By default, Groups for Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1, 2 and 3 are assigned. If you wish to assign different groups to the temporary user, you need to create groups from the Enterprise Module. Create the desired groups and then select the desired group from the respective picklist. For details on creating groups, refer to ["Configuring Groups"](#).

## As Temporary Worker

Settings

Temporary User

Temporary Addition of Unknown User: As Temporary Worker ⓘ

Skill \*  Skill-1 ⓘ

Contractor \*  Name ⓘ

Work Order  Name ⓘ

Assignment Period  ⓘ  ⓘ

Confirm before adding Temporary User: ☐

**Auto Generate ID**

ID Format \*  ⓘ

Numeric Value Length \*

Zero Padding required ☐

**Auto Generate Name**

Add Name via Device: ☐

Name Format \*  ⓘ

**Group**

Organization \*  Organization-1 ⓘ

Branch \*  Branch-1 ⓘ

Department \*  Department-1 ⓘ

Section \*  Section-1 ⓘ

Category \*  Category-1 ⓘ

Grade \*  Grade-1 ⓘ

If you select **As Temporary Worker**, configure the following parameters:

- **Skill:** Select the Skill to be assigned to the temporary worker from the picklist.
- **Contractor:** Select the Contractor to be assigned to the temporary worker from the picklist.

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

- **Work Order:** Select the Work Order to be assigned to the temporary worker from the picklist.
- **Assignment Period:** The work order assignment period is auto-displayed based on the work order selected. If you wish to change the assignment period, select the start date and end date of work assignment using the calendar.

If you wish to create Skills, Contractors or Work Orders, refer to "[Contract Worker Management](#)".

The other temporary worker parameters are similar to that of temporary user. For details, refer to "[As Temporary User](#)".

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings, alarms and device timers.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- "[Settings](#)"
- "[Alarms](#)"
- "[Timers](#)"
- "[Wiegand](#)"

## Settings

The Advanced Settings page for **ARGO** as a **Direct Door** appears on your screen as shown below:

The screenshot shows the 'Device Configuration' window with the 'Advanced' tab selected. The left sidebar lists various configuration categories, and the main area displays settings for the 'ARGO' device (ID: 0/50000, Active/Inactive). The settings include checkboxes for event generation, credential requirements, and PIN display, as well as dropdowns for access level and mode, and input fields for timers and facility codes.

Setting	Value
Generate Exit Switch Events	<input type="checkbox"/>
Generate Invalid User Events	<input type="checkbox"/>
Generate Sequential IN-OUT Events	<input type="checkbox"/>
Two Credentials Required	<input type="checkbox"/>
Show PIN	<input type="checkbox"/>
Allow Exit when Door Lock	<input checked="" type="checkbox"/>
Auto Relock	<input type="checkbox"/>
Auto Relock Timer (Sec)	3
Enable Additional Security	<input type="checkbox"/> Disabled
Enable Smart Identification	<input type="checkbox"/>
Access Level	8
Access Mode	Card
Auto Acknowledge Alarm	<input type="checkbox"/>
Auto Acknowledge Alarm (Sec)	10
Facility Code	1
Allow Access Through Mobile	<input type="checkbox"/>
Mobile Entry Access Mode	Mobile Only
Mobile Exit Access Mode	Mobile Only
Show Attendance Details	<input type="checkbox"/>
Duplicate Access Time Interval (Sec) *	0

The following parameters are available for configuration:

- **Generate Exit Switch Events** - Select this checkbox to enable the door to generate events everytime the exit switch is used.
- **Generate Invalid User Events** - Select this checkbox to enable the door to generate events for invalid user inputs.  
 **Generate Invalid User Events** is applicable for all other credentials except **Face**. To generate events for **Face** credentials, make sure **Generate Unidentified Face Event** is enabled under "[Identification Server](#)".
- **Generate Sequential IN-OUT Events** - Select this checkbox to generate user punches on device as the sequential IN-OUT events irrespective of whichever mode in which device is functioning.
- **Two Credentials Required**- Select this checkbox to enable the feature of verifying 2 credentials mandatorily for users allowed to By-pass finger/palm.
- **Show PIN**- Select this checkbox to display the characters of PIN when the PIN is entered on device.
- **Allow Exit when Door Lock** - Select this checkbox if users are to be allowed to exit even when the Door relay is in locked condition.

- **Auto Relock** - Select this checkbox to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer** - Specify the time in seconds for the Auto Relock operation. Valid Range: 1 to 65535.
- **Enable Additional Security**- Select this checkbox to enable additional security at the selected Door Controller.
- **Additional Security Code** - Enter a code (ranging from 1 to 65535) in the field provided. Re-enter the code to confirm.

*Changing this value can affect the SI function. Click on the **Default Code** button to reset the **Additional Security Code** to the value set in the **Global Additional Security Code** field on the Global System Policy page.*

- **Enable Smart Identification** - Select this checkbox to enable this functionality at the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop down list.
- **Auto Acknowledge Alarm** - Select this checkbox to enable the auto-acknowledgement of all alarms for this device.
- **Auto Acknowledge Alarm (sec)** - Set the time in seconds for the Auto Acknowledge Timer. The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code** - Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile**- Check the box to allow the access to device using COSEC ACS App.
- **Mobile Entry/Exit Access Mode**- Select the entry and exit door access mode from the options of **Mobile Only**, **Mobile then Biometrics**, **Mobile then Card** and **Mobile then PIN**.

*If User Access Mode is selected as “None” and Mobile Access Mode is selected as “Mobile Then Biometrics” then door can be accessed through Mobile and then Biometric credential.*

- **Show Attendance Details** - Select this check-box for displaying the Attendance Details of the user on ARGO door. This allows user to view his attendance details on ARGO door itself and there is no need to login to ESS application to view attendance details.

The attendance details of user will be displayed for a period of 3-4 seconds after the Access Allowed screen.

*1. The user whose Attendance details are to be displayed on ARGO door must be enabled for this feature. Enable the check-box **Show Attendance details on Device** from User Configuration> T&A> Attendance.*

*2. While an attendance detail of one user is being displayed on device and second user tries to access the device; new user will be processed.*

*3. Whenever both users of 2-person rule are allowed to get access on device then attendance details screen of second user will be loaded on device.*

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

*The Duplicate Access Time Interval is not applicable:*

- if Duress Finger is detected by the device.
- if the device is in Cafeteria mode.
- to Smart Identification users.

## Temperature Logging

To configure Temperature Logging parameters, make sure the Enable check box for **Temperature Configuration** under “[Temperature and Symptoms Configuration](#)” in “[User Policy](#)” under “[Defining Global Policies](#)” is enabled.

Temperature Logging	
Enable	<input type="checkbox"/>
Sensor Type	FEVOBOT
Sensor Interface	USB
Emissivity	0.95
Calibration Parameter	+ 0.0
Approach to Sensor Wait-Timer (Sec)	3.0
Temperature Detection Time Out (Sec)	10
Tolerance between Consecutive Readings	0.5
Consecutive Readings Count within Tolerance	5
Temperature Threshold (°F)	99.5
Minimum Temperature for Access (°F)	95.0
Restriction Type	Soft
Bypass If Sensor Disconnected	<input type="checkbox"/>

- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *AST*, *Web-Based* and *FEVOBOT*. Default sensor set is *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type-*AST*.  
Sensor Interface options will be: RS-232 and USB  
For Sensor Type- *Web-based*  
Sensor Interface options will be: HTTP/S  
For Sensor Type-*FEVOBOT*  
Sensor Interface options will be: USB
- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is *AST*. Default value is 0.95.  
It is used to define accuracy in sensor to detect temperature of different skin or objects.  
Not applicable for *FEVOBOT*.
- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.  
Not applicable for *FEVOBOT*.
- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.

- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.  
Not applicable for FEVOBOT.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.  
It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.  
The default value, unit and range should be updated based on the Temperature unit set on Panel.
- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

## Face Mask Compulsion

Face Mask Compulsion feature is used to enforce users to wear masks while they are within the premises.

After identifying the user, Device will prompt the user to show Face with Mask when "Face Mask Compulsion" is enabled.

Based on identification of Mask, user will be allowed or denied access.

Make sure you have enabled **Enable FR** checkbox in **Devices > Device Configuration > Identification Server > Face Recognition > Enable FR** and configure the below mentioned parameters to avail this feature.

The screenshot shows a configuration window titled "Face Mask Compulsion". At the top right, there is an "Enable" checkbox that is currently unchecked, followed by an information icon. Below this, there are three settings:

- "Approach to Camera Wait-Timer (Sec)" is set to "3.0".
- "Mask Detection Time Out (Sec)" is set to "4".
- "Restriction Type" is a dropdown menu currently showing "Soft".

- **Enable:** Select this checkbox to enable Face Mask Compulsion feature for IDS.

- **Approach to Camera Wait-Timer (Sec):** This parameter defines the time within which the user must approach the camera for face mask detection.
  - You must enter the Wait-Time between 0.0-15.0 seconds.
  - By default, it is 3.0 seconds.
- **Mask Detection Time Out (Sec):** This parameter defines the maximum time duration for user's face mask detection.
  - You must enter the detection time out between 0.0-15.0 seconds.
  - By default, it is 4.0 seconds.
- **Restriction Type:** Select the type of restriction to be imposed when the configured policy is violated. Select the desired option - Soft or Hard.
  - **Soft Restriction:** The access will be granted even if the user is identified without wearing a mask; however, an event and a warning are generated that indicates the user has been identified without wearing a mask.
  - **Hard Restriction:** The access will be denied if the user is identified without wearing a mask.

By default it is **Soft Restriction**.

Users face enrollments are dependent on the *Visible Face* parameter value set by you. To know more, refer [“Face Recognition”](#).

The **Advanced Settings** for ARGO as **Panel Door** is shown below:

1. **Tail-Gating** - Tail-gating refers to an access violation which occurs when more than one person tries to enter a secured area using a single person's access credentials. If this option is enabled on the panel door, the occupancy count of a zone should be incremented or decremented considering both the punch as well as the auxiliary input port of the panel door (say, input from a beam-counter). Set the wait timer for resetting the tailgating count (**Reset Wait Timer**) based on the door lock status or the door pulse wait timer (as configured).
2. **Man Trap Entry Timer (Sec)** - This check-box enables an alarm wait timer on the panel door to ensure that the user enters the next sequential door of a man-trap within a specific time-frame.

3. **Man Trap Exit Timer (Sec)** - This check-box enables an alarm wait timer on the panel door to ensure that the user exits the panel door to enter the next sequential door of a man-trap within a specific time-frame.
  4. **Enable Man Trap Door Interlocking:** Select this check-box to activate the Door Interlock for the selected door (say Door1). This means if the Door1 is open then other doors will remain close.
  5. **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.
- To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

Picklist For Panel Door

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID	Name ▲
<input type="checkbox"/>	10	ARCDC100_DD_Door
<input type="checkbox"/>	9	ARCDC100_DD_Door
<input type="checkbox"/>	8	ARCDC100_SD_Door
<input type="checkbox"/>	1	ARGO_PANEL
<input type="checkbox"/>	2	DoorV3
<input type="checkbox"/>	7	DoorV3_Door
<input type="checkbox"/>	3	DOORV4_PANEL
<input type="checkbox"/>	6	dummy
<input type="checkbox"/>	4	PATHV2_PANEL
<input type="checkbox"/>	5	VEGA_PANEL

OK Cancel

You can either select particular door or can select all the doors at once.

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box. The doors on all the pages will be selected.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

Suppose Door2 and Door3 are selected for Interlock with Door1. So When Door1 opens; Door2 and Door3 will remain close.

*For Degrade mode Door Interlocking feature will not work.*

*Whenever a door is in abnormal state and for that door interlocking is enabled then user access in other doors of the interlocking group is allowed.*

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

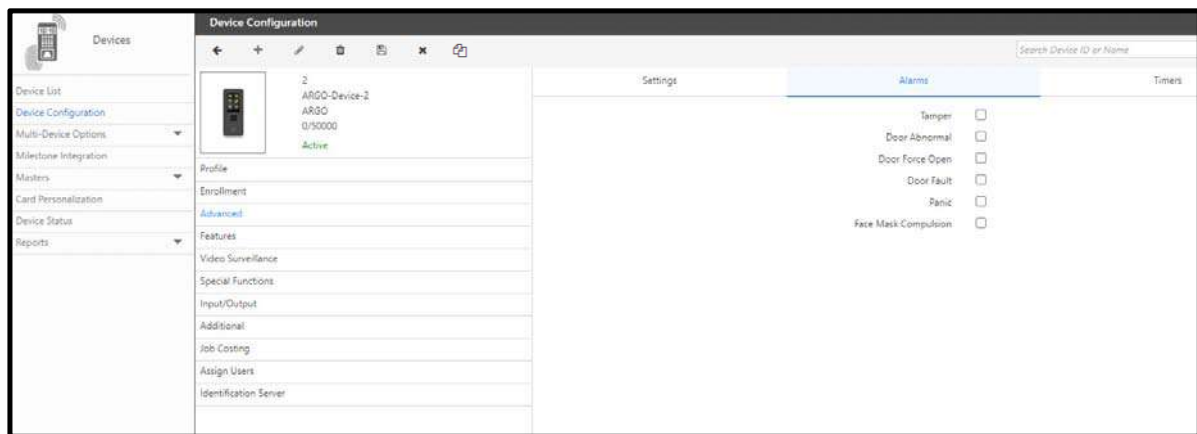

*The Duplicate Access Time Interval is not applicable:*

- if Duress Finger is detected by the device.
- when Panel200 Server mode is in Degraded mode.
- to Smart Identification users.

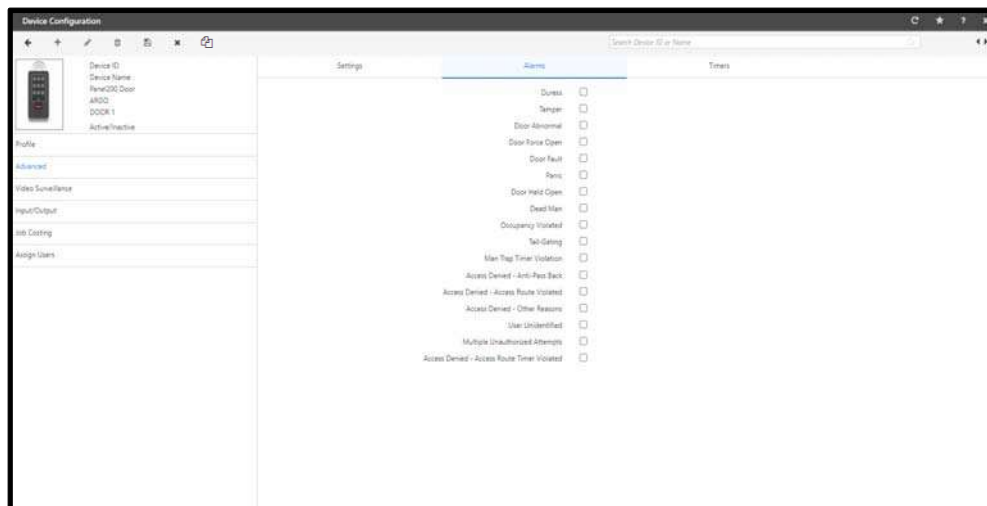

## Alarms

In Alarm tab, you can assign below list of alarms to the door.

### For Direct Door

### For Panel Door

Select the respective checkbox of alarms which you want to enable.

## Timers

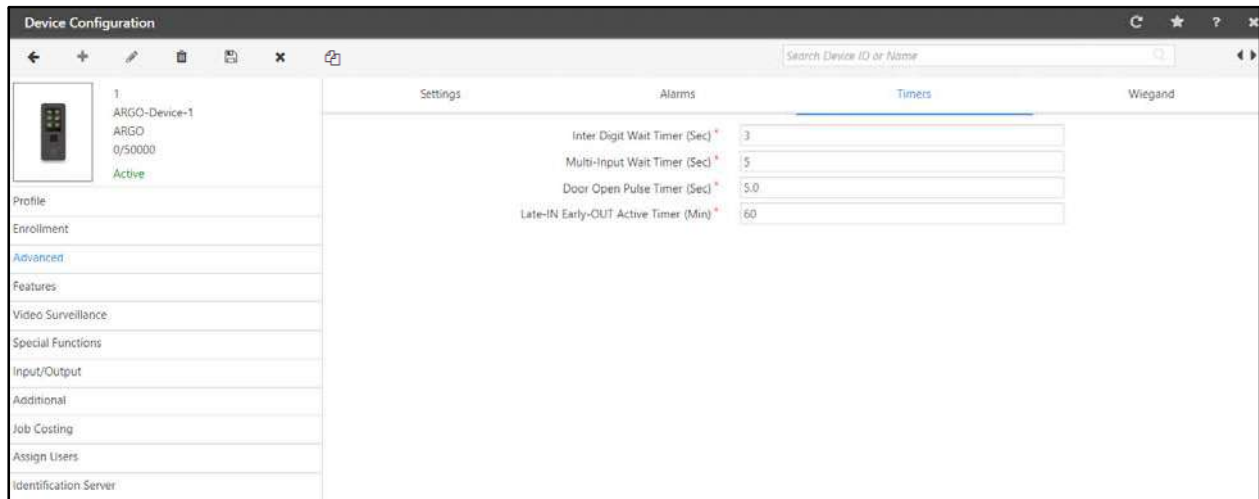

This section allows the configuration of various types of pre-defined device timers which can trigger off specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms.

The Timers parameters differ for ARGO as Direct Door and Panel Door.

### Timers - Direct Door

Click the **Timers** tab. The **Timers** page for **ARGO** as a **Direct Door** appears.

:

Configure the following parameters:

- **Inter-Digit Wait Timer (sec)** - Specify the time period in seconds (1 to 99) between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec)** - Specify the time in seconds (3 to 99) for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec)** - Specify the time in seconds (0.1 to 65535.0) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.

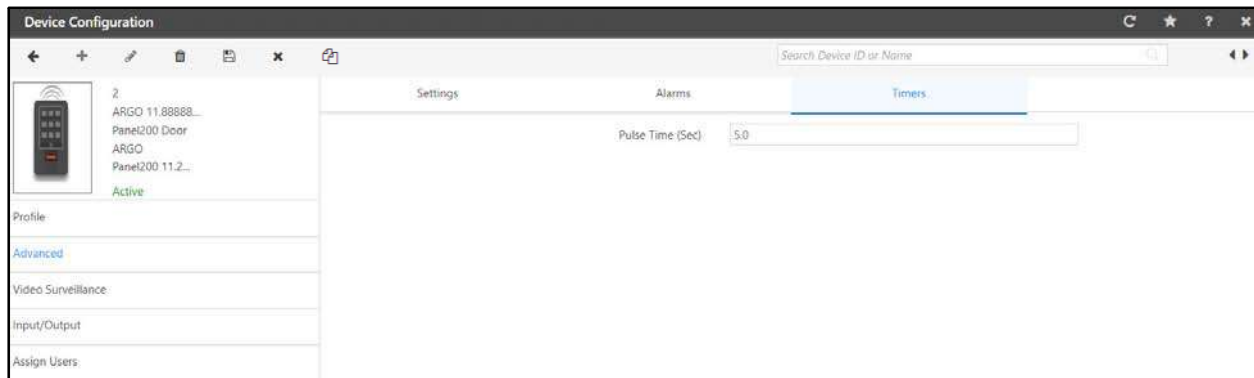

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

- **Late-IN Early-OUT Active Timer (min)** - Specify the time in minutes (1 to 99) for which the Late-IN and Early-OUT special functions will remain active after being enabled at the Door Controller.

## Timers - Panel Door

Click the **Timers** tab. The **Timers** page for **ARGO** as a **Panel Door** appears.

- **Pulse Time (sec)** - Specify the time in seconds (0.1 to 65535.0) for the panel door to be energized for a valid credential.

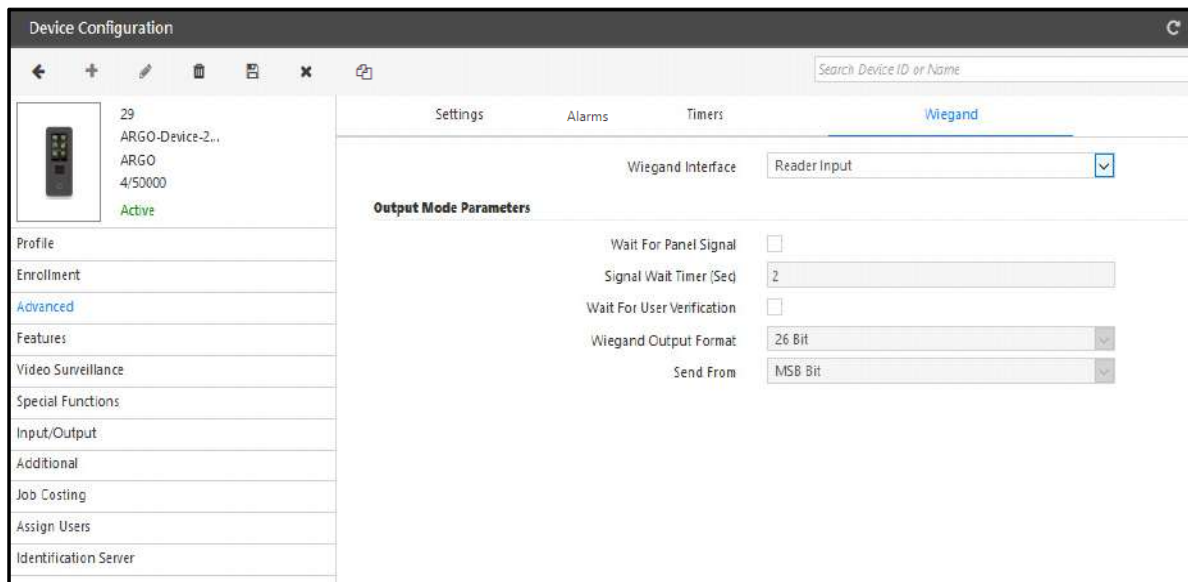

To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.

## Wiegand

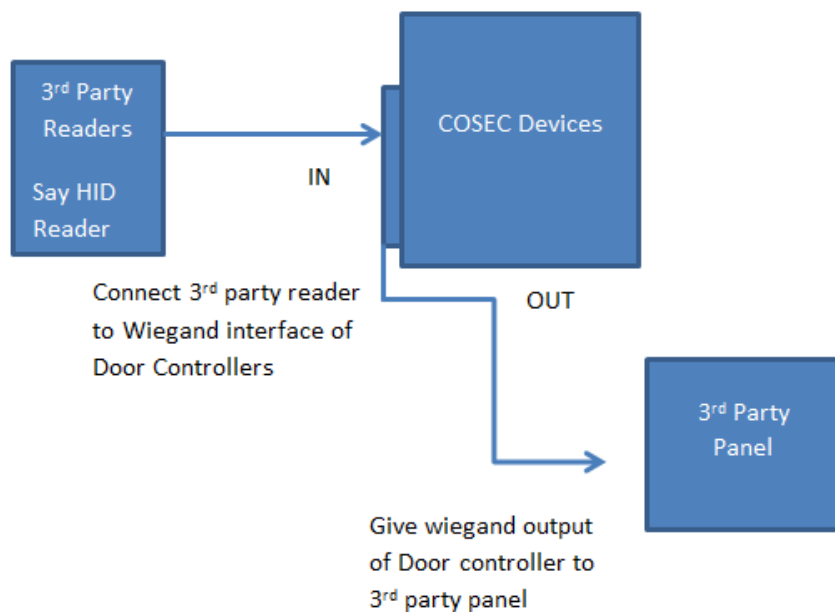

Wiegand is applicable for Direct Door only.

Click the **Wiegand** tab. The **Wiegand** page appears.

- **Wiegand Interface** - The COSEC device can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown below.

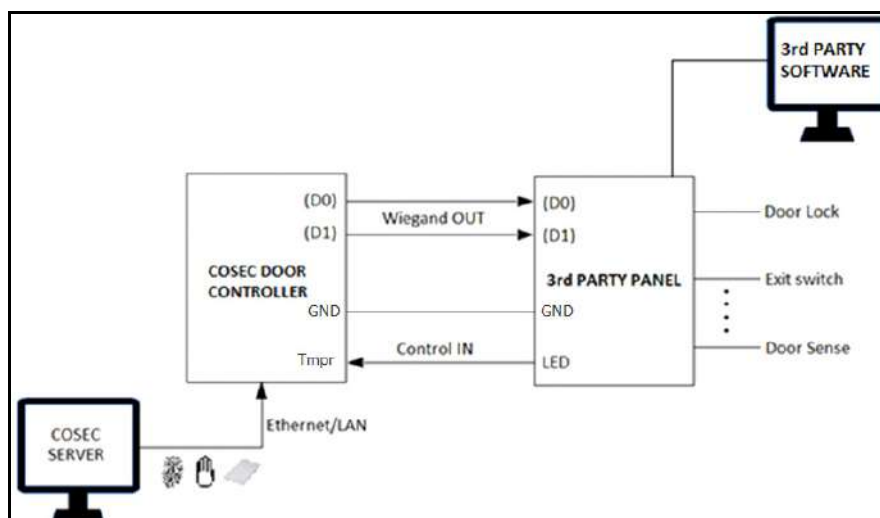

So select the interface of Door controller as **Output Mode** to work as Wiegand output to panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the output mode parameters will be disabled.

If you select Output mode then configure the **Output Mode Parameters**.

- **Wait For Panel Signal** - If this option is enabled the door will wait for reply from the connected third party device before triggering any output, as per the defined **Signal Wait Timer (Sec)**.
- **Wait For User Verification** - If this option is enabled, user verification will be requested on the third party device before triggering any output.
- Specify the **Wiegand Output Format** and sending order for reader data as MSB or LSB Bit in the **Send From** field.

### Wiegand Out Interface

Also for the **Custom** format, user can configure details of fields to be sent as output from the Wiegand reader that has been added.

### Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitute the details of the COSEC door.

There is icon for QR code on COSEC APTA application. Clicking that icon will open the camera in your mobile. Now you can show the mobile camera to scan the QR code. The COSEC door will get opened after verifying the security key and access policies of the user.

### Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1a.** If door is in direct door mode enter IP & port of the direct door

b. If door is a panel door, then enter IP & port of the panel door and in the pdid specify the door id which is to be accessed.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

**Step 4:** Use this string to generate QR code through any third party software.

## Features

The Features tab allows the user to enable certain Access Control features for a device

*The Features tab is available only with the Access Control Module license and is applicable only for direct doors.*

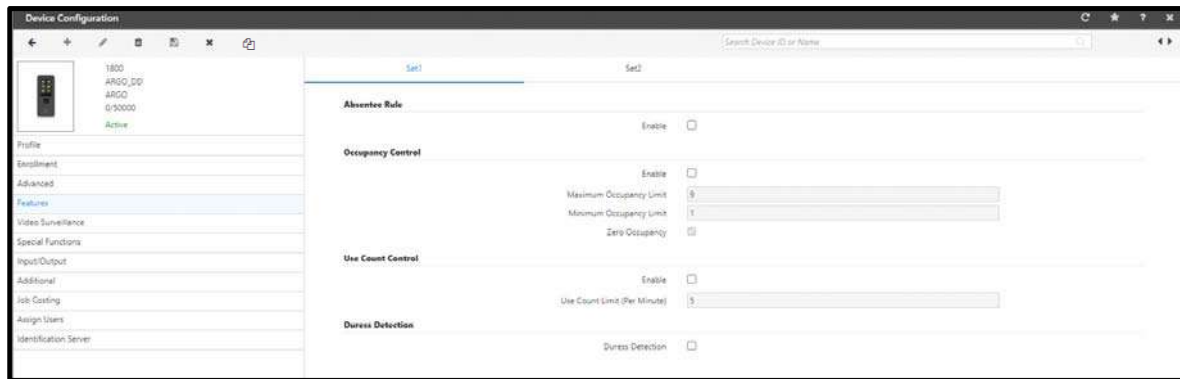

To access this, After selecting the device, Select **Device Configuration> Features**. The access control features for the device can be set from the following two sections:

- “Set1”
- “Set2”

## Set1

This page allows the configuration of three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**.

The page appears as shown below.

- **Absentee Rule** - Select this checkbox to enable this feature at the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked.

For configuring the rule See *Access Control> Absentee Rule*.

- **Occupancy Control** - Select this checkbox to enable the feature at the door and specify maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user. Also specify the **Minimum Occupancy Limit** i.e. the minimum number of occupants the designated zone should have, and enable/disable the **Zero Occupancy** option to determine whether the designated zone should be allowed to be empty or not.  
For configuring the rule See *Access Control> Occupancy Control*.

- **Use Count Control** - Select this checkbox to enable the feature at the door and specify the maximum number of uses per minute.  
For configuring the rule See *Access Control> Use Count Control*.

- **Duress Detection** - Select the checkbox to enable the feature. Duress Detection is used to generate the duress alarm which informs that the user is forced to open the door under threat.

## Set2

This page allows the configuration of three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. The page appears as shown below.

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a list of configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The 'Features' category is selected. The main area displays settings for 'Set1' and 'Set2'. Under 'Set1', the 'First-IN User Rule' is enabled with 'Reset On' set to 'Day Change', 'Access Timer (Sec)' set to 3, and 'First-IN User Group' set to '1'. The 'Anti-Pass-Back (APB)' rule is also enabled, with 'On Entry' checked, 'On Exit' unchecked, 'Hard/Soft' set to 'Hard', 'Forgiveness' checked, 'Reset After' set to 'Day Change', and 'Forgiveness Timer (Mins)' set to 1. The '2-Person Rule' is enabled with 'Mode' set to 'Primary Must', 'Primary Group' set to 'g1', and 'Secondary Group' set to 'None'.

- **First-IN User Rule** -Select this checkbox to enable the feature at the direct door and select the First-In User group which would be valid at the door. For configuring the rule *See Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB)** - Select the checkbox to enable the feature at the direct door.
  - **On Entry:** Check this box so that the system monitors the entry reader for APB violation.
  - **On Exit:** Check this box also so that the system monitors the entry as well as the exit readers for APB violations.
  - **Hard/Soft:** Select the restriction type as Hard or Soft option from the drop down options.
    - **Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.
    - **Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry.
  - **Forgiveness:** Check this box to enable the system to reset the APB status. When forgiveness is enabled, then there will be following options to reset the pass.
    - **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his card for entry in the next morning.
    - **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time.
    - **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-pass back status will get reset and the pass will be in original state.

- **2-Person Rule** - Select this checkbox to enable the feature at the door and set the **wait time** in seconds after which the second person is allowed to punch on the door. For configuring the rule See *Access Control> 2- Person Rule*.

## Video Surveillance

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

To access this, Go to **Device Configuration> Video Surveillance**.

- [“Visual Tagging”](#)
- [“Satatya/IP Camera Integration”](#)

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems as well as IP Cameras and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder and IP Camera parameters. The **Visual Tagging** page appears as shown below.

The screenshot displays the 'Device Configuration' window. On the left, a sidebar shows a list of devices, with the selected device '29 ARGO-Device-2...' having a status of 'Active'. The main panel is titled 'Visual Tagging' and contains configuration options. The 'Capturing Device' is set to 'Matrix HVR/NVR'. Below this, the 'MAC Address' is '00\_1b\_09\_01\_5c\_25', the 'Camera ID' is '2', and the 'Storage Root Folder' is 'abc'. At the bottom, there is a checkbox for 'FTP Login Credentials' which is currently unchecked, followed by fields for 'User Name' and 'Password'.

To view the user events and related images, go to **Admin > Views/Logs > Event View**. To know more about viewing events, refer to [“Event View”](#).

The following parameters are available for configuration:

- **Capturing Device** - Select the video recording type of device or IP Camera from the drop-down menu as shown.

The compatible device types are:

- Matrix HVR/NVR
- Milestone
- IP Camera

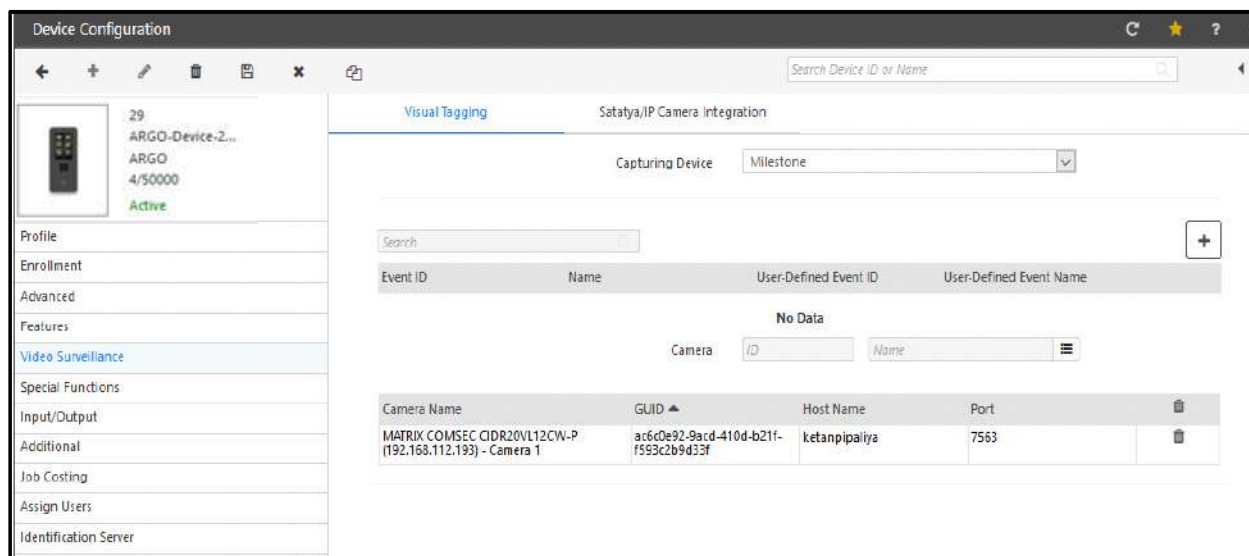

## Matrix HVR/NVR

- **MAC Address** - In the event of selecting the Matrix HVR/NVR, the administrator needs to specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID** - Specify the camera number or camera ID for IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder** - Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials** - Check this box to activate FTP login credentials for authentication.
- **Username** - Specify the FTP server username.
- **Password** - Specify the FTP server password.

*Some COSEC devices do not support all the network connection options.*

## Milestone

*For more information on integration with **Milestone** devices, refer to [“Milestone Integration”](#).*

## IP Camera

- **Snapshot URL:** If Capturing device is selected as IP Camera; then enter the API URL for taking the Snapshot through IP camera. You can use any camera for taking the snapshot/photo. The API for capturing snapshot will be available in the API document of camera.
- **User Name:** Enter the Username for accessing API for taking the Snapshot through IP Camera.
- **Password:** Enter the Password for accessing API for taking the Snapshot through IP Camera.

It is the same username and password using which IP camera login is done. Eg: username: admin and password: admin.

The allowed values for snapshot URL, User Name and Password are **A-Z, a-z, 0-9 !"#\$%&'()\*+,-./ :;<=>?@[\\]^\_`{|}~**

The screenshot shows the 'Device Configuration' window for a device named '29 ARGO-Device-2...'. The left sidebar lists various configuration categories, with 'Video Surveillance' highlighted. The main panel is titled 'Satatya/IP Camera Integration' and contains the following fields:

- Capturing Device:** A dropdown menu set to 'IP Camera'.
- Snapshot URL:** A text field containing 'http://192.168.102.191/matrix-cgi/snapshot'. A note below states: 'Note: Mention the protocol http or https in URL.'
- API Login Credentials:**
  - User Name:** A text field containing 'admin'.
  - Password:** A text field containing '\*\*\*\*\*'.

## Satatya/IP Camera Integration

This functionality is available for configuration only when the Matrix HVR/NVR device type or IP Camera is selected as the **Capturing Device** (from *Visual Tagging*).

It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices/ IP Camera as per the configuration on this page. The Satatya/IP Camera Integration page appears as shown below:

## SATATYA Integration

The screenshot shows the 'Device Configuration' window with the 'Satatya/IP Camera Integration' tab selected. The left sidebar lists various configuration options, with 'Video Surveillance' highlighted. The main configuration area includes fields for Integration Type (Network), Active status (checked), IP Address (192.168.104.37), Port Number (8000), Name (VegaNVR Integration), Active status (checked), Schedule (13:00 to 20:00), Days (Mon, Tue, Wed, Thu, Fri), Event (Invalid User), Mode (Entry), Action (Video Pop-Up), Duration Sec. (10), and a grid of 24 camera checkboxes (1-24) with camera 2 selected. Add and Cancel buttons are at the bottom right.

- **Integration type-** Select the integration type from the options of Wired and Network. In wired integration, door is physically connected with Satatya Device. In Network integration, connection can be by Ethernet, wireless or broadband depending upon the COSEC device support.
- **Active-** Check the box to activate the connection.
- **IP Address-** Specify the IP address of HVR/NVR.
- **Port Number-** Specify the port number of HVR/NVR.
- **Name-**Specify a user friendly name for the integration function.
- **Active-** Check the Active box to enable the SATATYA integration functionality.
- **Schedule** - Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable **days** of the week.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured.
- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list wherever applicable.
- **Action-**Select the action for the Satatya device from the drop down list. The options available are:
  - Recording - Specify the duration in minutes.
  - Upload Image - This will be uploaded as per the ftp settings.
  - Video Pop-up - Specify the duration in seconds. The video pop up will be generated on the local client of Satatya device on the selected camera.
  - PTZ Preset - Specify the PTZ position number as defined on the SATATYA device.
  - Mail Image - Specify the email-ID.

- **Camera-** Select the relevant camera channels depending on the action selected.
- Click the **Add** button to finish the process of linking the event to the action.

Search						
Name	Event	Action	Start Time	End Time	Active	
VegaNVR Integration	Invalid User	Video Pop-Up	13:00	20:00	Yes	

The user may now configure another event-action linkage if required.

**Example1:** For action as Upload Image, the image of Camera 13 will be upload at path defined in Visual Tagging.

Event	Access Allowed
Mode	Both
Action	Upload Image
Camera *	<div> <input type="checkbox"/> 1           <input type="checkbox"/> 2           <input type="checkbox"/> 3           <input type="checkbox"/> 4           <input type="checkbox"/> 5         </div> <div> <input type="checkbox"/> 6           <input type="checkbox"/> 7           <input type="checkbox"/> 8           <input type="checkbox"/> 9           <input type="checkbox"/> 10         </div> <div> <input type="checkbox"/> 11           <input type="checkbox"/> 12           <input checked="" type="checkbox"/> 13           <input type="checkbox"/> 14           <input type="checkbox"/> 15         </div> <div> <input type="checkbox"/> 16           <input type="checkbox"/> 17           <input type="checkbox"/> 18           <input type="checkbox"/> 19           <input type="checkbox"/> 20         </div> <div> <input type="checkbox"/> 21           <input type="checkbox"/> 22           <input type="checkbox"/> 23           <input type="checkbox"/> 24         </div>

- **Schedule Name-**Specify a user friendly name for the schedule of Device-IP Camera integration.
- **Active-** Check the Active box to activate the schedule for IP Camera.
- **Event-** Select a COSEC event from the drop down list for which the resultant action is to be configured. The Events will appear in the list based on the availability of the license.

*At max. 20 Events or schedules are allowed for configuration for a single device.*

- **Mode-** Select the event mode from the options of Entry, Exit and Both from the drop down list.

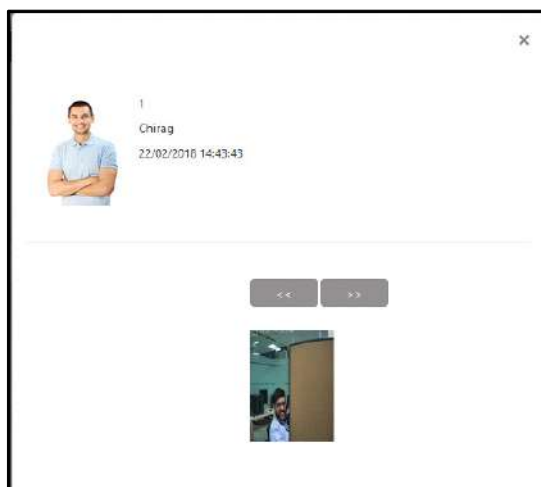

- **Schedule Range-** Specify a schedule for the function by specifying the start and the end time (*24 Hours format*) as well as checking the boxes against the applicable days of the week.

Click **Add** button to add the configured schedule. The schedule will be listed in the grid. Then click **Save** button to save the schedule integration.

Name	Event	Mode	Start Time	End Time
User Allowed Schedule	User Allowed	Both	09:00	19:00

When user event is generated, then snapshot is taken by the configured camera. The events can be viewed in User Events (User module) page and Event view (Admin module) page.

The snapshot can be viewed by clicking on View Image button.

## Special Functions

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door

device. This change of door state or occurrence of events may be considered as an input while the response or action that is generated by the system on detection of this input, may be defined as the output.

1. This functionality cannot be fully accessed in the Edit mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

To access this, After selecting the device, Select **Device Configuration> Input Output**. The Input Output parameters can be set from the following sections:

- “Configuration”
- “Linking”
- “Time Triggered”

## Configuration

The **Configuration** section for a ARGO Door as **Direct Door** appears as shown below.

- **Door Sense** - The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.
- Select the **Enable** checkbox to enable the system for such two-state monitoring.
- Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as Normally Open or Normally Closed.
- **Accept External IO Linking** - Select the Enable checkbox to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface**- Select the interface option for IO linking with external devices. The options are
  - Ethernet
  - Wireless
  - Mobile Broadband

The **Configuration** section for a ARGO Door as Panel Door appears as shown below.

Output Group Number (Door Lock): ID Name

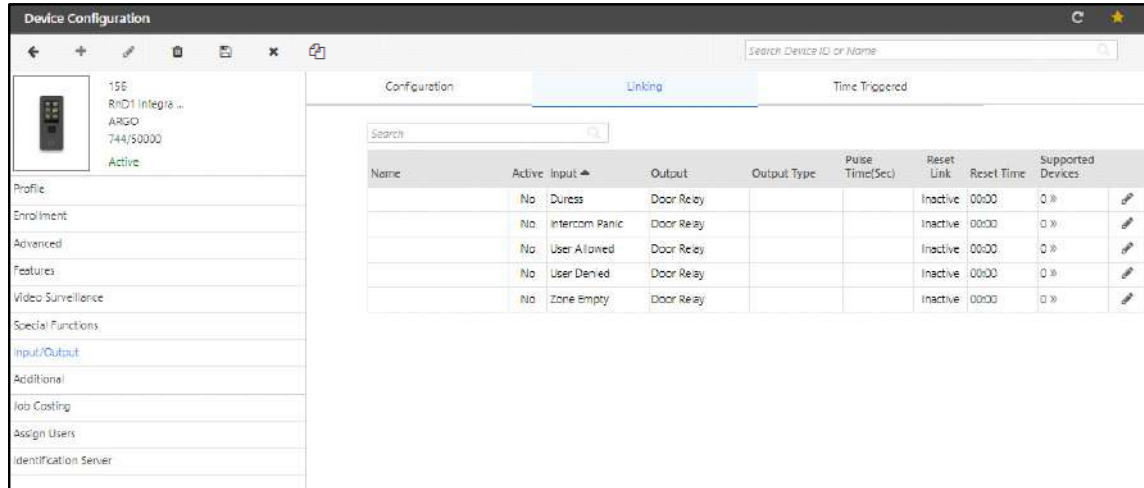

- **Door Sense** - The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.
  - Select the **Enable** checkbox to enable the system for such two-state monitoring.
  - Select the **Supervised** checkbox to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*. Specify the **Sense Type** as Normally Open or Normally Closed.
- **Relay Output:** This indicates the physical output which is received for opening and closing of the door.
  - **Group Number (Door Unlock):** Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.
  - **Group Number (Door Lock):** Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

## Linking

Linking is applicable for Direct Door only.

The **Linking** section appears as shown below.

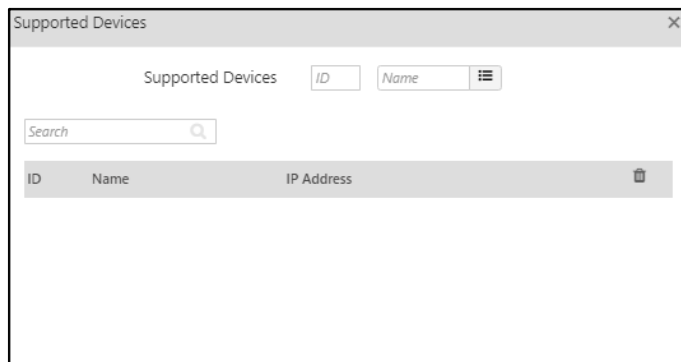

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click edit button.

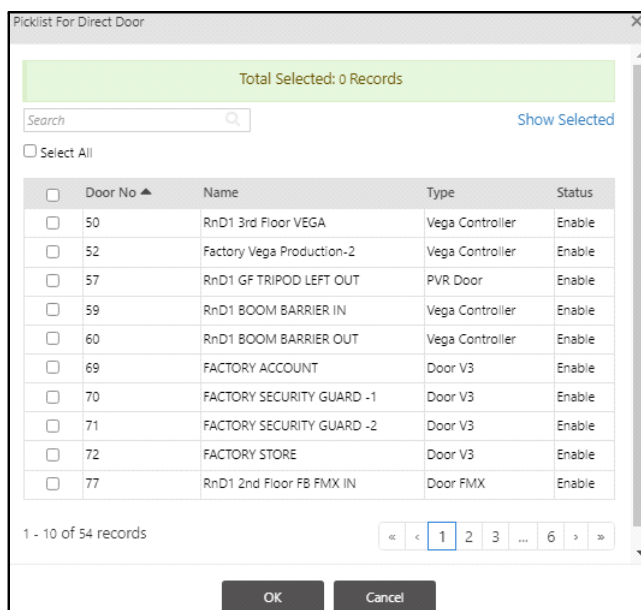

- **Name** - Specify a name for the new I/O linking program to be defined.
- **Active** - Select this check box to activate this linking program.
- **Output Type** - Specify the appropriate type of output from the following four options available in the drop down list:
  - **Pulse**: With this type of output, the user needs to define the Pulse time in seconds.
  - **Interlock**: With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
  - **Latch**: With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
  - **Toggle**: With this option, the output group toggles its state whenever an input group is activated.
- **Pulse Duration (sec)** - For a *Pulse* output type, specify the pulse duration in seconds.
- **Reset Link**: Select this check box to enable the system to reset the IO link.
- **Reset Time**: Specify the time after which the IO link should be reset in HH:MM format.
- **Supported Devices**: All devices supported for external IO Linking will appear in this picklist for selection. Select the required devices from the picklist. Upto 255 external devices can be added.

- Click **Supported Devices**  icon. The **Supported Devices** pop-up appears.

The 'Supported Devices' pop-up window has a title bar with a close button. Below the title bar, there is a section labeled 'Supported Devices' with two input fields: 'ID' and 'Name', followed by a list icon. A search bar with a magnifying glass icon is located below this section. The main area contains a table with the following columns: 'ID', 'Name', 'IP Address', and a trash icon. The table is currently empty.

- In this pop-up, click the **Supported Devices** picklist. The **Picklist For Direct Door** pop-up appears.

The 'Picklist For Direct Door' pop-up window has a title bar with a close button. Below the title bar, there is a green bar with the text 'Total Selected: 0 Records'. A search bar with a magnifying glass icon is located below this bar. To the right of the search bar is a 'Show Selected' button. Below the search bar is a 'Select All' checkbox. The main area contains a table with the following columns: 'Door No', 'Name', 'Type', and 'Status'. The table lists 10 records. At the bottom, there is a pagination bar showing '1 - 10 of 54 records' and a set of navigation buttons. At the very bottom are 'OK' and 'Cancel' buttons.

Door No	Name	Type	Status
50	RnD1 3rd Floor VEGA	Vega Controller	Enable
52	Factory Vega Production-2	Vega Controller	Enable
57	RnD1 GF TRIPOD LEFT OUT	PVR Door	Enable
59	RnD1 BOOM BARRIER IN	Vega Controller	Enable
60	RnD1 BOOM BARRIER OUT	Vega Controller	Enable
69	FACTORY ACCOUNT	Door V3	Enable
70	FACTORY SECURITY GUARD -1	Door V3	Enable
71	FACTORY SECURITY GUARD -2	Door V3	Enable
72	FACTORY STORE	Door V3	Enable
77	RnD1 2nd Floor FB FMX IN	Door FMX	Enable

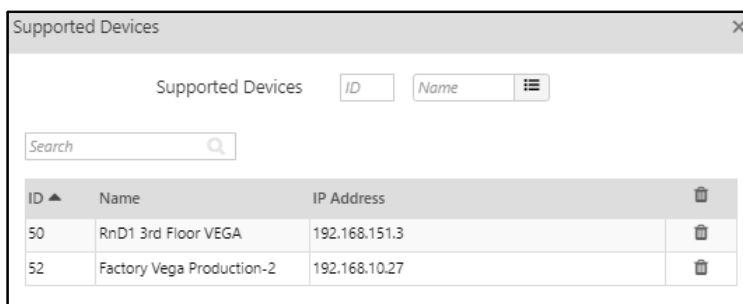

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Supported Devices** pop-up and the selected devices are displayed here.

The 'Supported Devices' pop-up window is shown again, but now the table contains two rows of data, representing the devices selected in the previous step. The columns are 'ID', 'Name', 'IP Address', and a trash icon.

ID	Name	IP Address	
50	RnD1 3rd Floor VEGA	192.168.151.3	
52	Factory Vega Production-2	192.168.10.27	

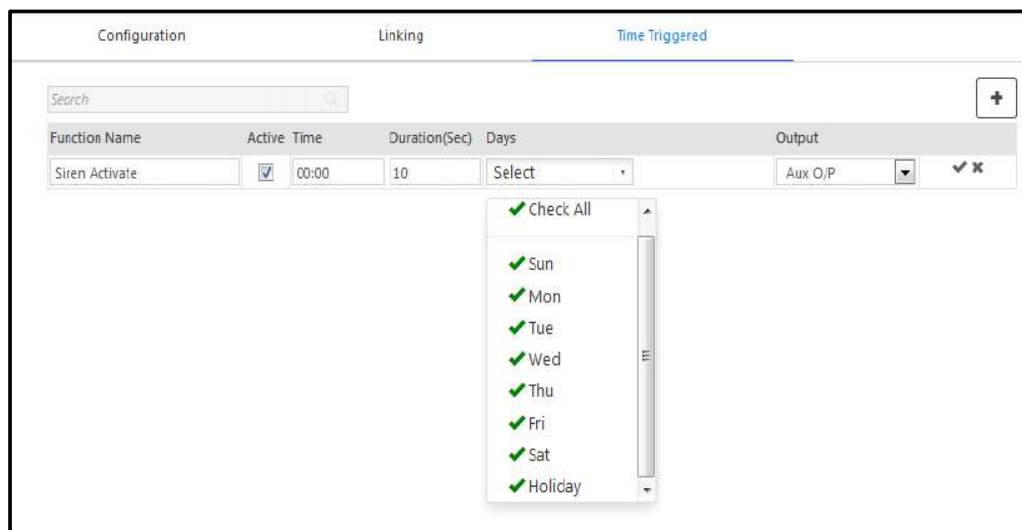

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

On the **Input Output** page, select the **Time Triggered** section as shown.

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions on a Direct Door.

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

*This section is available only for Direct Doors.*

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise. The **Disable** option when selected, disables the application of DST on the system time.
- On selection of the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

The screenshot shows the 'Device Configuration' window for a device named '29: ARGO-Device-2...'. The 'Daylight Saving' tab is selected. The 'DST Type' is set to 'Day-Month wise'. The 'Time Period' is set to '08:00'. Under 'Forward Clock', the 'Month' is 'January', 'Week No.' is '1st', 'Day of Week' is 'Sunday', and 'Time' is '09:00'. Under 'Backward Clock', the 'Month' is 'January', 'Week No.' is '1st', 'Day of Week' is 'Sunday', and 'Time' is '10:00'. A 'Save' button is at the bottom right.

- On selection of the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal. Define the **Time Period** for the date-month wise DST settings in **24-hours** format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed or set backwards by 08:00 hours.

The screenshot shows the 'Device Configuration' window for device 29 (ARGO-Device-29). The left sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional (highlighted), and Assign Users. The main area is titled 'Daylight Saving' and contains the following fields:

- DST Type:** A dropdown menu set to 'Date-Month wise'.
- Time Period:** A text field containing '08:00'.
- Forward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Date:** A dropdown menu set to '1'.
  - Time:** A text field containing '09:00'.
- Backward Clock:**
  - Month:** A dropdown menu set to 'January'.
  - Date:** A dropdown menu set to '1'.
  - Time:** A text field containing '10:00'.
- Save:** A button at the bottom right of the configuration area.

- Click the **Save** button.

## Job Costing

*Job Costing is applicable for Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Admin to show or hide Job Code selection on device. It also enables the admin to assign default jobs on device.

The screenshot shows the 'Device Configuration' window for device 11 (ARGO Door). The left sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing (highlighted), Assign Users, and Identification Server. The main area is titled 'Settings' and contains the following fields:

- Show Job Menu:** A dropdown menu set to 'Show List'.
- Retain Job Selection:** A checkbox that is checked.
- Assign Jobs:**
  - Job Group:** Fields for ID and Name.
  - Job:** Fields for ID and Name.
  - Search:** A text field.
- Table:** A table with columns: Job Code, Name, Assignment Start, Assignment End, and a delete icon. The table is currently empty, with 'No Data' displayed below it.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

- **Show Job Menu:** Select the desired option— **Show List** or **Allocate Default**.

## Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

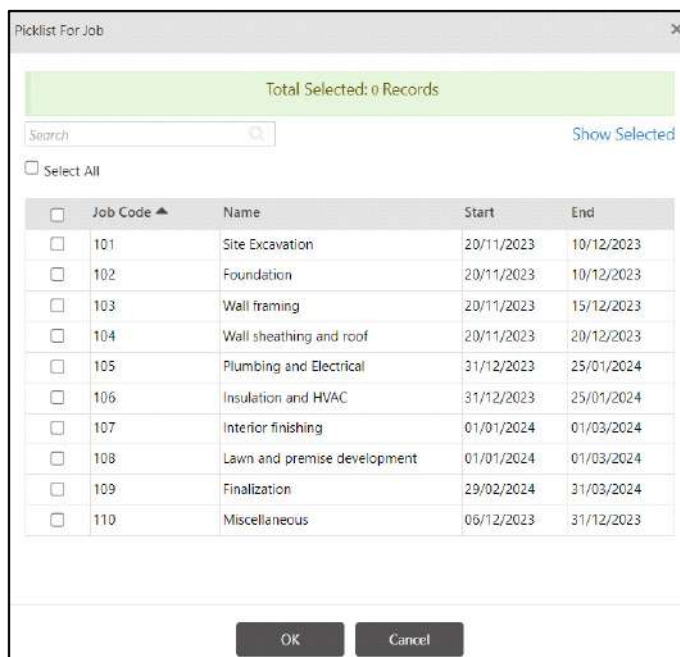

## Assign Jobs

- **Assign Jobs:** You can select Job Group as well as individual Jobs.
- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

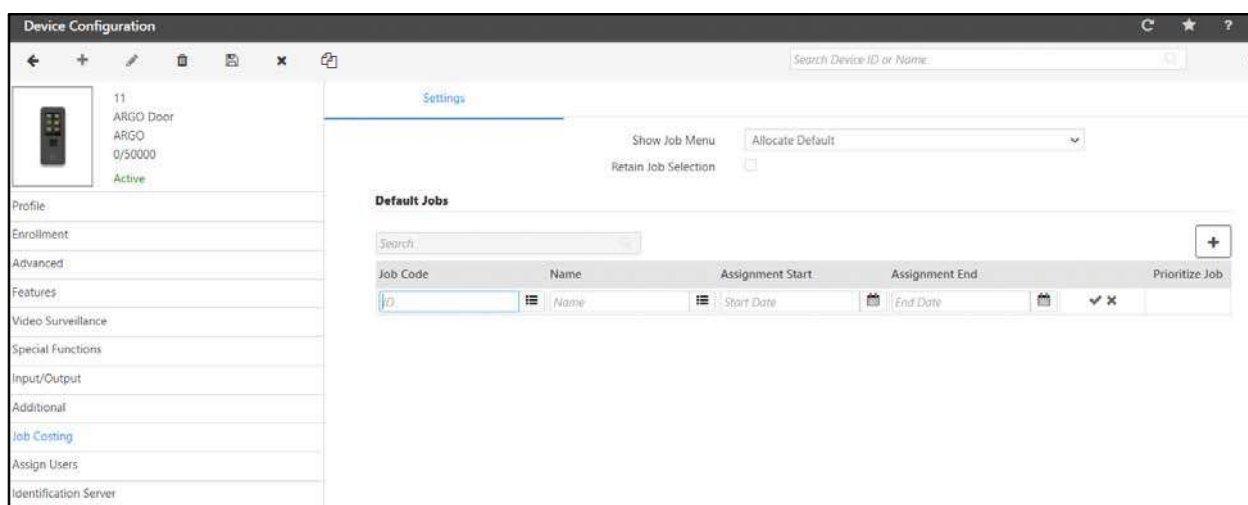

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

Picklist For Job

Search  Ended Days (1-999) Active

110	Miscellaneous	06/12/2023	31/12/2023

1 - 10 of 11 records

1 2

Cancel

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calender and select the desired start and end dates.
- Click **Save** to save the configuration.

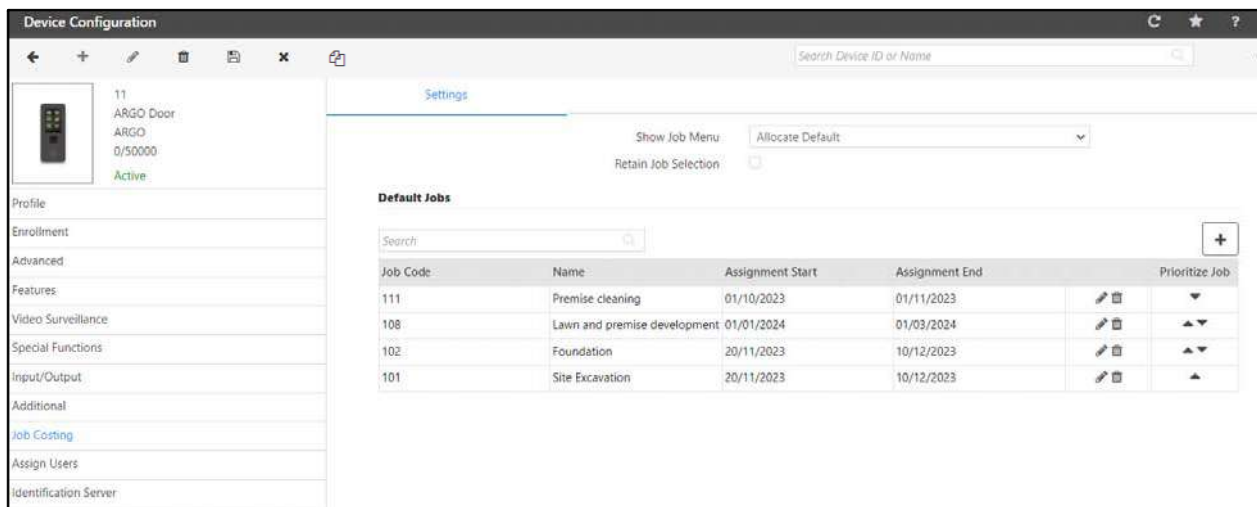

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

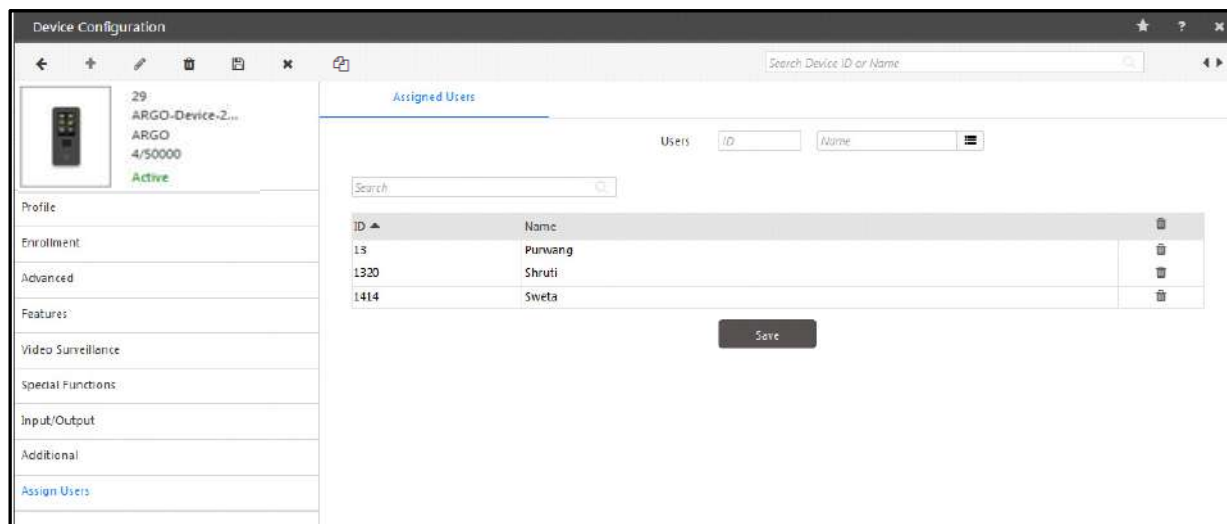

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

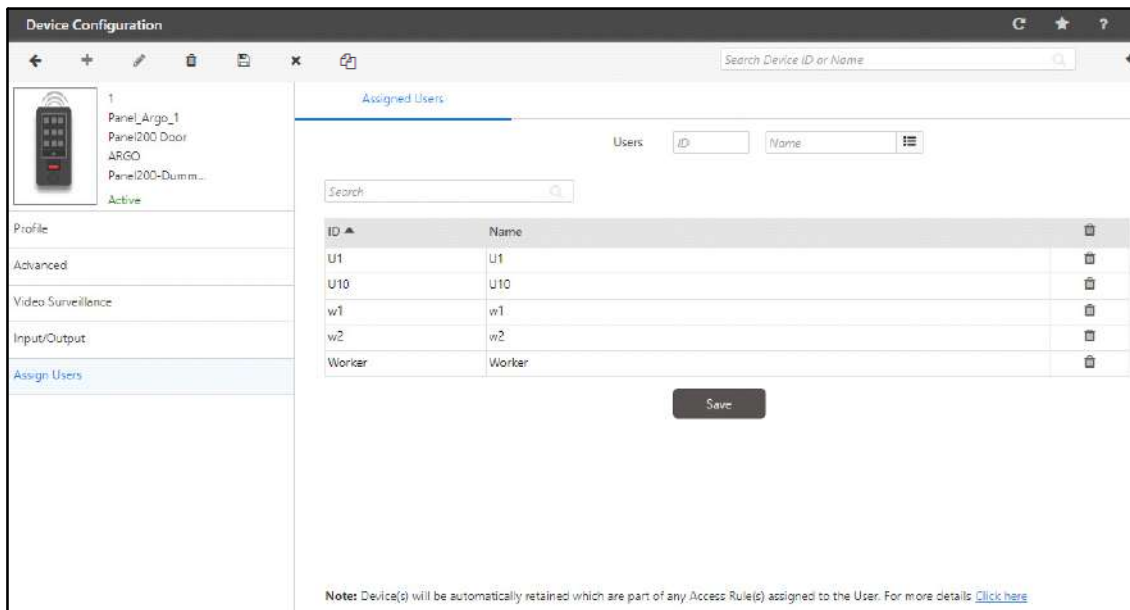

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

### For Panel Doors

You can select and assign users to the door.

- On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

The screenshot shows the 'Device Configuration' window with the 'Assigned Users' tab selected. On the left, a sidebar lists various device components like 'Panel\_Argo\_1', 'Panel200 Door', 'ARGO', and 'Panel200-Dumm...'. The main area displays a table of assigned users:

ID	Name
U1	U1
U10	U10
w1	w1
w2	w2
Worker	Worker

Below the table is a 'Save' button. At the bottom, a note states: 'Note: Device(s) will be automatically retained which are part of any Access Rule(s) assigned to the User. For more details [Click here](#)'.

- Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

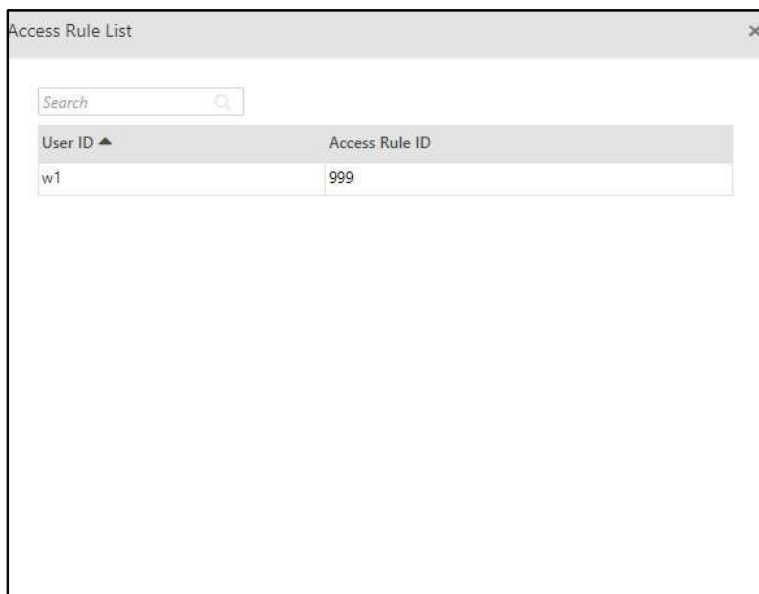

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The 'Access Rule List' window features a search bar at the top. Below it is a table with the following data:

User ID	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Cafeteria

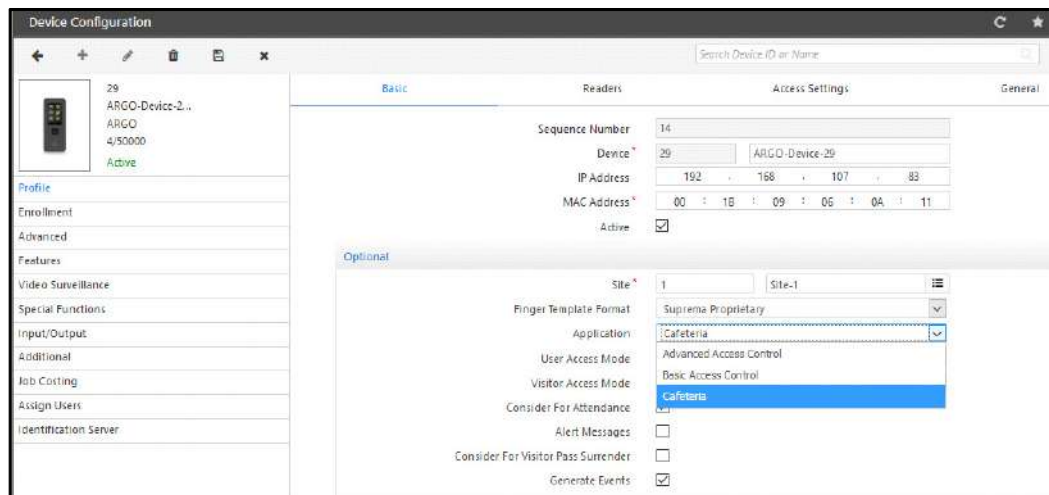

*Cafeteria is applicable for Direct Door only.*

*View Cafeteria Balance from Device will be functional using Card, QR Code (if Allow Access Via QR is enabled) as well as Face (if Enable FR is enabled) credentials.*

The COSEC system enables the user to configure devices which will be used by the Cafeteria management module.

To configure a door for Cafeteria application, select **Cafeteria** option in Device Profile> Basic> Application as shown below.

The Cafeteria tab will appear in Device Configuration page.

Select **Device Configuration> Cafeteria> Settings**

## Settings

The Cafeteria configuration for ARGO Door is shown as below.

- **Consecutive Transaction Delay (Sec):** Enter the time interval after which you wish to allow the second transaction from the same user.
- **Enable Offline Item Quantity Restriction:** Select the checkbox if you desire restricting transaction on exceeding the item quantity while the device is in offline mode.
- **Allowed Item Quantity:** Specify the number of item quantity to be allowed when the device is in offline mode. This will be applicable for each item present in the Menu.

For example, if the Menu has two items Tea and Poha and you have configured the **Allowed Item Quantity** as 2, then when the device is offline, the user/worker will be allowed to consume Tea twice as well as Poha twice.

## Printer Settings

- **Printer:** Select the printer from the dropdown list based on the site requirements.
- **Connection Type:** Select the printer connection type from the drop down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.
- Select the **Exclude Price-Cost From Coupon** check box if you want to exclude the price from the coupon.
- Select the **User Balance On Coupon** check box, if you want Current Balance/ Current Month Usage and Weekly Remaining Limit to be printed on the Cafeteria receipt.

For pre-paid account users, Current Balance and Weekly Remaining Limit will be printed.

For post-paid account users, Current Month Usage and Weekly Remaining Limit will be printed.

For details refer to [“Cafeteria Usage Policy”](#).

## Menu

COSEC allows the administrator to assign one or more cafeteria menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

*The Menu is created from Cafeteria module.*

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
No Data					

The Menu can also be scheduled from Cafeteria module which will be displayed in “Schedule Menus” in above screen.

If you have to assign menu and schedule it on the door from Device Configuration page, then select the Menu from the picklist. The Menu will be shown in the grid as shown below.

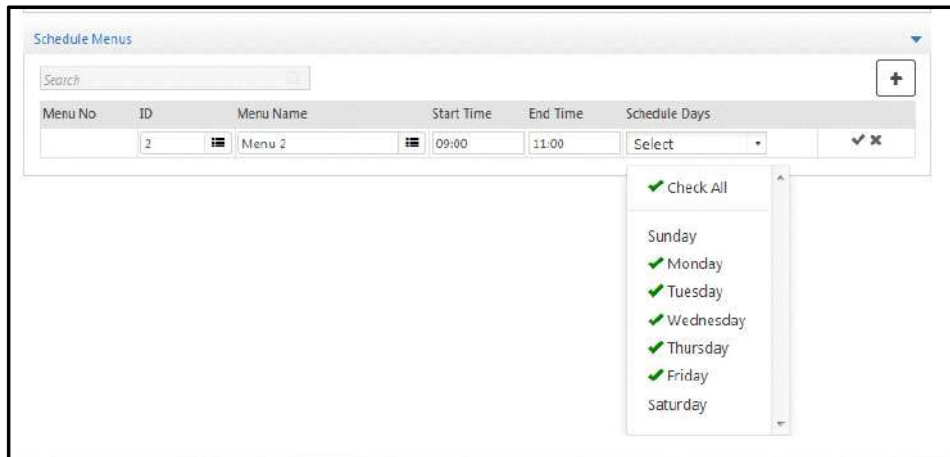

Menu No	ID	Menu Name
1	2	Menu 2

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
	ID	Name	HH:MM	HH:MM	Select

Now to schedule the menu click **Add** button as shown above.

Then select the menu to be scheduled from the **ID** picklist. Specify the **Start** and **End time** for which the Menu will be active and is available to users on the selected door. Select the **days** for which this menu will be available i.e. scheduled on the door.

Then click **OK** and **Save** the Menu schedule on the door.

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
2	2	Menu 2	09:00	11:00	Select

- ✓ Check All
- Sunday
- ✓ Monday
- ✓ Tuesday
- ✓ Wednesday
- ✓ Thursday
- ✓ Friday
- Saturday

*Two Menus cannot be scheduled for same timing.*

## Identification Server

*Identification Server is applicable for Direct Door only.*

This tab enables the selected device to be assigned to a pre-defined Identification Server.

Device has a limited memory capacity for storage of templates so we need Identification Server which will store the more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

To access these configurations, select the **Identification Server** tab.

Settings

### Face Recognition

Enable FR ☐

Face Capturing Tap & Go

## Face Recognition

- **Enable FR:** Select the checkbox to enable the Face Recognition feature on the device.

Make sure “**Enable FR**” flag is enabled and “**Basic Access Control**” application is selected in Devices > Device Configuration > Profile > Basic > Optional > Application in order to edit the parameters in Identification Server Settings.

- **Face Capturing:** Select the desired Face Capturing option — Tap & Go or Free Scan.
  - **Tap and Go:** If you select this option, user needs to tap on the device screen once. The MJPEG, that is motion recording screen appears. The device will capture and then identify the users face. If during working hours device is idle, then user needs to tap device to scan the face and gain access.
  - **Free Scan:** If you select this option, device will display the MJPEG, that is motion recording screen till the expiry of the Free Scan Time Out timer.
    - **Enable Time Out:** Select this checkbox to enable the time out.
    - **Free Scan Time Out (Sec):** Enter the free scan time out duration. The valid range is 1 to 999 sec.

In Free Scan method, multiple users can mark their attendance easily during peak entry hours.

For example, if the Free Scan Time Out is set as 30sec and if the user is identified in 10S then the system reloads the Free Scan Time Out timer again. Hence, device remains in the scanning mode.

- **IP Camera MJPEG URL:** Enter the URL for accessing the IP camera to receive the motion stream. For example: <http://192.168.104.48:80/matrix-cgi/mjpeg?profile-no=3>.

If the device is auto-added then the default value will be <http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4>.

- **User Name:** Enter the user name for accessing the IP camera. For eg: admin
- **Password:** Enter the password for accessing the camera. For eg: admin123

This will fetch the motion stream from camera to device screen. Then the users can show their face on camera. The face will be captured and after identification, the user will be allowed to access the door and punch will be marked.

- **FR Mode:** Select the FR mode as **Local** or **Server Assisted**.
  - **Local:** In this Local mode face templates will be stored in FR hardware module which can store 1 Lakh face templates. The captured face template will be verified with the templates already stored in FR module.
  - **Server Assisted:** In Server Assisted mode, the face templates will be stored directly in the server. You must first configure the Identification Server from where the face templates will be identified.

Card will be identified and verified locally by the device irrespective of the FR Mode. Whereas, Finger and Face will be identified and verified based on the selected FR Mode.

When FR Mode is selected as **Local** below mentioned parameters are to be configured:

**Face Recognition**

Enable FR ☒

Face Capturing Tap & Go

Enable Time Out ☐

Free Scan Time Out (Sec) 30

IP Camera MJPEG URL \* http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4  
Note: Mention the protocol in URL.

User Name \* Username

Password \* \*\*\*\*\*

FR Mode Local

Server Address \* 192.168.50.2

Server Port \* 12000

Identification Time-Out Duration (Sec) 4

Group FR ☐

Capture Face of Unidentified User ☐

Show Feedback for Unidentified Face ☐

Generate Unidentified Face Event ☐

- **Server Address/Port:** Enter the IP Address and Port of the FR Server.
- **Identification Time-Out Duration (Sec):** Enter the identification time-out in seconds, after which the face template identification process will be timed out.

**Example:** If **Identification Time-Out Duration (Sec)** is 5 seconds, then the identification server will try to identify the face template until 5 seconds and if not found then it will show time-out to the user.

When FR Mode is selected as **Server Assisted**, configure the below fields:

User can either assign a separate or a common Identification Server which is shared by other biometric credentials.

**Face Recognition**

Enable FR ☒

Face Capturing Tap & Go

Enable Time Out ☐

Free Scan Time Out (Sec) 30

IP Camera MJPEG URL \* http://192.168.1.126/matrix-cgi/mjpeg?profile-no=4

Note: Mention the protocol in URL.

User Name \* Username

Password \* \*\*\*\*\*

FR Mode Server Assisted

Identification Server ID Name ⋮

Configure Alternate Server Address ☐

Server Address

Server Port 11005

Identification Time-Out Duration (Sec) 4

Group FR ☐

Capture Face of Unidentified User ☐

Show Feedback for Unidentified Face ☐

- **Identification Server:** Select the Identification Server from the picklist button to which the device is to be assigned to save the records.
- **Configure Alternate Server Address:** Select this checkbox to configure external IP address of FR Identification Server.
- **Server Address:** By default, this will display the configured Identification Server for FR. This field allows user to enter the Alternate IP Address for FR if **Configure Alternate Server Address** is enabled.
- **Server Port:** Enter the TCP port number. The default port number is 11005.
- **Identification Time-Out Duration (Sec):** Enter the duration in seconds after which the face template identification will get time out.

**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.

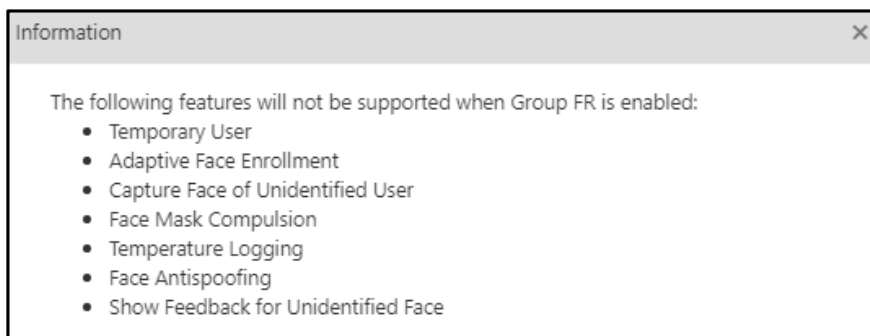

- **Group FR:** Select this checkbox to enable face recognition feature for multiple users and mark their attendance at the same time via this door. Group FR will be applicable only if you have selected **Free Scan** as the **Capturing Mode**.

Group FR will work in both FR Modes — Local, Server Assisted Mode.

For Group FR ([“Mark Group Attendance”](#)) feature to work in Server Assisted Mode, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

Once you enable Group FR, a pop-up will be displayed as shown below:

The features listed in the pop-up will not be functional.

- **Capture Face of Unidentified User:** Select this checkbox to enroll unidentified faces of users via this door.

For Capture Face of Unidentified User feature to work, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.

- **Show Feedback for Unidentified Face:** Select this check box, if you wish to display a message on the device display screen to user's whose face is not identified.

If you wish that events should be generated for Unidentified Face, enable **Generate Unidentified Face Event**.

If you have enabled **Group FR**, **Show Feedback for Unidentified Face** feature will not be functional.

- **Generate Unidentified Face Event:** Select this check box, if you wish to generate events when a user's face is not identified.

These events can be viewed from **Admin Module > View/Logs > Event View** as well as **Device Module > Reports > Invalid Events**.

If you wish to view the snapshots in the Events/Logs, make sure you have configured [“Satatya/IP Camera Integration”](#) in [“Visual Tagging”](#). Make sure you select the Event as **User Denied- User Not Identified** to view the snapshots for **User Denied- User Invalid** event.

**Generate Unidentified Face Event** is applicable for **Face** credentials only.

For ARGO Direct Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under “[Settings](#)” in “[Advanced](#)”.

For ARGO Panel Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under “[Settings](#)” tab in “[Advanced](#)” in “[Panel200](#)”.

If you wish that a message should be displayed on the device display screen for Unidentified Face, enable **Show Feedback for Unidentified Face**.

## Face Enrollment

If the **FR Mode** is **Server-Assisted** and you wish to enroll faces from the device, make sure **Enable Face Recognition** is selected in **Users > User Configuration > Face Recognition and/or Visitor Management > Visitor Profile > Face Recognition and/or Contract Worker Management > Worker Profile > Face Recognition**.

- **Conflict Check:** Select the checkbox for the system to check the conflict between the new face of a user and the already (existing) enrolled faces of all the users (available in the database) during the face enrollment process.
- **Conflict Matching Threshold:** Enter the desired Conflict Matching Threshold value in percentage.

The system will consider this value while comparing the face with the face templates already present in the database.

If a conflict is found, that is, if the system detects a face template in the database similar to the new face, then a conflict error will be displayed.

Make sure a higher value is set for this parameter, as it will result in less equivalent matches with the face templates available in the database.

Make sure the **Conflict Matching Threshold** is set lower than **Matching Threshold** in **Admin module > System Configuration > Identification Server Configuration**.

### Example: Face Enrollment of Suresh

- **Conflict Check** checkbox is selected.
- **Conflict Matching Threshold** is set as 93%.

Now during the face enrollment of Suresh, the system will check in its database if his face matches with faces of other users available in the database.

- **Case 1:** If Suresh's face matches 92% with Ram, then the system will allow to enroll Suresh's face.
- **Case 2:** If Suresh's face matches 94% with Shyam, then the system will display the conflict error while enrolling Suresh's face.

## Adaptive Face Enrollment

- **Adaptive Face Enrollment:** Enable adaptive face enrollment for identification server.

- Adaptive face enrollment provides automatic real time face enrollment whenever change is experienced in facial features.
- Enabling adaptive enrollment process parameter, an additional slot will be provided internally to store 10 more face templates of a user.
- IDS will learn from face recognized, adapt and would take decision of storing new template of a user database.

By enabling the adaptive face enrollment parameter will allow to specify following configurations:

- **Threshold Deviation (Face):** Enter the value of deviation from matching threshold in percentage. Based on the value entered for deviation, template for Adaptive Face Enrollment will be decided.

*Example: If deviation entered is 3% and matching threshold is 98% then it will classify template which has matching score between 98 - 95 and one lower than this will be classified below margin.*

- **Multi-user Matching Score Deviation (Face):** Enter the value of deviation from matching score between 2 different users while Adaptive Face Enrollment.
- Difference between matching scores of templates will be done, when we have templates of two or more users falling under above specified deviation.

*E.g. Assume the following parameters:*

- *Threshold value = 98%*
- *Threshold Deviation= 3%*

So, Result will display all matching templates having matching score between range 98 to 95

- *Multi-user Matching score deviation = 0.5%*

*Suppose, 5 best templates of 2 users fall between 98 -95% range*

<b>User</b>	<b>Matching Score</b>
User 1	97.8
User 1	97.6
User 1	97.4
User 2	97.25
User 2	97

*As we have obtained templates of 2 users in which user 1 is having template of highest matching score, so will make a difference between lowest score template of user 1 and highest matching score template of user 2.*

*97.4 - 97.25 = 0.15; this is less than 0.5*

*As difference is less than 0.5, user 1's template having matching score 97.8 for adaptive enrollment will not be used.*

- Threshold Deviation and Multi-user Matching score deviation will act as two filters to fetch appropriate template for adaptive enrollment.
- Value can be added in decimal.

We recommend to set the multi-user matching score deviation higher always e.g.2.0 to reduce the probability of enrolling a particular user's face template in some different user's enrolled faces.

- **Confirm before Adaptive Face Enrollment:** Select this checkbox if face enrolled using Adaptive face enrollment requires confirmation from user.

Faces enrolled under Adaptive enrollment process will be synced automatically, but when IDS is restarted due to any reason, the adaptive faces which are not synced will be removed by default.

## Face Anti-Spoofing

- **Face Anti-Spoofing:** To use this feature, make sure **Enable FR** checkbox is selected in **Devices> Device Configuration> Identification Server> Face Recognition> Enable FR**.

Then, select the **Face Anti-Spoofing** checkbox to enable this feature and configure the following parameters:

- **Camera Mount:** Select the desired Camera Mounting option - **Wall Mount** or **Ceiling Mount**.

There is an impact of Camera Mounting in face liveness detection.

By default, it is "Wall Mount".

For Wall Mount, make sure the distance between camera and user is less than 3 feet for proper detection of face.

- **Face Anti-Spoofing Mode:** Liveness Detection helps to limit the fierce risk of spoofing attacks by using several anti-spoofing approaches. Along with the configurations to be done for Face Anti-Spoofing you also need to take care of the recommended settings for liveness verification and for face recognition as well as the Camera Settings, refer "[Recommendations for Liveness Verification](#)", "[Recommendations for Face Recognition](#)" and "[Recommended Camera Settings for Liveness Verification](#)".

Select the Face Anti-Spoofing Mode for liveness detection from the following:

1. **Basic:** This mode detects face as well as photos from the mobile phones.  
Select this option when the distance between Camera and Face is more than 3 feet
2. **Moderate:** This mode analyzes the texture of face.  
Select this option when the distance between Camera and Face is less than 2 feet
3. **Advance:** This mode combines the features of **Basic Mode** and **Moderate Mode** of Face Anti-Spoofing.  
Select this option when the distance between Camera and Face is more than 1 feet and less than 2 feet.  
By default, Face Anti-Spoofing Mode will be **Advance**.

Only Basic option of Face Anti- Spoofing Mode will be applicable when the Camera Mount option is Ceiling Mount.

- **Face Anti-Spoofing Threshold:** Enter the Face Anti-Spoofing threshold value in percentage within the range from 1.00 to 99.99 to identify user's face liveness for considering him/her as genuine person. This Threshold value will vary as per **Face Anti-Spoofing Mode** selected by you.

## Other Biometric Credentials

- **Enable Identification On Server:** Select the checkbox to enable the identification of palm/finger templates on this device.

- **Identification Server:** Select an Identification Server using the picklist button to which the device is to be assigned. The configuration of server is done from **Admin module > System Configuration > Identification Server Configuration** and the Identification Service must be started from the service tray. The IP Address of this server is displayed in **Server Address**.
- **Configure Alternate Server Address:** Select this checkbox to configure external IP address of Identification Server.
  - **Server Address:** By default it displays the IP Address of the selected Identification Server. Enter the external network IP address which will be used for accessing identification server.
- **Server Port:** Enter the TCP port number. The default port number is 11005.
- **Enable Finger Smart Identification:** For all other supported doors, select the checkbox to enable fingerprint templates identification through Identification Server.
- **Identification Time-Out Duration (Sec):** Enter the duration in seconds after which the fingerprint template identification will get time out.
 

**Example:** If 5 seconds is specified, then the identification server will try to identify the template till 5 seconds and if not found then it will show time-out to the user.
- **Auto Send Enrolled Templates:** Select the checkbox to enable any enrolled templates to be saved both on the COSEC database as well as saved locally on the configured Identification Server. This enables prompt identification of user on enrollment.
- **Default Biometric Group No.:** Enter the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

Click **Save**.

# Panel200

---

Panel200 functions in two modes — Standalone or Server.

For details of Panel200 as a Standalone Server, please refer to the **COSEC Panel200 System Manual**.

When Panel200 is set to function in the Server mode, then the Panel200 manages multiple controllers (Panel Doors) and acts as a bridge between the controllers and the central COSEC server. It is responsible for synchronizing all door controllers and implementing advanced access control features.

The SDK Version for the Panel will be displayed after you have added the Panel to COSEC along with the name assigned to the device. You can also view the SDK Version from [“Device Status”](#).

If your Panel200 is working on SDK1, certain features are not supported in the same. For detailed list of features, refer to [“Features Not Supported in Panel SDK1”](#).

New features for Panel/Panel Doors are applicable for Panel200 (SDK2) only, except where mentioned explicitly for SDK1.

The Device Configuration option in COSEC enables the system administrator to add Panel200 in the COSEC network by setting the configurations through the COSEC application.

It is necessary to configure a Panel200 before starting the configuration of its slave controllers (Panel Doors).

You can connect the following devices as Panel Doors — Door V1, Door V2, Door V3, Door V4, Path Controller, Vega Controller, PVR Door, ARC DC 100, ARC IO 800, ARC DC 200, ARGO, Path V2, ARGO FACE.

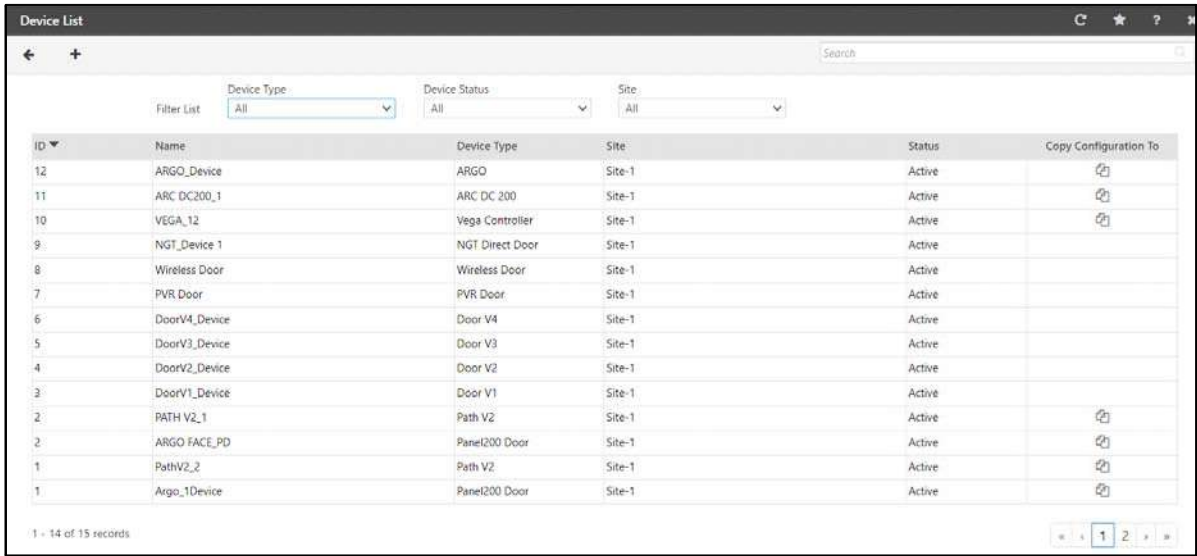

The Panel200 configuration are explained for the Panel set in the Server Mode.

*The Configuration of Panel and Panel Lite is similar to Panel200. In this manual, the configuration of Panel200 is explained for reference.*

*The basic difference between Panel, Panel lite and Panel200 is the support of user capacity and event buffer.*

To configure a new Panel200 device, click **Devices Module > Device List** menu and the page appears as shown below.

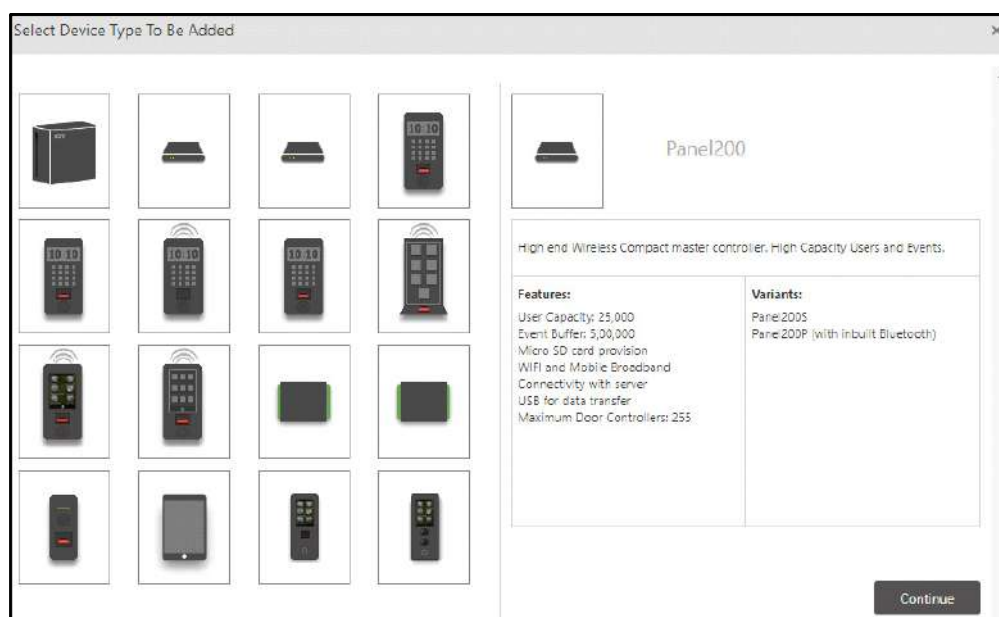

The screenshot shows the 'Device List' window with a search bar and filter options. The table below lists the devices:

ID	Name	Device Type	Site	Status	Copy Configuration To
12	ARGO_Device	ARGO	Site-1	Active	
11	ARC DC200_1	ARC DC 200	Site-1	Active	
10	VEGA_12	Vega Controller	Site-1	Active	
9	NGT_Device 1	NGT Direct Door	Site-1	Active	
8	Wireless Door	Wireless Door	Site-1	Active	
7	PVR Door	PVR Door	Site-1	Active	
6	DoorV4_Device	Door V4	Site-1	Active	
5	DoorV3_Device	Door V3	Site-1	Active	
4	DoorV2_Device	Door V2	Site-1	Active	
3	DoorV1_Device	Door V1	Site-1	Active	
2	PATH V2_1	Path V2	Site-1	Active	
2	ARGO_FACE_PD	Panel200 Door	Site-1	Active	
1	PathV2_2	Path V2	Site-1	Active	
1	Argo_1Device	Panel200 Door	Site-1	Active	

At the bottom, it indicates '1 - 14 of 15 records' and has pagination controls showing '1' and '2'.

Click **New +** and select **Panel200** as device type and click **Continue**.

The **Device Configuration** page of Panel200 appears on your screen.

To add Devices automatically, click Admin Module> System Configuration> Global Policy> Device. Select the “Auto Add New Devices” check box to enable. Once the device is connected in network, it will come online in the COSEC Monitor.

Make sure the Monitor Service is running while adding the device to COSEC.

The assignment of user on Panel Doors can be done from respective Panel Door Configuration > Assign Users.

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#).
- **OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

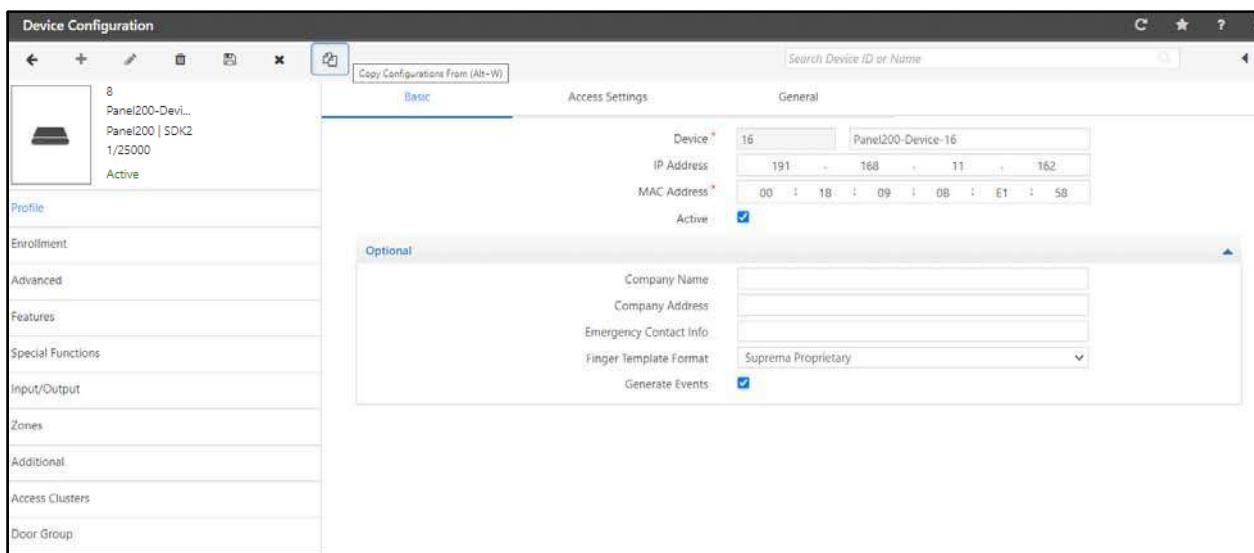

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

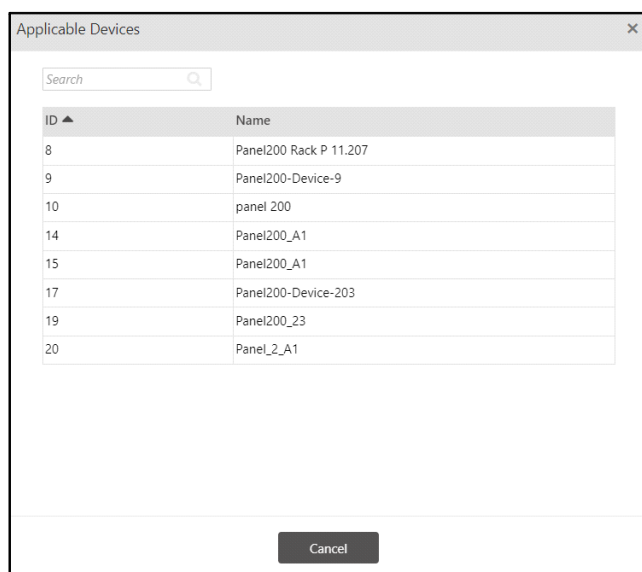

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration tabs: Profile, Enrollment, Advanced, Features, Special Functions, Input/Output, Zones, Additional, Access Clusters, and Door Group. The main area is titled 'Copy Configurations From (Alt-W)' and contains a search bar 'Search Device ID or Name'. Below this, there are three tabs: 'Basic', 'Access Settings', and 'General'. The 'General' tab is selected, showing fields for 'Device' (16), 'IP Address' (191.168.11.162), 'MAC Address' (00:1B:09:0B:E1:58), and 'Active' (checked). An 'Optional' section is expanded, showing fields for 'Company Name', 'Company Address', 'Emergency Contact Info', 'Finger Template Format' (Suprema Proprietary), and 'Generate Events' (checked).

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. That is, the pop-up will display other Panel200 devices only. For example, if you have devices — ARGO1, ARGO2, Panel1 and Panel2, then this pop-up will display only Panel1 and Panel2.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring the Panel200, click on the links.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)

- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Setting Up Access Zones”](#)
- [“Additional”](#)
- [“Access Clusters”](#)
- [“Door Group”](#)

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a profile involves defining basic parameters to set up the device.

Click each link to configure the Profile parameters:

- [“Basic”](#)
- [“Access Settings”](#)
- [“General”](#)

## Basic

The **Profile > Basic** and the page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Basic' tab selected. The left sidebar lists various configuration options: Profile, Enrollment, Advanced, Features, Special Functions, and Input/Output. The main area displays the following fields:

- Device:** 2 (Panel200-Device-2)
- IP Address:** 192 . 168 . 103 . 203
- MAC Address:** 00 : 18 : 09 : 03 : DF : 5A
- Active:** ☒
- Optional:**
  - Company Name:**
  - Company Address:**
  - Emergency Contact Info:**
  - Finger Template Format:** Suprema Proprietary
  - Generate Events:** ☒

Configure the following options as required:

- **Device:** Enter a **Name** for the new Panel200 device. The **ID** will be assigned by the system.
- **IP Address and MAC Address:** Enter the MAC address of the Panel. The IP address will be displayed automatically once the device comes online in Monitor.

MAC address of Panel is required while manually adding the Panel to the COSEC Monitor. Take a note of the MAC address from the device when it is powered on.

Make sure the Panel200 is set in the Server Mode. To do so,

- Enter the IP Address of the Panel200 in the browser.
- The Panel200 Web page appears.
- Click Configuration > Basic Profile > Panel Mode
- Select Server Mode

- **Active:** If the device is active on the network, select this check box to enable this option.

To add the Device automatically, click Admin Module> System Configuration> Global Policy> Device. Select the **Auto Add New Devices** check box to enable.

The device will be added automatically but make sure you enable the **Active** check box in order to connect the device to the network. Once the device is connected to the network, it will come online in the COSEC Monitor.

