panel doors. For multiple format description [See "Multiple Card Format" on page 1177.](#)
- **Exit Switch** - Select this checkbox to enable the use of **Exit Switch**.
- **User/Visitor Access Mode** - Select the access mode from the options shown below:
  - Any One
  - Card
  - Biometrics
  - Card + Biometrics
  - Biometrics then Card
  - None
- **Access Control On Exit Mode** (only for direct door) - Select this checkbox to enable access control on the exit mode.

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Access Settings' tab selected. The left sidebar lists various configuration categories, and the main area displays settings for a 'Wireless Door' (ID 4, 4/50000, Active). The settings include:

- Universal Time Zone:** (GMT+05:30)Chennai, Kolkata, New Delhi, Mumbai
- Time Format:** 24 Hours
- Auto Synchronize with NTP:** ☒
- Preferred NTP Server:** (empty field)
- Working Days:** Sun, Mon, Tue, Wed, Thu, Fri, Sat, Holiday (all checked)
- Working Hours(HH:MM):** 00:00 to 23:59
- Holiday Schedules:** Four rows for Holiday Schedule 1 through 4, each with a number field and a schedule selection dropdown.

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours

- 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.

If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

## General

The **General** page appears as follows. Enter all general details applicable to the device in this section.

Device Configuration

Device ID: Wireless Door 0/30000  
Active/Inactive

Basic Readers Access Settings **General**

Mute Buzzer ☐

**Allowed Acknowledgement**

Display Duration (ms): 3000  
LED - Buzzer Duration: Long

**Denied Acknowledgement**

Display Duration (ms): 3000  
LED - Buzzer Duration: Long

Enable Display Messages ☐

Custom Birthday Message: Happy Birthday

Display Message 1  
Schedule: 00:00 - 11:59  
Message: Good Morning

Display Message 2  
Schedule: 12:00 - 15:59  
Message: Good Afternoon

Display Message 3  
Schedule: 16:00 - 20:59  
Message: Good Evening

Display Message 4  
Schedule: 21:00 - 23:59  
Message: Good Night

Multi-Language Support ☐

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively. This is applicable for both Direct and Panel door.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.

The below mentioned features are available in direct door only.

- **Enable Display Messages** - This feature allows the user to enable custom birthday message and display messages to be displayed on the door device. Upto 4 display messages can be configured for a door.
- **Custom Birthday Message**- Enter the birthday message which would appear on the door when the user punches on the door on his birth date.

The valid values are

**A-Z**

**a-z**

**0-9**

**`~!@#\$%^&\*()\_+-={}|\|:;?<>.,\''**

- **Display Message** - Enable each display message individually by selecting this checkbox.
- **Schedule** - For each message, the user needs to define the time period between which this message is to be displayed.
- **Message** - Enter the message to be displayed in this field. Maximum 21 characters allowed.
- **Multi-Language Support** - Select this checkbox to enable multi-language support for the selected device.

The **Display From** field shall display the reading order for the selected language.

*However Wireless Door will support languages with english fonts (A-Z,a-z) only.*

## Enrollment

The Enrollment section is not available for panel doors.

The Enrollment page appears as shown below.

The screenshot shows the 'Device Configuration' window for a device named '3 wireless Wireless Door 11/50000' which is 'Active'. The 'Enrollment' tab is selected in the left sidebar. The main area shows the following settings:

- Enroll From Device:** ☒ (checked)
- Enrollment Mode:** ReadOnlyCard (dropdown)
- Template Per Finger:** Single Template/Finger (dropdown)
- Max Number Of Fingers:** Ten (dropdown)
- Number of Fingers:** One (dropdown)
- Number Of Cards:** One (dropdown)
- Enable Self-Enrollment:** ☐ (unchecked)

- **Enroll from Device** - Select this check-box to enable the enrollment of user from the door controller. When this check-box is enabled, 'Enroll User' special function on that device will get active as shown below.

If 'Enroll User' special function & 'Enroll From Device' check-box both are inactive in device configuration, then on activating 'Enroll User' special function, 'Enroll From Device' check-box will be enabled.

The screenshot shows the 'Device Configuration' window for the same device, but with the 'Special Functions' tab selected. It displays a table of functions:

No.	Function Name	Active	JOB Selection	User Group	Card-1
1	Official Work - IN	No	No	All	
2	Official Work - OUT	No	No	All	
3	Short Leave - IN	No	No	All	
4	Short Leave - OUT	No	No	All	
5	Regular - IN	No	No	All	
6	Regular - OUT	No	No	All	
7	Break End	No	No	All	
8	Break Start	No	No	All	
9	Overtime - IN	No	No	All	
10	Overtime - OUT	No	No	All	
11	Enroll User	Yes	No	All	
12	Enroll Special Card	No	No	All	

- **Enrollment Mode** - Select the Credential from the dropdown list that can be enrolled using the special function at the DOOR. The options are **ReadOnlyCard**, **SmartCard**, **Biometrics** and **BiometricsThenCard**.
- **Enrollment Using** - Select the option **User ID** or **Reference No.** using which enrollment will be done.

- **Template Per Finger** - This parameter displays the values as configured at the global level. This field is not user editable from this page.
- **Max Number of Fingers** - This parameter displays the values of the maximum number of fingers configured at the global level. This field is not user editable from this page.
- **Number of Fingers/Cards** - Select the number of cards or fingerprints to be enrolled based on the credential option selected in the **Enrollment Mode** parameter.
- **Enable Self-Enrollment** - Select this checkbox to enable the self-enrollment feature on this door.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- *“Settings”*
- *“Alarms”*
- *“Timers”*

## Settings

The **Advanced Settings** page for Wireless Door as a Direct Door appears on your screen as shown below:

The screenshot displays the 'Advanced' settings tab for a 'Wireless Door' device. The left sidebar lists navigation options: Profile, Enrollment, Advanced (selected), Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main content area is divided into sections: 'Settings' (active), 'Alarms', 'Timers', and 'Wiegand'. Under 'Settings', there are checkboxes for 'Generate Exit Switch Events', 'Generate Invalid User Events', 'Generate Sequential IN-OUT Events', 'Two Credentials Required', and 'Show Pin'. Below these are 'Allow Exit When Door Lock' and 'Auto Relock' checkboxes, followed by an 'Auto Relock Timer (Sec)' input field set to 3. The 'Enable Additional Security' section is currently 'Disabled'. The 'Enable Smart Identification' section shows 'Access Level' set to 8 and 'Access Mode' set to 'Card'. The 'Auto Acknowledge Alarm' section has a checkbox and an input field set to 10 seconds. The 'Facility Code' is set to 1. Below the main settings, there is a section for mobile access: 'Allow Access Through Mobile' is checked, 'Mobile Entry Access Mode' is set to 'Mobile Only', and 'Mobile Exit Access Mode' is also set to 'Mobile Only'.

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events everytime the exit switch is used.
- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.
- **Generate Sequential IN-OUT Events** - Select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.
- **Two Credentials Required**- Select this checkbox to enable the feature of verifying 2 credentials mandatorily for users allowed to By-pass finger/palm.
- **Show Pin**- Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.

- **Enable Additional Security** - Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this checkbox to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics** and **Mobile then Card**.

*If User Access Mode is selected as “None” in Zone Configuration and Mobile Access Mode is selected as “Mobile Then Biometrics” then door can be accessed through Mobile and then Biometric credential.*

## Temperature Logging

- **Enable:** Enable the temperature logging feature on the zone.
- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *AST*, *Web-Based* and *FEVOBOT*. Default sensor set is *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type-AST  
Sensor Interface options will be: RS-232 and USB  
For Sensor Type- Web-based  
Sensor Interface options will be: HTTP/S  
For Sensor Type-FEVOBOT  
Sensor Interface options will be: USB
- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is AST. Default value is 0.95.  
It is used to define accuracy in sensor to detect temperature of different skin or objects.  
Not applicable for FEVOBOT.
- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.

Not applicable for FEVOBOT.

- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.  
It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.  
The default value, unit and range should be updated based on the Temperature unit set on Panel.
- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

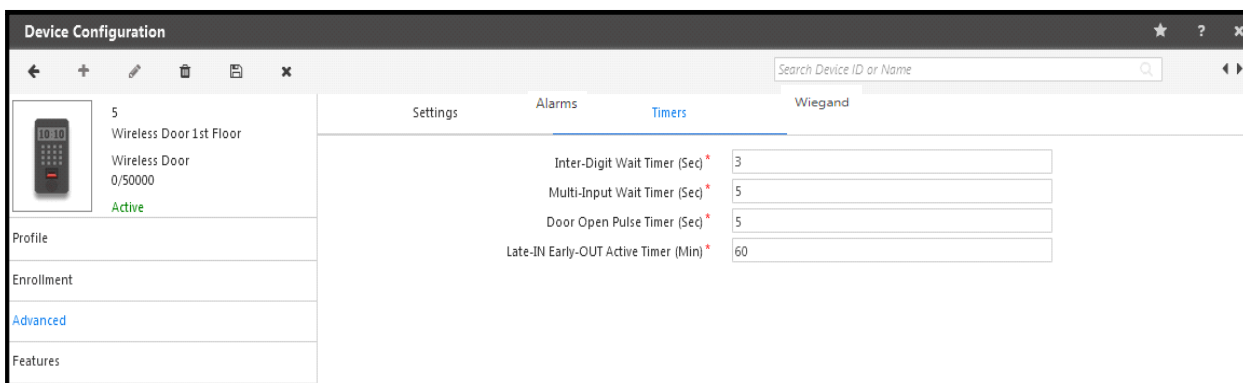

### For Direct Door

Settings	Alarms	Timers
	Tamper	<input type="checkbox"/>
	Door Abnormal	<input type="checkbox"/>
	Door Force Open	<input type="checkbox"/>
	Door Fault	<input type="checkbox"/>
	Panic	<input type="checkbox"/>
	Temperature Threshold	<input type="checkbox"/>

Enable the respective checkbox of alarms which is to be selected.

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms. The **Timers** page appears on your screen as shown below:

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (1 to 65535) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.
- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

### Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitute the details of the COSEC door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now you can show the mobile camera to scan the QR code. The COSEC door will get opened after verifying the security key and access policies of the user.

### Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1a.** If door is in direct door mode enter IP & port of the direct door

b. If door is a panel door, then enter IP & port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license.*

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- "Set1"
- "Set2"

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**. The page appears as shown below.

Set1	Set2
<b>Absentee Rule</b>	
Enable	<input checked="" type="checkbox"/>
<b>Occupancy Control</b>	
Enable	<input checked="" type="checkbox"/>
Maximum Occupancy Limit	9
Minimum Occupancy Limit	1
Zero Occupancy	<input checked="" type="checkbox"/>
<b>Use Count Control</b>	
Enable	<input checked="" type="checkbox"/>
Use Count Limit (Per minute)	
Duress Detection	<input checked="" type="checkbox"/> 10

- **Absentee Rule** - Select this checkbox to **enable** this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.  
For configuring the rule *See Access Control> Absentee Rule*.
- **Occupancy Control** - Select this checkbox to **enable** the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule *See Access Control> Occupancy Control*.
- **Use Count Control** - Select this checkbox to **enable** the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule *See Access Control> Use Count Control*.  
You can enable Duress Detection on the door. The default duress detection code is displayed which is used to generate the duress alarm which informs that the user is forced to open the door under threat.  
For details *See Device Configuration (Panel200)> Features> Set3> Duress Detection*

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. The page appears as shown below.

- **First-IN User Rule** -Select this checkbox to **enable** the feature at the direct door and select the First-In User group which would be valid at the door.  
For configuring the rule See *Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select this checkbox to enable the feature at the direct door.
  - **On Entry:** Check this box so that the system monitors the entry reader for APB violation.
  - **On Exit:** Check this box also so that the system monitors the entry as well as the exit readers for APB violations.
  - **Hard/Soft:** Select the restriction type as Hard or Soft option from the drop down options.  
**Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.  
**Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.
  - **Forgiveness:** Check this box to enable the system to reset the APB status. When forgiveness is enabled, then there will be following options to reset the pass.
  - **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his card for entry in the next morning.
  - **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time.
  - **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-pass back status will get reset and the pass will be in original state.
- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door.  
For configuring the rule See *Access Control> 2- Person Rule*

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To access this, Go to **Device Configuration > Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

The screenshot shows the 'Device Configuration' window with the 'Visual Tagging' tab selected. The left sidebar lists various configuration categories, with 'Video Surveillance' highlighted. The main content area is divided into two sections: 'Visual Tagging' and 'Satatya Integration'. Under 'Visual Tagging', there is a 'Capturing Device' dropdown menu set to 'Matrix HVR/NVR'. Below this are input fields for 'MAC Address' (00\_18\_09\_03\_C5\_4A), 'Camera ID' (6), and 'Storage Root Folder' (ftp://192.168.104.23/clip/). There is also a checkbox for 'FTP Login Credentials' which is checked, followed by 'User Name' (admin) and 'Password' (masked with asterisks).

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to “Event View”.

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording device type from the dropdown menu as shown. The compatible device types are:
  - Matrix HVR/NVR
  - Milestone

### Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.

- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server Username.
- **Password** -Specify the FTP server password.

*Some COSEC devices do not support all the network connection options.*

## Milestone

Event ID	Name	User-Defined Event ID	User-Defined Event Name
No Data			

Camera Name	GUID	Host Name	Port
MATRIX COMSEC C1DR20V112CW-P (192.168.112.192) - Camera 1	ac6c0e92-9acd-410d-b21f-f593c2b5d33f	ketanpaliya	7563

*For more information on integration with **Milestone** devices, refer to [“Milestone Integration”](#).*

## Satatya Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type is selected as the **Capturing Device** (from *Visual Tagging*). It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configuration on this page. The Satatya configuration page appears as shown below

- **Integration type-** Select the integration type from the options of Wired and Network.  
In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by Ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **IP Address-** Specify the IP address of HVR/NVR.
- **Port Number-** Specify the port number of HVR/NVR.
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule -** Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-**Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the Email-ID.
- **Camera-** Select the relevant camera channels depending on the action selected.

- Click the **Add** button to finish the process of linking the event to the action.

Name	Event	Action	Start Time	End Time	Active	
WirelessNVR	Access Allowed	Mail Image	09:00	14:00	Yes	

- The user may now configure another event-action linkage if required.

**Example1:** For action as Video Pop up, the pop up of Camera 24 will be shown for 10 seconds.

**Example2:** For Access allowed event on COSEC Device, recording of camera channel 4,6,8 and 10 will be done for 10 seconds.

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

- This functionality cannot be fully accessed in the Edit mode for a selected device.
- This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- [“Configuration”](#)
- [“Linking”](#)
- [“Time Triggered”](#)

## Configuration

The **Configuration** section for a Direct Wireless Door appears as shown below.

Device Configuration

Device ID  
Device Name  
Wireless Door  
0/50000  
Active/Inactive

Profile  
Enrollment  
Advanced  
Features  
Video Surveillance  
Special Functions  
Input/Output  
Additional  
Job Costing  
Assign Users  
Identification Server

Configuration Linking Time Triggered

**Door Sense**

Enable ☐  
Supervised ☐  
Door Sense Type: Normally Open

**Auxiliary Input**

Enable ☐  
Supervised ☐  
Sense Type: Normally Closed  
Debounce Time (Sec): 5

**Auxiliary Output**

Enable ☐  
Output Wait Time (Sec): 0

**Accept External IO Linking**

Enable ☐  
Network Interface: Ethernet

The following parameters are available for configuration:

- **Door Sense** - The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.

Select the **Enable** checkbox to enable the system for such two-state monitoring.

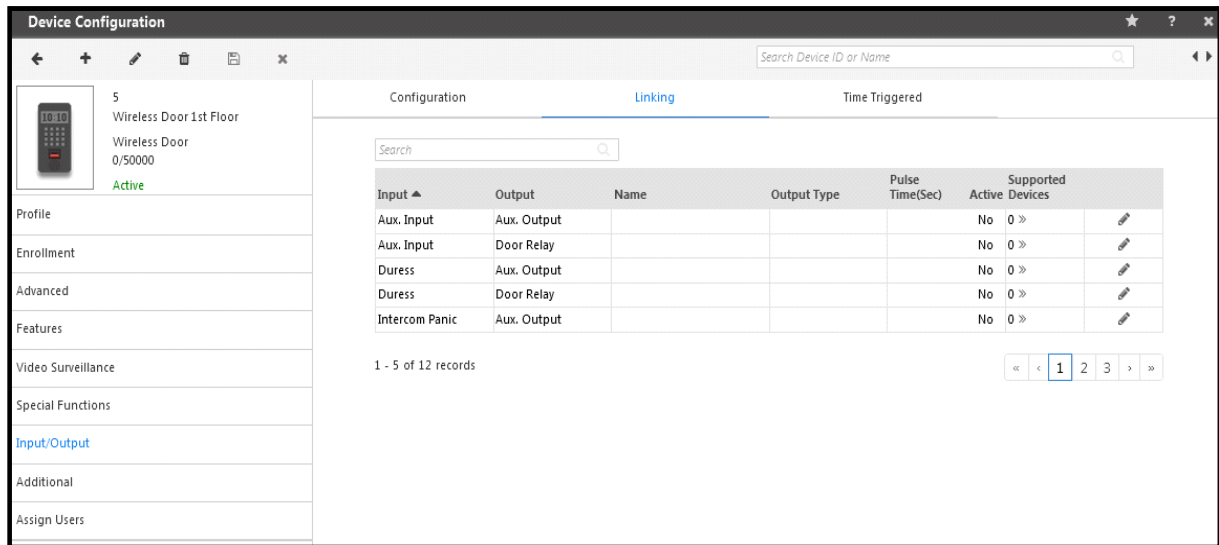

- Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as Normally Open or Normally Closed.
- **Auxiliary Input** - Select the **Enable** checkbox option for Auxiliary Input (e.g. Smoke Detectors) depending on normal or supervised door state monitoring as described above.

**Debounce Time (Sec)** - Specify the Debounce time in seconds. Default value is 3 sec and range should be 0-99 sec. It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated.

- **Auxiliary Output** - Select the **Enable** checkbox to enable Auxiliary Output (e.g. Fire Alarm) for the selected device. To set an additional waiting period before the Aux Output signal is sent, enter an **Output Wait Time (Sec)**.
- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface**: Select the interface option for IO linking with external devices from the drop-down list options—Ethernet, Wireless or Mobile Broadband.

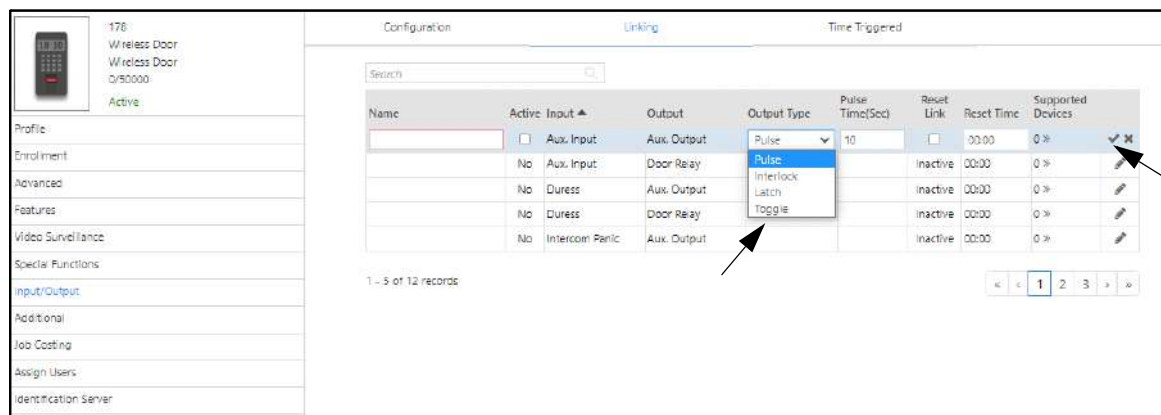

## Linking

The **Linking** section appears as shown below.

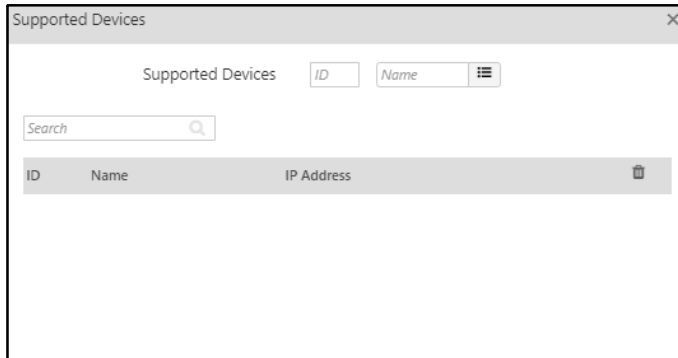

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button shown with arrow.