## Optional

Click the **Optional** collapsible panel. It provides optional configurations as shown below:

- Configure the **Company Name**, **Company Address** and **Emergency Contact Info**.
- **Finger Template Format:** Select the Finger Template Format as **Suprema Proprietary** or **Suprema ISO**.

If you select either of the formats, then all the Existing Suprema Finger Templates will be deleted from the device and user will have to enroll with selected Fingerprint template format again.

*Suprema Proprietary is a local format of Suprema, while Suprema ISO is the standard format.*

- **Generate Events:** By default, this option is enabled, that is the events generated in the Panel Doors will be displayed in the COSEC Monitor.

Clear the check box if you do not wish to view the Panel Door events in the COSEC Monitor.

## Access Settings

Click **Profile > Access Settings** and the page appears as shown below:

The screenshot shows the 'Device Configuration' web interface. On the left is a sidebar with a device icon and details: '8 Panel200-Dev...', 'Panel200 | SDK2', '1/25000', and 'Active'. Below this are menu items: Profile, Enrollment, Advanced, Features, Special Functions, Input/Output, Zones, Additional, and Access Clusters. The main area has three tabs: Basic, Access Settings (selected), and General. Under 'Access Settings', there are fields for 'Universal Time Zone' (set to '(GMT+05:30)Chennai, Kolkata, New Delhi, Mum'), 'Time Format' (set to '24 Hours'), and 'Auto Synchronize with NTP' (unchecked). Below these is a 'Preferred NTP Server' field. Further down is a 'Working Days' section with checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, Sat, and Holiday, all of which are checked. Below this are 'Working Hours (HH:MM)' (00:00 to 23:59), 'Break Hours(HH:MM)' (13:00 to 14:00), 'Allowed Early-IN (HH:MM)' (00:10), and 'Allowed Late-OUT (HH:MM)' (00:10). At the bottom are four 'Holiday Schedule' entries, each with a number (1-4) and a 'Schedule' dropdown menu.

- **Universal Time Zone:** Select the geographic time zone in which the Panel will operate.
- **Time Format:** Specifies the time format to be displayed on Panel Door LCD display connected with the Panel200. The formats available are:
  - 24 Hours
  - 12 HoursSelect the relevant option from the drop down list as per the site requirements.
- **Auto Synchronize with NTP:** If Date and time is to be automatically synchronized as per the Preferred NTP Server (predefined or user-defined NTP server address) selected by user, then you must enable Auto Synchronize With NTP check box.

*Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from the Panel200 as well as the Panel Door device web-page, which will be reflected on the Panel Door device LCD display.*

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  - You can specify the Preferred NTP server of your choice. In this case Panel will first try to get Date and Time from that server address.

If it does not get Date and Time in three tries; Panel will check from pre-defined NTP servers.

If you have entered one of the three pre-defined NTP servers (ntp1.cs.wisc.edu, time.windows.com, time.nist.gov); then Panel will first check that server first.

- If it receives updated Date and Time then Updated Date and Time will be reflected on Panel webpage and Panel Door device display screen.

- You can keep the Preferred NTP server as blank. In this case Panel will check for Date and Time from the first NTP server.

*If user has manually entered Date and Time from web-page of the Panel Door or Device Menu then those values of Date and Time will be reflected on device web-page and display screen.*

*In the case of the Manual option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.*

- **Working Days:** While adding new devices, by default all the days including holidays for access are enabled. To change the default settings of working days, click on the relevant boxes which are not to be included in active working days.
- **Working Hours (HH:MM):** While adding new devices, the default working hours is set as 00:00 to 23:59. The user can change the default working hours in HH:MM format.
- **Allowed Early-IN (HH:MM):** Specifies the number of hours before official entry time, during which the user should be allowed entry.
- **Allowed Late-OUT (HH:MM):** Specifies the number of hours after official exit time, during which the user should be allowed to exit.
- **Holiday Schedule:** This section allows the administrator to assign up to four holiday schedules to the device by using the Holiday Schedule picklist

*If the same holiday schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on the device, on any of the scheduled holidays will always be marked as a holiday.*

*All these configurations will be applicable to the Panel Doors connected with the Panel.*

## General

Click **Profile > General** and the page appears as shown below.

The screenshot shows the 'Device Configuration' web interface. On the left is a sidebar with a device icon and details: '8 Panel200-Devi...', 'Panel200 | SDK2', '1/25000', and 'Active'. Below this are menu items: Profile, Enrollment, Advanced, Features, Special Functions, Input/Output, Zones, Additional, Access Clusters, and Door Group. The main area has tabs for 'Basic', 'Access Settings', and 'General' (which is selected). Under the 'General' tab, there are several settings: 'Enable Display Messages' (checkbox), 'Custom Birthday Message' (text field with 'Happy Birthday'), and four 'Display Message' sections (1, 2, 3, 4). Each section has a checked checkbox, a 'Schedule' (two time pickers), and a 'Message' (text field). For example, Display Message 1 has a schedule from 00:00 to 11:59 and the message 'Good Morning'. At the bottom, there is a 'Multi-Language Support' checkbox.

- **Enable Display Messages:** Select this check box to enable the Custom Birthday Message and the Display Messages. Upto 4 Display Messages can be configured.
- **Custom Birthday Message:** Configure the birthday message which you wish to display on the Panel Door when the user punches on the door on his/her birth date.

The valid values are

**A-Z**

**a-z**

**0-9**

**`~!@#\$%^&\*()\_+-{}|\\|.;?<>,.\'\"**

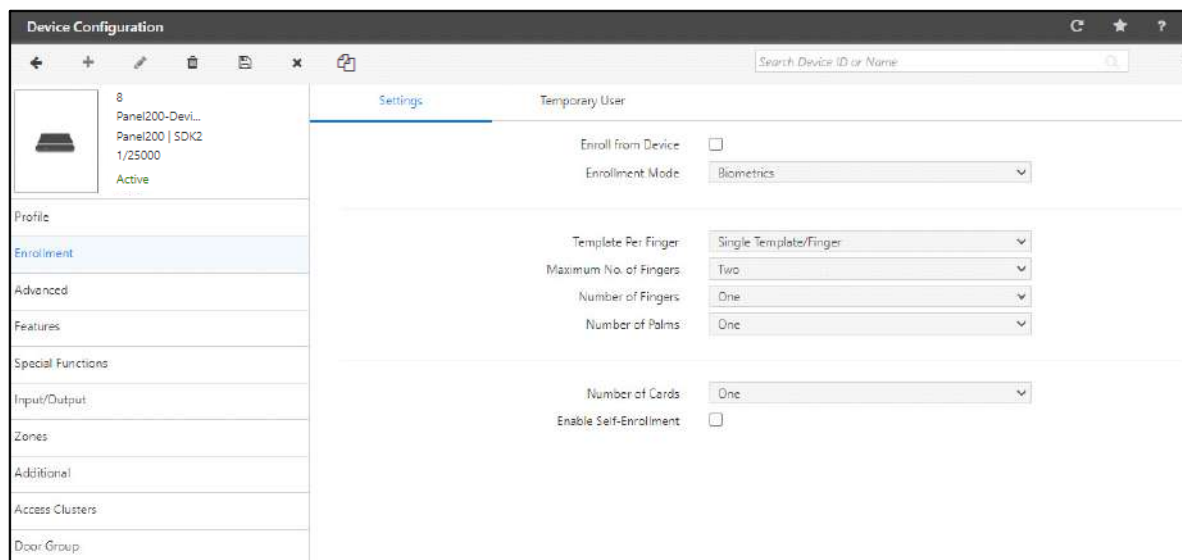

- **Display Message 1 to Display Message 4:** Select the respective check box of the desired Display Messages from 1 to 4, to enable.
  - **Schedule:** For each **Display Message**, define the time period for which the message is to be displayed.
  - **Message:** For each **Display Message**, configure the message you wish to display on the Panel Door as per the time set in the Schedule. Maximum 21 characters allowed.
- **Multi-Language Support:** Select this check box to enable multi-language support for the Panel Doors.

*Wireless Door/PVR Door/Door V3 will support languages with English fonts (A-Z,a-z) only.*

# Enrollment

On the **Device Configuration** page, click the **Enrollment** tab in the left pane.

To configure the Enrollment parameters click the following links:

- [“Settings”](#)
- [“Temporary User”](#)

## Settings

*Settings is applicable for Direct Door only.*

Click the **Settings** tab. The **Settings** page appears.

Settings	Temporary User
Enroll from Device	<input type="checkbox"/>
Enrollment Mode	Biometrics
Template Per Finger	Single Template/Finger
Maximum No. of Fingers	Two
Number of Fingers	One
Number of Palms	One
Number of Cards	One
Enable Self-Enrollment	<input type="checkbox"/>

Configure the following parameters.

- **Enroll from Device:** Select this check box to enable the enrollment of user from the Panel Door.

When this check box is enabled, **Enroll User** under Special Function is enabled automatically.

Similarly, if Enroll User under Special Function and Enroll From Device check-box both are inactive in device configuration, then if you enable Enroll User under Special Function, Enroll From Device check box is enabled automatically.

- **Enrollment Mode:** Select the Credential — Biometrics, ReadOnlyCard, SmartCard, BiometricthenCard, Face and DuressFinger that you wish to enroll from the Panel Door. The selected option will work only if supported by the connected Panel Door.

Refer to “[Enroll Credentials](#)” or “[Enrolling Users](#)” to enroll User/Worker.

Refer “[Enrollment](#)” or “[Enroll Credentials](#)” to enroll Worker.

Refer “[Enroll Credentials](#)” to enroll a Visitor.

*DuressFinger is only applicable for User and Worker.*

- **Template Per Finger:** Displays the values as configured at the global level. This field is not editable.
- **Maximum No. of Fingers:** Displays the values of the maximum number of fingers configured at the global level. This field is not editable.
- **Number of Fingers and Palms/Cards:** Select the number of cards or fingerprints to be enrolled based on the credential option selected in the **Enrollment Mode**.
- **Enable Self-Enrollment:** Select this check box to enable the self-enrollment feature on the Panel Door.

## Temporary User

*Make sure, User Access Mode (Door) in Zones is — Face, Biometric or Card — as per your requirement.*

Click the **Temporary User** tab. The **Temporary User** page appears.

Click the **Temporary User** tab. The **Temporary User** page appears.

Configure the following parameter.

- **Temporary Addition of Unknown User:** Select this check box to enable the temporary addition of users/ workers on Panel Doors.

Make sure you also configure the parameters of Temporary User/Worker for the desired Panel Door.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control Settings, Alarms, Timers and Wiegand.

*The configurations done in Panel will be functional only if supported by the Device connected with it.*

Click each link to configure the Advanced parameters:

- [“Settings”](#)
- [“Alarms”](#)
- [“Timers”](#)
- [“Wiegand”](#)

## Settings

The **Advanced > Settings** and the page appears as shown below:

The screenshot shows the 'Device Configuration' window with the 'Settings' tab selected. The left sidebar lists various configuration categories, with 'Advanced' currently highlighted. The main panel displays a list of settings for the selected device, 'Panel200-Dev1'. These settings include checkboxes for 'Generate Exit Switch Events' and 'Generate Invalid User Events', a 'Degraded Access' checkbox, a 'Degraded Wait Timer (Sec)' input field set to 5, an 'Access Mode' dropdown menu set to 'Any One', a 'Facility Code' input field set to 1, an 'Allow Facility Code Verification' checkbox, an 'Enable Additional Security' checkbox set to 'Disabled', an 'Enable Smart Identification' checkbox, an 'Access Level' dropdown menu set to 8, an 'Access Mode' dropdown menu set to 'Card', an 'Auto Acknowledge Alarm' checkbox, an 'Alarm Auto Acknowledge Timer (Sec)' input field set to 10, and an 'Override IO Linking/Time Triggered during Disarm' checkbox.

- **Generate Exit Switch Events:** Select this check box to enable the Panel Door to generate events every-time the exit switch is used.
- **Generate Invalid User Events:** Select this check box to enable the Panel Door to generate events for invalid user inputs.

**Generate Invalid User Events** is applicable for all other credentials except **Face**.

To generate events for **Face** credentials, make sure **Generate Unidentified Face Event** is enabled:

- under **"Face/Image Settings"** for **"ARGO FACE Door"**.
- under **"Identification Server"** for **"ARGO Door"**.
- under **"Identification Server"** for **"VEGA Door"**.
- **Degraded Access:** Degraded mode allows a valid user to access the facility even if the Panel Door is not communicating with the Panel200. Select this check box to enable this feature at the Panel level. Make sure you also configure the Degraded Mode parameters in **"Configuration"** under **"Setting Up Access Zones"**.
- **Degrade Wait Timer (sec):** Specifies the time period in seconds after the expiry of which the Panel Door switches from Network Fault to Degraded Mode. Default value is 5 sec.
- **Access Mode** - Defines the type and combination of credentials required to identify and validate a user at the Panel Door. Select the appropriate credential combination from the drop-down list. The options available are:
  - Any One
  - Card
  - Card + Biometrics
  - Card + Biometrics + PIN
  - Card + PIN
  - Biometrics
  - Biometrics + PIN

- Biometrics then Card
- Biometrics + Group
- **Facility Code:** Facility or site codes are encoded on cards, along with a card number, to ensure that cards belong to the facility where access is attempted. Facility Code is unique 8 or 16 bits of every HID Proximity card number specific to a site and is encoded into the card by the manufacturer.

COSEC also supports end user defined Facility Code (FC) to be written on to the card at the time of enrollment while using Smart Cards. Configure the Facility Code (ranging from 1 to 65535) as per your requirement.

- **Allow Facility Code Verification:** Select this check box to avail facility code verification on Panel Door.
- **Enable Additional Security:** In order to keep additional level of security check other than Facility Code and card number check, Smart Cards can be written with Additional Security Code that takes security to the next higher level. Select this check box to enable this functionality at the Panel level.
  - **Additional Security Code:** Configure the code (ranging from 1 to 65535).
  - **Re-enter Code:** Configure the code again to confirm.

Enable Additional Security ☒

Additional Security Code \*

Re-enter Code \*

Default Code

- **Default Code:** If your wish to use the default code, click the Default Code button, the Additional Security Code and Re-enter Code fields will be updated automatically.
- **Enable Smart Identification:** Select this check box to enable this functionality at the Panel.
- **Access Level:** Select the desired level from 1 to 15.
- **Access Mode:** Select the desired mode — Card, Card+PIN, Card+Biometrics, Card+Biometrics+PIN.

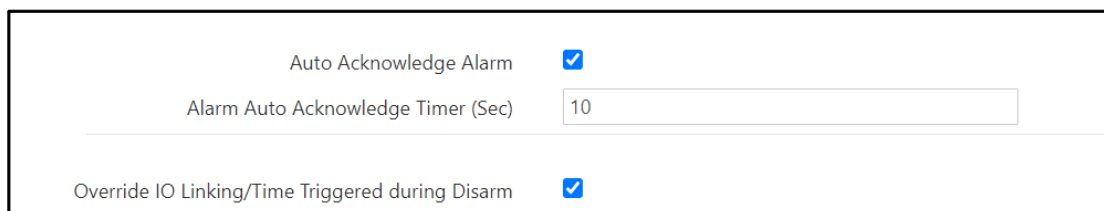

Enable Smart Identification ☐

Access Level

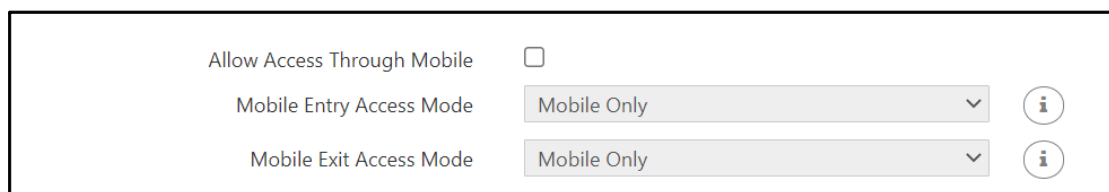

Access Mode

- **Auto Acknowledge Alarm:** Select this check box to enable the auto-acknowledgment of all alarms.

- **Alarm Auto Acknowledge Timer (sec):** Set the time in seconds after the expiry of which the alarm buzzer will stop automatically.

- **Override IO Linking/Time Triggered during Disarm:** Select this check box to enable Overriding of IO Linking/ Time Triggered configurations when the Disarm under Special Function is enabled.
- **Allow Access Through Mobile:** Select this check box to enable this functionality.

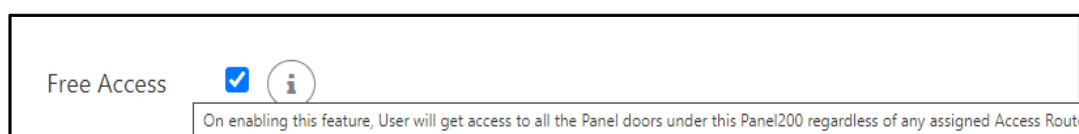

- **Mobile Entry/Exit Access Mode:** Select the entry and exit door access mode from the options — Mobile Only, Mobile then Biometrics, Mobile then PIN and Mobile then Card.

If User Access Mode is selected as “None” in Zone Configuration and Mobile Access Mode is selected as “Mobile Then Biometrics” then Panel Door can be accessed through Mobile then Biometric credential.

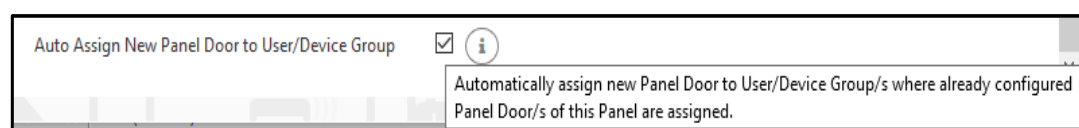

- **Free Access:** Select this check box to allow the users to access all Panel Doors connected with the Panel200. If the user is assigned an Access Route, then such doors within the route will allowed access as per the defined route. However, the users will also have access to the all other doors.

Clear this check box, you wish to allow access to users to doors as per the Access Route only.

- **Auto Assign New Panel Door to User/Device Group:** Enabling this check box allows Panel to assign the new configured Panel Doors to the respective users and/or device groups automatically.

For example: Panel Door 1 and Panel Door 2 are assigned to the User 1 and Device Group 1. Now if the Panel Door 3 has been added in the same configured Panel and if this check box is enabled then, the newly added Panel Door 3 will be automatically assigned to the User 1 and Device Group 1.

- **Face Sync In Panel Door:** Select the option to sync the face images in Panel Door from the options — via Panel or via Server. The default value is via Panel.

If you select **via Panel**, the face images in Panel Door will be synced via Panel.

If you select **via Server**, the face images in Panel Door will be synced via Server. On selecting via Server, the following pop-up appears.

Click **OK**. The drop-down value changes to via Server and the pop-up closes. Clicking on **Save** will save the configuration.

*If you have selected the option - via Panel,*

- *Panel200 will discard any new images received from the Server when its memory is full and Face Sync will stop.*
- *When Face Sync process starts and if Panel200 or Panel Door memory is full then, Face Sync will stop.*
- *On encountering 90% storage full condition, the Panel200 will notify the Server and an alert will be triggered. This alert can be configured from Admin module > System Configuration > Alert Message Configuration. Make sure you select Alert Filter as **System** and Event as **Device Storage**.*
- **Advertise Bluetooth:** Select this check box to enable bluetooth of the Panel by which the Panel will be visible to others. Then configure the following parameters.

- **Bluetooth Name:** Configure the name of the bluetooth by which it can be identified by other devices. Default: MATRIX.

If required, you can configure the bluetooth name as per your requirement. The **Bluetooth Name** can be a maximum of 10 characters.

- **Bluetooth Range:** Select the range for bluetooth as **Short**, **Medium** or **Long**. If Short range is selected then the Panel will be visible to the nearby devices which are in the range of 1m to 2m.

Select the Bluetooth Range as — **Short (1m-2m)**, **Medium (5m-7m)** or **Long (>8m)**.

- **Panel Door Secured Communication:** Select this check box to establish secure communication between Panel and Panel doors.

Panel Door Secured Communication	<input checked="" type="checkbox"/>	Activate Wind Go to Settings to a
----------------------------------	-------------------------------------	--------------------------------------

Click **Save** to save all the configurations.

## Alarms

Click **Advanced > Alarms** and the page appears as shown below.

Select the desired check boxes for the respective alarms to activate the same. You can configure upto 3 **Custom Alarms** also as per your requirement.

- **Duress Alarm:** Duress Alarm can be generated when a facility/premises has been accessed by a valid user but under some threat or force entry. In this situation; the user can alert the security by entering the duress code along with user code. This duress will be reported to the security at remote location without any local alarm.

Enable the Duress Detection feature and set the Duress Code from Duress Detection in **“Set3”** or/and Enroll Duress Finger from **“Enrollment”**.

- **Dead Man Alarm:** Dead Man Alarm is generated when the person working in restricted environment does not come out of the Dead Man Zone within a pre-defined Alert time.

Enable the Dead Man Zone feature at Panel level from Access Features > **“Set3”** and at Zone level from Zones> Configuration.

- **Panic Alarm:** You can enable the system to generate a Panic Alarm from the Panel Door by enabling the Panic Alarm check box. Also Door Alarm must be activated and the door must be in the normal condition (i.e. armed) then Panic Alarm will be generated.

- **Door Offline Alarm:** You can enable the system to generate a Door Offline Alarm by enabling the Door Offline check box. Also Door Alarm must be activated so when the door is offline then Door Offline alarm will be generated.
- **Door Fault Alarm:** You can enable the system to generate a Door Fault Alarm by enabling the Door Fault check box. Also door alarm must be active. So when the door is accessed and held opened for long time, then door fault alarm will be generated.
- **Occupancy Violated Alarm:** You can enable the system to generate the Occupancy Violated alarm, when the number of users permitted within a secured area or controlled zone exceed.

*Enable the Occupancy Control feature at Panel level from Access Features > Set1 and at Zone level from Zones> Configuration.*

- **Tail-Gating Alarm:** You can enable the system to generate the Tail-Gating alarm, when more than one person enters a secured area using a single person's access credentials.
- **Man Trap Timer Violation Alarm:** Whenever the Man Trap Timer is configured for a particular door, the user is expected to punch on the door present in the same zone within the specified Mantrap timer. If user fails to do so, Man Trap Timer Violation Alarm will be activated.

*Enable Man Trap for the Zone level from Zones> Configuration.*

- **Access Denied-Anti-Pass Back Alarm:** This alarm can be enabled to alert the fraudulent use of card when Anti-Pass back feature is applied in a zone. When the restriction is hard, the user has to follow entry and exit sequence before entering again; else access will be denied and alarm will be generated.

*Enable the Anti-Pass back feature at Panel level from Access Features > "Set3" and at Zone level from Zones> Configuration.*

- **Access Denied- Access Route Violated:** This alarm can be enabled to alert the violation of access route configured for the user. When the restriction is hard, the user has to follow the access route; only then he will be allowed to access the doors in the route.

*Enable the Access Route feature at Panel level from Access Features > Set1 and configure the Access Route feature from Access Control module> Access Route.*

- **Access Denied-Other Reasons:** This alarm can be enabled to alert the violations of other Access control policies (other than APB violation & Access Route violation) while accessing the door.
- **Multiple Unauthorized Attempts:** This alarm can be enabled to provide an alert when an unauthorized user is trying to access the door multiple times.
- **User Unidentified:** This alarm can be enabled to provide an alert when the credential of user accessing the door are not identified.
- **Access Denied - Access Route Timer Violated:** This alarm is activated when the Access Route Timer is violated.
- **Custom Alarm 1/2/3:** You can configure custom alarm as per your requirements.
- **Alarm Reissue Wait Timer (min):** Define the time in minutes for which an acknowledged alarm should wait before being re-issued. Default value is 5 minutes.

- **Man Trap Alarm Wait Timer:** This check box enables an alarm wait timer on the panel to ensure that the user accesses sequential doors of a Man Trap within a specific time-frame.

## Timers

This section allows the configuration of various types of pre-defined timers which can trigger off specific responses.

Click **Advanced > Timers** and the page appears as shown below:

Timer	Value
Inter-Digit Wait Timer (Sec)	3
Multi-Input Wait Timer (Sec)	5
Late-IN Early-OUT Timer (Min)	60
Door Abnormal Wait Timer (Sec)	10
Palm Enrollment Time Out (Sec)	60

Configure the following options as required:

- **Inter-Digit Wait Timer (sec):** Specifies the time period in seconds for which the Panel Door waits between two digits before considering the user input code as complete. Default value is 3 sec.
- **Multi-Input Wait Timer (sec):** Specifies the time for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access. Default value is 5 sec.

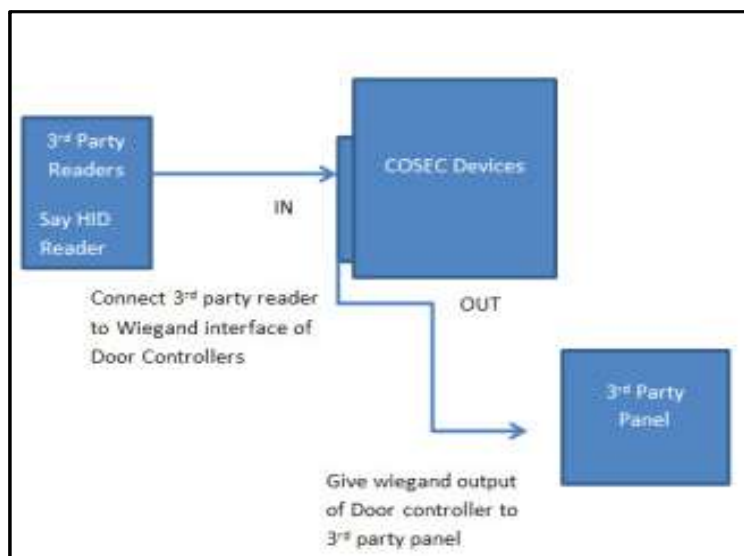

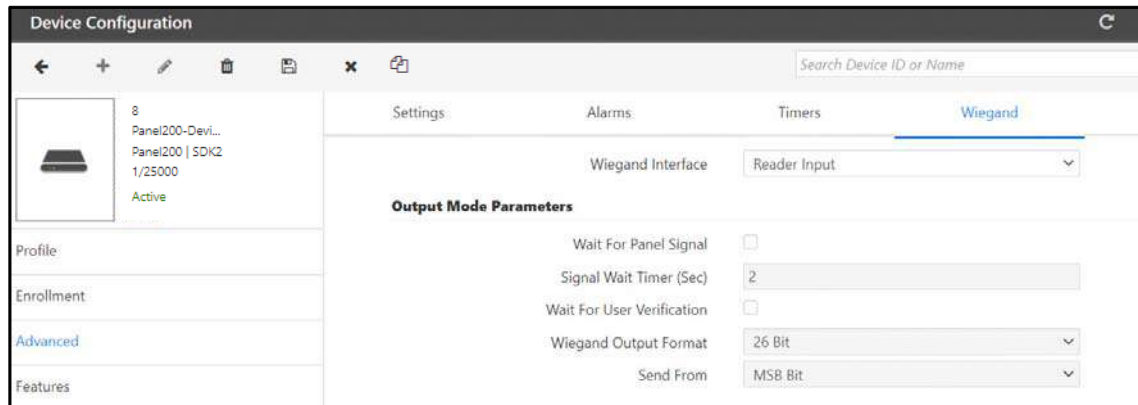

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Late-IN Early-OUT Timer (min):** Specify the time in minutes for which the Late In and Early Out special functions will remain in effect after being enabled at the Panel.
- **Door Abnormal Wait Timer (sec):** Specify the time in seconds for which system needs to wait before generating an alarm for abnormal door status.
- **Palm Enrollment Time Out (sec):** Specify the time in seconds for which a Palm enrollment command will be valid for credential input on a PVR Panel Door. Once this timer runs out, a new enrollment command will have to be generated.

## Wiegand

Click **Advanced > Wiegand** and the page appears as shown below:

- **Wiegand Interface:** Panel200 can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown above.

So select the interface of Panel Door as **Output Mode** to work as Wiegand Output to Panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the output mode parameters will be disabled.

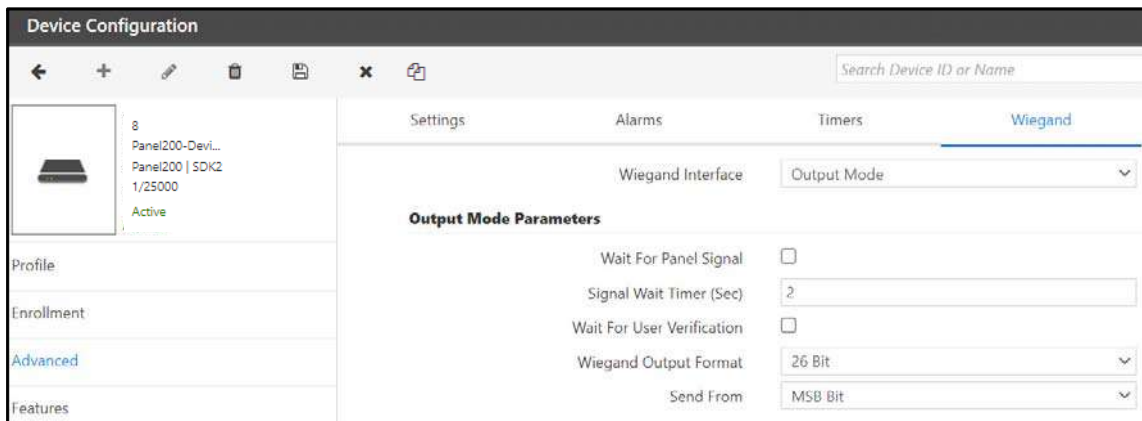

If you select Output Mode then configure the **Output Mode Parameters**.

### Output Mode Parameters

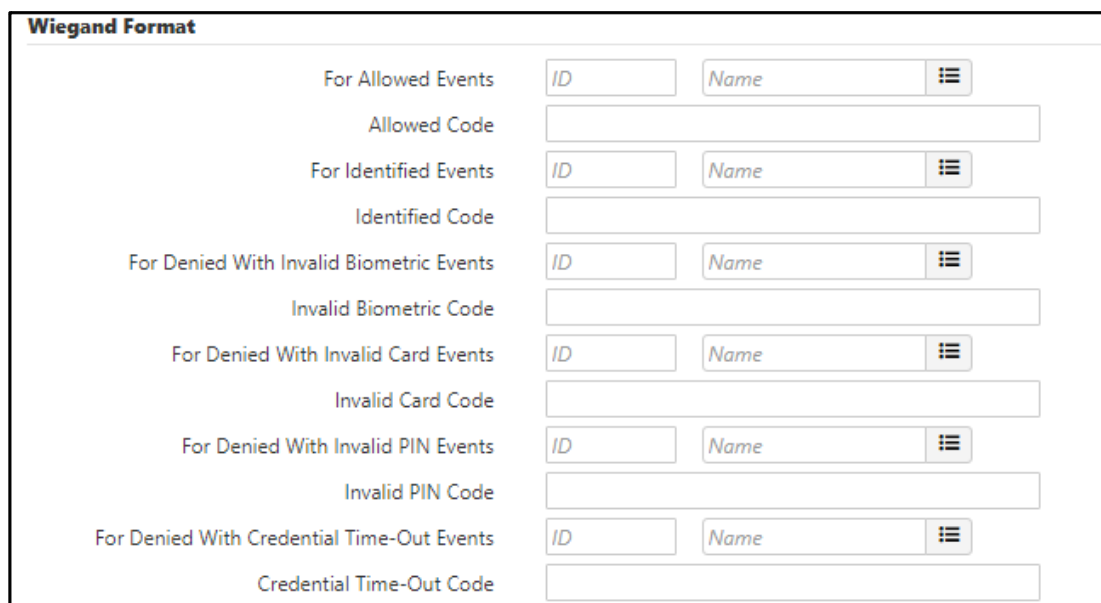

- **Wait For Panel Signal:** Select the check box to enable. If this option is enabled the Panel Door will wait for reply from the connected third party device before triggering any output. You need to configure the **Signal Wait Timer (Sec)**.
- **Signal Wait Timer:** Specify the time for which the Panel Door should wait for reply from the connected third party device before triggering any output.

- **Wait For User Verification:** Select the check box to enable. If this option is enabled, user verification will be requested on the third party device before triggering any output.
- **Wiegand Output Format:** Select the desired format — 26 Bit, 37 Bit, Actual or Custom.

If you select **Custom**, you can configure details of fields to be sent as output from the Wiegand reader that has been added.

- For each of the listed events, click the picklist to select the desired **Wiegand Output Format**.
- Assign an Access **Code** for each communication (for example Invalid PIN Code). This will depend on the number of output bits configured for Access Code in the selected Wiegand Output Format.
- **Send From:** Select the desired sending order for reader data — MSB or LSB Bit.

## Features

The Features tab allows the you to enable certain Access Control features.

*The Features tab is available only with the Access Control Module license.*

*The configurations done in Panel will be functional only if supported by the Device connected with it.*

Click each link for details.

- [“Set1”](#)
- [“Set2”](#)
- [“Set3”](#)

## Set1

This page allows the configuration of following rules - **Absentee Rule**, **Occupancy Control**, **Use Count Control**, **Soft Override**, **Access Route**, **Elevator Access Control** and **Block Users**.

Click **Features > Set1** and the page appears as shown below:

Set1	Set2	Set3
<b>Absentee Rule</b>		
Enable		<input type="checkbox"/>
<b>Occupancy Control</b>		
Enable		<input type="checkbox"/>
Default Occupancy Limit		9
<b>Use Count Control</b>		
Enable		<input type="checkbox"/>
Default Use Count Limit (per minute)		5
<b>Soft Override</b>		
Enable		<input type="checkbox"/>
<b>Access Route</b>		
Enable		<input type="checkbox"/>
<b>Elevator Access Control</b>		
Enable		<input type="checkbox"/>
<b>Block Users</b>		
Tail-Gating		<input type="checkbox"/>
Man Trap Timer Violation		<input type="checkbox"/>
Occupancy Violation		<input type="checkbox"/>
Anti-Pass Back Violation		<input type="checkbox"/>
Multiple Unauthorized Attempts		<input type="checkbox"/>
Allowed Unauthorized Attempts		3

- **Absentee Rule:** This rule sets the maximum number of days for which the credential is not used (1 - 365 days). On expiry (that is, no usage of the credential for the maximum number of days set) the User will be blocked automatically. Select the **Enable** check box to enable this feature at the Panel level.
- **Occupancy Control:** Occupancy Control functionality enables the system to monitor and control the number of users permitted within a secured area or controlled zone. Occupancy control functionality requires entry and exit readers on the controlled area. Select the **Enable** check box to enable the feature at the Panel level and then enable the same at the Zone level.
- **Default Occupancy Limit:** Set the number of users to be considered as default Occupancy limit for Occupancy Control.
- **Use Count Control:** Use Count Control sets a maximum number of times an authorized user can use their credential in order to enter/exit a controlled area within a minute, after which the credential is blocked. Select the **Enable** check box to enable this feature at the Panel level.

- **Default Use Count Limit (per minute):** Specify the maximum number of times a user can use his/her credential per minute.
- **Soft Override:** The override function allows you to change the current status of a system temporarily, from the software application. Select the **Enable** box for enabling this functionality at the Panel level.

Once the **Soft Override** check box is enabled, you can temporarily Override the following Access Rule features — 2 Person Rule, ACS Policies, Alarm, Anti-Pass Back, First-IN User Rule, Mantrap, Occupancy Control and Visitor Escort Rule. Refer "[Soft Override](#)" for details.

- **Access Route:** This rule allows the you to enable defining an access path for users on a Panel by specifying the member Panel Doors using the *Access Control* module.
- **Elevator Access Control:** Enable this check box to enable Elevator Access Control at the Panel.
- **Block Users:** These check boxes can be used to enable conditions on the violation of which a user should be blocked on the Panel Door. For example, to block a user for multiple attempts at unauthorized access, select the **Multiple Unauthorized Attempts** check box. The maximum number of attempts allowed before the user is blocked can be specified using the **Allowed Unauthorized Attempts** option.

## Set2

This page allows the configuration of following rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**.

Click **Features > Set2** and the page appears as shown below.

The screenshot shows the 'Set2' configuration page with three main sections:

- First IN User Rule:** Includes an 'Enable' checkbox, four 'Group' input fields (1-4), and four 'List' dropdown menus (List 1-4).
- Anti-Pass Back (APB):** Includes an 'Enable' checkbox, 'On Entry' and 'On Exit' checkboxes with 'Local' dropdowns, a 'Hard/Soft' dropdown set to 'Soft', a 'Forgiveness' checkbox, a 'Reset After' section with 'Day Change' and 'Timer Expiry' options, and a 'Forgiveness Timer (Min)' input field set to '1'.
- 2-Person Rule:** Includes an 'Enable' checkbox, a 'Default Mode' dropdown set to 'Primary: Must', a 'Default Primary Group' dropdown set to 'Select', a 'Default Secondary Group' dropdown set to 'None', and a '2nd Person Wait Timer (Sec)' input field set to '5'.

- **First-IN User Rule:** Select the **Enable** check box to enable the feature at the Panel Door.
- Select the First-In User **Group 1 to 4** which would be valid at the door.

For configuring the rule, refer to Access Control> First- In User Rule> Assignment.

- **Anti-Pass Back (APB):** Select the **Enable** check box to enable the feature at the Panel Door. For configuring refer to *Access Control> Anti-Pass Back*.
- **2-Person Rule:** Select the **Enable** check box to enable the feature at the Panel Door and set the **2nd Person Wait Timer** in seconds after which the second person is allowed to punch on the door. For configuring refer to *Access Control> 2- Person Rule*.

## Set3

This page allows the configuration of following rules - **Visitor Escort Rule, Dead Man Zone, Duress Detection, Man Trap Door Interlock, DND Zone** and **Access Clusters**.

Click **Features > Set3** and the page appears as shown below.

Set1	Set2	Set3
<b>Visitor Escort Rule</b>		
Enable		<input type="checkbox"/>
<b>Dead Man Zone</b>		
Enable		<input type="checkbox"/>
Default Warning Timer (Min)		3
Default Alert Timer (Min)		10
<b>Duress Detection</b>		
Enable		<input type="checkbox"/>
Default Code		10
<b>Man Trap Door Interlock</b>		
Enable		<input type="checkbox"/>
Man Trap Wait Timer (Sec)		5
Functioning		Zone Based
<b>DND Zone</b>		
Enable		<input type="checkbox"/>
Default Access Level		15
<b>Access Clusters</b>		
Enable		<input type="checkbox"/>

- **Visitor Escort Rule:** This rule requires all Visitors to be accompanied by an escort and the display of the visitor's credential has to be followed by the credential of the Escort within the stipulated time period. Select the **Enable** check box to enable this feature.
- **Dead Man Zone:** This condition allows the system to track the safety and security of a user while a specific task is being performed. This requires the user to show his credential within the pre-defined dead man time period. Select the **Enable** check box to enable this feature.
- **Default Warning Timer (min):** Specify the minimum time in minutes, within which any user inside the dead man zone should show his/her card/finger to reset the timer and thus prevent the alarm.

- **Default Alert Timer (min):** Specify the maximum time in minutes, for which the user is allowed to remain inside the dead man zone.
- **Duress Detection:** Duress detection enables the card holder to trigger an alarm on output device in the event of threats or being forced to grant access to an unauthorized person.

This feature can be activated by:

- finger credential, refer to [“Enrollment”](#) or/and
- when two digit duress code is keyed in, at the end of a User's allotted PIN Code.

To activate this feature using PIN,

- Select the **Enable** check box to enable this feature at the Panel level.
- Once this feature is enabled the system waits for the duress code after the User PIN and the right arrow key input before enabling the duress alarm. The keys have to be pressed in the following order:

**(User Pin Code) → (Right Arrow Key) → (2 digit Duress Code)**

- **Default Code:** Specify the default two digit duress code (ranging from 10 to 99).
- **Man Trap Door Interlock:** Mantrap interlock or airlock systems provide safety, security and environmental control between two or more rooms by ensuring that opening any door causes all other doors to lock until the opened door returns to the closed position. Select the **Enable** check box to enable the feature at the Panel level and then enable the same at the Zone level.

*Door sense is must for this feature as the system will ignore the door status either in the absence of a door sense or its fault state.*

*This feature is not supported when the Panel Doors are in Degrade Mode.*

- **Man Trap Wait Timer:** Specify the time in seconds for which the Panel Door needs to wait for the other door in the same zone where the mantrap feature is enabled to get closed. By default the value of the Man Trap Timer is 5 seconds and valid range is from 3 sec to 99 sec.
- **Functioning:** Select the desired option — Zone Based, Door Group Based.
- **DND Zone:** DND feature allows the user to declare that a particular zone is not to be accessed by other users for a specific period of time thereby ensuring that the users inside the zone are not disturbed by others. Select the **Enable** check box to enable this feature. The DND is activated using a special card or through the Menu of the Panel Doors.

- **Default Access Level:** Specify the default Access level for DND Zone within a range of 1-15.
- **Access Clusters:** Select the **Enable** check box to enable checking for access control restrictions when a user punches on any of the assigned Panel Doors.

## Special Functions

COSEC provides its users the privilege to perform certain pre-defined operations directly from the Panel Doors. These operations are related to various time and attendance marking functions, administrative tasks, zone-related access and door-control functionality as well as alarms management.

A special function may be used in three different ways:

- Entering short codes on the device keypad.
- Navigating the device menu.
- Using Special Cards.

*The configurations done in Panel will be functional only if supported by the Device connected with it.*

## Special Cards

A Special Card is especially useful when the user has to perform routine tasks, where repeated manual entry of codes can become tedious. It is also required when a Panel Door does not have keypad or LCD display for manual entry of special codes. In such a case, an RFID card can be encoded for a special function and the card-holder can perform a special function at the device just by showing this Special Card.

**Example:** In factories where workers avail shortleave; security guard can show the Special Card enrolled for Shortleave IN on the Entry door and can give the access to the worker. This same card can be used for multiple workers.

## Configuring Special Functions

To access this,

Click **Special Functions** and the page appears as shown below:

The screenshot shows the 'Device Configuration' window with a sidebar on the left containing a tree view with options like Profile, Enrollment, Advanced, Features, Special Functions (highlighted), Input/Output, Zones, and Additional. The main area has two tabs: 'Configuration' and 'Schedule'. The 'Configuration' tab displays a table with 12 rows of special functions. Each row includes a number, a function name, an 'Active' status, a 'User Group', and four columns for 'Card 1' through 'Card 4'. Each card column has a small icon of a card. The 'Schedule' tab is currently inactive.

No.	Function Name	Active	User Group	Card 1	Card 2	Card 3	Card 4
1	Official Work - IN	Yes	All				
2	Official Work - OUT	Yes	All				
3	Short Leave - IN	Yes	All				
4	Short Leave - OUT	Yes	All				
5	Regular - IN	Yes	All				
6	Regular - OUT	Yes	All				
7	Break End	Yes	All				
8	Break Start	Yes	All				
9	Overtime - IN	Yes	All				
10	Overtime - OUT	Yes	All				
12	Set Panic Alarm	Yes	All				

The COSEC system pre-defines 38 special functions for its users. For instance, all the special functions in the given list are supported on all COSEC Panels. The following list provides details of the special functions supported on Panel200.

### Time and Attendance Functions *(Available only with the Time & Attendance add on module)*

Special Function	Description
Official Work-IN / Official Work-OUT	Late-IN as well as Early-OUT is marked as User's Official work in Time & Attendance.
Short Leave-IN / Short Leave-OUT	Late -IN as well as Early-OUT is marked as User's short leave in Time & Attendance.
Regular - IN / Regular - OUT	Normally used in Time & Attendance system in the absence of an exit reader. The punch in at start of shift and punch out at end of shift are sent with the appropriate flags.
Break End / Break Start	Clock-IN is marked as User post break entry and Clock-OUT is marked as User exit at start of break.
Late-IN Start / Late-IN Stop	System starts / stops inserting the special ID to T&A events of all users who clock-IN after this function.
Early-OUT Start / Early-OUT Stop	System starts / stops inserting the special ID to T&A events of all users who clock-OUT after this function.
Over Time - IN / Over Time - OUT	The IN punch is marked as User entering at start of over time while the OUT punch is marked as User exiting after completion of overtime.

### Administrative Functions *(Available with the Basic platform license.)*

Special Function	Description
Enroll User	Application switches the door controller mode to Enrolment mode and User Credentials are enrolled against the defined user ID. Global Enrolment mode is selected by default for users.
Enroll Special Card	Application switches the door controller mode to Enrolment mode and special Cards are enrolled against special function ID
Delete Credentials	Enables user to delete the existing credential data from the PANEL User database against the selected user ID.
View User Profile	System reads the User's Smart Card and displays the stored user profile.

### Zone Settings *(Highlighted options available only with the Access Control add on module)*

Special Function	Description
Activate DND / Deactivate DND	System switches the door zone from Normal to DND and vice versa.
Activate Dead-Man / Deactivate Dead-Man	System switches all Door Controllers of the zone from Normal mode to activated Dead Man Zone mode and vice versa.
Door Lock / Door Unlock	System locks/unlocks the selected Door. Entry is denied to all users. Exit request however, is enabled and the user can still provide T&A events.
Zone Lock / Zone Unlock	System locks/unlocks all Doors of the Zone. Entry is denied to all users. Exit request however, is enabled and the user can still provide T&A events.

Special Function	Description
Door Normal	System switches the mode of the door controller to the normal or controlled mode.
Zone Normal	System switches the mode of all Doors of the Zone to the normal or controlled mode.

### Alarms *(Available only with the Access Control add on module)*

Special Function	Description
Set Panic Alarm	System enables the user to generate a Panic Alarm from the Door Controller.
Mute Door Buzzer	Enables the user to mute the Door Controller's existing Alarms.
Mute Panel Buzzer	Enables the user to mute the PANEL's existing Alarms.
Clear Door Aux O/P	Enables the user to Reset the Aux output of Door Controller and switch it back to Normal/Controlled state from its current state.
Clear Panel Aux O/P	Enables the user to Reset the Alarm output of PANEL and switch it back to Normal/Controlled state from its current state.
Door Arm/Door Disarm	To enable/disable door alarms using special function cards.
Zone Arm/Zone Disarm	To enable/disable zone alarms (for all doors in the zone) using special function cards.

To configure Special Functions, click **Edit** . For details, refer to [“Special Functions”](#).

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any changes in door state or event occurrences at the door device. This change of door state or occurrence of events will be considered as an input while the response or action that is generated by the system on detection of this input, will be considered as the output.

The I/O configuration of Panels allows the user to enable Auxiliary Ports, create Input and Output groups, configure I/O Linking and set up Time Triggered Output functions.

*This functionality is available only with the Access Control add-on module license.*

*The configurations done in Panel will be functional only if supported by the Device connected with it.*

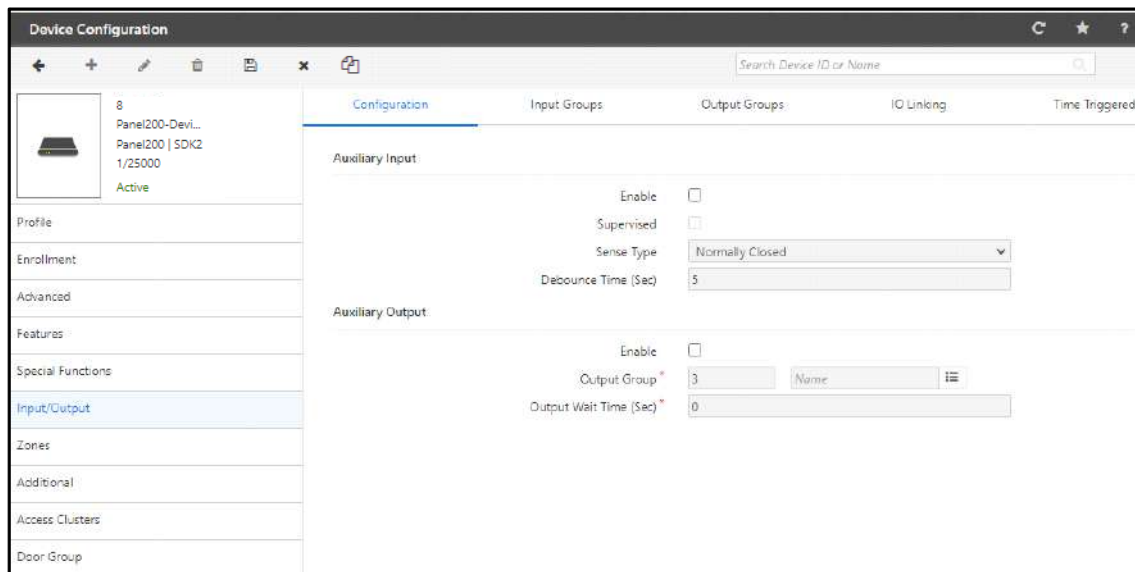

Click each link to configure the Input Output parameters:

- [“Configuration”](#)
- [“Input Groups”](#)
- [“Output Groups”](#)
- [“IO Linking”](#)
- [“Time Triggered”](#)

## Configuration

Click **Input/Output > Configuration** and the page appears as shown below:

### Auxiliary Input

- **Enable:** Select the **Enable** check box option for Auxiliary Input (e.g. Smoke Detectors) depending on normal or supervised door state monitoring.
- **Supervised:** Select the **Supervised** check box to enable the door for four-state monitoring where the door is also monitored for Door Fault and Door Disconnection.
- **Sense Type:** The system by default can sense two states of a door — Normally Open and Normally Closed —depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a Door Abnormal alarm. Specify the **Sense Type** as **Normally Closed** or **Normally Open**.
- **Debounce Time (Sec):** It defines the minimum time for which an input interface must be maintained in a given state before the system reports it. For example, if a Normal door state is changed to Alarm, the state must remain in Alarm for five seconds before an alarm is generated. Specify the Debounce time in seconds. Range should be 0-99 sec.

### Auxiliary Output

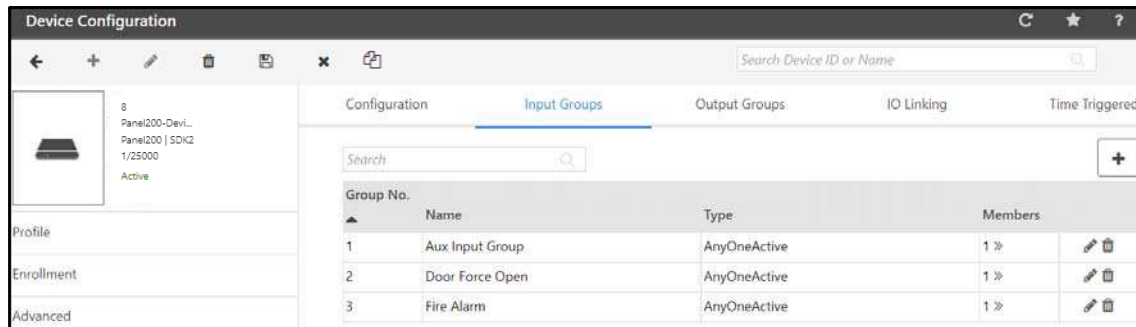

- **Enable:** Select the **Enable** check box to enable Auxiliary Output (e.g. Fire Alarm).
- **Output Group:** Click the picklist to select an Output Group to which the auxiliary output is to be assigned based on the output groups defined on the system.

To configure the output groups listed in the picklist, click **Device Configuration page > Input/Output > Output Groups**.

- **Output Wait Time (Sec):** Specify an Output Wait Time in Sec to set an additional waiting period before the Aux Output signal is sent.

## Input Groups

Click **Input/Output > Input Groups** and the page appears as shown below:

Each Panel has one Input port while each of the slave Panel Doors have 4 inputs. The **Input Groups** option enables you to club these inputs into groups before they can be used in the Input/Output Linking.

Multiple input ports (logical ports) can be grouped together to form an input port group. This option allows you to assign user-friendly names to frequently used inputs and also setting the input parameters. You can club any of the inputs (not constrained to particular Panel Doors) and define them in a group.

Click **Add** to add a new Input Group.

- **Name:** Specify a user-friendly name to the Input group.
- **Type:** Select the Output **Type** from the options available in the drop down list (All, Active, AnyOneActive).
- **Members:** Click . The Member Configuration pop-up window appears.
- **Source:** Select the desired option — Panel, Door, Zone, Door Group.

- **Port:** The option in this will depend on the Source you select. Configure these as per your requirement.

**OK** **Cancel**

To do so,

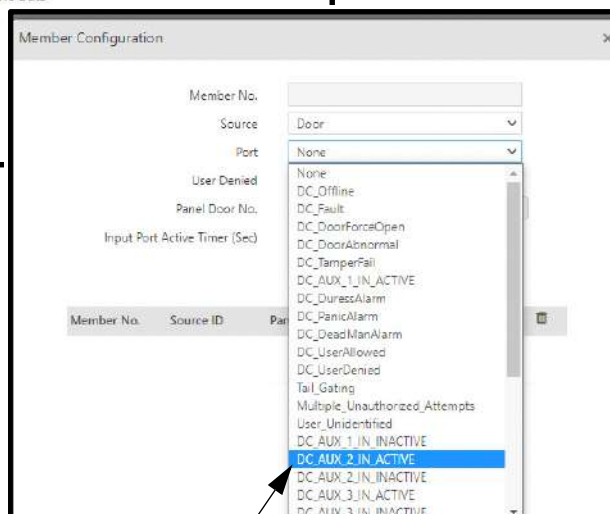

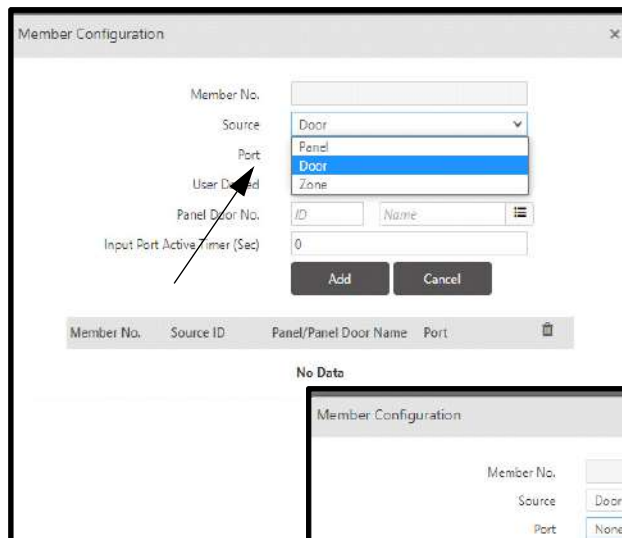

Select the check box of corresponding user that you wish to add.

Click **OK**.

- **User Denied:** Will be editable when Source is selected as “DC\_UserDenied”.

If you select **Source** as **Door** and **Port** as **DC\_AUX-2\_IN\_ACTIVE** or **DC\_AUX-2\_IN\_INACTIVE** then in the **Picklist For Panel Door Masters** for the parameter **Panel Door No.**, **ARC DC 200 Single Door Dual Reader** will be visible and can be selected.

Refer “ARC as Panel Door” to add a new **ARC DC 200 Single Door Dual Reader Panel door**.

The screenshots illustrate the steps to add a new ARC DC 200 Single Door Dual Reader Panel door. The first window, 'Picklist For Panel Door Masters', shows a table with one entry: '1' and 'Auxiliary ARC DC 200 Panel'. The second window, 'Member Configuration', shows the configuration fields for a new member. The third window, also 'Member Configuration', shows the configuration fields for a new member, with the 'Source' set to 'Panel' and 'Port' set to 'None'. The table in the third window shows one entry: '1' and 'Auxiliary ARC DC 200 Panel'.

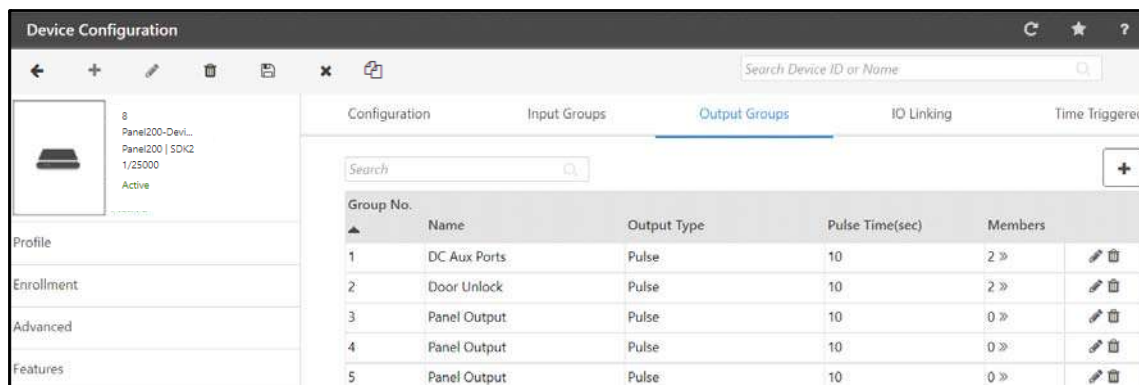

- **Panel Door No.:** Click the picklist to select the desired Panel Door.
- **Input Port Active Timer (Sec):** Specify the time in seconds for which the input port needs to remain active.

Click on **OK**  once done with the configuration.

You can now assign the individual relay outputs at the Panel and Panel Doors to this Input group as per the site requirements, prior to defining the IO Linking with this output group.

## Output Groups

Click **Input/Output > Output Groups** and the page appears as shown below.

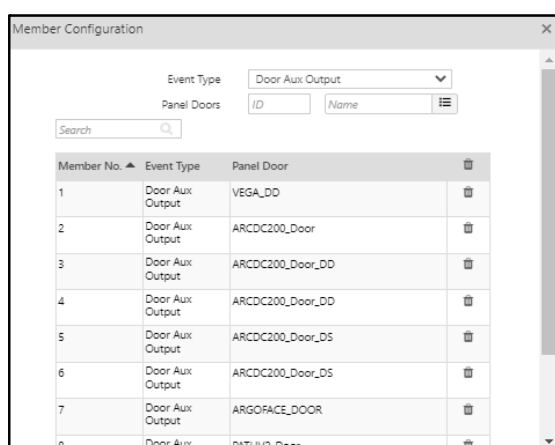

Each Panel has one Output port while each of the Panel Door has 2 Outputs one of which is used as a Door Relay. This option enables you to club these outputs into groups before they can be used in the Input/ Output Linking.

The output ports are physical ports and they can be assigned in to a group called Output Ports Group. The system supports up to 99 Output groups.

Click on **Add** button to add a new Output Group.

- **Name:** Specify a user-friendly name to the Output group.
- **Type:** Select the Output **Type** from the four options available in the drop down list (Pulse, Interlock, Latch, Toggle).
  - In the event of a **Pulse** type output, user needs to define the **Pulse time** in seconds.
  - In the **Interlock** option the Output group follows the input group. All member outputs are triggered as long as the input group is activated after which they return to normal state.
  - The **latch** option denotes the condition where all member outputs will be in an energized condition for infinite period and need to be reset manually.
  - In the **Toggle** option, the output group toggles its state whenever an input group is activated.
- **Members:** Configure the members as per your requirement.
- Click . The **Member Configuration** pop-up appears.

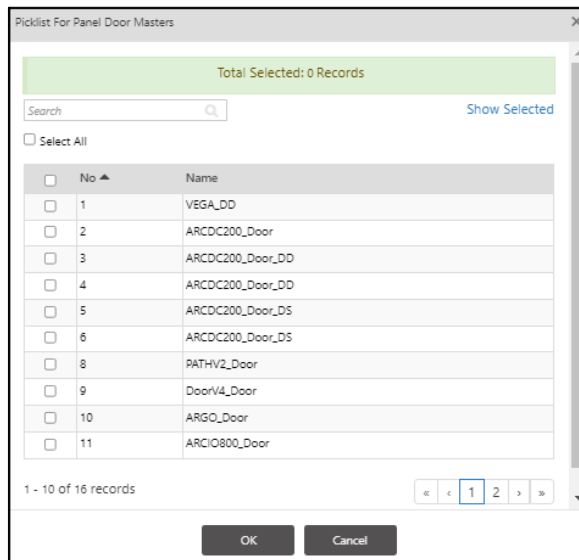

In this pop-up,

Select the desired Event Type — Door Lock, Door Unlock, Door Aux Output.

Click the **Panel Doors** picklist. The **Picklist For Panel Door Masters** pop-up appears.

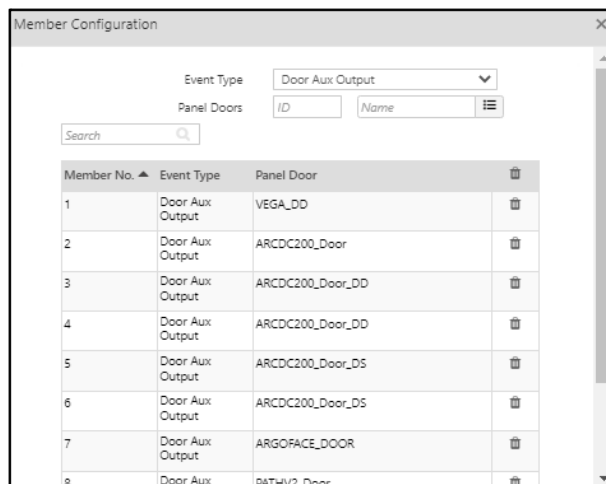

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**. You return to the **Member Configuration** and the selected devices are displayed here.

You can also delete the desired devices. To do so, click the **Delete**  icon of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click on **OK** once done with the configuration.

You can now go and assign the individual relay outputs at the Panel and Panel Doors to this Output group as per the site requirements, prior to defining the IO Linking with this output group.

## IO Linking

Click **Input/Output > IO Linking** and the page appears as shown below:

No.	Name	Input Group	Output Group	Status	
1	Aux Linking	Aux Input Group	DC Aux Ports	Inactive	
2	Force Open link	Door Force Open	Panel Output	Inactive	
3	Fire-Unlock	Fire Alarm	Door Unlock	Inactive	

The COSEC application supports the Input Output Group linking feature to activate single or multiple output ports (output Group) based on a trigger received from single or multiple input ports (Input Group). This option enables the administrator to define how an event or events (input port group) will trigger outputs belonging to an output ports group.

Input Output Group linking is a feature which enables the user to define programs which activate single or multiple output ports (output Group) based on a trigger received from single or multiple input ports (Input Group) on the Panels and Panel Doors.

- **Link Name** - Specify a user-friendly name to the linking program and
- **Active:** Select the check box to activate the linking program.
- **Input Group No.:** Click the picklist and select the desired input group.
- **Output Group No.** - Click the picklist and select the desired output group.
- **Raise Alarm:** Select a Custom Alarm (*See Advanced Configuration*) to be configured as output against an access violation event, if required.
- **Time Zone** - The Time Zones define the time slots in which the I/O linking Program must be activated.

Click **Add** once done with the configuration.

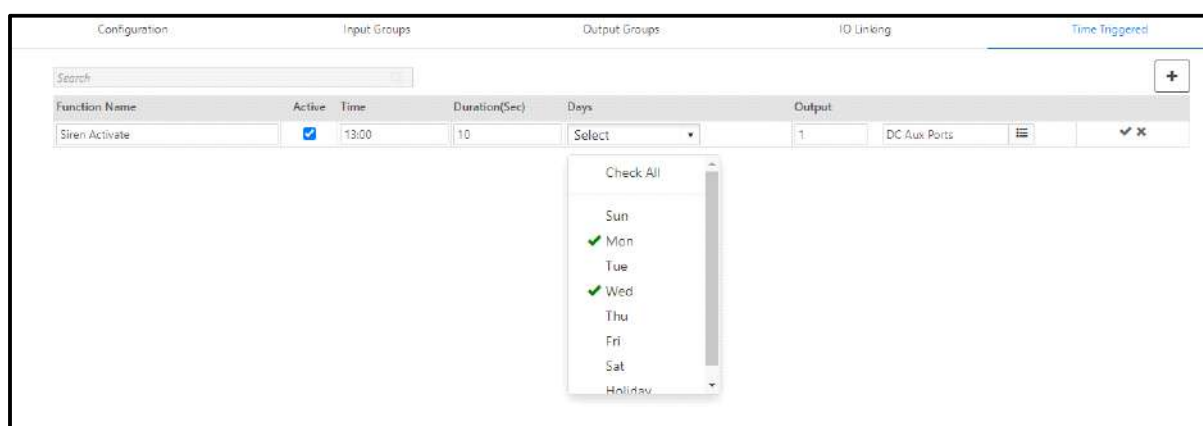

## Time Triggered

Click **Input/Output > Time Triggering** and the page appears as shown below.

This functionality enables the user to control the activity of an Output without manual intervention. The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration. This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC access control system supports up to 20 Time Triggered functions.

Click **Add** to add a new Profile for Time Trigger.

- **Function Name:** Configure a name to identify the function.
- **Active:** Select the check box to enable the function.
- **Time:** Configure the start time to trigger the function.
- **Duration (Sec):** Configure the duration for which this function should remain in the triggered state.
- **Days:** Select the days on which this functionality must be triggered.
- **Output:** Click the picklist to select the desired output.

Click **OK** once done with the configuration.

## Setting Up Access Zones

Access Zones are areas with well defined boundaries, which are defined to effectively implement an Access Security System with Access Policies. A site can have multiple Access Zones, each Zone having multiple Panel Doors. You need to define the Access Zones before defining the Panel Doors and assigning the Access Zones. Any defined Access Zone can be directly assigned to users for free access during active working hours, without matching their Access Level with that of the zone's, by either defining the Zone as a **Home Zone** or a **Visit Zone**.

During the non-working hours, the non-working access level of the user's access group has to be higher than the Zone Access Level for allowing access to the user. All zones other than assigned Home Zone and Visit Zone are control zones to users and access to these zones are based on the result of the comparison between the user Access Level and the Zone's Access Level. The User Access Level has to be higher than the Zone Access Level to allow access. The system supports up to 99 Access Zones.

*This section is available only with the Access Control add-on module license.*

*The configurations done in Panel will be functional only if supported by the Device connected with it.*

Click each link to configure the Zone parameters:

- [“Setup”](#)
- [“Configuration”](#)
- [“Occupancy Control”](#)

## Setup

Click **Zones > Setup** tab and the page appears as shown below.

By default **Zone-1** is created. You can either edit this zone or add a new zone as per your requirement.

To edit Zone-1,

- Click on Zone-1 in the grid. Edit the parameter as per your requirement.
- Click **Update**.

To add a new Zone,

- **Name:** Assign a name to the Zone you wish to add.
- **Access Level:** Select the access level you wish to assign to the zone. Valid Range:01 to 15.

- Select the mode of credentials required to identify and validate a **User** and **Visitor** both for internal and external readers. You can select the appropriate credential combination of Pin, Card, Face, BLE, Biometrics and Biometrics + Group or None in the following parameters.
  - **User Access Mode (Door):** Entry mode of user.
  - **Visitor Access Mode (Door):** Entry mode of visitor.
  - **User Access Mode (External Reader):** Exit mode of user.
  - **Visitor Access Mode (External Reader):** Exit mode of visitor.
- **Access Control on Exit Mode:** Select the check box to enable. The following Access Control Policies will be checked when the external reader is in the 'exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group

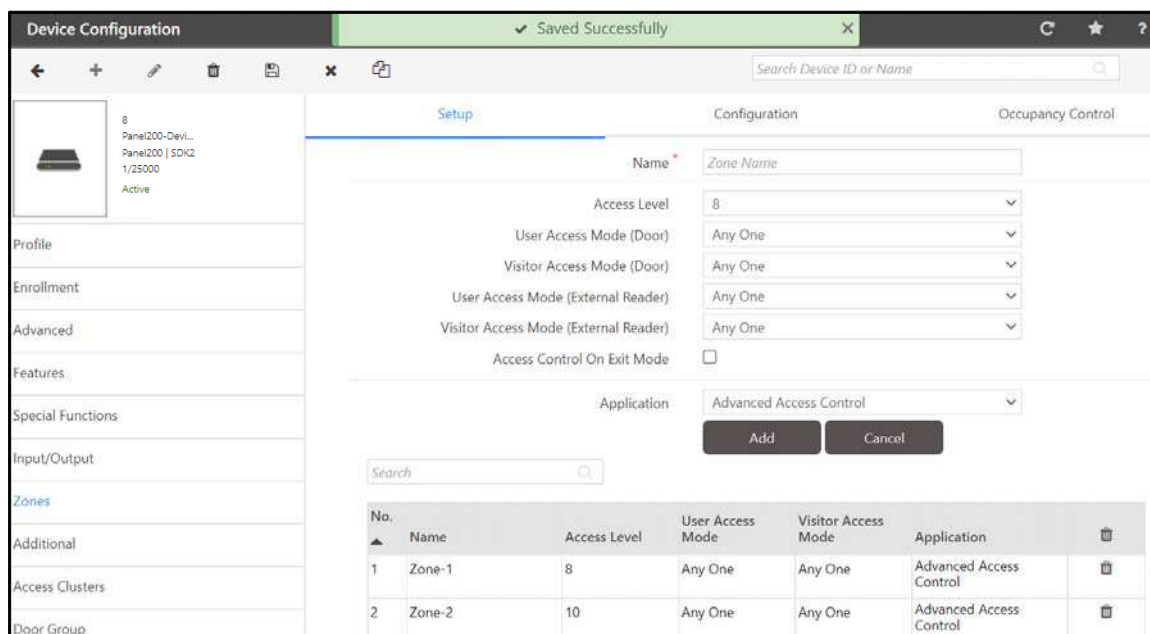

Clear the check box to disable. All the following access control features will be checked (which are applicable and configured).

- User enabled
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group
  - Deadman
  - Door application mode
  - Use count
  - Mantrap
  - Anti-pass back
  - Panel Route access
  - Smart card based route access
  - 2-person
  - Access mode
  - Occupancy control
  - Visitor escort rule
- **Application:** Select the desired Application — Advanced Access Control (inclusive of T&A) or Basic Access Control.

*If you select Basic Access Control mode, Access Control functionalities mentioned above will not be applicable for the Zone. System will not check the same for the user access level for the Time and Attendance zone.*

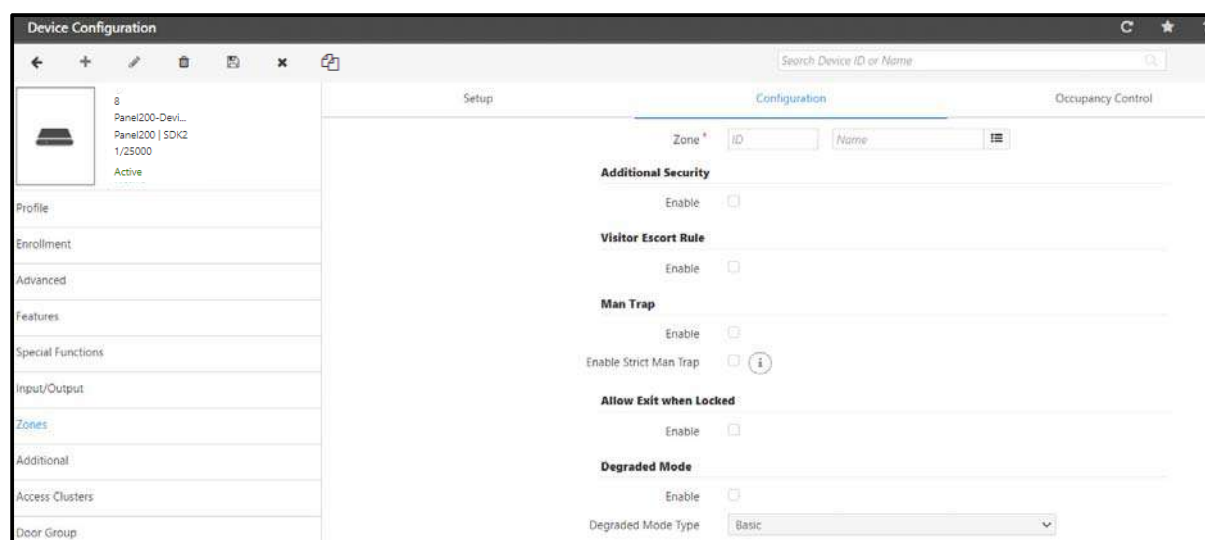

Click **Add** once done with the configuration. The newly added zone is displayed in the grid as shown below.

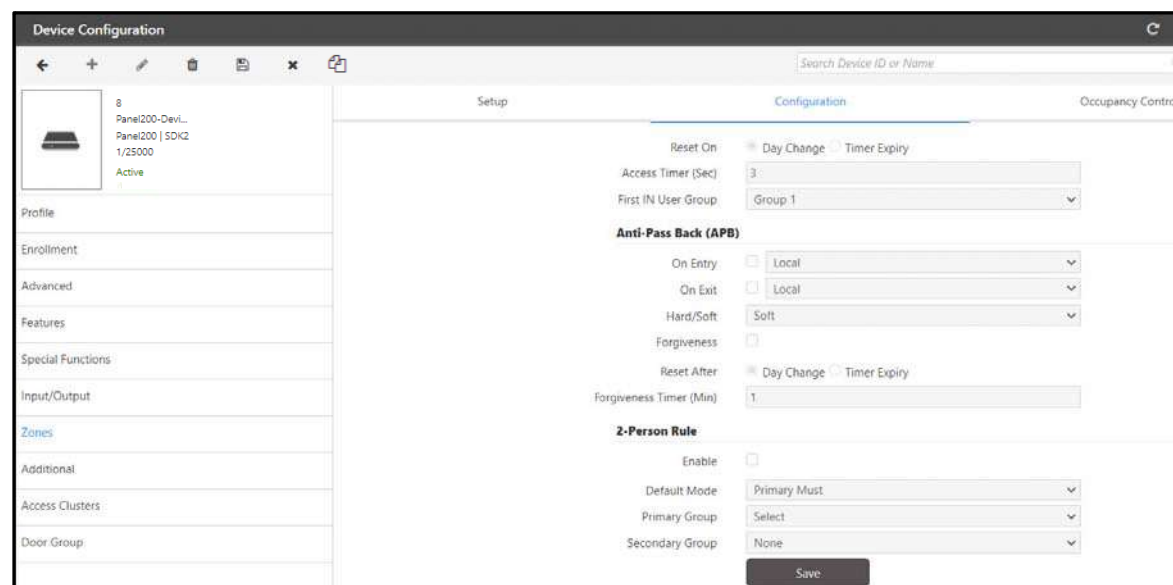

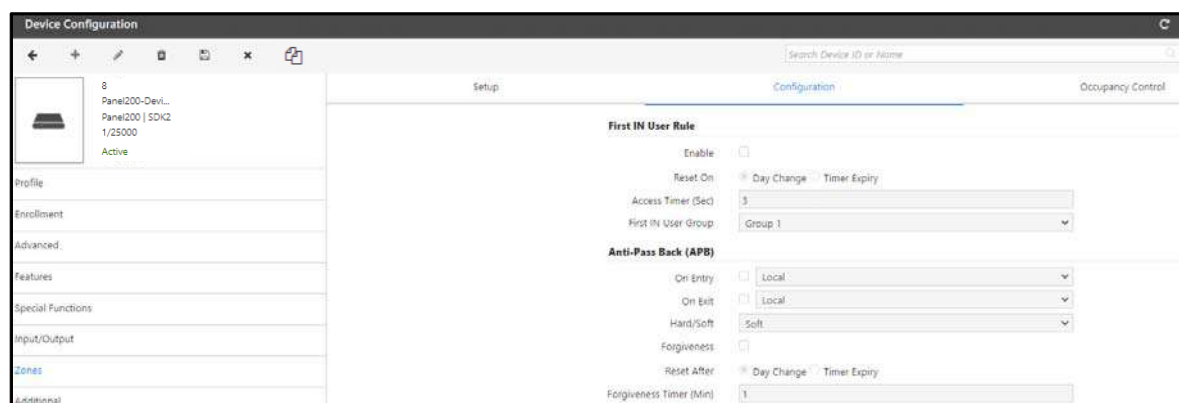

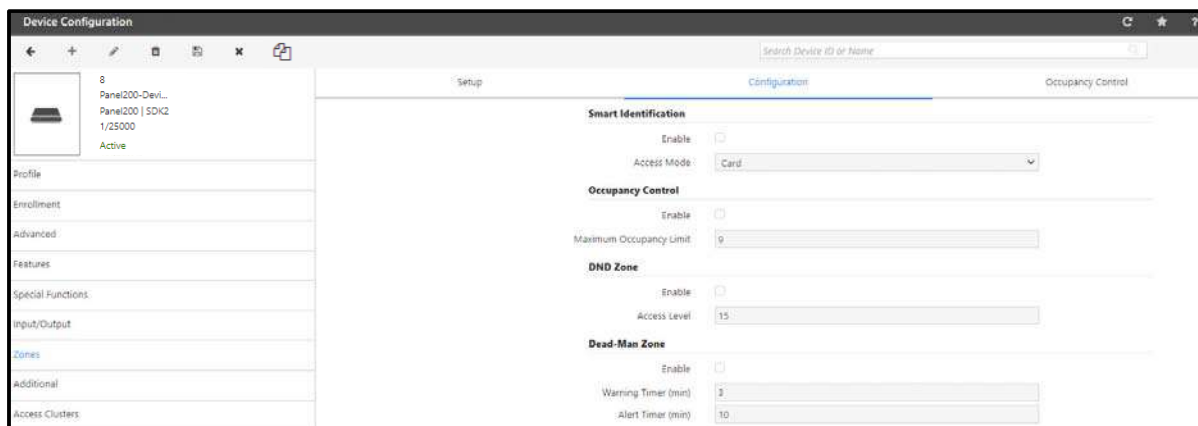

## Configuration

Click **Zones > Configuration** and the page appears as shown below.

- **Zone:** Click the picklist to select the desired Zone.

Select and configure desired Access Control Policies you wish to apply to the selected zone and configure their respective parameters.

- **Additional Security:** Configure the following:
  - **Enable:** Select this check-box to enable the Additional Security feature for the Zone.

This Additional Security Check is possible only with Smart Cards which will prevent the duplicacy of card and restrict unauthorized access to the facility.

The user; who is assigned the zone enabled with ASC will be checked for ASC verification on the door.

- **Visitor Escort Rule:** For details, refer to [“Visitor Escort”](#).
- **Man Trap:** For details, refer to [“Man Trap”](#).
- **Allow Exit when Locked:** Select this check box to enable the user to exit when the Panel Door is locked.
- **Degraded Mode:** Configure the following:
  - **Enable:** Select this check box to allow a valid user to access the facility even if the Panel Door is not in communication with the Panel. Make sure you have enabled Degraded Mode and configured the Degraded Wait Timer under **Advanced > Settings**.
  - **Degraded Mode Type:** If you have enabled Degraded Mode, you can select the Degraded Mode Type — Basic, Advanced.

If you select **Basic**, the user will be allowed/denied entry on the basis of limited checking of credential (that is finger and card) verification, as well as Access Policies will not be checked if configured. For Exit, user will be allowed to exit only after credential are verified. No other checking/verification will be done during exit.

If you select **Advanced**, the user will be allowed/denied entry/exit on the basis of checking the credential (all credentials will be supported) as well as the user details will be verified and checked. However Access Policies will not be checked, if configured.

- **Smart Identification:** For details, refer to [“Smart Identification”](#).
- **Occupancy Control:** For details, refer to [“Occupancy Control”](#).
- **DND Zone:** For details, refer to [“Do Not Disturb”](#).
- **Dead-Man Zone:** For details, refer to [“Dead Man Zone”](#).
- **First IN User Rule:** For details, refer to [“First In User”](#) and [“First In User Assignment”](#).
- **Anti-Pass Back (APB):** For details, refer to [“Anti-Pass Back”](#).
- **2-Person Rule:** For details, refer to [“2 Person Group”](#) and [“2 Person Rule Assignment”](#).

Make sure the Access Control Policies are also enabled in [“Features”](#). The Configuration of the policies will be activated when these are configured from the Access Control module. For details refer to [“Access Control”](#).

Click **Save** once done with the configurations.

## Occupancy Control

Click **Zones > Occupancy** and the page appears as shown below.

- **Control Zone:** Click the picklist to select the desired zone, that is the zone whose occupancy is to be controlled.
- **Access Mode:** Select the desired access mode for the Control Zone — Entry, Exit or Both.
- **Action:** Select the desired action to be taken, that is raise an **Alarm** or to **Restrict** access to or from the control zone.
- **Alarm Timer (Sec):** If you have selected **Alarm** as the Action, set the alarm timer in seconds.
- **Monitor Zones:** Click the picklist to select upto 2 zones as **Monitor Zones** i.e. zones whose occupancy shall determine the occupancy of the control zone. These may be same or different from the one as configured in Control Zone.
- **Avoid Occupancy:** Set the occupancy condition for each Monitor Zone — Equal to, Greater than or Less than along with the number you wish to allow. This defines an occupancy condition that must be satisfied in the monitor zone, for an action to be triggered in the Control Zone, such as restricting entry/exit for a user, or generating an alarm (as specified earlier).

- **Check Conditions For:** Select the desired option — Both Zones, Any One Zone. The Avoid Occupancy condition will be checked as per the option selected, that is for both monitor zones or for any one monitor zone in order to trigger the specified action in the control zone.

Click **Add** once done with the configuration. The newly added Control Zone is displayed in the grid as shown below.

The screenshot shows a web application window with a green header bar indicating 'Saved Successfully'. Below the header, there is a search bar labeled 'Search Device ID or Name'. The main content area has three tabs: 'Setup', 'Configuration', and 'Occupancy Control'. The 'Occupancy Control' tab is active, displaying a form for configuring occupancy control settings. The form includes fields for 'Control Zone' (ID and Name), 'Access Mode' (Entry), 'Action' (Alarm), 'Alarm Timer (Sec)' (0), 'Monitor Zone-1' (ID and Name), 'Avoid Occupancy' (Equal To, 0), 'Monitor Zone-2' (ID and Name), 'Avoid Occupancy' (Equal To, 0 - 999), and 'Check Conditions For' (Any One Zone). Below the form are 'Add' and 'Cancel' buttons. At the bottom, there is a table with columns: 'Control Zone', 'Action', 'Monitor Zone-1', 'Monitor Zone-2', and a delete icon. The table contains one row for 'Zone-1' with 'Alarm' as the action and 'Zone-1' as the monitor zone.

Control Zone	Action	Monitor Zone-1	Monitor Zone-2
Zone-1	Alarm	Zone-1	

Let us understand this with the help of the following example..

A manufacturing facility is divided into three zone types - a *Security Cabin* which leads into a *High Security Area (HSA Zone)* within which there are several secure *Sub-Zones (Sub-HSA Zone)* such as storage areas, equipment rooms etc.

The facility has specific security requirements as follows:

### Scenario 1

- Condition 1: There must be minimum two occupants in the Security Cabin always.
- Configuration: Here, exit from the Security Cabin has been restricted when occupancy of Security Cabin is less than 3.

The screenshot shows the 'Occupancy Control' configuration window. The 'Control Zone' is set to '1' and 'Security Cabin'. The 'Access Mode' is set to 'Exit' and the 'Action' is set to 'Restrict'. The 'Monitor Zone-1' is set to '1' and 'Security Cabin'. The 'Avoid Occupancy' for Monitor Zone-1 is set to 'Less Than' and '3'. The 'Monitor Zone-2' is empty. The 'Avoid Occupancy' for Monitor Zone-2 is set to 'Equal To' and '0'. The 'Check Conditions For' is set to 'Any One Zone'. Below the form are 'Update' and 'Cancel' buttons.

## Scenario 2

- Condition 2: The security cabin cannot be left unoccupied, when there are people present in the HSA Zone.
- Configuration :Here, exit from the Security Cabin has been restricted when occupancy of Security Cabin is 1 and occupancy of the HSA Zone is greater than 0.

The screenshot shows the 'Occupancy Control' configuration window. It has three tabs: 'Setup', 'Configuration', and 'Occupancy Control' (which is active). The configuration includes the following fields:

- Control Zone:** 1, Security Cabin
- Access Mode:** Exit
- Action:** Restrict
- Monitor Zone-1:** 1, Security Cabin
- Avoid Occupancy:** Equal To, 1
- Monitor Zone-2:** 2, HSA Zone
- Avoid Occupancy:** Greater Than, 0
- Check Conditions For:** Both Zones

At the bottom are 'Update' and 'Cancel' buttons.

## Scenario 3

- Condition 3: At a time, any person entering the HSA Zone or any of the Sub-HSA Zones must always be accompanied by a security personnel.
- Configuration: Here, an alarm has been set to be triggered if occupancy of the HSA Zone is 1 for more than a time of 10 seconds. Hence, when the HSA Zone has zero occupancy, the entry of the first occupant should set off the alarm timer till entry of the second occupant. The same can also be configured for each of the Sub-HSA Zones.

The screenshot shows the 'Occupancy Control' configuration window for Scenario 3. The configuration includes the following fields:

- Control Zone:** 2, HSA Zone
- Access Mode:** Both
- Action:** Alarm
- Alarm Timer (Sec):** 10
- Monitor Zone-1:** 2, HSA Zone
- Avoid Occupancy:** Equal To, 1
- Monitor Zone-2:** (empty), (empty)
- Avoid Occupancy:** Equal To, 0
- Check Conditions For:** Any One Zone

At the bottom are 'Update' and 'Cancel' buttons.

To know how Occupancy control parameters affect access control functionality, refer to [“Occupancy Control”](#).

## Additional

This section lists some additional configurations that can be enabled for Panel Doors.

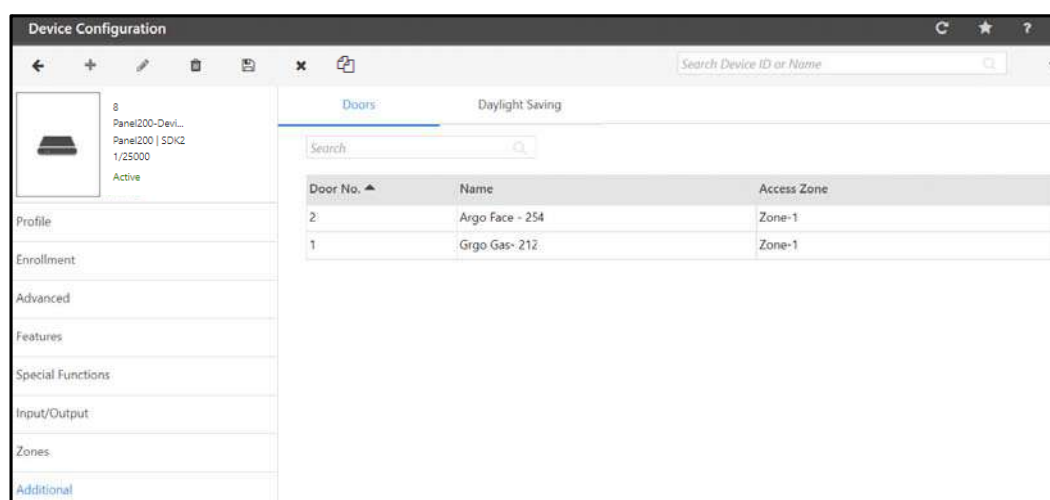

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

Click each link to configure the Additional parameters:

- [“Doors”](#)
- [“Daylight Savings”](#)

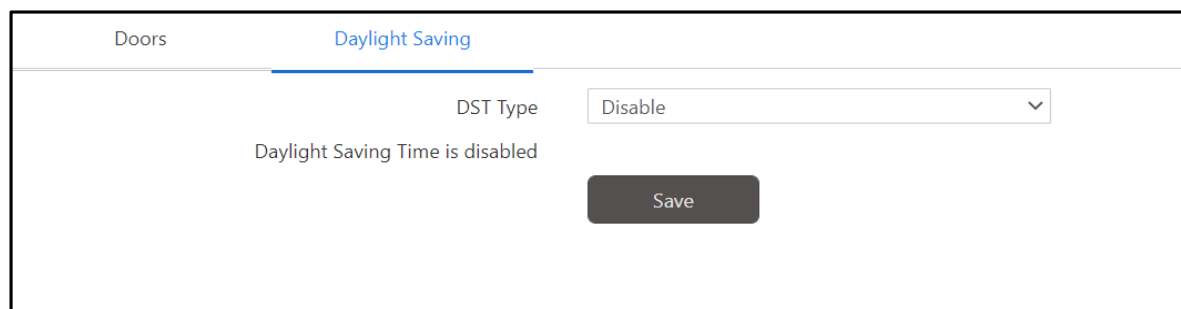

## Doors

Click **Additional > Doors** and the page appears as shown below.

## Daylight Savings

Click **Additional > Daylight Saving** and the page appears as shown below.

**DST Type:** Select the desired Daylight Saving configuration type — Disable, Day-Month wise or Date-Month wise.

The screenshot shows the 'Daylight Saving' configuration page. The 'DST Type' dropdown menu is open, displaying three options: 'Disable', 'Day-Month wise', and 'Date-Month wise'. The 'Disable' option is currently selected and highlighted in blue. The text 'Daylight Saving Time is disabled' is visible below the dropdown.

- If you select **Disable** option, DST will not be applicable.
- If you select **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal.
  - Set the **Month**, **Week No.**, **Day of Week**, and **Time** for both the **Forward Clock** and **Backward Clock**.
- If you select **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted back to normal.
- Set the **Time Period** for the date-month wise DST settings in *24-hours* format, and specify **Month**, **Date** and **Time** for the **Forward Clock** and the **Backward Clock**.

The screenshot shows the 'Daylight Saving' configuration page with the following settings:

- DST Type:** Day-Month wise
- Time Period:** 08:00
- Forward Clock:**
  - Month:** November
  - Week No.:** 1st
  - Day of Week:** Sunday
  - Time:** 09:00
- Backward Clock:**
  - Month:** January
  - Week No.:** 1st
  - Day of Week:** Sunday
  - Time:** 10:00

A 'Save' button is located at the bottom of the configuration area.

As per the above configuration, the DST Setting will be applicable on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed by 08:00 hours.

Click **Save** once done with the configurations.

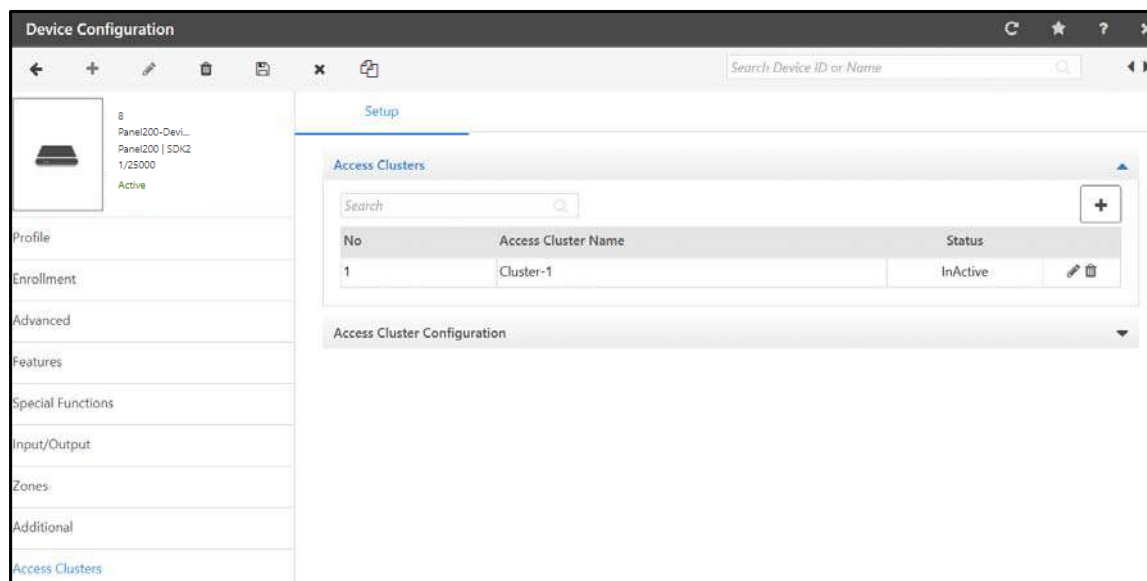

## Access Clusters

Access Clusters are door groups that can be created under each panel to restrict or limit access of users to some special regions. Once access clusters are defined under a panel, panel doors can be assigned to specific clusters.

For e.g. In some workplaces, such as Chemical factories, once a user goes into a radiation exposed area, he/she must not be allowed in public areas such as the Admin department or the Cafeteria. However, this user will be allowed access to a specific quarantined zone. Such purpose can be served using the access cluster feature whereby, users going into one cluster can be allowed or denied access to other clusters based on configured policies.

Click **Access Clusters > Setup** and the page appears as shown below.

## Access Clusters

Click the **Access Clusters** collapsible panel.

Click **Add** to add a new Cluster. You can Upto 75 clusters.

No	Access Cluster Name	Status
	Cluster-2	<input type="checkbox"/>
1	Cluster-1	InActive

- **Access Cluster Name:** Assign a name for the new access cluster.
- **Active:** Select the **Active** check box to enable access cluster restrictions for this cluster.

Click **OK**. The cluster appears in the grid.

## Access Cluster Configuration

Click the **Access Cluster Configuration** collapsible panel.

- **Access Cluster:** Click the picklist to select the desired Access Cluster.
- **Cluster Mode:** Select the desired mode for the selected cluster — **Allow All**, **Deny All**, **Selected**.

- **Allow All:** Select this option to allow access for all clusters of the Panel.
- **Selected:** Select this option to allow access for selected clusters of the Panel.
  - **Allowed Cluster:** Click the picklist and select the desired clusters.
- **Deny All:** Select this option to deny access for all clusters of the Panel.
- **Restricted Duration:** Define the time period (HH:MM) for which the **Allow/Deny Mode** will be applicable to the cluster.

Click **Save** once done with the configurations.

## Door Group

Door Group enables the grouping of Panel Doors belonging to different Zones of corresponding Panel.

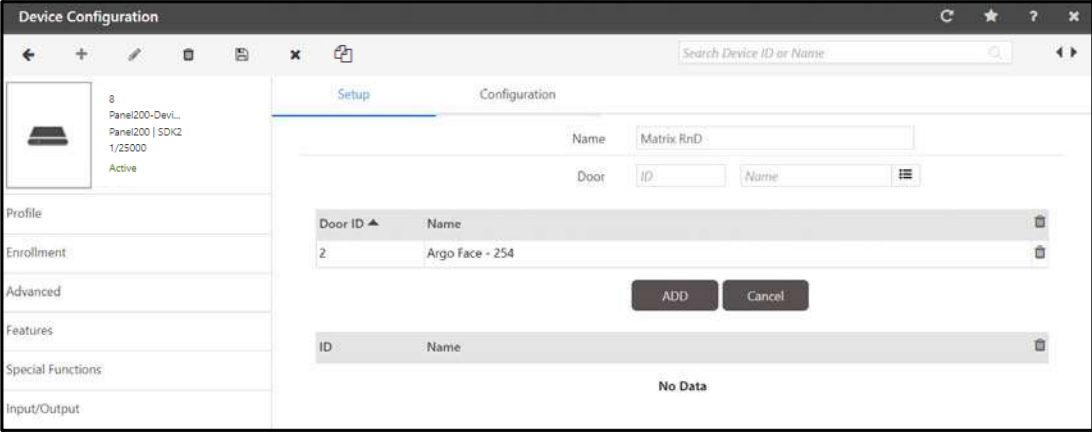

Then Man Trap feature can be configured to operate on the basis of Zone OR Group.

Click each link to configure the Door Group parameters:

- [“Setup”](#)
- [“Configuration”](#)

## Setup

Click **Door Group > Setup** and the page appears as shown below.

The screenshot shows the 'Device Configuration' window with the 'Setup' tab selected. The window title is 'Device Configuration'. On the left, there is a sidebar with a list of devices: '8 Panel200-Dev...', 'Panel200 | SDK2', '1/25000', and 'Active'. Below this, there are tabs for 'Profile', 'Enrollment', 'Advanced', 'Features', 'Special Functions', and 'Input/Output'. The main area is divided into two sections: 'Setup' and 'Configuration'. The 'Setup' section has a 'Name' field with the value 'Matrix RnD'. Below it, there is a 'Door' section with a table showing 'Door ID' and 'Name'. The table has one row with '2' and 'Argo Face - 254'. Below the table are 'ADD' and 'Cancel' buttons. The 'Configuration' section has a table with 'ID' and 'Name' columns, which is currently empty and shows 'No Data'.

From the Setup, you can create Door Groups and assign multiple Panel Doors to it. Maximum 15 Door Groups can be configured for the selected Panel. Each Door Group can consist of maximum 9 Panel Doors.

- **Name:** Assign a user friendly name to the Door Group.
- **Door:** Click the picklist to select the desired Panel Doors to be added to the group.

- Click **Add** when done with the configurations. The Door Group will be displayed in the grid as shown.

*At any instance of time a Panel Door can be assigned to only one Door Group.*

## Configuration

Click **Door Group > Configuration** and the page appears as shown below.

From Configuration, you can enable Man Trap for corresponding Door Group. Also you can enable Strict Man Trap from here. Doing so will allow opening a door only when all other doors of the respective group are closed irrespective of the Man Trap Wait Timer.

- **Door Group:** Click the picklist to select the desired door group for which Mantrap feature is to be enabled.

## Man Trap

To enable the Man Trap feature on Door Groups:

- You must enable Man trap Door Interlock from **Features > Set3 > Man Trap Door Interlock** and select **Functioning as “Door Group Based”** as shown below:

Man Trap Door Interlock	
Enable	<input checked="" type="checkbox"/>
Man Trap Wait Timer (Sec)	<input type="text" value="5"/>
Functioning	<input type="text" value="Door Group Based"/>

The Door Group must be assigned in the Input Group. For details, refer to [“Input/Output”](#).

**Enable:** Select the **Enable** check box to activate the Man Trap feature.

**Enable Strict Man Trap:** If you wish to apply Strict Man trap, select this check box.

Click **Save** to save the settings.

# MODE Door

The MODE (**M**obile **D**evice) devices are used for Time-Attendance solution in which user can mark the punch by using Face recognition method. MODE Door can be connected as **Direct Door** only.

The Device Configuration page for MODE Door appears as shown below.

**Sequence Number** - This is a system generated sequence number for each new device.

**Device**- Specify a name that can be assigned to the Mobile device. The Device ID is auto-generated by the system.

**IP Address** - This is the IP address assigned to the device. Once the device connection is established, this field will automatically display the door IP address.

**UUID**- Enter the UUID of the device which is the IMEI number of the Mobile device (Tablet device).

**Active** - Check the box to activate the device on the network.

To add Devices automatically, go to Admin Module> System Configuration> Global Policy> Device. Enable the “Auto Add New Devices” checkbox. Once the device is connected in network, it will come online in COSEC Monitor.

*The Monitor Service must be running while adding the device to COSEC.*

*The Auto added MODE device will be **Inactive** by default to avoid misuse of auto-add feature on mobile phones. Make sure you enable the **Active** checkbox in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#).
- OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

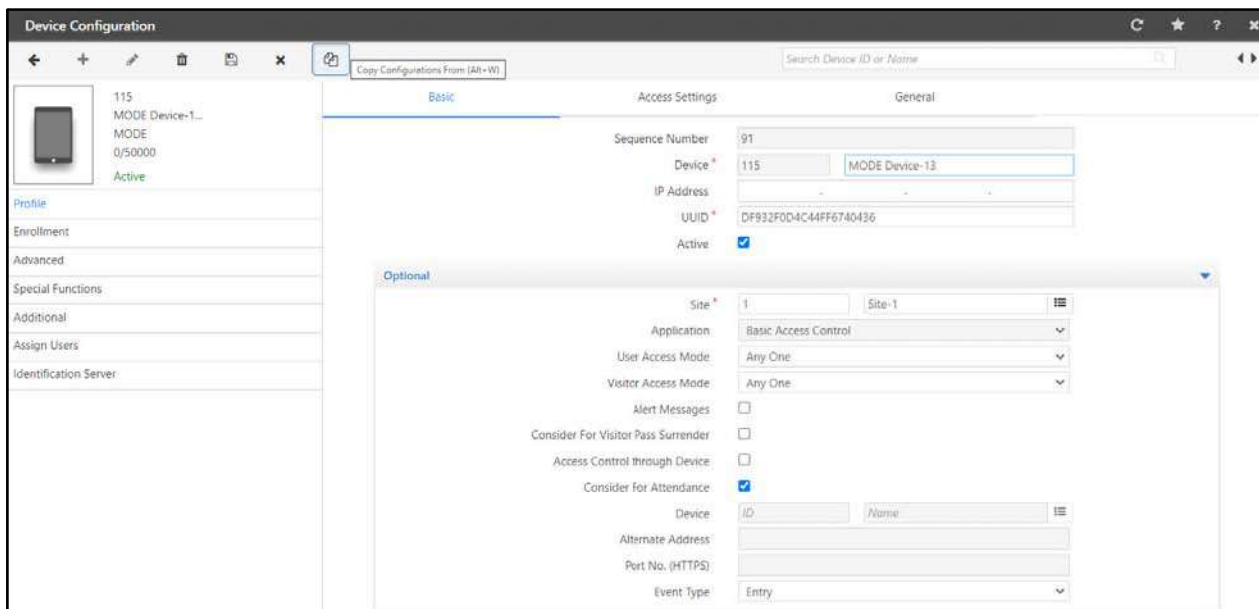

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

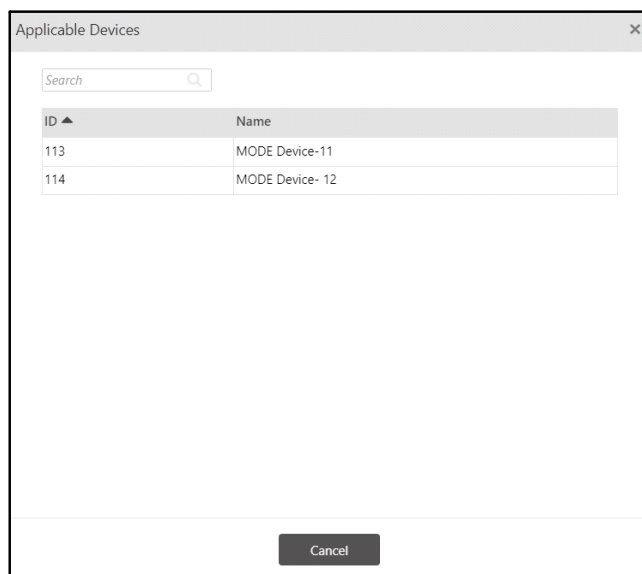

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#)*

To do so, click **Copy Configuration From** .

The screenshot displays the 'Device Configuration' window. On the left, a sidebar lists various configuration tabs: Profile, Enrollment, Advanced, Special Functions, Additional, Assign Users, and Identification Server. The main area is divided into three sections: Basic, Access Settings, and General. The 'Basic' section is currently active, showing fields for Sequence Number (91), Device (115), IP Address, UUID (DF932F0D4C44FF6740436), and Active (checked). Below this, the 'Optional' section is expanded, showing Site (1), Application (Basic Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages (unchecked), Consider For Visitor Pass Surrender (unchecked), Access Control through Device (unchecked), Consider for Attendance (checked), Device (ID/Name), Alternate Address, Port No. (HTTPS), and Event Type (Entry).

The **Applicable Devices** pop-up appears.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. That is, the pop-up will display other Mode devices only. For example, if you have direct door devices — ARG01, ARG02, MODE1 and MODE2, then this pop-up will display only MODE1 and MODE2.*

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring devices, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Video Surveillance”](#)

- “Special Functions”
- “Additional”
- “Assign Users”
- “Identification Server”

## Profile

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any device.

### Basic

The **Basic** section is shown below:

The screenshot shows a web interface for configuring a device profile. It has three tabs: 'Basic' (selected), 'Access Settings', and 'General'. The 'Basic' tab contains the following fields:

- Sequence Number: 91
- Device: 108 (with a '30 chars' limit indicator)
- IP Address: (empty)
- UUID: (empty)
- Active: ☒

Below these fields is an 'Optional' section, which is expanded. It contains the following fields:

- Site: 1 (with a 'Site-1' dropdown menu)
- Application: Basic Access Control (dropdown)
- User Access Mode: Any One (dropdown)
- Visitor Access Mode: Any One (dropdown)
- Alert Messages: ☐
- Consider For Visitor Pass Surrender: ☐
- Access Control through Device: ☐
- Consider For Attendance: ☒
- Device: ID (with a 'Name' dropdown menu)
- Alternate Address: (empty)
- Port No. (HTTPS): (empty)
- Event Type: Entry (dropdown)

### Optional

The **Basic** page has an **Optional** tab which provides optional configurations as shown below:

- **Site** - Select the site to which this Mobile device is to be assigned from the site pick-list window. Site is created from Devices> Masters> Site.
- **Application** - The application type for which the device is to be used is set as **Basic Access Control**.
- **User/Visitor Access Mode** - This defines the type and combination of credentials required to identify and validate a user at the Mobile device. Select the appropriate credential combination from the drop down list.

The options available are:

- Any one
- Face
- PIN + Face

*If FR license is not available then User/Visitor Access Mode will have Any One option only.*

- **Alert Messages** - Select this check-box to enable the application to send alerts based on events from this device.
- **Consider for Visitor Pass Surrender**- Check the box to consider the selected device for visitor pass surrender. The Visitor can show his credential on this device to surrender the pass.
- **Access Control through Device**- Enable this check-box if the events coming from the door are to be considered as access control events.
- **Consider for Attendance**- Select the option as **Attendance** if the events sent by this door are to be considered for Time and Attendance data processing.
- **Alternate Address**: To access MODE from an external network (public network), enter an alternate address. It can be the Device IP Address or the Domain Name.

If MODE is selected for Location1. The IP address (Internal Address) of MODE is 192.168.104.114. The Alternate Address of Door V3 is 173.183.4.11:43.

When the door is accessed from external network then alternate address will be used for communication.

If you are using APTA in the external network at Location1 and tries to access MODE, then it will be accessed through 173.183.4.11:43. In Door API response to APTA, alternate IP address will be sent in response.

The communication between MODE and the external network takes place via device port configured in **Port No. (HTTPS)**.

- **Port No. (HTTPS)**: Enter the Device Port number for secure communication between the device and the external network.

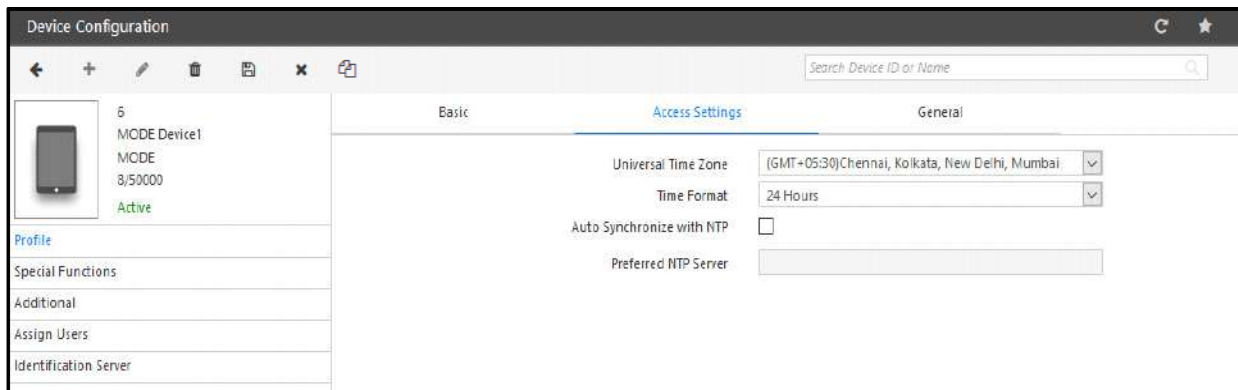

*The Device picklist will show active Direct Doors and Panel200 doors (Except ARC IO 800 Panel Door and ARC IO 800 as direct door and MODE).*

Consider For	Access Control		▼
Device *	1	Door V3-Device-1	☰
Alternate Address	173.183.4.11:43		
Event Type	Entry		

## Access Settings

The **Access Settings** page appears as shown below:

- **Universal Time Zone** - Select the geographic time zone in which the DOOR will operate.
- **Time Format** - Specifies the time format to be displayed on Door Controller LCD display. The formats available are:
  - 24 Hours
  - 12 Hours

Select the relevant option from the drop down list as per the site requirements.

### Auto Synchronize with NTP

If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must enable **Auto Synchronize With NTP** checkbox.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  1. You can specify the Preferred NTP server of your choice. In this case device will first try to get Date and Time from that server address.  
If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.  
If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com , time.nist.gov); then device will first check that server first.  
If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.
  2. You can keep the Preferred NTP server as blank. In this case device will check for Date and Time from the first NTP server.
  3. If user has manually entered Date and Time from webpage or Device Menu then those values of Date and Time will be reflected on device webpage and display screen.

In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor and control application.

## General

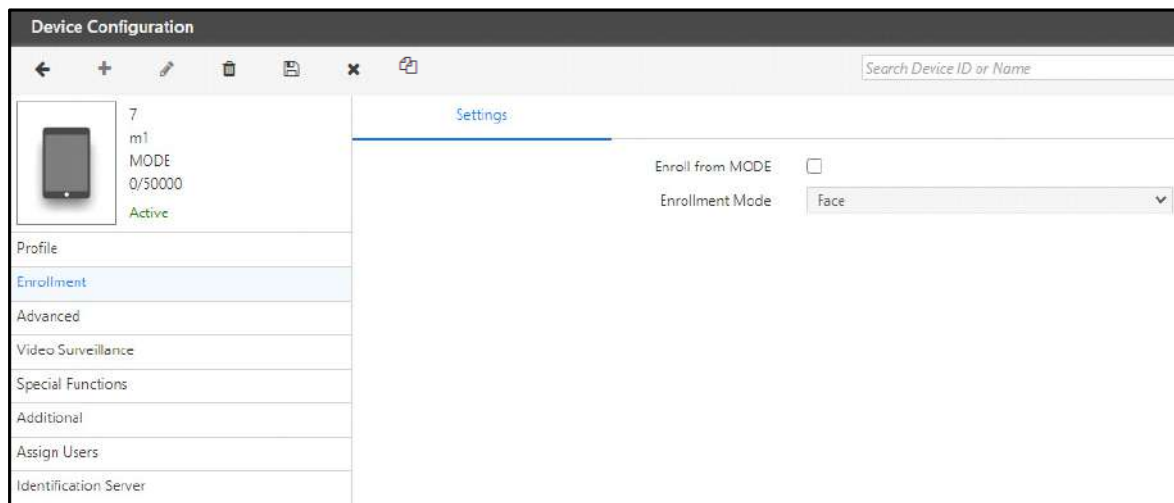

The **General** page appears as follows. Enter all general details applicable to the device in this section.

The screenshot shows the 'Device Configuration' window with the 'General' tab selected. On the left, a sidebar lists device details: '28', 'MODE-Device-2...', 'MODE', '0/50000', and 'Active'. Below this are links for 'Profile', 'Special Functions', 'Additional', 'Assign Users', and 'Identification Server'. The main area has tabs for 'Basic', 'Access Settings', and 'General'. Under 'Access Settings', there is a 'Mute Buzzer' checkbox. Below that, there are two sections: 'Allowed Acknowledgement' and 'Denied Acknowledgement'. Each section contains a 'Display Duration (ms)' text input field (both set to '3000') and an 'LED - Buzzer Duration' dropdown menu (both set to 'Long'). Information icons are present next to the dropdown menus.

- **Mute Buzzer** - User can mute or unmute the door buzzer by checking or clearing the box respectively.
- **Allowed Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Allowed' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.
- **Denied Acknowledgment**
  - **Display Duration (ms)** - Define the time duration in between 500 to 3000ms till which the 'Acknowledgment Denied' message will be displayed.
  - **LED - Buzzer Duration** - Select the time duration as Long, Medium or short for the LED Buzzer.

## Enrollment

The Enrollment page appears as shown below.

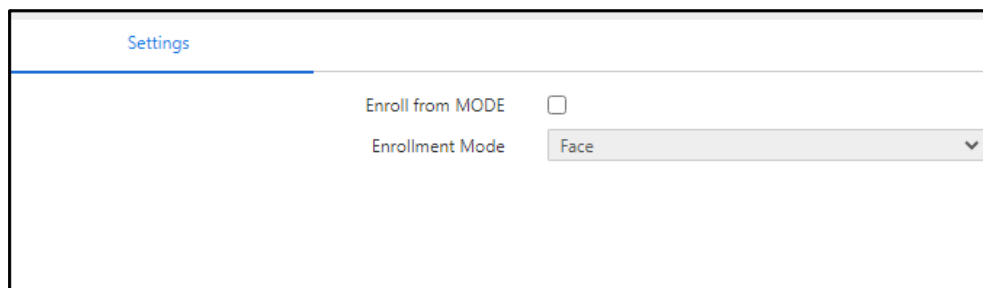

To configure the Enrollment parameters click the following links:

- [“Settings”](#)

## Settings

Click the **Settings** tab. The **Settings** page appears.

Configure the following parameters.

- **Enroll from MODE** - Select this checkbox to enable the enrollment of user from MODE.
- **Enrollment Mode** - The type of credential that can be enrolled using MODE is displayed i.e. Face.

## Advanced

The Advanced tab allows the user to configure some advanced parameters such as access control settings.

To access this, After selecting the device, Select the **Advanced** tab from **Device Configuration** page. The advanced settings can be configured from following sections:

- [“Settings”](#)

## Settings

The Advance Settings page for MODE appears on your screen as shown below:

The screenshot shows the 'Device Configuration' window with the 'Settings' tab selected. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced (selected), Video Surveillance, Special Functions, Additional, Assign Users, and Identification Server. The main area is divided into two sections: 'Temperature Logging' and 'Face Mask Compulsion'. The 'Temperature Logging' section has an 'Enable' checkbox, a 'Sensor Type' dropdown (set to 'Web-Based'), a 'Sensor Interface' dropdown (set to 'HTTP/S'), a 'Calibration Parameter' with '+' and '-' buttons and a value of '0.0', and several numerical input fields: 'Approach to Sensor Wait-Time (Sec)' (3.0), 'Temperature Detection Time Out (Sec)' (10), 'Tolerance between Consecutive Readings' (0.5), 'Consecutive Readings Count within Tolerance' (5), 'Temperature Threshold (°F)' (99.5), and 'Minimum Temperature for Access (°F)' (95.0). There is also a 'Restriction Type' dropdown (set to 'Soft') and a 'Bypass If Sensor Disconnected' checkbox. The 'Face Mask Compulsion' section has an 'Enable' checkbox with a red '1' icon, an 'Approach to Camera Wait-Time (Sec)' (3.0), a 'Mask Detection Time Out (Sec)' (4), and a 'Restriction Type' dropdown (set to 'Soft').

- **Enable GPS Location on IN-OUT Events:** Select the check box to enable GPS location to be received by the Server in Events generated from MODE.

*Make sure this check box is selected and Location is turned on in the COSEC MODE App to send GPS coordinates in Events.*

*GPS Events generation is supported in the following devices only - Direct Doors (VEGA, ARGO, PATH Controller, ARC DC 200, ARGO FACE) and Panel Doors (ARGO, VEGA, PATH Controller and ARC DC 200).*

## Temperature Logging

- **Enable:** Enable the temperature logging feature on the zone.
- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *Web-Based*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor.  
For Sensor Type: Web-based  
Sensor Interface options will be: HTTP/S
- **Emissivity:** Set the emissivity parameter for Sensor. This parameter should only be visible when Sensor Type is AST. Default value is 0.95.  
It is used to define accuracy in sensor to detect temperature of different skin or objects.
- **Calibration Parameter:** Set the calibration parameter for the thermal sensor.  
On click of + the value should increase by 0.1 and on click of – it should decrease by 0.1.
- **Approach to Sensor Wait-Timer:** Time for which the device will wait for user to approach the device before starting Temperature Detection.

- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between consecutive readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.
- **Consecutive readings count within tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues.
- **Minimum Temperature for Access:** The minimum temperature value that should be detected is to be considered as valid temperature.

It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be shown.

The default value, unit and range should be updated based on the Temperature unit set on Panel.

- **Temperature Threshold:** To set the threshold value of the temperature. The default value, unit and range can be updated based on the Temperature unit set on Panel.
- **Restriction Type:** To set restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check-box to give provision of bypassing the feature if sensor connectivity is lost.

## Face Mask Compulsion

Face Mask Compulsion feature is used to enforce users to wear masks while they are within the premises.

After identifying the user, Device will prompt the user to show Face with Mask when "Face Mask Compulsion" is enabled.

Based on identification of Mask, user will be allowed or denied access.

Make sure you have enabled **Enable FR** checkbox in **Devices> Device Configuration> Identification Server> Face Recognition> Enable FR** and configure the below mentioned parameters to avail this feature.

- **Enable:** Select this checkbox to enable Face Mask Compulsion feature for IDS.
- **Approach to Camera Wait-Timer (Sec):** This parameter defines the time within which the user must approach the camera for face mask detection.
  - You must enter the Wait-Time between 0.0-15.0 seconds.
  - By default, it is 3.0 seconds.
- **Mask Detection Time Out (Sec):** This parameter defines the maximum time duration for user's face mask detection.
  - You must enter the detection time out between 0.0-15.0 seconds.
  - By default, it is 4.0 seconds.

- **Restriction Type:** Select the type of restriction to be imposed when the configured policy is violated. Select the desired option - Soft or Hard.
- **Soft Restriction:** The access will be granted even if the user is identified without wearing a mask; however, an event and a warning are generated that indicates the user has been identified without wearing a mask.
- **Hard Restriction:** The access will be denied if the user is identified without wearing a mask.

By default it is **Soft Restriction**.

Users face enrollments are dependent on the Visible Face parameter value set by you. To know more, refer "[Face Recognition](#)".

## Video Surveillance

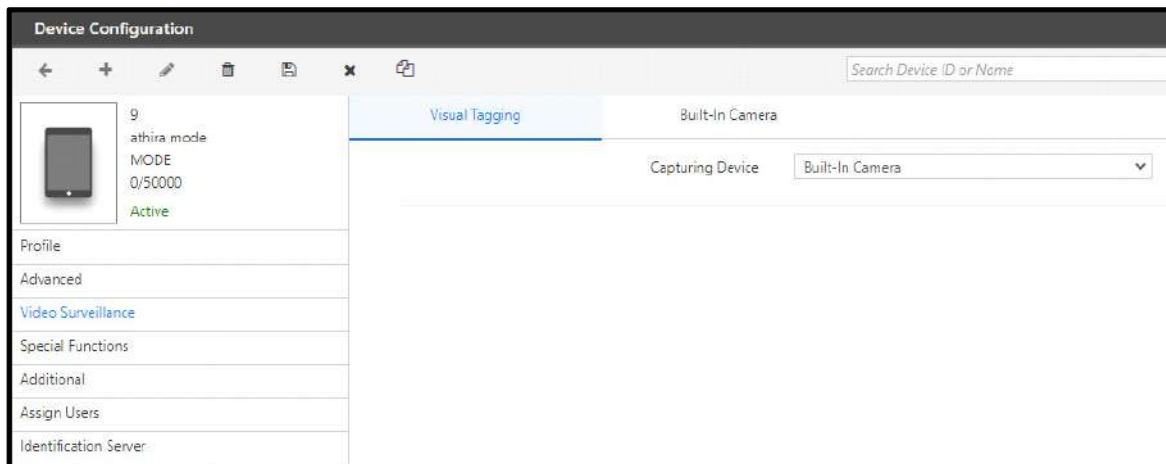

The Video Surveillance tab allows the user to configure parameters for video surveillance integration with the COSEC MODE.

This feature is useful to track if any user accesses using someone else's credentials.

Make sure you have enabled the **Consider for Attendance** checkbox in **Devices> Mode Device Configuration> Profile> Basic> Optional> Consider for Attendance**.

## Visual Tagging

The COSEC application can interface with some supported hybrid and network video recording systems and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder parameters. The **Visual Tagging** page appears as shown below.

**Capturing Device:** Select the video recording device type from the dropdown list.

- None
- Built-In Camera

Select the **Built-In Camera** option to schedule the capture configuration.

## Built-In Camera

This functionality enables configuration and scheduling of image capturing using the in-built camera of MODE device.

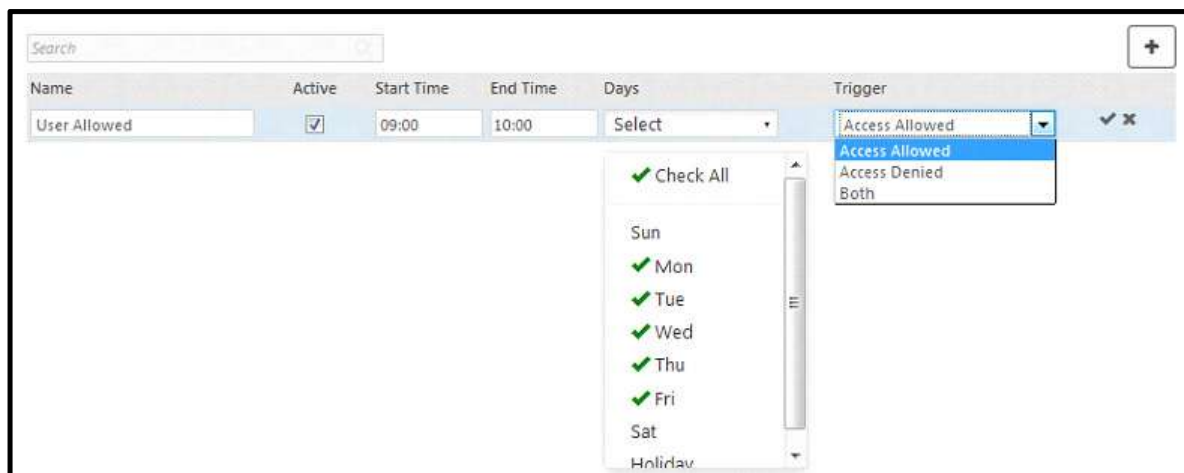

Click the **Built-In Camera** tab. The **Built-In Camera** configuration page appears as shown below.

The Built-In Camera of MODE can be scheduled to capture images during specific periods which will be triggered by specific user events.

To configure the schedule, click **Add** button as shown above.

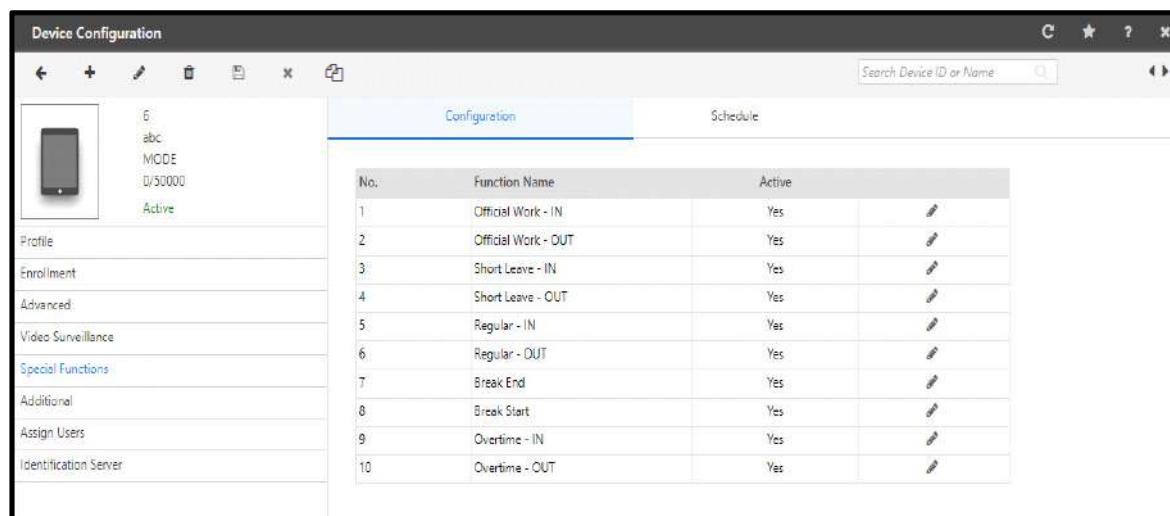

- Specify the function **Name** and select the **Active** check box to enable it.
- Specify the **Start** and **End Time** for the schedule.
- Select the Applicable **Days** for the schedule.
- Select the user events from the dropdown list by which you want image capturing to be **triggered**. The options are Access Allowed, Access Denied and Both.

- Click **OK** button and **Save** button to save the schedule.

## Special Functions

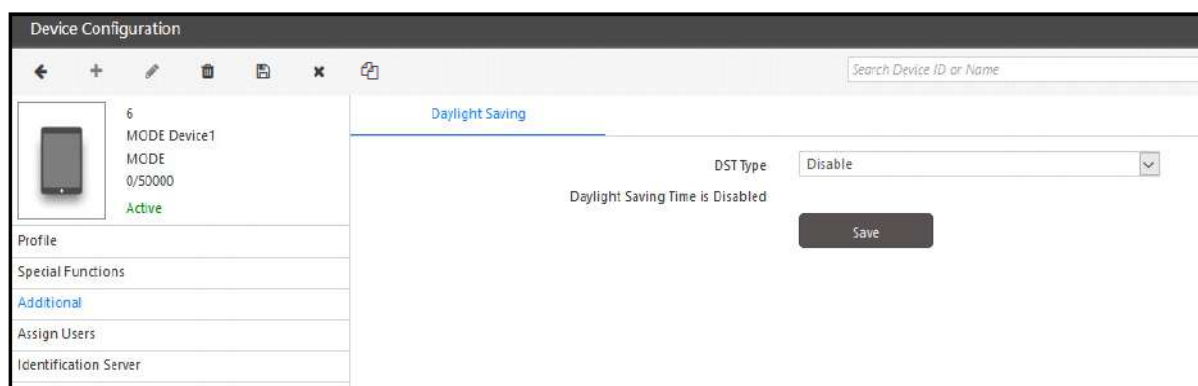

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

## Additional

This section lists some additional configurations that can be enabled for door controllers.

To access these configurations, Go to **Device Configuration > Additional > Daylight Saving**

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC devices can be configured to be compatible with this procedure keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways i.e. **Day-Month wise** or **Date-Month wise**. The **Disable** option when selected, disables the application of DST on the system time.

On selection of DST type as **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted back to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

- This DST Setting implies that on 1st sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st sunday of January at 10:00 hours, the clock will be reversed or backwarded by 08:00 hours.

Save

- Click the **Save** button.

## Assign Users

To the configured device, you can select and assign the users.

Click the picklist button and select the users.

- Click the **Save** button to assign all the added users to the selected device.

## Identification Server

This tab enables the selected device to assign the Identification mode as Local or Server Assisted.

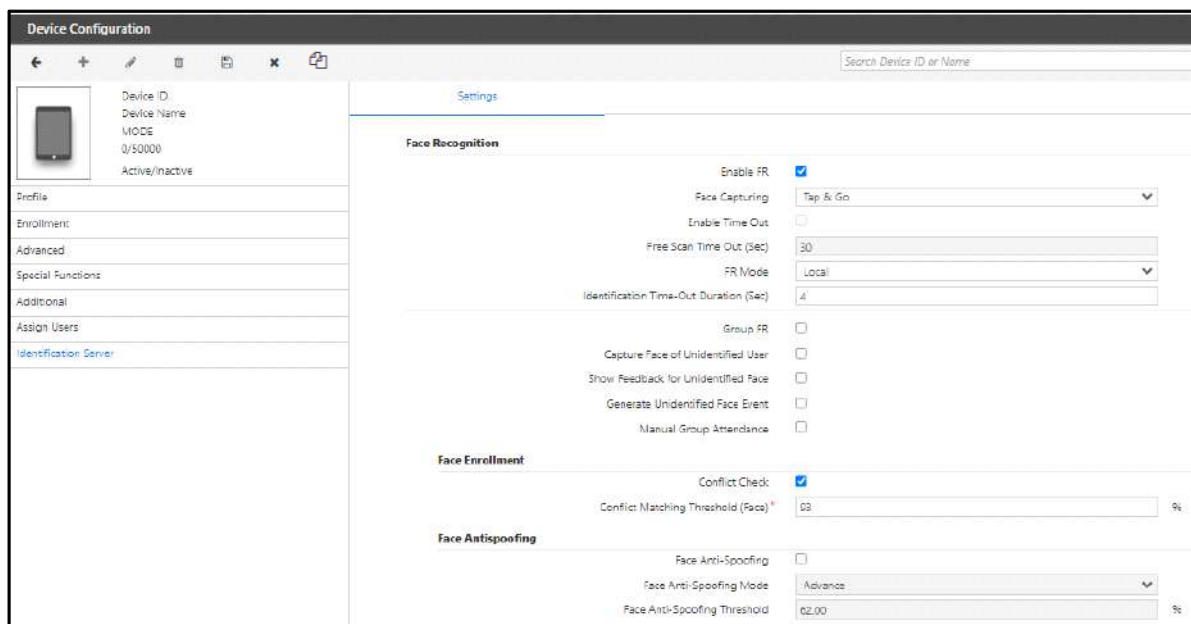

Device has a limited memory capacity for storage of templates so we need Identification Server which will store more number of templates and respond to device when asked for identification.

For more information on Identification Servers, See *Admin> System Configuration> Identification Server Configuration*.

*If FR license is not available then Identification Server tab will not be available.*

To access these configurations, select the **Identification Server** tab.

## Face Recognition

- **Enable FR:** By default, this check box is enabled, that is Face Recognition feature is enabled in the device. Clear the checkbox to disable.

Make sure “**Enable FR**” flag is checked and “**Consider For Attendance**” flag is enabled in *Devices > Device Configuration > Profile > Basic > Optional* in order to edit the parameters in Identification Server Settings.

- **Face Capturing:** Select the desired Face Capturing option.
  - **Tap and Go:** If you select this option, user needs to tap on the device screen once. The MJPEG, that is motion recording screen appears. Device will capture and then identify the users face. If during working hours device is idle, then user needs to tap the device to scan the face and gain access.
  - **Free Scan:** If you select this option, the device will display the MJPEG, that is motion recording screen till the expiry of the Free Scan Time Out timer
- **Enable Time Out:** Select this box to enable the time out.
- **Free Scan Time Out (Sec):** Enter the Free scan time out duration. The valid range is 1 to 999 sec. In Free Scan method, multiple users can mark their attendance easily during peak entry hours.

For example, if the Free Scan Time Out is set as 30sec and if the user is identified in 10S then the system reloads the Free Scan Time Out timer again. Hence, device remains in the scanning mode.

- **FR Mode:** Select the FR mode as **Local** or **Server Assisted**.
  - **Local:** In this Local mode Face templates will be stored in FR hardware module which can store 1 lakh face templates. The captured face template will be verified with the templates stored in the FR module.
  - **Server Assisted:** In Server Assisted mode, an identification server and the fields to configure an individual identification server will get enabled as shown below. You must select the Identification server from where the face templates will be identified.

When FR Mode is selected as **Local** below mentioned parameters are to be configured:

The screenshot shows the 'Face Recognition' configuration window. The 'FR Mode' dropdown is set to 'Local' and is highlighted with a red box. Other visible settings include 'Enable FR' (checked), 'Face Capturing' (Tap & Go), 'Free Scan Time Out (Sec)' (30), and 'Identification Time-Out Duration (Sec)' (4). Below the red box, there are several unchecked checkboxes: 'Group FR', 'Capture Face of Unidentified User', 'Show Feedback for Unidentified Face', 'Generate Unidentified Face Event', and 'Manual Group Attendance'.

- **Identification Time-Out Duration (Sec):** Enter the duration in seconds after which the face identification will get timed out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the face till 5 seconds and if not found then it will show time-out to the user.

If you select FR Mode as **Server Assisted**, you must configure the following parameters:

User can either assign a separate or a common Identification Server which is shared by other biometric credentials.

The screenshot shows the 'Face Recognition' configuration window with 'FR Mode' set to 'Server Assisted', highlighted by a red box. The 'Identification Server' is selected from a dropdown menu. Below it, the 'Configure Alternate Server Address' checkbox is unchecked. The 'Server Address' field is empty, and the 'Server Port' is set to '11005'. The 'Identification Time-Out Duration (Sec)' is set to '4'. Other settings like 'Enable FR' (checked) and 'Free Scan Time Out (Sec)' (30) are visible above the red box. The same set of unchecked checkboxes as in the Local mode screenshot is visible below.

- **Identification Server:** Select the Identification server from the picklist to which the device is to be assigned to save the records.
- **Configure Alternate Server Address:** Select this check box to configure external IP address of Identification Server.

- **Server Address:** By default, this is a non-editable field by which will display the configured Identification Server for FR. This field allows user to enter the Alternate IP Address for FR if **Configure Alternate Server Address** is enabled.
- **Server Port:** Enter the TCP port number. The default port number is 11005.
- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the face identification will get timed out.  
**Example:** If 5 seconds is specified, then the identification server will try to identify the face till 5 seconds and if not found then it will show time-out to the user.
- **Group FR:** Select this checkbox to enable face recognition feature for multiple users and mark their attendance at the same time via this door.

For Group FR ("**Mark Group Attendance**") feature to work, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

Once you enable Group FR, a pop-up will display the features that will not be supported:

- Adaptive Face Enrollment
  - Capture Face of Unidentified User
  - Face Mask Compulsion
  - Temperature Logging
  - Face Antispoofing
  - Show Feedback for Unidentified Face
- **Capture Face of Unidentified User:** Select this checkbox to enroll unidentified faces of users via this door.

For Capture Face of Unidentified User feature to work, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.

- **Show Feedback for Unidentified Face:** Select this check box, if you wish to display a message on the Device display screen to user's whose face is not identified.

If you wish that events should be generated for Unidentified Face, enable **Generate Unidentified Face Event**.

If you have enabled **Group FR**, **Show Feedback for Unidentified Face** feature will not be functional.

- **Generate Unidentified Face Event:** Select this check box, if you wish to generate events when a user's face is unidentified.

These events can be viewed from **Admin Module > View/Logs > Event View** as well as **Device Module > Reports > Invalid Events**.

If you wish to view the snapshots in the Events/Logs, make sure you have configured “**Built-In Camera**” in “**Visual Tagging**”. Make sure you select the Trigger as **Access Denied** or **Both** to view the snapshots for **User Denied- User Invalid** event.

**Generate Unidentified Face Event** is applicable for **Face** credentials only. However, PIN credential events will be generated automatically.

If you wish that a message should be displayed on the device display screen for Unidentified Face, enable **Show Feedback for Unidentified Face**.

- **Manual Group Attendance:** Select this check box if you wish to allow marking of attendance manually for a group of users from the Mode Application. Make sure **Tap & Go** is selected as the **Face Capturing** option.

*Manual Group Attendance is supported in FR Mode-Local as well as Server Assisted.*

*For Manual Group Attendance feature to work in Server Assisted mode, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

## Face Enrollment

If the **FR Mode** is **Server-Assisted** and you wish to enroll faces from the device, make sure **Enable Face Recognition** is selected in Users > User Configuration > Face Recognition and/or Visitor Management > Visitor Profile > Face Recognition and/or Contract Worker Management > Worker Profile > Face Recognition.

- **Conflict Check:** Select the checkbox for the system to check the conflict between the new face of a user and the already (existing) enrolled faces of all the users (available in the database) during the face enrollment process.
- **Conflict Matching Threshold:** Enter the desired Conflict Matching Threshold value in percentage.

The system will consider this value while comparing the face with the face templates already present in the database.

If a conflict is found, that is, if the system detects a face template in the database similar to the new face, then a conflict error will be displayed.

Make sure a higher value is set for this parameter, as it will result in less equivalent matches with the face templates available in the database.

Make sure the **Conflict Matching Threshold** is set lower than **Matching Threshold** in Admin module > System Configuration > Identification Server Configuration.

### Example: Face Enrollment of Suresh

- **Conflict Check** checkbox is selected.
- **Conflict Matching Threshold** is set as 93%.

Now during the face enrollment of Suresh, the system will check in its database if his face matches with faces of other users available in the database.

- **Case 1:** If Suresh's face matches 92% with Ram, then the system will allow to enroll Suresh's face.

- **Case 2:** If Suresh's face matches 94% with Shyam, then the system will display the conflict error while enrolling Suresh's face.

## Adaptive Face Enrollment

When **FR Mode** is set as **Server Assisted Mode**, configure the following parameters:

- **Adaptive Face Enrollment:** Select this check box to Enable adaptive face enrollment for identification server.
  - Adaptive face enrollment provides automatic real time face enrollment whenever change is experienced in facial features.
  - Enabling adaptive enrollment process parameter, an additional slot will be provided internally to store 10 more face templates of a user.
  - IDS will learn from face recognized, adapt and would take decision of storing new template of a user database.

If you enable adaptive face enrollment, you must configure the following parameters.

- **Threshold Deviation (Face):** Enter the value of deviation from matching threshold in percentage. Based on the value entered for deviation, template for Adaptive Face Enrollment will be decided.

Example: If deviation entered is 3% and matching threshold is 98% then it will classify template which has matching score between 98 - 95 and one lower than this will be classified below margin.

- **Multi-User Matching Score Deviation (Face):** Enter the value of deviation from matching score between 2 different users while Adaptive Face Enrollment.

Difference between matching scores of templates will be done, when we have templates of two or more users falling under above specified deviation.

Let us understand this with the help of the following example:

- *Threshold value = 98%*
- *Threshold Deviation= 3%*

*So, Result will display all matching templates having matching score between range 98 to 95*

- *Multi-user Matching score deviation = 0.5%*

*If, 5 best templates of 2 users fall between 98 -95% range*

<b>User</b>	<b>Matching Score</b>
User 1	97.8
User 1	97.6
User 1	97.4
User 2	97.25
User 2	97

*As we have obtained templates of 2 users in which user 1 is having template of highest matching score, so will make a difference between lowest score template of user 1 and highest matching score template of user 2.*

$97.4 - 97.25 = 0.15$ ; this is less than 0.5

As difference is less than 0.5, user 1's template having matching score 97.8 for adaptive enrollment will not be used.

- **Threshold Deviation and Multi-user Matching score deviation** will act as two filters to fetch appropriate template for adaptive enrollment. Values can be added in decimal.

*We recommend to set the multi-user matching score deviation higher always e.g.2.0 to reduce the probability of enrolling a particular user's face template in some different user's enrolled faces.*

- **Confirm before Adaptive Face Enrollment:** Select this check box, if face enrolled using Adaptive face enrollment requires confirmation from User.

*Faces enrolled under Adaptive enrollment process will be synced automatically, but when IDS is restarted due to any reason, the adaptive faces which are not synced will be removed by default.*

## Face Antispoofing

- **Face Anti-Spoofing:** To use this feature, make sure **Enable FR** checkbox is selected.

Then, select the **Face Anti-Spoofing** check box to enable this feature and configure the following parameters:

- **Face Anti-Spoofing Mode:** Liveness Detection helps to limit the fierce risk of spoofing attacks by using several anti-spoofing approaches. Along with the configurations to be done for Face Anti-Spoofing you also need to take care of the recommended settings for liveness verification and for face recognition, refer ["Recommendations for Liveness Verification"](#) and ["Recommendations for Face Recognition"](#).

Select the Face Anti-Spoofing Mode for liveness detection from the following:

1. **Basic:** This mode detects face as well as photos from the mobile phones.  
Select this option when the distance between Camera and Face is more than 3 feet
2. **Moderate:** This mode analyzes the texture of face.  
Select this option when the distance between Camera and Face is less than 2 feet
3. **Advance:** This mode combines the features of **Basic Mode** and **Moderate Mode** of Face Anti-Spoofing.  
Select this option when the distance between Camera and Face is more than 1 feet and less than 2 feet.  
By default, Face Anti-Spoofing Mode will be **Advance**.

If **FR Mode** is selected as Server Assisted, select the Face Anti-Spoofing Mode for detection from the following:

1. **Moderate:** This mode analyzes the texture of face. Select this option when the distance between Camera and Face is less than 2 feet
  2. **Advance:** Select this option when the distance between Camera and Face is more than 1 feet and less than 2 feet. By default, Face Anti-Spoofing Mode will be **Advance**.
- **Face Anti-Spoofing Threshold:** Enter the Face Anti-Spoofing threshold value in percentage within the range from 1.00 to 99.99 to identify user's face liveness for considering him/her as genuine person.
  - **Default Biometric Group No.:** When FR Mode is selected as Server Assisted, enter the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the

Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

*When FR Mode is selected as Server assisted, then the Adaptive Enrollment feature can be configured in Admin> System Configuration> Identification Configuration.*

*In Local Mode Adaptive Enrollment feature is not supported.*

# ARGO FACE Door

---

Matrix COSEC ARGO FACE is a powerful Face Recognition Device powered by Matrix's advanced AI-based Deep Learning algorithms to offer superior Face Recognition performance. The COSEC ARGO FACE is an all-integrated, compact, elegant and robust Face Recognition Device specifically designed for enterprise-grade People Mobility applications. Loaded with versatile functions and a range of features, COSEC ARGO FACE is an ideal solution for organizations requiring accuracy, speed, ease of use and security.

ARGO FACE comes with built-in facial recognition and liveness detection support for Access Control, Time Attendance & Cafeteria. It consists of POE terminal with Ingress Protection (IP65 rated) and IK08 protection. It has an elegant design with graphical display. It supports Face, Card, PIN and BLE credentials. It also supports QR Code, if enabled. To know more refer to "[Image Settings](#)".

There are in total 4 variants of ARGO FACE door. They are:

Variants	Reader Supported
COSEC ARGO FACEE	EM Prox
COSEC ARGO FACEM	MiFare
COSEC ARGO FACEI	HID iClass
COSEC ARGO FACE200T	-

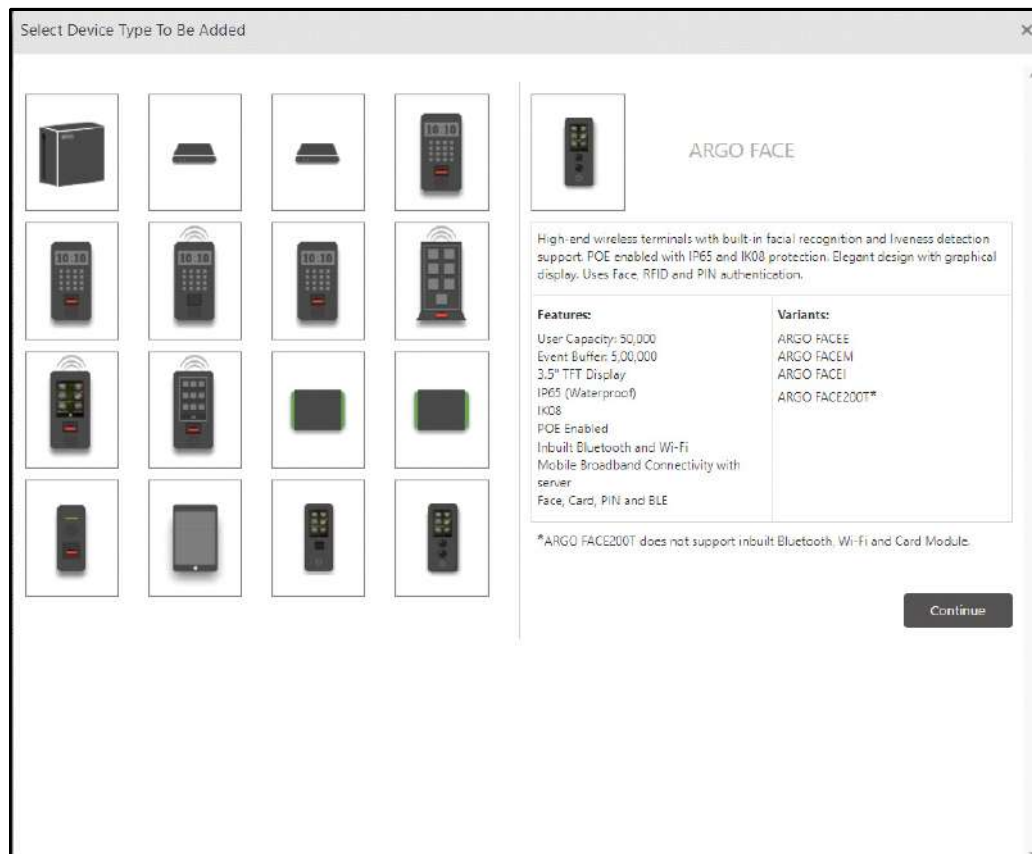

*The features and functionalities supported will differ as per the variant installed.*

ARGO FACE can be connected as **Direct Door** as well as **Panel Door**.

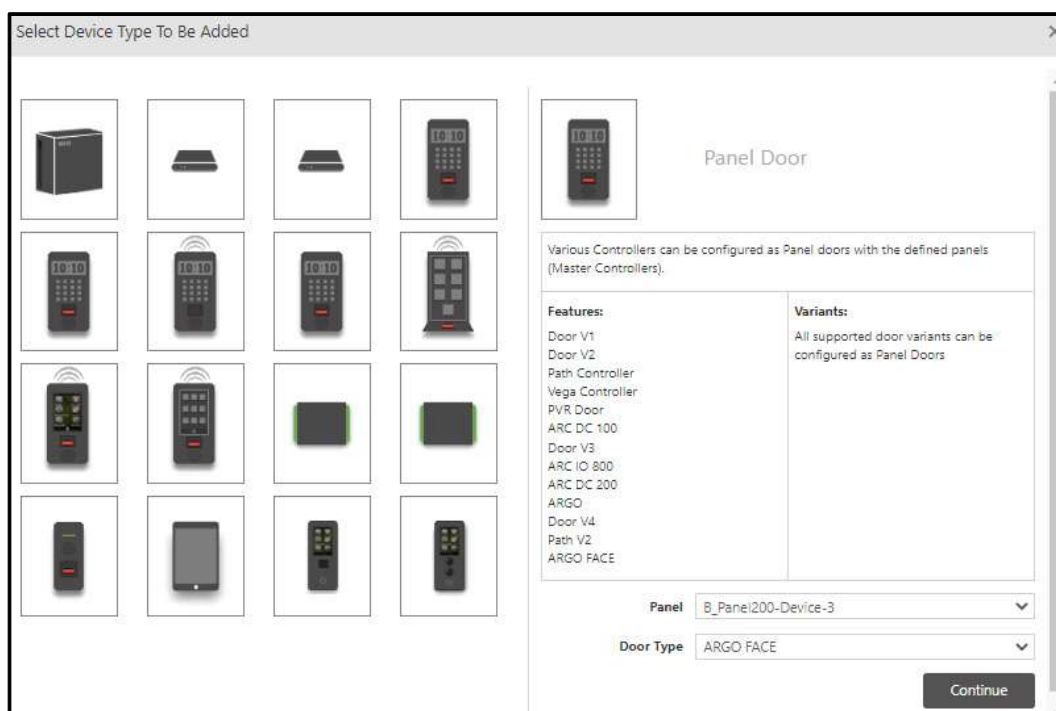

Click the ARGO FACE device from the Device List to add it as a **Direct Door**.

OR

Click Panel Door to add ARGO FACE device as a **Panel Door**.

**Panel:** Select the desired Panel from the drop-down list with which you wish to connect the Door.

**Door Type:** Select **ARGO FACE** from the drop-down list.

Click **Continue**.

The **Device Configuration** page for ARGO FACE Door appears.

To add Devices automatically, click Admin Module > System Configuration > Global Policy > Device. Select the “Auto Add New Devices” check box. Once the device is connected in the network, it comes online in COSEC Monitor.

*While adding the device to COSEC Server, make sure the COSEC Monitor Service is running.*

To configure the parameters, you can:

- copy the parameters from another device, refer to [“Copy Parameters From”](#).
- OR**
- can click each link to configure the parameters, refer to [“Selective Configuration”](#).

## Copy Parameters From

You can also copy the parameters from another device, if required.

*The Copy Configuration From option is applicable in Add (after you have selected the desired device type) as well as Edit mode of any added device.*

*If certain parameters are configured and Copy Parameters From option is clicked, then:*

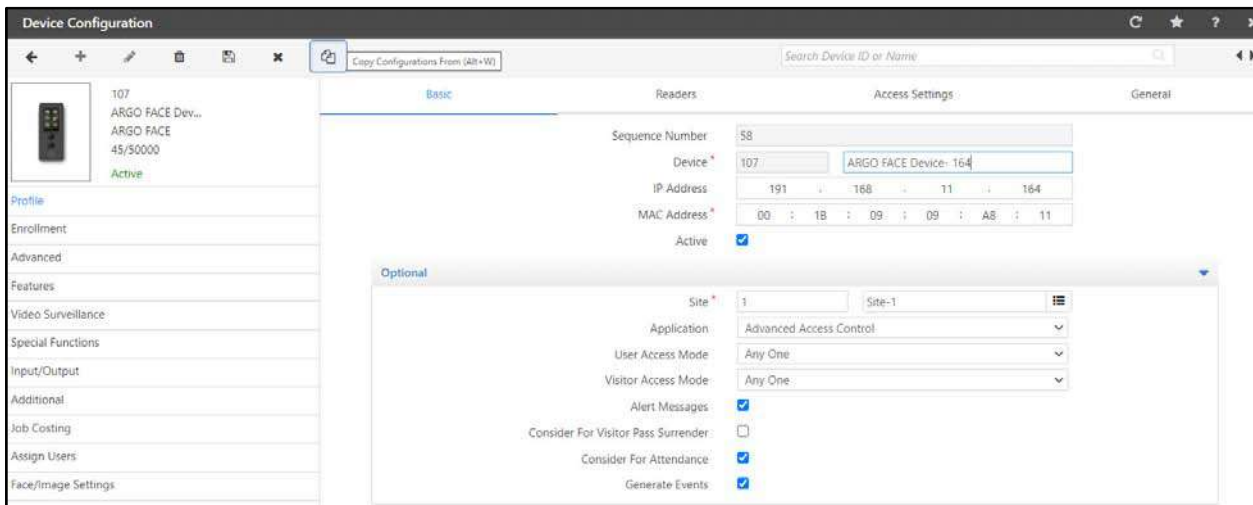

- *the value of the applicable parameters already configured will be over-written with the values as configured in the selected device.*
- *the values of other parameters that are configured will remain as they are.*

*If none of the parameters are configured and Copy Parameters From option is clicked, then*

- *all the applicable parameter values will be copied from the selected device.*
- *the values of the other parameters will be their default values.*

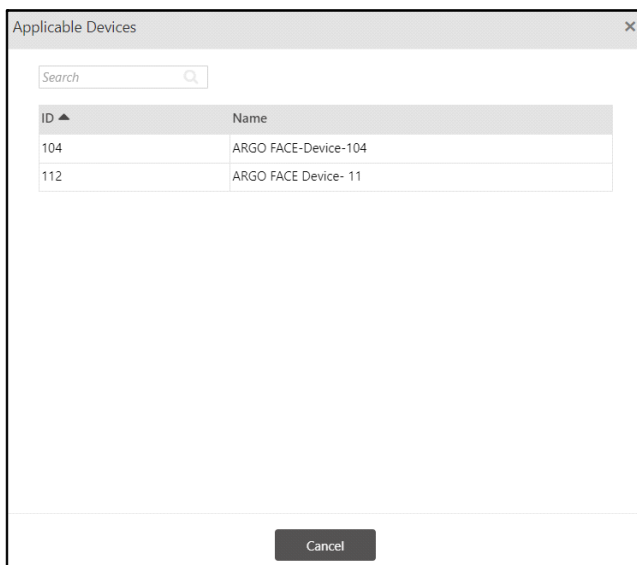

*To know more about the applicable parameters that will be copied, refer to [“Copy Parameter Details”](#).*

To do so, click **Copy Configuration From** .

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration categories. The main area is divided into tabs: 'Basic', 'Readers', 'Access Settings', and 'General'. The 'Optional' section is expanded, showing settings for 'Site', 'Application', 'User Access Mode', 'Visitor Access Mode', 'Alert Messages', 'Consider For Visitor Pass Surrender', 'Consider For Attendance', and 'Generate Events'. The 'Device' field is set to '107' and 'ARGO FACE Device- 164'.

The **Applicable Devices** pop-up appears.

The 'Applicable Devices' pop-up window displays a search bar and a table of devices. The table has two columns: 'ID' and 'Name'.

ID	Name
104	ARGO FACE-Device-104
112	ARGO FACE Device- 11

A 'Cancel' button is located at the bottom right of the pop-up.

*The devices that appear in the Applicable Devices pop-up will be of the same family and device type. Let us understand this:*

- In case of Direct Door, the pop-up will display other ARGO FACE Direct Doors only. For example, if you have direct door devices — ARGOFACE1, ARGOFACE2, Vega1 and Vega2, then this pop-up will display only ARGOFACE1 and ARGOFACE2.
- In case of Panel Door, the pop-up will display other Vega Panel Doors connected with the same Panel only. For example if you have two Panels — Panel1 and Panel2 connected. In Panel1 the connected Panel Doors are VegaPD1, VegaPD2, ARGOFACEPD1, ARGOFACEPD2. In Panel2 the Panel Doors connected are ARGOFACEPD3 and ARGOFACEPD4. Then, if you are adding the new ARGO Panel Door to Panel1, then this pop-up will display ARGOFACEPD1 and ARGOFACEPD2 only.

Select the desired device from which you wish to copy the configurations.

OR

You can also search for the desired device using the Search option and then select the device.

A Warning pop-up appears. Click **Yes** to copy all the applicable parameters. A processing screen appears.

*Only applicable parameters will be copied. For details, refer to [“Copy Parameter Details”](#).*

*If during the processing screen, you click Cancel, then the entire copy process will be aborted.*

If all applicable parameters are copied successfully, then the Applicable Configurations are Successfully Copied message will be displayed.

If all applicable parameters are not copied successfully, then the Failed to copy. Please try again message will be displayed.

## Selective Configuration

To know more about configuring the device, click on the links for different tabs of Device configuration.

- [“Profile”](#)
- [“Enrollment”](#)
- [“Advanced”](#)
- [“Features”](#)
- [“Video Surveillance”](#)
- [“Special Functions”](#)
- [“Input/Output”](#)
- [“Additional”](#)
- [“Job Costing”](#)
- [“Assign Users”](#)
- [“Cafeteria”](#)
- [“Face/Image Settings”](#)

# Profile

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Face Settings. The 'Profile' category is selected. The main window has four tabs: Basic, Readers, Access Settings, and General. The 'Basic' tab is active, displaying fields for Sequence Number (15), Device (2003), IP Address, MAC Address (12-AD-78-12-AA-47), and an Active checkbox. Below these is an 'Optional' section with Site (1), Application (Basic Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages, Consider For Visitor Pass Surrender, Consider For Attendance, and Generate Events.

This section enables the user to set up the basic profile for any new device. Setting up a door profile involves defining basic parameters to set up any door controller device.

To do this, on the **Device Configuration** page, click the **Profile** tab in the left pane. To configure the Profile parameters click the following links:

- [“Basic”](#)
- [“Readers”](#)
- [“Access Settings”](#)
- [“General”](#)

## Basic

The **Basic** section appears on your screen as shown below.

*Sequence Number, Device, IP Address, MAC Address and Active are applicable for both Direct Door and Panel Door.*

For ARGO FACE as a **Direct Door**,

This screenshot is a zoomed-in view of the 'Basic' tab in the 'Device Configuration' window. It shows the same fields as the previous image: Sequence Number (15), Device (2003), IP Address, MAC Address (12-AD-78-12-AA-47), and an Active checkbox. The 'Optional' section is also visible, showing Site (1), Application (Basic Access Control), User Access Mode (Any One), Visitor Access Mode (Any One), Alert Messages, Consider For Visitor Pass Surrender, Consider For Attendance, and Generate Events.

Configure the following options:

- **Sequence Number:** This is a system generated sequence number for each new device.

- **Device:** Specify a name that can be assigned to the door. The Door ID is auto-generated by the system.
- **IP Address:** This is the IP address assigned to the door. Once the device connection is established, this field will automatically display the door IP address.
- **MAC Address:** Enter the MAC Address of the door.

*MAC address of door is required while manually adding the door to the COSEC Monitor. Note the MAC address from the device when it is powered on.*

- **Active:** Select the check box to activate the device in the network.

*To add the Device automatically, click Admin Module> System Configuration> Global Policy> Device. Enable the **Auto Add New Devices** check box.*

*The device will be added automatically but make sure you enable the **Active** check box in order to connect the device to the network. Once the device is connected to the network, it will come online in COSEC Monitor.*

Click the **Optional** collapsible tab, to configure the parameters:

- **Site:** Click the picklist and select the site to which this door is to be assigned. Site is created from **Devices> Masters> Site**.
- **Application:** Select the type of application for which the device is to be used. Option are — **Basic Access Control, Advanced Access Control** and **Cafeteria**. All devices set to **Cafeteria** will subsequently be available for Cafeteria configuration.
- **User/Visitor Access Mode:** Defines the type and combination of credentials required to identify and validate a user at the Door Controller. Select the appropriate credential combination from the drop-down list. The options are
  - Any one
  - Card
  - Card + PIN
  - None
  - Face
  - Card+ Face
  - PIN + Face

*Users will be able to use QR Code as credentials (if enabled) and if User/Visitor Access Mode is selected as Any one, Card, Card+PIN or Card+Face.*

- **Cafeteria Face Access Mode:** When Application option is set as 'Cafeteria', only then this configuration is available to the Admin and to add provision of using face as a credential to make transactions on cafeteria devices.

Select the mode type from the drop-down list to allow a user to choose multiple menu items and upon checkout do transactions using face as credential.

The options available are **None, Default Item** and **Item Selection**.

**Default Item:** This mode in cafeteria will allow users a touch-less cafeteria experience. In Default Item mode only the transaction for default item is allowed. A default item is assigned in each scheduled menu.

- **Item Selection:** This mode in cafeteria will allow users to select the desired menu items and make a transaction using Face as a credential.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Consider for Visitor Pass Surrender:** Select this check box to consider the selected device for visitor pass surrender. The Visitors can show their credentials on this device to surrender their passes.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Generate Events:** By default, this check box is selected. Click to disable, if the server is not required to receive any events from the this device.

For ARGO FACE as a **Panel Door**,

Click the **Optional** collapsible panel, to configure the parameters:

- **Site:** Click the picklist and select the site to which this door is to be assigned. Site is created from Devices> Masters> Site.
- **Consider for Attendance:** Select this check box if the events sent by this door are to be considered for Time and Attendance data processing. If this option is disabled, then the system would consider all events coming from the door as Access Control events.
- **Alert Messages:** Select this check box to enable the application to send alerts based on events from this door.
- **Access Zone:** Assign an access zone to the door by selecting the desired zone from the drop-down list.
- **Access Cluster:** Assign an access cluster to the door by selecting the desired access cluster from the drop-down list
- **Door Group:** The Door Group drop-down includes the list of all configured Door Groups on the corresponding Panel. An additional option as 'None' is available and selected by default.
- **Auto IP Assignment:** There is an option where the panel door can be assigned its IP from the device webpage. To enable this option, select the Auto IP Assignment check box.

Access Zone is configured while configuring Panel200.

## Readers

Readers are important hardware components in a biometric door device. They may be internal or external. This section enables the administrator to configure both internal and external readers for a door as shown below.

Click the **Reader** tab and configure the following parameters:

*Door Mode Selection, Prompt Special Function and Auto Detect Readers are applicable for Direct Door only.*

- **Door Mode Selection:** Select the check box, if you want the user to select the punch type as IN or OUT while punching on the device.

E.g: When a door is in Entry mode, your punches will always be in Entry side. But if you want to mark the punch in exit mode then you can select the door mode if “Door Mode Selection” is enabled.

If not selected, user will need to enable Scheduling to set reader mode of door as entry or exit as per user-defined schedules. For information on creating Reader Mode Schedules, refer **Devices > Masters > Reader Mode Scheduler**.

- **Prompt Special Function:** This will provide selection of special function on device screen and based on the selection of particular type of special function, job codes for JPC user will be prompted.

This can be enabled only when Door Mode Selection is enabled.

- **Auto Detect Readers:** Select this check box to enable auto detection of Readers on the door controller connected to the server.

## Internal Readers

This option allows the configuration for the Internal Reader of the selected door.

Click **Internal Readers** collapsible panel and configure the following parameters.

*Mode, Card Reader Type and Card Format are applicable for both Direct Door and Panel Door.*

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop-down list.
- **Card Reader Type:** Select the desired Card Reader Type from the drop- down list.
- **Card Format:** Single or multiple card formats can be assigned to the readers of the door. The default card format is assigned to device as shown in the grid. If no other card format is assigned to device; then this default format will be applied. To know more about Card Formatting, refer [“Card Formats”](#).

### Multiple Card Format

- To assign multiple card formats to device click **Add**. Then click the picklist to select the desired card format and click **OK** to save the format.

- Similarly, you can add maximum 5 card formats. When the card format is saved, the Configured bits of that format as configured from Masters> Card format will be displayed here. Multiple Card format configurations will be sent by the server to the door separated by '**Format ID**' that is 'Member No.' along with all other format related parameters.

**Internal Readers**

Mode: Entry

Card Reader Type: EM Prox Reader

Search

Member No ▲	Card Format	Configurable Bits
1	Default Format	0
2	Format1	26
3	Format2	32

*Enable Scheduling and Reader Mode Schedule are applicable for Direct Door only.*

- **Enable Scheduling:** Select the check box to enable automated control of an Internal Reader. This will set reader mode of door as entry or exit as per user-defined schedules.
- **Reader Mode Schedule:** Click the picklist and select the schedule which is to be assigned to the internal reader of ARGO FACE Door. With this the same reader can be configured to function both in Entry as well as Exit mode based on scheduled timings.

*For configuring Reader Mode Schedule refer Devices> Masters> Reader Mode Scheduler.*

*Advertise Bluetooth, Bluetooth Name and Bluetooth Range are applicable for both Direct Door and Panel Door.*

- **Advertise Bluetooth:** Select this check box to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters:
  - **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.  
  
If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 10 characters.
  - **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.  
  
Select the Bluetooth Range as — Short (1m-2m), Medium (5m-7m), Long (>8m) or Custom.
  - **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- Click **Save**.

## External Readers

This option allows you to configure the External Reader for the selected door.

*Mode, External Reader Type, Card Format and Exit Switch are applicable for both Panel Door and Direct Door.*

Click **External Readers** collapsible panel and configure the following parameters.

- **Mode:** Select the Mode as **Entry** or **Exit** from the drop-down list.
- **External Reader Type:** Select the desired type of External Reader from the drop-down list.

*If you are using PIN-W Reader; user's will be able to change their PIN number from the devices.*

*User Access Mode, Visitor Access Mode and Access Control on Exit Mode is applicable for Direct Door only.*

- **Exit Switch:** Select this check box to enable the use of **Exit Switch**.
- **User/ Visitor Access Mode:** Select the access mode from the options:
  - Any One
  - Card
  - None
  - BLE
  - Card + PIN
- **Card Format:** Select a card format to be applicable for external readers of the device. This is applicable for all Direct Doors and all Panel Doors. For multiple format description refer "[Multiple Card Format](#)".

Bluetooth parameters are configurable for both Direct Door as well as Panel Door.

- **Configure Bluetooth from Server:** When you select External Reader Type as — CB U Reader, ATOM RD300, ATOM RD200 or ATOM RD100, select Configure Bluetooth from Server check box to enable Bluetooth feature of aforementioned readers.

Once you enable Configure Bluetooth from Server, configure the following Bluetooth parameters:

- **Advertise Bluetooth:** Select this check box to enable Bluetooth of the device by which the device will be visible to others. Then configure the following parameters:

- **Bluetooth Name:** By default, if the Device Name is configured then it will be displayed here along with the Mode. The prefix will be the Device Name and the suffix will be -IN or -OUT as per the set Mode.

If required, you can configure the bluetooth name as per your requirement. The Bluetooth Name can be a maximum of 20 characters.

- **Bluetooth Range:** The system supports different ranges of bluetooth using which the users can mark their attendance. You can set the desired range to control the boundary for marking the attendance.

If you select the **External Reader Type** option as ATOM RD200/300, then only you can select the **Custom** option for Bluetooth Range.

- **Custom Bluetooth Range (dBm):** If you select **Custom** option for Bluetooth Range, enter the Bluetooth range manually or set the range using the slider. Drag the slider towards the left to decrease the value or drag the slider to the right to increase the value.
- **Access Control On Exit Mode:** Select this check box to enable the checking of the following access control policies on the door when the external reader is in the 'Exit' mode.
  - User enabled
  - User validity
  - Blocked user
  - Time Based Access Check
  - ASC
  - User Access Group

## Access Settings

*Access Settings are applicable for Direct Door only.*

Click the **Access Settings** tab. The **Access Settings** page appears:

- **Universal Time Zone:** Select the geographic time zone in which the DOOR will operate. Select the relevant option from the drop-down list as per the site requirement.

- **Time Format:** Specifies the time format to be displayed on the Door Controller's LCD display. Select the relevant option from the drop-down list as per the site requirements.
  - 24 Hours
  - 12 Hours

**Auto Synchronize with NTP:** If Date and time is to be automatically synchronized as per the **Preferred NTP Server** (predefined or user-defined NTP server address) selected by user, then you must select the **Auto Synchronize With NTP** check box to enable.

Independent of the mode set from server as Auto or Manual, the user can change the date and time settings from device webpage, which will be reflected on device display.

- When Auto Synchronization with NTP is disabled Preferred NTP Server field will be disabled.
- When Auto Synchronization with NTP is enabled,
  - You can specify the **Preferred NTP Server** of your choice. In this case device will first try to get Date and Time from that server address.

If it does not get Date and Time in three tries; device will check from pre-defined NTP servers.

If you have entered one of the three pre-defined NTP servers(ntp1.cs.wisc.edu , time.windows.com, time.nist.gov); then device will first check that server first.

If it receives updated Date and Time then Updated Date and Time will be reflected on device webpage and display screen.

- You can keep the Preferred NTP Server as blank. In this case device will check for Date and Time from the first NTP server.

*If user has manually entered Date and Time from device web page or Device Menu, then these values of Date and Time will be reflected on device webpage and display screen.*

*In the case of the **Manual** option the administrator can manually update the time on the Door with that of the system time as and when required. This can be accomplished from the COSEC Monitor.*

- **Working Days:** Specify the days on which the default working hours should be applicable. Select the respective check boxes of the relevant days.
- **Working Hours (HH:MM):** Define the default working hours in HH:MM format.
- **Holiday Schedule:** Click the picklist and select the desired Holiday Schedule. The Administrator can assign upto four Holiday Schedules to the device.

*If the same Holiday Schedule is configured for a user and for the door controller on which the user is assigned, then the user's attendance marking on this device, on any of the scheduled holidays will always be marked as a holiday.*

- **Device Access Schedule:** All the Access Schedules created from the "[Access Schedules](#)" page appear in the drop-down list. By default, the Access Schedule, if assigned from the Access Schedule page appears here. If you wish to change the Access Schedule, select the desired Access Schedule to be assigned to the device from the drop-down list.

If an Access Schedule is selected, it will override the Working Days configuration.

If an Access Schedule is already assigned from “[Access Schedules](#)” page and a different schedule is selected here, it will override the schedule assigned from “[Access Schedules](#)” page and vice versa.

To revoke an Access Schedule, select the **Select** option from the list. The device will be removed from the Access Schedule under the “[Assign Doors](#)” section on the “[Access Schedules](#)” page.

## General

Click the **General** tab.

Enter all general details applicable to the device in this section.

*Mute Buzzer, Allowed Acknowledgment, Denied Acknowledgment and Auto Hide Menu Bar are applicable for both Direct Door and Panel Door.*

*If you have connected Readers — ATOM RD100/200/300, PATH — then the configurations for Allowed/ Denied Acknowledgment will be applicable to these readers as well.*

- **Mute Buzzer:** Select the check box to enable door buzzer muting.
- **Allowed Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Allowed** message should be displayed. Valid Range is 250 to 3000 ms.
  - **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options— Long, Medium, Short, Shortest.
- **Denied Acknowledgment**
  - **Display Duration (ms):** Specify the time duration for which the **Acknowledgment Denied** message should be displayed. Valid Range is 250 to 3000 ms.

- **LED - Buzzer Duration:** Select the time duration for the LED Buzzer from the drop-down list options—Long, Medium, Short, Shortest.

*Enable Display Messages, Custom Birthday Message, Display Message 1 to 4, Schedule, Message and Multi-Language Support are applicable for Direct Door only.*

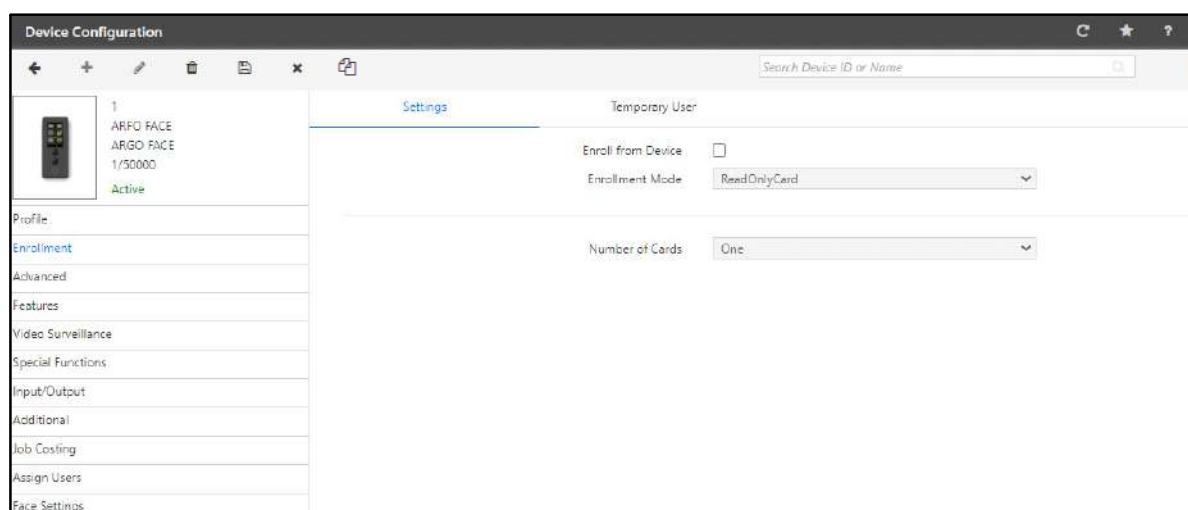

- **Enable Display Messages:** Select this check box, if you wish to customize the messages as well as display them on the device. You can customize and display the Birthday Message and 4 other Messages.
- **Custom Birthday Message:** Enter the birthday message to be displayed on the door to the user, when the user punches on the door on her/his birth date.

The valid values are: A-Z a-z 0-9 `~!@#\$%^&\*()\_+-{}|\\|:;?<>.,\''"

- **Display Message 1 to 4:** Select this check box to enable each display message. These check boxes are enabled automatically if you select the **Enable Display Message** check box.
- **Schedule:** Specify the time duration for which the display message should be displayed in HH:MM format.
- **Message:** Enter the message to be displayed. Maximum 21 characters are allowed.
- **Multi-Language Support:** Select this check box to enable multi-language support for the selected device.
- **Auto Hide Menu Bar:** If any user touches the device screen by mistake and enters into the Menu; then users punch will not be accepted by the device till the Menu is closed or till time out occurs. To avoid such a scenario, select this check box. This will hide the Menu, hence users will be able to punch on the door. To access the Menu, swipe upwards on the device screen. The Menu appears.

## Enrollment

On the **Device Configuration** page, click the **Enrollment** tab in the left pane. The Enrollment page appears.

To configure the Enrollment parameters click the following links:

- [“Settings”](#)
- [“Temporary User”](#)

## Settings

*Settings is applicable for Direct Door only.*

Click the **Settings** tab. The **Settings** page appears.

Settings		Temporary User	
Enroll from Device	<input type="checkbox"/>		
Enrollment Mode		ReadOnlyCard	▼
Number of Cards		One	▼

Configure the following parameters.

- **Enroll from Device:** Select this check box to enable the enrollment of user from the door controller. When this check box is enabled, 'Enroll User' special function on that device will get activated.

*If 'Enroll User' Special Function & 'Enroll From Device' check box both are disabled in device configuration, then on activating 'Enroll User' special function, 'Enroll From Device' check box will be enabled.*

- **Enrollment Mode:** Select the Credential from the drop-down list that can be enrolled using the special function at the DOOR. The options are — **ReadOnlyCard, SmartCard and Face.**
- **Number of Cards:** Select the number of cards to be enrolled based on the credential option (ReadOnlyCard or SmartCard) selected in the Enrollment Mode parameter.

## Temporary User

*Temporary User/Worker is applicable for both Direct Door and Panel Door.*

*Temporary User/Worker is not applicable for Cafeteria mode of devices.*

*For Panel Door to add Temporary User/Worker, make sure*

- *Temporary Addition of Unknown User is enabled from Panel200 > Enrollment > Temporary User.*
- *User Access Mode (Door) in Zones is — Face, Biometric or Card — as per your requirement.*

*For Direct Doors make sure the User Access Mode selected in Profile is — Face, Biometric or Card — as per your requirement.*

Click the **Temporary User** tab. The **Temporary User** page appears.

Settings Temporary User

Temporary Addition of Unknown User Disabled

Confirm before adding Temporary User

**Auto Generate ID**

ID Format

Numeric Value Length 0

Zero Padding required

**Auto Generate Name**

Add Name via Device

Name Format

**Group**

Organization	1	Organization-1
Branch	1	Branch-1
Department	1	Department-1
Section	1	Section-1
Category	1	Category-1
Grade	1	Grade-1
Designation	1	Designation-1
Custom Group 1	1	Custom Group 1
Custom Group 2	1	Custom Group 2
Custom Group 3	1	Custom Group 3

Configure the following parameters.

- **Temporary Addition of Unknown User:** Select the option to temporarily add an unknown user from the drop-down list. The options are — Disabled, As Temporary Worker or As Temporary User. By default, **Disabled** is selected. If you select **Disabled**, all the parameters are disabled.

You can add an unknown user either as a temporary user or worker from the device at a time.

If you select As Temporary User, for details refer to [“As Temporary User”](#).

If you select As Temporary Worker, for details refer to [“As Temporary Worker”](#).

## As Temporary User

Temporary User		
Temporary Addition of Unknown User	Disabled	
Confirm before adding Temporary User	<input type="checkbox"/>	
<b>Auto Generate ID</b>		
ID Format		
Numeric Value Length	0	
Zero Padding required	<input type="checkbox"/>	
<b>Auto Generate Name</b>		
Add Name via Device	<input type="checkbox"/>	
Name Format		
<b>Group</b>		
Organization	1	Organization-1
Branch	1	Branch-1
Department	1	Department-1
Section	1	Section-1
Category	1	Category-1
Grade	1	Grade-1
Designation	1	Designation-1
Custom Group 1	1	Custom Group 1
Custom Group 2	1	Custom Group 2
Custom Group 3	1	Custom Group 3

If you select **As Temporary User**, configure the following parameters.

- **Confirm before adding Temporary User:** Select the check box if you wish that a confirmation message should be displayed on the device display screen, to confirm a user before adding that user as a temporary user when enrolling the same from the device. If this is not enabled, no confirmation message will be displayed and the user/worker will be enrolled automatically. You need to check the Temporary User/ Worker list to verify if the user is enrolled in the system.

### Auto Generate ID

- **ID Format:** Configure the required format of the ID as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user.

To select the different format for the ID, Enter the \* in **ID Format** box and the drop-down list containing different Value format list will appears. Select the required one from the drop-down list.

Click **Copy User Format from Global Policy**  to copy the ID Format if you have configured the same from Global Policy. For more details, refer to ["Generate User ID"](#).

- **Numeric Value Length:** Enter the desired number of the digits from 1 to 15 till which the 'NUMVAL' will be generated. For example: 4.

- **Zero Padding Required:** Select the check box to allow the addition of zeros before the 'NUMVAL' value to reach the configured Numeric value length. For example, if the Numeric value length is configured as 4 and the number assignment starts from a single digit then as explained in above example, the new user id to be generated is 'MATRIX4DOC1' if Zero Padding is enabled, it will generated as 'MATRIXDOC0001'.

## Auto Generate Name

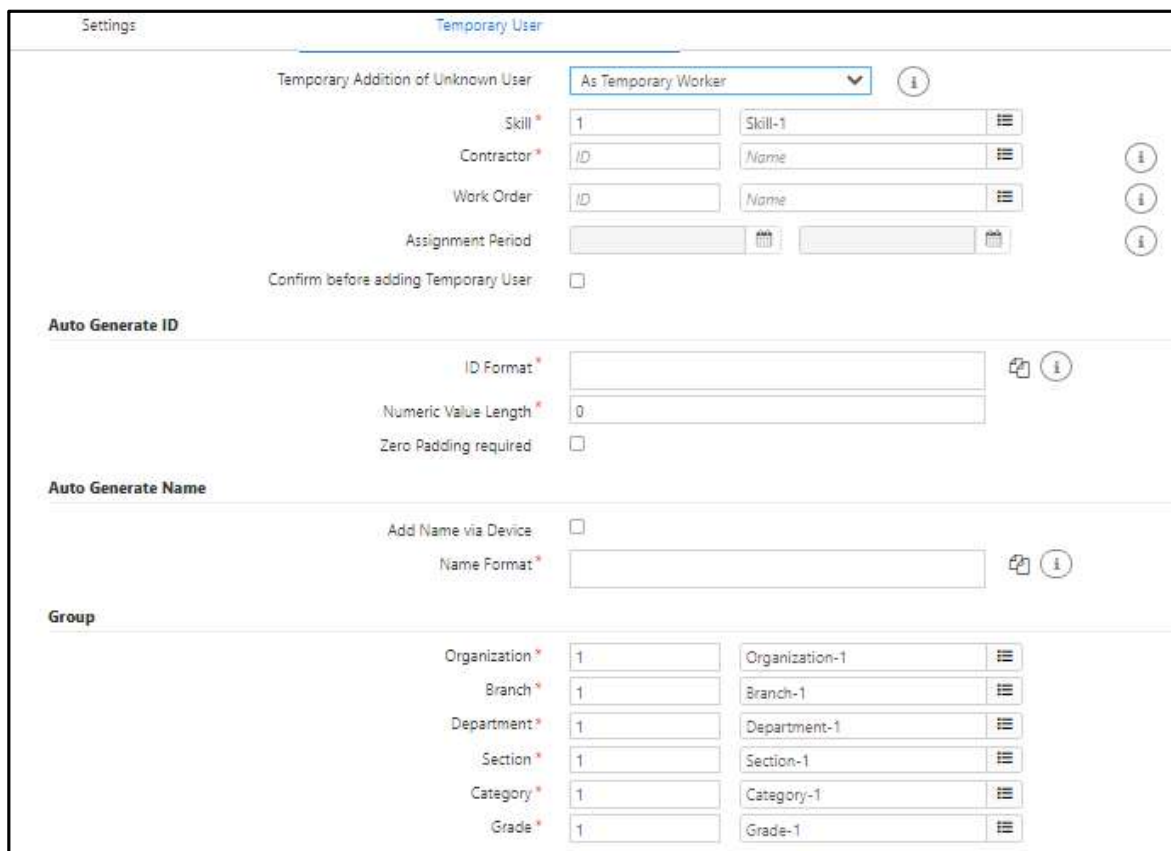

- **Add Name via Device:** Select the check box to enable adding the name of the temporary user through the device display screen while enrolling the user. If enabled, the **Name Format** parameter is disabled.
- **Name Format:** Configure the required format of the Name as 'Numeric Value Format' and/or other Value Formats in any order as per the requirement. You can also enter the fixed value which will always be displayed along with the other components of the User ID for every user. To select a different format for the ID, enter \* in **Name Format** box and select the desired format from drop-down list.

You can also copy the Name Format as configured in ID Format. To do so, click **Copy ID Format**  .

## Group

By default, groups for Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1, 2 and 3 are assigned. If you wish to assign different groups to the temporary user, you need to create groups from the Enterprise Module. Create the desired groups and then select the group from the respective picklist. For details on creating groups, refer to ["Configuring Groups"](#).

## As Temporary Worker

Settings Temporary User

Temporary Addition of Unknown User: As Temporary Worker

Skill: 1 Skill-1

Contractor: ID Name

Work Order: ID Name

Assignment Period: [Date Picker] [Date Picker]

Confirm before adding Temporary User: ☐

**Auto Generate ID**

ID Format: [Text Box]  

Numeric Value Length: 0

Zero Padding required: ☐

**Auto Generate Name**

Add Name via Device: ☐

Name Format: [Text Box]  

**Group**

Organization: 1 Organization-1

Branch: 1 Branch-1

Department: 1 Department-1

Section: 1 Section-1

Category: 1 Category-1

Grade: 1 Grade-1

If you select **As Temporary Worker**, configure the following parameters.

- **Skill:** Select the Skill to be assigned to the temporary worker from the picklist.

- **Contractor:** Select the Contractor to be assigned to the temporary worker from the picklist.

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

- **Work Order:** Select the Work Order to be assigned to the temporary worker from the picklist.
- **Assignment Period:** The work order assignment period is auto-displayed based on the work order selected. If you wish to change the assignment period, select the start date and end date of work assignment using the calendar.

The other temporary worker parameters are similar to that of temporary user. For details, refer to "[As Temporary User](#)".

## Advanced

The screenshot shows the 'Device Configuration' window with the 'Advanced' tab selected. The left sidebar lists various configuration categories, and the main area displays settings for a device with ID '0/50000' and name 'ARGO FACE'.

Category	Setting	Value
Settings	Generate Exit Switch Events	<input type="checkbox"/>
	Generate Invalid User Events	<input type="checkbox"/>
	Generate Sequential IN-OUT Events	<input type="checkbox"/>
	Two Credentials Required	<input type="checkbox"/>
	Show PIN	<input type="checkbox"/>
	Allow Exit when Door Lock	<input checked="" type="checkbox"/>
	Auto Relock	<input type="checkbox"/>
	Auto Relock Timer (Sec)	3
	Enable Additional Security	<input type="checkbox"/> Disabled
	Enable Smart Identification	<input type="checkbox"/>
Access Control	Access Level	8
	Access Mode	Card
Alarms	Auto Acknowledge Alarm	<input type="checkbox"/>
	Auto Acknowledge Alarm (Sec)	10
Facility	Facility Code	1
	Allow Access Through Mobile	<input type="checkbox"/>
Mobile Access	Mobile Entry Access Mode	Mobile Only
	Mobile Exit Access Mode	Mobile Only
Attendance	Show Attendance Details	<input type="checkbox"/>
	Duplicate Access Time Interval (Sec) *	0

The Advanced tab allows you to configure some advanced parameters such as Access Control Settings, Alarms and Device Timers as well as Wiegand.

To access this, on the **Device Configuration** page, click the **Advanced** tab in the left pane. The advanced settings can be configured from following sections:

- “Settings”
- “Alarms”
- “Timers”
- “Wiegand”

## Settings

Click the **Settings** tab.

The Settings parameters differ for ARGO Face as Direct Door and Panel Door.

### Settings - Direct Door

The **Advanced> Settings** page for ARGO Face as **Direct Door** appears as shown below.

The screenshot displays the 'Device Configuration' window for an ARGO FACE device (ID: 0/50000, Active/Inactive). The left sidebar contains a list of configuration sections: Profile, Enrollment, Advanced (selected), Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Face/Image Settings. The main area shows the 'Settings' tab with various configuration options:

- Generate Exit Switch Events: ☐
- Generate Invalid User Events: ☐
- Generate Sequential IN-OUT Events: ☐
- Two Credentials Required: ☐
- Show PIN: ☐
- Allow Exit when Door Lock: ☒
- Auto Relock: ☐
- Auto Relock Timer (Sec): 3
- Enable Additional Security: ☐ Disabled
- Enable Smart Identification: ☐
- Access Level: 8
- Access Mode: Card
- Auto Acknowledge Alarm: ☐
- Auto Acknowledge Alarm (Sec): 10
- Facility Code: 1
- Allow Access Through Mobile: ☐
- Mobile Entry Access Mode: Mobile Only
- Mobile Exit Access Mode: Mobile Only
- Show Attendance Details: ☐
- Duplicate Access Time Interval (Sec): 0

Configure the following parameters:

- **Generate Exit Switch Events:** Select this check box to enable the door to generate events every-time the exit switch is used.
- **Generate Invalid User Events:** Select this check box to enable the door to generate events for invalid user inputs.

***Generate Invalid User Events** is applicable for all other credentials except **Face**. To generate events for **Face** credentials, make sure **Generate Unidentified Face Event** is enabled under [“Face/Image Settings”](#).*

- **Generate Sequential IN-OUT Events:** Select this check box to generate user punches on device as the sequential IN-OUT events irrespective of the mode in which the device is functioning.
- **Two Credentials Required:** Select this check box to enable the feature of verifying 2 credentials compulsorily for users.
- **Show PIN:** Select this check box to display the characters of the PIN when the PIN is entered on the device.
- **Allow Exit when Door Lock:** Select this check box if users are to be allowed to exit even when the Door relay is in locked condition.
- **Auto Relock:** Select this check box to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer:** Specify the time in seconds after which the door should relock. Valid Range: 1 to 65535.
- **Enable Additional Security:** Select this check box to enable additional security at the selected Door Controller.
- **Enable Smart Identification:** Select this check box to enable this functionality on the selected Door Controller and select the **Access Level** and the **Access Mode** from the drop-down list.
- **Auto Acknowledge Alarm:** Select this check box to enable the auto-acknowledgment of all alarms for this device.
- **Auto Acknowledge Alarm (sec):** Set the time in seconds The wait timer will start and on expiry of the timer, the alarm buzzer will stop automatically.
- **Facility Code:** Set a value for Facility Code to be set for access modes other than “Card”, if Facility Code is expected in Wiegand Output. This will be applicable to all direct doors except Door V1 and V2.
- **Allow Access Through Mobile:** Check the box to allow the access to device using COSEC ACS Application.
- **Mobile Entry/Exit Access Mode:** Select the entry and exit door access mode from the options — **Mobile Only**, **Mobile then Card** and **Mobile then PIN**.

*Users will be able to use QR Code as credentials (if enabled) and Mobile Entry/Exit Mode is selected as Mobile then Card.*

- **Show Attendance Details:** Select this check box for displaying the Attendance Details of the user on ARGO FACE door. This allows users to view their attendance details on ARGO FACE door and there is no need to login to ESS application to view attendance details.

The attendance details of user will be displayed for a period of 3-4 seconds after the Access Allowed screen.

1. The user whose Attendance details are to be displayed on ARGO FACE door must be enabled for this feature. Enable the check-box **Show Attendance details on Device** from User Configuration> T&A> Attendance.

2. While an attendance detail of one user is being displayed on the device and second user tries to access the device; new user request will be processed.

3. Whenever both users of 2-person rule are allowed to get access on device then attendance details screen of second user will be loaded on device.

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

The Duplicate Access Time Interval is not applicable:

- if Duress Finger is detected by the device.
- if the device is in Cafeteria mode.
- to Smart Identification users.

## Temperature Logging

To configure Temperature Logging parameters, make sure the Enable check box for **Temperature Configuration** under “Temperature and Symptoms Configuration” in “User Policy” under “Defining Global Policies” is enabled.

Temperature Logging	
Enable	<input type="checkbox"/>
Sensor Type	FEVOBOT
Sensor Interface	USB
Calibration Parameter	+ 0.0
Approach to Sensor Wait-Timer (Sec)	3.0
Temperature Detection Time Out (Sec)	10
Tolerance between Consecutive Readings	0.5
Consecutive Readings Count within Tolerance	5
Temperature Threshold (°F)	99.5
Minimum Temperature for Access (°F)	95.0
Restriction Type	Soft
Bypass If Sensor Disconnected	<input type="checkbox"/>

- **Sensor Type:** Select the type of thermal sensor integrated in the device. There are three sensors: *Web-Based* and *FEVOBOT*. Default: *FEVOBOT*.
- **Sensor Interface:** Select the interface on which device will communicate with the sensor. For Sensor Type- Web-based, the Sensor Interface options will be: HTTP/S  
For Sensor Type-FEVOBOT, the Sensor Interface options will be: USB

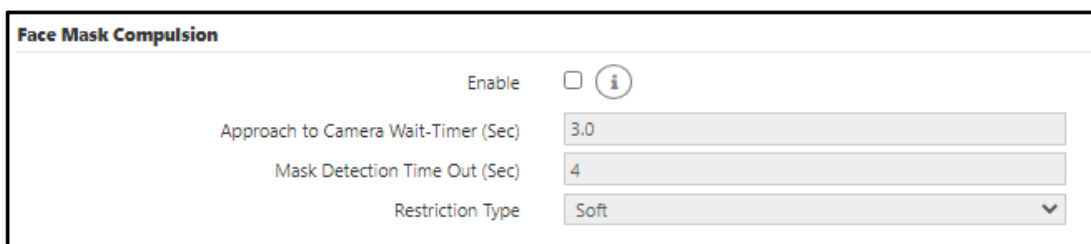

- **Calibration Parameter:** Set the calibration parameter for the thermal sensor. Not applicable for FEVOBOT. Click + the value increases by 0.1 and click – the value decreases by 0.1.
- **Approach to Sensor Wait-Timer:** This is the time for which the device will wait for user to approach the device before starting Temperature Detection.
- **Temperature Detection Time-Out:** The timer till which temperature detection will be done for the user and if valid temperatures are not found till the expiry of timer then timeout will be declared.
- **Tolerance between Consecutive Readings:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in the tolerance range the reference temperature is updated with the current temperature and the process continues. Not applicable for FEVOBOT.
- **Consecutive Readings Count within Tolerance:** The Tolerance range of reference temperature within which the consecutive readings are considered to be valid user temperature readings. If current temperature doesn't fall in tolerance range the reference temperature is updated with the current temperature and the process continues. Not applicable for FEVOBOT.
- **Temperature Threshold:** To set the threshold value of the temperature. Default: 99.5
- **Minimum Temperature for Access:** The minimum temperature value detected that should be considered as valid temperature. Default: 95.0

It should be less than threshold temperature. If user tries to enter a value equal to or greater than threshold temperature validation should be displayed.

- **Restriction Type:** You can set the restriction type as soft/hard.
- **Bypass if Sensor Disconnected:** Enable this check box to give provision of bypassing the feature if sensor connectivity is lost.

## Face Mask Compulsion

The screenshot displays the 'Face Mask Compulsion' configuration window. At the top, there is an 'Enable' checkbox and an information icon. Below these, there are three configuration fields: 'Approach to Camera Wait-Timer (Sec)' with a value of 3.0, 'Mask Detection Time Out (Sec)' with a value of 4, and 'Restriction Type' which is a dropdown menu currently set to 'Soft'.

Face Mask Compulsion feature is used to enforce users to wear masks while they are within the premises.

After identifying the user, Device will prompt the user to show Face with Mask when "Face Mask Compulsion" is enabled.

Based on identification of Mask, user will be allowed or denied access.

Make sure you have enabled **Enable FR** check box in **Devices> Device Configuration> Identification Server> Face Recognition> Enable FR** and configure the below mentioned parameters to avail this feature.

- **Enable:** Select this check box to enable Face Mask Compulsion feature for IDS.

- **Approach to Camera Wait-Timer (Sec):** This parameter defines the time within which the user must approach the camera for face mask detection.
  - You must enter the Wait-Time between 0.0-15.0 seconds.
  - By default, it is 3.0 seconds.
- **Mask Detection Time Out (Sec):** This parameter defines the maximum time duration for user's face mask detection.
  - You must enter the detection time out between 0.0-15.0 seconds.
  - By default, it is 4.0 seconds.
- **Restriction Type:** Select the type of restriction to be imposed when the configured policy is violated. Select the desired option - Soft or Hard.
  - **Soft Restriction:** The access will be granted even if the user is identified without wearing a mask; however, an event and warning are generated that indicates the user has been identified without wearing a mask.
  - **Hard Restriction:** The access will be denied if the user is identified without wearing a mask.

By default it is **Soft Restriction**.

Users face enrollments are dependent on the Visible Face parameter value set by you. To know more, refer "[Face Recognition](#)".

## Settings - Panel Door

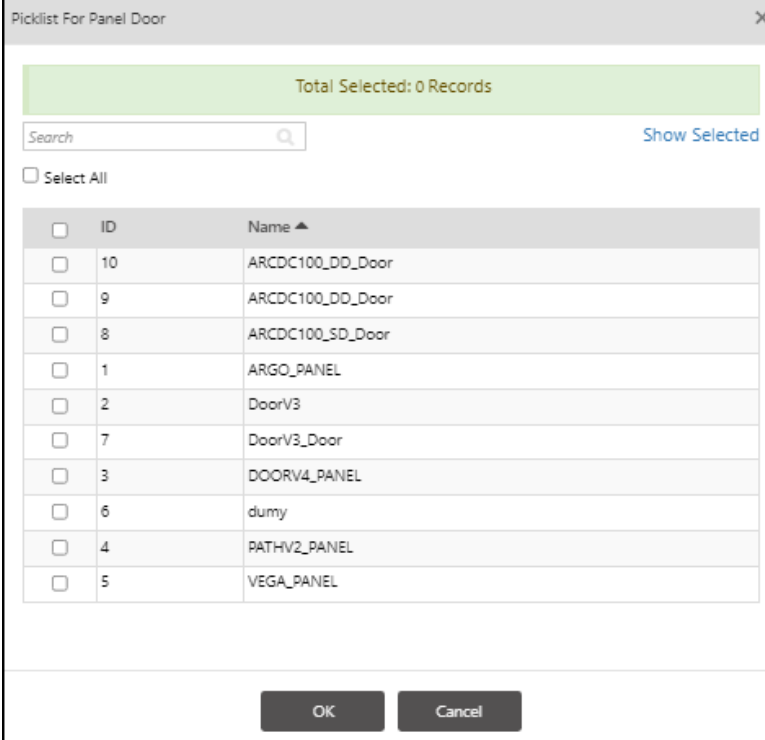

The **Advanced > Settings** page for ARGO FACE as **Panel Door** appears as shown below.

The screenshot shows the 'Device Configuration' window with the 'Settings' tab selected. The left sidebar lists 'Device ID', 'Device Name', 'Panel200 Door', 'ARGO FACE', 'Panel200', 'Active/Inactive', 'Profile', 'Enrollment', 'Advanced' (selected), and 'Video Surveillance'. The main content area shows the following settings:

- Auto Relock:** A checkbox that is currently unchecked.
- Auto Relock Timer (Sec):** A text input field with the value '3'.
- Man Trap Timer - Internal Reader (Sec):** A text input field with the value '0'.
- Man Trap Timer - External Reader (Sec):** A text input field with the value '0'.
- Enable Man Trap Door Interlocking:** A checkbox that is currently unchecked.
- Select Doors for Interlocking:** A section with two input fields labeled 'ID' and 'Name', and a list icon.
- Duplicate Access Time Interval (Sec):** A text input field with the value '0'.

- **Auto Relock:** Select this check box to allow the door to relock immediately when the door status changes to close after normal open irrespective of the defined pulse time. However, it is supported only if a door sense is installed and enabled.
- **Auto Relock Timer (Sec):** Specify the time in seconds after which the door should relock.
- **Man Trap Timer-Internal Reader (Sec):** This check-box enables an alarm wait timer on the panel door to ensure that the user enters the next sequential door of a man-trap within a specific time-frame.

- **Man Trap Timer-External Reader (Sec):** This check-box enables an alarm wait timer on the panel door to ensure that the user exits the panel door to enter the next sequential door of a man-trap within a specific time-frame.
- **Enable Man Trap Door Interlocking:** Select this check-box to activate the Door Interlock for the selected door (say Door1). This means if the Door1 is open then other doors will remain close.
- **Select Doors for Interlocking:** Select the doors to be assigned for Interlocking from the picklist. You can select particular doors or all the doors at once.
- To do so, click the **Select Doors** for Interlocking picklist. The **Picklist For Panel Door** pop-up appears.

Picklist For Panel Door

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID	Name ▲
<input type="checkbox"/>	10	ARCDC100_DD_Door
<input type="checkbox"/>	9	ARCDC100_DD_Door
<input type="checkbox"/>	8	ARCDC100_SD_Door
<input type="checkbox"/>	1	ARGO_PANEL
<input type="checkbox"/>	2	DoorV3
<input type="checkbox"/>	7	DoorV3_Door
<input type="checkbox"/>	3	DOORV4_PANEL
<input type="checkbox"/>	6	dummy
<input type="checkbox"/>	4	PATHV2_PANEL
<input type="checkbox"/>	5	VEGA_PANEL

OK Cancel

To select particular doors, click the check boxes of the desired doors.

**OR**

To select all the doors, select the **Select All** check box.

Click **OK**. Hover over the **Info**  icon. It displays the number of selected doors.

Suppose Door2 and Door3 are selected for Interlock with Door1. So When Door1 opens; Door2 and Door3 will remain close.

*For Degrade mode Door Interlocking feature will not work.*

*Whenever a door is in abnormal state and for that door interlocking is enabled then user access in other doors of the interlocking group is allowed.*

- **Duplicate Access Time Interval (Sec):** Configure the maximum duration in seconds for which the device should consider a subsequent user punch (after the first successful allowed punch) received as a duplicate punch. Valid Range: 0 to 9999 seconds. Default: 0.

The Duplicate Access Time Interval is not applicable:

- if Duress Finger is detected by the device.
- when Panel200 Server mode is in Degraded mode.
- to Smart Identification users.

## Face Mask Compulsion

Face Mask Compulsion feature is used to enforce users to wear masks while they are within the premises.

After identifying the user, Device will prompt the user to show Face with Mask when “Face Mask Compulsion” is enabled.

Based on identification of Mask, user will be allowed or denied access.

Make sure you have enabled **Enable FR** check box in **Devices> Device Configuration> Identification Server> Face Recognition> Enable FR** and configure the below mentioned parameters to avail this feature.

- **Enable:** Select this check box to enable Face Mask Compulsion feature for IDS.
- **Approach to Camera Wait-Timer (Sec):** This parameter defines the time within which the user must approach the camera for face mask detection.
  - You must enter the Wait-Time between 0.0-15.0 seconds.
  - By default, it is 3.0 seconds.
- **Mask Detection Time Out (Sec):** This parameter defines the maximum time duration for user’s face mask detection.
  - You must enter the detection time out between 0.0-15.0 seconds.
  - By default, it is 4.0 seconds.
- **Restriction Type:** Select the type of restriction to be imposed when the configured policy is violated. Select the desired option - Soft or Hard.
  - **Soft Restriction:** The access will be granted even if the user is identified without wearing a mask; however, an event and warning are generated that indicates the user has been identified without wearing a mask.
  - **Hard Restriction:** The access will be denied if the user is identified without wearing a mask.

By default it is **Soft Restriction**.