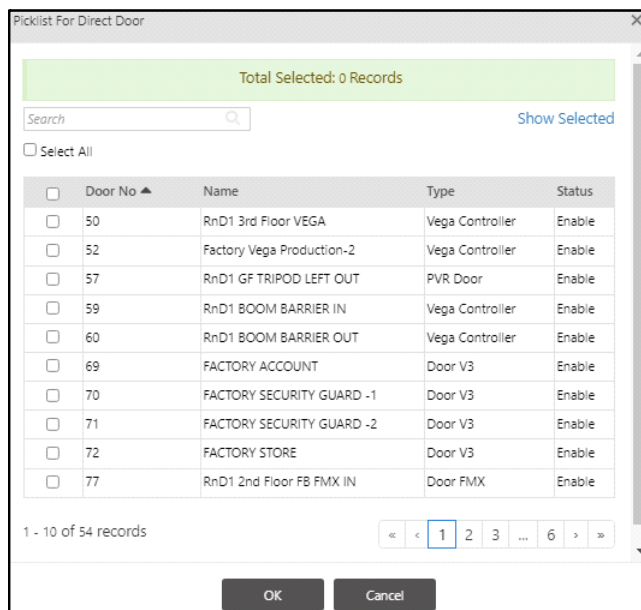

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Active** - Select this check box to activate this linking program.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list shown with the arrow above:
  - **Pulse**: With this type of output, the user needs to define the Pulse time in seconds.
  - **Interlock**: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - **Latch**: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - **Toggle**: With this option, the output group toggles its state whenever an input group is activated.

- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Reset Link:** Select this check box to enable the system to reset the IO link.
- **Reset Time:** Specify the time after which the IO link should be reset in HH:MM format.
- **Supported Devices:** All devices supported for external IO Linking will appear in this picklist for selection. Select the required devices from the picklist. Upto 255 external devices can be added.
- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The 'Supported Devices' pop-up window has a title bar with a close button. Below the title bar, there are two input fields labeled 'ID' and 'Name', followed by a list icon. A search bar with a magnifying glass icon is positioned below these fields. The main area of the window contains a table with three columns: 'ID', 'Name', and 'IP Address'. A trash can icon is located at the top right of the table area.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The 'Picklist For Direct Door' pop-up window has a title bar with a close button. Below the title bar, there is a green banner that says 'Total Selected: 0 Records'. A search bar with a magnifying glass icon is located below the banner. To the right of the search bar is a 'Show Selected' link. Below the search bar is a 'Select All' checkbox. The main area of the window contains a table with five columns: 'Door No', 'Name', 'Type', and 'Status'. The table lists 10 records. At the bottom of the table, there is a pagination bar showing '1 - 10 of 54 records' and a set of navigation buttons. At the very bottom of the window are 'OK' and 'Cancel' buttons.

Door No	Name	Type	Status
50	RnD1 3rd Floor VEGA	Vega Controller	Enable
52	Factory Vega Production-2	Vega Controller	Enable
57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
69	FACTORY ACCOUNT	Door V3	Enable
70	FACTORY SECURITY GUARD -1	Door V3	Enable
71	FACTORY SECURITY GUARD -2	Door V3	Enable
72	FACTORY STORE	Door V3	Enable
77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

You can either select particular devices or all the devices at once.

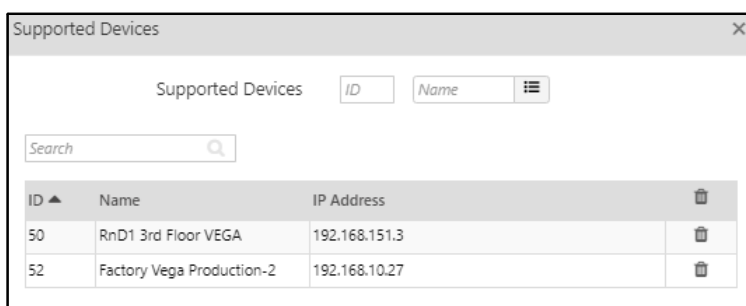

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices pop-up** and the selected devices are displayed here.

The 'Supported Devices' pop-up window displays a table of supported devices. It includes a search bar and a table with columns for ID, Name, and IP Address. Each row has a delete icon (trash can) next to it.

ID	Name	IP Address
50	RnD1 3rd Floor VEGA	192.168.151.3
52	Factory Vega Production-2	192.168.10.27

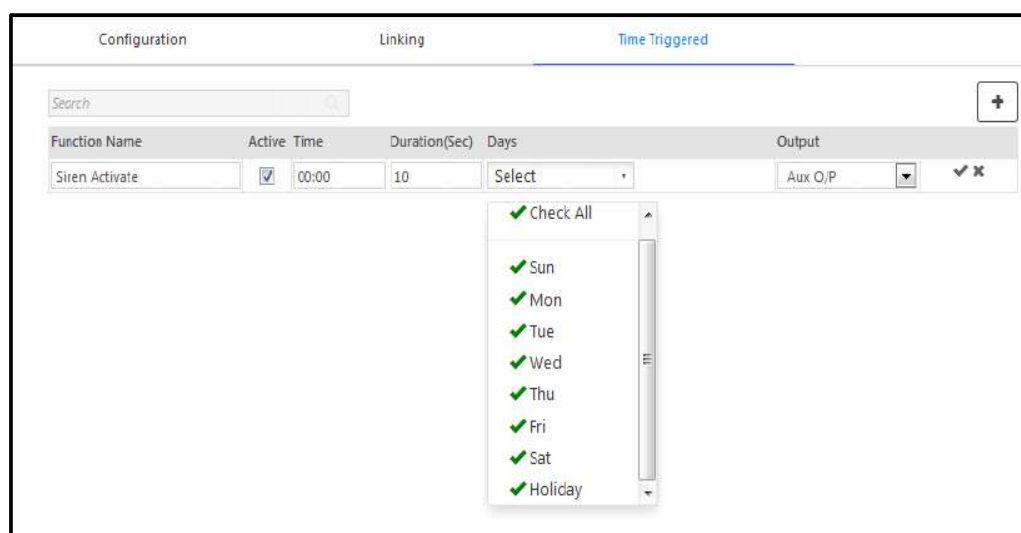

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

The 'Time Triggered' configuration window shows a table for setting up time-triggered functions. The table has columns for Function Name, Active, Time, Duration(Sec), Days, and Output. A dropdown menu is open for the 'Days' column, showing options for all days of the week and holidays, each with a green checkmark.

Function Name	Active	Time	Duration(Sec)	Days	Output
Siren Activate	<input checked="" type="checkbox"/>	00:00	10	Select	Aux O/P

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the **Month**, **Week No.**, **Day of Week**, and **Time** for both the **Forward Clock** and **Backward Clock** as shown.

Save

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST settings in **24-hours** format, and specify **Month**, **Date** and **Time** for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed or backwarded by 08:00 hours.

The screenshot shows a web-based configuration interface titled "Device Configuration". On the left is a sidebar with a list of configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional (highlighted in blue), and Assign Users. The main area displays the "Daylight Saving" settings for a device named "5 Wireless Door 1st Floor" with ID "0/50000" and status "Active". The settings include: "DST Type" set to "Date-Month wise", "Time Period" set to "00:00", "Forward Clock" settings (Month: January, Date: 1, Time: 00:00), and "Backward Clock" settings (Month: January, Date: 1, Time: 00:00). A "Save" button is located at the bottom right of the settings area.

Category	Value
DST Type	Date-Month wise
Time Period	00:00
Forward Clock Month	January
Forward Clock Date	1
Forward Clock Time	00:00
Backward Clock Month	January
Backward Clock Date	1
Backward Clock Time	00:00

- Click the **Save** button.

## Job Costing

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

The screenshot shows the 'Device Configuration' window for a device named '10 Wireless Door' with ID '0/50000'. The 'Job Costing' option is highlighted in the left sidebar. In the main settings area, 'Show Job Menu' is set to 'Show List' and 'Retain Job Selection' is checked. Below these, there are fields for 'Job Group' and 'Job', each with 'ID' and 'Name' picklists. A search bar is also present. At the bottom, a table header is visible with columns: 'Job Code', 'Name', 'Assignment Start', 'Assignment End', and a delete icon. The table currently displays 'No Data'.

Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

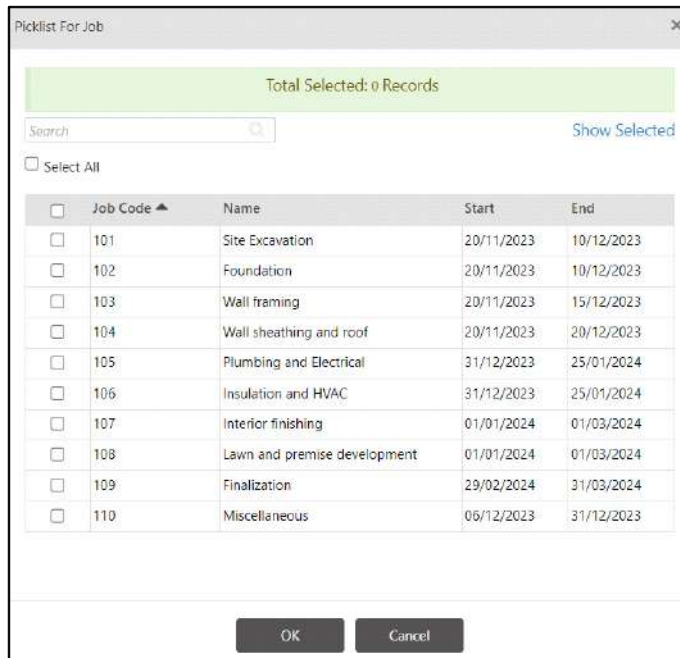

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

Picklist For Job

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

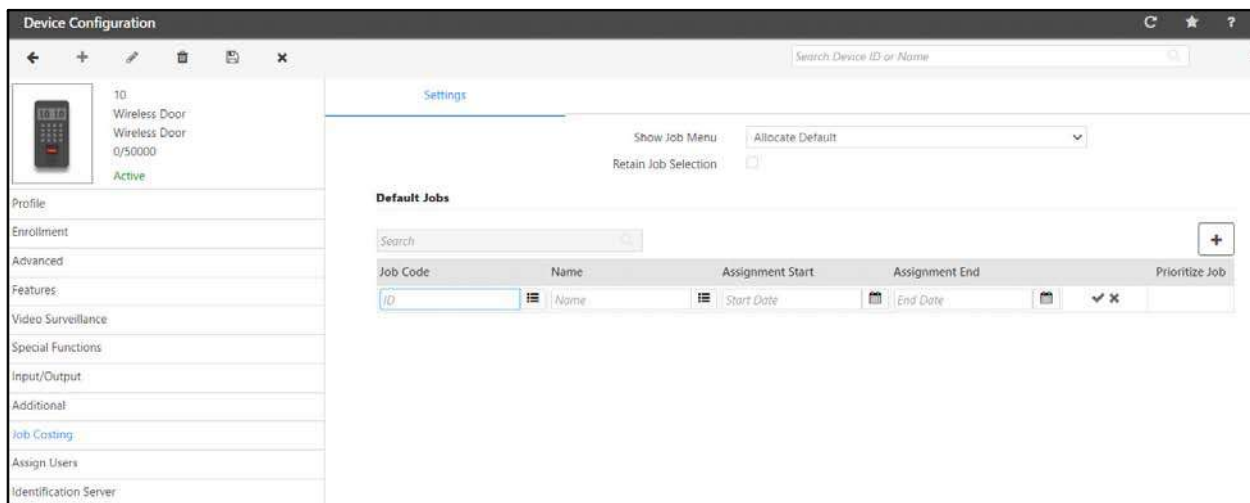

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

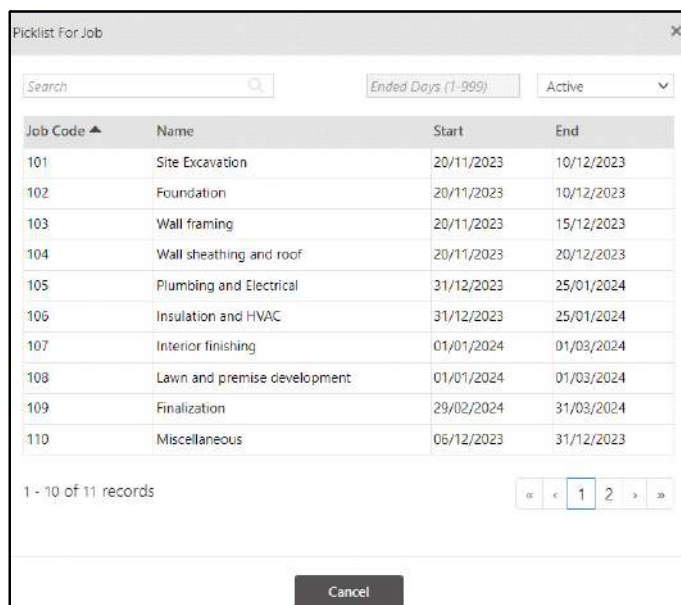

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add** . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start and Assignment End:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- Click **Save** to save the configuration.