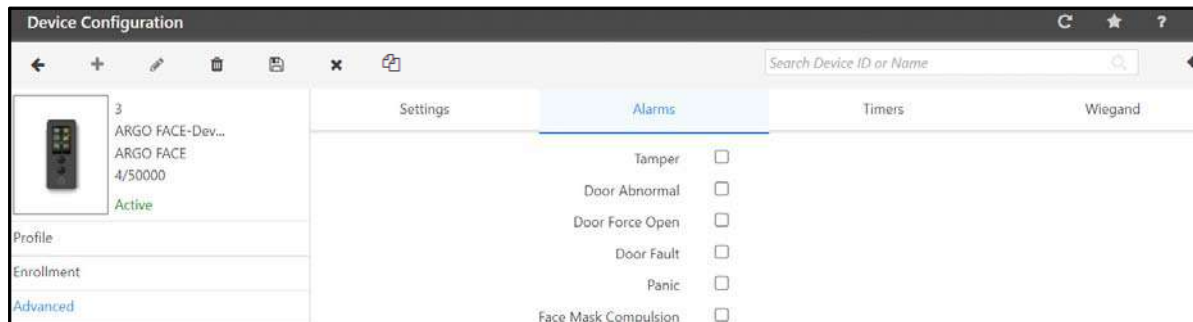

Users face enrollments are dependent on the Visible Face parameter value set by you. To know more, refer [“Face Recognition”](#).

## Alarms

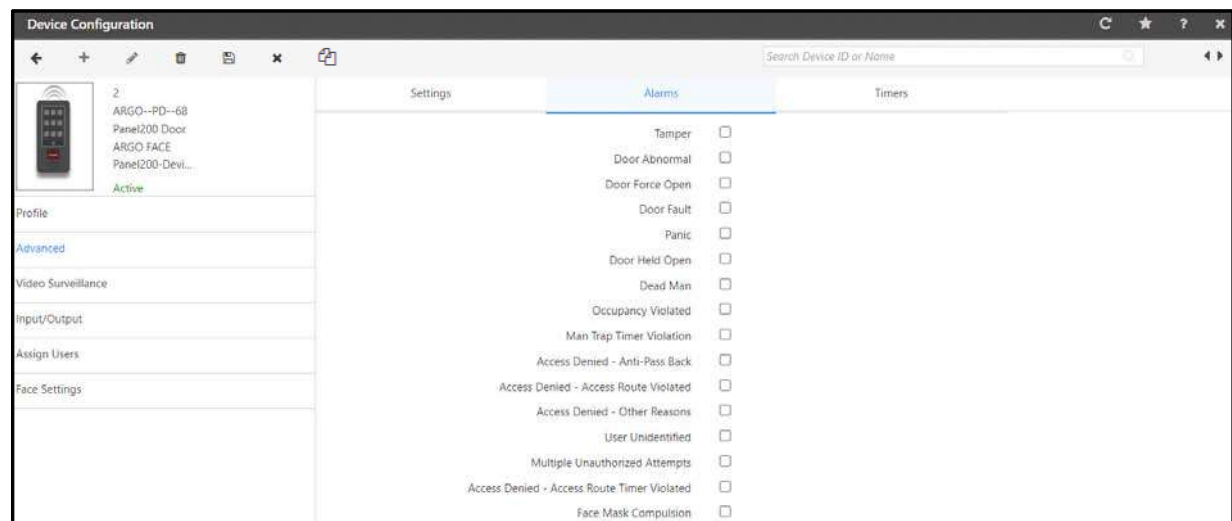

In the **Alarm** tab, you can assign below list of alarms to the door.

Click the **Alarms** tab. A different set of Alarms can be enabled/disabled for ARGO Face as Direct Door as well as Panel Door.

The **Alarms** page for ARGO FACE as **Direct Door** appears as shown below.

The **Alarms** page for ARGO FACE as **Panel Door** appears as shown below.

Select the check boxes of the desired Alarms you wish to enable.

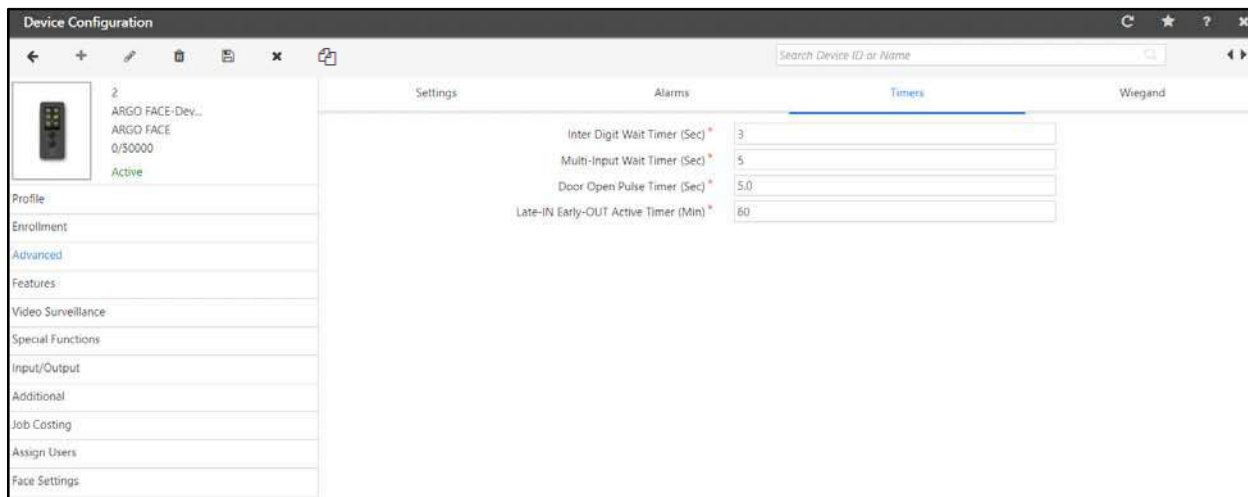

## Timers

This section allows the configuration of various types of pre-defined device timers which can trigger specific responses. In COSEC, timers are often used to control door behavior and for triggering alarms.

The Timers parameters differ for ARGO FACE as Direct Door and Panel Door.

### Timers - Direct Door

Click the **Timers** tab. The **Timers** page for **ARGO FACE** as a **Direct Door** appears.

Configure the following parameters:

- **Inter-Digit Wait Timer (sec):** Specify the time period in seconds (1 to 99) between two key inputs on the device keypad. On expiry of this timer, the system considers the user input to be complete and is ready for the next input.
- **Multi-Input Wait Timer (sec):** Specify the time in seconds (3 to 99) for which system needs to wait for the second credential input from the user when more than one credential is to be used to grant access.

*We recommend you to set the timer value as greater than or equal to 10 seconds to avoid access denial issues to users. This is applicable when the system reads the credentials (biometric) from the user's Smart Cards.*

- **Door Open Pulse Timer (sec):** Specify the time in seconds (0.1-65535.0) for the door to be energized for a valid credential. If the opened door does not return to a closed state before the expiry of this timer, the door will generate a "Door Abnormal" alarm.

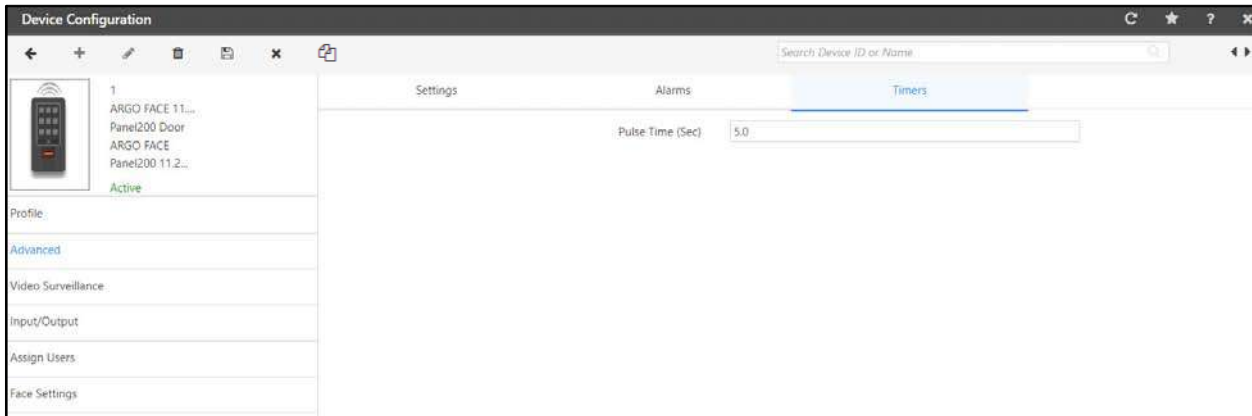

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

- **Late-IN Early-OUT Active Timer (min):** Specify the time in minutes (1 to 99) for which the Late-IN and Early-OUT special functions will remain active after being enabled for the Door Controller.

## Timers - Panel Door

Click the **Timers** tab. The **Timers** page for **ARGO FACE** as a **Panel Door** appears.

- **Pulse Time (sec):** Specify the time in seconds (0.1 to 65535.0) for the panel door to be energized for a valid credential.

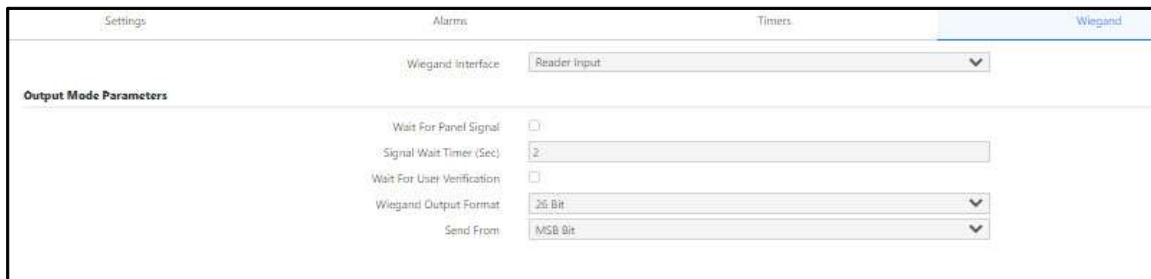

*To ensure smooth functioning of this feature, make sure the Server and Device Firmwares are upgraded to the latest version.*

## Wiegand

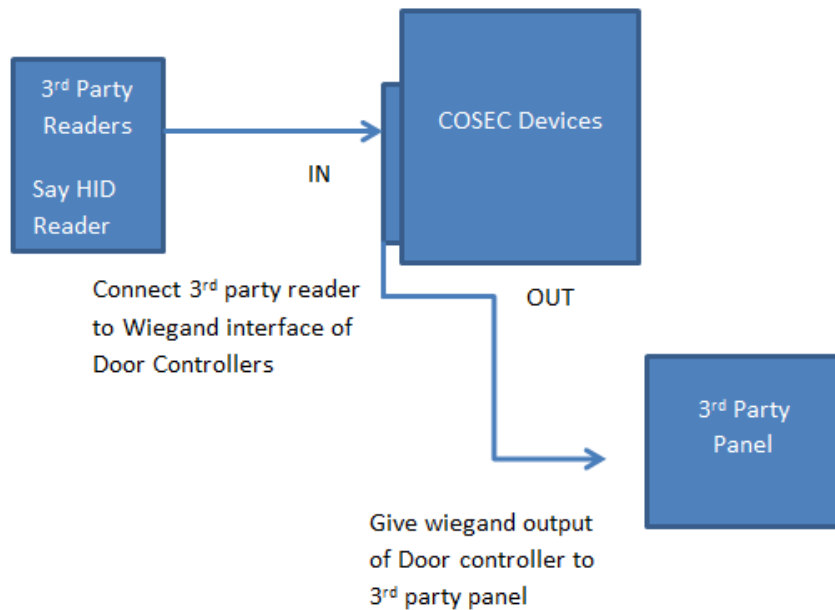

*Wiegand is applicable for Direct Door only.*

Click the **Wiegand** tab. The **Wiegand** page appears:

- **Wiegand Interface:** The COSEC device can be connected both as input devices (e.g. to receive data from a Wiegand Reader) or output devices (e.g. to support output to third party panel) via the Wiegand interface as shown below.

So select the interface of Door controller as **Output Mode** to work as Wiegand output to panel or **Reader Input** to take data from third party reader. If Reader Input option is selected, all the Output Mode parameters will be disabled.

If you select Output Mode then configure the following **Output Mode Parameters**:

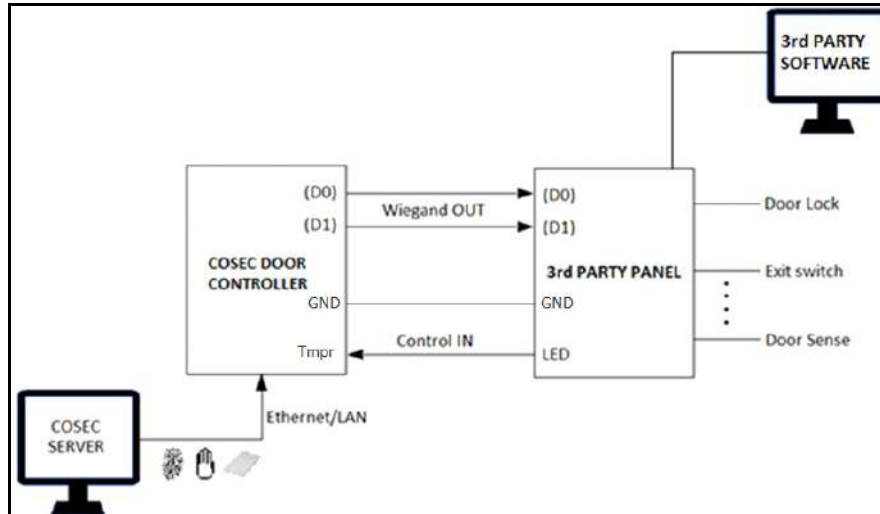

- **Wait For Panel Signal:** Select the check box to enable this option. The door will wait for reply from the connected third party device before triggering any output, as per the defined **Signal Wait Timer (Sec)**.
- **Signal Wait Timer (Sec):** The time for which the device will wait to receive the reply from the third party panel, before it triggers any output.
- **Wait For User Verification:** Select the check box to enable this option. The user verification will be requested to the third party device before triggering any output.
- **Wiegand Output Format:** Select the desired Wiegand Output Format from the options 26 Bit, 37 Bit, Actual or Custom.

If you select Custom, you need to configure the Wiegand Format. For details refer to Devices Module > Masters > Wiegand Output Format.

- **Send From:** Specify the sending order for reader data as MSB or LSB Bit.

## Wiegand Out Interface

## Door Access using QR code

The user can access the COSEC device using COSEC APTA installed in the mobile device. If the user has rights for COSEC APTA and the access to the device is allowed for the user, then he can use his mobile device to scan the QR code which constitutes the details of the COSEC door.

There is icon for QR code in the COSEC APTA application. Click the icon, it will open the camera in your mobile. Now you can scan the QR Code using the mobile camera. The COSEC door will get opened after verifying the security key and access policies of the user.

## Steps to create a QR code

Step 1: Enter details in JSON format

```
{"version":"x","ip": "x.x.x.x","port":"x","pdid":"x","mode":"x"}
```

Valid values:

Field	Field range	Default Value	Remark
version	1-255	1	
ip	0.0.0.0-255.255.255.255	0.0.0.0	
port	0-65535	0	
pdid	0-255	0	If door is in direct door mode then, then PDID will be 0  If door is in panel door mode then, PDID will have values from 1-255
mode	0,1	0	0= for entry mode 1=for exit mode

**Note:**

**Step1:** If door is in direct door mode enter IP & port of the direct door.

**Step 2:** Encrypt the JSON string using key "matrix12" with simple DES/ECB mode.

**Step 3:** Encode the encrypted string using Base 64.

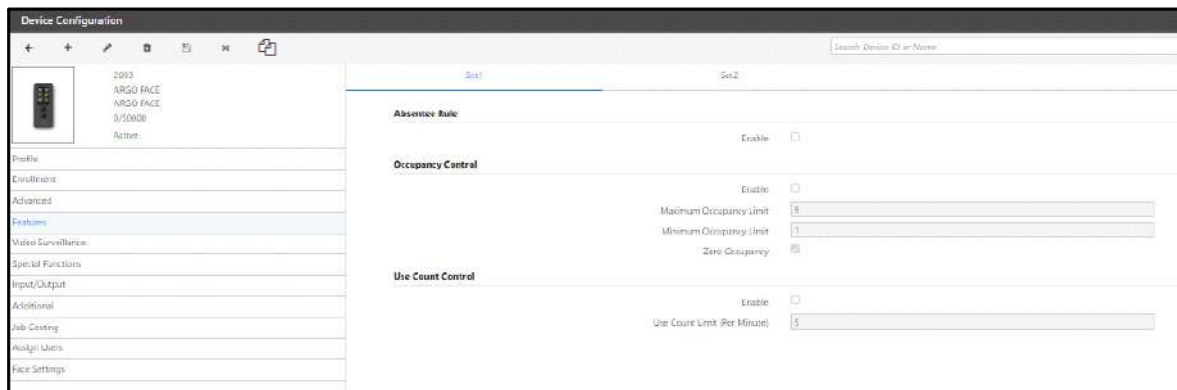

**Step 4:** Use this string to generate QR code through any third party software.

## Features

*The Features are available only with the Access Control Module license and are applicable for Direct Door only.*

On the **Device Configuration** page, click **Features** on the left pane. This tab allows the user to enable certain Access Control features for the device.

To set the access control features for the device, click the following:

- “Set1”
- “Set2”

## Set1

This page allows you to set the parameters for three rules - **Absentee Rule**, **Occupancy Control** and **Use Count Control**. Click the **Set1** tab, the page appears.

The screenshot shows a web interface with two tabs at the top: 'Set1' (selected) and 'Set2'. Below the tabs are three sections for configuring rules:

- Absentee Rule**: Contains an 'Enable' checkbox which is currently unchecked.
- Occupancy Control**: Contains an 'Enable' checkbox (unchecked), a 'Maximum Occupancy Limit' input field with the value '9', a 'Minimum Occupancy Limit' input field with the value '1', and a 'Zero Occupancy' checkbox (unchecked).
- Use Count Control**: Contains an 'Enable' checkbox (unchecked) and a 'Use Count Limit (Per Minute)' input field with the value '5'.

- **Absentee Rule:** Select the **Enable** check box to enable the feature on the door. This rule sets the maximum number of days for non-use of a credential. On expiration of days limit, the user will be automatically blocked. For configuring the rule, refer to *Access Control> Absentee Rule*.
- **Occupancy Control:** Select the **Enable** check box to enable this feature on the door.
  - **Maximum Occupancy Limit:** Specify the maximum number of users to be allowed within the controlled area after which a user exit is required to enable access to another user.
  - **Minimum Occupancy Limit:** Specify the minimum number of occupants the designated zone should have.
  - **Zero Occupancy:** Select the check box to enable, that is whether the designated zone should be allowed to be empty or not.

For configuring the rule, refer to *Access Control> Occupancy Control*.

- **Use Count Control:** Select the Enable check box to enable this feature on the door.
  - **User Count Limit (Per Minute):** Specify the maximum number of uses per minute allowed to the user.

For configuring the rule, refer to *Access Control> Use Count Control*.

## Set2

This page allows you to set the parameter for the three rules - **First-IN User Rule**, **Anti-Pass-Back (APB)** and **2-Person Rule**. Click the **Set2** tab and the page appears.

The screenshot displays the configuration interface for the Matrix COSEC System, divided into three main sections:

- First IN User Rule:**
  - Enable:** A checkbox that is currently unchecked.
  - Reset On:** Radio buttons for "Day Change" (selected) and "Timer Expiry".
  - Access Timer (Sec):** A text input field containing the value "3".
  - First IN User Group:** A dropdown menu showing "1" and a "List 1" button.
- Anti-Pass Back (APB):**
  - On Entry:** An unchecked checkbox.
  - On Exit:** An unchecked checkbox.
  - Hard/Soft:** A dropdown menu set to "Soft".
  - Forgiveness:** A checked checkbox.
  - Reset After:** Radio buttons for "Day Change" (selected) and "Timer Expiry".
  - Forgiveness Timer (Min):** A text input field containing the value "1".
- 2-Person Rule:**
  - Enable:** An unchecked checkbox.
  - Mode:** A dropdown menu set to "Primary Must".
  - Primary Group:** A dropdown menu set to "Select".
  - Secondary Group:** A dropdown menu set to "None".
  - 2nd Person Wait Timer (Sec):** A text input field containing the value "5".

- **First-IN User Rule:** Select the Enable check box to enable the feature on the direct door and configure the parameters.

- **Reset On:** You can reset the rule as per your requirement. Select the desired option f — **Day Change** or **Time Expiry**.

If you select **Time Expiry**, configure the **Access Timer (Sec)**.

- **Access Timer (sec):** Configure the duration for which the rule should be applied. After the expiry of this timer the rule will be reset for all the users.
- **First-In User Group:** Click the picklist to select the desired group which would be valid at the door. For configuring the rule, *refer to Access Control> First- In User Rule> Assignment*
- **Anti-Pass Back (APB):** Select the Enable check box to enable this feature on the direct door and configure the parameters.
  - **On Entry:** Select the check box so that the system monitors the entry reader for APB violation.
  - **On Exit:** Select the check box also so that the system monitors the entry as well as the exit readers for APB violations.
  - **Hard/Soft:** Select the restriction type as Hard or Soft.
    - **Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit.
    - **Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and warning are generated that indicates the second entry.

- **Forgiveness:** Select this check box to enable the system to reset the APB status. When forgiveness is enabled, you can select one of the following options to reset the pass.
- **Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use her/his card for entry in the next morning.
- **Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time. If you select this option, configure the Forgiveness Timer (Mins).
- **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-pass back status should be reset and the pass will be in original state.
- **2-Person Rule:** Select the Enable check box to enable the feature on the door and configure the parameters.
- **Mode:** Set the Mode as **Primary Must** or **Primary & Secondary Must**.
- **Primary Group:** Select the desired group from the drop-down list.
- **Secondary Group:** Select the desired group from the drop-down list.
- **2nd Person Wait Timer:** Set the wait time in seconds after which the second person is allowed to punch on the door.

For configuring the rule, refer to *Access Control > 2- Person Rule*

## Video Surveillance

*Video Surveillance is applicable for both Direct Door and Panel Door.* On the **Device Configuration** page,

Click **Video Surveillance** on the left pane. The Video Surveillance tab allows you to configure parameters for video surveillance integration with the COSEC device. It is available in Basic License.

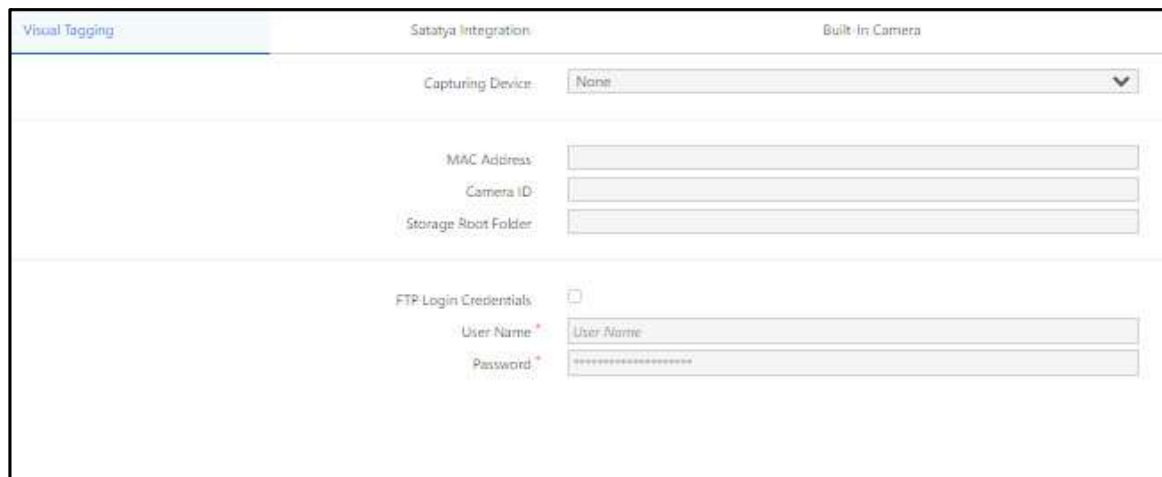

To set parameters, click the following links:

- [“Visual Tagging”](#)
- [“Satatya Integration”](#)
- [“Built-In Camera”](#)

## Visual Tagging

The COSEC application acts as an interface between supported hybrid and network video recording systems as well as IP Cameras and grab images triggered by user events at the Doors. The **Visual Tagging** option enables the administrator to define the video recorder and IP Camera parameters.

Click **Visual Tagging** tab. The **Visual Tagging** page appears.

To view the user events and related images, click **Admin > Views/Logs > Event View**. To know more about viewing events, refer [“Event View”](#).

Configure the following parameters:

- **Capturing Device:** Select the video recording type of device or IP Camera from the drop-down list.
  - Matrix HVR/NVR
  - Built-In Camera
  - Milestone

If you select **Matrix HVR/NVR**, configure the following:

- **MAC Address:** Specify the MAC address of the video recorder device using “\_” (underscore) as the separator.
- **Camera ID:** Specify the camera number or camera ID of the IP cameras. For analog cameras specify the camera number.
- **Storage Root Folder:** Specify the Root folder path or FTP Path where the uploaded images will be saved.
- **FTP Login Credentials:** Select this check box to enable FTP login credentials for authentication.
  - **Username:** Specify the FTP Server Username.
  - **Password:** Specify the FTP Server Password.

Some COSEC devices do not support all the network connection options.

If you select **Milestone**, refer to [“Milestone Integration”](#).

If you select **Built-In Camera**, refer to [“Built-In Camera”](#).

## Satatya Integration

This functionality is available for configuration only when the **Matrix HVR/NVR** device type is selected as the **Capturing Device** under **Visual Tagging**. It enables the configured COSEC devices to directly send commands to the SATATYA HVR/NVR devices as per the configurations.

Click the **Satatya Integration** tab. The Satatya configuration page appears.

<div>Add Cancel</div>																										

- **Integration type:** Select the desired options — Wired, Network.

In **Wired**, the door is physically connected with Satatya Device. If you select this option then you do need to configure any other parameters.

In **Network**, connection can be though Ethernet, Wireless or Broadband depending upon the COSEC device support. If you select this option, configure the following parameters:

- **Active:** Select the check box to enable the connection.
- **IP Address:** Specify the IP Address of HVR/NVR.

- **Port Number:** Specify the Port Number of HVR/NVR.
- **Schedule Name:** Specify a user friendly name for the schedule function.**Active:** Select the check box to enable the SATATYA Integration functionality.
- **Schedule Range:** To run the schedule for the function, configure the start and the end time (*24 Hours format*).
- **Days:** To apply the configured schedule to the days of the week, select the check boxes of the desired days of the week.
- **Event:** Select the desired COSEC event from the drop-down list for which the action is to be configured.
- **Mode:** Select the desired event mode from the options — Entry, Exit and Both.
- **Action:** Select the action to be taken by the Satatya device from the drop-down list. The options are — Recording, Image Upload, Video Pop-up, PTZ Preset, Mail Image.

If you select **Recording**, configure the **Duration Min.** as well as select the desired **Camera** channels.

If you select **Upload Image**, select the desired **Camera** channels. Images will be uploaded as per the FTP settings.

If you select **Video Pop-up**, configure the **Duration Sec.** as well as select the desired **Camera** channels. The video pop up will be generated on the local client of Satatya device for the selected cameras.

If you select **PTZ Preset**, configure the desired **Position No.** as defined in the SATATYA device as well as select the desired **Camera** channels.

If you select **Mail Image**, configure the **Email ID** as well as select the desired **Camera** channels.

- **Camera:** Select the check boxes of the relevant camera channels depending on the action selected.

**Example:** For Access allowed event on COSEC Device, the video pop up of Camera 12 will be shown for 10 seconds.

Click **Add** to complete the process of linking the event with the action. You can also configure other event-action linkages as per your requirements.

The screenshot shows a configuration window with the following fields and options:

- Event:** Access Allowed (dropdown menu)
- Mode:** Both (dropdown menu)
- Action:** Video Pop-Up (dropdown menu)
- Duration Sec.:** 10 (text input field)
- Camera:** A grid of checkboxes for cameras 1 through 24. Camera 12 is selected (checked).

<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5

## Built-In Camera

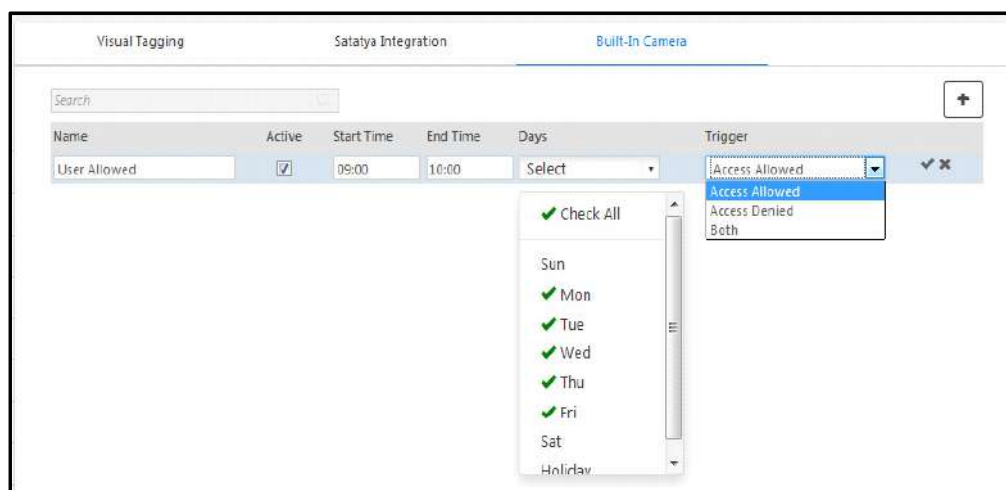

This functionality enables configuration and scheduling of image capturing using the in-built camera of the door. Click the **Built-In Camera** tab. The **Built-In Camera** configuration page appears.

The ARGO FACE's built-in camera can be scheduled to capture images during scheduled periods and can be triggered by specific user events.

To configure a schedule click **Add** button as shown above.

- Specify the function **Name** and select the **Active** check box to enable it on the system.
- Specify a schedule by entering **Start** and **End Time**.
- Select the Applicable **Days**.
- Select the user events Trigger from the drop-down list on the occurrence of which the image capturing should be triggered. The options are Access Allowed, Access Denied and Both.

- Click **OK** and then click **Save** to save the schedule for the selected device.

*If you delete ARGO FACE Panel Door from your device list, then the configurations stored for Built-In Camera will not be deleted. If you add the same ARGO FACE Panel Door again with the same Panel Door ID, then the configurations for Built-In Camera will be restored and displayed on the same page.*

## Special Functions

*Special Functions are applicable for Direct Door only.*

On the **Device Configuration** page, click the **Special Functions** tab on the left pane.

No.	Function Name	Active	Job Selection	User Group	Card 1	Card 2	Card 3	Card 4
1	Official Work - IN	Yes	Yes	All				
2	Official Work - OUT	Yes	Yes	All				
3	Short Leave - IN	Yes	Yes	All				
4	Short Leave - OUT	Yes	Yes	All				
5	Regular - IN	Yes	Yes	All				
6	Regular - OUT	Yes	Yes	All				
7	Break Start	Yes	Yes	All				
8	Break End	Yes	Yes	All				
9	Quarantine - IN	Yes	Yes	All				
10	Quarantine - OUT	Yes	Yes	All				
11	Normal User	Yes	No	All				
12	Normal Special Card	Yes	No	All				

To configure *Special Functions* for COSEC doors, refer to [“Special Functions”](#).

*Users will be able to use QR Code as credentials (if enabled) for Special Functions, if the QR number is configured against a Card1/2/3/4.*

## Input/Output

The Input/Output (I/O) configuration of a system determines how the output or response of a system is influenced by the input applied on it. In case of the COSEC Access Control System, the I/O configuration should enable the system to monitor and trigger a specific response to any change in the door state or event occurrences at the door device. This change of door state or occurrence of events is considered as an input while the response or action that is generated by the system on detection of this input, is defined as the output.

**Device Configuration**

Network Interface: Ethernet

1. This functionality cannot be fully accessed in the Edit  mode for a selected device.
2. This functionality is available only with the Access Control add-on module license.

On the **Device Configuration** page, click the **Input Output** tab on the left pane. Click the following links to configure the parameters:

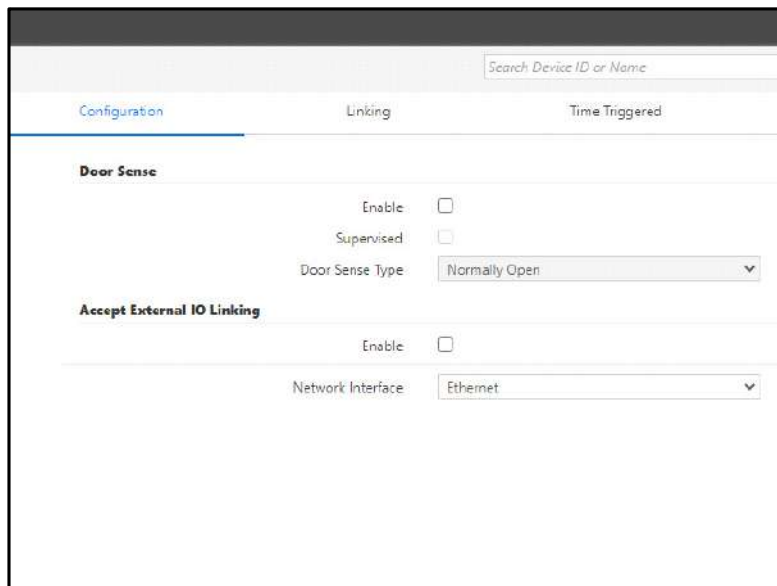

- ["Configuration"](#)
- ["Linking"](#)
- ["Time Triggered"](#)

## Configuration

Configuration is applicable for both Direct Door and Panel Door but the parameters differ.

Click the **Configuration** tab. The **Configuration** page for ARGO FACE as **Direct Door** is shown below.

- **Door Sense:** The system by default can sense two states of a door - *Normally Open* and *Normally Closed* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.
  - Select the **Enable** check box to enable the system for two-state monitoring.
  - Select the **Supervised** check box to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*.
  - Specify the **Door Sense Type** as **Normally Closed** or **Normally Open**.
- **Accept External IO Linking:** Select the **Enable** check box to enable device-to-device IO Linking i.e. input from one Direct Door can trigger output in another Direct Door.
- **Network Interface:** Select the interface option for IO linking with external devices. The options are:
  - Ethernet

- Wireless
- Mobile Broadband

The **Configuration** page for ARGO FACE as **Panel Door** is shown below.

- **Door Sense:** The system by default can sense two states of a door - *Normally Open (NO)* and *Normally Closed (NC)* depending on which the output is determined. For example, any deviation of the door from its normal state may lead to the trigger of a *Door Abnormal* alarm.
- Select the **Enable** check box to enable the system for two-state monitoring.
- Select the **Supervised** check box to enable the door for four-state monitoring where the door is also monitored for *door fault* and *door disconnection*.
- Specify the **Door Sense Type** as **Normally Closed** or **Normally Open**.
- **Relay Output:** This indicates the physical output which is received for opening and closing of the door.
- **Output Group Number (Door Unlock):** Select the Output Group Number to which the device output for Door Unlock is to be assigned from the picklist.
- **Output Group Number (Door Lock):** Select the Output Group Number to which the device output for Door Lock is to be assigned from the picklist.

## Linking

*Linking is applicable for Direct Door only.*

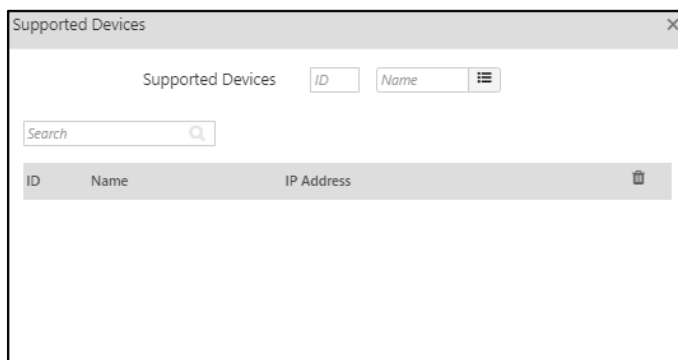

Click the **Linking** tab. The **Linking** page appears.

Name	Active	Input	Output	Output Type	Pulse Time(Sec)	Reset Link	Reset Time	Supported Devices
	No	Intercom Panic	Door Relay			Inactive	00:00	0 »
	No	User Allowed	Door Relay			Inactive	00:00	0 »
	No	User Denied	Door Relay			Inactive	00:00	0 »
	No	Zone Empty	Door Relay			Inactive	00:00	0 »

The COSEC application supports the Input/Output Linking feature to activate an output port based on a trigger received from an input port on the same Direct Door. This option enables the administrator to define how an event or events (input port) will trigger an output on the selected door.

Select a Input-Output linking row or click **Edit** button.

- **Name:** Specify a name for the new I/O linking program.
  - **Active:** Select this check box to activate this linking program.
  - **Output Type:** Specify the appropriate type of output from the following four options available in the drop-down list:
    - **Pulse:** With this type of output, the user needs to define the Pulse time in seconds.
    - **Interlock:** With this option, the output follows the input. The relay output is triggered as long as the input is activated after which it returns to normal state.
    - **Latch:** With this option, it is denoted that the relay output will be in an energized condition for infinite period and needs to be reset manually.
    - **Toggle:** With this option, the output group toggles its state whenever an input group is activated.
  - **Pulse Time (sec):** For a *Pulse* output type, specify the pulse duration in seconds.
  - **Reset Link:** Select this check box to reset the link automatically after a defined time period.
  - **Reset Time:** Enter the time period in hh:mm format after which the link should be reset automatically.
- For example, an IO Link gets activated on 21/04/2017 at 15:00. And Reset Time is set as 18:00. When Device Time is 18:00 then that IO link will get reset.
- **Supported Devices:** Click the picklist, all devices supported for external IO Linking will appear in this . Select the desired devices. Upto 255 external devices can be added by the administrator.
  - Click **Supported Devices**  icon. The **Supported Devices pop-up** appears.

- In this pop-up, click the **Supported Devices** picklist, the **Picklist For Direct Door** pop-up appears.

52	Factory Vega Production-2	192.168.10.27	

OK Cancel

You can also delete the desired devices. To do so, click **Delete** of the respective device.

Close the pop-up the number of selected devices are displayed under **Supported Devices** in the grid.

- Click the **OK** button and **Save** the configuration.

## Time Triggered

*Time Triggered is applicable for Direct Door only.*

This functionality enables the user to control the activity of an Output without manual intervention.

The time triggered functions are used for activating events like door unlock and siren activation that are set as per the start time and for the configured time duration.

This functionality is designed to energize outputs for predefined periods at the configured time. The COSEC Access Control System supports up to 20 Time Triggered functions on a Direct Door

Click the **Time Triggered** tab and the page appears.

Click **Add**.

- Enter the **Function Name**.
- Select the **Active** check box.
- Enter the **Time** and **Duration** of the triggered function.
- Select the **Days** on which this function should be triggered.
- Click **OK** and then **Save** to save the settings.

## Additional

*Additional is applicable for Direct Door only.*

This section lists some additional configurations that can be enabled for door controllers.

On the **Device Configuration** page, click the **Additional** tab.

Many countries observe the convention of adjusting clocks forward and backward. Clocks are set ahead during the spring and back to standard time in the autumn. COSEC doors can be configured and made compatible, keeping the RTC of the system updated with such changes.

The **Daylight Saving** configuration can be done in 2 ways. that is Day-Month wise or Date-Month wise.

- Select the **DST Type** as Day-Month wise or Date-Month wise.

Select **Disable** if you do not wish to apply DST.

- If you select the **Day-Month wise** option, the DST is set by the day of the month on which clock needs to be forwarded and reverted to normal. Set the month, week number, day of the week, and time for both the **Forward Clock** and **Backward Clock** as shown.

The screenshot shows the 'Daylight Saving' configuration window. At the top, 'Daylight Saving' is selected in the left sidebar. The main form has two sections: 'Forward Clock' and 'Backward Clock'. In the 'Forward Clock' section, 'DST Type' is set to 'Day-Month wise' (dropdown), 'Time Period' is '00:00' (text input), 'Month' is 'January' (dropdown), 'Week No.' is '1st' (dropdown), 'Day of Week' is 'Sunday' (dropdown), and 'Time' is '00:00' (text input). The 'Backward Clock' section has identical fields: 'Month' is 'January', 'Week No.' is '1st', 'Day of Week' is 'Sunday', and 'Time' is '00:00'. A 'Save' button is at the bottom right.

- If you select the **Date-Month wise** option, the DST is set by date of the month on which clock needs to be forwarded and reverted to normal. Define the **Time Period** for the date-month wise DST settings in *24-hours* format, and specify the day of the week, date and time for the **Forward Clock** and the **Backward Clock** as shown.

The screenshot shows the 'Daylight Saving' configuration window with 'Date-Month wise' selected for 'DST Type'. The 'Forward Clock' section shows 'Month' as 'January', 'Date' as '1' (dropdown), and 'Time' as '00:00'. The 'Backward Clock' section also shows 'Month' as 'January', 'Date' as '1', and 'Time' as '00:00'. The 'Time Period' field is present but empty. A 'Save' button is at the bottom right.

This DST Setting implies that on 1st Sunday of November at 09:00 hours, the clock will be forwarded by 08:00 hours. And on 1st Sunday of January at 10:00 hours, the clock will be reversed or set backward by 08:00 hours.

- Click the **Save** button.

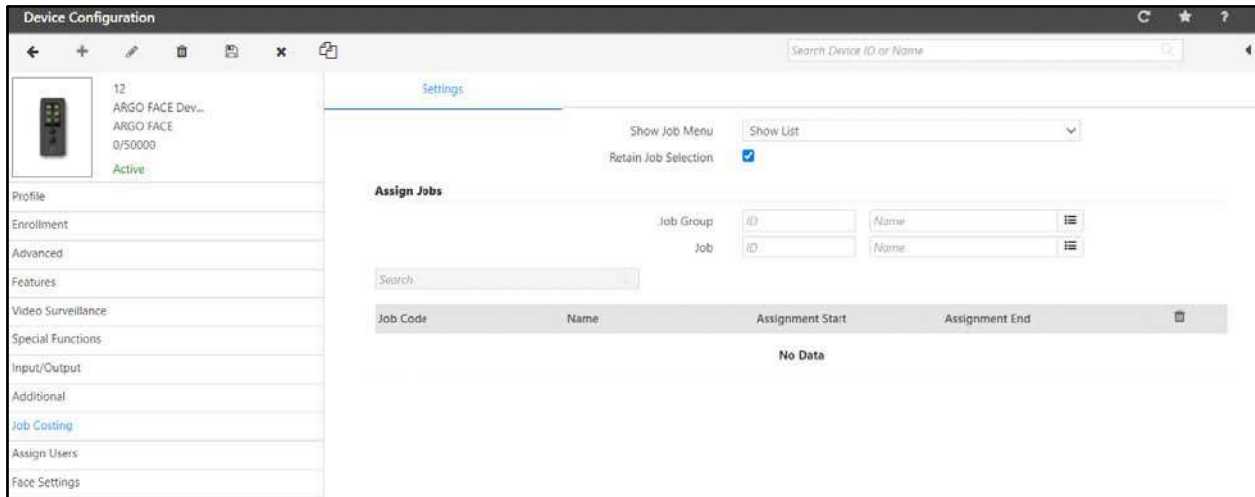

## Job Costing

*Job Costing is applicable for Direct Door only.*

When user punches on any device, there will be an option to select the Job Code on which the user is working. Job Costing enables the Administrator to display or hide Job Code selection on device. It also enables the Administrator to assign default jobs on device.

*Make sure the **Device Based Job Assignment** check box is enabled for the desired Users.*

- **Show Job Menu:** Select the option as **Show List** or **Allocate Default**.

### Show List

When **Show List** is selected; then multiple jobs can be assigned to the device. The user can select the relevant Job Code while punching on the device. His/her job hours will be recorded for that Job Code.

- **Retain Job Selection:** If Retain Job Selection check box is selected, it allows the device to remember the last Job Code selected by a user and the same would be applicable for all the subsequent users until another job selection is done on the device. This is useful in environments where dynamic job selection prevails.

In this case, if the user selects a Job Code the same is saved and retained for future use by the device. If the user selects None option on the device, it ends the current job and assigns None until a new Job Code is selected by the user.

If the you clear the check box, then the device does not retain any job selection done by the user.

For example, in an educational setup, teachers may have dynamic job assignments, while students have static ones. After a teacher selects a Job Code, that code is retained by the device. Any student who punches in afterward will be assigned the teacher's Job Code until the teacher selects a new one or selects None.

### Assign Jobs

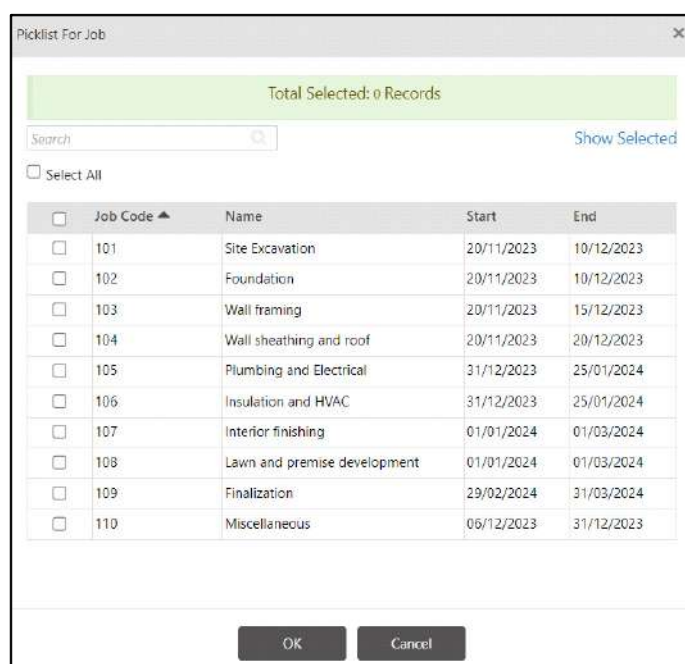

- **Assign Jobs:** You can select Job Group as well as individual Jobs.

- To select **Job Group**, click the Job Group picklist, the **Picklist For Job Group** pop-up appears. Select the desired Job Group.

Click **Save**. The Jobs of the selected Job Group appear in the grid.

You can delete the desired Job. To do so, click **Edit**  and then click **Delete**  of the respective Job.

- To select **Jobs**, click the Jobs picklist. The **Picklist For Job** pop-up appears.

OK Cancel

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

**OR**

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**.

The selected Jobs appear in the grid. You can also delete the desired Job. To do so, click **Delete**  of the respective Job.

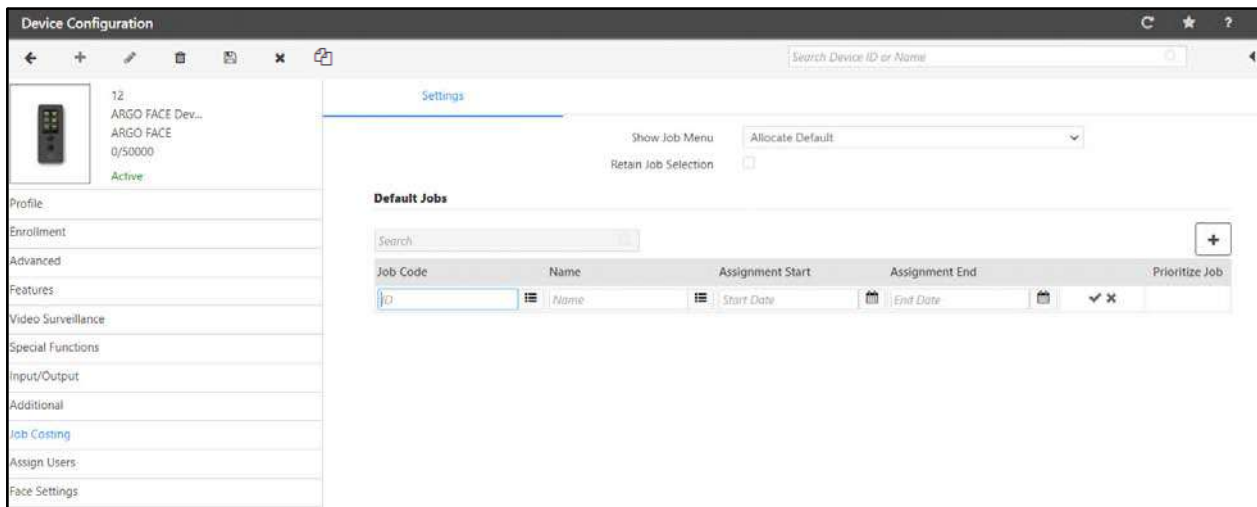

- Click **Save**.

## Allocate Default

When **Allocate Default** is selected; then default jobs for the device can be selected. The Job costing user can directly punch on this door for starting the default job.

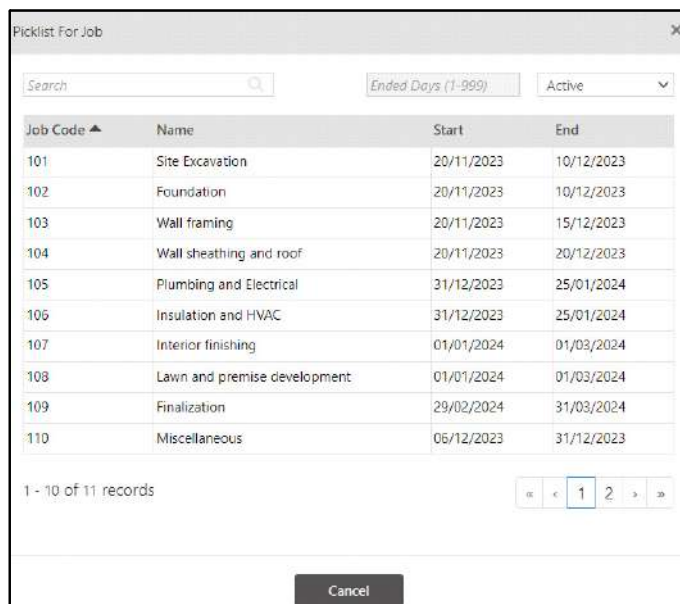

## Default Jobs

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

- Click **Add**  . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar. The selected job appears in the grid.

- **Assignment Start** and **Assignment End**: The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.

- Click **Save** to save the configuration.

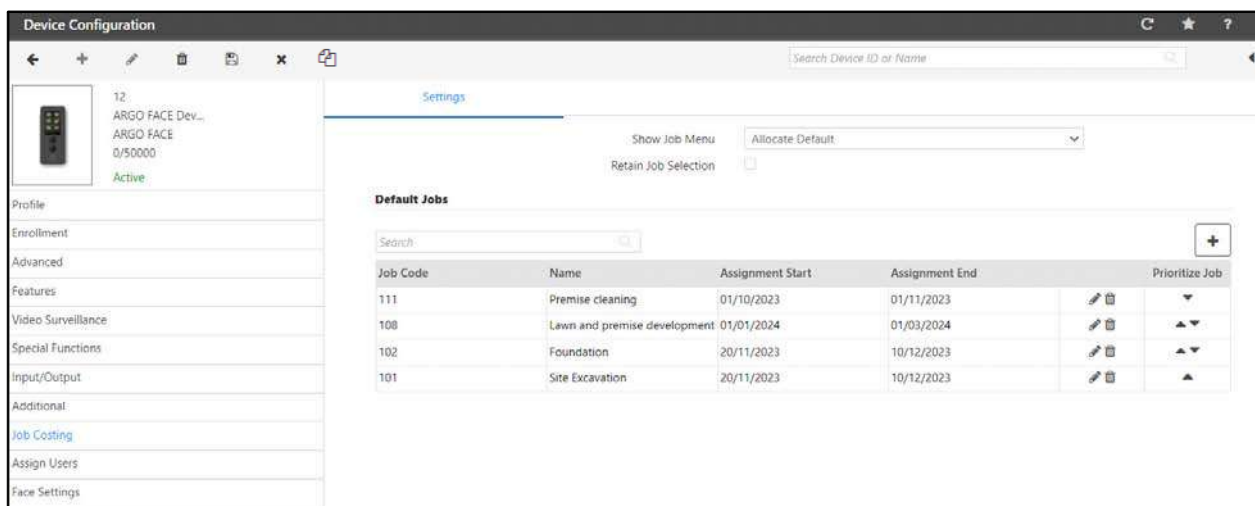

The **Default Jobs** grid will consist of all the jobs, that is expired, in-progress as well as assigned.

*It is recommended to set job priority only if overlapping dates are assigned to the jobs.*

*If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.*

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

User 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, User 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When User 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when User 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

## Assign Users

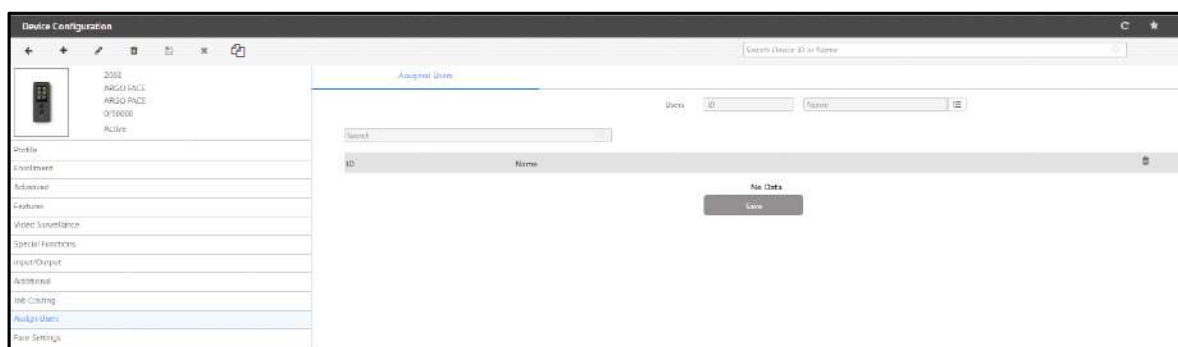

*Assign Users is applicable for both Direct Door and Panel Door.*

### For Direct Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The Picklist For All Users window appears.

Select the check boxes of the desired Users and click **OK**.

The grid displays the list of selected users.

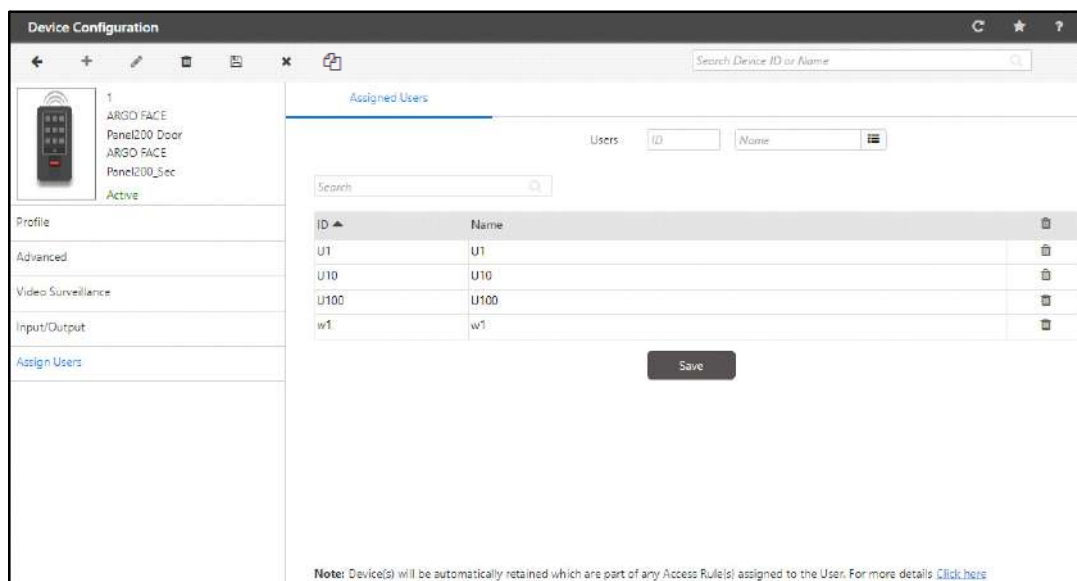

If you wish to remove any assigned user, click the respective **Delete**  icon.

- Click **Save**.

## For Panel Doors

You can select and assign users to the door.

On the **Device configuration** page, click **Assign Users**. The Assign Users page appears.

- **Users:** Click the picklist. The **Picklist For All Users** window appears.

Select the check boxes of the desired Users and click **OK**.

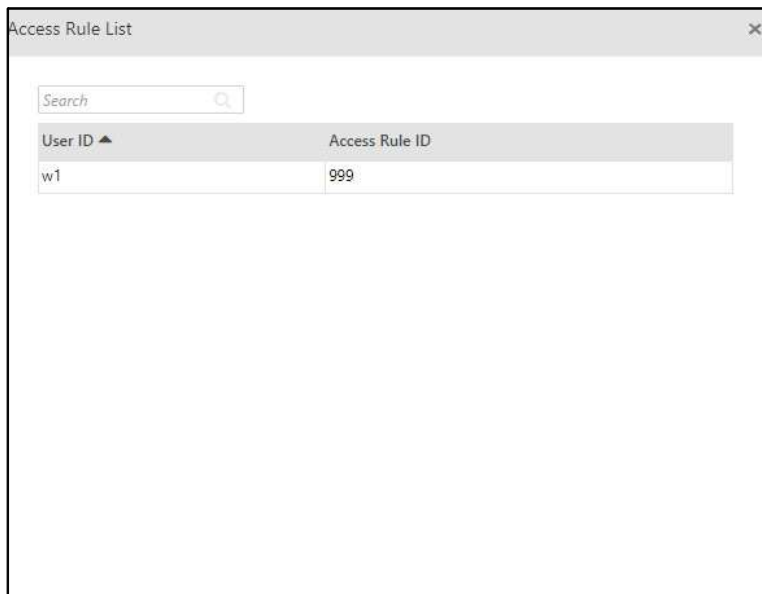

The grid displays the list of selected users.

If you wish to remove any assigned user, click the respective **Delete**  icon.

*If you wish to delete a user which is assigned to this device and it is a part of any Access Rule assigned to that user, then such user and door/s will be retained.*

- If you wish to check the users assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The image shows a pop-up window titled "Access Rule List". It contains a search bar at the top. Below it is a table with two columns: "User ID" and "Access Rule ID". The table has one row with the values "w1" and "999".

User ID	Access Rule ID
w1	999

It displays the list of User ID along with the Access Rule ID against which they are assigned.

- Click **Save** to assign all the added users to this door.

## Cafeteria

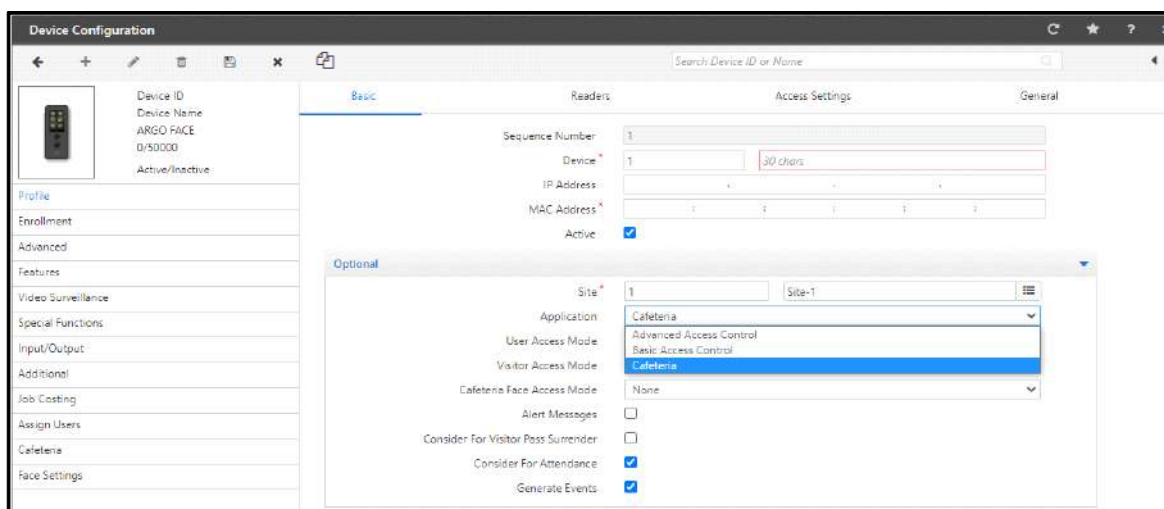

*Cafeteria is applicable for Direct Door only.*

*View Cafeteria Balance from Device will be functional using Card, QR Code (if Allow Access Via QR is enabled) as well as Face (if Enable FR is enabled) credentials.*

The COSEC system enables you to configure devices which will be used by the Cafeteria management module.

To configure a door for Cafeteria application, make sure you have selected **Cafeteria** option in **Application** (Device Profile > Basic > Application) as shown below.

The image shows the "Device Configuration" window with the "Application" tab selected. The left sidebar shows a list of configuration options: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, Cafeteria, and Face Settings. The main area displays the "Application" configuration for a device named "ARGO FACE". The "Application" dropdown is set to "Cafeteria". Other options include "User Access Mode" (Basic Access Control), "Visitor Access Mode" (Basic Access Control), "Cafeteria Face Access Mode" (None), "Alert Messages" (unchecked), "Consider For Visitor Pass Surrender" (unchecked), "Consider For Attendance" (checked), and "Generate Events" (checked).

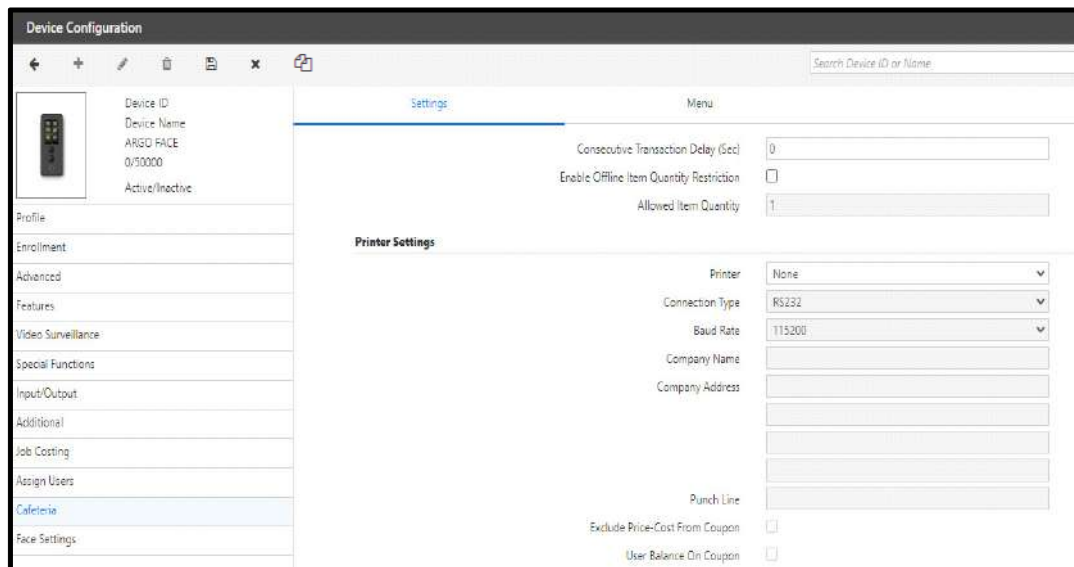

On the **Device Configuration** page, click **Cafeteria** on the left pane.

For the Cafeteria configurations, click the following links.

- “Settings”
- “Menu”

## Settings

Click **Settings** tab. The Cafeteria configuration for ARGO FACE Door appear.

The screenshot shows the 'Device Configuration' window. On the left, a sidebar lists various configuration categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, Cafeteria (selected), and Face Settings. The main area is titled 'Settings' and contains the following fields:

- Consecutive Transaction Delay (Sec):** A text input field with the value '0'.
- Enable Offline Item Quantity Restriction:** A checkbox that is currently unchecked.
- Allowed Item Quantity:** A text input field with the value '1'.
- Printer Settings:** A section containing several fields:
  - Printer:** A dropdown menu with 'None' selected.
  - Connection Type:** A dropdown menu with 'RS232' selected.
  - Baud Rate:** A dropdown menu with '115200' selected.
  - Company Name:** A text input field.
  - Company Address:** A text input field.
  - Punch Line:** A text input field.
  - Exclude Price-Cost From Coupon:** A checkbox that is currently unchecked.
  - User Balance On Coupon:** A checkbox that is currently unchecked.

- **Consecutive Transaction Delay (Sec):** Enter the time interval after which you wish to allow the second transaction from the same user.
- **Enable Offline Item Quantity Restriction:** Select the check box if you desire restricting transaction on exceeding the item quantity while the device is in offline mode.
- **Allowed Item Quantity:** Specify the number of item quantity to be allowed when the device is in offline mode. This will be applicable for each item present in the Menu.

For example, if the Menu has two items Tea and Poha and you have configured the **Allowed Item Quantity** as 2, then when the device is offline, the user/worker will be allowed to consume Tea twice as well as Poha twice.

## Printer Settings

- **Printer:** Select the printer from the drop-down list based on the site requirements.
- **Connection Type:** Select the printer connection type from the drop-down list. The options available are:
  - RS232 (serial)
  - USB
- **Baud Rate:** In the event of a serial printer, select the appropriate baud rate from the drop-down list.
- Specify the **Company Name**, **Company Address** and the **Punch Line** as per the site requirements. These details will be printed on the receipt dispensed from the selected printer.

- **Exclude Price-Cost From Coupon:** Select this check box if you want to exclude the price from the coupon.
- **User Balance On Coupon:** Select the check box, if you want Current Balance/ Current Month Usage and Weekly Remaining Limit to be printed on the Cafeteria receipt.  
For pre-paid account users, Current Balance and Weekly Remaining Limit will be printed.

For post-paid account users, Current Month Usage and Weekly Remaining Limit will be printed.

For details refer to [“Cafeteria Usage Policy”](#).

## Menu

Click the **Menu** tab.

COSEC allows the administrator to assign one or more Cafeteria Menus (Menu 1, Menu 2, Menu 3... upto 99.) to a device. These can be configured by selecting pre-defined menus from the Menu picklist.

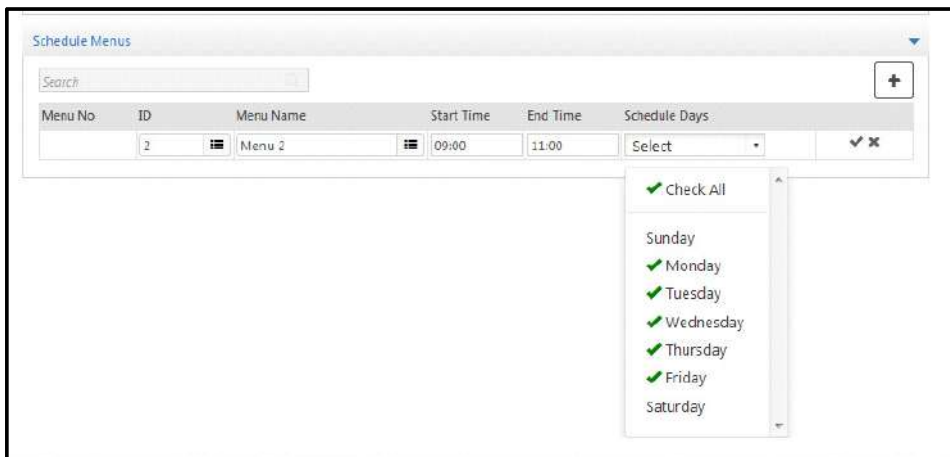

*The Menu is created from Cafeteria module.*

The Menu can also be scheduled from Cafeteria module which will be displayed under “Schedule Menus” in above screen.

If you have to assign menu and schedule it on the door from Device Configuration page, then select the Menu from the picklist. The Menu will be displayed in the grid as shown below.

Now to schedule the Menu click **Add**.

- **ID:** Click the picklist to select the desired Menu ID
- **Name:** Click the picklist to select the desired Menu Name.
- **Start Time/End Time:** Specify the **Start Time** and **End Time** for which the Menu will be active and is available to users on the selected door.
- **Days:** Select the **days** for which this menu will be available, that is, scheduled on the door.
- Click **OK** and **Save** to save the Menu schedule on the door.

*Two Menus cannot be scheduled for the same timing.*

## Face/Image Settings

*Face/Image Settings (except Group FR which is applicable for Direct Door only) are applicable for both Direct Door and Panel Door.*

*ARGO Face as Panel Door supports FR Mode - Local only.*

Device has a limited memory capacity for storage of templates so we need the Identification Server which will store more number of templates and respond to the device when asked for identification.

For more information on Identification Servers, refer to *Admin> System Configuration> Identification Server Configuration*.

On the Device Configuration page, click **Face/Image Settings** on the left pane.

The screenshot shows the 'Device Configuration' interface. On the left, a sidebar lists various settings categories: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions, Input/Output, Additional, Job Costing, Assign Users, and Face/Image Settings (which is highlighted). The main area displays the 'Settings' for the selected device. Under the 'Image Settings' section, the following options are visible: 'Enable FR' (checked), 'Allow Access Via QR' (unchecked), 'Image Capturing Mode' (set to 'Free Scan'), 'Enable Time Out' (unchecked), 'Free Scan Time Out (Sec)' (set to 30), and 'Identification Time-Out Duration (Sec)' (set to 4). Below this, the 'Face Recognition' section includes 'FR Mode' (set to 'Local'), 'Matching Threshold (Face)' (set to 94.00%), 'Threshold for Face Detection' (set to 50%), 'Group FR' (unchecked), 'Capture Face of Unidentified User' (unchecked), 'Show Feedback for Unidentified Face' (checked), and 'Generate Unidentified Face Event' (unchecked).

## Image Settings

*The parameters under **Image Settings** are applicable when **Enable FR** and/or **Allow Access Via QR** are enabled.*

*If both **Enable FR** and **Allow Access Via QR** are enabled then all the credentials will be functional.*

- **Enable FR:** By default, this check box is enabled, that is Face Recognition feature is enabled in the device. Clear the check box to disable.

*If only **Enable FR** is enabled, then the credentials with Face will be functional, but Access Via QR feature will not be functional.*

- **Allow Access Via QR:** If you wish to allow users/workers to access the Device using QR Code, select this check box. Enabling this feature will eliminate the need of connecting a Wiegand QR Reader separately for detecting QR Codes.

- *Access Via QR feature is not applicable for Temporary Users.*
- *Access Via QR feature is applicable for:*
  - *Application mode select as Basic Access Control, Advanced Access Control as well as Cafeteria mode.*
  - *If only **Allow Access Via QR** is enabled, then the credentials with Card only will be functional and FR feature will not be functional.*
  - *Credential option selected in Mobile Entry/Exit Access Mode is set as Mobile then Card (when only Allow Access Via QR is enabled).*
- *Users will be able to use QR Code as credentials (if enabled) for Special Functions, if the QR number is configured against a Card1/2/3/4.*

For the QR Code functionality to work, make sure:

- you have generated the QR Code for the desired user, refer to **"Credentials"**, Access Card 2.

- you have generated the QR Code for the desired worker, refer to [“Worker Profile- Credentials”](#), Access Card 2.
- enabled the Alert, so that the generated/re-generated QR can be sent to the desired users/workers using SMS/Email/WhatsApp. Make sure you select the Alert Filter as Users and Event as User Access - QR Credentials. For details, refer to [“Configuring Alert Messages”](#).

If you add new devices and want **Allow Access Via QR** check box to be enabled by default, make sure you have enabled the same in Global Policy > Device. For details refer to [“Device”](#) in [“Defining Global Policies”](#).

- **Image Capturing Mode:** Select the desired Image Capturing option.
  - **Tap and Go:** If you select this option, user needs to tap on the device screen once. The MJPEG, that is motion recording screen appears. Device will capture and then identify the users face. If during working hours device is idle, then user needs to tap the device to scan the face and gain access.
  - **Free Scan:** If you select this option, the device will display the MJPEG, that is motion recording screen till the expiry of the Free Scan Time Out timer.
    - **Enable Time Out:** Select this box to enable the time out.
    - **Free Scan Time Out (Sec):** Enter the Free scan time out duration. The valid range is 1 to 999 sec.

In Free Scan method, multiple users can mark their attendance easily during peak entry hours.

For example, if the Free Scan Time Out is set as 30sec and if the user is identified in 10S then the system reloads the Free Scan Time Out timer again. Hence, device remains in the scanning mode.

- **Identification Time-Out Duration (Sec):** Specify the duration in seconds after which the face identification will get timed out. For Example: If 5 seconds is specified, then the identification server will try to identify the face till 5 seconds and if not found then it will show time-out to the user.

## Face Recognition

- **FR Mode:** Select the FR Mode as **Local** or **Server Assisted**.

*ARGO Face as Panel Door supports FR Mode - Local only.*

- **Local:** In this Local mode Face templates will be stored in FR hardware module which can store 2 lakh face templates. The captured face template will be verified with the templates stored in the FR module.
- **Server Assisted:** In Server Assisted mode, an identification server and the fields to configure an individual identification server will get enabled as shown below. You must select the Identification server from where the face templates will be identified.

*Card will be identified and verified locally by the device irrespective of the FR Mode. Whereas, Face will be identified and verified based on the selected FR Mode.*

When FR Mode is selected as **Local** below mentioned parameters are to be configured:

The screenshot shows the 'Settings' page with two main sections: 'Image Settings' and 'Face Recognition'. In the 'Image Settings' section, 'Enable FR' is checked, 'Allow Access Via QR' is unchecked, 'Image Capturing Mode' is set to 'Free Scan', 'Enable Time Out' is unchecked, 'Free Scan Time Out (Sec)' is set to 30, and 'Identification Time-Out Duration (Sec)' is set to 4. These four settings are enclosed in a red rectangular box. The 'Face Recognition' section shows 'FR Mode' set to 'Local', 'Matching Threshold (Face)' at 94.00%, and 'Threshold for Face Detection' at 50%. Below these are 'Group FR' (unchecked), 'Capture Face of Unidentified User' (unchecked), 'Show Feedback for Unidentified Face' (checked), and 'Generate Unidentified Face Event' (unchecked).

- **Matching Threshold (Face):** Enter the Matching Threshold in percentage for Face Recognition. This will be considered while face identification of the user. This value can be configured upto two decimal points. *Example:* If you set Matching threshold as low (e.g.: 20%) then false matching may be found. i. e. your Face may match with other person.

But if you set matching at high percentage (e.g.: 70%) then more accurate matching of your template will be done and accordingly access will be granted or denied.

- **Threshold for Face Detection:** Set the value in percentage. The system will consider this percentage as confidence of face presence in the received image. When the user image received is above this threshold it will be considered for further processing.

*If you upgrade the system to V20R08 and later, the value of Threshold for Face Detection will be set as 50 by default.*

If you select FR Mode as **Server Assisted**, you must configure the following parameters:

User can either assign a separate or a common Identification Server which is shared by other biometric credentials.

The screenshot shows the 'Settings' page with the 'Image Settings' section. The 'Face Recognition' sub-section is highlighted with a red box. The settings within this section are:

- FR Mode: Server Assisted (dropdown)
- Identification Server: ID (picklist), Name (picklist)
- Configure Alternate Server Address: ☐
- Server Address: (text field)
- Server Port: 11005 (text field)
- Threshold for Face Detection: 50 (text field) %

- **Identification Server:** Select the Identification server from the picklist to which the device is to be assigned to save the records.
- **Configure Alternate Server Address:** Select this check box to configure external IP address of Identification Server.
- **Server Address:** By default, this will display the configured Identification Server for FR. This field allows user to enter the Alternate IP Address for FR if **Configure Alternate Server Address** is enabled.
- **Server Port:** Enter the TCP port number. The default port number is 11005.
- **Threshold for Face Detection:** Set the value in percentage. The system will consider this percentage as confidence of face presence in the received image. When the user image received is above this threshold it will be considered for further processing.

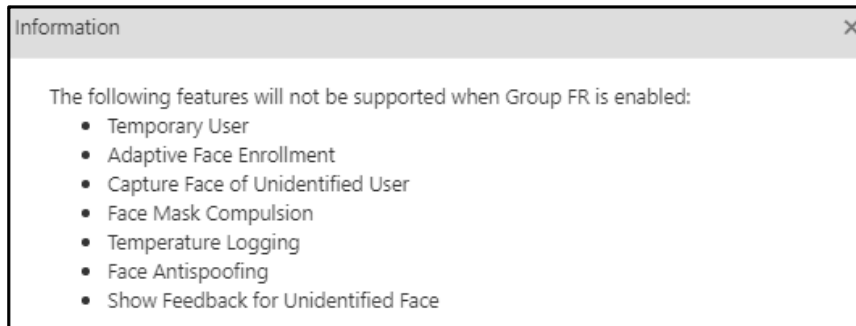

*Group FR is applicable for Direct Door only.*

- **Group FR:** Select this check box to enable face recognition feature for multiple users and marking their attendance at the same time via this door. Group FR will be applicable only if you have selected **Free Scan** as the **Capturing Mode**.

For Group FR ("[Mark Group Attendance](#)") feature to work, ensure that Server Assisted is selected as the FR Mode and the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

Once you enable Group FR, a pop-up will be displayed as shown below:

The features listed in the pop-up will not be functional.

- **Capture Face of Unidentified User:** Select this check box to enroll unidentified faces of users via this door.

For Capture Face of Unidentified User feature to work, ensure that the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.

If you have enabled the **Capture Face of Unidentified User** feature then make sure that you schedule a task of **Delete Unidentified Face** in Admin > System Utilities> Task Scheduler to avoid storage of excess data in the database.

- **Show Feedback for Unidentified Face:** Select this check box, if you wish to display a message on the Device display screen to user's whose face is not identified.

If you wish that events should be generated for Unidentified Face, enable **Generate Unidentified Face Event**.

If you have enabled **Group FR**, **Show Feedback for Unidentified Face** feature will not be functional.

- **Generate Unidentified Face Event:** Select this check box, if you wish to generate events when a user's face is unidentified.

These events can be viewed from **Admin Module > View/Logs > Event View** as well as **Device Module > Reports > Invalid Events**.

If you wish to view the snapshots in the Events/Logs, make sure you have configured "[Built-In Camera](#)" in "[Visual Tagging](#)". Make sure you select the Trigger as **Access Denied** or **Both** to view the snapshots for **User Denied- User Invalid** event.

**Generate Unidentified Face Event** is applicable for **Face** credentials only.

For ARGO FACE Direct Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under **“Settings - Direct Door”** in **“Advanced”**.

For ARGO FACE Panel Door, to generate events for all other credentials, make sure **Generate Invalid User Events** is enabled under **“Settings”** tab in **“Advanced”** in **“Panel200”**.

If you wish that a message should be displayed on the device display screen for Unidentified Face, enable **Show Feedback for Unidentified Face**.

## Face Enrollment

If the **FR Mode** is **Server-Assisted** and you wish to enroll faces from the device, make sure **Enable Face Recognition** is selected in **Users > User Configuration > Face Recognition and/or Visitor Management > Visitor Profile > Face Recognition and/or Contract Worker Management > Worker Profile > Face Recognition**.

The screenshot shows the 'Settings' page with a 'Face Enrollment' section. The 'Conflict Check' checkbox is checked, and the 'Conflict Matching Threshold (Face)' is set to 93.00%. The 'Adaptive Face Enrollment' section has 'Adaptive Face Enrollment' unchecked, 'Threshold Deviation (Face)' set to 02.0%, 'Multi-User Matching Score Deviation (Face)' set to 02.0%, and 'Confirm Before Adaptive Face Enrollment' unchecked. The 'Face Antispoofing' section has 'Face Anti-Spoofing' unchecked, 'Face Anti-Spoofing Mode' set to 'Advance', 'Face Anti-Spoofing Threshold' set to 62.00%, and 'Default Biometric Group No.' set to 0.

Setting	Value
Server Port	11005
Threshold for Face Detection	50 %
Group FR	<input type="checkbox"/>
Capture Face of Unidentified User	<input type="checkbox"/>
Show Feedback for Unidentified Face	<input checked="" type="checkbox"/>
Generate Unidentified Face Event	<input type="checkbox"/>
<b>Face Enrollment</b>	
Conflict Check	<input checked="" type="checkbox"/>
Conflict Matching Threshold (Face) *	93.00 %
<b>Adaptive Face Enrollment</b>	
Adaptive Face Enrollment	<input type="checkbox"/>
Threshold Deviation (Face)	02.0 %
Multi-User Matching Score Deviation (Face)	02.0 %
Confirm Before Adaptive Face Enrollment	<input type="checkbox"/>
<b>Face Antispoofing</b>	
Face Anti-Spoofing	<input type="checkbox"/>
Face Anti-Spoofing Mode	Advance
Face Anti-Spoofing Threshold	62.00 %
Default Biometric Group No.	0

- **Conflict Check:** Select the check box for the system to check the conflict between the new face of a user and the already (existing) enrolled faces of all the users (available in the database) during the face enrollment process.
- **Conflict Matching Threshold (Face):** Enter the desired Conflict Matching Threshold (Face) value in percentage.

The system will consider this value while comparing the face with the face templates already present in the database.

If a conflict is found, that is, if the system detects a face template in the database similar to the new face, then a conflict error will be displayed.

Make sure a higher value is set for this parameter, as it will result in less equivalent matches with the face templates available in the database.

Make sure the **Conflict Matching Threshold (Face)** is set lower than **Matching Threshold** in **Admin module > System Configuration > Identification Server Configuration**.

#### Example: Face Enrollment of Suresh

- **Conflict Check** check box is selected.
- **Conflict Matching Threshold (Face)** is set as 93%.

Now during the face enrollment of Suresh, the system will check in its database if his face matches with faces of other users available in the database.

- **Case 1:** If Suresh's face matches 92% with Ram, then the system will allow to enroll Suresh's face.
- **Case 2:** If Suresh's face matches 94% with Shyam, then the system will display the conflict error while enrolling Suresh's face.

## Adaptive Face Enrollment

- **Adaptive Face Enrollment:** Select this check box to Enable Adaptive Face Enrollment for identification server.
- Adaptive face enrollment provides automatic real time face enrollment whenever change is experienced in facial features.
- Enabling adaptive enrollment process parameter, an additional slot will be provided internally to store 10 more face templates of a user.
- IDS will learn from face recognized, adapt and would take decision of storing new template of a user database.

If you enable Adaptive Face Enrollment, you must configure the following parameters.

- **Threshold Deviation (Face):** Enter the value of deviation from matching threshold in percentage. Based on the value entered for deviation, template for Adaptive Face Enrollment will be decided.

Example: If deviation entered is 3% and matching threshold is 98% then it will classify template which has matching score between 98 - 95 and one lower than this will be classified below margin.

- **Multi-user Matching Score Deviation (Face):** Enter the value of deviation from matching score between 2 different users while Adaptive Face Enrollment.

Difference between matching scores of templates will be done, when we have templates of two or more users falling under above specified deviation.

Let us understand this with the help of the following example:

- *Threshold value = 98%*
- *Threshold Deviation= 3%*

So, Result will display all matching templates having matching score between range 98 to 95

- Multi-user Matching score deviation = 0.5%

If, 5 best templates of 2 users fall between 98 -95% range

User	Matching Score
User 1	97.8
User 1	97.6
User 1	97.4
User 2	97.25
User 2	97

As we have obtained templates of 2 users in which user 1 is having template of highest matching score, so will make a difference between lowest score template of user 1 and highest matching score template of user 2.

$97.4 - 97.25 = 0.15$ ; this is less than 0.5

As difference is less than 0.5, user 1's template having matching score 97.8 for adaptive enrollment will not be used.

- Threshold Deviation and Multi-user Matching score deviation will act as two filters to fetch appropriate template for adaptive enrollment. Values can be added in decimal.

We recommend to set the multi-user matching score deviation higher always e.g.2.0 to reduce the probability of enrolling a particular user's face template in some different user's enrolled faces.

- **Confirm before Adaptive Face Enrollment:** Select this check box, if face enrolled using Adaptive face enrollment requires confirmation from User.

Faces enrolled under Adaptive enrollment process will be synced automatically, but when IDS is restarted due to any reason, the adaptive faces which are not synced will be removed by default.

## Face Antispoofing

- **Face Anti-Spoofing:** Face Anti-Spoofing feature prevents false face verification by using a photo, video, mask or a different substitute for an unauthorized person's face.

To use this feature, make sure **Enable FR** check box is selected. Select the **Face Anti-Spoofing** check box to enable this feature and configure the following parameters:

- **Face Anti-Spoofing Mode:** This parameter is applicable when **FR Mode** is selected as **Server Assisted**.

Liveness Detection helps to limit the fierce risk of spoofing attacks by using several anti-spoofing approaches. Along with the configurations to be done for Face Anti-Spoofing you also need to take care of the recommended settings for liveness verification and for face recognition, refer "[Recommendations for Liveness Verification](#)" and "[Recommendations for Face Recognition](#)".

Select the Face Anti-Spoofing Mode for liveness detection from the following:

1. **Moderate:** This mode analyzes the texture of face. Select this option when the distance between Camera and Face is less than 2 feet
  2. **Advance:** Select this option when the distance between Camera and Face is more than 1 feet and less than 2 feet. By default, Face Anti-Spoofing Mode will be **Advance**.
- **Face Anti-Spoofing Threshold:** Enter the Face Anti-Spoofing threshold value in percentage within the range from 1.00 to 99.99 to identify user's face liveness for considering him/her as genuine person.

*For FR Mode as Local, the default value of Face Anti-Spoofing Threshold will be 90.*

*If you upgrade the system to V20R08 and later, the value of Face Anti-Spoofing Threshold will be set as 90 by default.*

Default **Biometric Group** is applicable only if you have selected **Server Assisted** as the **FR Mode**.

- **Default Biometric Group No.:** Enter the default biometric group number to be assigned to the device. It is a number allotted to a device to be assigned to the Identification Server. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group. This reduces the false detection as well time to search template.

Click **Save**.

# Device Access Schedule

---

Device Access Schedule allows you to create Time Frames and Access Schedules which define the time period for which the devices will remain active. These schedules enable you to create specific time slots during a day when the devices should be accessible to selected users, after which the devices will switch into inactive mode. This ensures that the devices are accessible only during designated time slots, so that user access is controlled and monitored easily.

Device Access Schedule is supported in the following Direct Doors — ARGO, VEGA, ARGO FACE, Path V2 and ARC DC200.

To use this feature, you must:

- create Time Frames. For details, refer to [“Time Frames”](#).
- create Access Schedule. For details, refer to [“Access Schedules”](#).
- assign the Time Frames to the Access Schedule. For details, refer to [“Select Time Frames”](#).
- assign Devices to the Access Schedule. For details, refer to [“Assign Doors”](#).
- assign Access Schedule to the desired device. For details, refer to [“Access Settings”](#) in ARC DC200, [“Access Settings”](#) in Path V2, [“Access Settings”](#) in ARGO, [“Access Settings”](#) in VEGA and [“Access Settings”](#) in ARGO FACE.

*Device Access Schedule is not applicable:*

- *when device is in Cafeteria mode.*
- *when device has active IO Linking and/or Time Triggered configuration.*

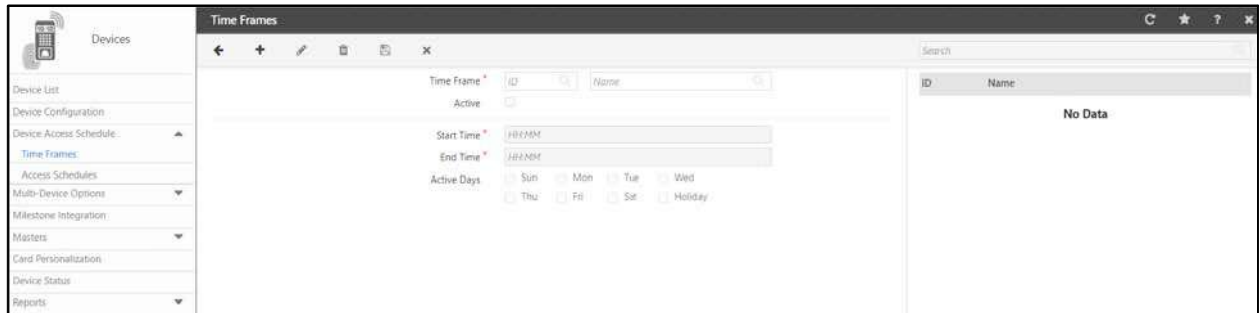

*The devices will respond to the commands from —COSEC Server, COSEC Monitor, Device Webpage and Device display menu (If Hide Menu Bar outside the Schedule is disabled) — irrespective of the Device Access Schedule assignment.*

*Special Cards will not function when the device is not within the assigned Access Schedule.*

# Time Frames

To configure Time Frames,

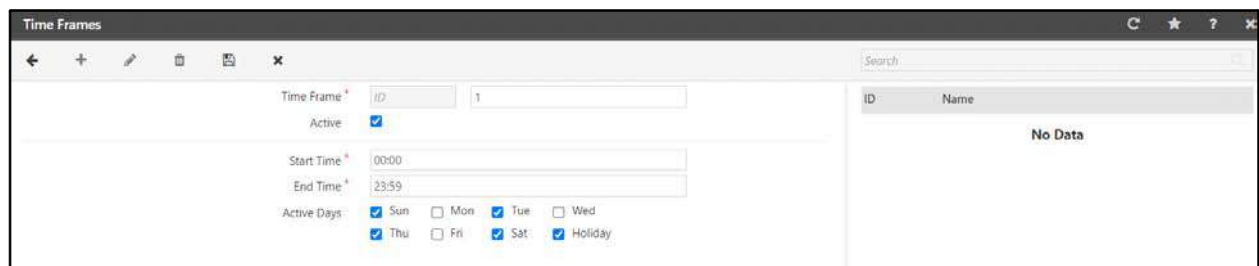

- Click **Devices module > Device Access Schedule > Time Frames**.

- Click **New**  .

*Maximum 99 Time Frames can be created.*

Configure the following parameters:

- Time Frame:** Specify a user friendly name for the new Time Frame. The ID is auto-generated by default.
  - Active:** Select the check box to activate the Time Frame.
  - Start Time:** Specify the Start Time for the Time Frame in HH:MM format. Valid Range: HH: 00-23, MM:00-59.
  - End Time:** Specify the End Time for the Time Frame in HH:MM format. Valid Range: HH: 00-23, MM:00-59.
  - Active Days:** Select the check boxes for the days on which you wish to apply the Time Frame. The Holiday check box will be displayed only if TAM or ACM module license is activated.
- Click **Save**  to save the Time Frame.

The new Time Frame appears in the right grid.

Time Frames

Time Frame \* 1 1

Active ☒

Start Time \* 00:00

End Time \* 23:59

Active Days ☒ Sun ☐ Mon ☐ Tue ☐ Wed ☒ Thu ☐ Fri ☒ Sat ☐ Holiday

Note: Time Frame cannot be deleted if already assigned to Access Schedule(s). For more details: [Click Here](#)

ID	Name
1	1

If you wish to edit any Time Frame,

- Click the desired Time Frame from the right pane. The details appear on the left. Edit the Time Frame as per your requirement.
- Click **Save**  to save the Time Frame.

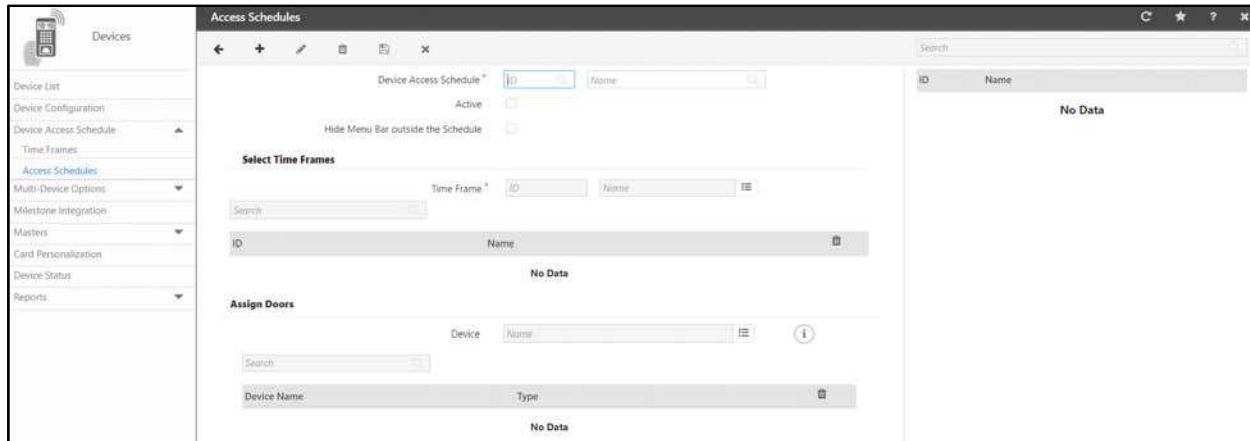

*A Time Frame that is assigned to any Access Schedule cannot be deleted. To view the details, click the **Click Here** link.*

# Access Schedules

To configure Access Schedules,

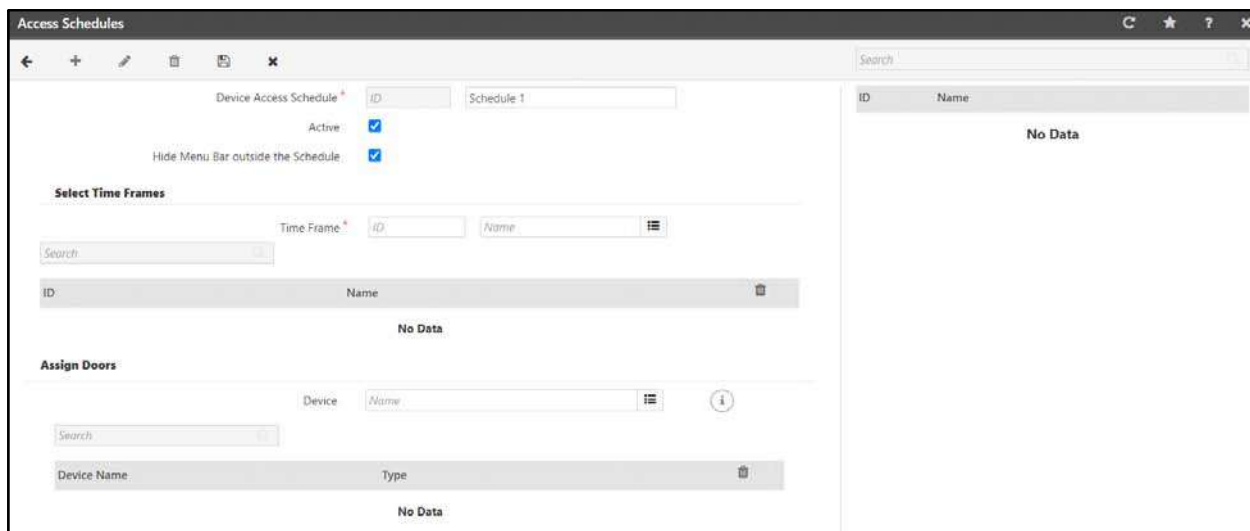

- Click **Devices module > Device Access Schedule > Access Schedule**.

- Click **New** .

*Maximum 99 Access Schedules can be created.*

Configure the following parameters:

- Access Schedule:** Specify a user friendly name for the new Access Schedule. The ID is auto-generated by default.
- Active:** Select the check box to activate the Access Schedule.
- Hide Menu Bar outside the Schedule:** Select the check box to hide the menu bar on device display screen once the defined schedule time frame expires.

If device is not within the assigned Access Schedule and Hide Menu Bar outside the Schedule is enabled, then it will override the Auto Hide Menu Bar (Device Configuration > Profile > General) parameter for that device.

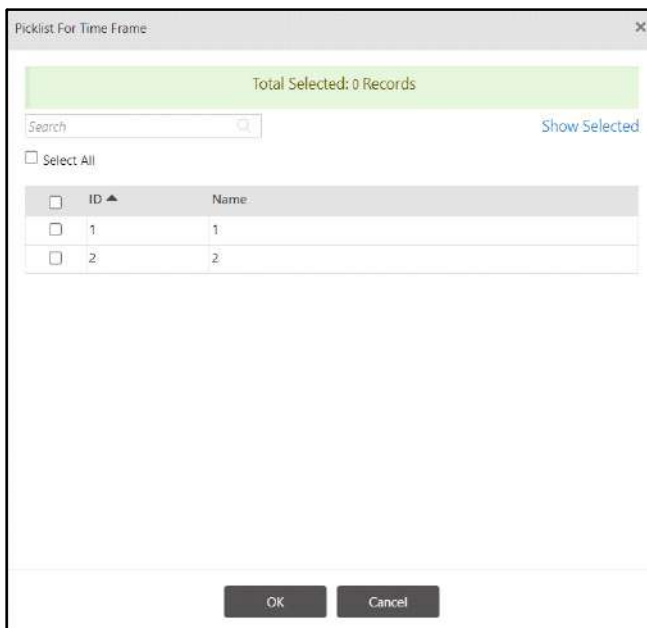

## Select Time Frames

A single Time Frame can be assigned to multiple Access Schedules. Maximum 32 Time Frames can be assigned to each Access Schedule.

Atleast one Time Frame must be assigned to each Access Schedule.

- **Time Frame:** Select the desired Time Frame/s which you wish to assign to the Access Schedule using the **Time Frame**  picklist. Click the picklist, the **Picklist For Time Frame** pop-up appears.

ID	Name
1	1
2	2

- You can either select particular Time Frame or select all the Time Frames at once.
- To select particular Time Frames, select the check boxes of the desired Time Frames. You can also search for the desired Time Frame using the search bar.

☒ Select All

<input checked="" type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	1
<input checked="" type="checkbox"/>	2	2

OK Cancel

- Click **OK**.
- The selected Time Frames appear in the grid.

The Time Frame details displayed are — ID and Name.

- You can also delete the desired Time Frames. To do so, click **Delete**  of the respective Time Frame.

## Assign Doors

*Only one Access Schedule can be assigned to a device. However, a particular Access Schedule can be assigned to multiple devices.*

- Device:** Select the desired devices which you wish to assign to the Access Schedule using the **Device**  picklist. Click the picklist, the **Select Device** pop-up appears.

- Only those devices which have not been assigned any Access Schedule appear in this list. You can either select particular device or select all the devices at once.
- To select particular devices, select the check boxes of the desired devices. You can also search for the desired device using the search bar.

The 'Select Device' dialog box shows a green header bar with 'Total Selected: 1 Records'. Below it is a search bar and a 'Show Selected' link. A 'Select All' checkbox is unchecked. The table below has three rows: 'Vega' (selected), 'ARGO Device\_1', and 'ARGO FACE\_1'.

	Name	Type
<input checked="" type="checkbox"/>	Vega	Vega Controller
<input type="checkbox"/>	ARGO Device_1	ARGO
<input type="checkbox"/>	ARGO FACE_1	ARGO FACE

At the bottom are 'OK' and 'Cancel' buttons.

**OR**

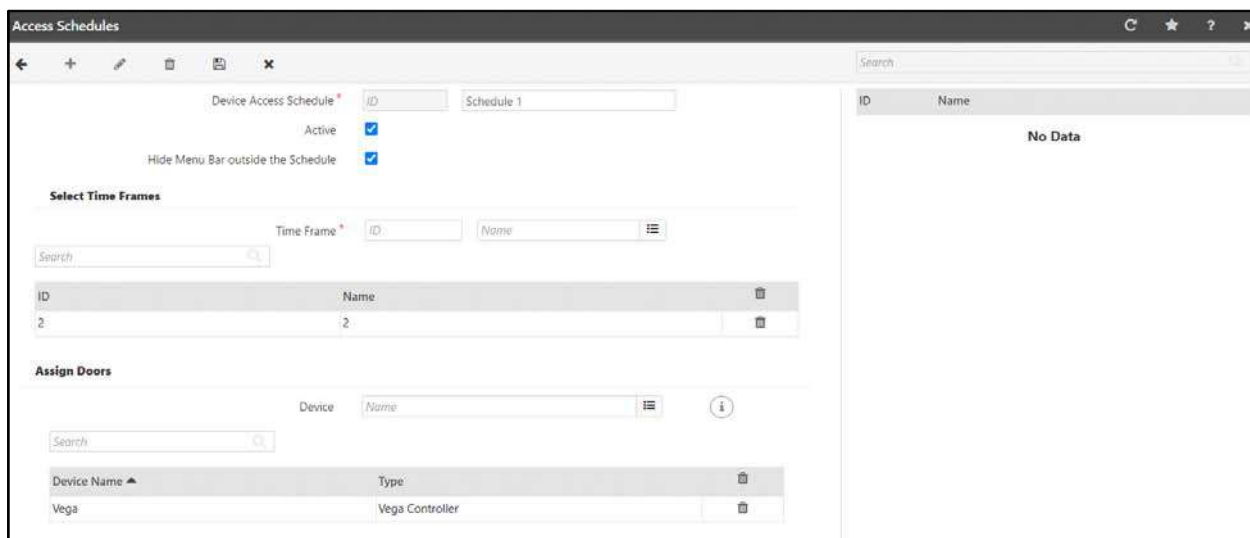

- To select all the devices at once, select the **Select All** check box. The devices on all the pages will be selected.

The 'Select Device' dialog box shows a green header bar with 'Total Selected: 3 Records'. Below it is a search bar and a 'Show Selected' link. A 'Select All' checkbox is checked. The table below has three rows: 'Vega', 'ARGO Device\_1', and 'ARGO FACE\_1', all of which are selected.

	Name	Type
<input checked="" type="checkbox"/>	Vega	Vega Controller
<input checked="" type="checkbox"/>	ARGO Device_1	ARGO
<input checked="" type="checkbox"/>	ARGO FACE_1	ARGO FACE

At the bottom are 'OK' and 'Cancel' buttons.

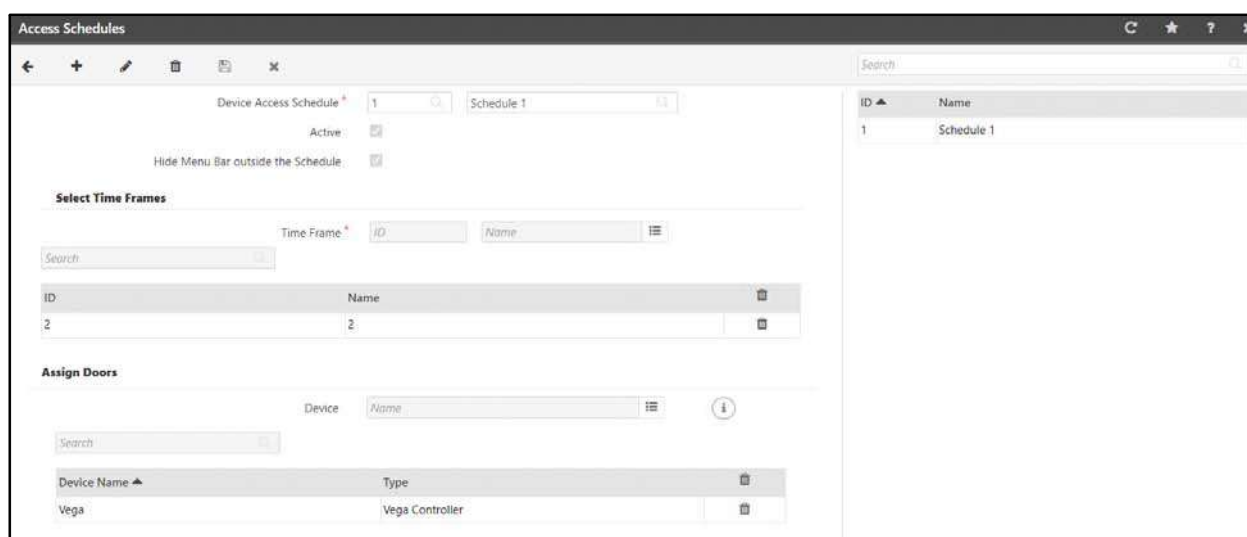

- Click **OK**.
- The selected devices appear in the grid.

The device details displayed are — Device Name and Type.

- You can also delete the desired devices. To do so, click **Delete**  of the respective device.
- Click **Save**  to save the Access Schedule.

The new Access Schedule appears in the right grid.

If you wish to edit any Access Schedule,

- Click the desired Access Schedule from the right pane. The details appear on the left. Edit the Access Schedule as per your requirement.
- Click **Save**  to save the Access Schedule.

*If an Access Schedule is assigned from Device Configuration > Profile > Access Settings page and a different schedule is selected here, it will override the schedule assigned from Device Configuration > Profile > Access Settings page and vice versa.*

*If both; Access Schedule and Reader Mode Schedule are assigned to a device, then the Access Schedule will have a higher priority when the device is not within the assigned Access Schedule.*

*User Access will be allowed on devices when the device is not within the assigned Access Schedule, only if:*

- *Access Control on Exit Mode is disabled, and*
- *Internal and/or External Reader Mode is set as Exit*

*If you wish to revoke an Access Schedule from a device, select the **Select** option for Device Access Schedule in Profile > Access Settings for the particular device.*

# Special Functions

COSEC provides its users the privilege to perform certain pre-defined operations directly from the COSEC device. These operations are related to various time and attendance marking functions, administrative tasks, zone-related access and door-control functionality as well as alarms management. It also provides privilege to schedule these special functions. A special function may be used in three different ways by a user -

- Entering short codes on the device keypad.
- Navigating the device menu.
- Using Special Cards.

To access this functionality, select **Devices> Multi-Device Options> Special Functions**.

*“Single Device Special function”*

*“Multiple Device Special functions”*

## Special Cards

A *Special Card* is especially useful when the user has to perform routine tasks, where repeated manual entry of codes can become tedious. It is also required when a door controller device does not have keypad or LCD display for manual entry of special codes. In such a case, an RFID card can be encoded for a special function and the card-holder can perform a special function at the device just by showing this special card.

Example: In factories where workers avail shortleave; security guard can show the Special card enrolled for Shortleave IN on the Entry door and can give the access to the worker. This same card can be used for multiple workers.

## Configuring Special Functions

The COSEC system pre-defines 38 special functions for its users. These functions are supported differently by different COSEC devices. For instance, all the special functions in the given list are supported on all COSEC Panel200. The following list provides details of some of the available special functions and the devices they are supported on:

**Time and Attendance Functions:** *(Available only with the Time & Attendance add on module)*

Special Function	Available on	Description
Official Work-IN / Official Work-OUT	Panel200 and DIRECT DOORS.	Late-IN as well as Early-OUT is marked as User's Official work in Time & Attendance.
Short Leave-IN / Short Leave-OUT	Panel200 and DIRECT DOORS.	Late-IN as well as Early-OUT is marked as User's short leave in Time & Attendance.
Regular - IN / Regular - OUT	Panel200 and DIRECT DOORS.	Normally used in Time & Attendance system in the absence of an exit reader. The punch in at start of shift and punch out at end of shift are sent with the appropriate flags.
Break End / Break Start	Panel200 and DIRECT DOORS.	Clock-IN is marked as User post break entry and Clock-OUT is marked as User exit at start of break.
Late-IN Start / Late-IN Stop	Panel200 and DIRECT DOORS.	System starts / stops inserting the special ID to T&A events of all users who clock-IN after this function.
Early-OUT Start / Early-OUT Stop	Panel200 and DIRECT DOORS.	System starts / stops inserting the special ID to T&A events of all users who clock-OUT after this function.

Special Function	Available on	Description
Over Time - IN / Over Time - OUT	Panel200 and DIRECT DOORS.	The IN punch is marked as User entering at start of over time while the OUT punch is marked as User exiting after completion of overtime.

**Administrative Functions:** *(Available with the Basic platform license.)*

Special Function	Available on	Description
Enroll User	Panel200 and DIRECT DOORS	Application switches the door controller mode to Enrollment mode and User Credentials are enrolled against the defined user ID. Global Enrollment mode is selected by default for users.
Enroll Special Card	Panel200 and DIRECT DOORS	Application switches the door controller mode to Enrollment mode and special Cards are enrolled against special function ID
Delete Credentials	Panel200 and DIRECT DOORS	Enables user to delete the existing credential data from the PANEL User database against the selected user ID.
View User Profile	Panel200 only.	System reads the User's Smart Card and displays the stored user profile.

**Zone Settings:** *(Highlighted options available only with the Access Control add on module)*

Special Function	Available on	Description
Activate DND / Deactivate DND	Panel200 only.	System switches the door zone from Normal to DND and vice versa.
Activate Dead-Man / Deactivate Dead-Man	Panel200 only.	System switches all Door Controllers of the zone from Normal mode to activated Dead Man Zone mode and vice versa.
Door Lock / Door Unlock	Panel200 and DIRECT DOORS.	System locks/unlocks the selected Door. Entry is denied to all users. Exit request however, is enabled and the user can still provide T&A events.
Zone Lock / Zone Unlock	Panel200 only.	System locks/unlocks all Doors of the Zone. Entry is denied to all users. Exit request however, is enabled and the user can still provide T&A events.
Door Normal	Panel200 and DIRECT DOORS.	System switches the mode of the door controller to the normal or controlled mode.
Zone Normal	Panel200 only.	System switches the mode of all Doors of the Zone to the normal or controlled mode.
Guard Tour	Panel200 only.	The security guard carries the guard tour card which is linked to the guard tour-ID.

**Alarms:** *(Available only with the Access Control add on module)*

Special Function	Available on	Description
Set Panic Alarm	Panel200 only	System enables the user to generate a Panic Alarm from the Door Controller.
Mute Door Buzzer	Panel200 only	Enables the user to mute the Door Controller's existing Alarms.
Mute Panel Buzzer	Panel200 only	Enables the user to mute the PANEL's existing Alarms.

Special Function	Available on	Description
Clear Door Aux O/P	Panel200 only	Enables the user to Reset the Aux output of Door Controller and switch it back to Normal/Controlled state from its current state.
Clear Panel Aux O/P	Panel200 only	Enables the user to Reset the Alarm output of PANEL and switch it back to Normal/Controlled state from its current state.
Door Arm/Door Disarm	Panel200 only	To enable/disable door alarms using special function cards.
Zone Arm/Zone Disarm	Panel200 only	To enable/disable zone alarms (for all doors in the zone) using special function cards.
Clear Alarm	DIRECT DOORS only.	Enables the user to clear all the alarms at the DIRECT DOOR.

**Cafeteria:** (Available only with the Cafeteria add on module)

Special Function	Available on	Description
Sold Out	Cafeteria devices	System enables the user to mark an item as Sold Out.
Available	Cafeteria devices	Enables the user to mark an item as available.

## Single Device Special function

To configure special functions for a single device,

- Select the **Devices module > Device Configuration > Special Functions**

The **Special Functions** page appears for Door V3:

No.	Function Name	Active	Job Selection	User Group	Card-1	Card-2	Card-3	Card-4
1	Official Work - IN	Yes	Yes	All				
2	Official Work - OUT	Yes	Yes	All				
3	Short Leave - IN	Yes	Yes	All				
4	Short Leave - OUT	Yes	Yes	All				
5	Regular - IN	Yes	Yes	All				
6	Regular - OUT	Yes	Yes	All				
7	Break End	Yes	Yes	All				
8	Break Start	Yes	Yes	All				
9	Overtime - IN	Yes	Yes	All				
10	Overtime - OUT	Yes	Yes	All				
11	Enroll User	Yes	No	All				
12	Enroll Special Card	Yes	No	All				

1. Select a **Function Name** from the list on the Special Functions page.

No.	Function Name	Active	Job Selection	User Group	Card-1	Card-2	Card-3	Card-4
1	Official Work - IN	Yes	Yes	All				
2	Official Work - OUT	Yes	Yes	All				
3	Short Leave - IN	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	All	1453			
4	Short Leave - OUT	Yes	Yes	All				
5	Regular - IN	Yes	Yes	All				
6	Regular - OUT	Yes	Yes	All				
7	Break End	Yes	Yes	All				
8	Break Start	Yes	Yes	All				
9	Overtime - IN	Yes	Yes	All				
10	Overtime - OUT	Yes	Yes	All				
11	Enroll User	Yes	No	All				
12	Enroll Special Card	Yes	No	All				

2. Check the **Active** box to enable the function.
3. Click the **User Group** drop down list and select the *Functional Group* for which this special function will be activated.
4. Specify the Card Serial Number (CSN) or a Comma separated CSN in the **Card** fields which would be registered to activate the special function at the devices. To know about the format of entering the Card details, refer **Access Card 1** in "[Credentials](#)" under *Users > User Configuration > Credentials > Access Card 1*.
5. Click **OK** after all the member cards have been added to save the defined parameters. Administrator can define up to 4 member cards per function. User can also assign cards to the special functions using the *Enrollment* option as explained in the "[Enrolling Special Cards](#)" section.

## Multiple Device Special functions

To configure Special Functions for multiple devices, Select the **Devices module > Multi-Device Options > Special Functions**.

The **Multi-Device Special Function** page opens as follows:

**Device Type:** Select the device type from the dropdown list.

**Function:** Select the special function which needs to be activated on the devices by checking the corresponding **Update** check box.

**Active:** Select the Active check boxes for activating the special function on the selected devices.

**User group:** Some special functions can be assigned to specific user groups. For eg: “Enroll User” special function can be assigned to the desired User group from the drop down list as shown below.

**Card:** Specify the Card Serial Number (CSN) or a Comma separated CSN in the **Card** fields which would be registered to activate the special function at the devices. To know about the format of entering the Card details, refer **Access Card 1** in “[Credentials](#)” under *Users> User Configuration> Credentials> Access Card 1*.

Device Type: Door V3

Update	Function Name	Active	Job Selection	User Group	Card-1	Card-2	Card-3
<input checked="" type="checkbox"/>	Official Work - IN	<input checked="" type="checkbox"/>	<input type="checkbox"/>	No Change	5698		
<input type="checkbox"/>	Official Work - OUT	<input type="checkbox"/>	<input type="checkbox"/>	No Change			
<input checked="" type="checkbox"/>	Short Leave - IN	<input checked="" type="checkbox"/>	<input type="checkbox"/>	No Change	1256		
<input type="checkbox"/>	Short Leave - OUT	<input type="checkbox"/>	<input type="checkbox"/>	No Change			
<input type="checkbox"/>	Regular - IN	<input type="checkbox"/>	<input type="checkbox"/>	No Change			
<input type="checkbox"/>	Regular - OUT	<input type="checkbox"/>	<input type="checkbox"/>	No Change			

Filter

Device Filter: All

Update

Click the **Filter** collapsible panel.

**Device Filter:** Select the desired option — All, Randomly — on which the special functions are to be activated.

If you select **All**, click **Update**.

If you select **Randomly**, you can select particular devices or all the devices at once.

- Click the **Device** picklist. The **Select Device** pop-up appears.

Select Device

Total Selected: 0 Records

Search

Show Selected

☐ Select All

<input type="checkbox"/>	MID ▲	Name	Type
<input type="checkbox"/>	13	Panel	Panel

OK Cancel

To select particular devices, select the check boxes of the desired devices.

**OR**

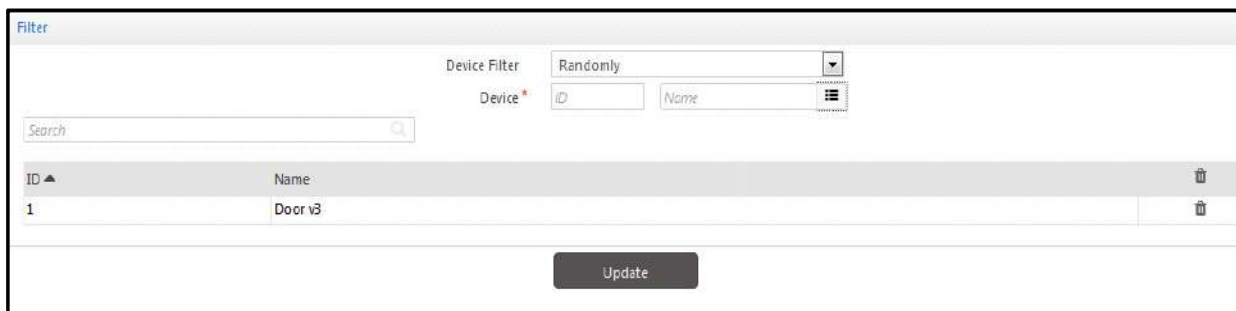

To select all the devices, select the **Select All** check box.

- Click **OK**. The selected devices appear in the grid.

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

- Click **Update**.

Example: If 3 doors of type Door V3 are selected; then Official IN function can be accessed on these doors using the card with number 5698.

The screenshot shows a 'Filter' window with a 'Device Filter' dropdown set to 'Randomly'. Below it, there are input fields for 'Device ID' and 'Name'. A search bar is also present. A table lists devices with columns 'ID' and 'Name'. The first row shows ID '1' and Name 'Door v3'. To the right of the table is a trash icon. At the bottom center is an 'Update' button.

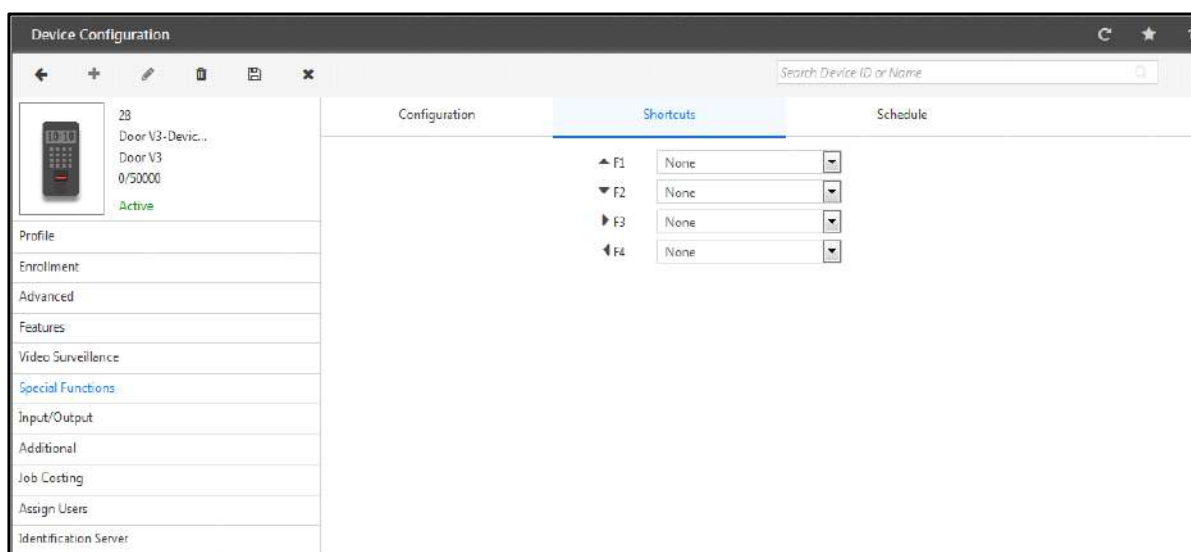

ID	Name
1	Door v3

Click **Update** to save the changes. This will enable the users to punch for “Official IN” function using card (5698) along with their respective credential on the Door V3.

## Special Functions Shortcuts

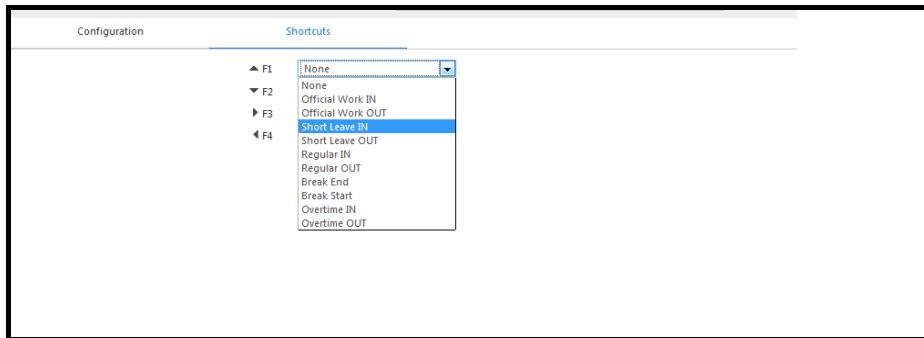

The COSEC application enables the user to map up to 4 special functions to the arrow keys on a Direct Door/Panel Door keypad. To do this,

1. Select a device on which the shortcuts are to be configured.
2. On the **Device Configuration** page, select the **Special Functions** tab.
3. Click **Edit** .
4. Under the **Special Functions** tab, select the **Shortcuts** section as shown below:

The screenshot shows the 'Device Configuration' window. On the left is a sidebar with a list of tabs: Profile, Enrollment, Advanced, Features, Video Surveillance, Special Functions (highlighted), Input/Output, Additional, Job Costing, Assign Users, and Identification Server. The main area has three tabs: Configuration, Shortcuts (highlighted), and Schedule. Under the 'Shortcuts' tab, there are four rows for F1, F2, F3, and F4, each with a dropdown menu set to 'None'.

5. Use the drop down lists for the appropriate arrow keys to assign a special function to each key, as per the site requirements.

6. Click **Save**.

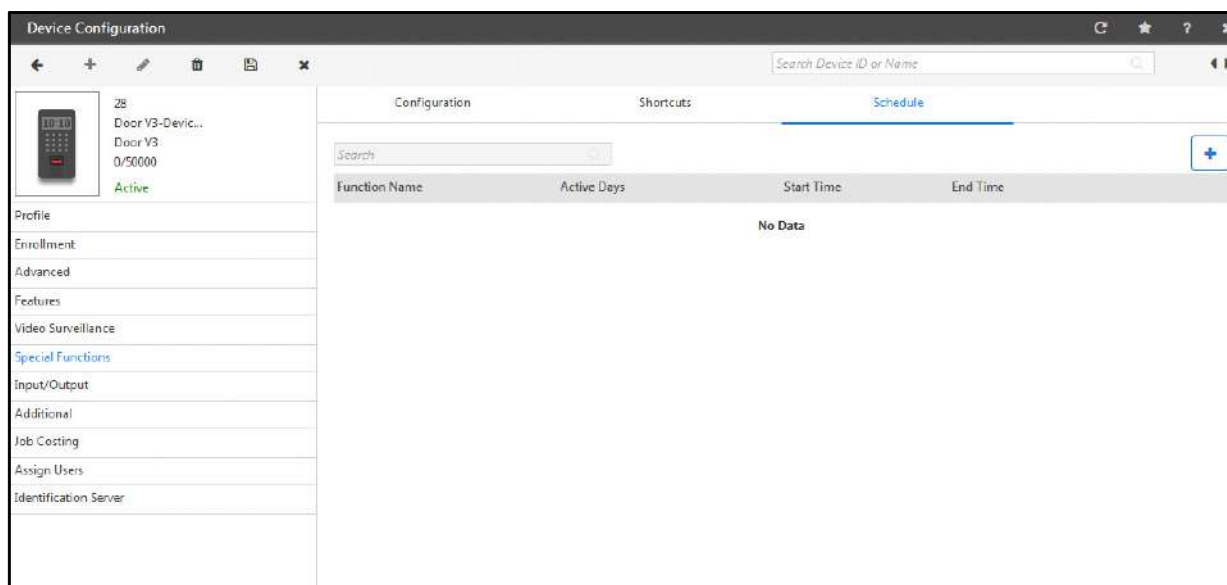

*This option is not available for the NGT DOOR.*

## Special Functions Schedule

The COSEC application enables the user to schedule special functions for specified time range on a Direct Door/ Panel Door keypad. To do this,

1. Select a device on which the scheduling is to be done.
2. On the **Device Configuration** page, select the **Special Functions** tab.
3. Click **Edit** .

Under the **Special Functions** tab, select the **Schedule** section as shown below:

4. Click **Add** .

5. Specify the **Function Name**, **Active Days**, **Start Time** and **End Time** as shown below:

Device Configuration

Search Device ID or Name

28 Door V3-Devic... Door V3 0/50000 Active

Profile Enrollment Advanced Features Video Surveillance Special Functions Input/Output Additional Job Costing Assign Users Identification Server

Configuration Shortcuts Schedule

Search

Function Name	Active Days	Start Time	End Time
Short Leave IN	Select	13:00	14:00

6. Click on the **Tick**  to save the schedule.

7. Click **Save**.

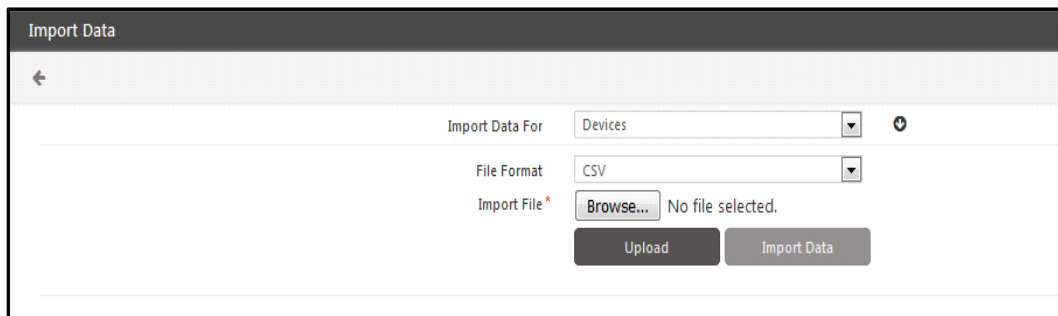

# Import Devices

---

The COSEC application has an inbuilt utility for enabling users to import data from excel files with predefined format. This would thus save the end user a lot of time and effort in having to make individual data entries at the application level.

To import device data from a file, select the **Devices module > Multi-Device Options > Import Devices**.

The **Import Data** page appears as shown.

The following options appear for configuration on the **Import Data** page.

- **Import Data For** - The Data is to be imported for Devices by default. You can download the sample import file and enter the data for devices. Then the updated file can be imported here.
- **File Format** - Select the file format to be imported. The options available are XLS or CSV.
- **Import File** - Browse the path of the file from which the data is to be imported.

Click **Upload** button to save the file. The **Preview Data** button enables the administrator to view the data in the respective worksheets to confirm that the data is in order prior to giving the import command.

Click on **Import** to start the import of data.

While importing the data from the User Worksheet, the system enables the administrator to directly assign controllers to the users while importing the user data.

Select the controllers to be assigned to the imported users by checking the boxes against the relevant controllers and click on **Import**. The system will import all the relevant valid entries from the sheet and will display the status in the bottom grid.

*Administrator needs to ensure that the ASP.NET user has full rights on the folder containing the Excel or .csv file for the import data operation.*

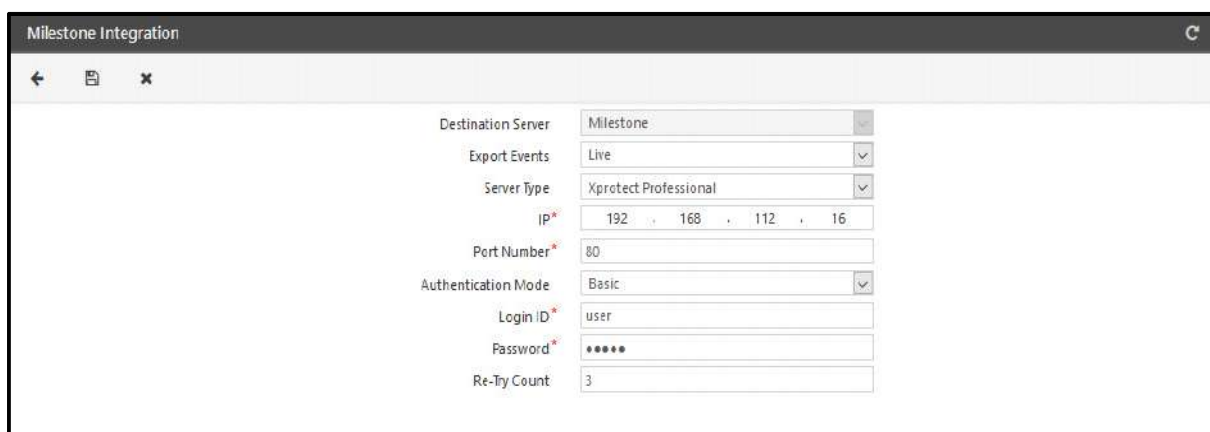

# Milestone Integration

This feature enables the *COSEC Access Control Monitoring System* to be integrated with the *Milestone XProtect Video Management Software*. The integration provides a common platform and supports the following functions:

- Triggering Milestone User-Defined Events based on COSEC Events.
- Retrieving images captured by Milestone Devices.

To set up Milestone Integration, Select the **Devices module > Milestone Integration**

The page will appear as shown:

The screenshot shows the 'Milestone Integration' configuration window. The 'Authentication Mode' is set to 'Basic'. The fields are filled with the following values: Destination Server: Milestone, Export Events: Live, Server Type: Xprotect Professional, IP: 192.168.112.16, Port Number: 80, Login ID: user, Password: (masked with dots), and Re-Try Count: 3.

The screenshot shows the 'Milestone Integration' configuration window with a green 'Saved Successfully' message at the top. The 'Authentication Mode' is now set to 'Windows'. The other fields remain the same: Destination Server: Milestone, Export Events: Live, Server Type: Xprotect Corporate, IP: 192.168.112.16, Port Number: 80, Login ID: user, Password: (masked with dots), and Re-Try Count: 3.

**Export Events:** Select the type of COSEC Events to be exported from the drop-down list. You can select All or Live events.

**Server Type:** Select the Milestone Server Type for integration and enter the Server **IP** address and **Port** Number as configured for the selected Milestone server.

**Authentication Mode:** Select the Authentication mode as **Basic** or **Windows**.

- Enter the Milestone server login credentials (Login ID and Password) for Authentication.

*Windows Authentication Mode has been implemented & verified for Milestone - Corporate edition only.*

**Re-Try Count:** The count must be numeric and will determine the number of times connection request will be renewed in case of failure to establish connection with Milestone server.

Then click **Save** to save the configuration.

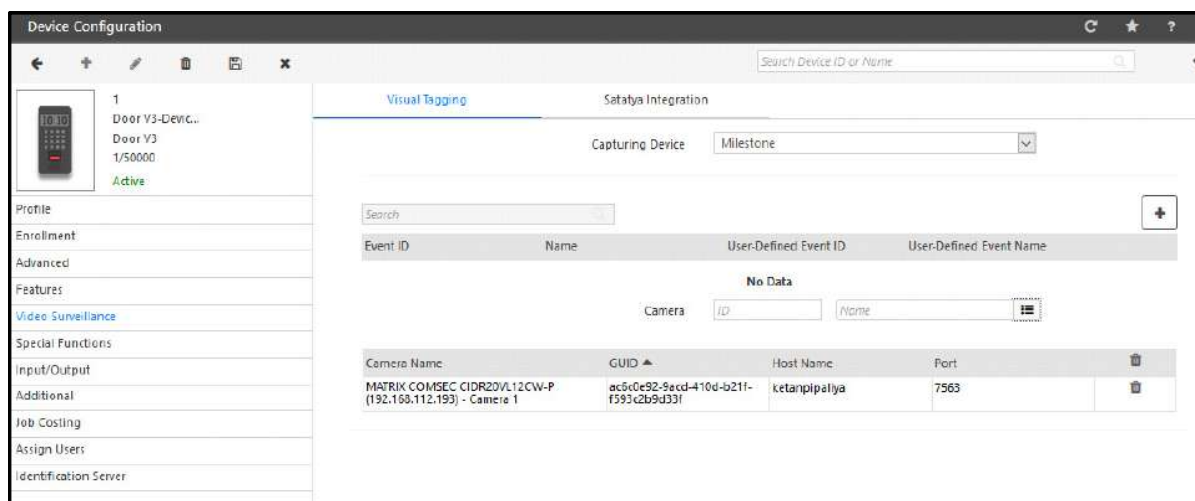

## Mapping Milestone and COSEC events

Using this feature, the administrator can map Milestone user-defined events to be triggered based on COSEC Events. For this, *Manual Events* must first be defined on the *Milestone XProtect Management Application* as shown.

Now, to map these User defined events against COSEC events, go to **Devices > Device Configuration** (Select a Device) > **Video Surveillance > Visual Tagging**.

Select the **Capturing Device** as Milestone.

Select a COSEC Event using the corresponding picklist.

Click on **Add** button. Select the COSEC event and User defined Milestone event which is to be mapped with the selected COSEC Event. Then click OK to save the mapping.

The mapped events will appear in the grid as shown.

Event ID	Name	User-Defined Event	
101	Allowed	Manual Event 1	
104	Allowed - Dead Man Zone	Manual Event 1	

Camera

Camera Name	GUID	Host Name	Port	
Camera 1	1D17801D-7810-4958-B3EF-BC335BADE69F	192.168.153.144	800	

**Camera:** For each door, COSEC can also request images from the Milestone server against the mapped events. To do this, select a camera from a list of Milestone cameras using the **Camera** pick-list.

When user punches on door say Access Allowed event is generated; then image captured by camera will be displayed in User Events as shown below:

The screenshot shows the 'User Events' application window. At the top, there are filters for Date (12/09/2018), Filter By (Individual), and User (1320, Shruti Patki). Below the filters is a 'View' button. The main section is titled 'Attendance Events (2)' and contains a search bar and a table of events.

User ID	User Name	Date-Time	Device Name	I/O	Access	Source	Source Details	Location Details	View Image
1320	Shruti Patki	12/09/2018 10:56	Vega Controller-Device-87	Entry	Allowed	Device			 
1320	Shruti Patki	12/09/2018 10:55	Vega Controller-Device-87	Entry	Denied	Device			 

Below the table, there are sections for 'Access Control Events (0)' and 'Visitor Events (0)'.

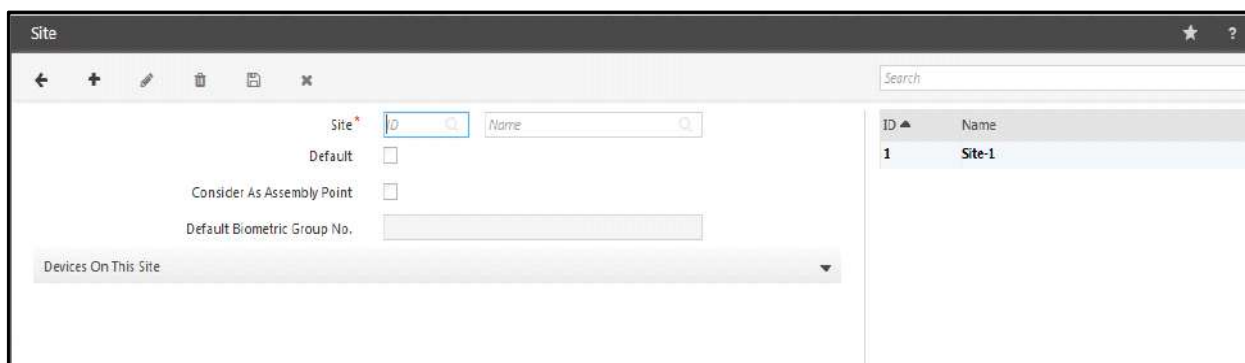

The screenshot shows a 'View Image' dialog box. It contains a user profile section with a placeholder image, the user ID '1320', the name 'Shruti Patki', and the timestamp '12/09/2018 10:56:20'. Below this is a large image area displaying a camera capture of a person in a hallway.

# Managing Sites

A site is a distinct work area or unit within an enterprise with its specific access control and/or attendance marking needs. For instance, in a retail enterprise (say “ABC”), the access system for customers at retail outlets must be different than the access system implemented for warehouse employees. In this case, the administrator can define two separate sites, one for the store (say “ABC-Store”) and one for the warehouse (say “ABC-Warehouse”).

To create a Site, Go to **Devices Module > Masters > Site**.

The following page will appear:

The screenshot shows the 'Site' management window. On the left, there is a form with fields for 'Site ID' (containing '1'), 'Name' (containing 'Site-1'), 'Default' (unchecked), 'Consider As Assembly Point' (unchecked), and 'Default Biometric Group No.' (empty). Below these is a 'Devices On This Site' dropdown. On the right, a table lists existing sites:

ID	Name
1	Site-1

Click **New** button to add a Site.

**Site:** Enter a unique site name ( Eg: “ABC-Store”) in the **Name** field. The ID will be genrated by the system automatically.

**Default:** Select this checkbox to make this site as a default site.

**Consider As Assembly Point:** Enable the checkbox to consider the configured site as assembly point. During an emergency situation, all the users are expected to assemble at this assembly point.

**Default Biometric Group No.:** Specify the Default Biometric Group No. to be assigned to the site. It is a number allotted to the site to be assigned to the devices belonging to that particular site. This enables the Identification Server to match the template against only those devices that belong to the corresponding biometric group site.

Click **Save** button to save the site as shown below.

The screenshot shows the 'Site' management window after saving. The 'Site ID' is now '2' and the 'Name' is 'Matrix- RnD'. The 'Default' checkbox is now checked. The 'Consider As Assembly Point' checkbox remains unchecked. The 'Default Biometric Group No.' is now '0'. The 'Devices On This Site' dropdown is still present. On the right, the table now lists two sites:

ID	Name
1	Site-1
2	Matrix- RnD

An arrow points to the 'Matrix- RnD' entry in the table.

## Adding Devices to a Site

Each COSEC device can be assigned to a site. To do so, click the desired Site from the list on the right side.

Click the **Devices On This Site** collapsible panel.

**Devices:** You can select particular devices or all the devices at once.

To do so, click the **Device** picklist. The **Picklist For Door Master** pop-up appears.

« < 1 2 3 ... 11 > »

OR

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**.

The selected devices assigned to this site appear in the grid.

You can also delete the desired devices. To do so, click **Delete** of the respective device.

On deletion of any device from the device list, the status of the respective site will be automatically changed to “default”. For a “default” site, devices cannot be deleted from the device list.

# Device Group

This option enables the administrator to assign multiple devices to a group. This functionality facilitates assignment of users to a group of devices.

To define a device group, select **Devices Module > Masters > Device Group**.

The **Device Group** page appears as shown below.

ID	Name
No Data	

Click **New** to configure a new device group.

- **ID**: This is a system-generated ID automatically assigned to each new device group.
- **Name**: Enter a unique device group name in this field.
- **Type**: Select the type of device group to be assigned. The options are **Device Group** and **Super Group**.

*A **super group** is a group or collection of multiple device groups.*

Click the **Save** button to save the device group.

A new device group is created successfully. All defined device groups can be viewed in the grid list view on the right-hand side of the page as follows:

ID	Name
1	Device Group-RnD

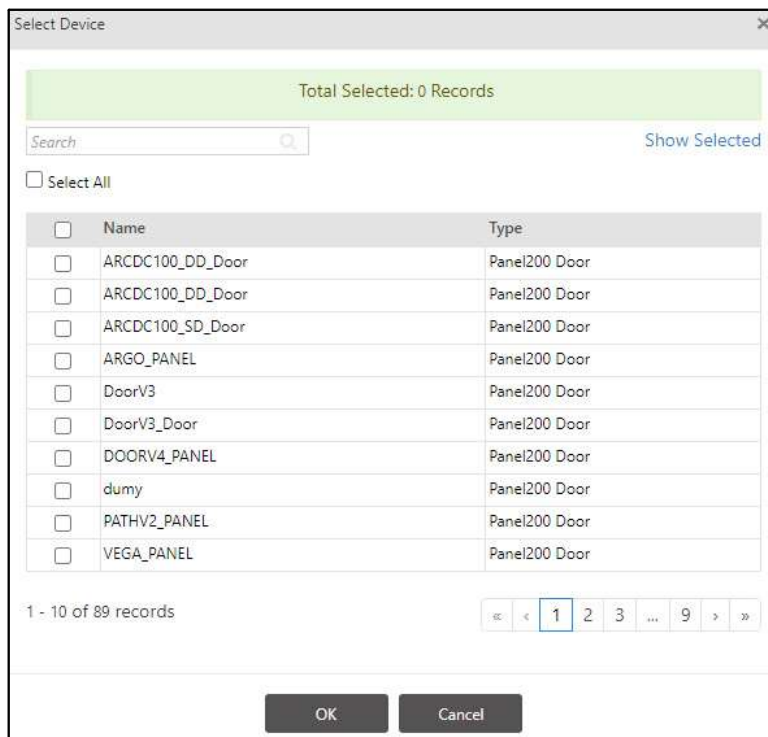

## Assigning Devices to Device Group

Click the desired Device Group (for which the Type is selected as Device Group) from the list on the right.

Click the **Assign Devices** collapsible panel.

You can add particular devices or all the devices to the device group.

To do so, click the **Device** picklist. The **Select Device** pop-up appears.

Select Device

OK Cancel

*The device appearing in the device picklist will be Panel Doors and Direct Doors only.*

You can either select particular devices or can select all the devices at once.

To select particular devices, select the check boxes of the desired devices.

The 'Select Device' dialog box displays a table with 10 rows of device information. The first two rows are selected, indicated by blue checkmarks in the first column. The table has columns for 'Name' and 'Type'. Below the table, a pagination bar shows '1 - 10 of 89 records' and a set of navigation buttons. At the bottom are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	Name	Type

<input checked="" type="checkbox"/>	PATHV2_PANEL	Panel200 Door
<input checked="" type="checkbox"/>	VEGA_PANEL	Panel200 Door

Click **OK**. The selected devices assigned to this Device Group appear in the grid.

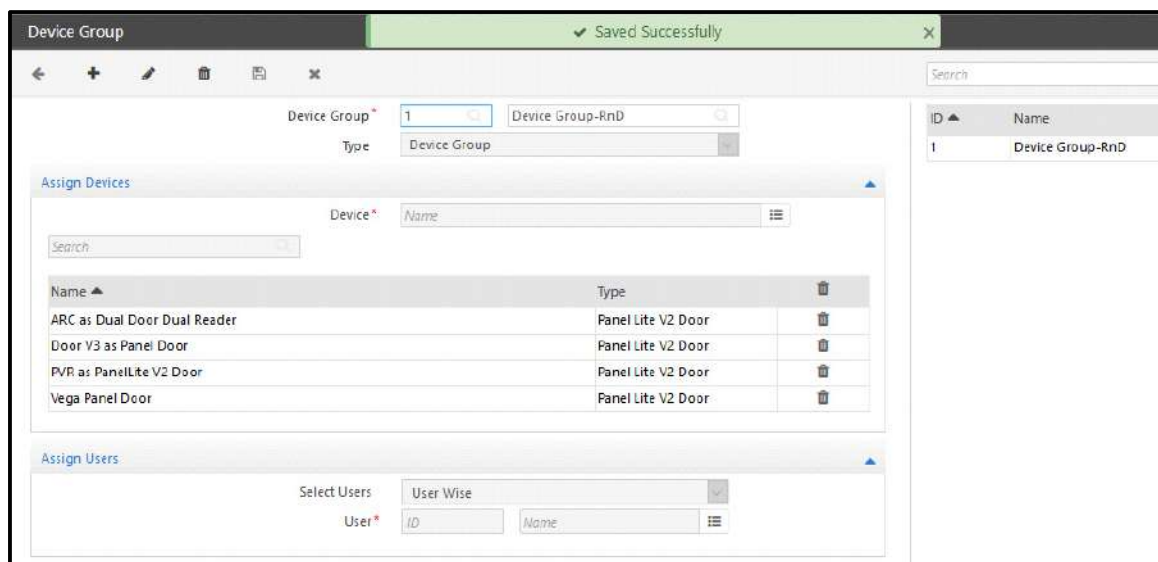

The 'Assign Devices' dialog box shows a search bar and a table of devices. The table has columns for Name, Type, and a delete icon.

Name	Type	
RnD1 Canteen1 ARGO	ARGO	
RnD1 Canteen2 ARGO	ARGO	
FACTORY ACCOUNT	Door V3	
NGT	NGT Direct Door	
ARC200	ARC DC 200	

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Click **Save** button to save the device group.

The device/devices are assigned to the specified device group successfully.

The 'Device Group' interface shows a 'Saved Successfully' message. It includes a 'Device Group' dropdown set to '1', a 'Type' dropdown set to 'Device Group', and an 'Assign Devices' dialog box. The 'Assign Devices' dialog box shows a table of devices. Below it is an 'Assign Users' section with a 'Select Users' dropdown set to 'User Wise' and a 'User' table.

ID	Name
1	Device Group-RnD

Name	Type	
ARC as Dual Door Dual Reader	Panel Lite V2 Door	
Door V3 as Panel Door	Panel Lite V2 Door	
PVR as Panel Lite V2 Door	Panel Lite V2 Door	
Vega Panel Door	Panel Lite V2 Door	

User	ID	Name
------	----	------

If you have created a **Super Group**, follow the same steps as mentioned above.

## Assigning Users to Device Group

To assign users to a device group, select a device group from the right grid.

Select **Assign Users** section. You can assign the users based on filter options of Userwise, Groupwise or All.

User ID	Name	
1687	Aditi Gupta	
103	Kruti Boghani	
1688	Anu Bhatt	

Click **Save** to save the assignment of users to all devices in the device group.

*The maximum number of device group allowed against a user is 99.*

*Any user/s exceeding the value of maximum allowed device group will not be assigned any device group.*

*Such user/s shall be displayed under the Exceptions tab.*

# Card Formats

All proximity cards store a sequence of numbers which can be read by card reader devices, when a card is swiped. This unique card number sequence is then verified against a user enrolled on the COSEC access control system to allow access to the card-holder. Hence, the pattern or structure of this card number must be compatible with the corresponding card reader format to support identification. This programmable data pattern of a proximity card is known as its *card format*.

Different card manufacturers across the industry provide some standard as well as proprietary card formats. However, organizations may require a format flexibility to match their site requirements. COSEC provides a unique option for users to write their own card formats to be compatible with their access control system.

Users can define upto 99 card profiles in COSEC. Custom Formats allow the user to enhance security by:

- Setting formats of up to 128 bits.
- Providing the option to add Facility Code to the Card Serial Number.
- Adding Parity bits for added accuracy of sent data.

To create a new card format, Select the **Devices Module > Masters > Card Format**.

The page will appear as shown below.

The screenshot shows the 'Card Format' configuration window. It has a top toolbar with icons for back, add, edit, delete, and search. The main area contains several input fields: 'Card Format' with sub-fields for 'ID' and 'Name', 'Max. No. Of Bits' set to '1-128', 'Read Order' set to 'Forward', 'Include FC in Card No.' as an unchecked checkbox, 'Configurable Bits' set to '0-128', and 'Sequence of Operation' set to 'Reading Order then Bit Configuration'. Below these is a 'Bit Configuration' section with a legend on the left: 'Even Parity' (blue), 'Odd Parity' (orange), 'Facility Code' (grey), and 'Card Serial Number' (dark grey). To the right of the legend is a 16x8 grid of bits numbered 1 to 128. A search bar is located in the top right corner.

Click **New** button to configure a card format.

**Card Format:** Enter a suitable name for the card format. The ID will be autogenerated by the system when the format is saved.

**Max No. of bits:** Specify the maximum number of bits that will be allowed for the format. Only the number of bits mentioned here will be considered for further processing. Remaining bits will be truncated. Maximum value can be 128 bits.

**Read Order:** It indicates the sequence in which the card serial number should be read by the card reader. The user should be aware of the reading order of the card reader before configuring this option.

Specify the Read Order as one of the following:

- **Forward** - This implies that the bits should be processed in the order of their arrival.
- **Reverse bitwise** - This implies that all incoming bits will be received and then reversed before processing them further.
- **Reverse byte-wise** - This implies that each incoming byte will be reversed separately and then used for further processing.

**Include FC in Card No.:** Enable this checkbox to ensure that the Card Number or Card ID includes Facility Code as well as Card Serial Number.

**Configurable Bits:** Specify the number of bits that will be configured in the card structure.

Eg: If 32 bits are set as configurable bits; then Bit Configuration grid will display 1 to 32 bits for configuration.

*If the number of bits received at the card reader is greater than the number of configured bits, then default card format applicable for the reader will be used.*

**Sequence of Operation:** Select the sequence of operation based on which operation is to be performed first and then second between Reading Order and Card Format Configuration.

In the **Bit Configuration** section, all configurable bits of the card data will appear numerically in a serial order, from left to right, as boxes. Here, each box represents a bit.

In the **Color Selection** area, click to select a colour that represents the bit type to be added to the card number. Then drag the cursor across boxes where the selected bit type is to be placed and select the box.

Click **Save** button to save the card format. The new format will now appear in the grid list on the right hand side of the page.

*If you have configured Comma separated CSN as Access Card Value for Users, Visitor Profile and/or Worker Profile, make sure in the Card Format you configure Max. No. of bits and Configurable bits as 26 bits. Do not change any other settings. Save and assign this Card Format to the desired device. To know more about Comma separated CSN, refer Access Card 1 under "Credentials" in Users> User Configuration> Credentials> Access Card1.*

*The Card format can be assigned to the device from Device Configuration> Profile> Readers.*

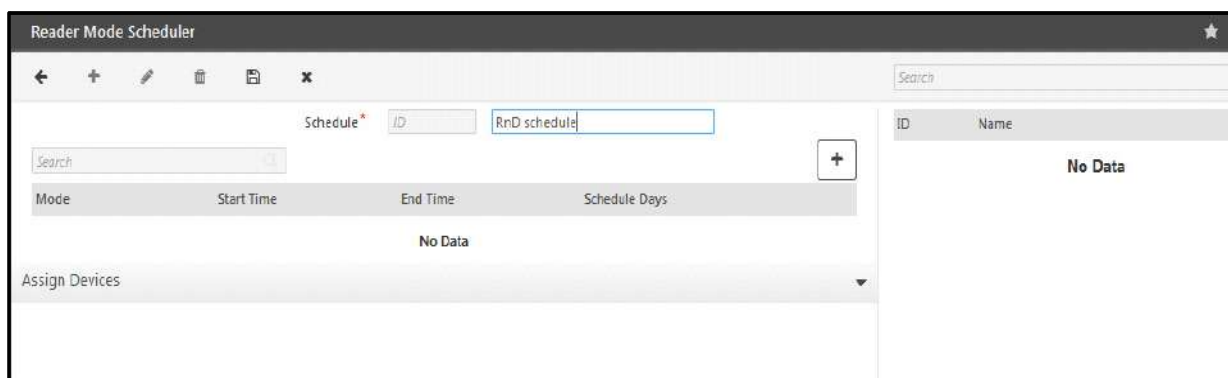

# Reader Mode Scheduler

A device has Internal and External Readers, wherein the Internal Reader is mandatory and in Entry mode by default. The Exit mode is optional and can be replaced with an exit switch also. The **Reader Mode Scheduler** feature enables automated control for the mode of an Internal Reader. Using this feature, the same reader can be configured to function both in Entry as well as Exit mode based on scheduled timings.

User can create maximum 15 schedules in COSEC. To create a new Reader Mode Schedule,

Select the **Devices Module > Masters > Reader Mode Scheduler**.

The page will appear as shown below.

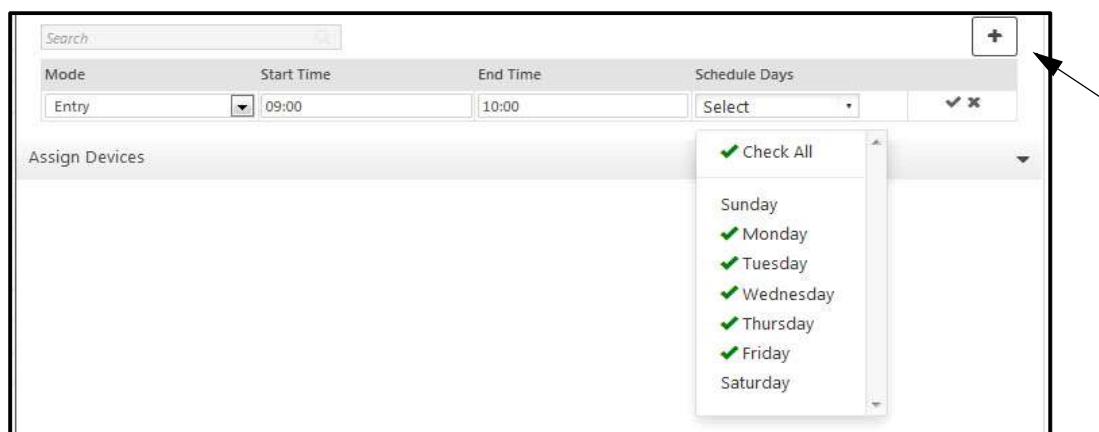

The screenshot shows the 'Reader Mode Scheduler' window. At the top, there's a search bar and a '+ Add' button. Below that, there's a table with columns: Mode, Start Time, End Time, and Schedule Days. The table is currently empty, showing 'No Data'. There's also a 'Schedule\*' field with a dropdown and a text input field containing 'RnD schedule'. At the bottom, there's an 'Assign Devices' section.

Click **New** button to define new reader mode scheduler.

**Schedule:** Enter a user-friendly name for the new schedule. The ID will be generated by the system automatically.

Click **Add** button to define the timing for entry and exit mode as shown below.

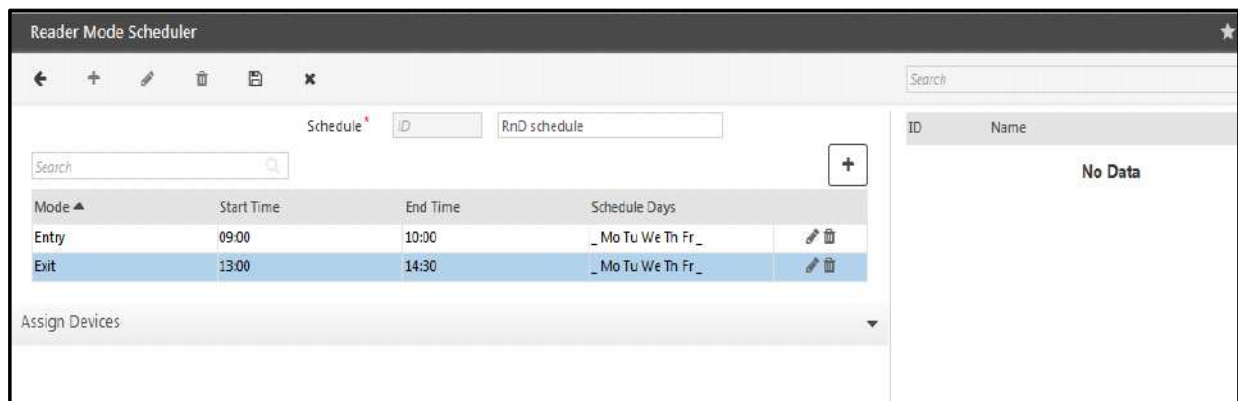

This screenshot shows the 'Add' button highlighted with an arrow. The table below it has columns: Mode, Start Time, End Time, and Schedule Days. The 'Mode' dropdown is set to 'Entry', 'Start Time' is '09:00', 'End Time' is '10:00', and 'Schedule Days' is 'Select'. A dropdown menu is open for 'Schedule Days', showing a list of days with checkboxes: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, and Saturday. The 'Assign Devices' section is visible at the bottom.

Select the **Mode** for the schedule as *Entry* or *Exit*.

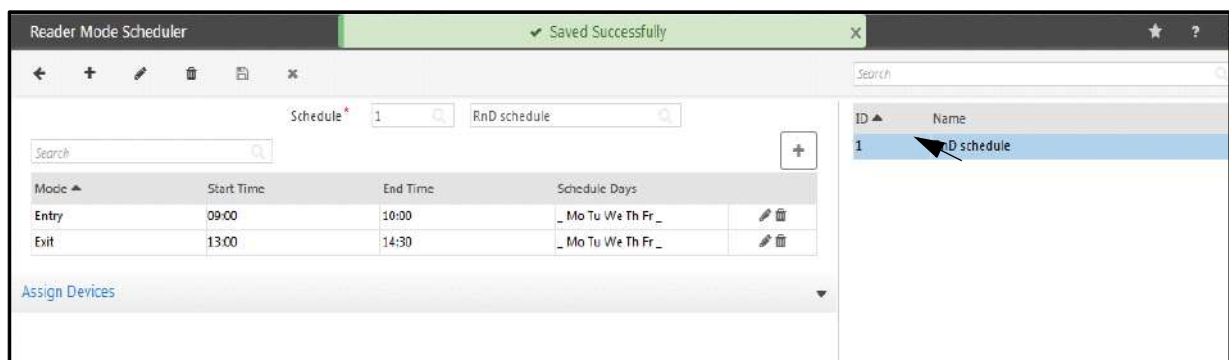

Enter the **Start** and **End** time for the schedule in HH:MM format.

Select the **days** of the week for which the new schedule would be applicable.

Click the **OK** button to create the new schedule as shown below.

Click **Save** to save the new schedule. The schedule now appears in the grid list on the right hand side of the page.

In the above example, a scheduler is set between 13:00 PM and 14:30 PM (break) on all week days (Mon-Fri), during which configured readers would register all punches in Exit Mode only. This will be especially useful when more doors are required in Exit mode at shift end time. Similarly, doors can also be scheduled to turn to Entry mode during shift start hours.

The user can assign a Reader Mode Schedule to particular devices or all the devices configured in COSEC.

To do so, select the desired Schedule from the list on the right.

Click the **Assign Devices** collapsible panel.

**Devices:** You can select particular devices or all the devices at once.

To do so, click the **Device** picklist. The **Picklist for Device** pop-up appears.

Picklist For Device

OK Cancel

You can either select particular devices or can select all the devices at once.

To select particular devices, click the check boxes of the desired devices.

**OR**

To select all the devices, select the **Select All** check box. Th devices on all the pages will be selected.

Click **OK**.The selected devices appear in the grid.

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

Click **Assign** to save the settings.

*This feature is applicable on the following door controllers (direct doors only) - **Wireless Door, PVR Door, NGT Controller, Vega Controller, Door V3.***

# Wiegand Output Format

In COSEC, Wiegand readers can send outputs not only in the standard formats or the actual information, but also in a custom data format whose structure can be defined. The COSEC administrator can use this page to create and save multiple profiles for different Wiegand Output Formats. Based on the output required, Wiegand output format in the Device Configuration module should be selected for allowed and denied events.

The admin can create maximum 9 Wiegand Output Formats.

To create a new format, Select the **Devices Module > Masters >Wiegand Output Format**.

The page will appear as shown below.

Click **New** button to add a new Weigand format.

**Format:** Enter a suitable **name** for the format. The ID will be autogenerated when the format is saved.

**Output Bits:** Enter the number of bits to be configured in Wiegand Output Format. For eg: If 32 is entered, then the configurable bits will become 32 as shown below.

The following fields can be defined in the Wiegand output format by using different **color** for each of the below mentioned fields:

- Even Parity
- Odd Parity
- Facility Code
- Card No.
- Access Code (indicates to the 3rd party panel whether the user has been allowed or not by the device)

In the **Color Selection** area, click to select a colour that represents the bit type to be added to the new format. Now, click to select the boxes where the selected bit type is to be placed. For e.g. In the above figure, Facility Code is placed across the bits 2-4.

**Facility Code:** If Facility Code is marked in the output bits, you must specify the source from where it must be read i.e. from Card No., from Card Personalization data or as per Device Configuration as shown below.

**Replace with Card No. If FC not found:** When FC is not obtained then you can select the alternate option of card number to send for FC by enabling this check box.

**Read FC from Device:** If access mode is kept as "Biometrics"/"Biometrics + PIN" and if FC is set to be read from card no. then FC will never be obtained, so in such cases which does not have card as any form of access mode, then FC stored in device can be sent by checking this box.

- The applicable devices are PVR, Vega Controller, Panel200

Click to **Save** the output format. The new format will now appear in the grid list on the right side of the page.

- *If a Wiegand Output format is edited and saved, it will be automatically sent to all the devices to which this format is assigned.*
- *The maximum bits of Facility Code and Card No. should be as defined in “**Card Personalization**” page of the Devices module. They should be selected one at a time.*
- *At a time, “Access Code” should be of 1 bit only but user can select it to be of more than 1 bit and till maximum 20 bits.*

# Card Personalization

Card Personalization is used when you want to configure all the fields of the card with your choice.

This page allows users to program the memory mapping of smart cards as per their requirement. Users can configure their own card format by adding user-defined fields as well as modifying length, type and location of pre-defined fields on the different available memory sectors in specific **HID iClass** and **MiFare** cards. A total of maximum **99** fields can be configured for each personalized format.

This feature enables to:

- Add or modify fields such as name, ID, department, shift, fingerprint templates etc. to be written on the Smart Card.
- Add new fields starting from index 1 having pre-defined field as "Facility Code and define upto 99 fields.
- To configure location of pre-defined and the newly added fields.
- To change field type and length of pre-defined fields.
- To configure a field profile based on card type and card mode.

To use this feature, Select the **Devices Module > Card Personalization**.

The page will appear as shown below.

The screenshot shows the 'Card Personalization' window. On the left, there is a sidebar with 'Field List' and 'Configuration' tabs. The main area contains a form to add a new field with fields for 'Field Name' (containing '30 chars'), 'Field Type' (set to 'Text'), and 'Max Field Length (Bytes)'. Below the form is a table of existing fields. The table has columns for Index, Field Name, Field Type, Length (Bytes), and a delete icon. The table lists five fields: Facility Code (Index 1, Numeric, 2 bytes), Additional Security Code (Index 2, Numeric, 2 bytes), User ID (Index 3, Numeric, 4 bytes), Value (Index 4, Numeric, 4 bytes), and User Name (Index 5, Text, 15 bytes). Below the table, there is a pagination control showing '1 - 5 of 22 records' and a set of buttons for navigating between pages (1, 2, 3, 4, 5).

Index	Field Name	Field Type	Length (Bytes)	
1	Facility Code	Numeric	2	
2	Additional Security Code	Numeric	2	
3	User ID	Numeric	4	
4	Value	Numeric	4	
5	User Name	Text	15	

## Field List

On the Card Personalization page, select the **Field List** tab.

Card Personalization

Field List

Configuration

Field Name: Date of Birth

Field Type: Date

Date Type: ASCII

21 - 25 of 25 records

Save Cancel

Click the **Save** button to save the new field.

If some pre-defined field's type is changed from text to numeric, the admin should make sure to have only numeric value in such fields. If any mismatch occurs, then while writing or reading information from card, conversion will not be performed and the field shall remain <Blank>.

## Configuration

On the Card Personalization page, select the **Configuration** tab.

**Card Type:** Select a Card Type from the drop-down list. Hover your mouse on the icon to view information on each card type.

**Card Mode:** Select the Card Mode as **Default** to use the default card format where location of each field is fixed as per card type selected. If **Custom** mode is selected then location of all pre-defined fields will be allowed to be changed as per available memory sectors on the card.

1. **Default:** Select the Card Mode as Default to use the default card format where location of each field is fixed as per card type selected.
  - **Card No.:** If Default Card Mode is selected, you can specify if the Card No. to be used is the original **CSN**, or **UID** (Universal Identifier number).
2. **Custom Mode:** If Custom mode is selected then location of all pre-defined fields will be allowed to be changed as per available memory sectors on the card. Maximum 99 newly created fields will be accepted for such card types.
  - **Card No.:** If Custom Card Mode is selected, you can specify if the Card No. to be used is the original **CSN**, **UID** or **Custom** card no. as is defined at the time of enrollment. While location of CSN is fixed, it is mandatory to define a Field Profile for Custom Card Nos.

UID is supported in HID iClass cards only.

When you have selected Custom card no., you must specify the Card no. from User Configuration> Credentials during enrollment of card. The number specified in Access Card field will get write over the card. See [““Credentials”” on page 472.](#)

**Read CSN:** If Card No. is selected as Custom, then “Read CSN” check-box is activated. Checking this box allows to read CSN number in case custom number is failed to read.

Valid Values	iClass 2K2	iClass 16K2	iClass 16K16	MiFare 1K	MiFare 4K
Available Page	Page0 (Total=1)	Page0 (Total=1)	Page0-Page6	NA	NA
Available Sector	NA	NA	NA	Sector0-Sector15 (Total=16)	Sector0-Sector39 (Total=40)
Available Block	19-31 (for all pages)	19-255 (for all pages)	19-31 (Page0), 6-31 (Page1-Page6)	1-2 (Sector0), 0-2 (Sector1-Sector15)	1-2 (Sector0), 0-2 (Sector1-Sector31), 0-14 (Sector32-Sector39)
Available Byte	0-7	0-7	0-7	0-15	0-15

## Field Profile

For the Custom Card Mode, location on the card memory can be defined for each selected field. For this click the **Add** button and select a **Field** using the picklist button as shown below.

If card number is selected as Custom, then it is must to add the field 22: Card No. in the field profile. If card number is set as CSN, then selecting field 22 is not mandatory.

When Card Mode is selected as "Custom" and Card No. is selected as "UID" then Card No. cannot be configured in field profile grid.

Specify the **Page** and **Block** on the card and number of **Bytes** to be used depending on the field type and the available memory for the selected field. Click the **OK** button. Similarly, add other required fields to card. Then click the **Save** button.

The configured field will appear on the grid list showing the Start and End position as shown below.

Save

Cancel

*If the Custom Card mode is selected, all fields, their length, location and types should be reflected as per Card Personalization across COSEC applications such as COSEC Enroll at the time of card enrollment.*

# Device Status

The COSEC Web application enables the administrator to view the online or offline status of all configured devices as well as to send some basic control commands to the connected devices. This makes it easier for the administrator to keep track of disconnected devices and their respective sites and also to filter out lists of specific devices.

The administrator can view and reset the I/O linked events. It also provides the administrator the authority to Soft Override certain Access Control Features.

To view device status, select the **Device module > Device Status**.

The **Device Status** page will appear as follows.

Name	Status	IP	MAC/UUID	Device Type	Site
Panel200-Device-1	Connected	191.168.11.70	00:18:09:0D:83:35	Panel200	
ARC DC100	Offline	192.168.103.54	AC:65:60:04:46:04	Panel200 Door	Site-1
Panel200-Device-2	Connected	191.168.11.76	00:18:09:07:81:76	Panel200 (SDK)	
pnI_arcdc	Online	191.168.11.28	00:18:09:0F:1A:42	Panel200 Door	Site-1
Pnl_vega	Online	191.168.11.32	00:18:09:0E:CF:66	Panel200 Door	Site-1
Path V2-Device-5	Disconnected	191.168.11.37	00:18:09:0E:CD:06	Path V2	Site-1

There are two tabs displayed namely:

- “Device Status”
- “Features”

## Device Status

Select **Device Status** tab to view the status of all the devices added to the Server. The **Device Status** page lists the devices and shows their **Name**, **Status**, **IP**, **MAC Address/ UUID**, **Device Type** and **Site**.

You can view the devices based on filters of:

- **Device Type**
- **Device Status** (All/Connected/Disconnected)
- **Group By** (None/Site/Device Type)

Once filters are applied, the filtered devices with their current status will appear in the list as shown below.

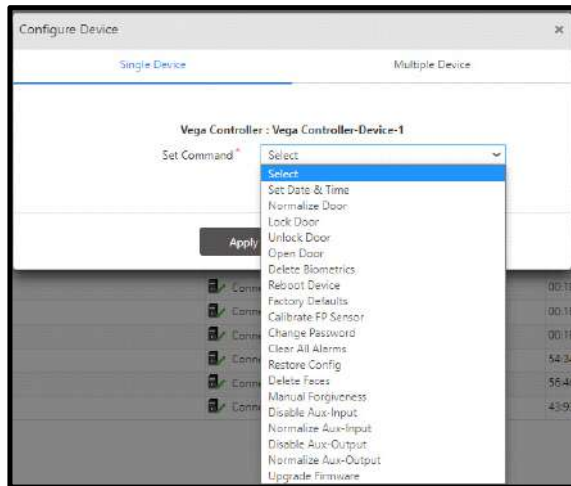

Name	Status	IP	MAC/UUID	Device Type	Site
Panel200-Device-1	Connected	191.168.11.70	00:18:09:0D:83:35	Panel200	
Panel200-Device-2	Connected	191.168.11.76	00:18:09:07:81:76	Panel200 (SDK)	
pnI_arcdc	Online	191.168.11.28	00:18:09:0F:1A:42	Panel200 Door	Site-1

## Sending Commands to Devices

The administrator can send direct commands to the selected device by clicking on  from the **Device Status** page.

The **Configure Device** window appears as shown below.

For a **Single Device**, select the Command from the **Set Command** drop down list and click **Apply** to set the command to the device.

These commands include:

- **Set Date &Time** - Sends the current system date and time to the device.
- **Normalize/Lock/Unlock/Open Door**- Sends the appropriate commands to the DOOR to reset the door lock status and open the door.
- **Delete Biometrics** - Sends command to delete the biometrics from the selected device.
- **Reboot Device** - Sends the reboot command to the device.
- **Factory Defaults** - Sends the command to default the device settings to the default factory settings.
- **Calibrate FP Sensor**- Sends the command to calibrate the finger print sensor.
- **Change Password** - Sends command to change the password of selected user on the COSEC device.
- **Clear All Alarms** - Sends the command to clear all alarms configured on the system.

*For changing the alarm status, the user will be prompted to provide the login password. Also, he may provide an optional remark to justify his action.*

- **Restore Configuration** - For Panel200 door and direct doors, the user configuration /credentials can be restored on the device from the database.
- **Delete Faces (only for Vega/FMX, MODE, ARGO, and ARGO FACE Direct doors)**- Sends command to delete the faces from the selected device.

- **Manual Forgiveness (only for Panel200 and Direct doors PVR, V3, Wireless, Vega, FMX, ARC DC200, ARGO, ARGO FACE, and PATH V2)-** The user who is denied access due to Anti-pass back violation can be reset by giving **Manual Forgiveness** command. With this the user wont have to wait for the timer to expire and he can access the doors again.

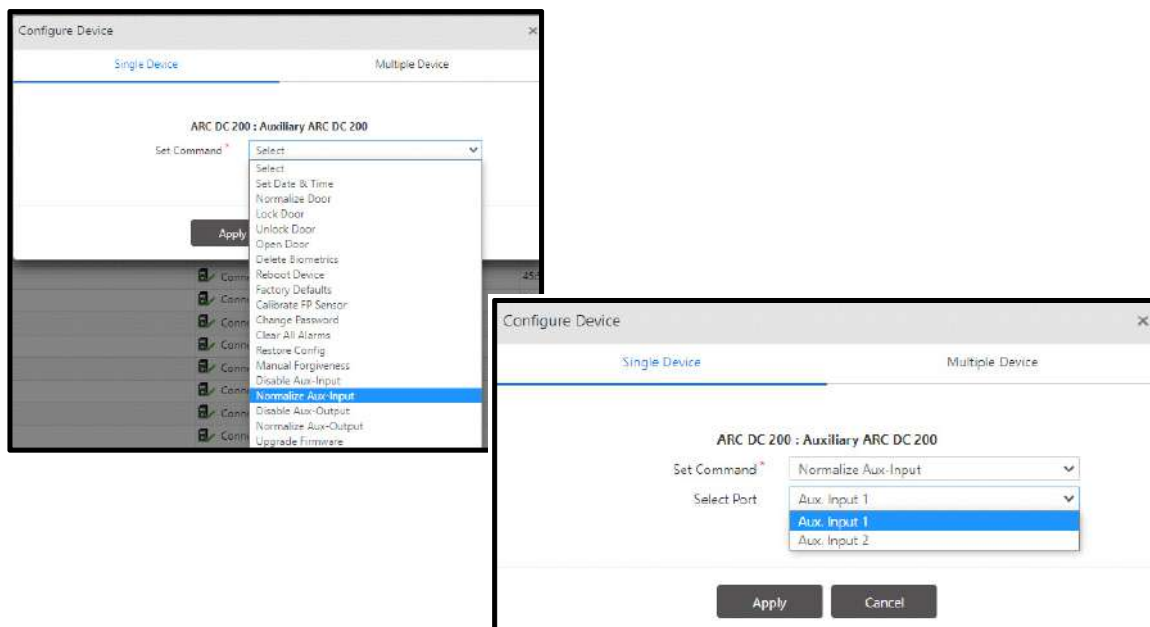

- **Forgiveness For-** Select the option as **Local** or **Global** for which manual forgiveness is to be given.

For **Global**; forgiveness is sent to all the access zones of Panel200.

For **Local**; select the Access Zone from the picklist. In this forgiveness is sent to selected access zone only.

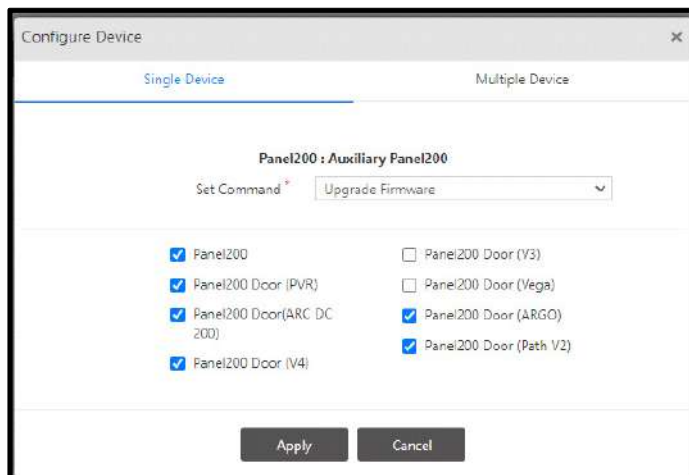

- **User-** Select the user for whom manual forgiveness is to be given.

- **Normalize/Disable Aux-Input (only for VEGA, V4, ARC DC200 Direct doors and ARC DC200 Single Door Dual Reader Panel door)-** Sends the appropriate commands to the DOOR to reset the Aux-Input status.

When **ARC DC200 Direct door/ARC DC200 Single Door Dual Reader Panel** door is selected in the **Device Status** list and **Set Command** is selected as **Disable Aux- Input/Normalize Aux-Input** then only **Select Port** parameter will be visible. You can select the desired port from the **Select Port** dropdown list.

- **Normalize/Disable Aux-Output (only for VEGA, V4, ARC DC200 Direct doors and ARC DC200 Single Door Dual Reader Panel doors)-** Sends the appropriate commands to the DOOR to reset the Aux-Output status.
- **Upgrade Firmware-** Sends the command to upgrade the firmware. When you upgrade the firmware of Panel200; then you can select the checkbox of Panel200 Door (V3), Panel200 Door (PVR) and Panel200 Door (Vega) to upgrade the firmware of selected type of doors of the Panel200.

When **Panel200** device is selected and if few of the components are checked and when you click **Apply** then the **Upgrade Firmware** command will be sent to the **Panel200** for selected components only.

If all the components are selected; then **Upgrade Firmware** command will be sent to the **Panel200** for **Panel door (PVR, ARC DC200, V4, V3, Vega, ARGO, and PATH V2)**.

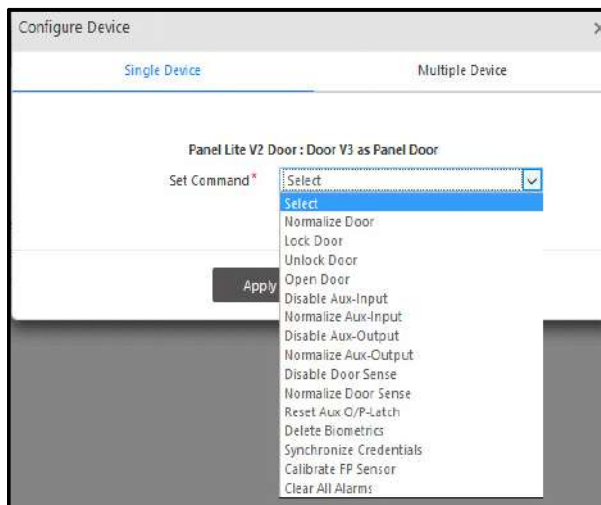

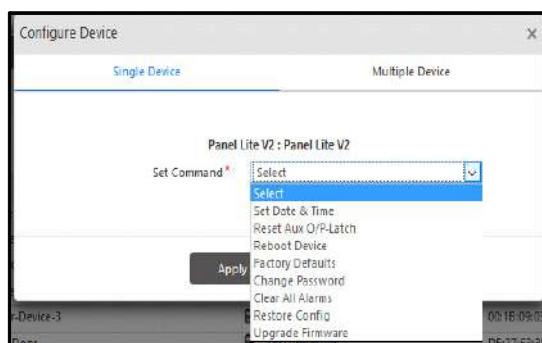

When **Upgrade Firmware** command is sent to direct door; then firmware of selected direct door will be upgraded.

- **Delete Fingerprints/Palms** - Sends command to delete the fingerprints/palm templates from the fingerprint/palm reader module of the selected device.
- **Synchronize Credentials (only for Panel200 Doors)** - Sends command to synchronize the fingerprints/palm templates from the Panel Lite V2 to the Panel Doors. It is recommended to first send the delete fingerprints/palms command to the door before starting the synchronizing process.

*For different doors, there are different sets of **Set Command**.*

The following commands can be sent to the **Panel200** and **Panel200 Door**.

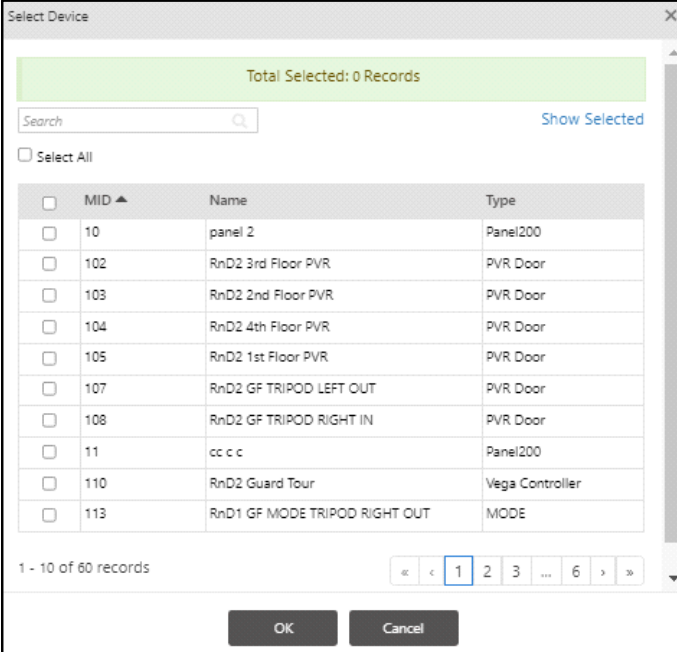

Click the  icon adjacent to a **Panel200** on the **Device Status** list to view the status of all Panel200 Doors assigned under it.

For **Multiple Device**, in the **Configure Device** pop-up

- **Set Command:** Select the desired command from the **Set Command** drop down list;
- **Device:** Select the devices to which the command is to be sent from the **Device** picklist. You can select particular devices or can select all the devices at once.

Click the **Device** picklist. The **Select Device** pop-up appears.

When **Panel200** device is selected in the list of **Multiple Device** selection and command is selected as **Upgrade Firmware** in the **Set Command** picklist, if few firmware components checkbox are selected and when you click **Apply** then the configuration for selected components only will be sent to the **Panel200**.

*It is possible that the Firmware Location may have Firmware Update file of lower version then the current version of device firmware and still if the Firmware Update command is triggered then device firmware will get degraded to lower version.*

## Example: Firmware upgrade from FTP

Suppose the current firmware in PVR direct door is V1R37 which was upgraded on 10th May 2018.

Now the FTP path for COSEC CENTRA is configured as shown below:

The new firmware of PVR door is available at FTP path as shown below:

Now the firmware of PVR can be upgraded from Device Status page by selecting the Upgrade Firmware command as shown below.

Device Status						
<div> <div> <div>←</div> <div>↺</div> </div> <div>Search</div> </div>

## Features

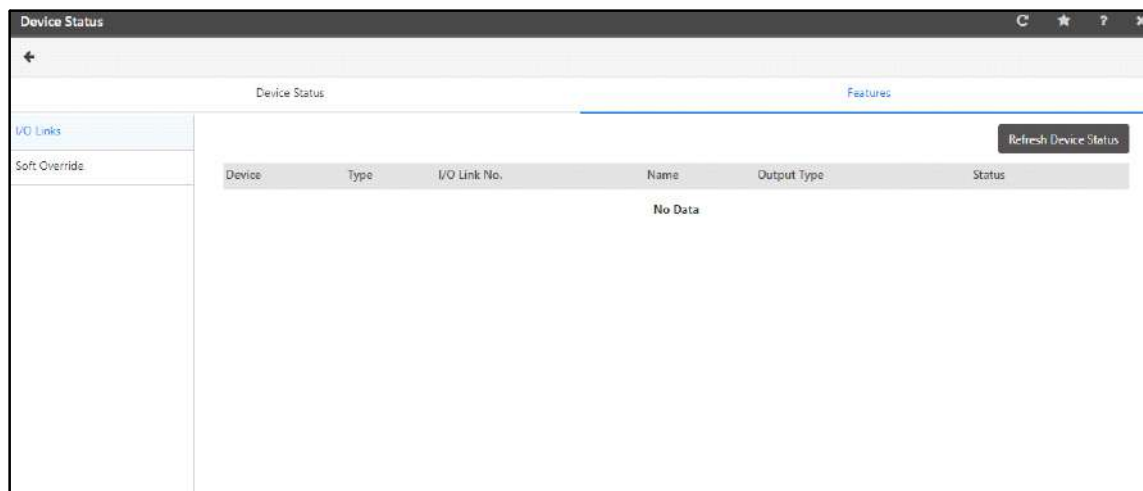

The Features tab consists of two pages — I/O Links and Soft Override.

### I/O Links

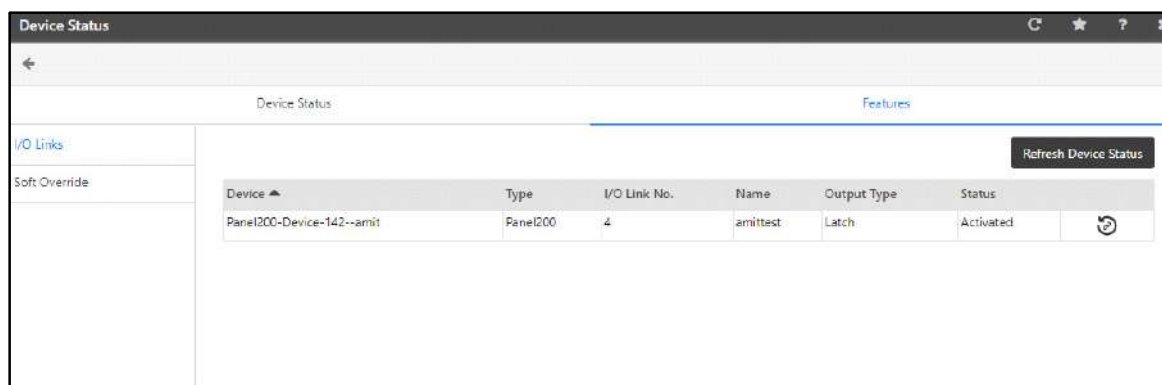

The I/O Links page allows you to view the Events related to I/O links of devices for the connected Panels/Direct Doors.

To view I/O linked events,

- Click **Device module > Device Status > I/O Links**.

- When an I/O Link related event occurs, it appears in a grid.
- Click **Refresh Device Status** to fetch the new events.

The details displayed are — Device Name, Type, I/O Link No., Name, Output Type and Status. If the Output Type is **Latch**, then **Reset** option appears.

*The **Reset** option is applicable only when the Output Type is **Latch**.*

- Click **Reset** to reset the output.

## Soft Override

The Soft Override page allows you to override certain Access Control features for the connected Panel200 on a temporary basis.

Make sure you have selected the **Soft Override** check box from **Device Configuration > Features > Set 1** for Panel200 to enable the Soft Overriding of Access Control features.

To configure Soft Override,

- Click **Device module > Device Status > Soft Override**.

Configure the following parameters:

- Device:** Select the desired device on which you wish to override Access Control features from the drop-down list.
- Override:** Select the desired Access Control feature which you wish to override from the drop-down list and specify the time in minutes.

If you select ACS Policies, the time based access will be overridden if set. This includes Shift Based Access as well as Time Zone Based Access.

To know about the respective feature — 2 Person Rule, First User In, Alarm, Anti-Pass Back, Mantrap, Occupancy Control, Visitor Escort Rule — refer to [“Access Control”](#).

- Click **Submit**. Click **Refresh Device Status**. The overridden Access Control feature appears in the grid.

The details displayed are — Device Name, Feature, Status, Date Time and Duration (Minutes).

You can stop the Soft Overriding of the Access Control feature, if required. To do so,

- Click **Resume**  to stop the overriding of the Access Control feature.

# Device Reports

These reports can be obtained using the **Reports** section under the **Devices** module. The Reports can be categorized as follows:

“Panel”

“Door”

“Invalid Events”

“Device- Wise events”

“Door Offline”

“Intercom Events”

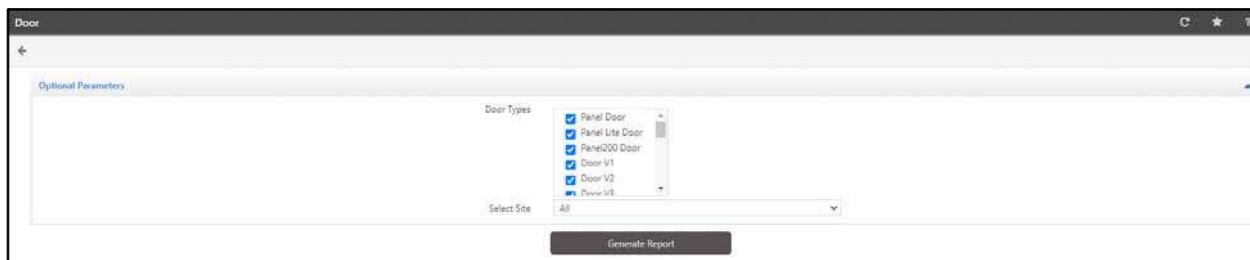

## Panel

This report displays the details of all panel devices on the system.

Panel

## Door

This report displays the details of all the devices on the system.

The screenshot shows a web application interface for a 'Door' report configuration. It features a section titled 'Optional Parameters' with a 'Door Types' list containing several options: Panel Door, Panel Lite Door, Panel200 Door, Door V1, Door V2, and Door V3. Below this is a 'Select Site' dropdown menu set to 'All'. A 'Generate Report' button is located at the bottom.

Click the **Optional Parameters** collapsible panel and configure the following parameters:

- **Door Type:** Select the check boxes of the desired Door Type
- **Select Site:** Select the desired option — **All** or **Selected**.
  - If you select **All**, a report for all the sites will be generated.

- If you select **Selected**, click the selected picklist. The **Select Sites** pop-up appears.

The 'Select Sites' window displays a table with 10 records. The status bar at the top indicates 'Total Selected: 0 Records'. The table has columns for 'ID' and 'Name'.

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	site5
6	site6
7	site7
8	site8
9	site9
10	site10

At the bottom, it shows '1 - 10 of 11 records' and a pagination control with '1' selected. Buttons for 'OK' and 'Cancel' are at the bottom right.

- You can either select particular site/s or can select all the sites at once.
- To select particular site/s, click the check boxes of the desired sites.

The 'Select Sites' window displays the same table as before, but now with 2 records selected (IDs 1 and 2). The status bar at the top indicates 'Total Selected: 2 Records'.

ID	Name
<input checked="" type="checkbox"/> 1	Factory
<input checked="" type="checkbox"/> 2	HO
<input type="checkbox"/> 3	RnD1
<input type="checkbox"/> 4	RnD2
<input type="checkbox"/> 5	site5
<input type="checkbox"/> 6	site6
<input type="checkbox"/> 7	site7
<input type="checkbox"/> 8	site8
<input type="checkbox"/> 9	site9
<input type="checkbox"/> 10	site10

The rest of the interface, including the pagination and buttons, remains the same.

**OR**

- To select all the sites, select the **Select All** check box. The sites on all the pages will be selected.

Select Sites

## Invalid Events

This report displays the details of invalid events on selected doors for a specified period.

The screenshot shows the 'Invalid Events' report configuration window. It includes a 'Date' field with a range from 06/21/2023 to 06/21/2023. Below this is an 'Optional Parameters' section with a dropdown for 'Enterprise Group in Report' set to 'Organization'. The 'Door Selection' section has a 'Select Doors' dropdown set to 'Door-Wise' and a 'Door' field with a search icon. A 'Generate Report' button is at the bottom.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Enterprise Group in Report:** Select the desired enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1(Association Maps) Custom Group /2/3.

### Door Selection

- **Select Doors:** Select the desired option— **Door-Wise** or **All**.
- If you select **All**, the report will be generated for all the doors.
- If you select **Door-Wise**,
  - Click the **Door** picklist. The **Picklist for Door** pop-up appears.

The screenshot shows the 'Picklist For Door' pop-up window. It has a search bar and a 'Show Selected' button. Below is a table with 10 rows, each with a checkbox, an ID, and a Name. The table shows 10 records out of 107. At the bottom are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	ID	Name

## Door Offline

This report displays the details of all Panel and Direct Doors which have gone offline for selected duration.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.
- **Time** Specify the **Start** and **End** time for the device-wise events to be listed.

### Optional Parameters

- **Offline Duration (seconds):** Specify the desired offline duration in seconds for which you wish to view the report.

### Device Selection

- **Filter Devices:** Select the desired option— **All** or **Group Wise**.

If you select **All**, then all the devices will be selected.

If you select **Group Wise**, you need to select the group and the devices of the selected group.

- **Select Group:** Select the desired option— **Panel**, **Direct Door** or **Device Group**.

If you select **Panel**,

- Click the **Panel** picklist. The **Picklist for Panel** pop-up appears.

Shift Schedules are detailed chart indicating the working hours for group employees based on the organization's requirement. These display details like no. of days, timing, shift rotation, rotation count etc for each shift schedule.

*This functionality will not be available with the COSEC Application basic platform license.*

*In order to start the configuration of the system the user needs to first define the devices from the **Basic** module and then proceed with the configuration of the Shifts from the **Shifts and Schedules** module.*

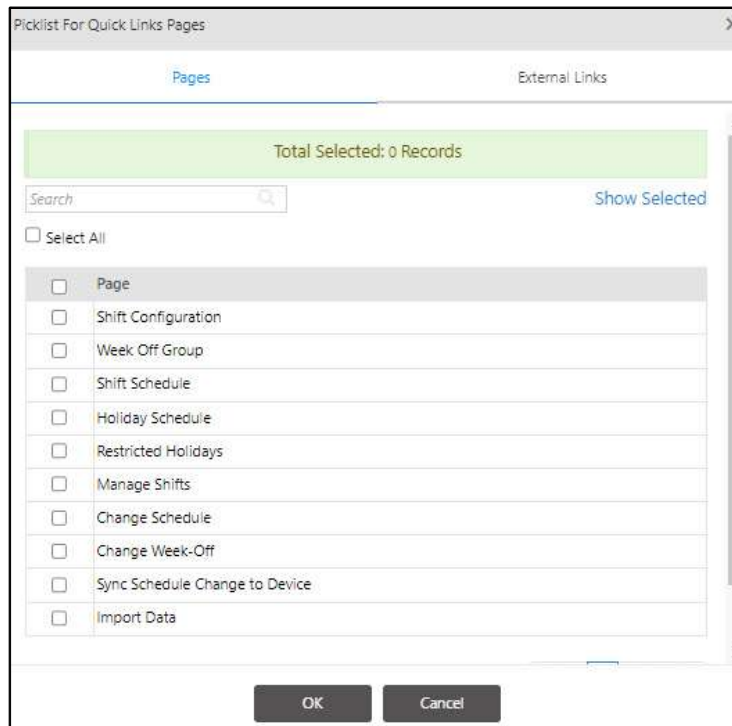

To use the Shift and Schedules functionality, Click on **Shifts and Schedules**  Module. The Shifts and Schedules page will appear on your screen.

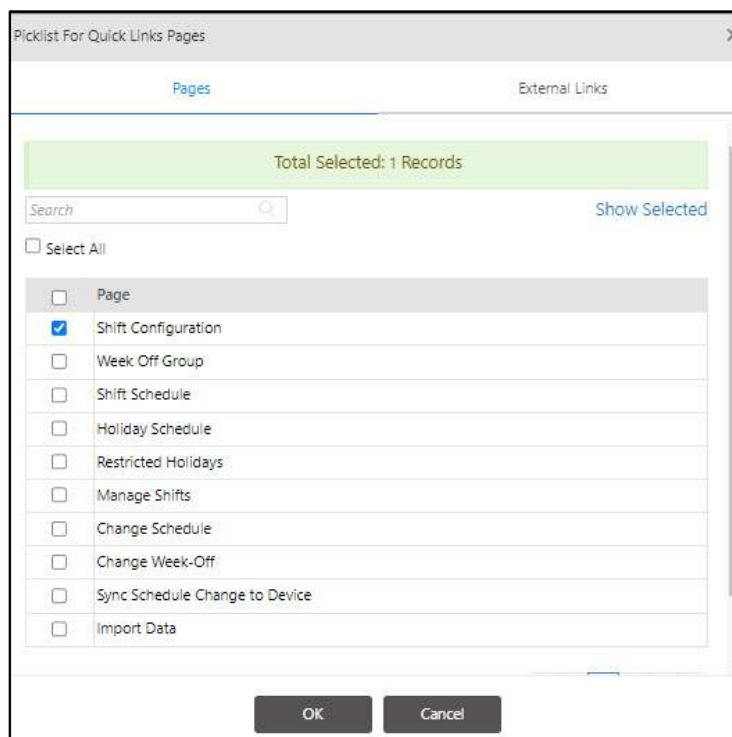

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

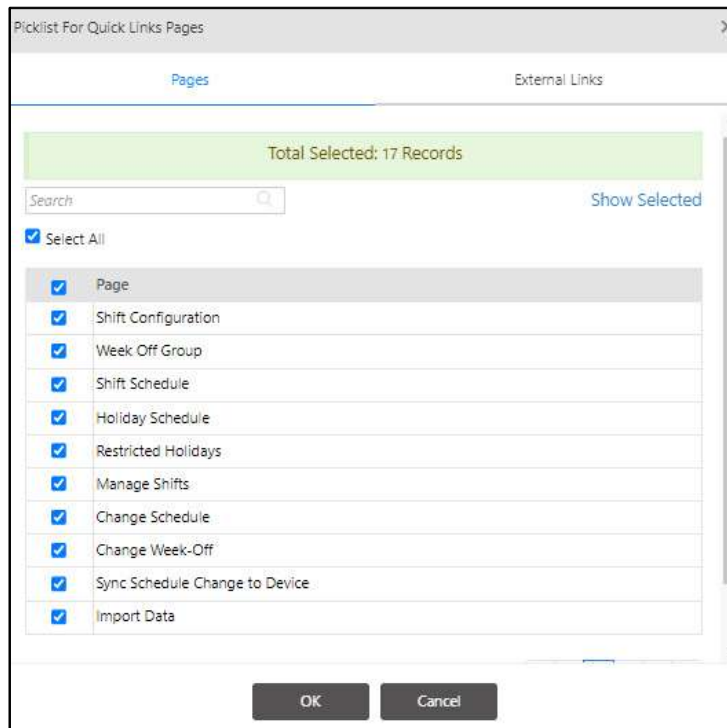

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

**OR**

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

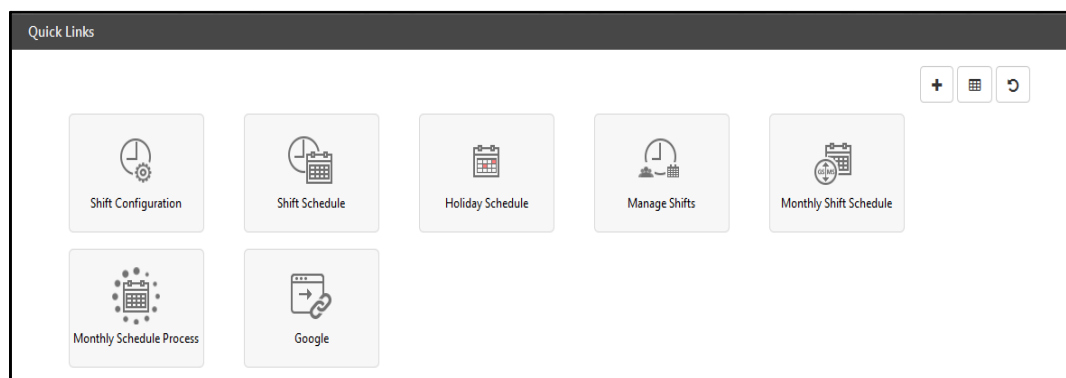

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

#### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

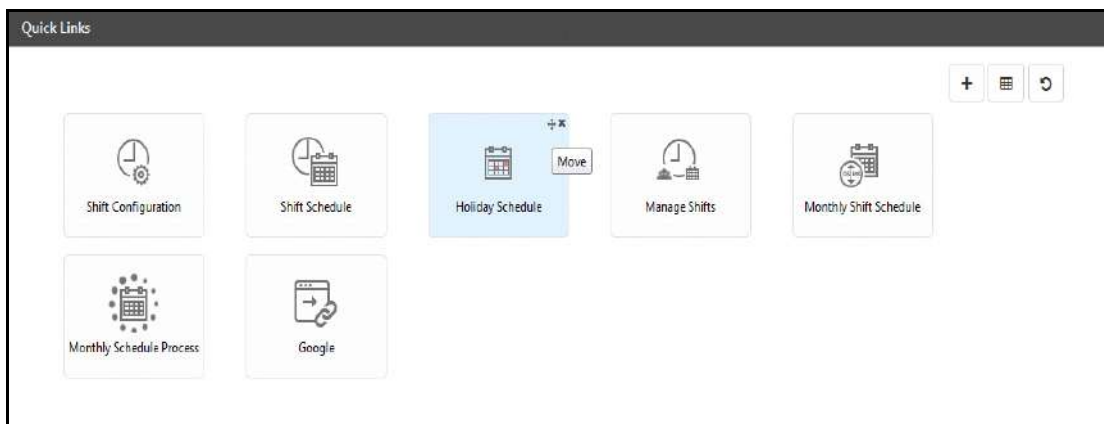

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

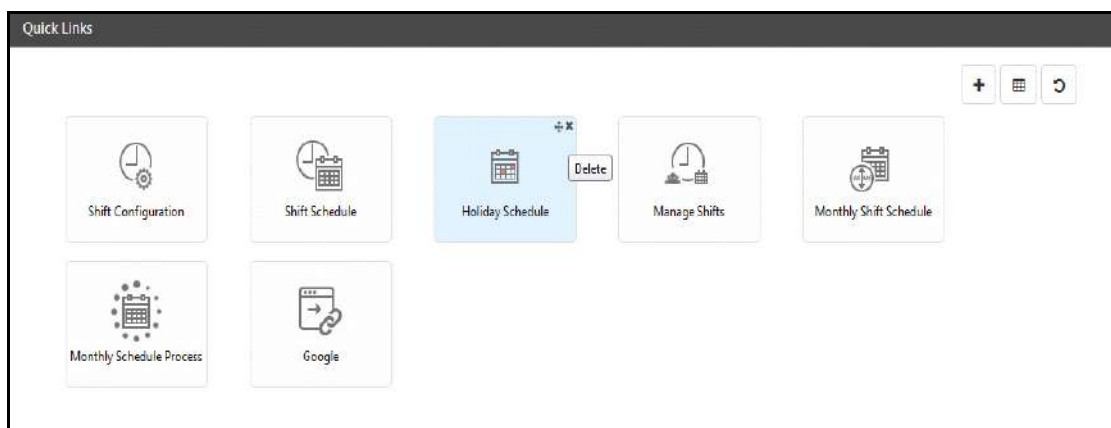

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

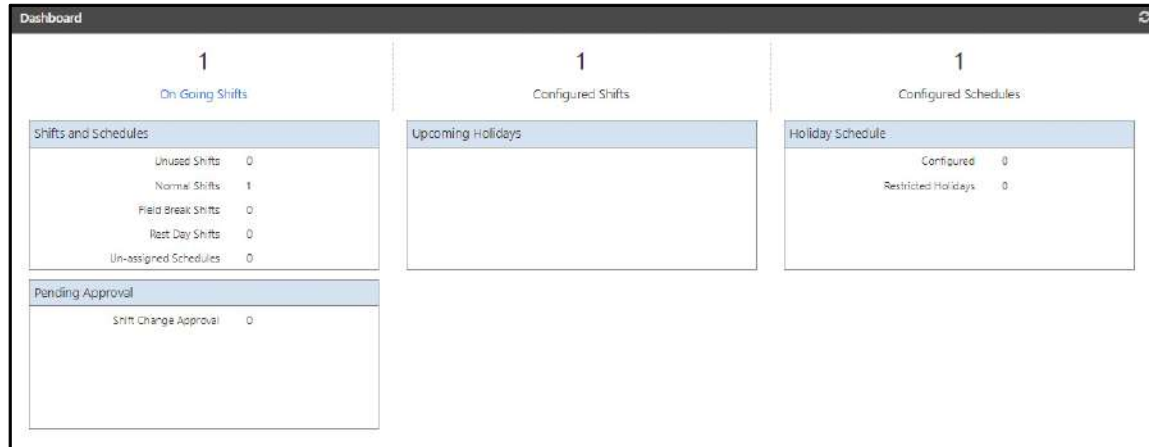

*Quick links are displayed as per rights given to System Account and ESS users.*

## Shifts and Schedules Dashboard

To view the Dashboard, click the Dashboard button  on the **Shifts and Schedules** page.