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a device icon and a list of configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Settings' and contains a 'Show Job Menu' dropdown set to 'Allocate Default' and a 'Retain Job Selection' checkbox. Below this is the 'Default Jobs' section, which includes a search bar and a table with the following data:

Job Code	Name	Assignment Start	Assignment End	Prioritize Job
111	Premise cleaning	01/10/2023	01/11/2023	[Up Arrow]
108	Lawn and premise development	01/01/2024	01/03/2024	[Up Arrow]
102	Foundation	20/11/2023	10/12/2023	[Up Arrow]
101	Site Excavation	20/11/2023	10/12/2023	[Up Arrow]

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

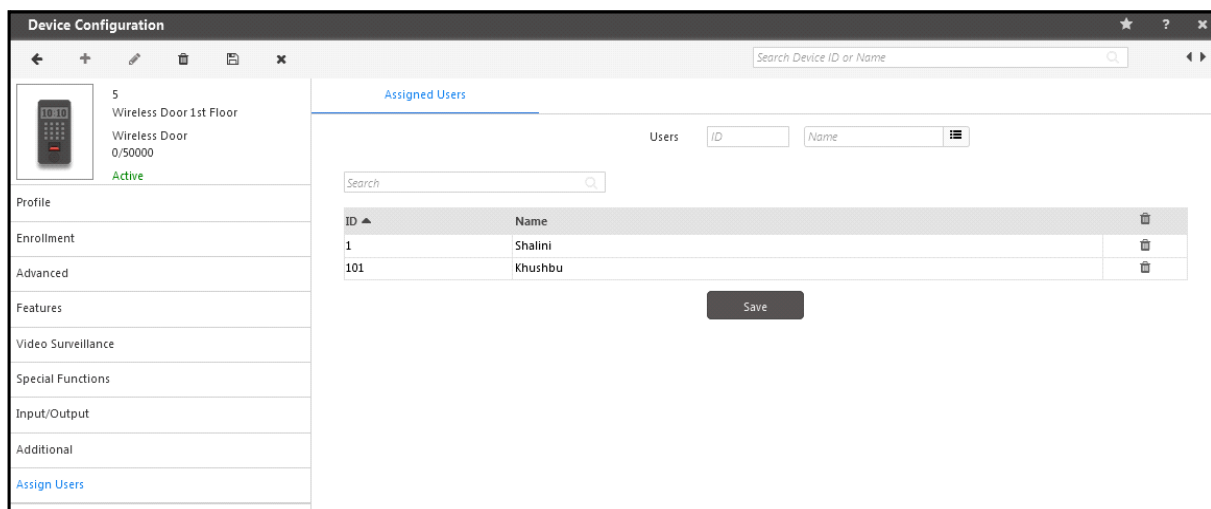

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

To the configured device, you can select and assign the users.

Click the picklist button and select the users.

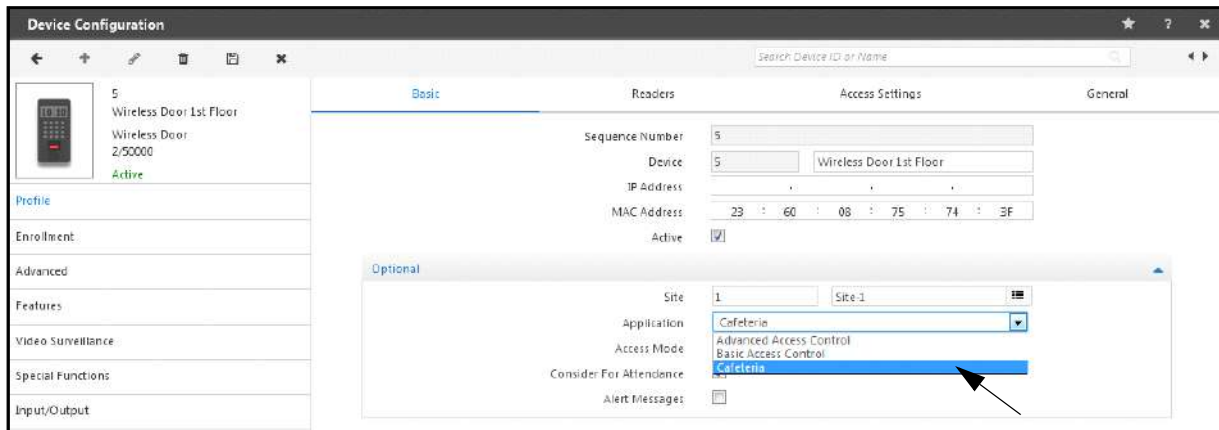

- Click the **Save** button to assign all the added users to the selected door.

## Cafeteria

The COSEC system enables the user to configure devices which will be used by the Cafeteria management module.

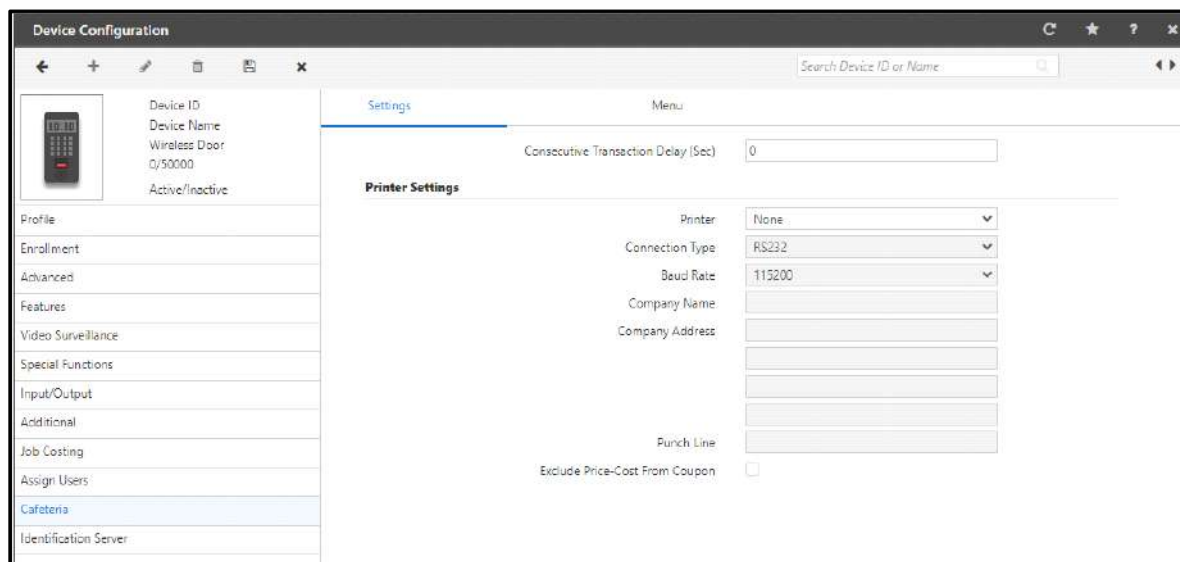

To configure a door for Cafeteria application, select **Cafeteria** option in Device Profile> Basic> Application as shown below with arrow.

The Cafeteria tab will appear in Device Configuration page. Select **Device Configuration> Cafeteria> Settings**

## Settings

The Cafeteria configuration for Wireless Door is shown as below.

- Consecutive Transaction Delay (Sec):** Enter the time interval between two transactions, wherein any user transaction would be restricted.

## Printer Settings

- **Printer:** Select the printer from the dropdown list based on the site requirements.
- **Connection Type:** Select the printer connection type from the drop down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.
- Select the **Exclude Price-Cost From Coupon** check box if you want to exclude the price from the coupon.

## Menu

COSEC allows the administrator to assign one or more cafeteria menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

*The Menu is created from Cafeteria module.*

The screenshot shows the 'Device Configuration' window with the 'Menu' tab selected. The left sidebar lists various settings, and the main area is titled 'Menu'. It contains two sections: 'Assign Menu' and 'Schedule Menu'. The 'Assign Menu' section has fields for 'Menu ID' and 'Menu Name' and a 'Save' button. The 'Schedule Menu' section has a search bar and a table with columns for 'Menu No', 'ID', 'Menu Name', 'Start Time', 'End Time', and 'Schedule Days'. The table is currently empty, showing 'No Data'.

The Menu can be scheduled from Cafeteria module and is displayed in “Schedule Menus” as shown above.

If you have to assign another menu and schedule it on the door then select the Menu from the picklist. The Menu will be shown in the grid as shown below.

The screenshot shows the 'Menu' settings window. The 'Assign Menu' section has a search bar and a table with two rows: Menu No 1 with ID 2 (Breakfast) and Menu No 2 with ID 1 (Lunch). A 'Save' button is below. The 'Schedule Menu' section has a search bar, a table with columns Menu No, ID, Menu Name, Start Time, End Time, and Schedule Days. It shows two rows: Menu No 1 with ID 2 (Breakfast) from 08:45 to 09:00, and Menu No 2 with ID 1 (Lunch) from 12:30 to 14:00. A '+' button is in the top right corner of the 'Schedule Menu' section, indicated by an arrow.

Now to schedule the menu click **Add** button as shown above.

Then select the menu to be scheduled from the **ID** picklist. Specify the **Start** and **End time** for which the Menu will be active and is available to users on the selected door. Select the **days** for which this menu will be available i.e. scheduled on the door.

Then click **OK** and **Save** the Menu schedule on the door.

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a list of devices, including '5 Wireless Door 1st Floor' which is 'Active'. The main area shows the 'Menu' settings for this device. It includes the same 'Assign Menu' and 'Schedule Menu' sections as the previous screenshot. The 'Schedule Menu' table shows two rows: Menu No 1 with ID 2 (Breakfast) from 08:45 to 09:00, and Menu No 2 with ID 1 (Lunch) from 12:30 to 14:00. A '+' button is in the top right corner of the 'Schedule Menu' section, indicated by an arrow.

*Two Menus cannot be scheduled for same timing.*

## Identification Server

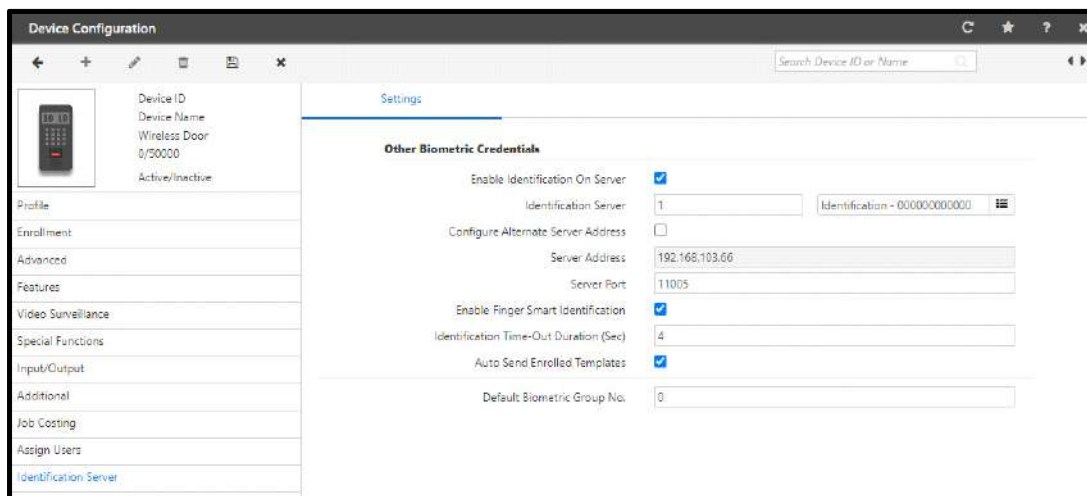

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations,

- On the **Device Configuration** page, select the **Identification Server** tab.

## Other Biometric Credentials

- **Enable Identification On Server:** Select the checkbox to enable the identification of palm/finger templates on this device.
- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray.
- **Server Address:** It displays the IP Address of the selected Identification Server.
- **Configure Alternate Server Address:** Enable this check-box to configure external IP address of Identification Server.
- **Server Address:** Enter the external network IP address which will be used for accessing identification server.

Enable Identification On Server	<input checked="" type="checkbox"/>
Identification Server	1 <span>Identification - 000000000000</span>
Configure Alternate Server Address	<input type="checkbox"/>
Server Address	192.168.103.66
Server Port	11005
Enable Finger Smart Identification	<input checked="" type="checkbox"/>
Identification Time-Out Duration (Sec)	4
Auto Send Enrolled Templates	<input checked="" type="checkbox"/>
Default Biometric Group No.	0

- **Server Port:** Enter the server port number. The default port number is 11005.
- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the fingerprint template identification will get time out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Specify the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

# ARGO Door

---

COSEC ARGO series door controllers are performance and engineering wonders with emphasis on productivity and security for modern organizations. COSEC ARGO devices are the next generation door controllers for serious deployments of Access Control and Time and Attendance applications. The intelligent workhorse is designed to meet aesthetics, technology and harsh environmental requirements of the organization. It consists of POE terminal with Ingress Protection (IP65 rated) with Graphical Display.

There are in total 6 variants of ARGO door. They are:

Variants	Reader Supported
COSEC ARGO FOE212	EM Prox
COSEC ARGO FOM212	MiFare
COSEC ARGO FOI212	HID iClass
COSEC ARGO CAE200	EM Prox
COSEC ARGO CAM200	MiFare
COSEC ARGO CAI200	HID iClass

*COSEC ARGO CAE200/CAM200/CAI200 do not support Fingerprint Module.*

*The features and functionalities supported will differ as per the variant installed.*

ARGO Door can be connected as **Direct Door** as well as **Panel Door**.

Click the ARGO device from the Device List to add it as a **Direct Door**.

Select Device Type To Be Added

ARGO

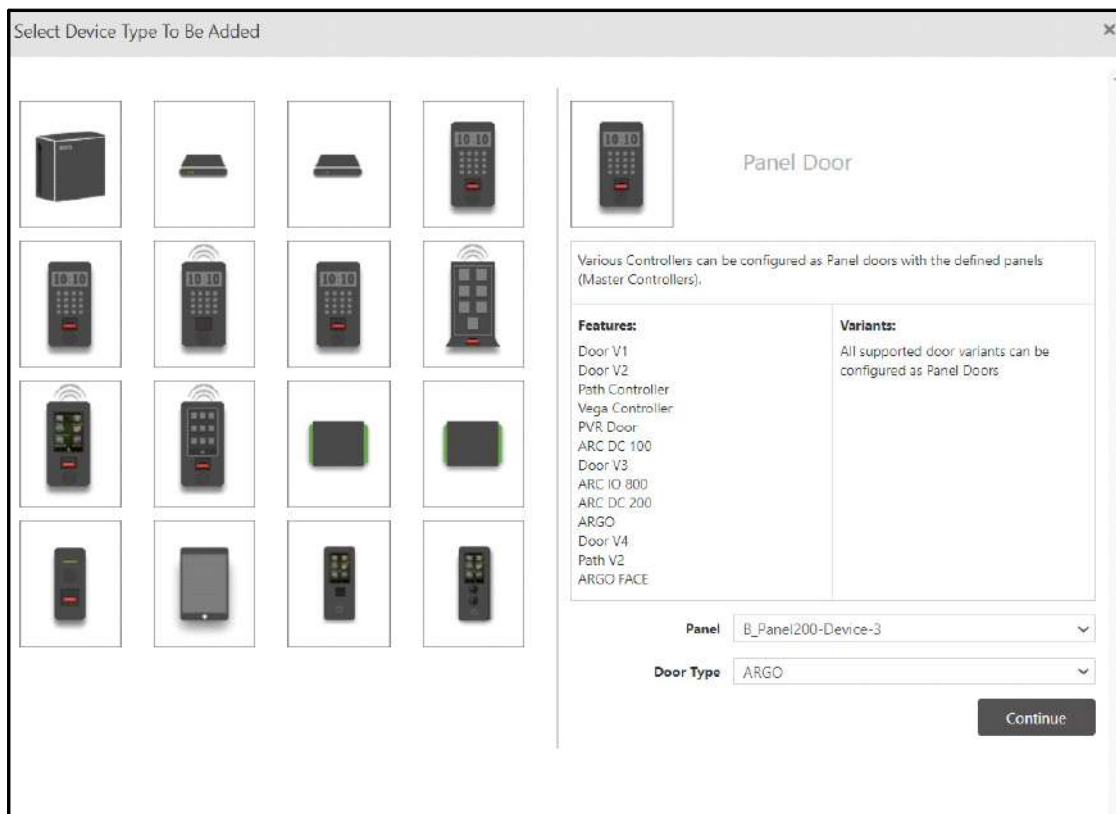

High-end Wireless terminals for Access Control, Time Attendance & Cafeteria. POE terminal with Ingress Protection (IP65 rated) & Graphical Display. Elegant design. Uses RFID, Password and Biometric Authentication.

<b>Features:</b> User Capacity: 50,000 Event Buffer: 5,000,000 3.5" TFT Display POE Enabled Wi-Fi and Mobile Broadband Connectivity with Server, Inbuilt Bluetooth Card, Pin, Finger and Face	<b>Variants:</b> FOE212 FOM212 FOI212 CAE200 CAM200 CAI200
--	--

Continue

OR

Click Panel Door to add ARGO device as a **Panel Door**.

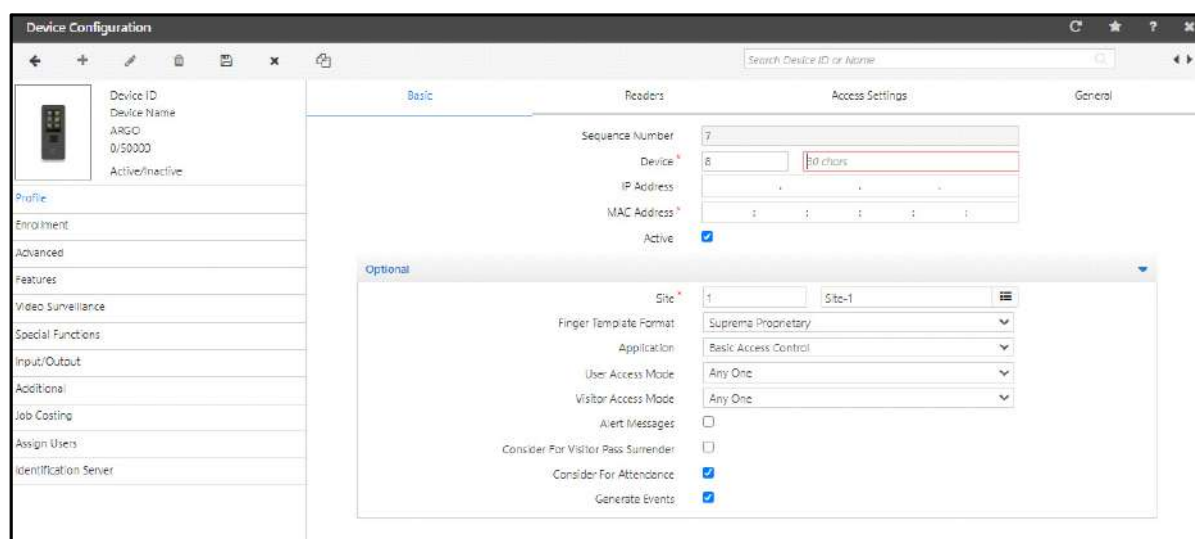

**Panel:** Select the desired Panel from the drop-down list with which you wish to connect the Door.

**Door Type:** Select **ARGO** from the drop-down list.

Click **Continue**.

The **Device Configuration** page for ARGO Door appears.

If you wish to add Devices automatically, click **Admin Module> System Configuration> Global Policy> Device**. Select the **Auto Add New Devices** check-box. Once the device is connected in network, it comes online in COSEC Monitor.

The IP Address of the device will be displayed automatically in **Profile > Basic**.