It displays the basic information on shifts and schedules relating to the COSEC Software under the four groups:

On Going Shifts- Total number of shifts assigned to user.

Configured Shifts- Total number of shifts configured in COSEC.

Configured Schedules- Total number of shift schedules configured in COSEC.

### Shifts and Schedules

- Unused Shifts- Total number of shifts, currently not configured in any Schedule.
- Normal Shifts- Total number of shifts configured as Normal Type Shift.
- Field Break Shifts- Total number of shifts configured as Field Break Type Shift.
- Rest Day Shifts- Total number of shifts configured as Rest Day Type Shift.
- Un-assigned Schedules- Total number of schedules, currently not configured to any user.

### Upcoming Holidays

- The upcoming 5 holidays will be listed in ascending order.

### Holiday Schedule

- Configured- Total number of holiday schedules configured in COSEC.
- Restricted Holidays- Total number of restricted holidays configured in Cosec.

### Pending Approval

- Shift Change Approval - Total number of Shift Change Applications pending for approval.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The

Latest values on Dashboard are updated on clicking the **Refresh**  button.

# Shift Configuration

Shift Configuration enables to define the Shift, Shift Timing details, Break details and Grace Time details. The total number of shifts that can be created in COSEC is 1402.

To access the Shift Configuration, Click on **Shift Configuration** option from the Shift and Schedule page. The page appears as shown below:

The screenshot shows the 'Shift Configuration' window. On the left, there are form fields for: Shift ID (H2), Shift Name (H2 Shift-Based), Shift Description (Factory Workers Shift), Shift Type (Normal), Shift Timings (09:45 to 17:45), Attendance Calculation Type (Shift-Based), Minimum Required Working Hours (03:00 for Half Day, 07:00 for Full Day), Minimum Hours Required Within Shift Duration (checked), Deviation From Shift Start (Min) (0-999), Deviation From Shift End (Min) (0-999), and Shift Allowance (unchecked). On the right, there is a table listing existing shifts:

ID	Name	Timings
A1	A1Shift	10:00 - 19:00
GS	General Shift	09:00 - 18:00
H1	H1 Cust Hrs Shift	09:45 - 17:45
H2	H2 Shift-Based	09:45 - 17:45
SA	sa	09:00 - 02:22

- **Shift:** Specify a User friendly Shift ID and Shift Name.
- **Shift Description:** Specify the description for the Shift.
- **Shift Type:** Select the Shift Type from the drop down options:
  - **Normal:** This is a normal shift with one weekoff within a week.
  - **Field Break:** This is a shift where a break of around 20 days can be given after working period of 2 months.
  - **Rest Day:** This is a like a normal shift with one weekoff given for rest after 10-12 working days.
- **Shift Timings:** Specify the start time and end time of the shift in hh:mm format.

The Shift duration or the total working hours of the shift is automatically calculated based on the start and end time.

- **Attendance Calculation Type:** For calculating attendance you can select Shift Based or Custom Works Hours option.

If you select **Shift Based**, you need to configure the parameters as mentioned in ["Shift Based"](#).

If you select **Custom Work Hours**, you need to configure the parameters as mentioned in ["Custom Work Hours"](#).

## Shift Based

If you have selected Shift Based as the Attendance Calculation Type, configure the following parameters:

### Minimum Required Working Hours

- **For Half Day:** Specify the minimum working hours required for marking half day present for the user. The format is in HH:MM.
- **For Full Day:** Specify the minimum working hours required for marking full day present for the user. The format is in HH:MM.
- **Minimum Hours Required Within Shift Duration:** Select this check the box to enable this option. This specifies the mandatory minimum working hours for full day as well half day that should fall within the shift working time allotted to the user.

This means if the shift duration is from 9:00 to 18:00, then your working hours must be within this shift duration to mark the user present. If you have worked from 17:00 to 23:00, then your 6 hours of work is not in the shift duration. Out of 6 hours only 1 hour fall in the shift duration which is not enough to mark half day present (depends on Minimum Required Working Hours For Half Day= 2 hrs)

If Minimum Hours Required Within Shift is enabled then system will consider **Eligible Hours** for marking user absent due to less work hours. For details, refer to "[Eligible hours calculation](#)".

- **Deviation from Shift Start (Min):** If **Minimum Hours Required Within Shift Duration** is enabled, then you can specify the deviation to be allowed from the shift starting time.
- **Deviation from Shift End (Min):** If **Minimum Hours Required Within Shift Duration** is enabled, then you can specify the deviation to be allowed from the shift ending time.

*Minimum hours fulfillment is checked before the "Normal" type user is marked Absent due to Less work hours.*

### Eligible hours calculation

**Example1:** Shift: 09:00 to 18:00 hrs. Deviation allowed for shift start=1hr, Deviation allowed for shift end=1 hr.

•

IN Punch	Deviated Shift Start	ShiftStart	Shift End	Deviated Shift End	OUT Punch
6:00 hrs	8:00 hrs	9:00hrs	18:00 hrs	19:00 hrs	21:00 hrs
Actual work done= 15 hrs					
Early IN=3hrs				Overstay = 3hrs	
DEI=2hrs					DO=2hrs

- Work hours = 15:00 hrs (6:00 to 21:00 hrs)
- Work hours within Shift= Work hours- Early IN- Overstay  
= 15 -3- 3 = 9:00 hrs
- Eligible Work hours= Work hours- Deviated Early IN(DEI)- Deviated Overstay(DO)

$$= 15 - 2 - 2 = 11 \text{ hrs}$$

### Example2:

IN Punch	Deviated Shift Start	Shift Start	Shift End	Deviated Shift End	OUT Punch
	13:00 hrs	15:00hrs	23:00 hrs	01:00 hrs	
15:00 hrs (5/7/16)					05:00 hrs (16/7/16)
		Actual work done= 14 hrs			
		Work hours within shift= 8 hrs			
Early IN=0hrs				Overstay = 6hrs	
DEI=0hrs					DO=4hrs

- Eligible Work hours= Work hours- Deviated Early IN(DEI)- Deviated Overstay(DO)  
= 14- 0- 4 = 10hrs

- **Shift Allowance:** Select this check to include the shift allowance in the salary calculation.

## Break Details

Click the Break Details collapsible panel and configure the following parameters:

Break Details

Break Timings

HH:MM

HH:MM

00:00

Break Deviation Allowed

☒

Advanced Details

**Break Timings:** Configure the Start and End break time in HH:MM format. The break duration is automatically calculated based on the start and end time and appears in the adjoining box. According to the break duration hours, shift duration will also be updated.

For example: If Break Start time is 13:00 hrs and Break End time is 14:00 hrs, then break duration will be 00:30 hr.

**Shift Configuration**

Shift: SG General Shift

Shift Description: General Shift 1

Shift Type: Normal

Shift Timings: 09:00 18:00 08:00

Attendance Calculation Type: Shift-Based

**Minimum Required Working Hours**

For Half Day: HH:MM

For Full Day: HH:MM

Minimum Hours Required Within Shift Duration: ☐

Deviation From Shift Start (Min): 0-999

Deviation From Shift End (Min): 0-999

Shift Allowance: ☐

**Break Details**

Break Timings: 13:00 14:00 01:00

Break Deviation Allowed: ☒

**Advanced Details**

**Break Deviation Allowed:** Select the check box to allow the break deviation. By enabling this option, the user is allowed to take a break at any time during the day.

## Advanced Details

**Break Details**

Break Timings: 13:00 14:00 01:00

Break Deviation Allowed: ☒

**Advanced Details**

Add Break Late-IN In Total Late-IN: ☐

Add Break Early-OUT In Total Early-OUT: ☐

**Deduct Break From Working Hours**

Deduction Type For 2 Punch: ☐ Configured Break Duration

Deduction Type For 2+ Punch: ☐ Actual Break Duration

You can configure the **Advanced Details** only if **Break Deviation Allowed** is disabled.

- **Add Break Late-IN In Total Late-IN:** Select this check box to add the break late-in to the total late-in of the shift. **For example:** GS (09:00 to 18:00 hrs), your break is from 13:00 to 14:00hrs. After availing break, you are entering office at 14:15 hrs, which is 15 minutes late. So Break Late-IN of 15 minutes will be added in the total Late-IN hours.

- **Add Break Early-OUT In Total Early-Out:** Select this check box to add the break early-out time to the total early-out time of the shift.  
**For example:** GS (09:00 to 18:00 hrs), your break is from 13:00 to 14:00hrs. You are going early for availing break at 12:45. Then 15 minutes of break early out will be considered. If your shift ends at 18:00 hrs. And you leave at 17:30 hrs. So it is 30 minutes Early-out. If this option is enabled then 15min (break early-out) will be added to the total early out (30 minutes) making it 45 minutes.

### Deduct Break From Working Hours

The screenshot shows a 'Break Details' configuration window. It includes fields for 'Break Timings' (13:00 to 14:00, 01:00), a checked 'Break Deviation Allowed' checkbox, and an 'Advanced Details' section with two unchecked checkboxes: 'Add Break Late-IN In Total Late-IN' and 'Add Break Early-OUT In Total Early-OUT'. The 'Deduct Break From Working Hours' section contains two checkboxes, 'Deduction Type For 2 Punch' and 'Deduction Type For 2+ Punch', each followed by a dropdown menu currently set to 'Configured Break Duration' and 'Actual Break Duration' respectively.

You can configure the basis for break hours deduction from the working hours for users of a particular shift. You can figure different options for 2 Punch users and 2+ Punch users.

The options are same for **Deduction Type for 2 Punch** and **Deduction Type For 2+ Punch**, however both can be configured individually.

### Deduction Type for 2 Punch and/or Deduction Type For 2+ Punch

- Select the respective check box and select the desired option — Configured Break Duration, Actual Break Duration, Time Exceeding Break Duration, Configured If Less, Else Actual Break Duration, Custom Break Deduction.
- If you select **Configured Break Duration**, the break duration deduction will be based on break duration as configured from Break Details.
- If you select **Actual Break Duration**, the break duration deduction will be based on user punches, that is actual break taken.
- If you select **Time Exceeding Break Duration**, the break duration deduction will be based on the time exceeding configured break duration.
- If you select **Configured Break If less, Else Actual Break Duration**, if the break availed by the user is less than the configured break duration, then the configured break duration is deducted from the working hours whereas if the break availed by the user is greater than the configured break duration, then the actual break duration availed is deducted from the working hours.

For example, if the configured break duration is 60mins and the user takes a break of 30mins, then the process will set the day's availed break as 60 mins. If the user takes a break of 70 mins, then the process will set the day's availed break as 70 mins.

- If you select **Custom Break Deduction**, you can define a break schedule.

## Grace Time Details

- **Include Grace Time in Working Hours:** Select the check the box to include the grace time in the allotted working hours.
- **Grace Time for Shift Late-IN(Min):** Specify the grace time in minutes as the allowed deviation of timing while punching IN at start of the shift. Refer to [“Late-IN Policy”](#).  
**Example:** Consider shift is from 9:00 to 18:00 hrs and Include Grace Time in Working Hours is enabled.

On 1/7/16: If Grace Time (check box is disabled) and Late-IN both are not applicable for user.

On 4/7/16: If Grace is allowed (check box is enabled), Late-IN not applicable. Then Late-IN column will show nothing.

On 5/7/16: If Late-IN allowed is 10 minutes, Include Grace Time in Working Hours is enabled, Grace Time for Shift Late-IN is 30 mins. IN-punch is 9:20, so due to grace timings, Late-IN will not be displayed.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/07/2016	GS	09:05	18:30	PR	PR			08:25	00:30		01:00			
02/07/2016	GS - WO			WO	WO

05/07/2016	GS	09:20	19:00	PR	PR			08:40	01:00		01:00			
06/07/2016	GS													

- **Overlap Grace Time With Shift Late-IN:** Select this check the box to include the Grace Time With the Shift Late-IN time.

**Example:** Consider Grace Time for Shift Late-IN as 10 mins, Late-IN allowed is 20 mins, Overlap is disabled.

On 1st: IN punch 9:05, within Grace period of 10mins

On 4th: IN punch 9:11, beyond Grace period of 10 mins but within Late-IN allowed of 20mins so Late-In by 1min.

On 5th: IN Punch 9:21, Upto 9:10 is Grace, after that Late-IN, so from 9:11 to 9:21 is 11 min of Late-IN

On 6th: IN Punch 9:15, Upto 9:10 is Grace, after that Late-IN, so from 9:11 to 9:15 is 5 min of Late-IN

On 7th: IN Punch 9:31, Beyond Grace and Late-IN period so user will be marked as Absent: Late-IN

The Absent marking of the user will depend on the option selected in Attendance Policy for Late-IN. For details, refer to [“Absent Marking Rule”](#) in [“Attendance Policy”](#).

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/07/2016	GS	09:05	18:30	PR	PR			08:25	00:30		01:00			
02/07/2016	GS - WO			WO	WO									
03/07/2016	GS - WO			WO	WO									
04/07/2016	GS	09:11	18:30	PR	PR	00:01		08:19	00:30		01:00

08/07/2016	ES			AB	AB									No Punches Available

**Example:** When Overlap is allowed, Grace Time will overlapped with Late-IN

On 6th: IN punch 9:15 am, the user will be marked as 15 min late. The Grace Time will not be considered and it will overlap with Late-IN so total 15 mins will be considered as Late-IN. Similarly will be on 4th.

On 5th: IN Punch 9:21 am, the user will be marked as Absent due to Late-IN as the Late-IN allowed is only 20 mins. Similarly will be on 7th.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/07/2016	GS	09:05	18:30	PR	PR			08:25	00:30		01:00

06/07/2016	GS	09:15	18:30	PR	PR	00:15		08:15	00:30		01:00			
07/07/2016	GS	09:31	18:30	AB	PR			07:59	00:30		01:00			AB:Late-IN

- **Grace Time for Shift Early Out (Min):** Specify the grace time in minutes as the allowed deviation of timing while punching OUT at end of the shift. Refer to [“Early-OUT Policy”](#).
- **Overlap Grace Time With Shift Early-OUT:** Select this check the box to include the Grace Time With the Shift Early-OUT time.
- **Grace Time for Break Late-IN (Min):** Specify the grace time in minutes.
- **Overlap Grace Time With Break Late-IN:** Select this check the box to include the Grace Time too with the break Late-IN time.
- **Grace Time for Break Early-OUT:** Specify the grace time in minutes.
- **Overlap Grace Time With Break Early-OUT:** Select this check the box to include the Grace Time too with the break Early-OUT time.

The functionality of Grace for Early-OUT, Break Late-IN and Break Early-OUT is similar to Late-IN as explained above.

Click on **Save** to save the changes.

Once you have completed the task of creating all the shifts, you need to assign the desired shifts to desired Shift Schedules. Then these Shift Schedules need to be assigned to the users. Refer to [“Shift Schedule”](#) and [“Configuring Users”](#) for details.

If a shift is assigned to any Shift Schedule or used in any Shift Change Application, then the system will not allow you to delete that shift.

**Example:**

**User Configuration**

- Attendance Marking Type: Normal

**Shift configuration**

- Shift Timings: 9:45 to 17:45
- Attendance Calculation Type: Shift-Based
- Minimum Required Working Hours For Half Day: 3.00
- Minimum Required Working Hours For Full Day: 7:00

**Late-IN Policy**

- Late-IN Applicable: Enabled
- Maximum Late-IN Allowed (Min): 30
- Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min): Enabled

**Early-OUT Policy**

- Early-OUT Applicable: Enabled
- Maximum Early-OUT Allowed (Min):10
- Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Enabled

**Attendance Policy Configuration**

- Marking Type As Per: Monthly Count
- Mode: Independent

**Leave Configuration**

- Leave Group with Paid Leave (Auto Debit and Negative Balance Handling enabled) as well as Restricted Holiday as Priority 2.

All the Policies are configured and assigned to U2. In this case the user U2 punches as follows:

Since, Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min) and Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min) is enabled and Marking Type As Per is Independent, U2 is marked Absent for each Late-IN and/or Early-OUT.

#### Example :Break Duration Calculation For Flexible User

To Configure Flexible Type of user, See ["Flexible Working Settings" on page 1855](#).

Consider Break Hours Configuration for Flexible User Attendance Calculation are as follows:

- Shift Start Time: 8:00
- Shift End Time: 19:00
- Shift Duration: 10:30
- Minimum Required Working Hours: Half Day - **4:30** and Full Day - **06:00**
- Break Start Time: **13:00**
- Break End Time: **13:30**
- Break Deviation Allowed: **Checked**
- Advance Detail > Deduct Break From Working Hours: For 2 Punch, For 2+ Punch = **Checked**
  - For 2 Punch = Configured Break Duration
  - For 2+ Punch = Configured Break if less, else Actual Break Duration

Work hours may vary depending upon 'Flexible Work Setting > Consider Work Hours' configuration for flexible user.

#### Cases:

##### Case 1:

Punches [I/P]		Expected [O/P]				
			Flexible for 24 Hours	From Shift Start	Till Shift End	From Shift Start To Shift End

		<i>Break Start Time</i>	-	-	-	-
		<i>Break End Time</i>	-	-	-	-

# Custom Work Hours

If you wish that the attendance calculations should be done as per the **Custom Work Hours**, make sure you have selected **Attendance Marking Type** as **Normal** for users.

Attendance Marking Type is set from User module > User Configuration > T&A. For details refer to [“T&A”](#) in [“Configuring Users”](#).

To select Custom Work Hours as the **Attendance Calculation Type**,

- Click **Shift and Schedule** module > **Shift Configuration** and configure the following parameters:

The screenshot shows the 'Shift Configuration' window. The 'Shift' section includes fields for ID, Name, Description (255 Chars), Type (Normal), and Timings (HH:MM - HH:MM, 00:00). The 'Attendance Calculation Type' is set to 'Custom Work Hours'. The 'Required Working Hours' section includes fields for Minimum Working Hours, Maximum Working Hours, Minimum Hours Required Within Shift Duration, Deviation From Shift Start (Min), Deviation From Shift End (Min), and Shift Allowance. The 'Break Details' and 'Grace Time Details' sections are collapsed.

ID	Name	Timings
GS	General Shift	09:00 - 18:00

- Shift:** Specify a User friendly Shift ID and Shift Name.
- Shift Description:** Specify the description for the Shift.
- Shift Type:** Select the Shift Type from the drop down options:
  - Normal:** This is a normal shift with one weekoff within a week.
  - Field Break:** This is a shift where a break of around 20 days can be given after working period of 2 months.
  - Rest Day:** This is a like a normal shift with one weekoff given for rest after 10-12 working days.
- Shift Timings:** Specify the start time and end time of the shift in hh:mm format.

The Shift duration or the total working hours of the shift is automatically calculated based on the start and end time.

- Attendance Calculation Type:** For calculating attendance you can select Shift Based or Custom Works Hours option.

If you select **Shift Based**, you need to configure the parameters as mentioned in [“Shift Based”](#).

If you select **Custom Work Hours**, you need to configure the parameters as mentioned below.

## Required Working Hours

- **Minimum Working Hours:** Specify the minimum working hours required. The format is in HH:MM. If the work duration is less than the duration configured here, the system will mark full day absent for the user.
- **Maximum Working Hours:** Specify the maximum working hours required. The format is in HH:MM.

If the work duration is between the Minimum Working Hours and Maximum Working Hours, then the system will check the Late-IN duration configured in the Late-IN Policy. The following scenarios are possible:

- If the IN-Punch is within the duration of the Late-IN allowed, the system will mark the user as full day present. This Late-IN occurrence will be considered as a Late-IN Count.
- If the IN-Punch is after the duration of the Late-IN allowed, the system will mark the user as full day absent.

If the work duration is more than the duration configured in Maximum Working Hours, the system will mark full day present for the user.

- **Minimum Hours Required within Shift Duration:** By default this check box is enabled. This specifies the mandatory minimum working hours for full day as well half day that should fall within the shift working time allotted to the user.

This means if the shift duration is from 9:00 to 18:00, then users working hours must be within this shift duration to mark the user present. If user has worked from 17:00 to 23:00, then the 6 hours of work is not in the shift duration. Out of 6 hours only 1 hour fall in the shift duration which is not enough to mark half day present (this depends on **Minimum Working Hours**, in this case we have considered it as 2 hrs)

- **Deviation from Shift Start (Min):** If **Minimum Hours Required within Shift Duration** is enabled, then you can specify the deviation that you wish to allow from the shift's starting time.
- **Deviation from Shift End (Min):** If **Minimum Hours Required within Shift Duration** is enabled, then you can specify the deviation that you wish to allow from the shift's ending time.

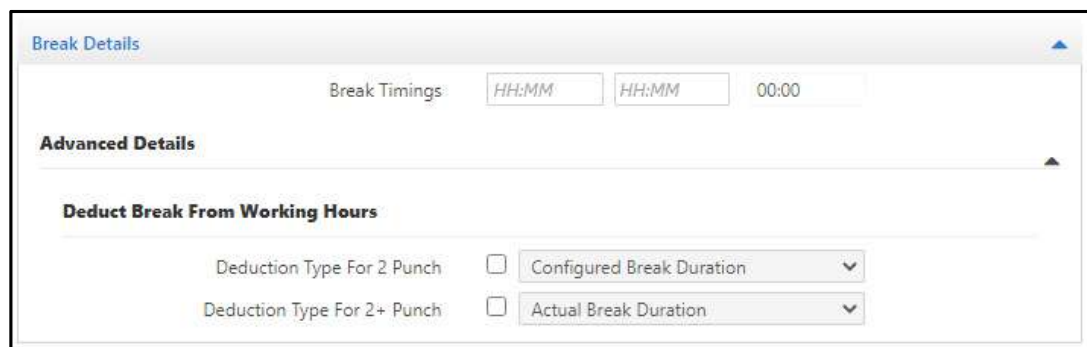

*Minimum hours fulfillment is checked before the Normal type user is marked Absent due to Less work hours.*

- **Shift Allowance:** Select this check box to include the shift allowance in the salary calculation.

## Break Details

Click the **Break Details** collapsible panel and configure the following parameters:

**Break Timings:** Configure the Start and End break time in HH:MM format. The break duration is automatically calculated based on the start and end time and appears in the adjoining box.

For example: If Break Start time is 23:00 hrs and Break End time is 23:30 hrs, then break duration will be 00:30 hr.

### Advanced Details

#### Deduct Break from Working Hours

You can configure the basis for break hours deduction from the working hours for users of a particular shift. You can figure different options for 2 Punch users and 2+ Punch users.

The options are same for **Deduction Type for 2 Punch** and **Deduction Type For 2+ Punch**, however both can be configured individually.

#### Deduction Type for 2 Punch and/or Deduction Type For 2+ Punch

- Select the respective check box and select the desired option — Configured Break Duration, Actual Break Duration, Time Exceeding Break Duration, Configured If Less, Else Actual Break Duration, Custom Break Deduction.
- If you select **Configured Break Duration**, the break duration deduction will be based on break duration as configured from Break Details.
- If you select **Actual Break Duration**, the break duration deduction will be based on user punches, that is actual break taken.
- If you select **Time Exceeding Break Duration**, the break duration deduction will be based on the time exceeding configured break duration.
- If you select **Configured Break If less, Else Actual Break Duration**, if the break availed by the user is less than the configured break duration, then the configured break duration is deducted from the working hours whereas if the break availed by the user is greater than the configured break duration, then the actual break duration availed is deducted from the working hours.

For example, if the configured break duration is 60mins and the user takes a break of 30mins, then the process will set the day's availed break as 60 mins. If the user takes a break of 70 mins, then the process will set the day's availed break as 70 mins.

- If you select **Custom Break Deduction**, you can define a break schedule.

**Deduct Break From Working Hours**

Search

Break Range (From)	Break Range (To)	Consider Value As	Replace Value
<input type="text"/>	<input type="text"/>	Actual	<input type="text"/>

+

- To do so, click **Add**  and configure the following parameters:
  - **Break Range (From):** Configure the start time (in minutes) of the break range.
  - **Break Range (To):** Configure the end time (in minutes) of the break range.
  - **Replace Value As:** Select the desired option **Fixed** or **Actual** from the drop down list.
    - If you select **Fixed**, define the desired value in **Replace Value**, which will replace the result if the parameter falls in the break range.
    - If you select **Actual**, the parameter value will be the result/output of the rounding function if the parameter value falls in its range.
- Click **OK**  to save. The entry appears in the grid.
- Click **Edit**  to make changes and click **Delete**  to remove the entry from the grid.

**For Example:** If break taken is within 1min to 15min then fixed 15min will be deducted. If break is between 16min to 30min, then fixed 30mins will be deducted. If break is between 31min to 60min then actual break availed will be deducted.

## Grace Time Details

**Grace Time Details**

Include Grace Time In Working Hours ☐

Grace Time for Shift Late-IN (Min)

Overlap Grace Time With Shift Late-IN ☐

- **Include Grace Time in Working Hours:** Select this check the box to include the grace time in the allotted working hours.

- **Grace Time for Shift Late-IN (Min):** Configure the grace time in minutes as the allowed deviation of timing while punching IN at the start of the shift. Refer to [“Late-IN Policy”](#).

**Example:** Consider shift is from 9:00 to 18:00 hrs and Include Grace Time in Working Hours is enabled.

On 1/7/16: If Grace Time (check box is disabled) and Late-IN, both are not applicable to the user.

On 4/7/16: If Grace is allowed (check box is enabled), Late-IN not applicable. Then Late-IN column will not display anything.

On 5/7/16: If Late-IN allowed is 10 minutes, Include Grace Time in Working Hours is enabled, Grace Time for Shift Late-IN is 30 mins. IN-punch is 9:20, so due to grace timings, Late-IN will not be displayed.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/07/2016	GS	09:05	18:30	PR	PR			08:25	00:30		01:00

06/07/2016	GS													

- **Overlap Grace Time With Shift Late-IN:** Select this check box to include the Grace Time With the Shift Late-IN time.

**Example:** Consider Grace Time for Shift Late-IN as 10 mins, Late-IN allowed is 20 mins, Overlap is disabled.

On 1st: IN punch 9:05, within Grace period of 10mins

On 4th: IN punch 9:11, beyond Grace period of 10 mins but within Late-IN allowed of 20mins so Late-IN by 1min.

On 5th: IN Punch 9:21, Upto 9:10 is Grace, after that Late-IN, so from 9:11 to 9:21 is 11 min of Late-IN.

On 6th: IN Punch 9:15, Upto 9:10 is Grace, after that Late-IN, so from 9:11 to 9:15 is 5 min of Late-IN.

On 7th: IN Punch 9:31, Beyond Grace and Late-IN period so user will be marked as Absent: Late-IN.

The Absent marking of the user will depend on the option selected in Attendance Policy for Late-IN. For details, refer to [“Absent Marking Rule”](#) in [“Attendance Policy”](#).

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark

03/07/2016	GS - WO			WO	WO									
04/07/2016	GS	09:11	18:30	PR	PR	00:01		08:19	00:30		01:00			
05/07/2016	GS	09:21	19:00	PR	PR	00:11		08:39	01:00		01:00			
06/07/2016	GS	09:15	18:30	PR	PR	00:05		08:15	00:30		01:00			
07/07/2016	GS	09:31	18:30	AB	PR			07:59	00:30		01:00			AB:Late-IN
08/07/2016	ES			AB	AB									No Punches Available

**Example:** When Overlap is allowed, Grace Time will overlapped with Late-IN

On 6th: IN punch 9:15 am, the user will be marked as 15 min late. The Grace Time will not be considered and it will overlap with Late-IN so total 15 mins will be considered as Late-IN. Similarly will be on 4th.

On 5th: IN Punch 9:21am, the user will be marked as Absent due to Late-IN as the Late-IN allowed is only 20 mins. Similarly will be on 7th.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/07/2016	GS	09:05	18:30	PR	PR			08:25	00:30		01:00			
02/07/2016	GS - WO			WO	WO									
03/07/2016	GS - WO			WO	WO									
04/07/2016	GS	09:11	18:30	PR	PR	00:11		08:19	00:30		01:00			
05/07/2016	GS	09:21	19:00	AB	PR			08:39	01:00		01:00			AB:Late-IN
06/07/2016	GS	09:15	18:30	PR	PR	00:15		08:15	00:30		01:00			
07/07/2016	GS	09:31	18:30	AB	PR			07:59	00:30		01:00			AB:Late-IN

Click on **Save** to save the changes.

Once you have completed the task of creating all the shifts, you need to assign the desired shifts to desired Shift Schedules. Then these Shift Schedules need to be assigned to the users. Refer to [“Shift Schedule”](#) and [“Configuring Users”](#) for details.

### Example:1

#### User Configuration

- Attendance Marking Type: Normal

#### Shift configuration

- Shift Timings: 9:45 to 17:45
- Attendance Calculation Type: Custom Work Hours
- Minimum Working Hours: 3.00
- Maximum Working Hours: 7:00

#### Late-IN Policy

Late-IN Applicable: Enabled

Maximum Late-IN Allowed (Min): 30

Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min): Enabled

#### Early-OUT Policy

Early-OUT Applicable: Enabled

Maximum Early-OUT Allowed (Min):420

Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Enabled

#### Attendance Policy Configuration

- Marking Type As Per: Monthly Count
- Mode: Combined
- Maximum Late-IN/Early-OUT Allowed Count: 2
- Calculation Basis: Slab Wise
- Action on Exceeding Max Late-IN Allowed: Debit Full Day Leave
- Action on Exceeding Max Early-OUT Allowed: Debit Full Day Leave

#### Leave Configuration

- Leave Group with Paid Leave (Auto Debit and Negative Balance Handling enabled)

All the Policies are configured and assigned to U1.

In this case the user U1 punches as follows:

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net-Work	Break Hours	Generated Overtime	Authorized Overtime	Remark
01/08/2023	CS-Normal	10:00	10:55	PR	PR		00:05	00:55						
02/08/2023	CS-Normal	10:12	17:10	PR	PR		00:02	06:58						
03/08/2023	CS-Normal	10:20	17:10	PR	PR	00:15		06:40						
04/08/2023	CS-Normal	10:45	19:30	AB	AB			08:14	01:15					ABLate-IN
05/08/2023	CS-Normal	10:40	17:35	PR	PR	00:25		06:55						
06/08/2023	CS-W/O			W/O	W/O									
Week Total						00:40	00:07	35:42	01:15					
07/08/2023	CS-Normal	10:30	19:30	PR	PR	00:15		04:20						
08/08/2023	CS-Normal	09:00	18:00	PR	PR		00:45	07:00	00:45					
09/08/2023	CS-Normal			AB	AB									No Punches Available
10/08/2023	CS-Normal			AB	AB									No Punches
Total						00:55	00:52	47:12	02:00					

Since combined count of Early-OUT and Late-IN allowed is 2, hence on the 3 Early-OUT/Late-IN a Leave will be debited to the user.

In this case on 03/08/2023 it is a third count, hence a Leave is debited.

Leave Balance											
<div> <div>User ID: U1 U1</div> <div> <div>Period: Monthly</div> <div>Balance Month-Year: August 2023</div> </div> </div>											
Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow	
2023	Aug	PL	Paid Leave	0.00	0.00	1.00	0.00	0.00	-1.00	0.00	
C-OFF											

U1 has not leave balance, hence after debiting a leave the closing balance displays negative balance.

Now the count will be reset as the option Slab Wise is selected for Calculation Basis. Hence, again on 08/08/2023 a leave will be debited.

Leave Balance											
<div> <div>User ID: U1 U1</div> <div> <div>Period: Monthly</div> <div>Balance Month-Year: August 2023</div> </div> </div>											
Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow	
2023	Aug	PL	Paid Leave	0.00	0.00	2.00	0.00	0.00	-2.00	0.00	
C-OFF											

## Example:2

### User Configuration

- Attendance Marking Type: Normal

### Shift configuration

- Shift Timings: 9:45 to 17:45
- Attendance Calculation Type: Custom Work Hours
- Minimum Working Hours: 3.00

- Maximum Working Hours: 7:00
- Grace Time for Shift Late-IN (Min): 30minutes

#### **Late-IN Policy**

- Late-IN Applicable: Disabled

#### **Early-OUT Policy**

- Early-OUT Applicable: Enabled
- Maximum Early-OUT Allowed (Min):30
- Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Disabled

#### **Attendance Policy Configuration**

- Marking Type As Per: Monthly Count
- Mode: Combined
- Maximum Late-IN/Early-OUT Allowed Count: 2
- Calculation Basis: Slab Wise
- Action on Exceeding Max Late-IN Allowed: Debit Full Day Leave
- Action on Exceeding Max Early-OUT Allowed: Debit Full Day Leave

#### **Leave Configuration**

- Leave Group with Paid Leave (Auto Debit and Negative Balance Handling enabled)

All the Policies are configured and assigned to U1.

**IN-Punch Time:**10:30

**OUT-Punch Time:** 17:15

**Total Working Hours:**6 hrs 45min

In this case since Late-IN Policy is disabled the system will check the working hours and then check if the time shortfall, if it falls within Early-OUT. Hence, in this case U1 will be marked PR in first as well as second half, with 15 minutes considered as Early-OUT.

#### **Example: 3**

#### **User Configuration**

- Attendance Marking Type: Normal

#### **Shift configuration**

- Shift Timings: 9:45 to 17:45
- Attendance Calculation Type: Custom Work Hours
- Minimum Working Hours: 3.00
- Maximum Working Hours: 7:00
- Grace Time for Shift Late-IN (Min): 30minutes

#### **Late-IN Policy**

- Late-IN Applicable: Disabled

#### **Early-OUT Policy**

- Early-OUT Applicable: Enabled
- Maximum Early-OUT Allowed (Min):30
- Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Enabled

#### **Attendance Policy Configuration**

- Marking Type As Per: Monthly Count

- Mode: Combined
- Maximum Late-IN/Early-OUT Allowed Count: 2
- Calculation Basis: Slab Wise
- Action on Exceeding Max Late-IN Allowed: Debit Full Day Leave
- Action on Exceeding Max Early-OUT Allowed: Debit Full Day Leave

#### **Leave Configuration**

- Leave Group with Paid Leave (Auto Debit and Negative Balance Handling enabled)

All the Policies are configured and assigned to U1.

**IN-Punch Time:**10:46

**OUT-Punch Time:** 13:46

**Total Working Hours:** 3 hrs

In this case since Late-IN Policy is disabled the system will check the working hours and then check if the time shortfall, if it falls within Early-OUT. Hence, in this case as Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min) is enabled, U1 will be marked AB in first as well as second half with Remark as AB: Early-OUT.

#### **Example: 4**

#### **User Configuration**

- Attendance Marking Type: Normal

#### **Shift configuration**

- Shift Timings: 9:45 to 17:45
- Attendance Calculation Type: Custom Work Hours
- Minimum Working Hours: 3.00
- Maximum Working Hours: 7:00
- Grace Time for Shift Late-IN (Min): 30minutes

#### **Late-IN Policy**

- Late-IN Applicable: Disabled

#### **Early-OUT Policy**

- Early-OUT Applicable: Enabled
- Maximum Early-OUT Allowed (Min):30
- Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Disabled

#### **Attendance Policy Configuration**

- Marking Type As Per: Monthly Count
- Mode: Combined
- Maximum Late-IN/Early-OUT Allowed Count: 2
- Calculation Basis: Slab Wise
- Action on Exceeding Max Late-IN Allowed: Debit Full Day Leave
- Action on Exceeding Max Early-OUT Allowed: Debit Full Day Leave

#### **Leave Configuration**

- Leave Group with Paid Leave (Auto Debit and Negative Balance Handling enabled)

All the Policies are configured and assigned to U1.

**IN-Punch Time:**10:46

**OUT-Punch Time:** 13:46

**Total Working Hours:** 3 hrs

In this case since Late-IN Policy is disabled the system will check the working hours and then check if the time shortfall, if it falls within Early-OUT. Hence, in this case as Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min) is disabled, U1 will be marked PR in first and AB in the second half with Remark as AB: Early-OUT.

# Week Off Group

Week Off Group enables to define the Week Off group which can be assigned to the user. The maximum 99 week off groups can be created.

To create WO group, select **Shift and Schedule module > Week Off Group**. The page appears as shown below:

The screenshot shows the 'Week Off Group' form. It has a header with navigation icons and a search bar. The main form area contains the following fields and sections:

- Week Off Group**: ID (text input), Name (text input with search icon).
- Auto Week Off Assignment**: ☐ Weekly Basis (dropdown menu).
- Off Day 1**: Sunday (dropdown menu).
- Off Day 2**: None (dropdown menu).
- Off Day 2 On Weeks**: ☐ W1, ☐ W2, ☐ W3, ☐ W4, ☐ W5, ☐ Last.
- Week Off Rotation**: ☐ Enable.
- Rotation Count**: 7.99 (text input).

On the right side, there is a table with columns 'ID' and 'Name', and a message 'No Data'.

To create a new Week Off Group, click on **New** button.

**Week Off Group:** Specify a user friendly Name for the Week Off Group. The ID will be auto generated by the system while saving the group.

**Auto Week Off Assignment:** You can assign WOs on days on which user was found absent but eventually the number of WOs in a month will be as per schedule only. So enable Auto week off assignment on weekly or monthly basis. *For details See Shift Schedule> Auto Week Off Assignment*

This screenshot shows the 'Week Off Group' form with the 'Auto Week Off Assignment' checkbox checked. The 'Weekly Basis' dropdown is now set to 'Monthly Basis'. The 'Rotation Count' is still 7.99. The other fields remain the same as in the previous screenshot.

**Off Day 1:** Select the Off Day 1 from the drop down list of Weekdays.

**Off Day 2:** If 2 week-offs are to be assigned in the week off group, then select the Off Day 2 from drop down list of Weekdays, else you can select None.

**Off Day2 on Weeks:** The second week-off can be assigned for the selected week by cheking the boxes against the respective weeks as shown below. Eg: Off day2: Tuesday is assigned for 2nd and 4th week.

## Week Off Rotation

**Enable:** Week Off rotation can be enabled by checking the box.

**Rotation Count:** Specify the Rotation Count of up to 99 for the rotation of week-off days. However, **Rotation Count** can not be less than 7.

**Example:** If Off Day 1 and Off Day 2 are assigned on Sunday and Tuesday respectively as shown below. And week off rotation is enabled for count 8 days, then both the week offs will be rotated after 8 days.

As shown below, the Week off on 2nd, tuesday will be rotated after 8 days and shifted to wednesday. After 8 days it will be shifted to thursday and will continue to repeat. Similarly the week off sunday will rotate to monday after 8 days and will continue.

User  Resham

29 1R	30 GS					

PH - Public Holiday
WO - Week Off
WO - Week Off & Public Holiday On Same Day

*If some week off group is assigned to user, then it will override the off days configured in shift schedule assigned to that user, though it is not mandatory to assign some week off group to user.*

# Holiday Schedule

Holiday Schedule is a list of non-working days in a calendar year which are user defined. The user can define up to 9999 holiday schedules. In each schedule you can configure holidays and maximum 32 holidays can be synced to the device.

To access the Holiday Schedule, Click on **Holiday Schedule** option from the Shift and Schedule page. The page appears as shown below:

The screenshot shows the 'Holiday Schedule' interface. On the left, there are configuration fields: 'ID' (1), 'Name' (Schedule 1), 'Default' (Select), 'Holiday List' (All), and 'Total No. Of Days'. Below these is a 'Configure Holidays' section with a table header: 'No.', 'From', 'To', 'Holiday', 'Days'. The table currently shows 'No Data'. On the right, there is a list of 10 schedules, each with an ID and a Name. The list is paginated, showing '1 - 10 of 30 records'.

ID	Name
1	Schedule 1
2	Schedule 2
3	Schedule 3
4	Schedule 4
5	Schedule 5
6	Schedule 6
7	Schedule 7
8	Schedule 8
9	Schedule 9
10	Schedule 10

There are pre-defined 30 schedules. You can create a new schedule by clicking New button.

To define holidays in your holiday schedule, select a schedule from the right grid. Click Edit button and configure the holidays in it.

This screenshot shows the 'Holiday Schedule' interface with 'Schedule 1' selected. The configuration fields on the left now show 'ID' (1), 'Name' (Schedule 1), 'Default' (Default 1), 'Holiday List' (All), and 'Total No. Of Days' (0). The 'Configure Holidays' section shows a table with headers: 'No.', 'From', 'To', 'Holiday', 'Days'. The table is currently empty, showing 'No Data'. On the right, the list of 10 schedules is shown, with 'Schedule 1' highlighted. The pagination shows '1 - 10 of 30 records'.

No.	From	To	Holiday	Days
No Data				

**ID/Name:** For new schedule specify the name for the schedule. The ID will be auto-generated by the system. For existing schedule you can edit and specify the name to your schedule as shown below.

**Default:** The schedules 1 to 4 are default holiday schedules. To make other holiday schedule as default you can select the Default option.

*When new user is added in COSEC; the holiday schedule which is Default1 will get assigned to the user.*

*The 4 default holiday schedules can be assigned to the device from Device Configuration> Access Settings.*

## Configure Holidays

**Holiday List:** It is the filter which will allow to view the configured holidays for **Previous year, Current year, Next year**. The **Device synced** filter will show those holidays for which Device Synced checkbox is enabled i.e. holidays are synced to device. The **Inactive holidays** filter will show those holidays for which Device Synced checkbox is disabled.

To configure the holidays into holiday schedule; click **Add** button.

Then select the **From** and **To** date by clicking the Calendar button on which holiday is to be given.

*The date for which holiday is declared; will not be allowed to declare as Restricted holiday. The Restricted holiday for the same schedule can be configured from "Shift and Schedule> Restricted Holidays."*

Specify the name of the **holiday** as shown below.

Enable the **Device Synced** checkbox for the holiday which is to be synced to the device. You can sync maximum 32 holidays in a schedule to the device. Then click **OK** to save the holiday.

No.	From	To	Holiday	Days
	15/01/2018	15/01/2018	Makar Sakranti	

OK

No.	From	To	Holiday	Days
1	15/01/2018	15/01/2018	Makar Sakranti	1

Similarly you can add other holidays in the schedule.

**Days** shows the number of days for which a holiday is configured. For eg: Holi-Dhuleti is configured as one holiday. But it includes 2days so 2 separate days will be counted.

**Configure Holidays**

Holiday List: All

Total No. Of Days: 4

No.	From	To	Holiday	Days
1	15/01/2018	15/01/2018	Makar Sakranti	1
2	13/02/2018	13/02/2018	Basant Panchmi	1
3	01/03/2018	02/03/2018	Holi-Dhuleti	2

**Total No. of days:** It shows the sum of all the days configured as holidays in the selected schedule.

After configuring all holidays; click **Save** button to save the holiday schedule.

**Holiday Schedule** ✓ Saved Successfully

ID: 1 RnD Schedule

Default: Default 1

**Configure Holidays**

Holiday List: All

Total No. Of Days: 4

No.	From	To	Holiday	Days
1	15/01/2018	15/01/2018	Makar Sakranti	1
2	13/02/2018	13/02/2018	Basant Panchmi	1
3	01/03/2018	02/03/2018	Holi-Dhuleti	2

1 - 10 of 30 records

1 2 3

## Copy Holiday

You can create a copy of existing holiday by clicking **Copy Holiday** button of that holiday row. A new row will appear with the same holiday for next year.

No. ▲	From	To	Holiday	Days			
1	15/01/2018	15/01/2018	Makar Sakranti	1	Yes		
2	13/02/2018	13/02/2018	Basant Panchmi	1	No		
3	01/03/2018	02/03/2018	Holi-Dhuleti	2	Yes		

No. ▲	From	To	Holiday	Days			
	15/01/2019	15/01/2019	Makar Sakranti				
1	15/01/2018	15/01/2018	Makar Sakranti	1	Yes		
2	13/02/2018	13/02/2018	Basant Panchmi	1	No		
3	01/03/2018	02/03/2018	Holi-Dhuleti	2	Yes		

You can also change the date for holiday from calender button.

Then click **OK** to save the new holiday.

No. ▲	From	To	Holiday	Days			
1	15/01/2018	15/01/2018	Makar Sakranti	1	Yes		
2	13/02/2018	13/02/2018	Basant Panchmi	1	No		
3	01/03/2018	02/03/2018	Holi-Dhuleti	2	Yes		
4	15/01/2019	15/01/2019	Makar Sakranti	1	No		

Now this holiday will appear in **Next Year** holiday list as shown below.

**Configure Holidays**

Holiday List

Next Year

Total No. Of Days 1

No. ▲	From	To	Holiday	Days			
4	15/01/2019	15/01/2019	Makar Sakranti	1	No		

Click on **Save** to save the holidays to the schedule.

Similarly, when you want to configure holiday list for current year. You can take the already configured list of previous year. And edit the changes with new date or new name of holiday.

Eg: If Rakshabandhan in year 2017 was on 26 August. And for current year 2018, it is on 22 August. Then You can edit the date from 26 Aug 2017 to 22 Aug 2018. The holiday 26 Aug 2017 can be viewed from the **Previous holidays** list.

Once defined, the Holiday schedules can then be assigned to the users.

*Read Restricted Holidays > Assigning Holiday schedule to user.*

# Shift Schedule

Shift Schedules are detailed chart indicating the working hours for group employees based on the organisation's requirement. It defines the details like timing, no. of days, shift rotation, rotation count etc for each shift configured.

The Shift Schedule enables the user to group multiple shifts into a single entity which can then be assigned to the employees. This option enables the administrator to assign different working hours and off days for each user by defining different schedules. For Assigning Shift Schedule to user See *User Configuration> Access Control*.

A maximum of **999** shift schedules can be configured and each Shift Schedule can have up to 32 different shifts as members.

To configure Shift Schedule, Select **Shift and Schedule module > Shift Schedule**. The page appears as shown below:

Shift Schedule

Shift Schedule\* ID Name

Default ☐

Start Date\* From Date

Preview Schedule

Off Day Configuration

Shift Based Access Rules

ID	Name
1	Schedule Group
2	Schedule- EO

To create a new Shift Schedule click on **New** button. The Schedule ID will be generated by the system and cannot be edited by the user.

**Name:** Specify a user friendly Name for Shift schedule.

**Default:** Check the box to set the shift schedule to default.

**Start Date:** Select the Start Date from the calendar from which the Shift Schedule will be started.

Shift Schedule

Shift Schedule\* 3 RnD Schedule

Default ☒

Start Date\* 06/03/2017

Preview Schedule

Search

Shift No.	Active Shift	Name	Timings	Type	Repeat Shift (Days)
Shift 1	<input checked="" type="checkbox"/>	ID Name			
Shift 2	No				
Shift 3	No				
Shift 4	No				
Shift 5	No				

1 - 5 of 32 records

1 2 3 7 10

To add the shifts to the schedule, click on Shift No. The grid will be enabled as shown above.

**Active:** Check the Active box to enable the shift.

**Shift:** Then select the Shift from the picklist to be added to the schedule. The Name of the shift, Timings and Type of the shift will be displayed.

**Repeat Days:** Enter the number of days for which shift will be continued. Suppose GS is repeated for 7 days and NS is repeated for 10 days so GS will continue for 7 days and then NS will continue for 10 days.

The first shift of the schedule is to be selected from the User configuration> Access Control> Basic> Start Shift.

Then click OK to save the shifts.

Shift No.	Active	Shift	Name	Timings	Type	Repeat Shift (Days)
Shift 1	Yes	GS	General Shift	09:00 - 18:00	Normal	7
Shift 2	Yes	NS	Night Shift	21:00 - 05:00	Normal	10
Shift 3	No					
Shift 4	No					
Shift 5	No					

Click **Save** button to save the Shift Schedule.

You can edit or delete the shift from the schedule by clicking on Edit button. In edit mode the preview of schedule can be viewed by clicking **Preview Schedule** button.

PH - Public Holiday WO - Week Off WO - Week Off & Public Holiday On Same Day

Click here to change the Month

## Off Day Configuration

Click on the Off Day Configuration section to set the Off Days and Week Off Rotation as shown below:

The screenshot shows the 'Off Day Configuration' window. It has a title bar and a main content area. The 'Auto Week Off Assignment' section has a checked checkbox and a dropdown menu set to 'Weekly Basis'. Below this, 'Off Day 1' is set to 'Sunday' and 'Off Day 2' is set to 'Saturday'. The 'Off Day 2 On Weeks' section has checkboxes for W1, W2, W3, W4, W5, and W6, with W2 and W4 checked. The 'Week Off Rotation' section has an 'Enable' checkbox (unchecked) and a 'Rotation Count' field with the value '7-99'. At the bottom, there is a 'Shift Based Access Rules' section with a dropdown arrow.

### Auto Week Off Assignment:

You can assign WOs on days on which user was found absent but eventually the number of WOs in a month should be as per schedule only. So enable Auto week off assignment on weekly or monthly basis.

*Only the Week-Offs assigned via Shift Schedule Process will be considered for movement or auto assignment; not the manually assigned Week-Offs.*

**For eg:** WO on 7th is shifted on 4th as shown below. As the user is present on 7th so it is considered as working day and the same week off is given on the absent day marking as Week Off.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/08/2016	GS	09:05	17:45	PR	AB			07:40			01:00			AB:Early-OUT
02/08/2016	GS	09:15	18:16	PR	PR			08:01	00:16		01:00			
03/08/2016	GS	09:30	18:30	PR	PR			08:00	00:30		01:00			
04/08/2016	GS	14:00	17:45	PR	AB			07:00			01:00			AB:Early-OUT
05/08/2016	GS	11:30	17:30	PR	AB			05:00			01:00			AB:Early-OUT
06/08/2016	GS	08:45	18:00	PR	PR			08:15	00:15		01:00			
07/08/2016	GS - WO	09:00	18:15	WO	WO			08:15	00:15		01:00			

After Monthly Attendance Process of the user, the Punches and WO will become as shown below:

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark
01/08/2016	GS	09:05	17:45	PR	AB			07:40			01:00			AB:Early-OUT
02/08/2016	GS	09:15	18:16	PR	PR			08:01	00:16		01:00			
03/08/2016	GS	09:30	18:30	PR	PR			08:00	00:30		01:00			
04/08/2016	GS - WO	14:00	17:45	WO	WO			03:45						
05/08/2016	GS	11:30	17:30	PR	AB			05:00			01:00			AB:Early-OUT
06/08/2016	GS	08:45	18:00	PR	PR			08:15	00:15		01:00			
07/08/2016	GS	09:00	18:15	PR	PR			08:15	00:15		01:00			

If you have assigned two week offs in the schedule with Auto week off enabled, then WO will be shifted on 2 absent days.

**Off Day1 & Off Day2:** Select the Off Day 1 from the drop down list of Weekdays (eg: Sunday). For configuring second week off, select the Off Day 2 from the drop down list(eg: Saturday). If only one week off is to be given, then select “None” for Off Day2.

**Off Day2 on Weeks:** You can select the week for which Off Day2 is to be assigned. For eg: Saturday is assigned as week off on 2nd and 4th saturday.

#### Week Off Rotation

**Enable:** Off Day rotation can be enabled by checking the box. If Auto Week Off Assignment is enabled, Week Off Rotation will be disabled.

**Rotation Count:** Specify the Rotation Count for rotating single or both week offs as configured. The Rotation Count can not be less than 7.

Here as specied in below figure, The off day on sunday will rotate to monday after the count of 15 days. Similarly it will continue to rotate further to Tuesday and so on.

The screenshot shows the 'Off Day Configuration' window. Under 'Auto Week Off Assignment', 'Weekly Basis' is selected. 'Off Day 1' is set to 'Sunday' and 'Off Day 2' is set to 'None'. The 'Off Day 2 On Weeks' section has checkboxes for W1 through W6, all of which are currently unchecked. In the 'Week Off Rotation' section, the 'Enable' checkbox is checked, and the 'Rotation Count' is set to 15.

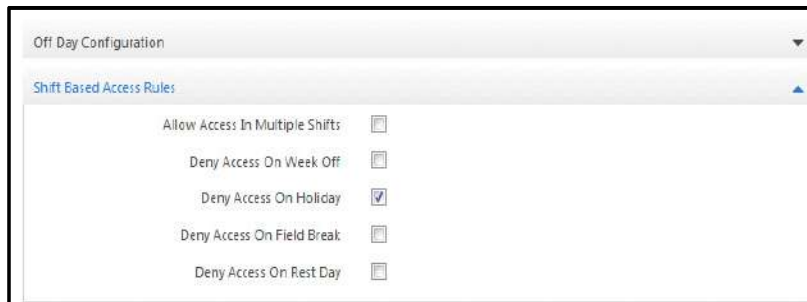

If both the off days are assigned for rotation, then both will rotate similarly.

Eg: Sunday will rotate to Monday and Tuesday will rotate to Wednesday after 15 days.

This screenshot shows the 'Off Day Configuration' window with 'Off Day 1' set to 'Sunday' and 'Off Day 2' set to 'Tuesday'. In the 'Off Day 2 On Weeks' section, all checkboxes for W1, W2, W3, W4, W5, and W6 are checked. The 'Week Off Rotation' section shows 'Enable' checked and 'Rotation Count' set to 15.

## Shift Based Access Rules

Click on the Shift Based Access Rules section to configure access based on shifts/ WO/ holidays as shown below:

The screenshot shows a configuration window titled "Off Day Configuration" with a dropdown arrow. Below the title bar, the "Shift Based Access Rules" section is expanded, indicated by a blue upward arrow. This section contains five settings, each with a label and a checkbox:

- Allow Access In Multiple Shifts ☐
- Deny Access On Week Off ☐
- Deny Access On Holiday ☒
- Deny Access On Field Break ☐
- Deny Access On Rest Day ☐

**Allow Access in Multiple Shifts:** Check this box to allow the User to work in multiple or any of the shifts from the schedule.

**Deny Access on Week Off:** Check the box to deny access on week off days.

**Deny Access on Holiday:** Check the box to deny access on holidays.

**Deny Access on Field Break:** Check the box to deny access on field break days.

**Deny Access on Rest Day:** Check the box to deny access on Rest day.

Click on **Save** button to save the changes to the shift schedule.

# Restricted Holidays

The COSEC application allows the administrator to define restricted holidays which can be availed by the users in addition to the regular holidays as defined in the system. However, these are optional for the users and the individuals may choose a limited number of holidays from this category as per the organizational policies.

To access the Restricted Holidays, select **Shift and Schedule module > Restricted Holidays**. The page appears as shown below:

Restricted Holidays

Search

Schedule  Name

Configure Holidays

Search

Date Restricted Holiday

No Data

ID	Name	No. Of Restricted Holidays

# Manage Shift

---

Manage Shifts allows you to:

- view/change shifts of a single/multiple users
- view/change a user's schedule
- check the shift-wise user count
- import/export shift data

The shifts can be changed by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service login

COSEC Web enables all *System Account users* with appropriate page rights to make Shift Change applications using the *Shift and Schedule* module. All applications made by the System Account user are *pre-approved* by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Shift Change applications using the *Shift and Schedule* module. If you wish to send all the applications made by the On Behalf System Account User for approval, make sure you have disabled the **Auto Approve** check box for Manage Shifts page in the Roles and Rights assigned. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#) as well as configure the Shift Change Alert parameters. For details refer to [“Configuring Alert Messages”](#).

For Shift Change Applications can be applied using the *Employee Self Service* login, the Shift Change Application approvals/rejections have to be done by the respective supervisors of the reporting group by logging into their ESS login. However, such applications can also be approved by the System Account user from the *Shift and Schedule* module of the COSEC Web Application.

*For SA users, make sure you have enabled Manage Shifts page Rights from Admin> System Accounts> Role and Rights Configuration and have disabled the Auto Approve check box. For details, refer to [“Roles and Rights Configuration”](#).*

*For ESS users, make sure you have enabled Shift Change Application page in ESS Rights from Users> Utilities> ESS Role Rights and for the RIC in In-Charge Permission, Shift Change Approval is enabled. For details refer to [“ESS Role Rights”](#) and [“In-Charge Permissions”](#)*

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

For Shift Change Application Approvals, refer to [“Shift Change Approval”](#).

When the shifts are changed from Manage Shifts, alerts can be triggered, if configured:

- Shift Change Application alert when there is an application for shift change. For this alert, in Alert Message Configuration, select the Alert Filter as Time and Attendance and Event as Shift Change Application.
- Shift Change alert after the verdict is given by RIC, that is the Shift Change Application is approved and the shift is updated. For this alert, in Alert Message Configuration, select the Alert Filter as Time and Attendance and Event as Shift Change.

The ESS Users will also receive ESS Notifications when the final verdict for the application is provided.

- If the verdict for the Shift Change Application is pending then the Pending Applications For Approval Alert will include the count of these applications also.

For details refer to [“Configuring Alert Messages”](#).

You can change shifts from:

- **Shift Change Application:** When shifts are changed from this page then Shift Change Application requests will be generated only if the Auto Approve check box is disabled. For details, refer to [“Shift Change Application/Approval”](#).
- **Manage Attendance:** When shifts are changed from this page then Shift Change Application requests will not be generated. For details, refer to [“Manage Attendance”](#).
- **Attendance Correction Application:** When shifts are changed from this page then Shift Change Application requests will not be generated, however Attendance Correction requests will be generated. For details, refer to [“Attendance Correction”](#).
- **Import from:**
  - Admin Module > System Utilities > Import Data > Import Data For (Shift Schedule)
  - Shift and Schedules Module > Utilities > Manual Schedule Import
  - In Shift and Schedules Module > Utilities > Manage Shift > Import > Change Shift with Import File

From Import the Shift Change Application requests will be generated only if the Auto Approve check box of the respective page is disabled. For details, refer to [“Importing Data”](#), [“Manual Schedule Import”](#) and [“Manage Shift”](#).

*If Shifts are changed from multiple places, then in such cases the last approved shift change request will be taken into consideration.*

## View/Manage Shifts

Click **Shift Schedule module > Utilities > Manage Shift**. The Manage Shifts page appears.

- **Date:** Select the From and To Date to view the shift details for the selected date range.

## User Selection

You can select the a user directly or can also select multiple users.

For select a user refer to “Single User”.

For selecting multiple users, refer to “Multiple Users”.

### Single User

- **User:** Click the picklist. The **Picklist For All Users** pop-up appears. Click to select the desired user.

Click **View** to view the details of the user's shifts in the defined date range. The shift details are displayed on the left and the selected user's summary is displayed on the right side as shown below.

The screenshot shows the 'Manage Shifts' window. At the top, there are date pickers for 'Date' (04/01/2017 to 04/26/2017) and a 'User' picklist showing '2 Chirag'. Below these are 'View' and 'Export' buttons. The main area is divided into two sections: 'Shift Details' on the left and 'User's Summary' on the right. The 'Shift Details' section contains a table with columns for User ID, Name, and shifts for each day from 01 Apr to 07 Apr. The 'User's Summary' section shows a profile picture of Chirag, his name, and a table of shift statistics.

User ID	Name	01 Apr Sat	02 Apr Sun	03 Apr Mon	04 Apr Tue	05 Apr Wed	06 Apr Thu	07 Apr Fri
2	Chirag	GS	GS   WO	GS	GS	GS	GS	GS

Shifts	Days
GS	26
WO	4
PH	0
Leave	0
Tour	2

You can copy a shift from a date and paste the same to another date also.

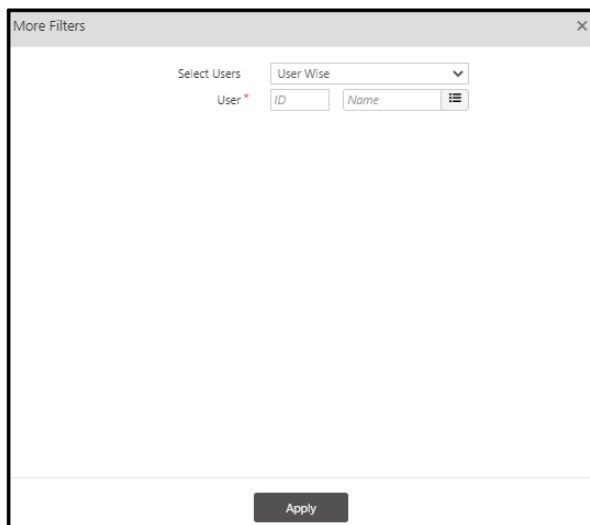

*If you wish to send all the applications made by the On Behalf System Account User for approval, make sure you have disabled the **Auto Approve** check box for Manage Shifts page in the Roles and Rights assigned. For Shift Changes done via Copy and Paste, Shift Change Applications will be sent to the RIC for Approval.*

To do so,

- Press right-click of the mouse on the Shift under the desired date. The cursor arrow icon appears with a plus (+) sign.
- Place the cursor over the date where you wish to paste the copied shift and press the left-click of the mouse. The shift is pasted.

### Multiple Users

If you wish to select multiple user, click **Filter**  .

The image shows a 'More Filters' pop-up window. At the top, it has a title bar with 'More Filters' and a close button. Below the title bar, there is a section labeled 'Select Users' with a dropdown menu currently set to 'User Wise'. Underneath this, there is a label 'User \*' followed by two input fields: 'ID' and 'Name'. The 'Name' field has a small icon of three horizontal lines with a square, likely representing a picklist. At the bottom of the window, there is an 'Apply' button.

The **More Filters** pop-up appears.

- **Select User:** You can select particular user or multiple users. Select the desired option — User Wise, Group Wise, All.
  - If you select **User Wise**,
    - Click the **User** picklist. The **Picklist For All Users** pop-up appears. Select the check boxes of the desired users and click OK.
    - The selected users appear in a grid in the **More Filters** pop-up.
    - Click **Apply**.
  - If you select **Group Wise**,
    - In **Select Group**, select the desired enterprise group from the drop-down list—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3. For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
    - Click **Apply**.
  - If you select **All**, all the active users can be selected.

View Similar Pattern

Copy Pattern

1 2 3

- Click **Copy Pattern**. The **Copy Pattern** pop-up appears.

If you wish to send all the applications made by the On Behalf System Account User for approval, make sure you have disabled the Auto Approve check box for Manage Shifts page in the Roles and Rights assigned. For Shift Changes done via Copy Pattern, Shift Change Applications will be sent to the RIC for Approval.

If in the selected date range multiple shifts are covered, for example Night Shift (NS) as well as General Shift (GS), then for each shift type Shift Change Application request will be sent to the RIC. For example dates selected are 10-03-2024 to 15-03-2024, for 10 and 12 NS is assigned and for 11, 13, 14 and 15 GS is assigned. Then two Shift Change Application requests will be sent, one for NS (for dates 10 and 12) and the other for GS (for dates 11, 13, 14, 15).

### Copy From

- **User ID:** This displays the user which you selected, that the user from which you wish to copy the Shift.
- **Date Range:** Select the From and To date from which the shift is to be copied.

The date span here will be as per the **Date** range set on the Manage Shift page.

### Copy To

- **Date Range:** Select the From and To date range for which the shift is to be copied.
- **Select Users:** Select the desired option — User Wise, Group Wise, All — for whom the shift is to be copied. For details refer to ["Multiple Users"](#).

The selected users appear in the grid.

If required you can delete any user. To do so, click **Delete**  of the desired user.

Matrix COSEC System Manual

## Export & Import

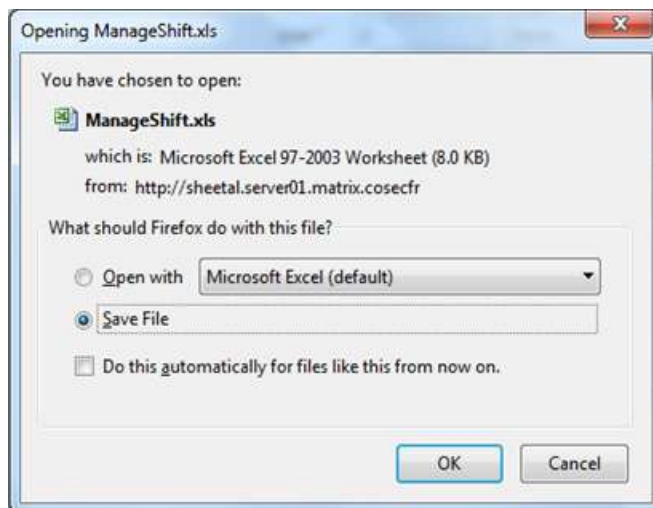

You can export the shifts of multiple users in XLS format to the local drive of a computer. This data can then be manually added/corrected/updated and the same file can be imported into the system.

### Export

You can set the filters according to which the data is required. To set the filter:

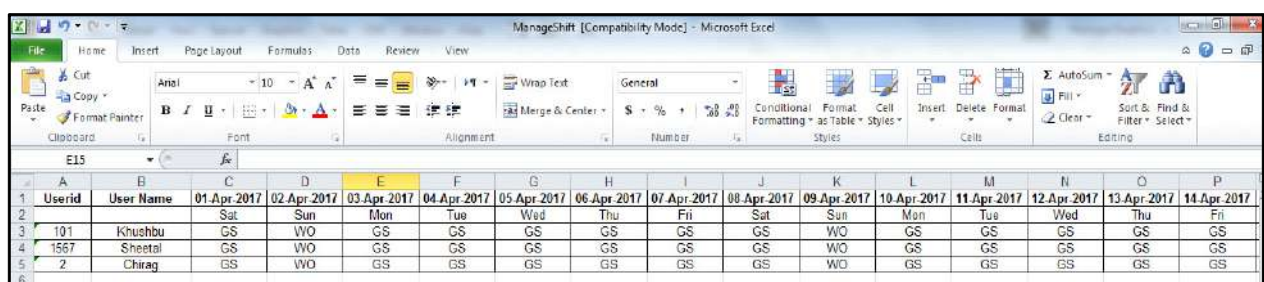

- **Date:** Select the from and to date. The data will be filtered for the set date range.
- **User:** You can select the desired users directly or by clicking the **Filter** . For details refer to "[User Selection](#)".

Click **Export** . The following pop-up appears prompting you to save the file on a local drive.

After saving the file, navigate to the path where you saved the file and open the file.

The exported shift file appears.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P
	Userid	User Name	01 Apr 2017	02 Apr 2017	03 Apr 2017	04 Apr 2017	05 Apr 2017	06 Apr 2017	07 Apr 2017	08 Apr 2017	09 Apr 2017	10 Apr 2017	11 Apr 2017	12 Apr 2017	13 Apr 2017	14 Apr 2017
1			Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri
3	101	Khushbu	GS	WO	GS	GS	GS	GS	GS	GS	WO	GS	GS	GS	GS	GS
4	1567	Sheetal	GS	WO	GS	GS	GS	GS	GS	GS	WO	GS	GS	GS	GS	GS
5	2	Chirag	GS	WO	GS	GS	GS	GS	GS	GS	WO	GS	GS	GS	GS	GS

## Import

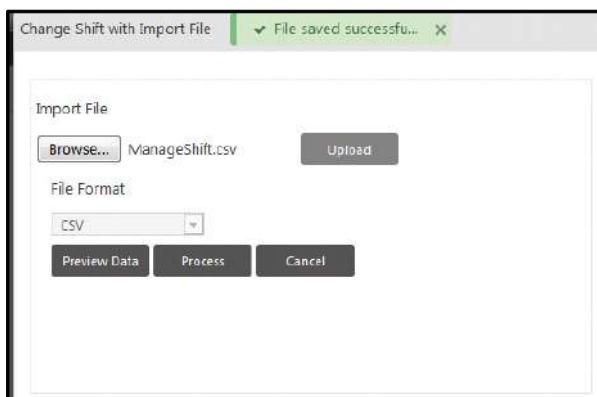

You can make the necessary manual changes in the exported file. Save the file and note down the file location.

For Shift Changes made via Import by On Behalf System Account User, Shift Change Applications will be sent to the RIC for approvals. Only after the verdict from the RIC (that is if the Shift Change application is approved) then the shift will be updated. To know the status of the shift application, refer to [“Monthly Shift Schedule”](#).

If the shift changes are done by the SA then the Shift Changes will be auto-approved.

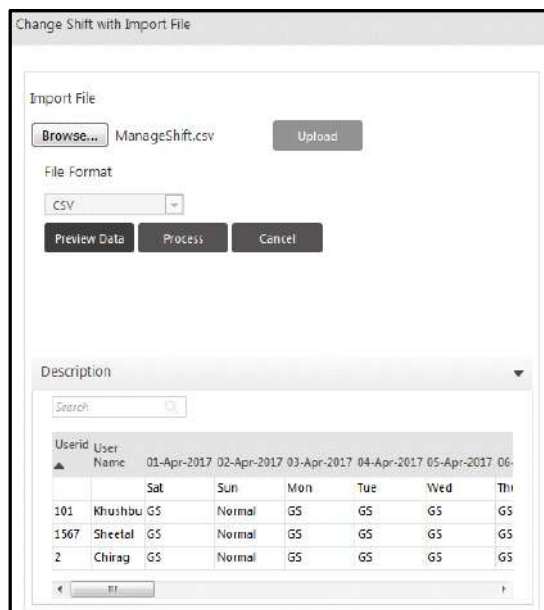

Shifts are changed from multiple locations, then in such cases the last approved shift change request will be taken into consideration. To know more refer to [“Shift Change Application/Approval”](#).

Click **Import**  to import the file with changes in shift.

**Browse** and select the file from the location you stored it at. Click **Upload** to upload the modified shift file.

Select a **File Format** (XLS or CSV) for uploading. Click **Preview Data** to view the preview of updated data.

Userid	User Name	01-Apr-2017	02-Apr-2017	03-Apr-2017	04-Apr-2017	05-Apr-2017	06-Apr-2017

GS	WO	GS	GS	GS	Yes	Shift assigned successfully
GS	WO	GS	GS	GS	Yes	Shift assigned successfully

*If WO is to be changed to other shift, then Normal must be typed in place of WO in excel sheet, then is imported. Once the WO is changed to Normal, then you can assign other shift to it.*

For example: The GS WO shift on 2nd April is changed to GS shift as shown below. Now this shift can be changed as per requirement.

To view the updated shift data,

- Click **Schedule Group** on the left to and then click **View Schedule**.

## Change Shift

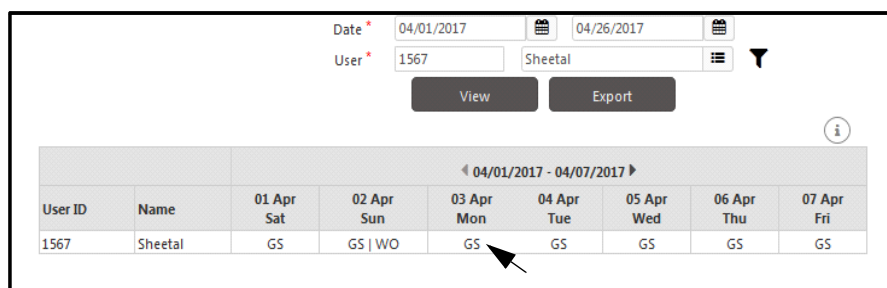

If Shift Changes done by On Behalf System Account User (Auto Approved check box disabled for Manage Shifts in Roles and Rights), Shift Change Applications will be sent to the RIC for approvals as well as to the SA. In this case the Shift will be visible in red and on hover the message "Shift Change Request pending for approval" will be displayed. Only after the verdict from the RIC (that is if the Shift Change application is approved) then the shift will be updated and the red color will not be visible. For Shift Change Application Approval and to know the status of the updated shift, refer to ["Shift Change Approval"](#).

If shifts have been changed from Attendance Correction or Manage Attendance and the verdict for the application is pending, then for the same date/date range the change request cannot be made from Manage Shifts. But if the verdict has been provided then for the same date/date range the request can be made.

If the shift changes are done by the SA then the Shift Changes will be auto-approved.

To change a shift,

Click on the shift assigned to the user which is to be changed.

The **Change Shift** pop-up appears.

The 'Change Shift' pop-up form contains the following fields and controls:

- Current Shift:** A text box containing 'GS' and a 'General Shift' picklist button.
- Replace With:** A text box containing 'NS' and a 'Night Shift' picklist button.
- Week Off (WO):** A checkbox.
- Holiday (PH):** A checkbox.
- Change Shift For:** Two date pickers showing '04/03/2017'.
- Buttons:** 'Update' and 'Cancel' buttons at the bottom.

- **Current Shift:** This displays the current shift assigned to the user.
- **Replace With:** Click the picklist. The **Picklist For Shift Masters** pop-up appears. Click to select the desired shift. The current shift will be replaced with this shift.
- **WO/PH:** You can select the desired check box — Week-off or Holiday — to be assigned to the user.
- **Change Shift for:** The shift can be changed for a single day or multiple days by selecting the from and to dates.

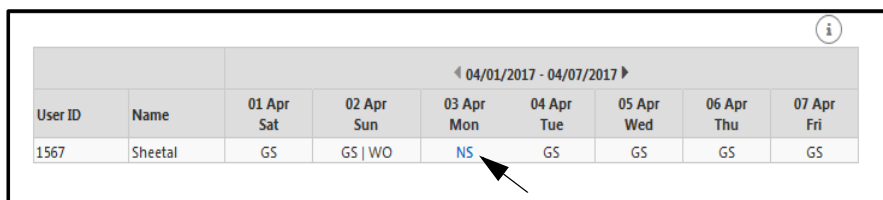

*The WO/PH will also be updated according to the date range selected and the change request will always be auto-approved.*

*If the shift is assigned for the selected date range, then a single Shift Change Application will be sent to the RIC.*

*If a Shift Change Application request is pending for approval and if On Behalf System Account User tries to update the shift for the same date, the system will not allow and an error message will be displayed: "Shift Change request already exist or overlaps with another existing entry for selected date range which is pending for approval".*

- Click **Update**.

Shift is changed from GS to NS.

The table displays a shift schedule for User ID 1567 (Sheetal) from 04/01/2017 to 04/07/2017. The selected date range is 04/01/2017 - 04/07/2017. The shift is changed from GS to NS on 03 Apr Mon.

## Change Schedule

To change the schedule assigned to the user, click **Schedule Group** and then select **Change Schedule**.

The **Change Schedule** pop-up appears.

The 'Change Schedule' pop-up form contains the following fields and options:

- User:** 2, Chirag
- Change Type:** Temporary
- Change From:**
  - Existing Schedule: 1, Schedule Group
  - Start Shift: GS, General Shift
- Change To:**
  - New Schedule: 3, RnD Schedule
  - Start Shift: GS, General Shift
  - Attendance Period: 04/01/2017 to 04/28/2017
- Buttons:** Update, Cancel

- **User:** It displays the name of the selected user.
- **Change Type:** Select the desired type of change — Temporary, Permanent.

### Change From

- Displays the Existing Schedule and Start Shift details.

### Change To

You can make the changes by configuring the following:

- **New Schedule:** Click the picklist. The **Picklist For Schedule Group Masters** pop-up appears. Click to select the desired schedule. The existing schedule will be replaced with this schedule.
- **Start Shift:** Click the picklist. The **Picklist For Shifts of Shift Schedule** pop-up appears. Click to select the desired shift.
- **Attendance Period:** If you have selected **Temporary** as the **Change Type**, select the From and To date for which the schedule is to be changed.  
If you have selected **Permanent** as the **Change Type**, select the desired date.
- Click **Update** to change the schedule.

# Change Schedule

This option enables the HR user to change the currently effective Schedule Group for a user or multiple users to another Schedule Group. This becomes essential in cases where the employee needs to be temporarily or permanently moved to a new shift based on certain considerations. The system maintains a record of the previous Schedule Groups which had been assigned to the users.

To use the Change Schedule feature, select **Shift and Schedule module > Utilities > Change Schedule**. The page appears as shown below:

The screenshot shows the 'Change Schedule' form. At the top, there is a title bar with a back arrow and a star icon. Below the title bar, the form is divided into several sections. The first section contains a 'Change Type' dropdown menu set to 'Temporary'. Below this is a 'Date' section with 'From Date' and 'To Date' fields, each with a calendar icon. The 'Schedule' section has 'ID' and 'Name' fields, with a list icon next to the 'Name' field. The 'Start Shift' section has 'ID' and 'Name' fields, with a list icon next to the 'Name' field. Below these sections is a 'Preview' button. The second section contains a 'Select Users' dropdown menu set to 'User Wise'. Below this is a 'User' section with 'ID' and 'Name' fields, with a list icon next to the 'Name' field. At the bottom is an 'Apply' button.

**Change Type:** Select the Change Type which needs to be changed for the user from the drop down list. The options available are

- **Temporary:** For the Temporary change, click on the **Date** selection button and select the date range from the pop up calendar.
- **Permanent:** For the Permanent Change, only administrator can select the **Start Date**.

**Schedule:** Click on the Schedule Group Master Picklist button and select the **New Schedule Group** to which the user is to be assigned for this period.

**Start Shift:** Click on the Shift selection button and Select the Start Shift from which the new schedule is to be started.

The screenshot shows the 'Change Schedule' form with example data. The 'Change Type' dropdown is set to 'Temporary'. The 'Date' section has 'From Date' set to '02/01/2017' and 'To Date' set to '02/25/2017'. The 'Schedule' section has 'ID' set to '2' and 'Name' set to 'Schedule- EO'. The 'Start Shift' section has 'ID' set to '12' and 'Name' set to 'Early Out Shift'. Below these sections is a 'Preview' button. The second section contains a 'Select Users' dropdown menu set to 'User Wise'. Below this is a 'User' section with 'ID' and 'Name' fields, with a list icon next to the 'Name' field. At the bottom is an 'Apply' button.

**Select Users:** Select the User from the drop down list. The options to filter the user are:

- **User Wise:** It enables the administrator to randomly select users from the user Picklist.
- **Group Wise:** It enables the administrator to select all users belonging to a particular group.
- **All:** It enables the administrator to select all active users in the database.

Select the user by clicking on the box and Click on **Apply** to save the changes.

Change Schedule

Change Type: Temporary

The user can also view a graphical representation of the schedule in the case of a single user by clicking on the **Preview** button.

Thus, for the selected users, the shift schedule will be changed either temporary or permanent for the defined time period.

# Change Week-Off

This functionality enables the administrator to swap a week off day as and when required. This is normally used when an employee or group of employees work on a week off and have to be given an off day on another day of the week.

To use the Change Week-off feature, select **Shifts and Schedule > Utilities > Change Week-off**. The page appears as shown below:

The screenshot shows the 'Change Week-Off' form. It has a title bar with a back arrow and a star icon. The form contains two date selection fields: 'Current Week-Off Date' with the value '16/04/2017' and 'New Week-Off Date' with the value '17/04/2017'. Below these is a 'Select Users' dropdown menu set to 'User Wise'. Underneath is a 'User' section with 'ID' and 'Name' input fields. At the bottom is an 'Apply' button.

**Current Week-Off Date:** Select the current weekoff date from the date selection button which is required to be changed.

**New Week-Off Date:** Select the new weekoff date from the date selection button to replace the current weekoff date.

**User Filter:** Select the user from the filter options of User Wise, Group Wise or All. The options to filter the user are:

- **User Wise:** Enables administrator to randomly select users from the user Picklist window.
- **Select Group:** Enables the administrator to select all users belonging to a particular group.
- **All:** Enables administrator to select all active users in the database.

This screenshot shows the 'Change Week-Off' form with a list of users. It includes a search bar with the text 'Search'. Below the search bar is a table with columns 'User ID', 'Name', and a delete icon. The table contains one entry: User ID '03' and Name 'Arushi'. At the bottom is an 'Apply' button.

User ID	Name	
03	Arushi	

Click on **Apply** to change the week-off.

The Week-off on 16th will be changed to 17th as shown below.

# Sync Change to Device

Sync Change to Device is a feature which is used to manually send and update the shift schedule(Exceptions list) on the devices with shift based access control feature.

To use the Sync Schedule change to Device feature, Click on **Shift and Schedule > Utilities > Sync Change to Device**. The page appears as shown below:

The screenshot shows a web application window titled "Sync Schedule Change To Device". It features a navigation bar with a back arrow. The main form contains several input fields and dropdown menus: "Schedule Date" with a calendar icon, "Device Filter" set to "Randomly", "Device" with "ID" and "Name" sub-fields, "Sync Type" set to "Only Exceptions", "User Filter" (a blue link), "Select Users" set to "User Wise", and "User" with "ID" and "Name" sub-fields. A "Sync" button is located at the bottom center.

**Schedule Date:** Select the current or future date from the calendar whose updated schedule is to be synchronized to the device.

**Device Filter:** Select the device filter as **Randomly** or **All** on which the changed schedule is to be synchronized.

**Device:** For Randomly option click the picklist and select the Panel200 to sync the change to the respective Panel doors. For All option, all the Panel200 will be selected.

**Sync Type:** Select the Sync type options to synchronize the change to device.

- **Only Exceptions:** An exception record for the particular changed schedule i.e. the shift schedule change for a particular day will be generated and sent to the device.
- **All Shifts:** An exception record for all the selected user will be generated and sent to the device irrespective of any particular shift change.

The exception record will be generated only if the corresponding user has shift based access enabled and at least one Panel200 assigned to the user

Sync

**User Filter:** Select the User from the drop down list for whom the shift schedule exceptions are to be synced to the device. The options to filter the user are:

- **Use Wise:** Enables administrator to randomly select users from the user Picklist window.
- **Group Wise:** Enables the administrator to select all users belonging to a particular group.
- **All:** Enables administrator to select all active users in the database.

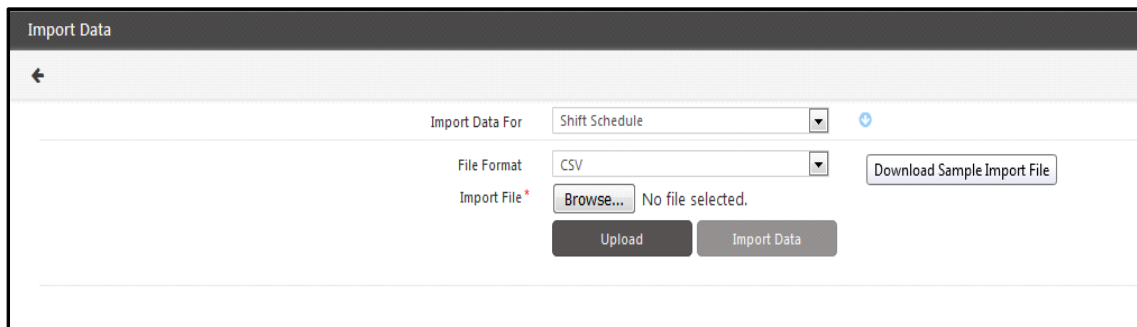

Select the user and Click on **Sync** to send the changes to the device.

# Manual Schedule Import

---

To Import the Manual Schedule, select **Shifts and Schedules > Utilities > Manual Schedule Import**. The page appears as shown below:

The screenshot shows a web form titled "Import Data". It has a back arrow icon in the top left. The form contains the following fields and buttons:

- Import Data For:** A dropdown menu with "Shift Schedule" selected and a blue plus icon to its right.
- File Format:** A dropdown menu with "CSV" selected.
- Download Sample Import File:** A button to the right of the File Format dropdown.
- Import File:** A label followed by a "Browse..." button and the text "No file selected."
- Upload:** A button below the "Import File" section.
- Import Data:** A button to the right of the "Upload" button.

*If in Admin Module > System Accounts > Roles and Rights Configuration > Shift and Schedules Module > Utilities > Page Rights - Manual Schedule Import, if Auto Approve check box is disabled, and if you are Importing data for Shift Schedule with changes in shifts for users, then the Shift Change Applications will be sent to the RIC for approval.*

*Shifts are changed from multiple locations, then in such cases the last approved shift change will be taken into consideration. To know more refer to ["Shift Change Application/Approval"](#).*

**Import Data For:** The Data is to be imported for Shift Schedule by default

You can download the sample import file and enter the data for Shift and Schedules. Then the updated file can be imported here.

**File Format** - Select the format for the file to be imported. The options available are XLS or CSV.

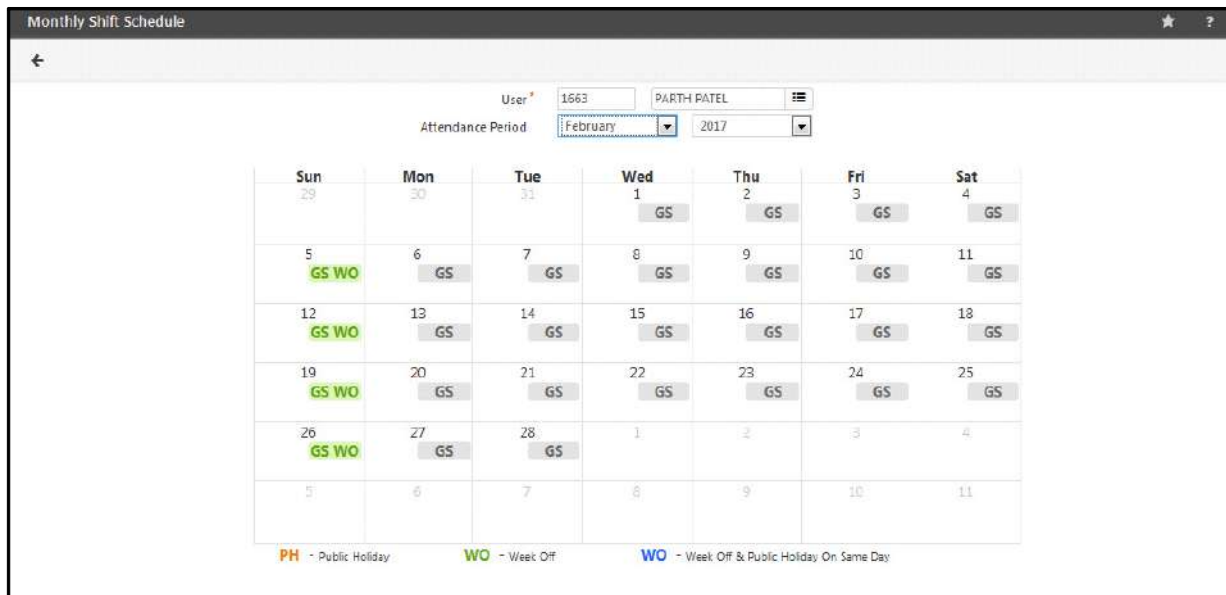

**Import File** - Browse the path of the file and select the file from which the data is to be imported.

Click **Upload** button to save the file. The **Preview Data** button enables the administrator to view the data in the respective worksheets to confirm that the data is in order prior to giving the import command.

Click on **Import Data** to start the import of data.

# Monthly Shift Schedule

To view the monthly shift schedule assigned to the user, Click on **Monthly Shift Schedule** option under **Utilities** from the Shifts and Schedule page. The page appears as shown below:

Monthly Shift Schedule

User: 1663 PARTH PATEL

Attendance Period: February 2017

Sun	Mon	Tue	Wed	Thu	Fri	Sat

5	6	7	8	9	10	11

PH - Public Holiday WO - Week Off WO - Week Off & Public Holiday On Same Day

**User:** Select the user from the picklist whose shift schedule is to be viewed.

**Attendance Period** - Select the month and year for which the schedule is to be viewed.

The shift details for the selected user is shown in the grid as shown above. The week-off is shown by green colour. The other colour codes are mentioned below the grid.

The Shift Schedule is assigned to the user from **Shift and Schedules> Process> Monthly Schedule**.

# Shift Change Application/Approval

---

Shifts can be changed from:

- **Shift Change Application:** When shifts are changed from this page then Shift Change Application requests will be generated only if the Auto Approve check box is disabled. For details, refer to [“Shift Change Application”](#).
- **Manage Shift:** When shifts are changed from this page then Shift Change Application requests will be generated only if the Auto Approve check box is disabled. For details, refer to [“Manage Shift”](#).
- **Manage Attendance:** When shifts are changed from this page then Shift Change Application requests will not be generated. For details, refer to [“Manage Attendance”](#).
- **Attendance Correction Application:** When shifts are changed from this page then Shift Change Application requests will not be generated, however Attendance Correction requests will be generated. For details, refer to [“Attendance Correction”](#).
- **Import** from:
  - Admin Module > System Utilities > Import Data > Import Data For (Shift Schedule)
  - Shift and Schedules Module > Utilities > Manual Schedule Import
  - In Shift and Schedules Module > Utilities > Manage Shift > Import > Change Shift with Import File

From Import the Shift Change Application requests will be generated only if the Auto Approve check box of the respective page is disabled. For details, refer to [“Importing Data”](#), [“Manual Schedule Import”](#) and [“Manage Shift”](#).

- **COSEC Integrate:** Shifts can be changes done from Integrate, but no Shift Change Application will be generated.
- **Shift Change API:** Shifts can be changed by SA as well as ESS User using API. However, Shift Change Application requests will only be generated when the ESS User changes shifts using API. For details, refer to the WEB API V2.0 Guide.

*If Shifts are changed from multiple places, then in such cases the last approved shift change request will be taken into consideration.*

## Shift Change Application

Shift Change Application is a formal mode of requesting a change in shift. It enables an organization to keep a track of all requested and approved Shift Changes and enables the HR administrator or reporting in-charge to address issues such as handling work overload, shortage of resources in a shift etc.

The Shift Change applications can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module

COSEC Web enables all System Account users with appropriate page rights to make Shift Change applications using the Shifts and Schedules module. All applications made by the System Account user are pre-approved by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Shift Change applications using the *Shift and Schedule* module. If you wish to send all the applications made by the On Behalf System Account User for approval, make sure you have disabled the **Auto Approve** check box for Shift Change Application page in the Roles and Rights assigned. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#). To receive a notification alert once the final verdict for such application is provided by RIC, make sure you have configured the desired Mobile Number/Email ID in [“Optional”](#) as well as configure the Shift Change Alert parameters. For details refer to [“Configuring Alert Messages”](#).

For Shift Change Applications can be applied using the *Employee Self Service* login, the Shift Change Application approvals/rejections have to be done by the respective supervisors of the reporting group by logging into their ESS login. However, such applications can also be approved by the System Account user from the *Shift and Schedule* module of the COSEC Web Application.

*For SA users, make sure you have enabled Shift Change Application page Rights from Admin> System Accounts> Role and Rights Configuration and have disabled the Auto Approve check box. For details, refer to [“Roles and Rights Configuration”](#).*

*For Approvals of Shift Change Applications, makes sure you have enabled Shift Change Approval page Rights from Admin> System Accounts> Role and Rights Configuration. For details, refer to [“Roles and Rights Configuration”](#).*

*For ESS users, make sure you have enabled Shift Change Application page in ESS Rights from Users> Utilities> ESS Role Rights and for the RIC in In-Charge Permission, Shift Change Approval is enabled. For details refer to [“ESS Role Rights”](#) and [“In-Charge Permissions”](#)*

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

For Shift Change Application Approvals, refer to [“Shift Change Approval”](#).

When the shifts are changed, alerts can be triggered, if configured:

- Shift Change Application alert when there is an application for shift change. For this alert, in Alert Message Configuration, select the **Alert Filter** as Time and Attendance and **Event** as Shift Change Application.
- Shift Change alert after the verdict is given by RIC, that is the Shift Change Application is approved and the shift is updated. For this alert, in Alert Message Configuration, select the **Alert Filter** as Time and Attendance and **Event** as Shift Change.

The ESS Users will also receive ESS Notifications when the final verdict for the application is provided.

- If the verdict for the Shift Change Application is pending then the Pending Applications For Approval Alert will include the count of these applications also.

For details refer to [“Configuring Alert Messages”](#).

## Applying for a Shift Change Application

This section describes how to apply for a Shift Change Application using the Shifts and Schedules module.

To apply for a Shift Change, click on **Shifts and Schedules Module > Application/Approval > Shift Change Application** and the following screen appears.

The page displays configurations on the left side and in the right grid the Shift Change Application details of a particular user for a particular month. It also displays the total number of Pending, Approved as well as Rejected Applications.

To apply for a Shift Change, click **New**  and configure the following parameters:

- **User:** Click the picklist. The **Picklist For User** pop-up appears.  
Click to select the desired user for whom the Shift Change application is to be made.
- **Change Shift For:** The Shift Change application can be made for a single day or for multiple days.

If you wish to change the shift of a particular day, select the same date in From and To.

If you wish to change the shift for multiple days, in To select the date from which you wish to start and in From select the end date. The shift will be changed for all the dates.

- **Replace Shift With:** Click the picklist. The **Picklist For Shift Masters** pop-up appears.

The screenshot shows the 'Shift Change Application' window. It has a header with navigation icons. Below, there are two 'User' fields, both containing 'User1'. A 'Change Shift For' field shows the date '2024/04/10'. A 'Replace Shift With' field shows 'MS'. At the bottom are 'Submit' and 'Cancel' buttons.

Click to select the desired shift with which you wish to replace the existing shift.

- Click **Submit**.

*If shifts have been changed from Manage Shifts and the verdict for the application is pending, then for the same date/date range the change request cannot be made from Shift Change Application. But if the verdict has been provided then for the same date/date range the request can be made.*

Once the Shift Change Application request has been made and the verdict is pending, then the same appears in red in Mange Shifts and on hover a message “Shift Change Request pending for approval” is displayed. After the verdict has been provided, that is approved the shift is updated and the red color changes to black. If rejected then the shift is not updated and the color changes to black. For details, refer to [“Manage Shift”](#).

The applied Shift Change Application appears in the right grid.

The screenshot shows the 'Shift Change Application' window with a split view. The left pane contains the application form. The right pane shows a list of applications. At the top of the right pane, there are tabs for 'Mar 2024' and 'May 2024'. Below them is a summary bar with counts: 1 Pending, 2 Approved, 1 Rejected. A 'Show All' link is present. The main table lists applications with columns: From, To, New Shift, Application Date, Status, and Approval Details.

From	To	New Shift	Application Date	Status	Approval Details
2024/04/15	2024/04/15	NS - 22:00 - 07:00	2024/04/22	Pending	
2024/04/12	2024/04/12	NS - 22:00 - 07:00	2024/04/22	Rejected	
2024/04/11	2024/04/11	MS - 01:00 - 10:00	2024/04/22	Approved	
2024/04/10	2024/04/10	MS - 01:00 - 10:00	2024/04/22	Approved	

From this page you can also view the details of the Shift Change Applications which have been applied for from the ESS module, once they get approved or rejected.

Shift Chang Applications applied by the SA will always be auto-approved.

To view the Shift Change Application approved details, select a the desired Shift Change Application from the grid on the right grid and the data will be displayed in the left grid.

**Approval Details** window appears as shown below:

The image shows three overlapping screenshots of the 'Shift Change Details' window, illustrating the 'Approval Details' section in different states.

**Top Screenshot (Pending):**

- Application Details:** Application Date: 2024/04/22
- Shift Change Date:** 2024/04/15
- Previous Shift:** GS - 09:00 - 18:00
- New Shift:** NS - 22:00 - 07:00
- Approval Details:** Pending (⌚ icon)
- Incharge:** RIC - RIC
- Status:** Pending (⌚ icon)
- Remark:**

**Middle Screenshot (Approved):**

- Approval Details:** Approved (✅ icon)
- Incharge:** RIC - RIC
- Status:** Approved (2024/04/22 15:59) (✅ icon)
- Remark:** Approved Shift Change

**Bottom Screenshot (Rejected):**

- Approval Details:** Rejected (❌ icon)
- Incharge:** RIC - RIC
- Status:** Rejected (2024/04/22 15:59) (❌ icon)
- Remark:** Rejected Shift Change

It displays the status of the application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending ⌚ , Approved ✅ or Rejected ❌ .

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

## Shift Change Approval

The Shift Change Application requests will be sent for authorization. The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

*Shift Change Applications by System Account user will always be auto-approved.*

*Shift Change Applications by On Behalf System Account user will be sent to the respective Reporting Group In-charges for approval. These can be approved by the RIC from their ESS application.*

*Shift Change Applications by users from their ESS application are also sent to their respective Reporting Group In-charges for approval. These can be approved by the RIC from their ESS application.*

*For Approvals, makes sure you have enabled Shift Change Approval page Rights from Admin> System Accounts> Role and Rights Configuration. For details, refer to [“Roles and Rights Configuration”](#).*

*For Approvals by RIC, makes sure in In-Charge Permission, Shift Change Approval check box is enabled. For details refer to [“ESS Role Rights”](#) and [“In-Charge Permissions”](#)*

SA will be able to view all the Shift Change Application requests from this page and if required these can also be approved by the SA.

To view/authorize Shift Change Application requests, click **Shifts and Schedules > Authorization/Approval > Shift Change Approval**.

The **Shift Change Approval** page appears as follows:

You can either:

- view all the Shift Change applications pending for approval, refer to [“All Pending Applications”](#).
- set the filters — Date, Filter Users — to view the desired applications, refer to [“Applications according to Set Filters”](#).