*The Monitor Service must be running while adding the device to COSEC.*

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#).
- OR
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

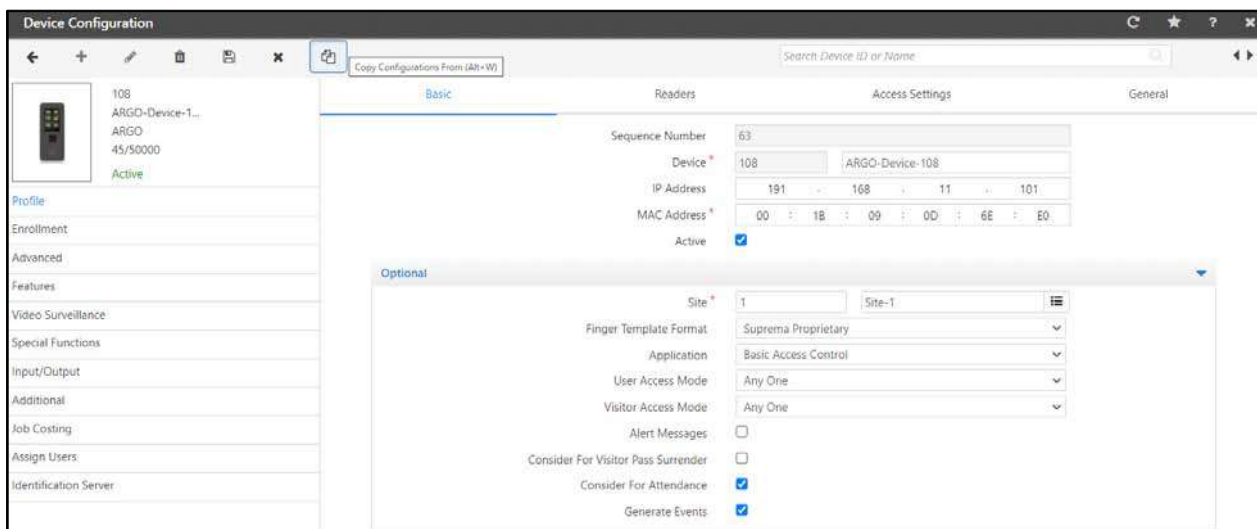

- the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.
- the values of other parameters that are configured will remain as they are.

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

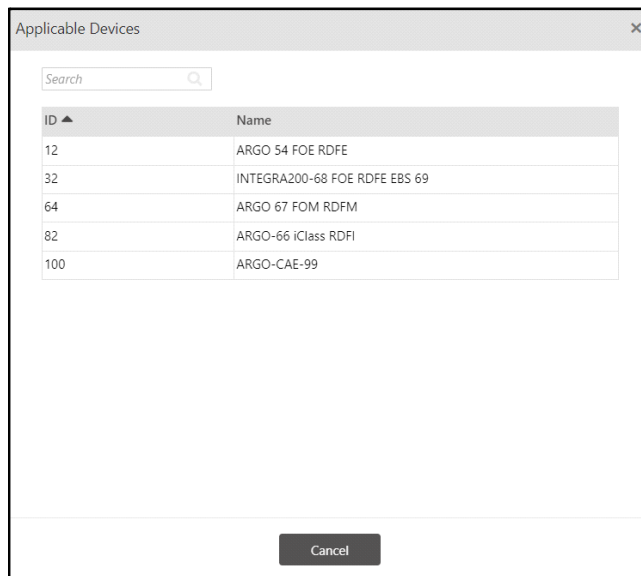

- all the applicable parameter values will be copied from the selected device.
- the values of the other parameters will be their default values.

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- *In case of Direct Door, the pop-up will display other ARGO Direct Doors only. For example, if you have direct door devices — ARGO1, ARGO2, Vega1 and Vega2, then this pop-up will display only ARGO1 and ARGO2.*
- *In case of Panel Door, the pop-up will display other Vega Panel Doors connected with the same Panel only. For example if you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, ARGOPD1, ARGOPD2. In Panel2 the Panel Doors connected are ARGOPD3 and ARGOPD4. Then, if you are adding the new ARGO Panel Door to Panel1, then this pop-up will display ARGOPD1 and ARGOPD2 only.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To configure the device parameters, click the following links:

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)
- [“Cafeteria”](#)
- [“Identification Server”](#)

## Profile

Setting up a door profile involves configuring basic parameters to set up any door controller device. This section enables the user to set up the basic profile for any new device.

To do so, on the **Device Configuration** page, click the **Profile** tab in the left pane.

The screenshot shows the 'Device Configuration' window with the 'Profile' tab selected in the left sidebar. The main area is divided into 'Basic' and 'Optional' sections. The 'Basic' section includes fields for 'Sequence Number' (24), 'Device' (163), 'IP Address' (192.168.103.127), 'MAC Address' (00:1B:09:41:7F), and 'Active' (checked). The 'Optional' section includes 'Site' (1), 'Finger Template Format' (Suprema Proprietary), 'Application' (Basic Access Control), 'User Access Mode' (Any One), 'Visitor Access Mode' (Any One), 'Alert Messages' (unchecked), 'Consider For Visitor Pass Surrender' (unchecked), 'Consider For Attendance' (checked), and 'Generate Events' (checked).

To configure the Profile parameters click the following links:

- “Basic”
- “Readers”
- “Access Settings”
- “General”

## Basic

Click **Basic** tab. The **Basic** page appears.

*Sequence Number, Device, IP Address, MAC Address and Active are applicable for both Direct Door and Panel Door.*

For ARGO Door as a Direct Door,

Configure the following parameters:

- **Sequence Number:** This is a system generated sequence number for each new device.
- **Device:** Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address:** This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address:** Specify the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active:** Check the box to activate the device on the network.

*To add the Device automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “**Auto Add New Devices**” checkbox.*

*The device will be added automatically but make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

Click the **Optional** collapsible tab, to configure the following parameters:

- **Site:** Select the site to which this door is to be assigned from the site pick list window. Site is created from Devices> Masters> Site.
- **Finger Template Format:** Select the format as Suprema Proprietary or Suprema ISO according to which the templates will be enrolled. For globally setting the template format, you can set from Global policy.
- **Application:** Select the application type for which the device is to be used. The options are **Basic Access Control**, **Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.
- **User/Visitor Access Mode:** Defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop down list. The options available are:
  - Any one
  - Card
  - Card + Biometrics
  - Card + Biometrics + PIN
  - Card + PIN
  - Biometrics
  - Biometrics + PIN
  - Biometrics then Card
  - None
  - Face
  - Card+ Face
  - PIN + Face
  - Biometrics+ Face
  - Card then Biometric
- **Cafeteria Face Access Mode:** When Application is set as '*Cafeteria*', only then this configuration is available to the Admin and to add provision of using face as a credential to make transactions on cafeteria devices.
  - Select the mode type from the drop down to allow a user to choose multiple menu items and upon checkout do transaction using face as credential.
  - The options available are **None**, **Default Item** and **Item Selection**.

Optional

Site \* 1 Site-1

Finger Template Format Suprema Proprietary

Application Cafeteria

User Access Mode Any One

Visitor Access Mode Any One

Cafeteria Face Access Mode None

Consider For Attendance
 

- None
- Default Item
- Item Selection

Alert Messages ☒

Consider For Visitor Pass Surrender ☐

Generate Events ☒

- Default Item mode in cafeteria will allow users a touch less cafeteria experience. In Default Item mode only the transaction for default item is allowed. A default item is assigned in each scheduled menu.
- Item Selection mode in cafeteria will allow users to select the desired menu items and make a transaction using Face as a credential.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as access control events.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Check the box to consider the selected device for visitor pass surrender. The Visitor can show his credential on this device to surrender the pass.
- **Generate Events:** This check-box is enabled by default. You can disable the check-box if the server is not required to receive any events from the respective devices.

Consider For Attendance ☒

Alert Messages ☒

Access Zone Zone-1

Access Cluster Cluster-1

Door Group None

Auto IP Assignment ☒

Click the **Optional** collapsible panel, to configure the parameters:

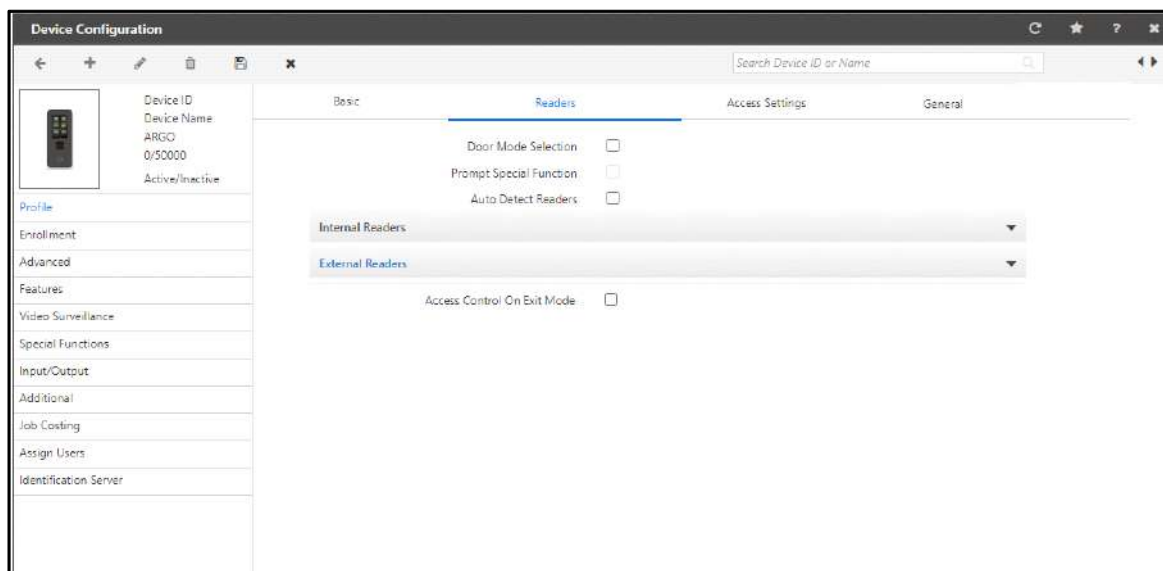

- **Site:** Click the picklist and select the site to which this door is to be assigned. Site is created from **Devices > Masters > Site**.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Access Zone** (only for panel doors) - Assign an access zone to the door by selecting from the drop down menu.
- **Access Cluster** (only for panel doors) - Assign an access cluster to the door by selecting from the drop down menu.
- **Door Group:** Door Group drop down includes list of all configured Door groups on corresponding panel. An additional option as 'None' is available and selected by default.
- **Auto IP Assignment:** There is option where panel door can be assigned its IP from device webpage. To enable this check the Auto IP Assignment box.

*Access Zone is configured while configuring Panel200.*

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown.

The following parameters are available for configuration:

*Door Mode Selection, Prompt Special Function and Auto Detect Readers are applicable for Direct Door only.*

- **Door Mode Selection:** If this option is enabled, then user will be prompted to select punch type as IN or OUT while punching on the device.

E.g: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in ext mode then you can select the door mode if “Door Mode Selection” is enabled.

If not selected, user will need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, **see Devices > Masters > Reader Mode Scheduler.**

- **Prompt Special Function:** This will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted. This can be enabled only when “Door Mode Selection” is enabled.
- **Auto Detect Readers** (for direct doors only): Select this checkbox to enable auto detection of Readers on a door controller connected to the server.

## Internal Readers

This option allows the configuration of the Internal Reader for the selected door.

The screenshot displays the 'Internal Readers' configuration window. At the top, there are dropdown menus for 'Mode' (set to 'Entry') and 'Card Reader Type' (set to 'MiFare Reader'). Below these is a search bar and a table with the following data:

Member No	Card Format	Configurable Bits
1	Default Format	0

Below the table, there are several configuration options: 'Finger Reader Type' (Finger Reader), 'Enable Scheduling' (checkbox), 'Reader Mode Schedule' (ID and Name fields), 'Advertise Bluetooth' (checkbox, checked), 'Bluetooth Name' (ARGO-De-IN), 'Bluetooth Range' (Custom), and a 'Custom Bluetooth Range (dBm)' slider ranging from -30 to +10 dBm.

*Mode, Card Reader Type and Card Format are applicable for both Direct Door and Panel Door.*

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **Card Reader Type:** Select the Card Reader Type from the following options:
  - EM Prox Reader
  - HID Prox Reader
  - MiFare Reader
  - HID iClass-U Reader
  - HID iClass-W Reader
- **Card Format:** The single or multiple card formats can be assigned to the readers of both direct and panel doors. The default card format is assigned to device as shown in the grid. If no other card format is

assigned to device; then this default format will be applied. To know more about Card Formatting, refer ["Card Formats"](#).

## Multiple Card Format

To assign multiple card formats to device click on **Add** button. Then click the picklist to select the card format. And click **OK** to save the format.

This screenshot shows the top part of the card format configuration window. It includes a search bar, a table with columns 'Member No.', 'Card Format', and 'Configurable Bits', and an 'Add' button. The table currently has one entry: Member No. 1, Card Format 'Default Format', and Configurable Bits 0.

This screenshot shows the same interface as the previous one, but with the second row selected. The 'Card Format' picklist is open, showing 'Format1' as the selected option. The 'OK' button is visible at the bottom right.

Similarly you can add maximum 5 card formats. When the card format is saved, the Configurable bits of that format as configured from Masters> Card format will be displayed here. Multiple Card format configurations will be dispatched to door separated by 'Format ID' that is 'Member No.' along with all other format related parameters.

This screenshot shows the 'Internal Readers' configuration window. It has dropdowns for 'Mode' (set to 'Entry') and 'Card Reader Type' (set to 'EM Prox Reader'). Below these is a search bar and a table with columns 'Member No.', 'Card Format', and 'Configurable Bits'. The table contains three entries: Member No. 1 with 'Default Format' and 0 bits; Member No. 2 with 'Format1' and 26 bits; and Member No. 3 with 'Format2' and 32 bits. Each row has edit and delete icons.

- Select the **Finger Reader Type** as **Finger Reader**.

Click the **FP Reader Configuration**  button to set the **Security Level**, **Lighting Condition**, **Sensitivity**, **Fast Mode**, **Image Quality** and **Restore Defaults** for the selected FP Reader as shown.

This screenshot shows the 'Finger Print Module Calibration' dialog box. It contains five settings, each with a dropdown menu: 'Security Level' (Normal), 'Lighting Condition' (In Door), 'Sensitivity' (Level 8 (High)), 'Fast Mode' (Auto), and 'Image Quality' (Moderate). There is a 'Restore Defaults' button below these settings. At the bottom are 'Save' and 'Close' buttons.

## Finger Print Module Calibration

- **Security Level:** Security level specifies FAR (False Acceptance Ratio). Since FAR and FRR (False Rejection Ratio) is in inverse proportion to each other, FRR will increase with higher security levels. For regular Time-Attendance system “**Normal**” level can be selected. For high security areas requiring complete or maximum matching of template, “**Highly Secure**” level must be selected. For approximate matching of template, “**Secure**” level can be selected.
- **Lighting Condition:** Optical sensors are sensitive to lighting condition. With this parameter, users can tune optical sensors to be adapted for their lighting environment. Select the In Door or Out Door option based on the device location.
- **Sensitivity:** Specifies sensor sensitivity to detect a finger. On high sensitivity, the module will accept the finger input more easily. Level 8 has the highest sensitivity.
- **Fast Mode:** Fast Mode parameter can be used to shorten the matching time with a little degradation of authentication performance. In typical cases, Fast Mode 1 is 2 to 3 times faster than Normal mode while Fast Mode 5 is 6 to 7 times faster than Normal mode. There is also an Auto mode.
- **Image Quality:** When a fingerprint is scanned, the module will check if the quality of the image is adequate for further processing. Image quality parameter specifies the strictness of this quality check. Strongest option might lead to higher number of finger rejections during the enrollment process.

*Good quality of enrollment (around 70-75% quality) is recommended for proper identification of enrolled templates.*

- Click on the **Restore Defaults** button to return the field values for this page to default values if needed.
- **Enable Scheduling:** Check the box to enable automated control for the mode of an Internal Reader. This will set reader mode of door as entry or exit as per user-defined schedules.
- **Reader Mode Schedule:** Select the schedule from the picklist which is to be assigned to the internal reader of ARGO door. With this the same reader can be configured to function both in Entry as well as Exit mode based on scheduled timings.

*For configuring Reader Mode schedule See Devices> Masters> Reader Mode Scheduler.*

*Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters.
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

Click on the **Save** button.

## External Readers

This option allows the configuration of the External Reader for the selected door.

*Mode, External Reader Type, Card Format and Exit Switch are applicable for both Panel Door and Direct Door.*

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.

*Using PIN-W Reader; user can change their PIN number through devices.*

- **Card Format:** Select a card format to be applicable for external readers of the device. This is applicable for all direct doors and all Panel doors. For multiple format description, refer to [“Multiple Card Format”](#)
- **Exit Switch:** Select this checkbox to enable the use of **Exit Switch**.

*User Access Mode, Visitor Access Mode and Access Control on Exit Mode is applicable for Direct Door only.*

- **User/ Visitor Access Mode:** Select the desired access mode for User/Visitor.

*Configure Bluetooth From Server, Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- **Configure Bluetooth from Server:** When you select **External Reader Type** as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select **Configure Bluetooth from Server** checkbox to enable Bluetooth feature for the mentioned external readers.

Once you enable **Configure Bluetooth from Server**, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this checkbox to enable Bluetooth of the ARGO device by which the device will be visible to others. Then configure the following parameters
- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement.

The Bluetooth Name can be a maximum of 20 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom. If you select the **External Reader Type** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.

*If Auto Detect Reader is enabled, then External Reader Bluetooth parameters will not be visible.*

- **Access Control On Exit Mode** (only for direct door): Select this check box to enable the checking of the following access control policies on door when the external reader is in the 'exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check

- ASC
- User Access Group

Click **Save** to save all the configurations.

## Access Settings

This section is available for direct doors. The **Access Settings** page appears as shown below:

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.

2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

- **Working Days** - Specify the days on which the default working hours should be applicable. Check the relevant boxes to specify the active days.
- **Working Hours (HH:MM)** - Define the default working hours in HH:MM format.
- **Holiday Schedule** - This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist.

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

- **Device Access Schedule:** All the Access Schedules created from the "[Access Schedules](#)" page appear in the drop-down list. By default, the Access Schedule, if assigned from the Access Schedule page appears here. If you wish to change the Access Schedule, select the desired Access Schedule to be assigned to the device from the drop-down list.

If an Access Schedule is selected, it will override the Working Days configuration.

If an Access Schedule is already assigned from "[Access Schedules](#)" page and a different schedule is selected here, it will override the schedule assigned from "[Access Schedules](#)" page and vice versa.

To revoke an Access Schedule, select the **Select** option from the list. The device will be removed from the Access Schedule under the "[Assign Doors](#)" section on the "[Access Schedules](#)" page.

## General

The **General** page appears as follows. Enter all general details applicable to the device in this section.

The screenshot shows the 'Device Configuration' window for device 26 (IJ-ARGO). The 'General' tab is selected. The left sidebar lists various configuration categories. The main area contains the following settings:

- Mute Buzzer:** ☐
- Allowed Acknowledgement:**
  - Display Duration (ms): 500
  - LED - Buzzer Duration: Short
- Denied Acknowledgement:**
  - Display Duration (ms): 3000
  - LED - Buzzer Duration: Long
- Enable Display Messages:** ☐
- Custom Birthday Message:** Happy Birthday
- Display Message 1:** ☒
  - Schedule: 00:00 to 11:59
  - Message: Good Morning
- Display Message 2:** ☒
  - Schedule: 12:00 to 15:59
  - Message: Good Afternoon
- Display Message 3:** ☒
  - Schedule: 16:00 to 20:59
  - Message: Good Evening
- Display Message 4:** ☒
  - Schedule: 21:00 to 23:59
  - Message: Good Night
- Multi-Language Support:** ☐
- Auto Hide Menu Bar:** ☐

*Mute Buzzer, Allowed Acknowledgment, Denied Acknowledgment and Auto Hide Menu Bar are applicable for both Direct Door and Panel Door.*

*If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/ Denied Acknowledgment will be applicable to these readers as well.*

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively. This is applicable for both Direct and Panel door.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 250 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.

- **LED - Buzzer Duration** - Select the time duration as Long, Medium, Short or Shortest for the LED Buzzer.
- **Auto Hide Menu Bar**- If a person touches the device screen by mistake and enter into Menu; then the finger sensor will not take the punch when he punches on device till the menu is closed or time out occurs. So in this case; enabling the **Auto hide Menu Bar** check-box will hide the menu and the user will be able to punch on the door. If you want to access the Menu then swipe upwards on the screen which will show the menu.

*Enable Display Messages, Custom Birthday Message, Display Message 1 to 4, Schedule, Message and Multi-Language Support are applicable for Direct Door only.*

- **Enable Display Messages** - This feature allows the user to enable custom birthday message and display messages to be displayed on the door device. Upto 4 display messages can be configured for a door.
- **Custom Birthday Message**- Enter the birthday message which would appear on the door when the user punches on the door on his birth date.