### All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** By default this option is selected.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more refer to [“Pending Applications”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters according to which you wish the applications,

- **Date:** Select this option to enable the date filter. Select the start and end dates by clicking the respective date selection buttons. This defines the period for which Shift Change Applications are to be viewed. The end date is by default set to the current date and authorization is not allowed for any later date.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click **View** to view all pending, approved and rejected Shift Change Applications and their details.

## Pending Applications

Click the **Pending** collapsible panel.

The **Pending** section lists all the Shift Change Applications from users/On Behalf System Account User waiting to be sanctioned by the System Administrator/RIC as shown.

Pending (1)									
Search									
User ID	User Name	Application Date	From Date	To Date	New Shift	Approve	Reject	Remark	Details
User1	User1	2024/04/22	2024/04/15	2024/04/15	NS - 22:00 - 07:00	<input type="checkbox"/>	<input type="checkbox"/>		

When any application is in the Pending state it can be authorized by the System Admin or RIC.

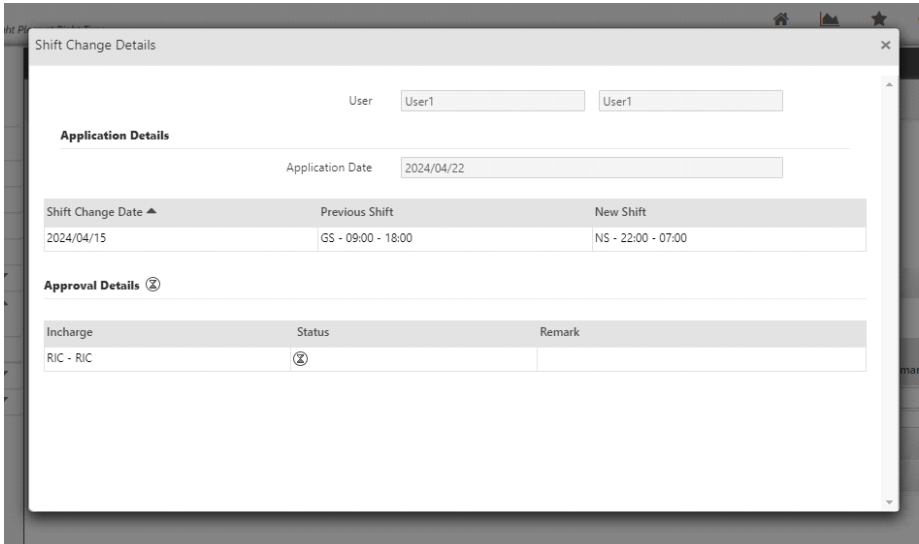

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve/Reject check box in the header column.

Once the applications are approved/ rejected, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter your Remark while authorizing the application.

Click **Details**  to view the Shift Change details of the corresponding user.

**Shift Change Details** window appears.

Under **Application Details**, it displays the Shift Change Application details — Application Date, Shift Change Date, Previous Shift, New Shift under Application Details.

Under **Approval Details**, it displays the status of user’s Shift Change Application. The application’s status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge (RIC) or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

**Remarks** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

**Approved Applications**

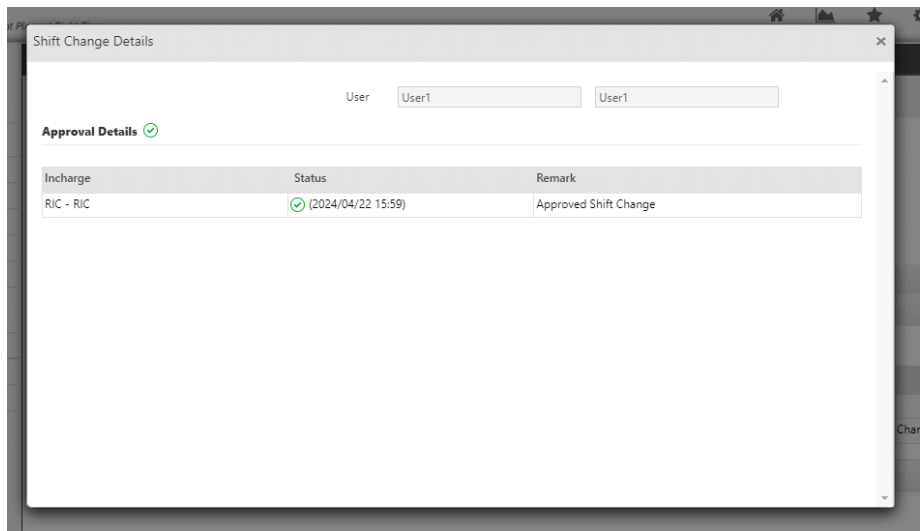

Click the **Approved** collapsible panel.

The **Approved** section displays all the Shift Change Applications that have been approved by the RIC or the System Administrator. The following screen displays the **Approved** section.

Approved (2)							
Search							
User ID	User Name	Application Date	From Date	To Date	New Shift	Remark	Details
User1	User1	2024/04/22	2024/04/10	2024/04/10	MS - 01:00 - 10:00		
User1	User1	2024/04/22	2024/04/11	2024/04/11	MS - 01:00 - 10:00	Approved Shift Change	

Click **Details**  to view the Shift Change details of the corresponding user.

**Shift Change Details** window appears.

Under **Approval Details**, it displays the status of user's Shift Change Application. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge (RIC) or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remarks** displays the comments provided by the Admin/ RIC/ System.

### Rejected Applications

Click the **Rejected** collapsible panel.

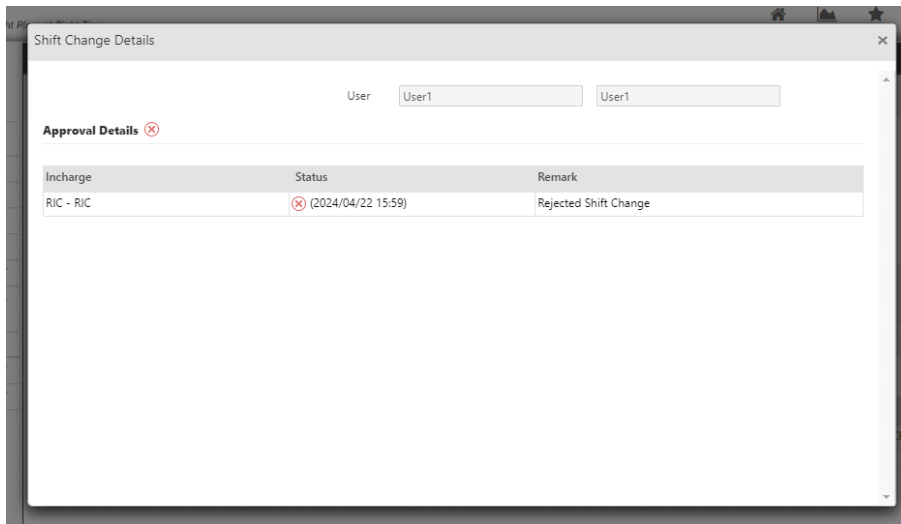

This section lists all Shift Change Application that have been rejected. The following screen is an example of an **Rejected** list of Shift Change Application requests for a specific date range:

User ID	User Name	Application Date	From Date	To Date	New Shift	Remark	Details
User1	User1	2024/04/22	2024/04/12	2024/04/12	NS - 22:00 - 07:00	Rejected Shift Change	

Click **Details**  to view the Shift Change details of the corresponding user.

**Shift Change Details** window appears.

Under **Approval Details**, it displays the status of user's Shift Change Application. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge (RIC) or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remarks** displays the comments provided by the Admin/ RIC/ System.

# Monthly Schedule

---

Shift Schedule generation for the month will create data for each day of the month for all users. Apart from the shift it will also mark weekly offs and holidays applicable to the users during the month. This process assigns shift for each day of the month as per the schedule group allotted to user. This process needs to be run at the end of the previous calendar month.

To use the Monthly Schedule Process, Select **Shifts and Schedule > Process > Monthly Schedule**. The page appears as shown below:

The screenshot shows the 'Monthly Schedule' process interface. At the top, there's a title bar 'Monthly Schedule'. Below it, a navigation bar with a back arrow. The main form area contains several sections: 'Month-Year' with dropdowns for 'May' and '2017'; 'Overwrite Existing Schedule' with a checkbox; 'Select Users' with a dropdown set to 'User Wise'; and a 'User \*' section with 'ID' and 'Name' input fields. Below these is a search bar. A table lists users with columns 'User ID' and 'Name'. One user is listed: '1320' and 'SHRUTI SAGAR PATKI'. There are delete icons for each user. At the bottom center is a 'Process' button.

User ID	Name
1320	SHRUTI SAGAR PATKI

**Month-Year:** Select the month and the year for which the process is to be run.

**Overwrite Existing Schedule:** Check the box to overwrite the shift schedule data already generated by an earlier process.

**User Filter:** Select the User from the drop down list. The options to filter the user are:

- **User Wise:** Enables administrator to randomly select users from the user Picklist window.
- **Select Group:** Enables the administrator to select all users belonging to a particular group.
- **All:** Enables administrator to select all active users in the database.

Select the user and Click on the **Process** button to start the process of Schedule Generation. The system starts processing the data and displays the process completion status.

*Example:* Suppose the current shift schedule for the user Aditi has GS shift as shown below.

Monthly Shift Schedule

User\* 1687 Aditi Gupta

Attendance Period May 2017

Sun	Mon	Tue	Wed	Thu	Fri	Sat
30	1 GS	2 GS	3 GS	4 GS	5 GS	6 GS
7 GS WO	8 RS	9 GS	10 GS	11 GS	12 GS	13 GS
14 GS WO	15 GS	16 GS	17 GS	18 GS	19 GS	20 GS
21 GS WO	22 GS	23 GS	24 GS	25 GS	26 GS	27 GS
28 GS WO	29 GS	30 GS	31 GS	1	2	3
4	5	6	7	8	9	10

PH - Public Holiday WO - Week Off WO - Week Off & Public Holiday On Same Day

Now the new schedule with NS shift is assigned to the user. So it must be processed again with “Overtime Existing Schedule” enabled.

# Shifts & Schedule Reports

These reports are available only with the Access Control or the Time and Attendance modules. Reports available under this option are as follows.

[“Shifts”](#)

[“Schedule Groups”](#)

[“Holiday Schedules”](#)

[“Shift Schedules”](#)

[“Week-Off Change”](#)

## Shifts

This report provides a list of the shifts as defined in the system along with their configuration parameters.

Sample Report

The screenshot shows a web application window titled "Shifts". Inside, there's a header for "MATRIX COMSEC PVT. LTD." and "Shifts". It indicates the report was run by "System Admin" on "05/23/2023" at "20:35". The table lists shifts with columns: Sr No, ID, Name, Start, End, BreakStart, Break End, Full Day, and Half Day. The data includes shifts like SE Support Evening, SF Saturday First, SN Support Night, SS Saturday 0900-1330, SU Support US, TS 1100 to 1930, U1 USA 1820-0300, U2 US 17.30-02.30, and U3 USA 14.30-00.00.

Sr No	ID	Name	Start	End	BreakStart	Break End	Full Day	Half Day
52	SE	Support Evening	18:00	03:30	20:30	21:00	09:00	04:30
53	SF	Saturday First	14:10	18:30			04:20	00:30
54	SN	Support Night	23:30	09:00	03:00	03:30	09:00	04:30
55	SS	Saturday 0900-1330	09:00	13:30			04:20	00:30
56	SU	Support US	20:00	05:00			09:00	04:30
57	TS	1100 to 1930	11:00	19:30			08:30	04:15
58	U1	USA 1820-0300	18:20	03:00			08:40	04:20
59	U2	US 17.30-02.30	17:30	02:30	22:00	22:30	09:00	04:30
60	U3	USA 14.30-00.00	14:30	00:00	17:00	17:30	09:00	04:30

## Schedule Groups

This report provides a list of the defined schedule groups along with the details of the member shifts.

Sample Report

The screenshot shows a web application window titled "Schedule Groups". Inside, there's a header for "MATRIX COMSEC PVT. LTD." and "Schedule Groups". It indicates the report was run by "System Admin" on "05/23/2023" at "20:38". The table lists schedule groups with columns: ID, Name, Shift, Shift Start, Shift End, Break Start, Break End, Shift Count, Off Day 1, and Off Day 2. The data includes groups like 1 HO Rnd ShiftSch, 2 HO Rnd Guards, 3 MUSEM SCH, 4 JASWANT SCH, 5 SWEEPERS SCH, 6 HOUSE KEPIN SCH, 7 Security Guards, 8 Rnd Guards, 9 Support Evening, 10 Consultant Sch, 11 Support Night, 12 Satish sch 2, 13 Field Employees, and 14 Europe1230-.

ID	Name	Shift	Shift Start	Shift End	Break Start	Break End	Shift Count	Off Day 1	Off Day 2
1	HO Rnd ShiftSch	G8	09:00	18:30	13:00	13:30	10	Sunday	None
2	HO Rnd Guards	M1	08:30	18:00	13:00	13:30	9	Sunday	None
3	MUSEM SCH	M2	08:30	18:00	13:00	13:30	20	Sunday	None
4	JASWANT SCH	S1	06:00	20:00			7	Sunday	None
5	SWEEPERS SCH	S2	20:00	08:00			7	Sunday	None
6	HOUSE KEPIN SCH	G1	10:00	19:30	13:00	13:50	7	Sunday	None
7	Security Guards	G3	08:00	17:30	12:00	12:50	7	Sunday	None
8	Rnd Guards	G4	07:30	19:00			7	Sunday	None
9	Support Evening	G5	07:30	16:30	13:00	13:50	7	Sunday	None
10	Consultant Sch	H8	09:30	18:30			7	Sunday	None
11	Support Night	S3	07:00	15:00			7	Sunday	None
12	Satish sch 2	S4	15:00	23:00			7	Sunday	None
13	Field Employees	S5	23:00	07:00			7	Sunday	None
14	Europe1230-	S1	08:00	20:00			7	Sunday	None

## Holiday Schedules

This report provides a list of holidays as defined in the selected schedule.

Set the filters as per your requirement:

The screenshot shows a web application window titled "Holiday Schedules". It features a "Schedule Selection" section with a "Select Schedules" dropdown menu set to "Holiday Schedule Wise". Below this, there is a "Holiday Schedule" section with input fields for "ID" and "Name". A "Generate Report" button is located at the bottom of the form.

### Schedule Selection

**Select Schedule:** Select the desired option — All or Holiday Schedule Wise.

- If you select **All**, all Holiday Schedules will be included.
- If you select **Holiday Schedule Wise**, click the **Holiday Schedule** picklist. The **Picklist For Holiday Schedule** pop-up appears.

The screenshot shows a pop-up window titled "Picklist For Holiday Schedule". It has a green header bar that says "Total Selected: 0 Records". Below the header is a search bar and a "Show Selected" link. The main area contains a table with columns "ID" and "Name". The table lists 10 records, each with a checkbox in the "ID" column. The records are:

ID	Name
1	HO-RnDSchedule
2	FactorySchedule
3	Schedule 3
4	Schedule 4
5	Schedule 5
6	Schedule 6
7	Schedule 7
8	Schedule 8
9	Schedule 9
10	Schedule 10

At the bottom of the table, it says "1 - 10 of 30 records". There are navigation buttons for "OK" and "Cancel".

Select the desired check boxes from the list. Click **OK**.

The selected Holiday Schedules appear in the grid.

search

Generate Report For: All Users

Generate Report

You can also delete the desired User. To do so, click **Delete**  of the respective user.

- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

The selected Groups appear in the grid.

You can also delete particular group. To do so, click **Delete**  of the respective group.

- If you select **All**, then All User will be selected.

**Generate Report For:** Select the desired option from the drop down list— All Users, Active Users or Inactive Users.

Click **Generate Report**.

Every business, irrespective of size, needs to be structurally organized for smooth and efficient operability. This structural organization is effective at two levels, at functional level and personnel level. COSEC allows an enterprise to identify distinct functional and personnel units as groups which can be configured independently by system administrators.

To access the **Enterprise Structure** module with COSEC Web Application, click on **Enterprise Structure**

on the Module selection page.

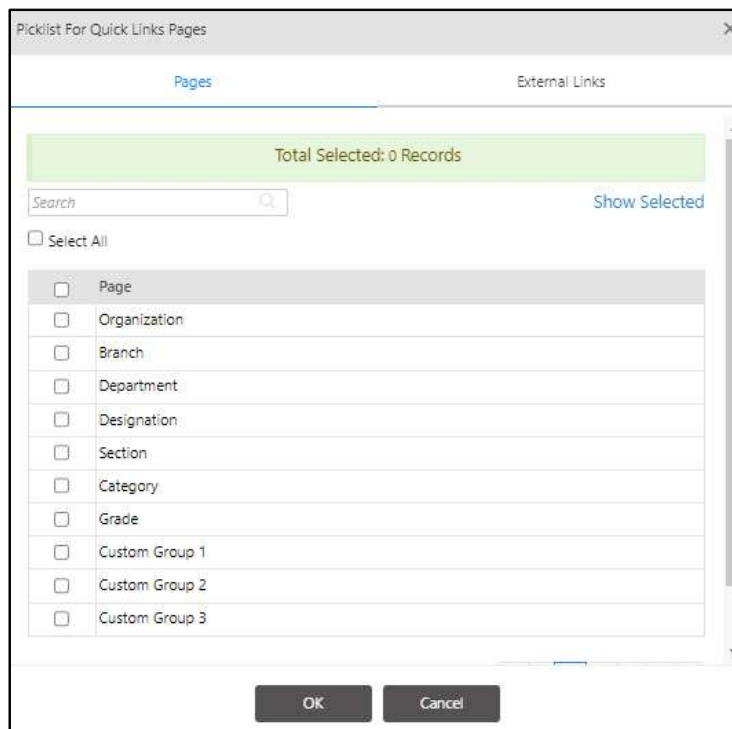

The **Enterprise Structure** page appears on the screen as shown below.

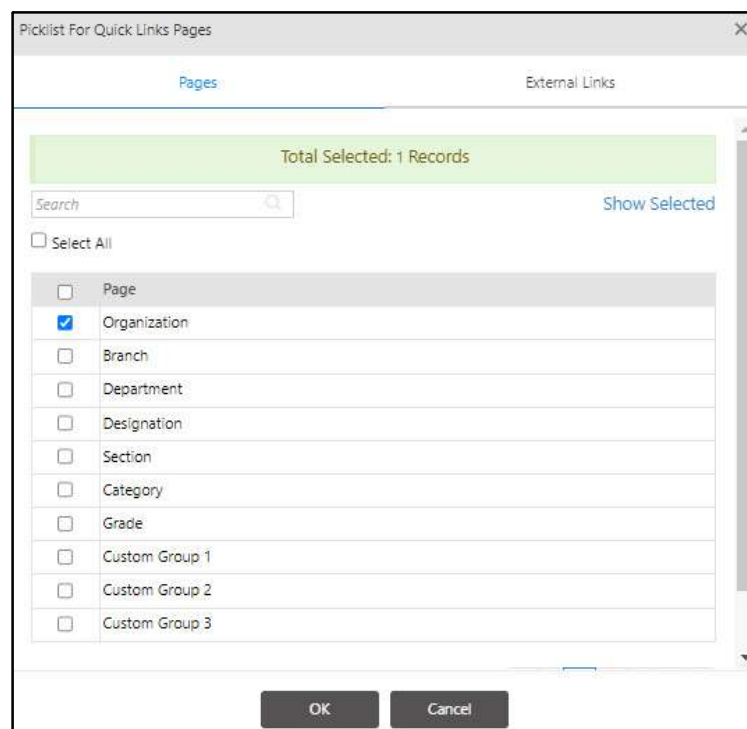

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add** . The **Picklist For Quick Links Pages** pop-up appears.

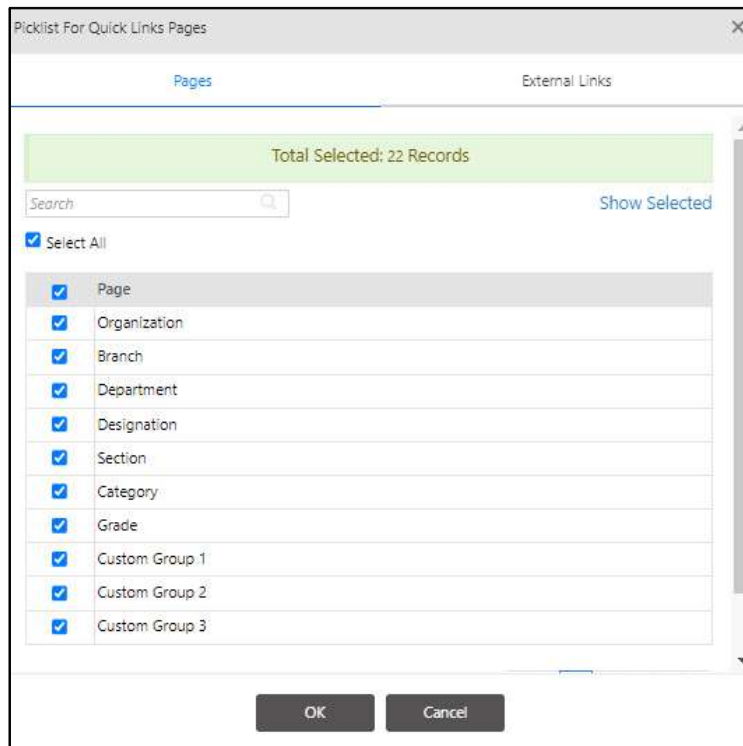

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

#### **Adding External Links,**

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

## Enterprise Groups

The following groups are defined under the *Enterprise Structure* module in COSEC:

- **Organization**
- **Branch**
- **Department**
- **Designation**
- **Section**
- **Category**
- **Grade**
- **Custom Group1**
- **Custom Group2**
- **Custom Group3**

All enterprise groups in COSEC are predefined and the user cannot define any new group types. The user can however, rename group labels as per business requirement. To know more, refer to [“Renaming Groups”](#).

An **organization** is a business unit that comprises of an individual or a collaborating group of people working towards a common commercial goal. Therefore, a business enterprise may have the need to identify multiple organizations. COSEC allows the creation of upto 9,99,999 organizations in its database. COSEC identifies organization as the broadest structural unit in a business environment.

An organization that operates across different geographical locations may be sub-divided structurally into branches. A **branch** may be further categorized into smaller functional units called **departments** which handle a specific aspect of the business, such as development, research, quality control, logistics and so on. Departments may have further sub-divisions in the form of **sections** which handle specific responsibilities or activities under the scope of their respective departments.

Hence, in terms of structure and function, an enterprise may be identified into the following hierarchical groups:

- Organization
- Branch
- Department
- Section

In terms of personnel structure, an enterprise may be classified into the following groups based on criteria such as function, responsibility, skill-sets, expertise, position, benefits, organizational rights and so on. These groups are:

- Category
- Grade
- Designation

Let us consider an example of how an Enterprise Structure can be classified into Enterprise Groups:

- Say, an enterprise operates two business organizations, namely *Company-1* and *Company-2*.
- *Company-1* operates across five branches world-wide, *Company-1- New York*, *Company-1- London*, *Company-1- Beijing*, *Company-1-Tokyo* and *Company-1- New Delhi*.
- The New Delhi branch runs two departments - *Sales* and *Customer-Support*.
- The Sales department for Company-1 further operates two sections or divisions, each for a product, say, *Product-1* and *Product-2*.
- For every product, employees are hired under two categories - *Contract-based* and *Permanent*.
- All the customer-support staff are classified either into *technical-support* or *commercial-support* teams, each team comprising *team managers*, *team leaders*, *engineers* and *executives*.

To know how to configure the structure of an enterprise, read the next section [“Configuring Groups”](#).

## Enterprise Structure Dashboard

To view the **Enterprise Structure** Dashboard, select the Dashboard button  on the **Enterprise Structure** page. The Dashboard displays the basic information on *Enterprise Structure* under the following categories:

Dashboard				
Structure Summary		Default Group Summary		Group Associations
Organization	75	Default Organization	1	Total Parameters 41
Brancha	77	Default Brancha	1	Associated Parameters 34
Department	58	Default Department	1	
Designation	58	Default Designation	1	
Section	62	Default Section	1	
Category	52	Default Category	1	
Grade	47	Default Grade	1	
Custom Group 1	12	Default Custom Group 1	1	
Custom Group 2	11	Default Custom Group 2	1	
Custom Group 3	7	Default Custom Group 3	1	

### Structure Summary

- This section displays the total number for each enterprise group configured on the system.

### Default Group Summary

- This section displays the group ID for default groups configured for each enterprise group type.

### Group Associations

- Total Parameters - Total number of parameters available for group association.
- Associated Parameters - Total number of parameters actually associated with groups.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The Latest values on Dashboard are updated on clicking the Refresh  button.

# Configuring Groups

---

The COSEC **Enterprise Structure** module has been specially designed to allow flexibility for policy-makers in operating COSEC across all business units based on operational convenience. COSEC enables the HR administrator to configure each Enterprise group individually and assign users to them.

Users added to a particular enterprise group will inherit the configuration of this group automatically. Hence, it becomes easier to associate specific group properties with selected users.

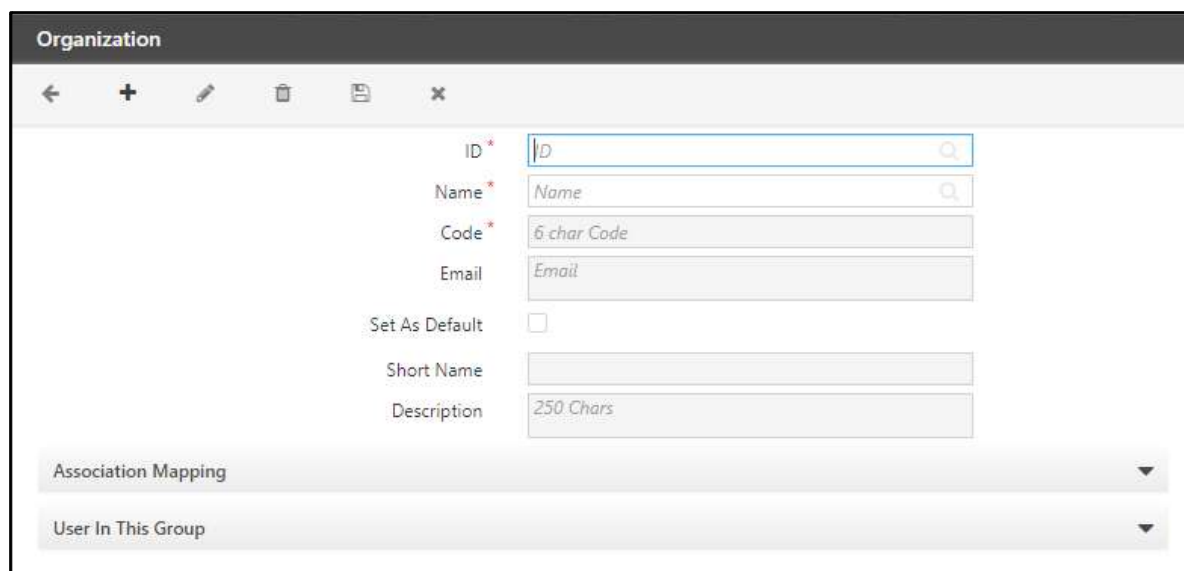

Following are the enterprise groups:

- *“Organization”*
- *“Branch”*
- *“Department”*
- *“Designation”*
- *“Section”*
- *“Category”*
- *“Grade”*

# Organization

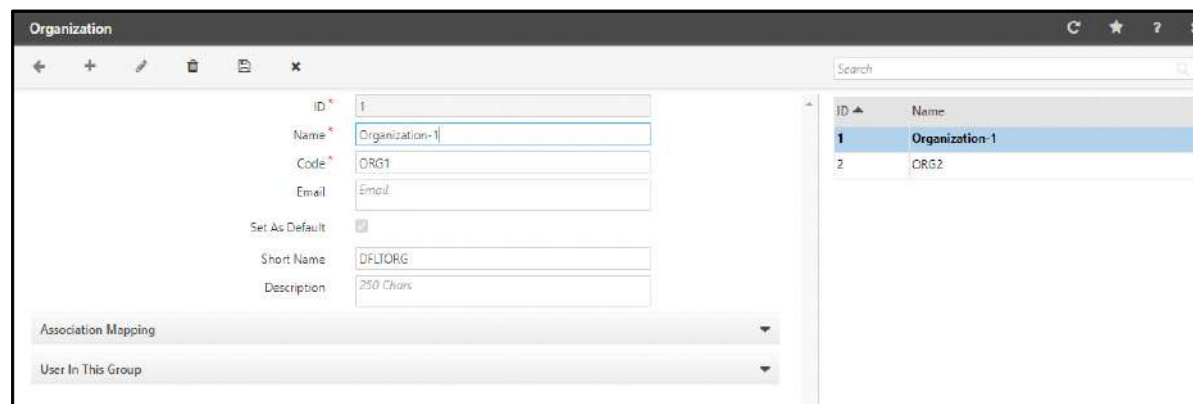

Organization tab enables to create and manage organizations. It helps to group users in a particular organization and assign policies accordingly. You can add 999999 organizations.

To view organization tab, click **Enterprise Structure > Organization** and the following screen appears.

The page displays configurations on the left side and to the right is the grid containing created organizations.

To configure an organization click the **New** button and the following screen appears.

Enter the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the group name to be created. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Email:** Enter the Email address of the group.

- **Code:** Enter a max 6 character code for the new group. For example, the code for “Research and Development” can be “RND” or for “Vice President” can be “VP”.
- **Set As Default:** Enable to set the organization to be created as the default group.

Both default groups and groups that are already in use cannot be deleted from the system. In case all groups configured on the system are deleted, the system will automatically apply the settings of the default group on the concerned users.

- **Short Name:** Provide short name for the organization to be created.
- **Description:** Enter description for the organization. It can be maximum of 250 characters.

## Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the organization from the “[Group Associations](#)” page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of Organization page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

*PIN Authentication For Door Access will be only displayed here, when Allow Door Access through API is enabled in Group Association> ESS> Allow Door Access Through API.*

*Reason For Punch From Unassigned Location will only be displayed when Location Mandatory For Punch is enabled from Group Association> ESS> Location Mandatory For Punch as well as Location Mandatory For Punch = None/Any Location.*

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to “[Devices](#)” in “[Configuring Users](#)”.

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

If you have enabled Capture Photo, refer [“ESS”](#) for details.

Select the organization from the grid to be edited and click **Edit**.

- In the **Association Mapping** panel, configure the associated parameters as required.
- Click **Save** .

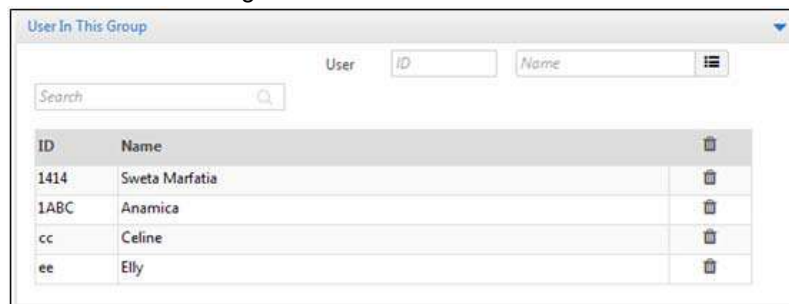

*If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.*

*If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.*

## User In This Group

This section enables to add users to the organization to be created.

ID	Name	
1414	Sweta Marfatia	
1ABC	Anamica	
cc	Celine	
ee	Elly	

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

*The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).*

Once a user is deleted from a group, it gets restored to the default group and inherits all configurations assigned to the default group.

Click **Save** button and the created organization gets displayed in the grid on the right hand side.

You can edit or delete the organization if required. To do so,

- Click on the desired organization from the grid on the right hand side.
- To edit, click **Edit** .

- To delete, click **Delete**  .

*Only those organizations can be deleted that are not assigned to any user/worker/visitor.*

# Branch

Branch tab enables to create and manage branches. It helps to group users in a particular branch and assign policies accordingly. You can add 999999 branches.

To view branch tab, click **Enterprise Structure > Branch** and the following screen appears.

The screenshot shows the 'Branch' configuration window. On the left, there are input fields for 'ID', 'Name', 'Code' (6 char Code), 'Set As Default' (checkbox), 'Short Name', and 'Description' (250 chars). Below these is a 'User In This Group' dropdown. On the right, there is a table with columns 'ID' and 'Name'. The table contains one entry: ID 1, Name Branch-1.

The page displays configurations on the left side and to the right is the grid containing created branches.

To configure a branch click the **New** button and the following screen appears.

The screenshot shows the 'Branch' configuration window with the 'New' button clicked. The 'ID' field is auto-generated as 1414. The 'Name' field is 'Research And Development'. The 'Code' field is 'RND'. The 'Set As Default' checkbox is checked. The 'Short Name' field is 'Research And De'. The 'Description' field is '250 chars'. Below the 'User In This Group' dropdown, a user selection dialog is open. It has a search bar and a table with columns 'ID', 'Name', and a delete icon. The table contains two entries: ID 1414, Name Sweta Marfatia, and ID rutu, Name rutu.

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the branch name to be created. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), / , & , , (comma), @ , ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a 6 character code for the new branch. For example, the code for "Research and Development" can be "RND" or for "Vice President" can be "VP".
- **Set As Default:** Enable to set the branch to be created as the default branch.

Both default branch and branches that are already in use cannot be deleted from the system. In case all groups configured on the system are deleted, the system will automatically apply the settings of the default group on the concerned users.

- **Short Name:** Provide short name for the branch to be created.
- **Description:** Enter description for the branch. It can be maximum of 250 characters.

### User In This Group

This section enables to add users to the branch to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a branch, it gets restored to the default group and inherits all configurations assigned to the default group.

- Click **Save** button and the created branch gets displayed in the grid on the right hand side.

You can edit or delete the branch if required. To do so,

- Click on the desired branch from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those branches can be deleted that are not assigned to any user/worker/visitor.

Now, one can also associate parameters to the created branch. To do so [See “Association Mapping” on page 1602.](#)

### Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the branch from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of Branch page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the branch from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. For example, in the above screen, Enable Account has been enabled for all employees of the “Research And Development” branch.
- Click **Save**.

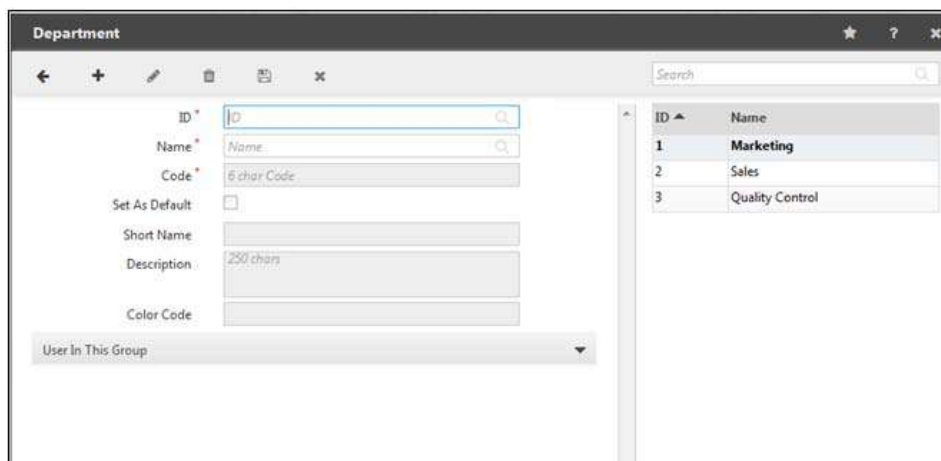

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Department

Department tab enables to create and manage department. It helps to group users in a particular department and assign policies accordingly. You can add 999999 departments.

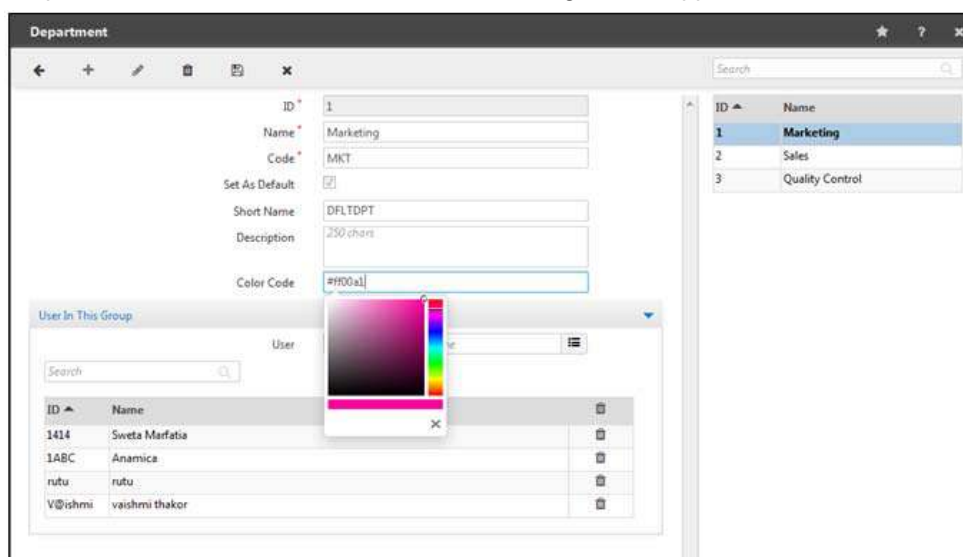

To view Department tab, click **Enterprise Structure > Department** and the following screen appears.

ID	Name
1	Marketing
2	Sales
3	Quality Control

The page displays configurations on the left side and to the right is the grid containing created departments.

To configure a department click the **New** button and the following screen appears.

ID	Name
1	Marketing
2	Sales
3	Quality Control

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the department name to be created. The supported values are: **A -Z, a-z, 0 - 9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " ' < > ?
- **Code:** Enter a 6 character code for the new department. For example, the code for “Marketing” can be “MKT”.

- **Set As Default:** Enable to set the department to be created as the default department.

*Both default department and departments that are already in use cannot be deleted from the system. In case all groups configured on the system are deleted, the system will automatically apply the settings of the default group on the concerned users.*

- **Short Name:** Provide short name for the department to be created.
- **Description:** Enter description for the department. It can be maximum of 250 characters.
- **Color Code** - One can assign a color code to each department using color picklist as shown above.

### User In This Group

This section enables to add users to the department to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

*The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).*

Once a user is deleted from a department, it gets restored to the default group and inherits all configurations assigned to the default group.

- Click **Save** button and the created department gets displayed in the grid on the right hand side.

You can edit or delete the department if required. To do so,

- Click on the desired department from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

*Only those departments can be deleted that are not assigned to any user/worker/visitor.*

Now, one can also associate parameters to the created department. To do so [See “Association Mapping” on page 1606.](#)

## Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the department from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of department page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

ID	Name
1	Marketing
2	Sales
3	Quality Control

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the department from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. in the above screen, Access Validity has been enabled for all employees of the “Marketing” department.
- Click **Save**.

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Designation

Designation tab enables to create and manage designations. It helps to group users in a particular designation and assign policies accordingly. You can add 999999 designations.

To view designation tab, click **Enterprise Structure > Designation** and the following screen appears.

The screenshot shows the 'Designation' management window. On the left, there are input fields for 'ID', 'Name', 'Code' (6 char Code), 'Set As Default' (checkbox), 'Short Name', 'Description' (250 chars), and 'Wage Level' (with sub-fields for ID and Name). At the bottom left is a 'User In This Group' dropdown. On the right, a table lists existing designations:

ID	Name
1	Engineer
2	Team Leader
3	Business Manager

The page displays configurations on the left side and to the right is the grid containing created designations.

To configure a designation click the **New** button and the following screen appears.

This screenshot shows the 'Designation' configuration window with the following details filled in:

- ID: 1
- Name: Engineer
- Code: EG
- Set As Default: ☒
- Short Name: Engineer
- Description: (empty)
- Wage Level: LVL1

Below the configuration fields is a 'User In This Group' section with a search bar and a table of users:

ID	Name
rutu	rutu
V@ishmi	vaishmi thakor

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the designation name to be created. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ], \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a 6 character code for the new designation. For example, the code for "Engineer" can be "EG".

- **Set As Default:** Enable to set the designation to be created as the default designation.

*Both default designation and designations that are already in use cannot be deleted from the system. In case all groups configured on the system are deleted, the system will automatically apply the settings of the default group on the concerned users.*

- **Short Name:** Provide short name for the designation to be created.
- **Description:** Enter description for the designation. It can be maximum of 250 characters.

### User In This Group

This section enables to add users to the designation to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

*The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).*

Once a user is deleted from a designation, it gets restored to the default group and inherits all configurations assigned to the default group.

- Click **Save** and the created designation gets displayed in the grid on the right hand side.

You can edit or delete the designation if required. To do so,

- Click on the desired designation from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

*Only those designations can be deleted that are not assigned to any user/worker/visitor.*

Now, one can also associate parameters to the created designation. To do so [See “Association Mapping” on page 1608.](#)

### Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the designation from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of designation page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the designation from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. in the above screen, Enable Attendance Calculation has been enabled for all employees of the “Engineer” designation.
- Click **Save**.

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Section

Section tab enables to create and manage sections. It helps to group users in a particular section and assign policies accordingly. You can add 999999 sections.

To view Section tab, click **Enterprise Structure > Section** and the following screen appears.

ID	Name
1	SAMAS Writers
2	COSEC Writers

The page displays configurations on the left side and to the right is the grid containing a list of created sections.

To configure a section, click the **New** button and the following screen appears.

ID	Name
1414	Sweta Marfatia
Rosy	Rosy

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the section name to be created. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a 6 character code for the new section. For example, the code for “Engineer” can be “EG”.
- **Set As Default:** Enable to set the section to be created as the default section.

Both default section and sections that are already in use cannot be deleted from the system. In case all groups configured on the system are deleted, the system will automatically apply the settings of the default group on the concerned users.

- **Short Name:** Provide short name for the section to be created.
- **Description:** Enter description for the section. It can be maximum of 250 characters.

### User In This Group

This panel enables to add users to the section to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a section, it gets restored to the default group and inherits all configurations assigned to the default group.

- Click **Save** and the created section gets displayed in the grid on the right hand side.

You can edit or delete the section if required. To do so,

- Click on the desired section from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those sections can be deleted that are not assigned to any user/worker/visitor.

Now, one can also associate parameters to the created section. To do so [See “Association Mapping” on page 1611.](#)

### Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the section from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of section page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the section from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. in the above screen, Enable Attendance Calculation has been enabled for all employees of the “Engineer” section.
- Click **Save**.

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Category

Category tab enables to create and manage categories. It helps to group users in a particular category and assign policies accordingly. You can add 999999 categories.

To view Category tab, click **Enterprise Structure > Category** and the following screen appears.

The screenshot shows the 'Category' configuration window. On the left, there are input fields for 'ID', 'Name', 'Code' (with a '6 char Code' hint), a 'Set As Default' checkbox, 'Short Name', and 'Description' (with a '250 chars' hint). Below these is a 'User In This Group' dropdown. On the right, a table lists existing categories. The table has two columns: 'ID' and 'Name'. It contains one row with '1' in the ID column and 'Category-1' in the Name column.

The page displays configurations on the left side and to the right is the grid containing a list of created categories.

To configure a new category, click the **New** button and the following screen appears.

This screenshot shows the same 'Category' configuration window, but with the 'User In This Group' dropdown menu expanded. The dropdown contains a search bar and a table with two columns: 'ID' and 'Name'. It lists one user: 'Jerry' with ID 'Jerry'. The main configuration fields on the left are now populated with 'COSEC' for Name, Code, Short Name, and Description. The 'Set As Default' checkbox is checked.

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new group defined on the system.
- **Name:** Specify the category name to be created. The supported values are: **A -Z, a-z, 0 - 9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a 6 character code for the new category.
- **Set As Default:** Enable to set the category to be created as the default category.

Both default category and categories that are already in use cannot be deleted from the system. In case all categories configured on the system are deleted, the system will automatically apply the settings of the default category on the concerned users.

- **Short Name:** Provide short name for the category to be created.
- **Description:** Enter description for the category. It can be maximum of 250 characters.

### User In This Group

This panel enables to add users to the category to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a category, it gets restored to the default category and inherits all configurations assigned to the default category.

- Click **Save** and the created category gets displayed in the grid on the right hand side.

You can edit or delete the category if required. To do so,

- Click on the desired category from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those categories can be deleted that are not assigned to any user/worker/visitor.

Now, one can also associate parameters to the created category. To do so [See “Association Mapping” on page 1614.](#)

### Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the category from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of category page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

ID	Name
1	Category-1
2	COSEC

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the category from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. in the above screen, Enable Account has been enabled for all employees of the “COSEC” category.
- Click **Save**.

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Grade

Grade tab enables to create and manage grades. It helps to group users in a particular grade and assign policies accordingly. You can add 999999 grades.

To view Grade tab, click **Enterprise Structure > Grade** and the following screen appears.

ID	Name
1	Grade-1

The page displays configurations on the left side and to the right is the grid containing a list of created grades.

To configure a new grade, click the **New** button and the following screen appears.

ID	Name
Jerry	Jerry
V@ishmi	vaishmi thakor

Provide the following details:

- **ID:** The ID field auto-generates a new ID for every new grade defined on the system.
- **Name:** Specify the grade name to be created. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] , \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a 6 character code for the new grade.
- **Set As Default:** Enable to set the grade to be created as the default grade.

Both default grade and grades that are already in use cannot be deleted from the system. In case all grades configured on the system are deleted, the system will automatically apply the settings of the default grade on the concerned users.

- **Short Name:** Provide short name for the grade to be created.
- **Description:** Enter description for the grade. It can be maximum of 250 characters.

### User In This Group

This panel enables to add users to the grade to be created.

- Select users to be added using the picklist button. The selected users get displayed in the grid as shown above. One can also delete the selected users from the list or search a particular user using the **Search** field.

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a grade, it gets restored to the default grade and inherits all configurations assigned to the default grade.

- Click **Save** and the created grade gets displayed in the grid on the right hand side.

You can edit or delete the grade if required. To do so,

- Click on the desired grade from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those grades can be deleted that are not assigned to any user/worker/visitor.

Now, one can also associate parameters to the created grade. To do so [See “Association Mapping” on page 1617.](#)

### Association Mapping

The parameters under Association Mapping panel are known as Associated parameters as they are linked with the grade from the **Group Associations** page of **Utilities** tab. Only the enabled parameters become available for configuration in the **Association Mapping** panel of grade page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one group from the Group Associations page, then it becomes disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the grade from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. in the above screen, Enable Attendance Calculation has been enabled for all employees of the “Grade 1”.
- Click **Save**.

If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.

If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.

# Custom Group1

Custom Group1 tab enables to create and manage custom group. It helps to group users in a particular custom group and assign policies accordingly. You can add 999999 custom group1.

To view Custom Group tab, click **Enterprise Structure > Custom Group1** and the following screen appears.

ID	Name
1	Custom Group 1
2	Cadre

The page displays configurations on the left side and to the right is the grid containing a list of created custom groups.

To configure a new custom group, click the **New** button and enter the following details:

- **ID:** The ID is auto generated by the system.
- **Name:** Specify the name of the custom group. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ], \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a code of maximum 6 characters for the new custom group.
- **Set As Default:** Enable to set the created custom group as the default group.

*Both default custom group and custom group that are already in use cannot be deleted from the system. In case all custom group configured on the system are deleted, the system will automatically apply the settings of the default custom group on the concerned users.*

- **Short Name:** Enter short name for the custom group to be created.
- **Description:** Enter description for the custom group. It can be maximum of 250 characters.

## User In This Group

This section enables to add users to the custom group.

- Select users to be added using the picklist button. The selected users get displayed in the grid. You can also delete the selected users from the list or search a particular user using the **Search** field.

**Custom Group 1**

ID\* 1

Name\* Custom Group 1

Code\* CG1

Set As Default ☒

Short Name DFLT CG1

Description 250 chars

**User In This Group**

Search

ID	Name	
12	12	
1551	Shalini Fefar	
1690	admin	
555	555	
apta	apta user	
cafe	cafeteria	

Grid on the right:

ID	Name
1	Custom Group 1
2	Cadre

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a custom group, it gets restored to the default custom group and inherits all configurations assigned to the default custom group.

- Click **Save** and the created custom group gets displayed in the grid on the right hand side.

You can edit or delete the custom group if required. To do so,

- Click on the desired custom group from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those custom groups can be deleted that are not assigned to any user/worker/visitor.

Now, you can also associate parameters to the created custom group. To do so See [“Association Mapping”](#) on page 1621.

## Association Mapping

The parameters under Association Mapping section are known as Associated parameters as they are linked with the custom group from the **Utilities > Group Associations**. Once the parameters are enabled, they will be available for configuration in the **Association Mapping** section of Custom Group page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

The screenshot shows the 'Custom Group 1' configuration page. The 'Association Mapping' section is expanded, showing three categories: ESS, Attendance, and Policy. Under ESS, there are three checkboxes: 'Enable Account' (unchecked), 'Edit Basic Details' (unchecked), and 'Punch Marking Via ESS' (unchecked). Under Attendance, there is one checkbox: 'Enable Attendance Calculation' (unchecked). Under Policy, there is a section for 'Attendance Policy' with fields for 'ID' and 'Name'. To the right of the configuration form, there is a table with two columns: 'ID' and 'Name'. The table contains two rows: '1 Custom Group 1' and '2 Cadre'.

ID	Name
1	Custom Group 1
2	Cadre

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one enterprise group from the Group Associations page, then it becomes disabled for other enterprise groups.

Eg: IF ESS> Enable Account is selected for Custom Group1 from Group Association page, then Enable Account will be disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to ["Devices"](#) in ["Configuring Users"](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer ["Default Jobs"](#) under ["Job Costing"](#) and to assign Job Schedulers, refer ["Select Users"](#) under ["Job Scheduler"](#).

If you wish to create Job Schedulers, refer to ["Job Scheduler"](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the custom group from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. In the below screen, Enable Attendance Calculation has been enabled for all users of the "Custom Group 1".

Custom Group 1

ID: 1

Name: Custom Group 1

Code: CG1

**ESS**

Enable Account: ☐

Edit Basic Details: ☐

Punch Marking Via ESS: ☐

**Attendance**

Enable Attendance Calculation: ☒

**Policy**

Attendance Policy: 1

Attendance Policy-1

- Click **Save** to save the settings.

*If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.*

*If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.*

# Custom Group2

Custom Group2 tab enables to create and manage custom group. It helps to group users in a particular custom group and assign policies accordingly. You can add 999999 custom group2.

To view Custom Group tab, click **Enterprise Structure > Custom Group2** and the following screen appears.

ID	Name
1	Custom Group 2

The page displays configurations on the left side and to the right is the grid containing a list of created custom groups.

To configure a new custom group, click the **New** button and enter the following details:

- **ID:** The ID is auto generated by the system.
- **Name:** Specify the name of the custom group. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ], \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a code of maximum 6 characters for the new custom group.
- **Set As Default:** Enable to set the created custom group as the default group.

*Both default custom group and custom group that are already in use cannot be deleted from the system. In case all custom group configured on the system are deleted, the system will automatically apply the settings of the default custom group on the concerned users.*

- **Short Name:** Enter short name for the custom group to be created.
- **Description:** Enter description for the custom group. It can be maximum of 250 characters.

## User In This Group

This section enables to add users to the custom group.

- Select users to be added using the picklist button. The selected users get displayed in the grid. You can also delete the selected users from the list or search a particular user using the **Search** field.

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a custom group, it gets restored to the default custom group and inherits all configurations assigned to the default custom group.

- Click **Save** and the created custom group gets displayed in the grid on the right hand side.

You can edit or delete the custom group if required. To do so,

- Click on the desired custom group from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

Only those custom groups can be deleted that are not assigned to any user/worker/visitor.

Now, you can also associate parameters to the created custom group. To do so See [“Association Mapping”](#) on [page 1625](#).

## Association Mapping

The parameters under Association Mapping section are known as Associated parameters as they are linked with the custom group from the **Utilities > Group Associations**. Once the parameters are enabled, they will be available for configuration in the **Association Mapping** section of Custom Group page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

The screenshot shows the 'Custom Group 2' configuration window. The top section contains fields for ID (1), Name (Custom Group 2), Code (CG2), Set As Default (checked), Short Name (DLTCG2), and Description (250 chars). The 'Association Mapping' section is expanded, showing three sub-sections: 'Attendance' with 'OT/C-Off Eligibility' set to 'None' and 'Authorize C-Off On' with checkboxes for WO, PH, WO/PH, FB, RD, and Normal Day; 'Policy' with 'Overtime Policy' set to 'ID' and 'Name'; and 'Access Details' with 'Shift Based Access' unchecked.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one enterprise group from the Group Associations page, then it becomes disabled for other enterprise groups.

Eg: If Policy > Overtime Policy is selected for Custom Group2 from Group Association page, then Overtime Policy will be disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the custom group from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. In the below screen, Shift Based Access has been enabled for all users of the “Custom Group 2”.

Custom Group 2

ID \* 1

Name \* Custom Group 2

Code \* CG2

Set As Default ☒

Short Name DFLTCG2

Description 250 chars

Association Mapping

**Attendance**

OT/C-OFF Eligibility None

Authorize C-OFF On ☐ WO ☐ PH ☐ WO/PH ☐ FB ☐ RD ☐ Normal Day

**Policy**

Overtime Policy ID Name

**Access Details**

- Click **Save** to save the settings.

*If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.*

*If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.*

# Custom Group3

Custom Group3 tab enables to create and manage custom group. It helps to group users in a particular custom group and assign policies accordingly. You can add 999999 custom group3.

To view Custom Group tab, click **Enterprise Structure > Custom Group3** and the following screen appears.

ID	Name
1	Custom Group 3

The page displays configurations on the left side and to the right is the grid containing a list of created custom groups.

To configure a new custom group, click the **New** button and enter the following details:

- **ID:** The ID is auto generated by the system.
- **Name:** Specify the name of the custom group. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ], \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**. The invalid characters for Multi-language character set are Set3 which includes ` ~ # % ^ \* = + { } | \ : ; " < > ?
- **Code:** Enter a code of maximum 6 characters for the new custom group.
- **Set As Default:** Enable to set the created custom group as the default group.

*Both default custom group and custom group that are already in use cannot be deleted from the system. In case all custom group configured on the system are deleted, the system will automatically apply the settings of the default custom group on the concerned users.*

- **Short Name:** Enter short name for the custom group to be created.
- **Description:** Enter description for the custom group. It can be maximum of 250 characters.

## User In This Group

This section enables to add users to the custom group.

- Select users to be added using the picklist button. The selected users get displayed in the grid. You can also delete the selected users from the list or search a particular user using the **Search** field.

Custom Group 3

ID: 1

Name: Custom Group 3

Code: CG3

Set As Default: ☒

Short Name: DFLTCG3

Description: 250 chars

User In This Group

Search

ID	Name	
12	12	
1551	Shalini Fefar	
1690	admin	
555	555	
apta	apta user	
cafe	cafeteria	
Device1	device1	

Grid on the right:

ID	Name
1	Custom Group 3

The picklist options that appear will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

Once a user is deleted from a custom group, it gets restored to the default custom group and inherits all configurations assigned to the default custom group.

- Click **Save** and the created custom group gets displayed in the grid on the right hand side.

You can edit or delete the custom group if required. To do so,

- Click on the desired custom group from the grid on the right hand side.
- To edit, click **Edit** .
- To delete, click **Delete** .

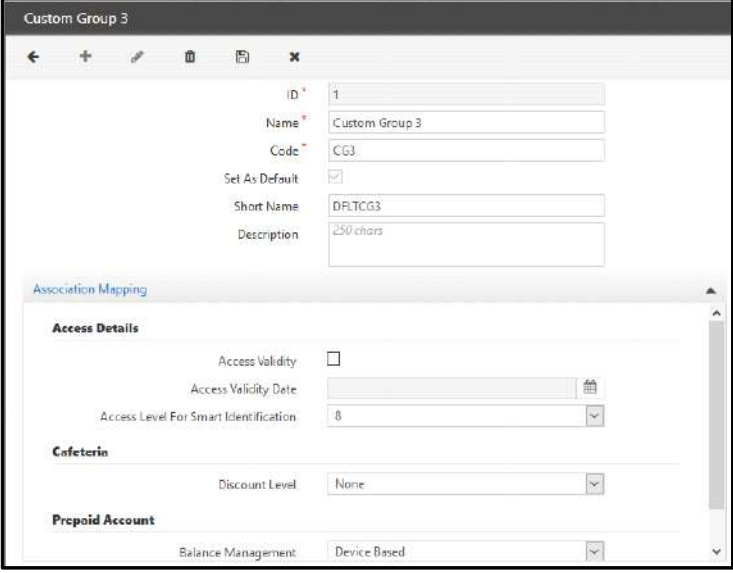

Only those custom groups can be deleted that are not assigned to any user/worker/visitor.

Now, you can also associate parameters to the created custom group. To do so See [“Association Mapping”](#) on page 1629.

## Association Mapping

The parameters under Association Mapping section are known as Associated parameters as they are linked with the custom group from the **Utilities > Group Associations**. Once the parameters are enabled, they will be available for configuration in the **Association Mapping** section of Custom Group page as shown below.

All the parameters configured here are applicable to all the users in the group as well as to the new users to whom the group will be assigned.

The screenshot shows the 'Custom Group 3' configuration window. The top section contains fields for ID (1), Name (Custom Group 3), Code (CG3), Set As Default (checked), Short Name (DRLTCG3), and Description (250 chars). The 'Association Mapping' section is expanded, showing three sub-sections: 'Access Details' with fields for Access Validity (unchecked), Access Validity Date, and Access Level For Smart Identification (8); 'Cafeteria' with a Discount Level dropdown set to 'None'; and 'Prepaid Account' with a Balance Management dropdown set to 'Device Based'.

A single associated parameter can be linked with only one group, i.e. if a parameter is enabled for one enterprise group from the Group Associations page, then it becomes disabled for other enterprise groups.

Eg: IF ESS> Enable Account is selected for Custom Group1 from Group Association page, then Enable Account will be disabled for other enterprise groups.

If you have enabled Access Profile, all the Panels appear in the grid. You can select the check box of the desired Panels and assign the desired Access Profiles to these Panels. The same will be assigned to the users. Make sure the devices/device groups are assigned after the configurations have been done in the Enterprise Group. You can also change the Access Profile Groups manually later if required. Refer to [“Devices”](#) in [“Configuring Users”](#).

If you have enabled Job Costing, you can assign Jobs manually or you can assign Job Schedulers through which Jobs will be assigned when the Scheduler runs. To assign Jobs, refer [“Default Jobs”](#) under [“Job Costing”](#) and to assign Job Schedulers, refer [“Select Users”](#) under [“Job Scheduler”](#).

If you wish to create Job Schedulers, refer to [“Job Scheduler”](#). If a Job Scheduler is assigned to any Enterprise Group Type, then only the Scheduler will be assigned to the users of that group. The Jobs in the Scheduler will be assigned to the users when the Scheduler runs as per its set schedule.

- Select the custom group from the grid to be edited and click **Edit**.
- In the **Association Mapping panel**, configure the associated parameters as required. E.g. In the below screen, Cafeteria- Discount Level1 has been set for all users of the “Custom Group 3”.

- Click **Save** to save the settings.

*If Association Mapping is changed from one Enterprise Group Type to other (eg. From Organization to Branch), all current default jobs records (Assignment End Date  $\geq$  Current Date) will be deleted. Previous default job records (Assignment End Date  $<$  Current Date) will still be retained.*

*If Enterprise Group is deleted then all job assignment records current as well as previous will be deleted.*

# Group Associations

Group Association refers to the process of associating certain system parameters with an enterprise group, such that the configurations of these parameters will apply uniformly to all users within the group. These configurations also apply to the new users when they are added in the group. For example, this function may be used to associate the *Attendance Policy* parameter with the *Designation* group so that different Attendance Policies can be applied to different designations within an organization.

The *Group Associations* feature in COSEC enables the system administrator to determine which parameters should be available for *Association Mapping* for an enterprise group.

To define *Group Associations* for each enterprise group, click **Enterprise Structure module > Utilities > Group Associations** and the following screen appears.

The screenshot shows the 'Group Associations' interface. On the left, under the 'ESS' group, parameters like 'Enable Account', 'Punch Marking Via API', and 'Manual Punch Marking' are listed with checkboxes. Under the 'Attendance' group, parameters like 'Enable Attendance Calculation' and 'Restrict Half Day Considerations' are listed. On the right, the 'Associations' table shows the mapping of these parameters to various groups. The 'Organization' group is associated with the 'ESS' group, and the 'Designation' group is associated with the 'Attendance' group.

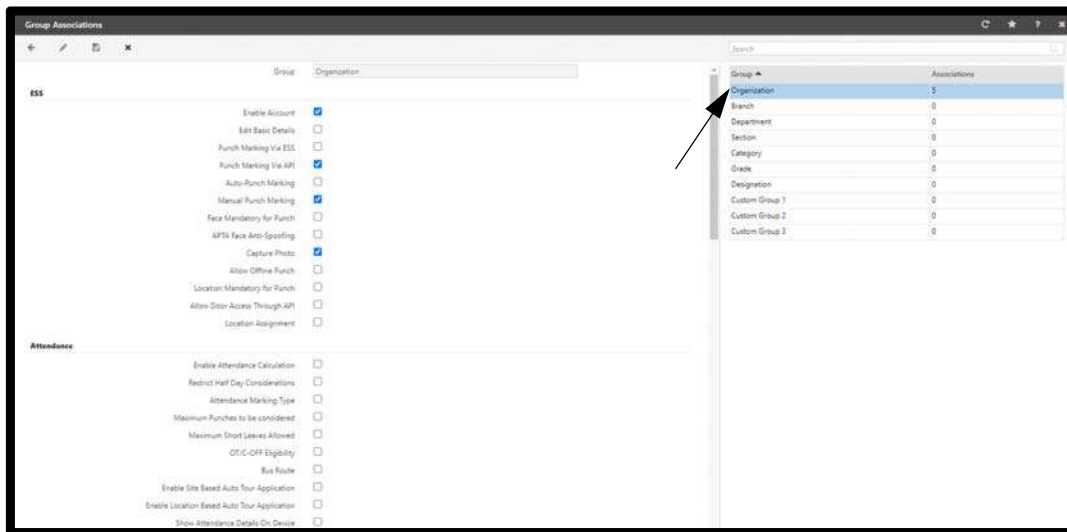

Group	Associations
Organization	ESS
Branch	
Department	
Section	
Category	
Grade	
Designation	
Custom Group 1	
Custom Group 2	
Custom Group 3	

The Group Association can be done for the parameters of **ESS, Attendance, Policy, Access Details, Cafeteria, Prepaid Account, Postpaid Account, Job Costing, Field Visit Management, Face Recognition and Visitor Management.**

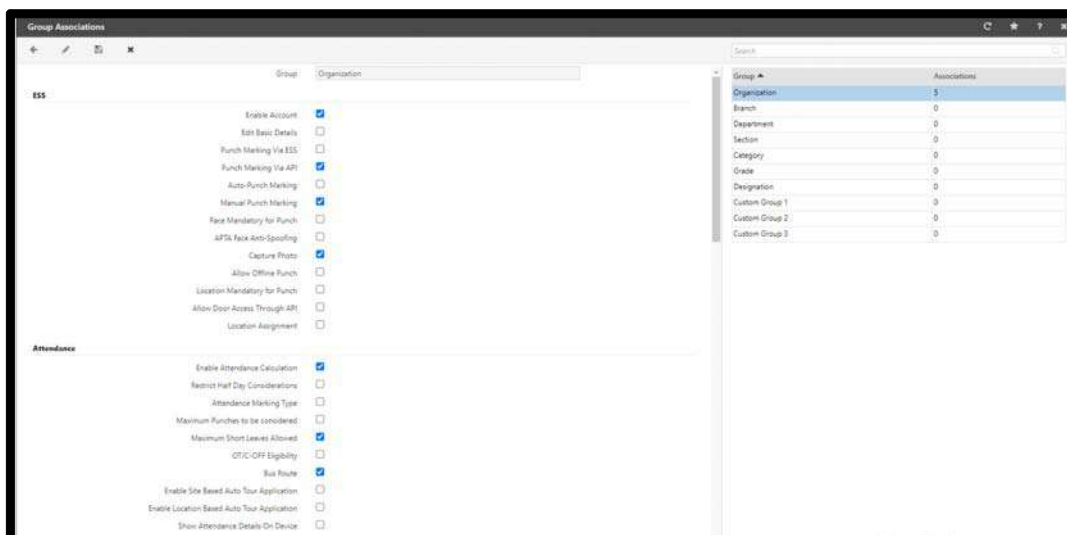

The ESS Assignment check box under Job Costing will not be displayed if the **Show All Jobs while Punching** check box is enabled. For details, refer to [“Job Costing”](#) in [“Defining Global Policies”](#).

1. Select a **Group** from the grid on the right hand side of the page as shown below.

2. Select the appropriate parameter check-boxes which are to be associated with the selected group as shown above.

3. Click **Save** to apply the associations to the selected group. The number of the association will be updated accordingly. These parameters will now appear on the particular group page for **Association Mapping**.

## Example:

Suppose **Group** is selected as **Organization**.

Select **Enable Account**, **Punch Marking via API**, **Manual Punch Marking**, **Capture Photo**, and **Max Short Leaves Allowed** options as shown below:

The screenshot shows the 'Group Associations' window with the 'Organization' tab selected. The 'ESS' section has the following options checked: 'Enable Account', 'Punch Marking Via API', 'Manual Punch Marking', and 'Capture Photo'. The 'Attendance' section has 'Maximum Short Leaves Allowed' checked. The right sidebar shows a list of groups with 'Organization' selected, showing 5 associations.

Group	Associations
Organization	5
Branch	0
Department	0
Section	0
Category	0
Grade	0
Designation	0
Custom Group 1	0
Custom Group 2	0
Custom Group 3	0

Then the Organization tab on Enterprise Structure page will appear as shown below.

**Enable Account**, **Punch Marking via API**, **Manual Punch Marking**, **Capture Photo**, and **Max Short Leaves Allowed** will get associated with "Organization". You can enable the options for the particular organization by selecting it from the list and enabling the options for it.

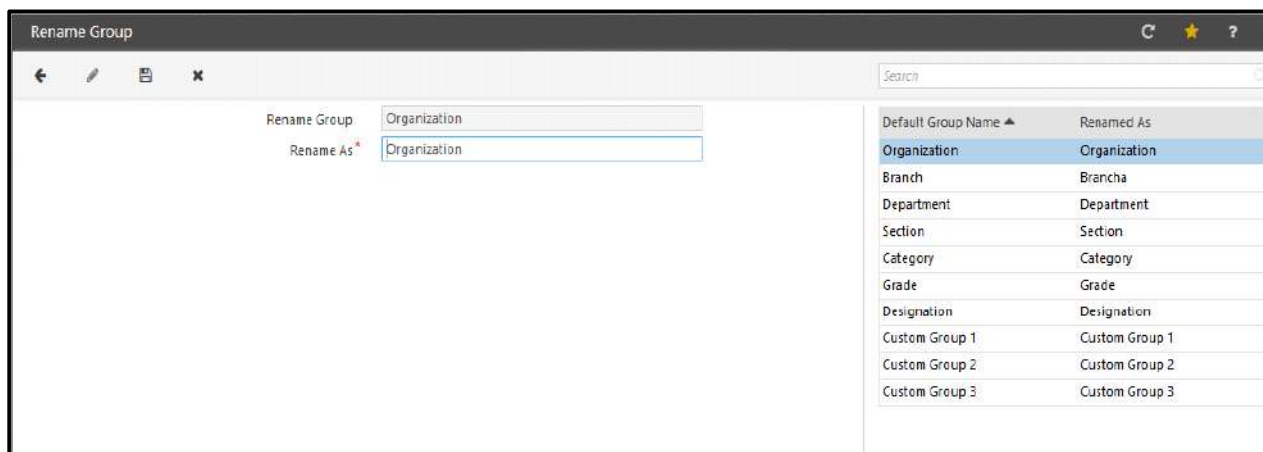

The screenshot shows the 'Organization' window with the 'Organization 1' tab selected. The 'ESS' section has the following options checked: 'Enable Account', 'Punch Marking Via API', 'Manual Punch Marking', and 'Capture Photo'. The 'Attendance' section has 'Maximum Short Leaves Allowed' checked. The right sidebar shows a list of organizations with 'Organization 1' selected, showing 1 association.

Organization	Associations
Organization 1	1

# Renaming Groups

COSEC enables the system administrator to decide how *Enterprise Groups* can be labelled to best represent a business structure. This can be done by renaming the existing groups predefined on the system.

To rename a group, Go to **Enterprise Structure > Utilities > Rename Groups** and the following screen appears.

Default Group Name	Renamed As
Organization	Organization
Branch	Brancha
Department	Department
Section	Section
Category	Category
Grade	Grade
Designation	Designation
Custom Group 1	Custom Group 1
Custom Group 2	Custom Group 2
Custom Group 3	Custom Group 3

Select a Group from the list view that is to be renamed. The selected *Default Group Name* appears in the **Group Name** field.

Enter the new Group Name/label in the **Rename As** field.

Click the **Save** button.

The new Group name/label will appear in the list view under the **Renamed As** column as shown below.

Default Group Name	Renamed As
Organization	Company
Branch	Brancha
Department	Department
Section	Section
Category	Category
Grade	Grade
Designation	Designation
Custom Group 1	Custom Group 1
Custom Group 2	Custom Group 2
Custom Group 3	Custom Group 3

The user can also perform the **Rename Groups** function using the **Admin** module. To know more see [Renaming Group in Admin Module](#).

# Enterprise Group Reports

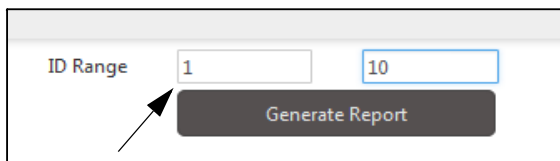

The COSEC user can easily access and generate individual and detailed reports on enterprise groups related to a business. Enterprise Structure reports can be generated using the **Reports** section under the **Enterprise Structure** module. The following reports can be viewed under this section:

- Organization Report
- Branch Report
- Department Report
- Designation Report
- Section Report
- Category Report
- Grade Report
- Custom Group 1
- Custom Group 2
- Custom Group 3

To generate an Enterprise Group report, set the filters as per your requirement.

1. On the respective group page,

- **ID Range:** Enter the start and end IDs. The data for the specified range of IDs will be retrieved for the particular group.

2. Click **Generate Report**.

Follow the same steps as mentioned above for any Enterprise Group.

Sample Reports of each Enterprise Groups are as follow:

Organization

Access Control System can detect and report intrusion, access to sensitive places like warehouse, cash rooms in banks, R&D departments in corporate offices, troubled conditions, any other place, where unauthorized access needs to be monitored.

Access control systems can grant, record, deny, detect and report access to facilities, services, information and other assets that need to be protected from mass access.

In order to start the configuration of the system, the user needs to first define the devices from the **Device** module and then proceed with the configuration of the access control policies from the **Access Control** module.

To use the Access Control functionality,

- Click on **Access Control**  module. The **Access Control** page appears.

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

Picklist For Quick Links Pages

## Select Layout

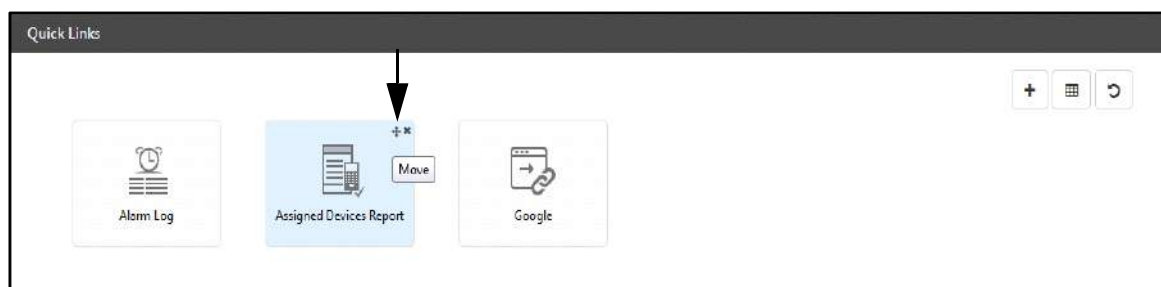

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

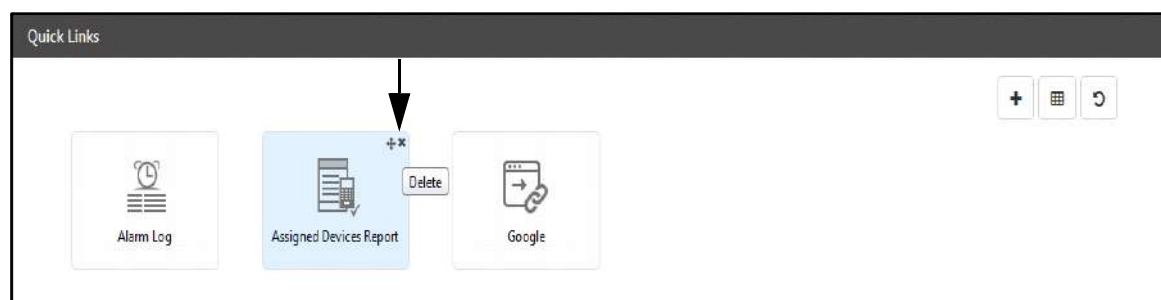

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** as shown below.

*Quick links are displayed as per rights given to System Account and ESS users.*

## Access Control Dashboard

To view the Dashboard, click **Dashboard**  on the **Access Control** page. It displays the total number of violations on the current day for the 2-Person Rule:

For more information on the above Dashboard option, click the respective information link on the Dashboard. The

Latest values on Dashboard are updated on clicking **Refresh**

# Absentee Rule

Absentee Rule feature enables the system to set the maximum number of days for non-usage of a credential (**1-99Days**). On expiration (no credential usage - for the maximum number of days set) the User will be automatically blocked.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

To set the Absentee Rule,

- Click **Access Control > Absentee Rule**. The **Absentee Rule** page appears.

The screenshot shows the 'Absentee Rule' configuration interface. On the left, there is a sidebar with two tabs: 'Device - Wise' (selected) and 'User - Wise'. The main content area for 'Device - Wise' contains a 'Device' field with two sub-inputs: 'ID' and 'Name'. Below these is an 'Enable Rule' checkbox. At the bottom right of the main area is an 'Update Device' button.

The Absentee Rule can be configured in two forms:

- Device-Wise
- User-Wise

## Device-Wise

In Device-Wise Absentee Rule, the rule will be applicable to the door as well as the users assigned to it.

To configure Device-Wise Absentee Rule,

- Click the **Device-Wise** tab.

The screenshot shows the 'Absentee Rule' configuration interface with the 'Device - Wise' tab selected. The 'Device' field is set to '2' and 'PVR Direct Door'. The 'Enable Rule' checkbox is checked. Below the form is a table with columns: 'User ID', 'Name', 'Rule Enabled', 'Days Count', and an edit icon.

User ID	Name	Rule Enabled	Days Count	
07	Aditi	No	60	
1	Shalini	No	60	
101	Khushbu	No	60	
2	Chirag	No	60	

Configure the following parameters:

- **Device:** Select the required device using the **Device**  picklist. A list of all users on the selected device appear in the grid.
- **Enable Rule:** Select the check box to enable the rule on the selected device.
- Click **Update Device** to save the device selection.

The grid displays all the users assigned to the selected device. The following details appear — User ID, Name, Rule Enabled and Days Count. You can edit the rule for a particular user.

- Click **Edit**  corresponding to the user you wish to edit the rule.

Search <input type="text"/>				
User ID ▲	Name	Rule Enabled	Days Count	
07	Aditi	No	60	
1	Shalini	<input checked="" type="checkbox"/>	60	 
101	Khushbu	No	60	
2	Chirag	No	60	

- **Rule Enabled:** Select the check box to enable the rule for the selected user.
- **Days Count:** Specify the absent days count after which the selected user should be blocked.
- Click **OK** to update the details or click **Cancel** to discard.

## User Wise

In User-Wise Absentee Rule, the rule will be applicable to the user as well as the doors assigned to the user.

To configure User-Wise Absentee Rule,

- Click the **User-Wise** tab.

Absentee Rule					
<div> <div>Device - Wise</div> <div>User - Wise</div> </div>					
<div> <div>User <sup>*</sup> 07 Aditi </div> <div>Search <input type="text"/></div> </div>					
Device ID ▲	Name	Rule Active	Rule Applicable	Days Count	
1	Door v3	No	No	60	
2	PVR Direct Door	Yes	No	60	
3	NGT Ground Floor	No	No	60	
4	Vega Direct Door	No	No	60	
5	Wireless Door 1st Floor	Yes	No	60	
6	PVR Door-Device-6	No	No	60	

Configure the following parameters:

- **User:** Select the required user using the **User**  picklist. A list of all devices on the selected user appear in the grid.

The grid displays all the devices assigned to the selected user. The following details appear — Device ID, Name, Rule Active, Rule Applicable and Days Count. You can edit the rule for a particular device.

- Click **Edit**  corresponding to the device you wish to edit the rule.

Search <input type="text"/>					
Device ID ▲	Name	Rule Active	Rule Applicable	Days Count	
1	Door v3	No	No	60	
2	PVR Direct Door	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	60	  
3	NGT Ground Floor	No	No	60	
4	Vega Direct Door	No	No	60	
5	Wireless Door 1st Floor	Yes	No	60	
6	PVR Door-Device-6	No	No	60	

- **Rule Active:** Select the check box to activate the rule for the selected device.
- **Rule Applicable:** Select the check box to enable the rule for the selected device.
- **Days Count:** Specify the absent days count after which the user will be blocked for the selected device.
- Click **OK** to update the details or click **Cancel** to discard.

# Occupancy Control

Occupancy Control feature enables the system to monitor and control the number of users permitted within a secured area or controlled zone. This feature can be useful for high security bank vaults, research organizations where a single person cannot be trusted.

The access to secured zone can be restricted by specifying Maximum and Minimum Occupancy limit for direct door as well as for Panel200 and Zones.

Occupancy Control functionality requires **Entry** and **Exit** readers on the controlled area.

This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.

- 1.If Dead Man and Occupancy Control feature both are enabled then Occupancy Control feature will not work.
- 2.If Duress feature is enabled then user will be allowed directly. Occupancy Control feature will not be checked.
3. SI user will be restricted to enter the Occupancy Control enabled Zone.

To set the Occupancy Control,

- Click **Access Control > Occupancy Control**. The **Occupancy Control** page appears.

ID	Name
2	NGT Direct Door-Device-2
3	Panel Lite V2
4	Panel Lite
4	Wireless Door
5	Door V3
5	Door FMX
8	ARC as Direct Door
9	Path as direct door
10	Vega as Direct Door

The grid on the right hand side of the page shows the list of the devices configured with Advance Access Control System.

Configure the following parameters:

- **Device:** Select the required device using the **Device**  picklist.
- **Enable Rule:** Select the check box to enable the rule on the selected device.
- Click **Update Device** to enable the rule on the device.

Once you update the device, you can configure the following parameters:

- **Zone:** Select the Zone on which you want to enable the rule.

*This parameter is applicable only when the selected device is Panel/Panel Lite/Panel200.*

- **Enable Rule on Zone:** Select the check box to enable the rule on the Zone.

*This parameter is applicable only when the selected device is Panel/Panel Lite/Panel200.*

- **Occupants Limit:** Specify the value for Occupants Limit to control the number of persons in a secured area. Maximum Occupancy Limit can vary from **1 to 999** users for any direct door. If the user count exceeds the maximum limit and a VIP user accesses the door then access will be granted.
- Click on **Update Zone** to save the changes.

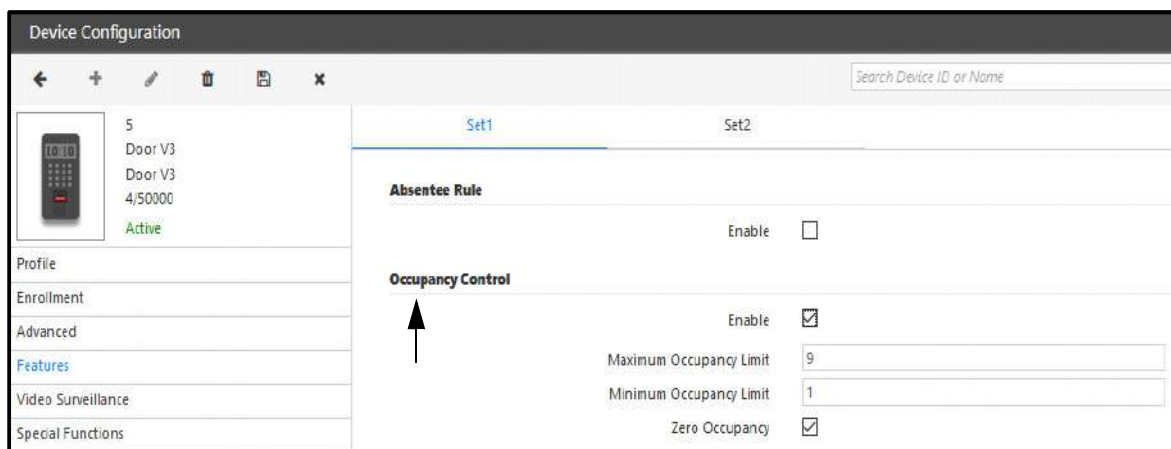

## For Direct Doors

The occupancy count should be affected on each entry (made through entry reader) and on each exit (made through exit reader). Occupancy control is verified even if the First-in-User or 2-Person Rule is enabled.

*Occupancy count shall be stored in RAM and on reboot, this value will be reset to zero.*

You can configure **Minimum Occupancy Limit** and **Zero Occupancy** in Direct doors from **Device Configuration > Features**.

Device Configuration	
 <p>5 Door V3 Door V3 4/50000 Active</p>	<div>Set1 Set2</div> <div><b>Absentee Rule</b> Enable <input type="checkbox"/></div> <div><b>Occupancy Control</b> Enable <input checked="" type="checkbox"/> Maximum Occupancy Limit 9 Minimum Occupancy Limit 1 Zero Occupancy <input checked="" type="checkbox"/></div>

- **Maximum Occupancy Limit:** It is the maximum number of users that can be present in the zone/area at a time. For example: If Maximum Occupancy Limit is set as 9, 10th individual will not be allowed to enter the zone. Users are allowed to enter until the Maximum Occupancy Limit is reached.

- **Minimum Occupancy Limit:** It is the minimum number of users that need to be present in the zone/area at a time. For example: If Minimum Occupancy Limit is set as 2, a single user is not allowed to enter. At least 2 users must enter together. After that, individual users can enter till the Maximum Occupancy Limit is reached.

When 1st user punches on the door, the device will wait for the 2nd user to punch. If second user does not come before the time out duration, the first user will not be allowed to enter.

- **Zero Occupancy:** Enable this check box if the zone is allowed to be empty or have zero occupancy which will be checked when user exists from the zone.

**Case1:** If Minimum Occupancy Limit is set as 2 and Zero Occupancy is enabled;

- If there are only 2 users left in the zone, so both users can exit the zone together leaving the zone vacant. But, users cannot exit one after another.

**Case2:** If Minimum Occupancy Limit is set as 2 and Zero Occupancy is disabled;

- If there are only 2 users left in the zone and as the zone cannot be empty; so the 2 users cannot exit from the zone maintaining the minimum limit.

- When a single user tries to exit from the door, he/she will not be allowed as occupancy of 1 is not allowed. So, both users must punch to exit which will satisfy zero occupancy.
- The Maximum Occupancy Limit will be violated if more than 5 occupants try to access the door, however VIP user will be granted access.

## For Panel Doors

The Occupancy Control rule for Panel Doors can be configured by enabling the rule for Panel200 and the specific Zones. Once the rule is updated on Zone, it is applicable to all the doors of the respective zones.

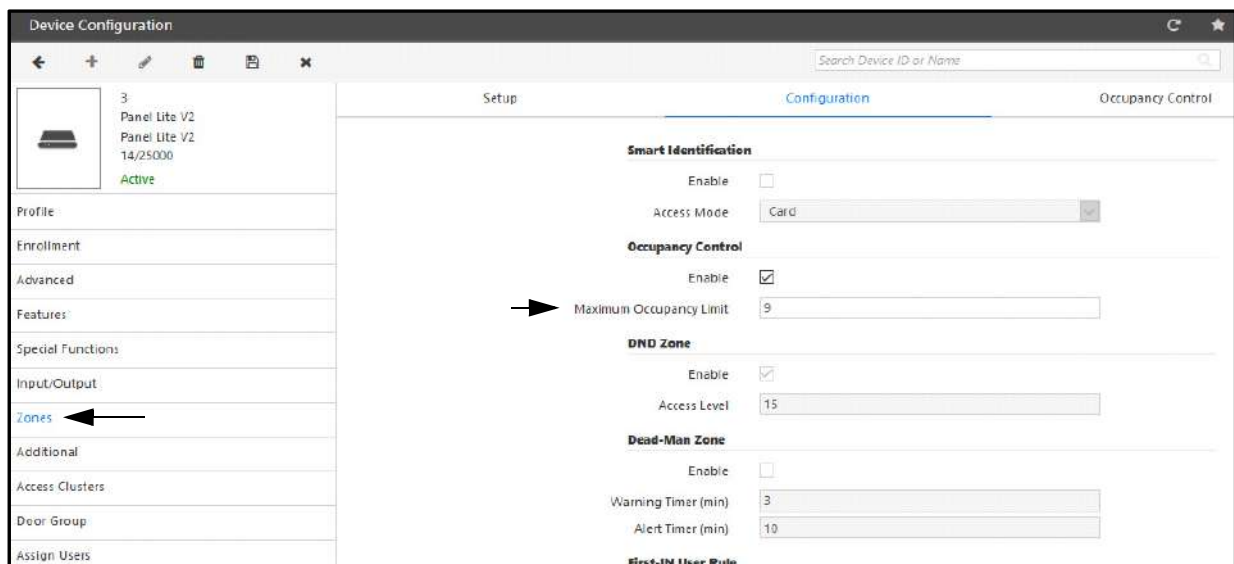

In Panel200, the **Maximum Occupancy Limit** is the Default Occupancy Limit.

When you create new zones of Panel200, the Maximum Occupancy Limit for that zone will be set to the default value as set in the Panel200. If the Default Occupancy Limit for Panel200 is 9, so all the newly created zones will have the default value as 9.

You can change the Maximum Occupancy Limit for the specific zone from

- **Panel200 > Zones > Configuration> Occupancy Control**  
OR
- **Access Control > Occupancy Control**

## For Single Zone

Consider the following example to understand the functioning of Occupancy Control feature for a single zone.

- The Occupancy Control is enabled on Zone-2 of Panel200 and the Maximum Occupants is configured as 2.

**Access Control**

**Occupancy Control** ✓ Saved Successfully

Device: 3 Panel Lite V2

Enable Rule: ☒

Update Device

Zone: Zone-2

Enable Rule On Zone: ☒

Occupants Limit: 2

Update Zone

## For Multiple Zones

Occupancy Control can be applied on each zone separately or occupancy of one zone (**Monitor zone**) can be monitored to control access into another zone (**Control zone**). To know about the detailed configuration, refer to ["Occupancy Control"](#).

Consider the following examples to understand the functioning of Occupancy Control for multiple zones.

### Example1:

Let there be two zones,

- Zone 1 - Control Zone - Door V3
- Zone 2 - Monitor Zone - PVR door

Initially occupancy of both the zones is empty.

Access Mode of both zones is **Entry**.

**Action** is selected as **Alarm** and Alarm Timer is 0 seconds.

**Condition** is avoid occupancy equal to 2

In this case, the first user will be allowed to access the monitor zone. When the second user tries to access the monitor zone, he/she will be allowed access but the occupancy rule will be violated. The occupancy violated Alarm will be generated when a user tries to access the control zone.

The screenshot shows the 'Device Configuration' window with the 'Occupancy Control' tab selected. The left sidebar lists various configuration options, with 'Zones' highlighted. The main area is divided into 'Setup' and 'Configuration' sections. The 'Configuration' section shows the following settings:

- Control Zone:** 1, Zone-1
- Access Mode:** Entry
- Action:** Alarm
- Alarm Timer (Sec):** 0
- Monitor Zone-1:** 2, Zone-2
- Avoid Occupancy:** Equal To, 2
- Monitor Zone-2:** ID, Name
- Avoid Occupancy:** Equal To, 0 - 999
- Check Conditions For:** Any One Zone

At the bottom, there is a table with the following data:

Control Zone	Action	Monitor Zone-1	Monitor Zone-2
Zone-1	Alarm	Zone-2	

### Example2:

Let there be two zones,

- Zone 1 - Control Zone - Door V3
- Zone 2 - Monitor Zone - PVR door

Initially occupancy of both the zones is **zero**.

Access Mode of both zones is **Exit**.

**Action** is selected as **Restrict**.

**Condition** is avoid occupancy greater than 1

In this case, the first user will be allowed to access the monitor zone. When the second user tries to access the monitor zone, he/she will be allowed access but the occupancy rule will be violated. When a user tries to access the control zone, he/she will be restricted access due to the violation of occupancy in monitor zone.

### Example 3:

Let there be two zones,

- Zone 1 - Control Zone - Door V3
- Zone 2 - Monitor Zone - PVR door

Occupancy of both zones is 4. User 1 to User 4 are in Monitor Zone while User 5 to User 8 are in Control Zone. Out of all the users, User 4 and User 8 are VIP Users.

Access Mode of both zones is **Exit**. The **Access Control on Exit Mode** check box is enabled for both the zones. **Action** is selected as **Restrict**. **Condition** is avoid occupancy less than 3.

Control Zone	Action	Monitor Zone-1	Monitor Zone-2
Zone-1	Restrict	Zone-2	

- In this case, Exit of User 1 from monitor zone is allowed. Exit of User 2 (Normal User) or User 4 (VIP User) from monitor zone will be allowed but it will violate the occupancy.
- When the User 5 tries to exit the control zone, access will be denied to him/her. But at the same time, if User 8 (VIP User) tries to exit from the control zone, access will be allowed to him/her as shown below.

The IN- OUT punches are stored in memory of Panel200. Re-booting the Panel/Panel Doors will not reset the Occupancy Count to zero.

If there are entry punches in a zone so zone will be occupied. There must be exit punch from the reader or from door in Exit mode to decrease the occupancy from the zone.

### Example 5:

Consider the above example 4 with change in Action as Alarm.

**Action** is selected as **Alarm** with Alarm Timer as 2 seconds. This will activate the alarm after 2 seconds of user access in control zone when the occupancy is violated in monitor zone.

The screenshot shows the 'Device Configuration' window with the 'Occupancy Control' tab selected. The 'Control Zone' is set to '1' (Zone-1) and the 'Access Mode' is 'Entry'. The 'Action' is set to 'Alarm' and the 'Alarm Timer (Sec)' is set to '2'. The 'Monitor Zone-1' is set to '2' (Zone-2). The 'Avoid Occupancy' is set to 'Equal To' and the 'Monitor Zone-2' is set to 'ID' and 'Name'. The 'Check Conditions For' is set to 'Any One Zone'. The 'Update' and 'Cancel' buttons are visible at the bottom.

Control Zone	Action	Monitor Zone-1	Monitor Zone-2
Zone-1	Restrict	Zone-2	

- In this case, when User 1 and User 2 punch on PVR door, they will be allowed access.
- But, when User 3 punches on Door V3 then he/she will be allowed access. But after 2 seconds, alarm will be generated as shown below.

- Cancel

For occupancy violation Alarm to generate, you must enable Alarms from both Panel200 and Panel door.

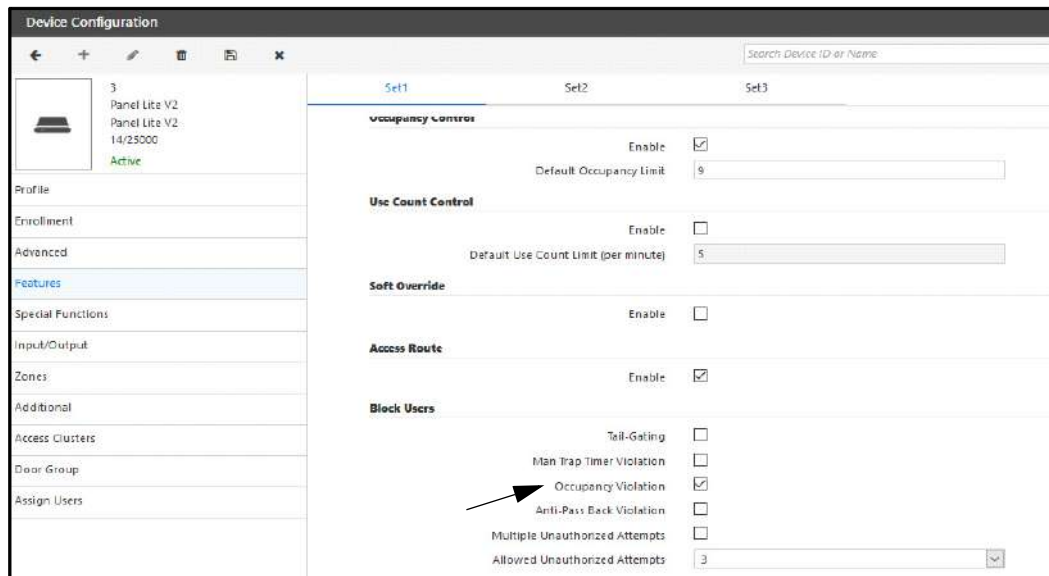

- Panel200> Advanced> Alarms> Occupancy Violated
- Panel door (in Control zone i.e. Door V3 here) > Advanced > Settings> Alarm

If you want to block the user who is violating occupancy rule, then enable the Occupancy Violation check-box for Block Users in Panel200> Features> Set1 as shown below.

This will block the user and you will have to restore back the user from Block Users page.

#### Example 6:

Let there be 3 zones of Panel200:

- Zone 1 - Control Zone - Door V3
- Zone 2 - Monitor Zone1- PVR Door
- Zone-3- Monitor Zone 2- Door V3-115

Initially occupancy of all the zones is empty. Access Mode of all zones is Entry. (Configure Access Mode from Panel doors> Reader section.)

**Access mode** is selected as Entry. This is the access mode of user in control zone (Zone-1) for which the Action (Alarm/ Restrict) is to be taken.

**Action** is selected as Alarm and Alarm Timer is set as 2 seconds. This will activate the alarm after 2 seconds of user access in control zone when the occupancy is violated in monitor zone.

**Condition** for Monitor Zone 1 condition is Avoid Occupancy equal to 2. For Monitor Zone 2 condition is Avoid occupancy greater than 1.

If **Check Conditions For** is selected as

- **Any One Zone** then occupancy Condition will be checked for any one zone. If occupancy is violated in either of the monitor zone then Alarm will be generated after the duration of Alarm Timer when the user punches in Control zone.
- If **Both Zones** is selected then occupancy Condition will be checked for both the zones. The alarm will be generated in control zone if occupancy is violated in both the monitor zones.

**Device Configuration**

Search Device ID or Name

Setup Configuration Occupancy Control

Control Zone: 1 Zone-1

Access Mode: Entry

Action: Alarm

Alarm Timer (Sec): 2

Monitor Zone-1: 2 Zone-2

Avoid Occupancy: Equal To 2

Monitor Zone-2: 3 Zone-3

Avoid Occupancy: Greater Than 1

Check Conditions For: Any One Zone

Update Cancel

Control Zone	Action	Monitor Zone-1	Monitor Zone-2
Zone-1	Alarm	Zone-2	Zone-3

- When User 1 punches on Door V3-115 (Zone-3), he/she will be allowed access. When User 2 punches on Door V3-115 (Zone-3), he/she will be also be access allowed. But this is violating Occupancy >1.
- Now when User 3 punches on Door V3 (Zone-1) then he/she will be allowed access but after 2 seconds alarm will be generated as shown below.

Similarly if Action is Restrict; then User 3 will be denied access on Door V3.

If Check Conditions For is Both Zones, then occupancy in PVR door will also be monitored.

# Use Count Control

Use Count Control feature enables the system to set the maximum number of times an authorized user can use his/her credential in order to enter/exit a controlled area within a minute, after which the credentials are blocked.

**For example:** If the Use Count per minute is set as 5, a valid user can access the door, that is, can mark the punch for entry/exit only 5 times in a minute. If the user punches for 6th time in a minute, his/her credentials will be blocked. The user will need to restore the credentials before using them again.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

To set the Use Count Control,

- Click **Access Control > Use Count Control**. The **Use Count Control** page appears.

ID	Name
2	NGT Direct Door-Device-2
3	Panel Lite V2
4	Panel Lite
4	Wireless Door
5	Door V3
6	Door FMX
8	ARC as Direct Door
9	Peth as direct door
10	Vega as Direct Door
12	PVR Door-Device-12

The grid on the right hand side of the page displays the list of the devices configured with Advance Access Control System.

Configure the following parameters:

- **Device:** Select the required device using the **Device**  picklist.
- **Enable Rule:** Select the check box to enable the rule on the selected device.
- **Use Count per Minute:** Specify the number of counts (entry /exit) allowed per minute.
- Click **Update Device** to enable the rule on the device.

## Example of Use Count Control for Direct Door

Consider the following scenario where a NGT Direct Door is enabled for Use Count Control with Use Count per minute as 3.

**Use Count Control** ✓ Saved Successfully

# Dead Man Zone

Dead Man Zone feature enables the system to track the safety and security of a user while performing a task in a risky environment. The user is expected to come out of the zone at predefined intervals (Dead Man time period) to show his/her card/credential.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

To set the Dead Man Zone,

- Click **Access Control > Dead Man Zone**. The **Dead Man Zone** page appears.

ID	Name
3	Panel Lite V2
4	Panel Lite

The grid on the right hand side of the page displays the list of the Panel devices configured with Advance Access Control System.

Configure the following parameters:

- **Device:** Select the required device using the **Device**  picklist.
- **Enable Rule:** Select the check box to enable the rule on the selected device.
- Click **Update Device** to enable the rule on the device.

Once you update the device, you can configure the following parameters:

- **Zone:** Select the Zone on which you want to enable the rule.
- **Enable Rule on Zone:** Select the check box to enable the rule on the zone.
- **Warning Timer (Min):** Specify the Dead Man Time/Warning Time within which any user inside the zone must show the credentials.
- **Alert Timer (Min):** Specify the time for which a user is allowed to stay in the Dead Man Zone.