The valid values are

**A-Z**

**a-z**

**0-9**

**`~!@#\$%^&\*()\_+~{}|\\|:;?<>,.\\''**

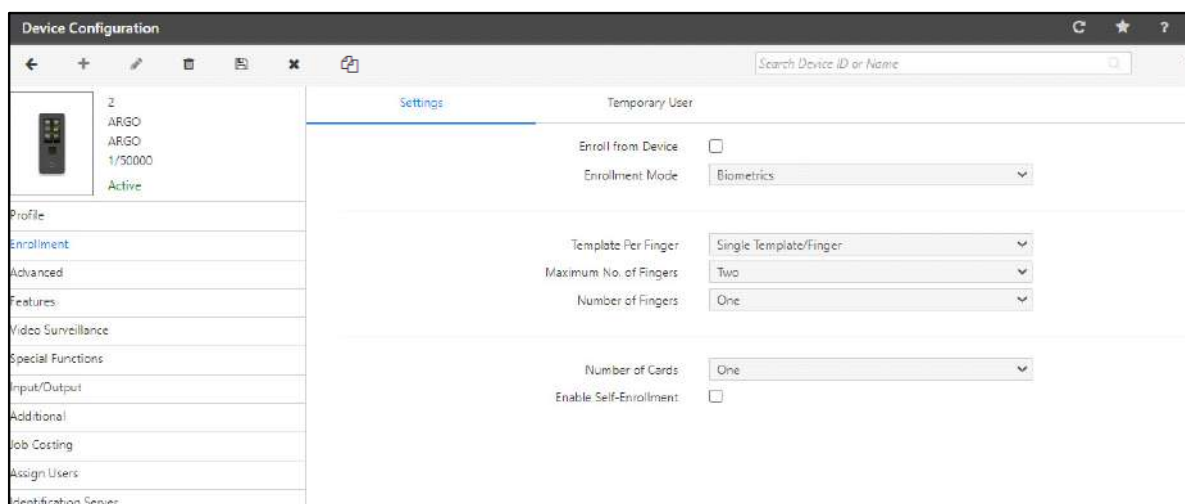

- **Display Message** - Enable each display message individually by selecting this checkbox.
- **Schedule** - For each message, the user needs to define the time period between which this message is to be displayed.
- **Message** - Enter the message to be displayed in this field. Maximum 21 characters allowed.
- **Multi-Language Support** - Select this checkbox to enable multi-language support for the selected device.

The **Display From** field shall display the reading order for the selected language.

# Enrollment

On the **Device Configuration** page, click the **Enrollment** tab in the left pane.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration options: Profile, Enrollment (selected), Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area is titled 'Settings' and 'Temporary User'. It contains several configuration options: 'Enroll from Device' (checkbox, unchecked), 'Enrollment Mode' (dropdown menu, 'Biometrics' selected), 'Template Per Finger' (dropdown menu, 'Single Template/Finger' selected), 'Maximum No. of Fingers' (dropdown menu, 'Two' selected), 'Number of Fingers' (dropdown menu, 'One' selected), 'Number of Cards' (dropdown menu, 'One' selected), and 'Enable Self-Enrollment' (checkbox, unchecked).

To configure the Enrollment parameters click the following links:

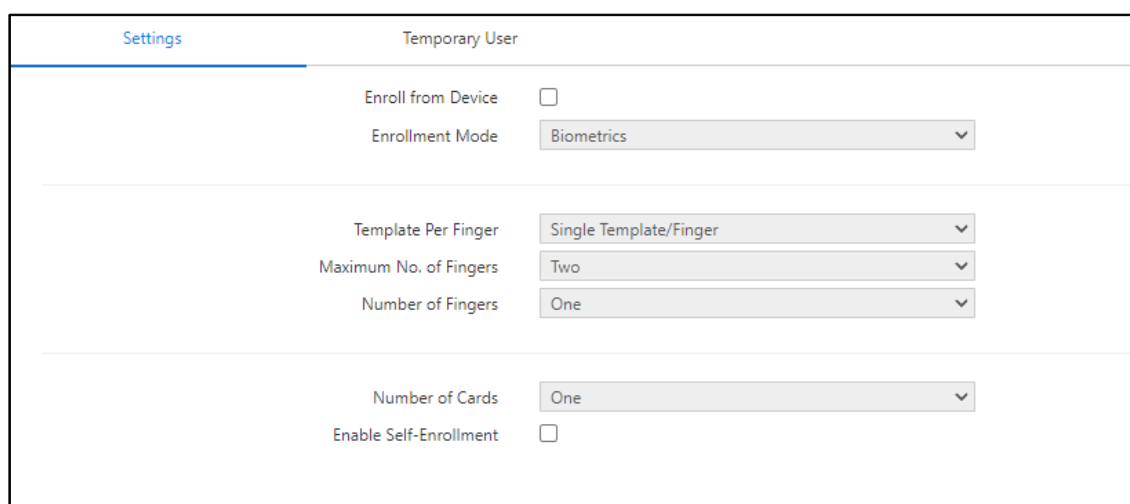

- [“Settings”](#)
- [“Temporary User”](#)

## Settings

*Settings is applicable for Direct Door only.*

Click the **Settings** tab. The **Settings** page appears.

The screenshot shows the 'Settings' page for 'Temporary User'. It contains the same configuration options as the previous screenshot: 'Enroll from Device' (checkbox, unchecked), 'Enrollment Mode' (dropdown menu, 'Biometrics' selected), 'Template Per Finger' (dropdown menu, 'Single Template/Finger' selected), 'Maximum No. of Fingers' (dropdown menu, 'Two' selected), 'Number of Fingers' (dropdown menu, 'One' selected), 'Number of Cards' (dropdown menu, 'One' selected), and 'Enable Self-Enrollment' (checkbox, unchecked).

Configure the following parameters.

- **Enroll from Device** - Select this check-box to enable the enrollment of user from the door controller. When this check-box is enabled, **Enroll User** special function on that device will be activated.

*If both Enroll User special function & Enroll From Device check box are inactive in Device Configuration, then if you enable Enroll User special function, Enroll From Device check box will also be enabled.*

- **Enrollment Mode** - Select the Credential from the drop-down list that can be enrolled using the special function at the DOOR. The options are **ReadOnlyCard**, **SmartCard**, **Biometric** and **BiometricthenCard**, and **DuressFinger**. Refer [“Enroll Credentials”](#) or [“Enrolling Users”](#) to enroll User/Worker. Refer [“Enrollment”](#) or [“Enroll Credentials”](#) to enroll Worker. Refer [“Enroll Credentials”](#) to enroll a Visitor.

*DuressFinger is applicable for User and Worker only.*

- **Template Per Finger:** This displays the values as configured in the Global Policy. This field is not editable. For details refer to [“User Policy”](#).
- **Max Number of Fingers:** This displays the values of the Maximum Number of Fingers configured in the Global Policy. This field is not editable. For details refer to [“User Policy”](#).
- **Number of Fingers/Cards:** Select the Number of Cards or Fingerprints to be enrolled based on the credential option selected in Enrollment Mode.
- **Enable Self-Enrollment:** Select this check box to enable the Self-Enrollment feature on this door.

## Temporary User

*Temporary User/Worker is applicable for both Direct Door and Panel Door.*

*Temporary User/Worker is not applicable for Cafeteria mode of devices.*

*For Panel Door to add Temporary User/Worker, make sure*

- *Temporary Addition of Unknown User is enabled from Panel200 > Enrollment > Temporary User.*
- *User Access Mode (Door) in Zones is — Face, Biometric or Card — as per your requirement.*

*For Direct Doors make sure the User Access Mode selected in Profile is — Face, Biometric or Card — as per your requirement.*

Click the **Temporary User** tab. The **Temporary User** page appears.

Settings Temporary User

Temporary Addition of Unknown User: Disabled (dropdown menu with info icon)

Confirm before adding Temporary User: ☐

**Auto Generate ID**

ID Format:

Numeric Value Length: 0

Zero Padding required: ☐

**Auto Generate Name**

Add Name via Device: ☐

Name Format:

**Group**

Organization	1	Organization-1	≡
Branch	1	Branch-1	≡
Department	1	Department-1	≡
Section	1	Section-1	≡
Category	1	Category-1	≡
Grade	1	Grade-1	≡
Designation	1	Designation-1	≡
Custom Group 1	1	Custom Group 1	≡
Custom Group 2	1	Custom Group 2	≡
Custom Group 3	1	Custom Group 3	≡

Configure the following parameters.

- **Temporary Addition of Unknown User:** Select the desired option to temporarily add an unknown user from the drop-down list. The options are — Disabled, As Temporary Worker or As Temporary User. By default, **Disabled** is selected. If you select **Disabled**, all the parameters are disabled.

You can add an unknown user either as a temporary user or worker from the device at a time.

If you select As Temporary User, for details refer to [“As Temporary User”](#).

If you select As Temporary Worker, for details refer to [“As Temporary Worker”](#).

## As Temporary User

Temporary User Settings		
Temporary Addition of Unknown User	Disabled	
Confirm before adding Temporary User	<input type="checkbox"/>	
<b>Auto Generate ID</b>		
ID Format		
Numeric Value Length	0	
Zero Padding required	<input type="checkbox"/>	
<b>Auto Generate Name</b>		
Add Name via Device	<input type="checkbox"/>	
Name Format		
<b>Group</b>		
Organization	1	Organization-1
Branch	1	Branch-1
Department	1	Department-1
Section	1	Section-1
Category	1	Category-1
Grade	1	Grade-1
Designation	1	Designation-1
Custom Group 1	1	Custom Group 1
Custom Group 2	1	Custom Group 2
Custom Group 3	1	Custom Group 3

If you select **As Temporary User**, configure the following parameters:

- **Confirm before adding Temporary User:** Select the check box if you wish that a confirmation message should be displayed on the device display screen, to confirm a user before adding that user as a temporary user when enrolling the same from the device. If this is not enabled, no confirmation message will be displayed and the user/worker will be enrolled automatically. You need to check the Temporary User/ Worker list to verify if the user is enrolled in the system.

### Auto Generate ID

- **ID Format:** Configure the required format of the ID as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user.

To select the different format for the ID, enter \* in **ID Format** box and the drop-down list containing different Value formats appears. Select the desired format from the drop-down list.

Click **Copy User Format from Global Policy** , if you wish to copy the ID Format as configured in the Global Policy. For more details, refer to ["Generate User ID"](#).

- **Numeric Value Length:** Enter the desired number of digits from 1 to 15 till which the 'NUMVAL' must be generated. For example: 4.

- **Zero Padding Required:** Select the check box to allow the addition of zeros before the 'NUMVAL' value to reach the configured Numeric value length. For example, if the Numeric value length is configured as 4 and the number assignment starts from a single digit then as explained in above example, the new User ID to be generated is 'MATRIX4DOC1' if Zero Padding is enabled, it will be generated as 'MATRIXDOC0001'.

## Auto Generate Name

- **Add Name via Device:** Select this check box to enable adding the name of the temporary user through the device display screen while enrolling the user. If enabled, the **Name Format** parameter is disabled.
- **Name Format:** Make sure the Add Name via Device is disabled to configure this parameter. Configure the required format of the Name as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user. To select the different format for the ID, enter \* in **Name Format** box and the drop-down list containing different Value formats appears. Select the desired format from the drop-down list.

Click **Copy ID Format**  , if you wish the Name Format to be the same as the ID Format.

## Group