*Dead Man Alarm is generated when the person working in restricted environment does not come out of the Dead Man Zone within a pre-defined Warning time i.e. when the presence of user is not marked.*

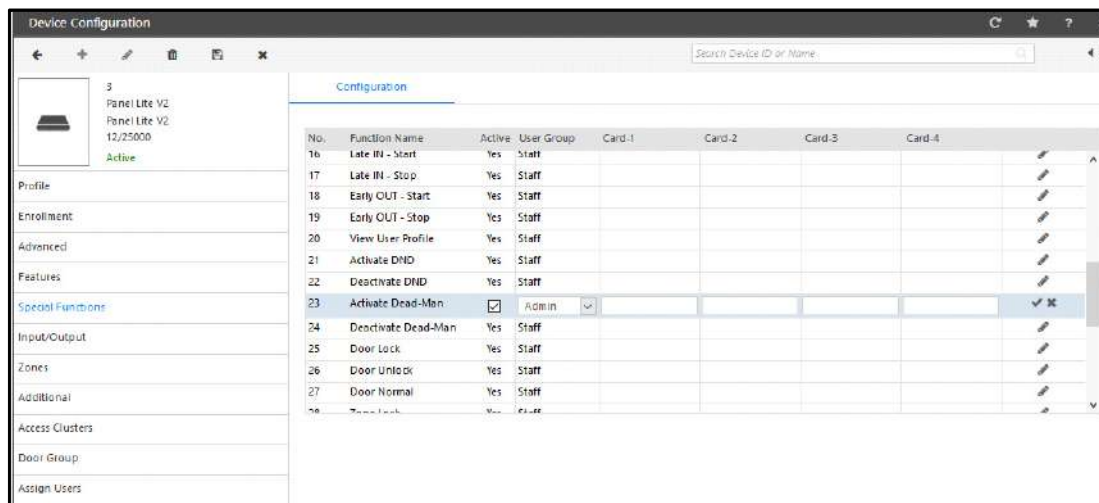

- Click on **Update Zone** to save the changes.

When any user enters into the zone, the Warning timer and the Alert timer start. If the user punches on Exit Reader at regular interval within the Zone, then after each punch the Warning Timer will reset. If the user fails to punch on the Exit Reader of the Dead Man Zone within the Warning time, the Alarm will be generated.

For a Panel device, the Dead Man Zone can be activated when you select **Activate Dead-Man** from **Device module > Device Configuration (Panel200/Panel/Panel Lite) > Special Functions**.

Create a users group (For example: Admin). Users belonging to Admin functional group can activate this feature using the card enrolled for this feature. You can enroll special function card from Users> Credential Management> Enrollment> Special Card.

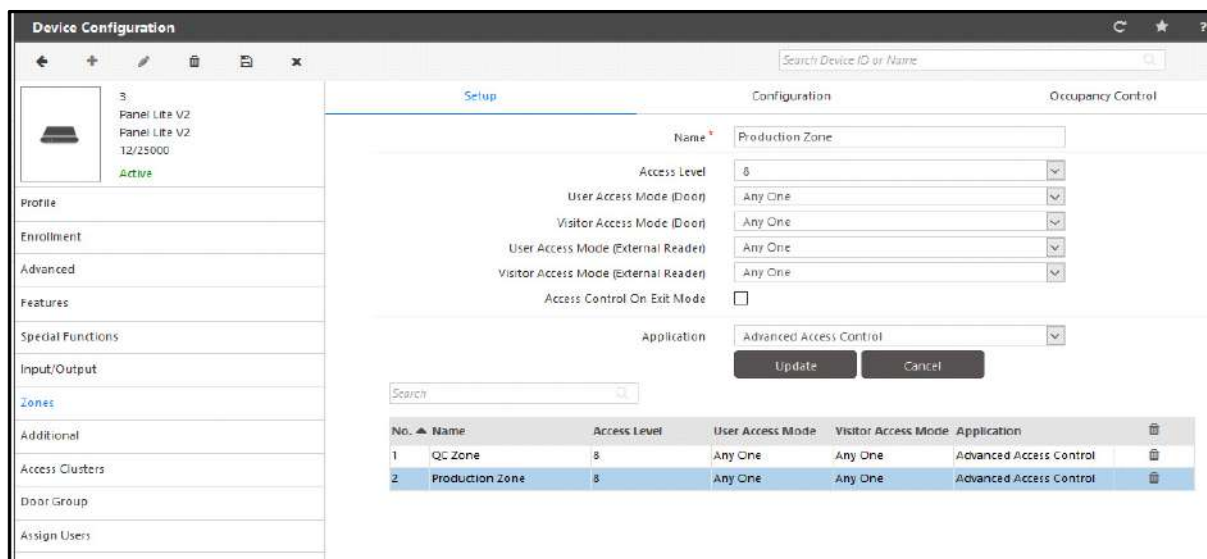

No.	Function Name	Active	User Group	Card-1	Card-2	Card-3	Card-4
16	Late IN - Start	Yes	Staff				
17	Late IN - Stop	Yes	Staff

22	Deactivate DND	Yes	Staff				
23	Activate Dead-Man	<input checked="" type="checkbox"/>	Admin				
24	Deactivate Dead-Man	Yes	Staff				
25	Door Lock	Yes	Staff				
26	Door Unlock	Yes	Staff				
27	Door Normal	Yes	Staff				

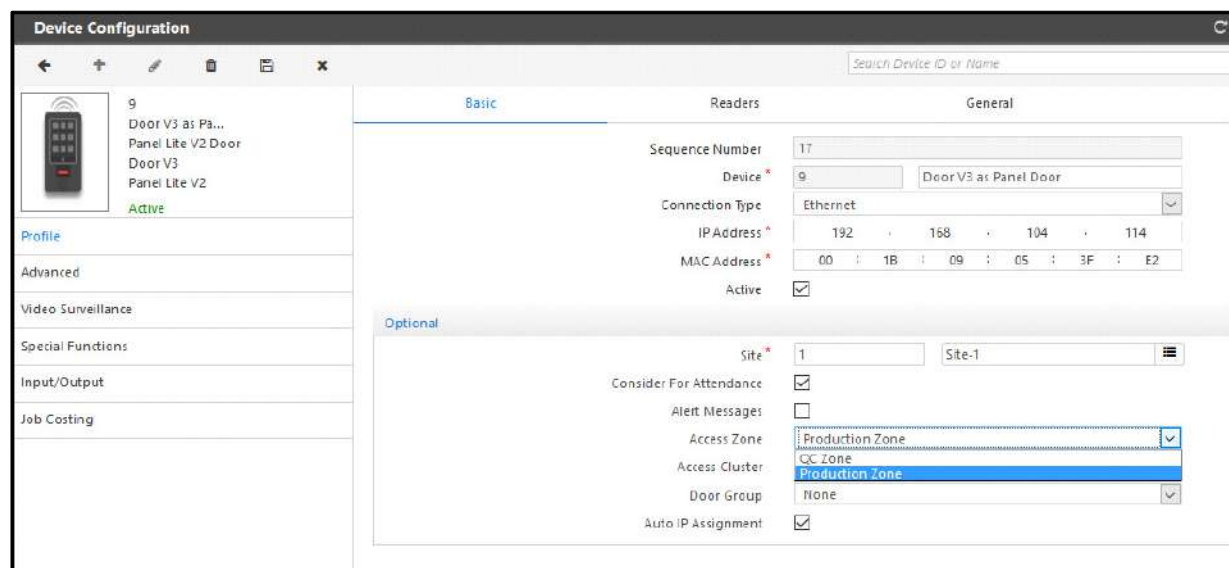

### Example of Dead Man Zone - Panel device.

Consider the following scenario where a Panel200 has a Door V3 connected to it. Dead Man Zone is enabled for the Panel200.

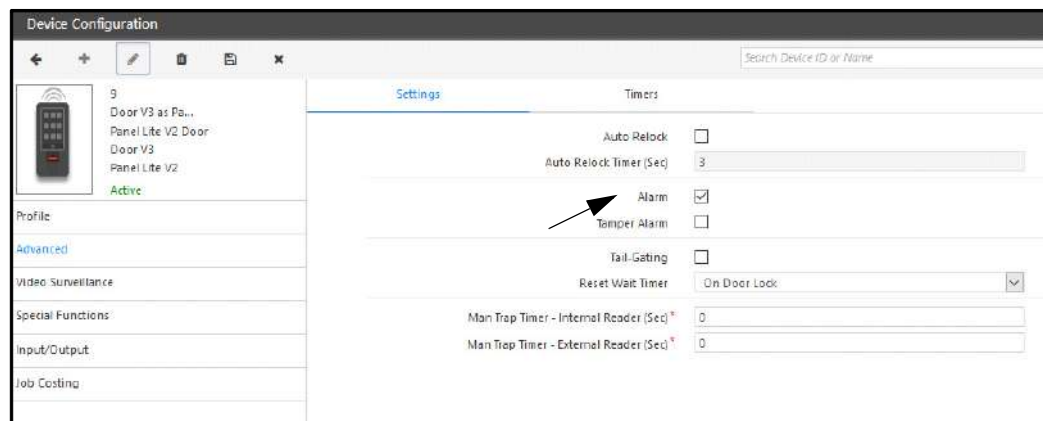

The Dead Man Zone is activated for Production Zone on the Panel.

Now the Access Zone for Panel Door, that is Door V3 must be set as Production zone as shown below.

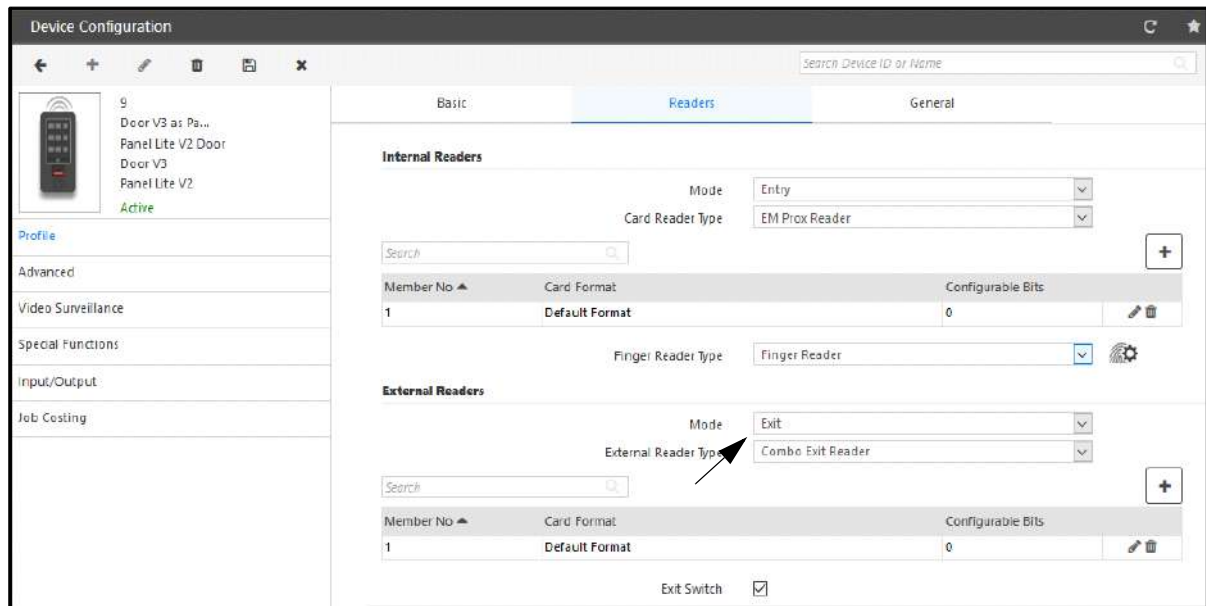

You must activate the Alarm for the Door V3.

Connect an Exit Reader (For example: COSEC PATH RDFE) to the Reader port of Door V3 and set the mode and reader type in External Readers section of Door V3.

Then click Menu> Zone Settings> Dead Man Zone from the display of door and activate Dead Man Zone feature. Then show your ID on door, that is punch on the door. This will activate the Dead Man feature.

Now once the feature is activated; when the user goes inside the Dead Man Zone by punching on the entry door then the timer will start. This will monitor the user in the Dead Man Zone. He/She must show his/her presence by punching on the exit door (reader) within the Warning Timer.

*When you enroll credential of a user through Entry door (say V3 door) then credentials will automatically sync to the exit reader (Path reader) as well. If you have enrolled finger before and you are connecting PATH reader later; then you will have to enroll the finger template again.*

*If the timer value in Access Control> Dead Man Zone and Device Configuration (Panel200)> Features are different then the timer duration specified in Access Control > Dead Man Zone will be considered.*

The events will be displayed in the Monitor as below.

# Do Not Disturb

DND feature allows the user to declare that a particular zone is not to be accessed by other users for a specific period of time thereby ensuring that the users inside the zone are not disturbed by others.

 This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.

To set Do Not Disturb,

- Click **Access Control > Do Not Disturb**. The **Do Not Disturb** page appears.

A screenshot of the 'Do Not Disturb' configuration page. The page has a dark header with the title 'Do Not Disturb'. Below the header, there are two main sections. The first section is for 'Device' configuration, with fields for 'ID' and 'Name', an 'Enable Rule' checkbox, and an 'Update Device' button. The second section is for 'Zone' configuration, with a 'Zone' dropdown menu, an 'Enable Rule On Zone' checkbox, an 'Access Level' dropdown menu, and an 'Update Zone' button. On the right side of the page, there is a table with two columns: 'ID' and 'Name'. The table contains two rows: one with ID '1' and Name 'Panel Lite V2-Device-1', and another with ID '21' and Name 'panel lite v2 default'.

The grid on the page shows the list of the Panel200 configured with Access Control System.

The user can select any Panel200 from the list. Click on the Panel200 from the list. The selection will be reflected in the **Device** field. Also the Device picklist is given to search and select the device from a list of devices.

Click on **Enable Rule**.

Then Click on **Update Device**. The DND rule will be updated on device.

**Zone:** Click on the Zone dropdown button and select the Zone of the Panel200 where the DND rule is to be configured.

**Enable Rule on Zone:** Check the box to enable this Rule on Zone. The Rule is enabled on the zone only after the device is updated for the rule.

**Access Level:** Select the Access level for DND Zone within a range of 1-15. DND access Level must be higher than the zone access level so that the unwanted users are restricted to access the DND zone.  
For example: If DND Zone access level - 5 and User access level - 4; then user is not allowed to enter in DND zone.

VIP users are not affected by the Do Not Disturb zone i.e. they will be allowed to access the door even if DND is enabled.

Click on **Update Zone**. The Do Not Disturb Rule will be activated.

The DND can be activated using a special card i.e. Special function **21** on Panel lite or it can be activated on the door using Active DND special function.

## Configuration of DND feature

Create a Zone of Pane Lite V2 where the DND rule is to be configured. For example: QC Zone

Now the Panel door (say Door V3) where the DND rule is to be activated must be assigned the QC Zone.

**Device Configuration**

Search Device ID or Name

**Basic** | Readers | General

Sequence Number: 17

Device: 9 | Door V3 as Panel Door

Connection Type: Ethernet

IP Address: 192 . 168 . 104 . 114

MAC Address: 00 : 1B : 09 : 05 : 3F : E2

Active: ☒

**Optional**

Site: 1 | Site-1

Consider For Attendance: ☒

Alert Messages: ☐

Access Zone: QC Zone

Access Cluster: QC Zone

Door Group: None

Auto IP Assignment: ☒

Now enable the DND rule from Access Control on Panel200 and QC Zone. Ensure that the access level of zone is higher than the access level of user.

**Do Not Disturb** | Saved Successfully

Device: 3 | Panel Lite V2

Enable Rule: ☒

Update Device

Zone: QC Zone

Enable Rule On Zone: ☒

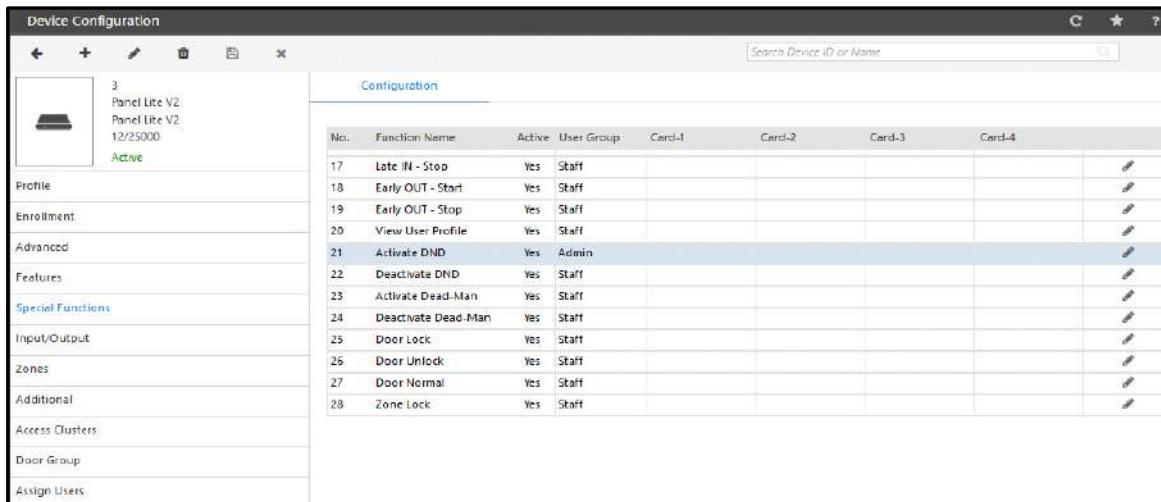

Access Level: 15

Update Zone

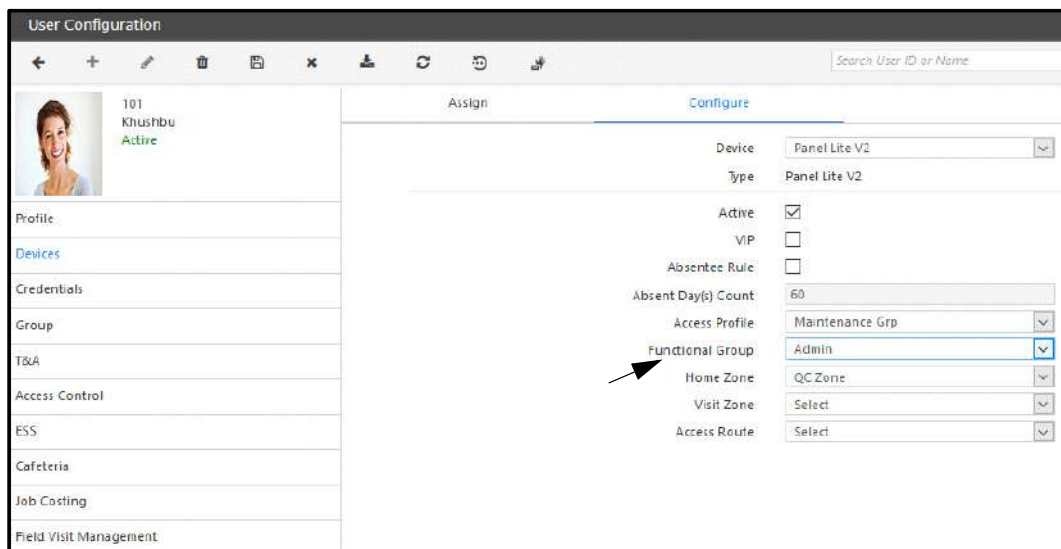

ID	Name
3	Panel Lite V2
4	Panel Lite

If you want to allow the special function to be activated by specific user group then select that user group for the particular special function.

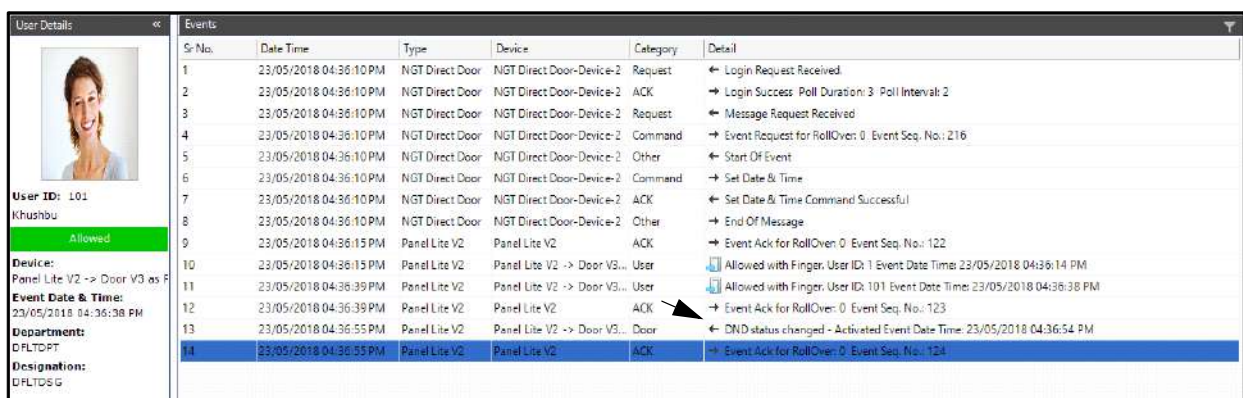

For example: The Special function Activate DND can be activated by the Admin user group as configured below. Similarly Deactivate DND function can be set on the door by Staff user group.

Now the user 101 is assigned functional group Admin for Panel200 as shown below. So this user can activate DND on Door V3.

When the particular area is to be set as Do Not Disturb, then go to Menu> Zone Settings> Do Not Disturb> Activate from the display of door. Then show your ID on door i.e. punch on the door. This will activate Do Not Disturb feature. The DND activated event will be shown on Monitor as below.

Now when any user punches on door; then he/she will be denied access as it is DND enabled zone.

The DND feature can be deactivated by the user belonging to the user group which is set for this special function. Here Staff group is set for Deactivate DND. So go to Menu> Zone Settings> Do Not Disturb> Deactivate from the display of door. Then show your ID on door i.e. punch on the door. This will deactivate Do Not Disturb feature.

# Man Trap

Man Trap, interlock or airlock systems provide safety, security and environmental control between two or more rooms by ensuring that opening any door causes all other doors to lock until the opened door returns to the closed position.

In this feature, Man Trap timer is provided which is the timer for which door needs to wait for the other door to get closed in the same zone where the mantrap feature is enabled. The system then waits for the defined timer period and then ignores the status of that door if it continues to be in the abnormal state.

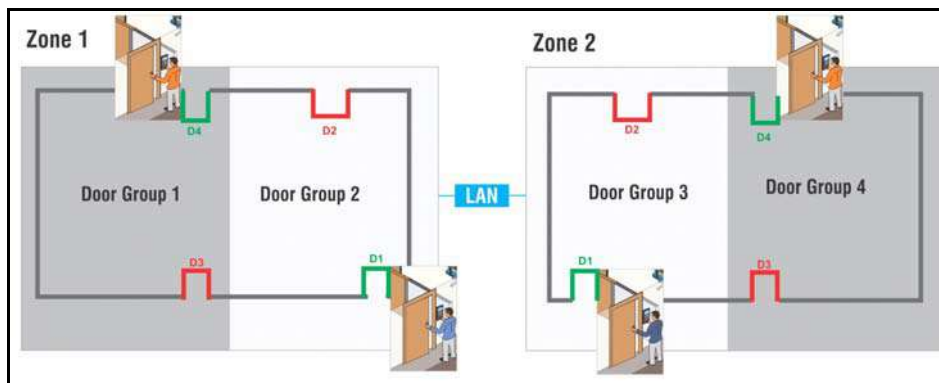

## Man Trap-Zone Based

Second Door opens only after the first Door gets closed completely of that particular Zone.

## Man Trap-Door Based

Second Door opens only after the first Door gets closed completely of that particular Door Group.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

- 1. Door sense is must for this feature as the system will ignore the door status either in the absence of a door sense or its fault state.*
- 2. This feature is not supported when the Panel Doors are in degraded mode (standalone mode).*

To use the Man Trap feature, click **Access Control > Man Trap**. The page appears as shown below:

Man Trap

Device \* 9 Panel Lite V2-Device-9

Enable Rule ☒

Man Trap Wait Timer (Sec) \* 5

Functioning Zone Based

Update Device

Zone \* Zone-1

Enable Rule On Zone ☐

Enable Strict Man Trap ☐ ⓘ

Update Zone

ID ▲	Name
1	RnD Panel lite V2
9	Panel Lite V2-Device-9

The grid on the page shows the list of the Panel lite configured with Access Control System.

The user can select any Panel lite from the list. The selection will be reflected in the **Device** field.

**Enable Rule:** Select the check box to enable Man trap rule on the selected Panel lite.

**Man Trap Wait Timer:** Specify the Man Trap Wait Timer (sec) for which the door needs to wait for the other door to get closed in the same zone where the Man Trap feature is enabled. By default the value of the Man Trap timer is 5 seconds and valid range is from **3 sec to 99 sec**.

**Functioning:** Select the Man Trap functioning from the option of **Zone based** and **Door Group based**.

Then Click on **Update Device**. The device will be updated as shown below:

Man Trap

Device \* 9 Panel Lite V2-Device-9

Enable Rule ☒

Man Trap Wait Timer (Sec) \* 5

Functioning Zone Based

Update Device

Zone \* HO zone

Enable Rule On Zone ☒

Enable Strict Man Trap ☒ ⓘ

Update Zone

ID ▲	Name
1	RnD Panel lite V2
9	Panel Lite V2-Device-9

**Zone:** If Zone based functioning is selected then select the Zone from the configured Zones of panel lite to be monitored for security.

**Enable Rule on Zone:** Select the check box to enable this rule on Zone.

**Enable Strict Man Trap:** Select the check box to enable Strict Man Trap. By this the Man Trap process will not use the wait timer to open the next door. Instead it will indefinitely wait for one door to close before the second door can open.

Click on **Update Zone**. The Man Trap Rule will be activated on Zone.

**Door Group:** If Door Group functioning is selected then select the Door Group on which Man Trap feature is to be implemented.

The screenshot shows the 'Man Trap' configuration window. On the left, there are input fields for 'Device' (set to 9), 'Enable Rule' (checked), 'Man Trap Wait Timer (Sec)' (set to 5), and 'Functioning' (set to 'Door Group Based'). Below these are fields for 'Door Group' (set to 'RandD Group'), 'Enable Rule On Door Group' (checked), and 'Enable Strict Man Trap' (unchecked). 'Update Device' and 'Update Group' buttons are at the bottom. On the right, a table lists devices:

ID	Name
1	RnD Panel lite V2
9	Panel Lite V2-Device-9

**Enable Rule on Door Group:** Select the check box to enable this Rule on Door Group.

**Enable Strict Man Trap:** Select the check box to enable Strict Man Trap. By this the Man Trap process will not use the wait timer to open the next door. Instead it will indefinitely wait for one door to close before the second door can open.

Click on **Update Group**. The Man Trap Rule will be activated on Door Group.

### Configuration of Man Trap- Zone based

Let us configure Man Trap on Panel200 for Zone Based on Production Zone. Enable the rule for Panel200 and for Production zone as shown below.

The screenshot shows the 'Man Trap' configuration window with a green success banner at the top that says 'Saved Successfully'. The configuration is now for a zone-based setup. The 'Device' field is set to 3, 'Enable Rule' is checked, 'Man Trap Wait Timer (Sec)' is set to 20, and 'Functioning' is set to 'Zone Based'. The 'Zone' field is set to 'Production Zone', 'Enable Rule On Zone' is checked, and 'Enable Strict Man Trap' is unchecked. 'Update Device' and 'Update Zone' buttons are at the bottom. On the right, a table lists zones:

ID	Name
3	Panel Lite V2
4	Panel Lite

Now the Production zone has 2 doors i.e. Door V3 and PVR door. Both doors are assigned Production Zone from door profile as shown below.

The Door Sense for the doors must be configured as shown below. You can select sense type as Normally Open or Normally Closed.

## Man Trap Only

When user1 punches on Door V3, door opens. If pulse time is elapsed before closing the door then “Door held open too long” alarm is generated. Now if door still remains open till abnormal wait timer elapse then “Door abnormal” alarm will be generated.

*When Alarm is disabled for Door V3 then alarms “Door Held Open too long” and “Door abnormal” will not be generated and displayed in Monitor.*

Now If **Man Trap Wait timer** is **20 sec**; then PVR door waits for 20 sec for Door V3 to close. If Strict Man Trap is enabled then PVR door wont check for the 20 sec time; it will only wait for Door V3 to close.

If Door V3 is open and user2 punches on PVR door then he will be asked to wait displaying the message on door as another door is open.

When 20 sec is over or Door V3 gets closed then user2 is access allowed on PVR door.

Suppose the Pulse time for Door V3 is set as 14sec. The Door Abnormal Wait Timer is set as 15sec.

Suppose user1 access Door V3 at 11:50:41 hrs. Then after 14 seconds i.e. at 11:59:56 Door Held open too long alarm is generated. The door is still open so after 15 sec; Door Abnormal alarm is generated. Now after 20 sec i.e. at 12:00:31 user 2 will be allowed access on PVR door.

The events on Monitor is shown below.

Alarm Reissue Wait Timer(min)	<input type="text" value="5"/>		
Man Trap Alarm Wait Timer	<input checked="" type="checkbox"/>		

The Panel doors must be enabled with Alarm. And enter the duration in seconds for Man Trap Timer- Internal Reader and Man Trap Timer- External Reader as shown below.

**Door V3- 20 sec** for Internal reader and **30 sec** for External reader

**PVR Door - 25 sec** for Internal reader and **35 sec** for External reader

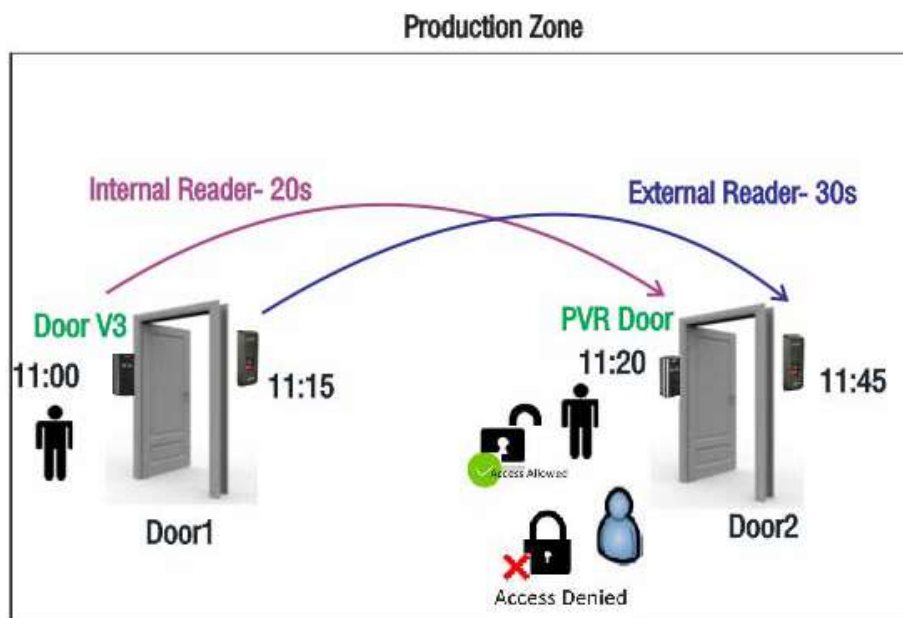

When user punches on internal reader of a door (say Door V3). Then he is expected to punch on internal reader of any other door (say here PVR door) of same zone within 20 seconds (Man Trap timer- Internal reader of Door V3).

- Until the same user punches on any internal reader in the same zone, no other user will be allowed to any other internal reader in the same zone.

When user punches on external reader of a door then he is expected to punch on external reader of any other door (say here PVR door) of same zone within 30 seconds (Man Trap timer- External reader of Door V3).

- Until the same user punches on any external reader in the same zone, no other user will be allowed to any other external reader in the same zone. This will work if Access Control on Exit mode is enabled for the zone. If this check-box is disabled then other user also can access the external reader of (say PVR door).

If user punches on PVR first; then Man Trap timer- Internal and External of PVR door will be considered.

# VIP Access

VIP Access feature allows the admin to give VIP access to a specific user on the particular door for security purposes.

To use the VIP Access feature, click **Access Control > VIP Access**. The page appears as shown below:

VIP Access

Device - Wise

User - Wise

Device \* ID Name

There are two modes to configure this rule:

- Device-wise configuration
- User-wise configuration

## Device- Wise

To assign VIP Access Rule Device-wise, select Device-wise option. The following page appears.

The user can select the **Device** from the picklist where the Rule is to be configured. Click on the button and select the Device from the picklist.

The List of the assigned Users on the selected device will be listed in the grid as shown below.

User ID ▲	Name	Rule Enabled
1687	Aditi Gupta	No
JCP2	Suresh	No
jcp3	Tina	No
sunny	sunny	No
user1	user1	No

To assign the VIP Access Rule to one or more person on the selected device, click the edit button for that user. Now select the **Rule Enabled** check box and click **OK** to save the changes as shown below.

User ID ▲	Name	Rule Enabled
1687	Aditi Gupta	<input checked="" type="checkbox"/>
JCP2	Suresh	No
jcp3	Tina	No
sunny	sunny	No
user1	user1	No

OK

## User- Wise

To Assign VIP Access Rule User-wise, select User-wise option. The following page appears.

The admin can select the user for whom the Rule is to be configured. Click the picklist button and select the User.

Device ID	Name	Rule Enabled
1	Panel Lite V2-Device-1	No
10	NGT Direct Door-Device-10	No
32	Door V3-Device-32	No
33	PVR Door-Device-33	No
34	NGT Direct Door-Device-34	Yes

The List of all the devices assigned to the selected user will be listed in the grid.

To assign the VIP Access Rule on one or more devices for the selected user, click the edit button for the device.

Now select the **Rule Enabled** check box and click **OK** to save the changes as shown below.

Device ID	Name	Rule Enabled
1	Panel Lite V2-Device-1	No
10	NGT Direct Door-Device-10	No
32	Door V3-Device-32	<input checked="" type="checkbox"/>
33	PVR Door-Device-33	No
34	NGT Direct Door-Device-34	Yes

# Visitor Escort

This rule requires all Visitors to be accompanied by an escort and the display of the visitor's credential has to be followed by the credential of the Escort within the stipulated time period. Check this box to enable this feature at the system level.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

To use the Visitor Escort Rule, click **Access Control > Visitor Escort**. The page appears as shown below:

ID	Name
4	Panel Lite V2

The grid on the page shows the list of the Panel configured with Access Control System.

The user can select any Panel from the list. Click on the Panel from the grid. The selection will be reflected in the **Device** field.

**Enable Rule:** Check the box to enable the rule.

Then Click on **Update Device**. The device will be updated as shown below:

ID	Name
4	Panel Lite V2

**Zone:** Click on the Zone dropdown button and select the Zone to be monitored for security from the configured Zones of the selected panel.

**Enable Rule on Zone:** Select the check box to enable this Rule on Zone.

Click on **Update Zone**. The Visitor Escort Rule will be activated.

# Anti-Pass Back

The Anti-Pass Back or APB feature is used to ensure that users pass through the entry reader followed by the exit reader before their ID will be accepted a second time at the designated entry reader. It prevents a card holder from passing back his/her card to other person to gain entry into an access controlled area.

**Hard APB** restricts the entry/exit of a person in case of an APB violation while **Soft APB** does not restrict the person from re-entering/ leaving on an APB Violation but reports the same and maintains a log.

*In degraded mode, APB will not be verified.*

*The configuration of Anti-pass back feature as done from Access Control >Anti-Pass Back will be updated on Device Configuration (Panel lite)> Zones (respective zones)*

*For Direct doors, Anti-Pass Back must be configured from **Device Module > Device Configuration> Features** option.*

To use the Anti-Pass Back feature, click **Access Control >Anti-Pass Back**. The page appears as shown below:

ID	Name
1	Panel lite V2

The grid on the right side shows the list of the Panel lite configured with Access Control System.

The user can select any Panel lite from the grid on which Anti-Pass Back Rule is to be configured.

**Enable Rule:** Select the check box to enable the rule for the selected Panel lite.

Then Click on **Update Device** to update the rule on the panel lite. The device will be updated as shown below and the Zone section will get enabled.

**Zone:** Click on the Zone dropdown button and select the Zone to be monitored for security from the configured Zones of the selected panel.

**On Entry:** Check this box so that the system monitors the entry reader for APB violation. Select the options from Local or Global from the drop down list.

- **Local:** In the event of the Local APB, the system applies the Anti-Pass Back rule at the Zone level. [See "Local" on page 1696.](#)
- **Global:** In the event of the Global APB, the system applies the rule across all zones at the Panel Lite level. [See "Global" on page 1697.](#)

**On Exit:** Check this box also so that the system monitors the entry as well as the exit readers for APB violations.

Eg: If Anti Pass back in exit mode is configured for the internal port then the system shall display 'Access Allowed', 'Entry Was Not Registered' for Soft Anti-Pass Back and for Hard Anti-Pass Back display 'Access Denied, Entry Not Recorded'.

**Restriction Type:** Select the restriction type as Hard or Soft option from the drop down options.

- **Hard APB:** The access will be denied if the exit is not registered first. It does not allow a second entry using the same card without an exit. [See "Configuration of APB- Hard" on page 1693.](#)

- **Soft APB:** The access will be granted even if the exit is not registered. It allows a second entry of the same user without an exit; however, an event and a warning are generated that indicates the second entry. See [“Configuration of APB- Soft” on page 1695](#).

**Forgiveness:** Check this box to enable the system to reset the APB status. When forgiveness is enabled, then there will be following options to reset the pass.

1. **Reset After Day Change:** This will reset the APB status of all the users to NULL at midnight. This enables a user, who left the building in the evening without exit punch, to use his card for entry in the next morning.
  2. **Reset After Timer Expiry:** This will reset the APB status of all the users after the expiry of user defined time.
- **Forgiveness Timer (Mins):** Enter the time duration in minutes after which Anti-Pass Back status will get reset and the pass will be in original state.

Click on **Update Zone**. The Anti-Pass Back Rule will be updated.

The screenshot shows the 'Anti-Pass Back' configuration window. At the top, a green banner indicates 'Saved Successfully'. The interface is divided into two main sections: configuration settings on the left and a table of devices on the right.

**Configuration Settings:**

- Device:** 1 (selected), Panel lite V2 (device name)
- Enable Rule:** ☒
- Update Device:** Button
- Zone:** RnD Zone (selected)
- On Entry:** ☒ Local
- On Exit:** ☒ Local
- Hard/Soft:** Soft
- Forgiveness:** ☒
- Reset After:** ☐ Day Change ☒ Timer Expiry
- Forgiveness Timer (Mins):** 5
- Update Zone:** Button

**Table of Devices:**

ID	Name
1	Panel lite V2

## Configuration of APB- Hard

Create the zone of Panel200. Then select that zone (say Production zone) where the APB feature is to be activated.

The screenshot shows the 'Anti-Pass Back' configuration window. On the left, there are fields for 'Device' (set to 3), 'Enable Rule' (checked), and 'Zone' (set to 'Production Zone'). Below these are options for 'On Entry' (Local), 'On Exit' (Local), 'Hard/Soft' (Hard), 'Forgiveness' (checked), and 'Reset After' (Timer Expiry). A 'Forgiveness Timer (Mins)' field is set to 60. On the right, a table lists devices: ID 3 'Panel Lite V2' and ID 4 'Panel Lite'. An arrow points to the 'Zone' dropdown menu.

Now the door in the zone where APB violation is to be monitored must be assigned the Access Zone as Production Zone. The Door V3 is assigned Production zone as shown below.

The screenshot shows the 'Device Configuration' window for 'Door V3 as Panel Door'. The 'Basic' tab is active, showing fields for 'Sequence Number' (17), 'Device' (9), 'Connection Type' (Ethernet), 'IP Address' (192.168.104.114), and 'MAC Address' (00:1B:09:05:3F:E2). The 'Optional' tab is also visible, showing 'Site' (1), 'Consider For Attendance' (checked), 'Alert Messages' (unchecked), 'Access Zone' (Production Zone), 'Access Cluster' (Cluster-1), 'Door Group' (None), and 'Auto IP Assignment' (checked). An arrow points to the 'Access Zone' dropdown menu.

For APB feature, you must have Exit reader. So here PATH RDFE is connected to Door V3 as exit reader. And the Mode in External Reader is selected as Exit and Reader type is selected as Combo Exit Reader.

## Local

Local configuration can be used when specific zones of panel lite is to be restricted. When “Local” is selected “On Entry” then APB is monitored zone wise. So here both the zone (Production and QC zone) must be selected and configured for APB.

The image displays two side-by-side screenshots of the 'Panel Lite V2' configuration interface. Both screenshots show the 'Device' set to '3' and 'Panel Lite V2'. The 'Enable Rule' checkbox is checked. The 'Update Device' button is visible. In the left screenshot, the 'Zone' dropdown is set to 'Production Zone', and both 'On Entry' and 'On Exit' are set to 'Local'. In the right screenshot, the 'Zone' dropdown is set to 'QC Zone', and both 'On Entry' and 'On Exit' are also set to 'Local'. Both screenshots show 'Hard/Soft' set to 'Soft', 'Forgiveness' checked, and 'Reset After' set to 'Timer Expiry' with a 'Forgiveness Timer (Mins)' of 60. Arrows point to the 'Zone' dropdown in both screenshots.

Suppose **Door V3** is in- **Production zone** and **PVR Door** is in- **QC zone** of Panel200.

- When user1 enters Production zone through Door V3 then he will be access allowed. Then his exit punch is required from production zone i.e. exit reader of Door V3.
- Without exit punch from production zone; If the same card is used to punch on PVR door (entry punch) of QC zone then he will be allowed access because both the doors are in different zone and APB is monitored zone wise.
- But without exit punch from production zone; If the same card is used to punch on Door V3 i.e. production zone; then APB will be violated. And access will be allowed if Soft APB is configured else access will be denied if Hard APB is configured.

## Global

Global configuration can be used when all zones of panel lite are to be restricted. When “Global” is configured “On Entry” then APB is monitored Panel Lite wise.

Suppose **Door V3** is in- **Production zone** and **PVR Door** is in- **QC zone** of Panel200.

- When user1 enters Production zone through Door V3 then he will be access allowed. Then his exit punch from production zone is must; only then he can access another zone of same panel lite.
- Without exit punch from production zone; If the same card is used to punch on PVR door (entry punch) of QC zone then he will be denied access.

# Guard Tour

Guard Tour functionality enables the system to monitor the movements of the security guards within the facility premises during the specified time periods. It is specially required to provide security during the non working hours. This is achieved by defining a series of check points or door controllers where the guard has to show the configured credential within a given amount of time. The check points can be sequenced (they must be activated in a specified order) or they can be unsequenced (they can be activated in any order).

A maximum of **99** Guard Tours and **99** member devices per Guard Tour can be configured in the system. Devices can also be repeated in the member list. The guard tour configuration is maintained at the system level and is not sent to the devices.

To use the Guard Tour feature, click **Access Control > Guard Tour**. The page appears as shown below:

The screenshot shows the 'Guard Tour' configuration page. It has a top toolbar with icons for back, add, edit, delete, and search. Below the toolbar, there are input fields for 'Guard Tour' ID and Name, an 'Active' checkbox, and three time input fields for 'Start Time', 'Tour Duration (Hrs)', and 'Single Tour Time (Hrs)'. There is also an 'Enable Sequence' checkbox. Below these, there is a 'Guard' dropdown menu. At the bottom, there is a 'Configured Tour Path' section with a 'Device' dropdown menu. On the right side, there is a table with columns 'ID' and 'Name', and it currently displays 'No Data'.

To Add a Guard Tour, Click on **Add** button.

**Name:** Specify a unique and descriptive Guard Tour Name.

**Active:** Check the box to activate the Guard tour.

**Start Time:** Specify the **Start Time** in **HH:MM** format for the Guard Tour when the guard will start the tour.

**Tour Duration:** Specify the **Tour Duration** in **HH:MM** format for the Guard Tour. It defines the time period within which a particular number of tour cycles should be completed.

**Single Tour Time:** Specify the time period within which the guard has to complete a single tour. Specify the single tour time in hh:mm format.

- **Example:** If Tour duration for a guard tour is 6:00 hours, start tour time is 00:00 and single tour time is 00:30 hours. And the devices defined for the tour are 4. Then the guard has to start the tour from 00:00 and have to cover all the four check points(4 devices) within 30 minutes. This tour cycle will continue for 6 hours i.e. the duration of the tour.

**Enable Sequence:** Select the check box to sequence the checkpoints of the Guard Tour.

In case of the sequenced option the Guard has to go to the devices in the sequence as mentioned in the member list in the grid below.

**Guard:** Select the user whose credentials will be used for the Guard Tour from the User Master picklist window.

### Configured Tour Path

Now user needs to define the Member devices which would be part of the Guard Tour being defined.

Under Configured Tour Path, select the desired Member Devices. To do so,

Click the **Device** picklist. The **Select Device** pop-up appears.

Click **OK**.

The selected devices appears in the grid.

Configured Tour Path				
Device * <input type="text" value="ID"/> <input type="text" value="Name"/>				
Seq.	Device ID ▲	Name	Up/Down	
1	94	RnD1 GF TRIPOD RIGHT IN	▼	🗑
2	102	RnD2 3rd Floor PVR	▲▼	🗑
3	103	RnD2 2nd Floor PVR	▲▼	🗑
4	104	RnD2 4th Floor PVR	▲	🗑

You can change the sequence of the devices using the up/down arrows or can delete the desired device/s by clicking the **Delete**  icon of the respective device.

Click on **Save** button to add the Tour to the list in the right grid. The **ID** will be automatically generated.

*User needs to ensure that the door controllers are added in the sequence which the Guard needs to cover in the tour (required only if the **Sequence** box is checked).*

# Access Route

The Access Route functionality enables the administrator to define an access policy which allows the user to access only specified doors (applicable to Panel200 and Panel doors) with specified levels in predefined route, sequenced or unsequenced.

The COSEC system has the capability to define up to maximum **255** routes and **255** doors on a single route.

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** and **User Module > User Configuration > Devices > Configure**.*

To use the Access Route feature, click **Access Control > Access Route**. The page appears as shown below:

**Panel:** Select the Panel from the picklist on which the Access Route feature is to be configured.

Click **New** button from the toolbar to configure the route.

**Access Route:** Specify a unique and descriptive name for the route. The Access Route ID is auto-generated and cannot be edited by the user.

**Active:** Select the check box to activate the Access Route.

**Sequence Route:** The Access Route can be sequenced or unsequenced. Select the check box if you require the configured route to be Sequenced.

In sequenced route the system checks the route based on the levels defined. For e.g. the user has to swipe the credential on a Level 1 door and then go to Level 2, Level 3 and so on. In this case the order needs to be maintained for both the "IN" as well as the "OUT" punches. Therefore it is necessary to have exit readers installed on all the doors of the Access Route.

**Restrictions:** Select the Restriction option from the drop down list as per the site requirements. This functionality can operate in two modes:

- **Hard:** Access will be allowed only if the Access Route is followed.
- **Soft:** Access will be allowed on any door on the Access Route with an Access Route violation message.

**Reset On Start Level:** Select the check box to enable the system to reset the current level status to allow access on the lowest level.

This option is useful in the event of the user not following the proper order while exiting the premises. If this functionality is enabled then the user will be allowed access on the lowest level irrespective of his/her state but this will happen only on entry side.

**Check on Last Exit Level:** Select the check box, if you want the system to check the Lowest Route Level Door accessed by the User during exit.

If enabled, then the system will check whether any violation has occurred during Access Route Cycle (i.e. from Entry to Exit).

If any violation has not occurred during the Cycle, then the User will be allowed to access the Lowest Level door. If any violation has occurred during the Cycle, then the system will allow/deny the access to the User as per the option configured in "Last Exit Level Restriction" option.

**Last Exit Level Restriction:** Select the Last Exit Level Restriction option from the drop down list as per the site requirements.

- **Hard:** The access will be denied if the Access Route is not followed by the User while he/she exits.
- **Soft:** The access will be granted even if the Access Route is not followed by the User while he/she exits, with an Access Route Violation Alert.

## Configured Route

Click **Add** button to add the doors to the route.

**Configured Route**

Search

Member No. ▲	Device ID	Name	Level	
1	<input type="text" value="1"/>	Panel Door V3	1 ▼	» ✓ ✕

**Device ID:** Click on the Picklist button and select the Device ID of the Panel door to be added to the route.

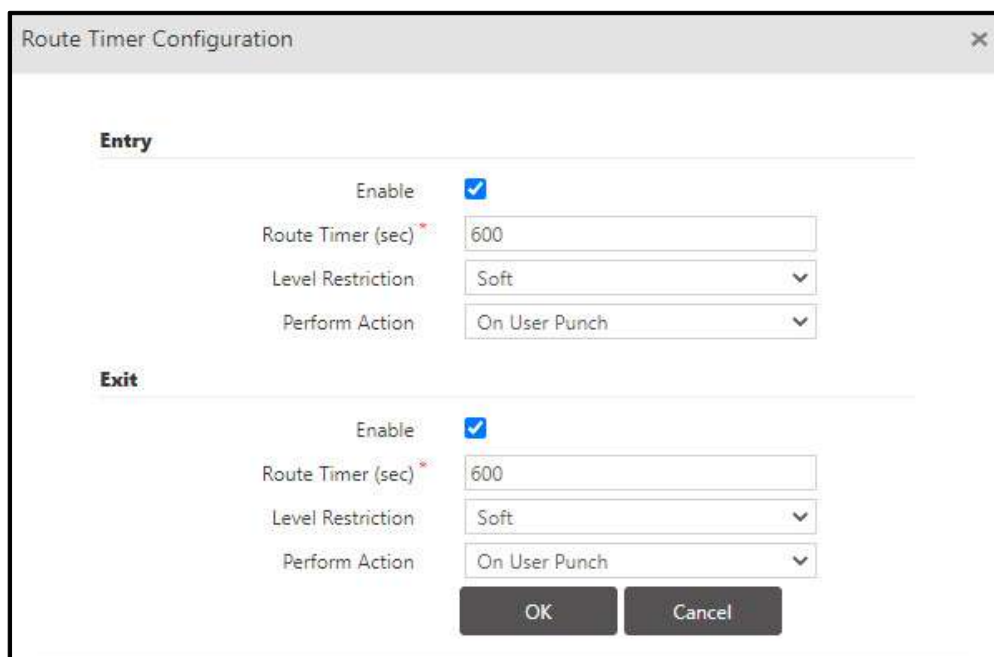

**Name:** Click on the Picklist button and select the Panel door to be added to the route.

**Level:** Select the Level number for the Door from the drop down list. Multiple Doors can be assigned to a single level. However, the same door cannot be assigned to multiple levels.

Now click on **Route Timer Configuration**  button.

A pop-up of **Route Timer Configuration** appears as shown below:

## Entry

**Enable:** Select this check box to enable Access Route Timer and Restrictions while the User enters.

**Route Timer (sec):** This is the time within which the User needs to access the next configured door defined in the respective route.

Enter the value of Timer as per your requirement.

**Level Restriction:** Select the Level Restriction option from the drop down list as per the site requirements.

- **Hard:** The User will not be allowed to access the door. Additionally, an Alarm will be raised for the violation of Access Route Timer Policy.
- **Soft:** The User will be allowed to access the door, however an Alarm will be raised for the violation of Access Route Timer Policy.

**Perform Action:** Select the desired option from the drop down list.

- **On User Punch:** Access Route Timer Violation Alarm as well as an Alert (if configured) will be generated once the User punches on the next Route Level Door after the configured Route Timer, which violates the Access Route Timer Policy.
- **On Timer Elapsed:** Access Route Timer Violation Alarm as well as an Alert (if configured) will be generated automatically once the User fails to punch within the configured Route Timer, which violates the Access Route Timer Policy.

## Exit

**Enable:** Select this check box to enable Access Route Timer and Restrictions while the User exits.

**Route Timer (sec):** This is the time within which the User needs to access the next configured door defined in the respective route.

**Level Restriction:** Select the Level Restriction option from the drop down list as per the site requirement. This functionality can operate in two modes:

- **Hard:** The User will be denied to access the door. Additionally, an Alarm will be generated for the violation of Access Route Timer Policy.
- **Soft:** The User will be allowed to access the door, however an Alarm will be generated for the violation of Access Route Timer Policy.

**Perform Action:** Select the desired option from the drop down list.

- **On User Punch:** Access Route Timer Violation Alarm as well as an Alert (if configured) will be generated once the User punches on the next Route Level Door after the configured Route Timer, which violates the Access Route Timer Policy.
- **On Timer Elapsed:** Access Route Timer Violation Alarm as well as an Alert (if configured) will be generated automatically once the User fails to punch within the configured Route Timer, which violates the Access Route Timer Policy.

Click  button to save the added door.

Similarly add other panel doors to the route as shown below.

Configured Route				
Search				+
Member No. ▲	Device ID	Name	Level	
1	1	PVR Paneldoor	1	 
2	2	Path Paneldoor	1	 
3	4	Vega Paneldoor	2	 

The Door which is not required in the route can be deleted from the **Delete** button.

Finally click on Save button to save the configured Access Route. The route will be listed in grid on right side.

# Functional Group

The Functional Group feature is used to group users with similar profiles and access policies to help the System administrators in better managing the security and access control policies of a site.

This user grouping is used in assigning the activation rights of the Special Functions as explained in the “**Special Function**” section of this manual.

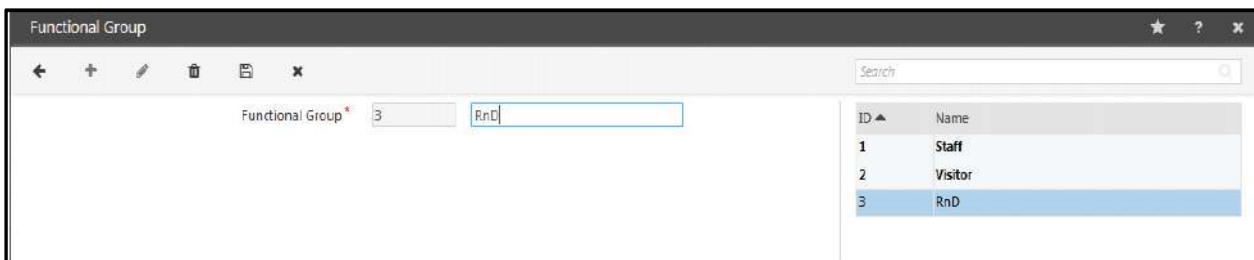

These groups are usually classified based on the roles they perform. A maximum of 99 Functional Groups can be created in the system.

To use the Functional Group feature, click **Access Control > Functional Group**. The page appears as shown below:

The system creates two default Functional Groups viz. **Staff** and **Visitor**.

To create a new Functional Group, Click on **New** button. The following window appears on your screen.

**Functional Group:** Specify a user friendly name for the new Functional Group. The ID appears by default and cannot be edited by the user.

Click on **Save** button. The Functional Group will be created as shown in the grid.

Administrator can now assign the users to the respective Functional Groups from the **User Module>User Configuration> Devices**. The users belonging to these Functional Groups can then be assigned to activate certain Special functions.

# Time Schedule

Time Schedule allows the system to grant access to the users to certain Access Zone only in a specified time period. This time period can be set to a full 24-hours or any limited set of hours or minutes. You can create maximum **99** Time Schedules.

Each time zone represents a particular period of time and time zones may have overlapping time periods. The maximum time period which can be assigned to a time zone is **23:59** hours.

To use the Time Schedule feature, click **Access Control > Time Schedule**. The page appears as shown below:

The screenshot displays the 'Time Schedule' configuration window. It includes a toolbar with icons for back, add, edit, delete, save, and close. The main form contains the following fields:

- Time Schedule**: A numeric input field with the value '2'.
- Name**: A text input field containing 'Lunch Time'.
- Active**: A checked checkbox.
- Start Time**: A time input field set to '13:00'.
- End Time**: A time input field set to '15:00'.
- Active Days**: A set of checkboxes for days of the week: Sun (unchecked), Mon (checked), Tue (checked), Wed (checked), Thu (checked), Fri (checked), Sat (checked), and Holiday (unchecked).

On the right side, there is a table listing existing time zones:

ID	Name
1	Time Zone-1
2	Lunch Time
3	Maintenance Zon
4	Working Shift

To create a new Time Schedule, Click on **New** button.

**Time Schedule:** Specify a user friendly name for the new Time Schedule. The ID will be auto-generated when the Time Schedule is saved.

**Active:** Select the check box to activate the Time Schedule.

**Start Time-End Time:** Specify the Start and End time period in **HH:MM** format for particular Time Schedule for the below selected day/s.

**Active Days:** Select the check boxes for the days for which the Time Schedule is to be activated.

Click on **Save** to save the Time Schedule configurations.

This Time Schedule can be assigned to the user in Access Profile while configuring Schedule based Access Level Override. For details, refer to ["Access Profile"](#).

# Time Schedule Group

You can create maximum **99** Time Schedule groups.

To use the Time Schedule Group feature, click **Access Control > Time Schedule Group**. The page appears as shown below

1 - 10 of 18 records

« < 1 2 > »

OK Cancel

You can either select particular Time Zones or can select all the Time Zones at once.

To select particular Time Zones, select the check boxes of the desired Time Zones.

The screenshot shows a dialog box titled "Picklist For TimeZone". At the top, a green bar indicates "Total Selected: 2 Records". Below this is a search bar and a "Show Selected" button. A "Select All" checkbox is present and unchecked. The main area is a table with columns "Time Zone No." and "Name". The table lists 10 time zones, with the first two (1 and 2) having their checkboxes selected. At the bottom, there is a pagination bar showing "1 - 10 of 18 records" and a set of navigation buttons. The "OK" and "Cancel" buttons are at the very bottom.

<input type="checkbox"/>	Time Zone No.	Name
<input checked="" type="checkbox"/>	1	Time Zone 1
<input checked="" type="checkbox"/>	2	TimeZone2
<input type="checkbox"/>	3	TimeZone3
<input type="checkbox"/>	4	TimeZone4
<input type="checkbox"/>	5	TimeZone5

<input type="checkbox"/>	7	TimeZone7
<input type="checkbox"/>	8	TimeZone8
<input type="checkbox"/>	9	TimeZone9
<input type="checkbox"/>	10	TimeZone10

OR

To select all the Time Zones, select the **Select All** check box. The Time Zone on all the pages will be selected.

This screenshot shows the same "Picklist For TimeZone" dialog box, but with the "Select All" checkbox checked. The green bar at the top now indicates "Total Selected: 18 Records". In the table, all 10 time zones have their checkboxes selected. The rest of the interface, including the search bar, pagination, and buttons, remains the same.

<input checked="" type="checkbox"/>	Time Zone No.	Name
<input checked="" type="checkbox"/>	1	Time Zone 1
<input checked="" type="checkbox"/>	2	TimeZone2
<input checked="" type="checkbox"/>	3	TimeZone3
<input checked="" type="checkbox"/>	4	TimeZone4
<input checked="" type="checkbox"/>	5	TimeZone5
<input checked="" type="checkbox"/>	6	TimeZone6
<input checked="" type="checkbox"/>	7	TimeZone7
<input checked="" type="checkbox"/>	8	TimeZone8
<input checked="" type="checkbox"/>	9	TimeZone9
<input checked="" type="checkbox"/>	10	TimeZone10

Click **OK**. The time schedules will be listed in the grid along with the Start and End time and Active days.

You can also delete the desired Time Zones. To do so, click **Delete**  icon of the respective Time Zones.

You can add maximum **9** Time Schedules per Time Schedule Group.

# Elevator Configuration

In high-rise corporate buildings; Elevators can be integrated with the Access Control Solution. This enables employees/users to access the specific areas or floors of buildings in-order to ensure company's security and employees' convenience.

Elevator Configuration enables to create the Elevators and assign floors to the Elevators. You can add maximum **64** Elevators in a Panel200.

To configure the Elevator Configuration, click **Access Control > Elevator Access Control> Elevator Configuration**.

The screenshot shows the 'Elevator Configuration' web application. It features a top navigation bar with a search field. Below the navigation bar, there are several input fields and picklists for configuring an elevator: 'Panel', 'Elevator', and 'Authentication Device'. Each of these fields has a picklist icon (three horizontal lines) to its right. Below these fields is the 'Access Duration For Floor(s)' field, which is currently set to '1 - 99' seconds. A 'Floor Configuration' section is located below the duration field, containing a search field and a table with columns: 'Floor No.', 'Floor Name', 'Free Access Floor', 'Device ID', 'Name', and 'Output Port'. The table currently displays 'No Data'. On the right side of the interface, there is another table with columns 'ID' and 'Name', also displaying 'No Data'.

- **Panel:** Click the picklist. The **Picklist For Panel200** pop-up appears. Select the desired Panel.

The **Elevator Access Control** feature must be enabled for Panel200 from Device Configuration> Features.

- Click **New** .
- **Elevator:** Enter the name for the Elevator. You can add maximum 64 Elevators.
- **Authentication Device:** Click the picklist. The **Picklist For Panel200 Doors** pop-up appears. Select the desired Panel200 door which will act as Authentication Device to access the Elevator. The Authentication Device must be placed inside the Elevator so it is recommended to select individual Authentication Device for each Elevator.

Once the user credential is verified on Authentication Device; only then floor selection buttons will become active. The supported doors as Authentication Device are: **Door V1, Door V2, Door V3, Door V4, Vega Controller, Path Controller, PVR Door, ARC DC100, ARC DC200, ARGO and ARGO FACE**.

- **Access Duration For Floors:** Enter the Access duration in seconds (1 - 99). The default time is 10 seconds. It is the duration for which floor selection buttons in Elevator will remain active.

If the floor is not selected within this access duration then selection buttons will disable. Then user has to punch on Authentication Device again for activating floor selection buttons.

- Floor No.:** It is auto generated by system. You can also change the floor number if required.
- Floor Name:** Specify the name of the floor.
- Free Access Floor:** Select the check box to allow the floor to be accessed freely by everyone.
- Device ID/Name:** Click the picklist and select the ARC IO800 Panel200 door.
- Output Port:** Select the Aux Output port from the drop down options which is to be connected to the respective floor of the Elevator. You can also connect one Aux Output Port to multiple floors.

**Example:** If a user is to be given access to Floors 1, 3 and 5; then one Aux Port, say Aux Output1 can be connected to floor1,3 and 5.

- Click **OK**. Similarly you can add other floors.

- You can also edit the desired Floor details. To do so, click **Edit**  of the respective Floor.
- You can also delete the Floor. To do so, click **Delete**  of the respective Floor.
- Click **Save** to save the Elevator Configuration. The Elevator appears in the right grid.

# Elevator Floor Group

Elevator Floor Group enables to create the group of floors. The floors can be of same Elevator or different Elevators. This Elevator Floor Group is then assigned to the user. The user can access the floors included in the group.

You can configure maximum **999** Elevator Floor Groups.

To configure the Elevator Floor Group, click **Access Control > Elevator Access Control> Elevator Floor Group**.

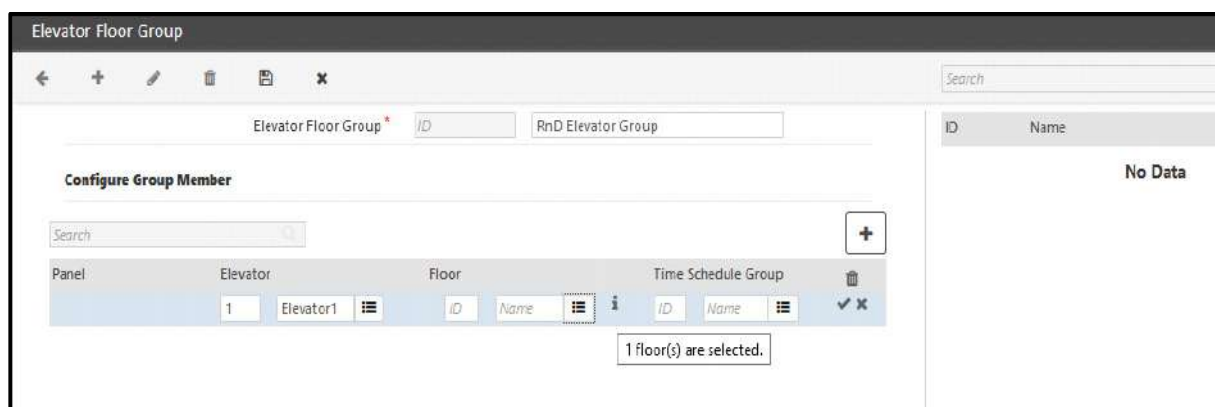

To create a new Elevator Floor Group, click **New** .

- **Elevator Floor Group:** Specify a user friendly name for the Elevator Floor Group. The ID will be auto-generated when the group is saved.

## Configure Group Members

- Click **Add** , to add the floors of the Elevator to the Group. Max **999999** members can be added to the group.

- Click the **Elevator** picklist, the **Picklist For Elevators** pop-up appears.
- Select the desired Elevator.

- Click the **Floor** picklist, the **Picklist For Elevator Floors** pop-up appears.

Picklist For Elevator Floors

*Same Elevator, Floor & Time Schedule Group combination can coexist in multiple Elevator Floor Groups but not in same group.*

*If no Time Schedule Group is assigned then that particular floor of the Elevator will be accessible throughout the day.*

*The Access to the Elevators can be viewed in Elevator Access Report and it can also be scheduled in Report Scheduler.*

# Access Profile

Access Profile defines the group of users having similar job functions and need equal privileges throughout the day.

Access Groups having Time Zone based Access Levels programmed, when assigned to any user, enables the system to determine user Access Level at any particular time.

System Access Policy compares User's Access Level with Zone's Access Level before the user is Allowed or Denied to access the restricted areas. A maximum of **99** Access Groups can be defined in the system.

Once the Access Groups are defined, the system administrator can define the Users from **User Module > User Configuration**.

To use the Access Profile feature, click **Access Control > Access Group > Access Profile**. The page appears as shown below:

Access Profile

Search

Access Profile \* ID Name

Schedule Based Access Level Override

Member	ID	Time Schedule	Status	Access Level
No Data				

ID	Name
1	Group-1
2	Group-2

The Group-1 and Group-2 are default Access Groups which are predefined and have an access level of 8.

To define a new **Access Group**, click on the **New** button. The following window appears on your screen.

**Access Profile**

Access Profile: 3 RnD Employees

Active: ☒

**User Access Levels**

Work Hours: 9

Break Hours: 8

Non-Working Hours: 8

**Schedule Based Access Level Override**

Member ID	ID	Time Schedule	Status	Access Level
1	1	Time Zone-1	InActive	8
2	1	Time Zone-1	InActive	8
3	1	Time Zone-1	InActive	8
4	1	Time Zone-1	InActive	8
5	1	Time Zone-1	InActive	8

1 - 5 of 8 records

Search

ID	Name
1	Group-1
2	Group-2

**Access Profile:** Enter a user friendly name for the new Access Profile in the Name field. The ID appears automatically.

**Active:** Select the check box to activate the Access Profile.

### User Access Levels

The access level of the user is compared to the access level of the zone and user is granted access only if user access level is greater than or equal to the access level of the zone. Either the User Access Levels or the Schedule Based Access Levels will work at a time.

**Work Hours:** Specify the Access Level for the Working hours ranging from **01 to 15** from the drop down list.

**Break Hours:** Specify the Access Level for the Break hours ranging from **01 to 15** from the drop down list.

**Non- Working Hours:** Specify the Access Level for the Non- Working hours ranging from **01 to 15** from the drop down list.

### Example:

If shift is defined from 9am to 6pm and Access Level for Work Hours is set at **9**, Access Level for Break Hours is set at **8**, Access Level for Non-Working Hours is set at **8**, Access Level for the Panel Door is set at **9** in Zone3 (Not Home zone)

Case1: Then if employee punches between 9 to 6, he will be allowed access.

Case2: If employee punches before 9am, he will be denied access as access level for Non-working hours (8) is less than the access level of Door(9).

Case3: If employee punches during break hours, he will be denied access as access level for Break hours (8) is less than the access level of Door(9).

### Schedule Based Access Level Override

Sometimes it is essential for certain groups to have access to a particular zone in Multiple Time Slots. The Time Zone based Access Levels allows user to configure such additional time slots for certain groups to have access to various zones during different time periods of the day.

Click on the Member to select the Time Schedule for which the group is to be activated based on the Access Level.

**Time Schedule:** Select the Time Zone from the picklist. To configure Time Schedule click Access Control > Time Schedule.

**Status:** Select the check box to activate the Time Zone.

**Access Level:** Select the Access Level for the Time Zone ranging from 1 to 15 from the drop down list.

Schedule Based Access Level Override						
Member	ID	Time Schedule	Status	Access Level		
1	4	Working Shift	<input checked="" type="checkbox"/>	9	<input type="checkbox"/>	<input type="checkbox"/>
2	1	Time Zone-1	InActive	8	<input type="checkbox"/>	<input type="checkbox"/>
3	1	Time Zone-1	InActive	8	<input type="checkbox"/>	<input type="checkbox"/>
4	1	Time Zone-1	InActive	8	<input type="checkbox"/>	<input type="checkbox"/>
5	1	Time Zone-1	InActive	8	<input type="checkbox"/>	<input type="checkbox"/>

1 - 5 of 8 records

<< < 1 2 > >>

Click on **OK** and **Save** the changes. The Time schedule for Working Shift and Lunch Time zones is activated for the RnD Employees group as shown below.

The screenshot shows the 'Access Profile' configuration window for the 'RnD Employees' group. The 'Active' checkbox is checked. Under 'User Access Levels', the 'Work Hours' are set to 9, 'Break Hours' to 8, and 'Non-Working Hours' to 8. The 'Schedule Based Access Level Override' section contains a table with 5 records. The first two records, 'Working Shift' and 'Lunch Time', are both set to 'Active' with an 'Access Level' of 9. The remaining three records, all labeled 'Time Zone-1', are set to 'Inactive' with an 'Access Level' of 8. Two arrows point to the 'Working Shift' and 'Lunch Time' rows. On the right, a list of groups shows 'RnD Employees' selected. At the bottom, a pagination bar shows '1 - 5 of 8 records' and a page selector with '1' highlighted.

Member ID	Time Schedule	Status	Access Level
1	Working Shift	Active	9
2	Lunch Time	Active	9
3	Time Zone-1	InActive	8
4	Time Zone-1	InActive	8
5	Time Zone-1	InActive	8

If the Access Level of Panel Door at the configured zones is 9 then employees belonging to RnD Employees profile can access the Working Shift zone and Lunch Time zone as the Access Level for user is 9.

For assigning users to the Access Profile see *Access Group > Assignment*.

*Either the User Access Levels or the Schedule Based Access Levels will work at a time. For example: If Access level of Break is 8; then employee will not be allowed to access in break hours. But the Lunch Time Zone has access level 9, so the employee will be allowed to access the lunch area.*

# Access Profile Assignment

Access Profile Assignment enables to assign Access Group to Users and Devices.

To use the Access Profile Assignment feature, click **Access Control > Access Group > Assignment**. There are two modes of Access Profile Assignment:

- Device-Wise
- User-Wise

## Device -Wise Configuration

**Device:** Select the Device (Panel200) from the device selection picklist to which the rule is to be assigned. The assigned users on the selected device will appear in the grid as shown below:

The screenshot shows the 'Access Profile Assignment' window. On the left, there are two tabs: 'Device - Wise' (selected) and 'User - Wise'. The main area contains three input fields: 'Device' with the value '3', 'User' with the value 'ID', and 'Access Profile' with the value 'ID'. Each field has a corresponding picklist icon to its right. Below these fields is an 'Update' button. A search bar is located above a table. The table has three columns: 'User ID', 'Name', and 'Access Profile'. It contains three rows of data.

User ID	Name	Access Profile
1	Chirag	Group-1
101	Khushbu	Group-1
1667	Aditi Ajay Gupta_Ahmedabad	Group-1

**User:** The single or multiple users can be selected from the picklist to which Access Profile is to be assigned. The number of selected users will be displayed on hovering over Info  icon.

**Access Profile:** You can select the Access Profile from the picklist which is to be assigned to the selected users on the selected Panel200. The profile is created from Access Group > Access Profile.

**Example:** The 2 users are selected as shown by Info  icon. The default Access Profile of users is Group-1 which is displayed in the grid. Now the Access Profile for the users to be assigned on Panel200 is selected as "Group- 2" as shown below.

Access Profile Assignment

User-Wise

User \* 101 Khushbu

Device \* ID Name

Access Profile \* ID Name

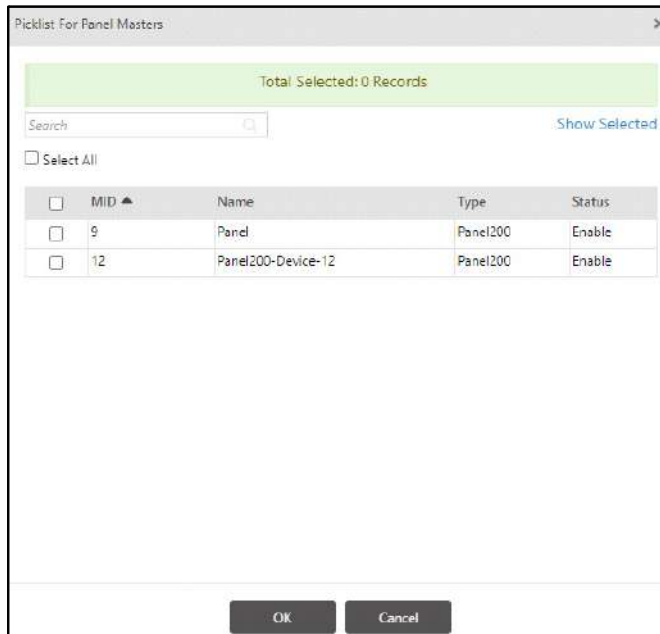

Update

Device ID ▲	Name	Access Profile
3	Panel Lite V2	Group-2
4	Panel Lite	Group-1

**Device:** The single or multiple devices (Panel200) can be selected from the picklist to which the Access Profile is to be assigned.

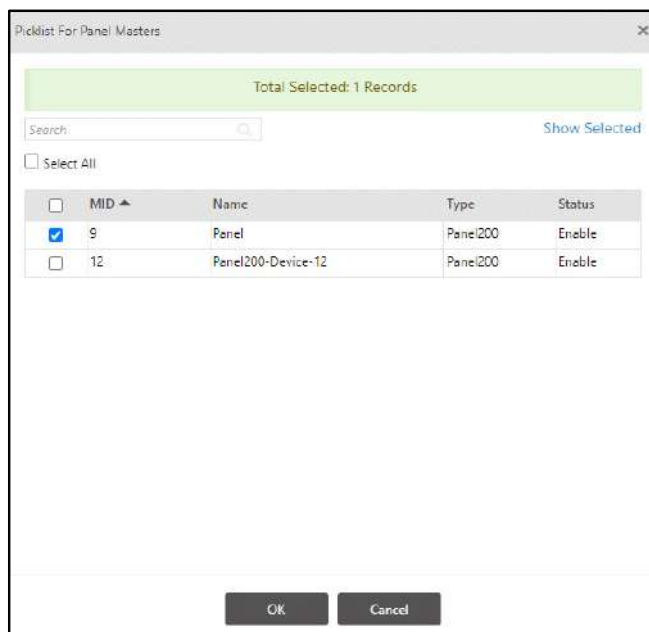

To do so,

Click the **Device** picklist. The **Picklist For Panel Masters** pop-up appears.

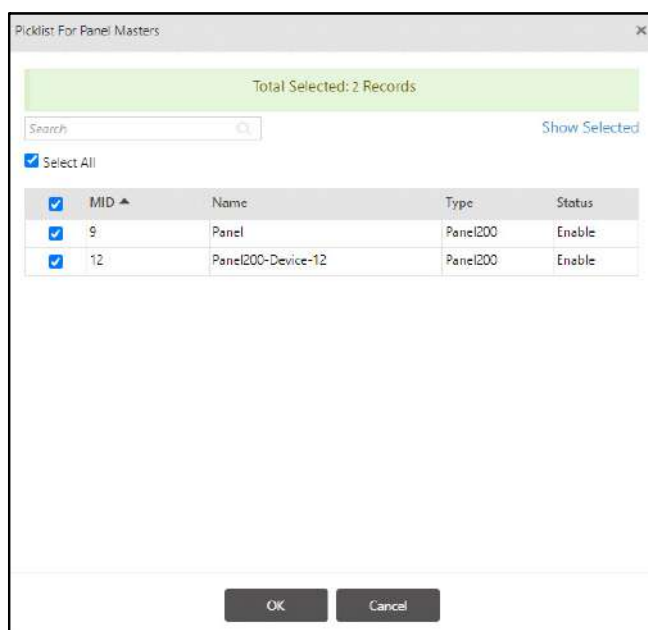

You can either select particular devices or can select all the devices at once.

To select particular devices, select the check boxes of the desired devices.

**OR**

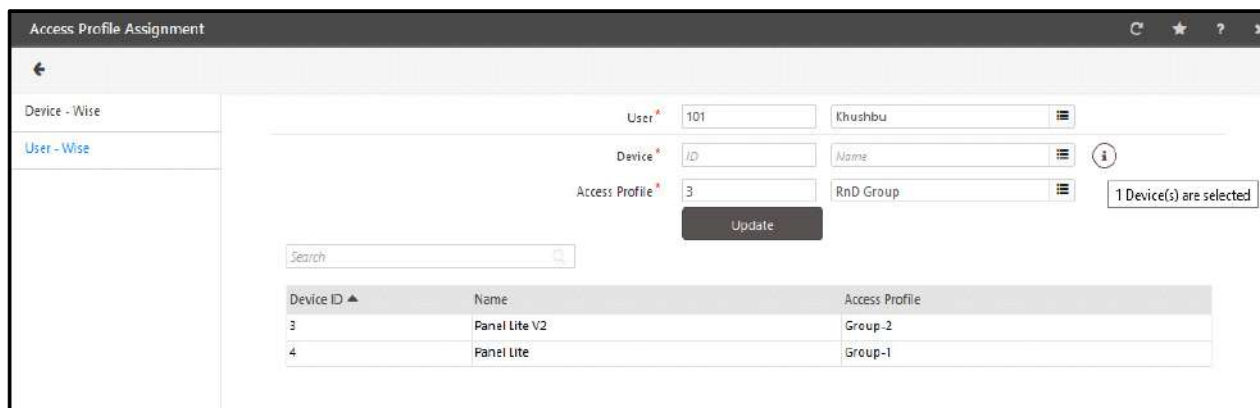

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

Click **OK**.

Hover over the Info  icon. It displays the number of devices selected.

**Access Profile:** You can select the Access Profile from the picklist to assign on the selected devices for the selected user. The profile is created from Access Group > Access Profile.

Click on **Update** to save the assignment. The Access Profile will be processed and updated as shown below.

## 2 Person Group

2-Person Rule is a feature that enables the system to insist for two valid user entries within specified time to allow access to a secured zone.

This is a control mechanism, designed to achieve a high level of security, especially for critical areas like Cash rooms, R&D Labs, sensitive documents storage etc.

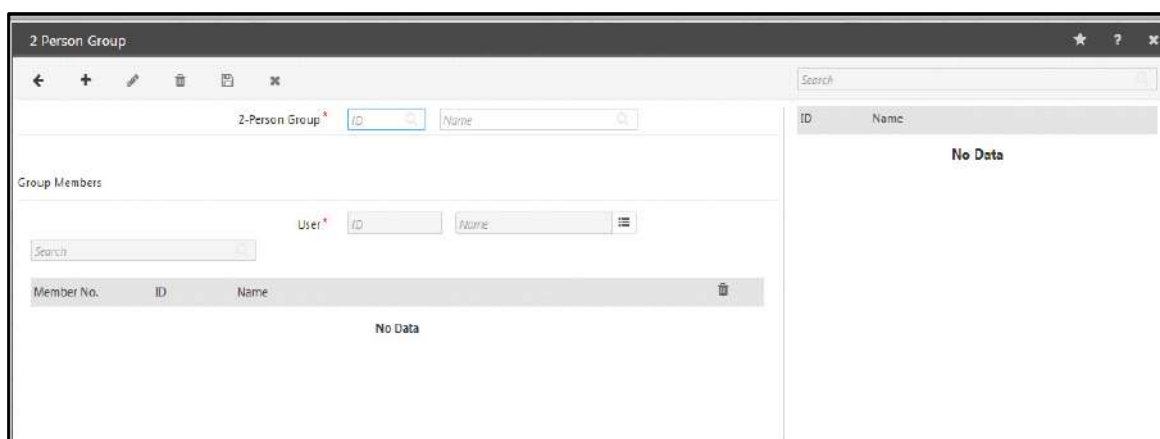

*This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.*

*Visitors with or without Escort are not allowed into a zone where 2-Person Rule is enabled while a VIP user can always enter a 2-Person Rule enabled zone without the need for a second credential.*

*If the first person is an authorized user and the 2nd person is a VIP then, system considers the VIP as an authorized 2nd person to validate the 2-Person Rule.*

To use the 2-Person Rule, click **Access Control > 2-Person Rule > Group**. The page appears as shown below:

To create a new Group, Click on **New** button. You can create upto 9999 Groups.

The following window appears.

2 Person Group

2-Person Group: 1 QA Group

Group Members:

User: ID Name

Create the other groups same as above.

*Zone Access Mode (ZAM) is applied on both users while verifying for 2-Person group authorization.  
ZAM is not applied on VIP user under any condition.*

To assign Groups to doors, refer [“2 Person Rule Assignment”](#).

## 2 Person Rule Assignment

2-Person Rule Assignment enables to assign 2-Person Rule to Users and Devices.

To use the 2-Person Rule Assignment feature, click **Access Control > 2-Person Rule > Assignment**. The page appears as shown below:

ID	Name
1	Door V3
1	R and D PaneliteV2
2	Vega Directdoor
3	Path-Direct door

The grid on the right shows all the devices including Panel200 and Direct Doors set to Advanced Access Control.

Click on the device from the grid, the related parameters will appear in the respective fields as shown below for Panel200:

ID	Name
1	Door V3
1	R and D PaneliteV2
2	Vega Directdoor
3	Path-Direct door

**Enable Rule:** Select the check box to enable the 2-Person Rule on selected device.

Click on **Update Device** to update the rule on selected device.

**Zone:** For Panel200, select the Zone from the drop down list.

**Enable Rule on Zone:** Select the check box to enable the 2-Person Rule on selected Zone.

*Zone is applicable for Panel Door only.*

**Mode:** Select the Mode from the options of Primary Must or Primary and Secondary Must.

- **Primary Must:** In this mode, the 2-Person Rule will grant access only when at least 1 user from the 2-Person Group is from the Primary Group and make sure that you have configured both the Groups—Primary Group and Secondary Group. Then the access is granted if both users are from Primary Group or first from Primary and second from Secondary Group. The situation when the access will be denied is when both the users are from Secondary Group or if one member does not belong to any configured group.

In case Secondary Group is not configured then both members need to be from the Primary Group.

- **Primary & Secondary Must:** In this mode, the 2-Person Rule will grant access only in one condition, one user from Primary Group and the other from Secondary Group.

In case Secondary Group is not configured then one member must be from Primary Group and the other member may or may not be a member of any configured group.

Access will be denied, only if the Primary member is missing.

**Primary Group:** Select the Group from the pick list to work as Primary Group. Members from the Primary Group are now valid users for the access and any two members of this group together can access a controlled area.

**Secondary Group:** Select the Group from the pick list to work as Secondary Group. If Secondary Group is selected, then the system verifies that any member of Secondary Group is always accompanied by a member from the Primary Group or a VIP user before allowing access to the zone.

*For 2 Person Rule, maximum 16 Groups can be assigned to the Panel.*

*For Direct Doors, maximum 2 groups can be assigned at any point of time.*

*If you wish to use only one Group, make sure you select the Primary Group. This is required because a member from the Secondary Group needs to be accompanied by a member from the Primary Group always for a valid transaction. However, any two members from the Primary Group are treated as valid user for the access to the Door.*

Click on **Update Zone** to save the changes.

# First In User

First-IN User rule uses a card or fingerprint as credential of the user declared as First-IN User to unlock the Access locked to a particular zone.

The access control system waits in lock mode till a valid First-IN user is detected whose effective working hours overlaps with the current time. The working hours of the zone is linked to the first detected First-IN user's effective working hours and system allows access to all authorized users till the working hours of the First-IN user is valid.

The system allows the administrator to define upto 99 groups with 999 users in each group.

999 users in each group is applicable for ARGO, VEGA, ARGO FACE, PATH V2, ARC DC200, Panel200. In other devices it is 99 users in each group.

This functionality can also be enabled from the **Device Module > Device Configuration > Features** option.

To use the First-IN User rule, click **Access Control > First-In User Rule > Group**. The page appears as shown below:

To create a new Group, Click on **New** button. You can also select the group from the right grid and add the users to it.

**First IN User:** Specify a user friendly name for the Group for First-IN users. The ID No. appears by default and cannot be edited by the user.

### Group Members:

**User:** Click on the picklist button and select the Users for the Group one by one. You can define upto 999 users per group.

Click on **Save** button from the toolbar. The First-IN Group will be saved in the right grid as shown below.

*A VIP user is allowed to access the First-IN enabled zone even when the zone is not activated by a First-IN user. However, the VIP user cannot activate the zone to allow access to other users.*

# First In User Assignment

First-IN User Rule Assignment enables to assign the Rule on Devices.

To use the First-IN User Assignment feature, click **Access Control > First-In User Rule > Assignment**. The page appears as shown below:

ID	Name
1	Door v3
1	RnD Panel lite V2
3	NGT Ground Floor
4	Vega Direct Door
5	Wireless Door 1st Floor
7	NGT-34
8	Panel Lite V2-Device-8

The grid on the right shows all the devices including Panel200 and direct doors set to advanced access control.

Click on the device from the grid, the related parameters will appear in the respective fields.

## Panel200

ID	Name
1	Door v3
1	RnD Panel lite V2
3	NGT Ground Floor
4	Vega Direct Door
5	Wireless Door 1st Floor
7	NGT-34
8	Panel Lite V2-Device-8

**Enable Rule:** Check the box to enable the First-IN user rule on selected device.

**Group1-4:** You can select four First-IN groups which can then be assigned to different zones of Panel200. Select the First-IN group from the picklist button. It will list all the First-IN groups as created from First-IN User Rule-Group.

Click on **Update Device** to update the First-IN groups on Panel200.

**Zone:** Select the Zone from the drop down list. The zones are configured while adding Panel200 to the Devices.

**Enable Rule on Zone:** Select the check box to enable the First-IN user rule on selected Zone.

**Reset On:** If a user from First-IN User group punches then access to other users can be restricted to that day or defined time duration.

- **Day Change:** If Day Change is selected, other user will be allowed access in the selected zone on that day and will be restricted on next day.
- **Access Timer (Sec):** If Timer Expiry is selected, specify the Access Timer in seconds (say 5 seconds); after which the user will be restricted the access.

**First-IN User Group:** Select the First-IN User group to be applicable for the selected zone. For example, for zone QC, Group1 is selected.

Click on **Update Zone** and **Save** the selection.

**Enable Rule:** Select the check box to enable the First-IN user rule on selected door.

**Reset On** and **Access Timer (Sec)** are disabled for direct door.

**First-IN User Group:** Select the First-IN User group to be applicable for the selected door.

Click on **Update Device** to save the selection.

# Smart Access Route

The Smart Access Route functionality using Mifare Cards/ HiD Cards enables the administrator to define an access policy which allows the user to access the COSEC Doors in the configured sequence. The COSEC system has the capability to define up to **75** doors on a single route.

*This functionality must be enabled from the **Admin Module > System Configuration> Global Policy> Access Control** option.*

*Also Access Route type and Smart Card Key settings are to be done from Global Policy Page.*

To use the Smart Card based Access Route, click **Access Control > Smart Access > Smart Access Route**. The page appears as shown below:

To create a new Access Route, Click on **New** button.

**Name:** Specify a user friendly name for the Smart Access Route.

**Active:** Select the check box to activate the feature.

**Sequenced Route:** When Sequenced Route is selected then restrictions for the route can be configured. If the check box is disabled then the Restrictions option will be disabled. Then the non-sequenced route can be configured.

**Restrictions:** Select the Restriction mode from the drop down list. This functionality can operate in two modes:

- **Hard:** Access will be allowed only if the Access Route is followed.
- **Soft:** Access will be allowed on any door on the Access Route with an Access Route violation message.

**Reset on Start Level:** Select the check box to enable the system to reset the current level status to allow access on the lowest level.

This option is useful in the event of the user not following the proper order while exiting the premises. If this functionality is enabled then the user will be allowed access on the lowest level irrespective of his/her state but this will happen only on entry side.

## Configured Route

The user needs to define the member doors as the part of defined Access Route. Click on **Add** button to add the doors to Access route.

**Device:** Click on the picklist button and select the required direct door or panel door from the picklist window.

**Level:** Select the Level number to be assigned to the Door from the drop down list.

Click on **OK** button. The Door will appear in the grid. Similarly you can add other doors in the route.

# Smart Identification

Smart Identification enables to define the Access Mode on the selected device (Panel or direct door) through Smart Card, Finger or PIN combinations.

Under this functionality, users defined in the system will be assigned Smart Cards by enrolling at the COSEC Enrollment station. Access to these users is granted based on the information written on the Smart Cards.

*This functionality can also be enabled from the **Device Module > Device Configuration > Advanced** option.*

*This functionality has to be first enabled from the **Admin Module > System Configuration > Global Policy > Device** option.*

*Also Set any General Additional Security Code which can be used as a passcode for this feature.*

*Click on the Default button on Door to set the **Additional Security Code** to the value set in the **General Additional Security Code** field on the Global Policy page of Admin Module.*

Firstly, User Shows RFID Card in which Fingerprint Template is Stored

Update Zone

**Enable Rule:** Select the check box to enable the Smart Identification rule on selected device.

Click on **Update Device**.

**Zone:** Select the Zone from the drop down list.

**Enable Rule on Zone:** Select the check box to enable the Smart Identification feature on selected Zone.

**Zone Access Level:** Select the Zone Access Level from the drop down list.

**SI Access Mode:** Select the Smart Identification (SI) mode from the drop down list. The options available are:

- Card
- Card + Finger
- Card + Finger+ PIN
- Card + PIN

For the PVR Door (Direct Door/Panel Door), the SI Access mode is as below:

- Card
- Card + PIN
- Card + Biometric
- Card + Biometric + PIN

Click on **Update Zone**.

*However, the user needs to ensure that the functionality is enabled at the device level.*

*It is essential to install either a Mifare or an HID i-Class serial reader at the DOOR devices for this functionality to work.*

*SI users need not be assigned any devices and need to be enrolled from the COSEC ENROLL application only.*

# Access Rule Profile

The Access Rule option allows you to create the conditional rules for a particular time duration to access the doors. Access Rule can be configured for Panel200 (Server Mode) and Panel Doors.

Access Rule is supported in the following Panel Doors — PVR Door, Vega Controller, Door V1/V2/V3/V4, PATH Controller, ARC DC 200, ARC DC 100, ARGO, ARGO FACE.

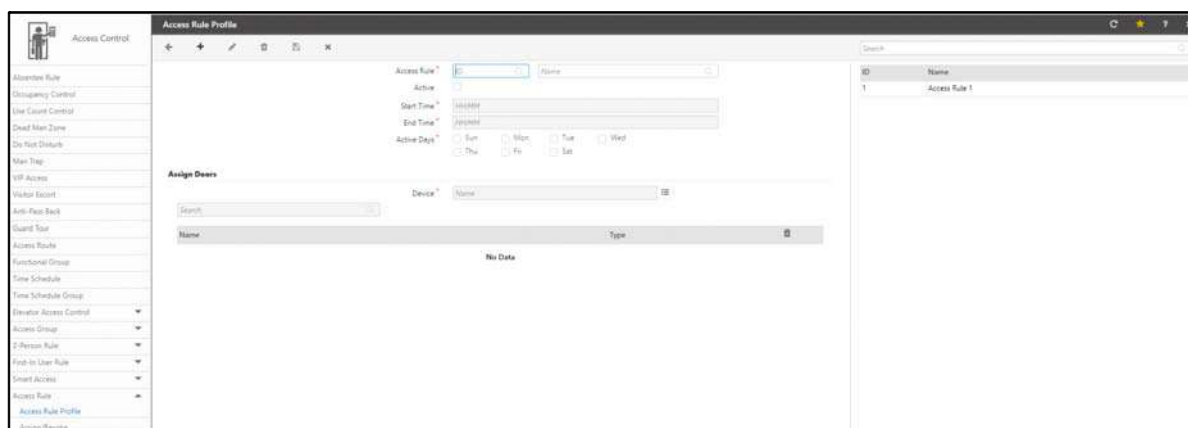

To use this feature you must:

- create an Access Rule
- assign doors to the Access Rule
- assign/revoke users to the Access Rule

## Access Rule Profile

To configure the Access Rule,

- Click **Access Control > Access Rule > Access Rule Profile**. The **Access Rule Profile** page appears.

- Click **New**  .

*Maximum 999 Access Rules can be created.*

*Maximum 99 Access Rules can be assigned to each user.*

ABhavin Argoface - 131	Panel200 Door	

Configure the following parameters:

- **Access Rule:** Specify a user friendly name for the new Access Rule. The ID is auto-generated by default.
- **Active:** Select the check box to activate the Access Rule.
- **Start Time:** Specify the Start Time for the Access Rule in HH:MM format.
- **End Time:** Specify the End Time for the Access Rule in HH:MM format.
- **Active Days:** Select the check boxes for the days on which you wish the Access Rule to be applied.

### Assign Doors

- **Device:** Select the desired device to which you wish to assign the Access Rule using the **Device** picklist.

Click the **Device** picklist. The **Picklist For Panel Door Masters** pop-up appears.

- You can either select particular Panel Doors or can select all the Panel Doors at once.
- To select particular Panel Doors, select the check boxes of the desired Panel Doors.

OR

- To select all the Panel Doors, select the **Select All** check box. The Panel Door on all the pages will be selected.

Application Ack Date

System Ack Date

Application Clear Date

System Clear Date

The screenshot shows the 'Alarm Log' window. At the top, there are filters for 'Date' (21/01/2022) and 'Alarm Type' (All). Below these is a search bar and a 'View' button. The main area contains a table with the following columns: Seq, Alarm Date-Time, Level, Status, Alarm Name, Panel, and Source. Two rows of data are visible, both with a status of 'Cleared'.

Seq	Alarm Date-Time	Level	Status	Alarm Name	Panel	Source
2	21/01/2022 14:11:53	Critical	Cleared	Duress detection	Panel000-Device-2	Hk Vega
1	21/01/2022 14:11:02	Critical	Cleared	Duress detection	Panel000-Device-2	Hk Vega

Below the table, there are four input fields for dates: Application Ack Date, System Ack Date, Application Clear Date, and System Clear Date.

The details displayed are — Sequence, Alarm Date-Time, Level, Status, Alarm Name, Panel and Source.

**Application Ack Date:** It shows the date on which alarm is acknowledged by the user.

**System Ack Date:** It shows the date on which alarm is acknowledged by the system.

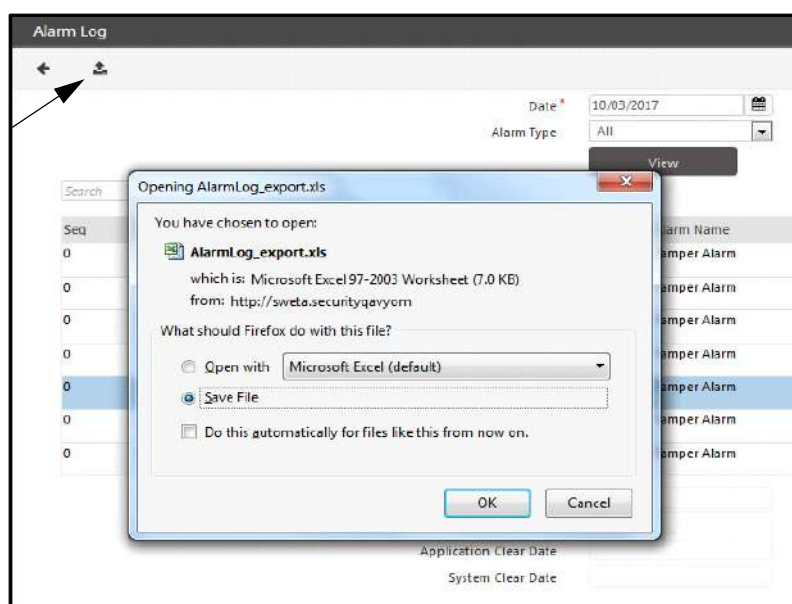

**Application Clear Date:** It shows the date on which alarm is cleared by the user.

**System Clear Date:** It shows the date on which alarm is cleared by the system.

This screenshot shows the date input fields from the previous image. The 'Application Ack Date' and 'System Ack Date' fields are empty. The 'Application Clear Date' field contains the text '10/03/2017 16:07:11'. The 'System Clear Date' field contains the text '10/03/2017 16:07:13'.

## Export

To export the log of alarm, click on Export button as shown below. You can open or save the Alarm log in excel file.

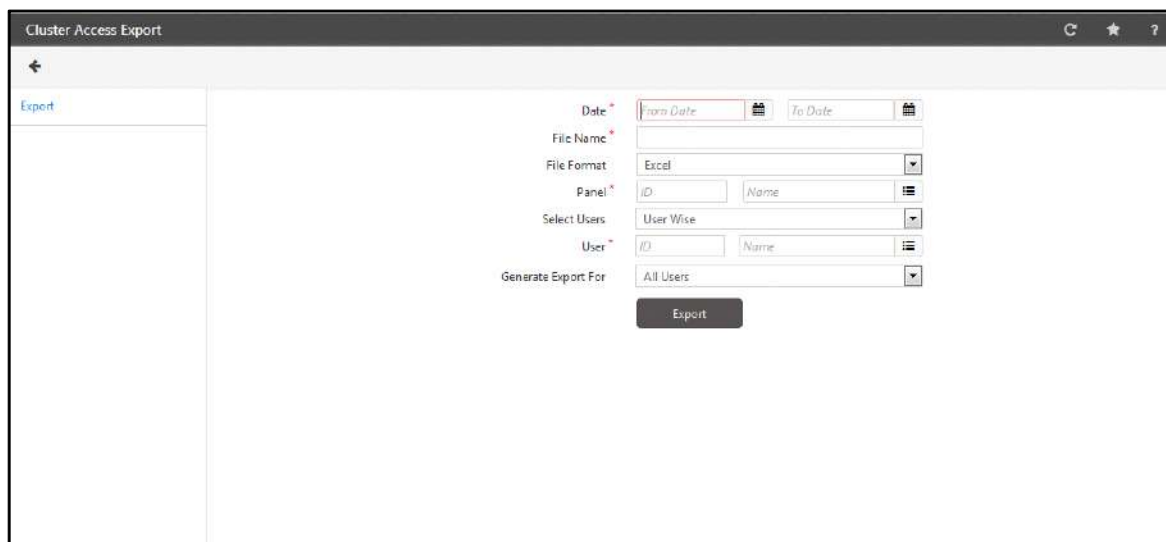

The exported file is shown as below:

# Cluster Access Details Export

This functionality enables the administrator to export Cluster Access data in a pre-defined Excel format. The exported file displays the information, which includes user-wise punch details.

To access this functionality, click **Access Control > Exports > Cluster Access Details** and the following page appears.

The screenshot shows a web application window titled "Cluster Access Export". On the left, there is a sidebar with a back arrow icon and a button labeled "Export". The main area contains a form with the following fields: "Date" with "From Date" and "To Date" date pickers; "File Name" as a text input; "File Format" as a dropdown menu currently set to "Excel"; "Panel" with "ID" and "Name" input fields; "Select Users" as a dropdown menu currently set to "User Wise"; "User" with "ID" and "Name" input fields; and "Generate Export For" as a dropdown menu currently set to "All Users". At the bottom of the form is a dark "Export" button.

**Date:** Enter the date range for which data has to be exported.

**File Name:** Enter an appropriate **File Name** for the export file.

**File Format:** Specify the export **File Format** as **Excel**.

**Panel:** Select the Panel for which Cluster Access details are to be fetched.

**Select Users:** Select one of the following filters from the **User Filter** drop down list:

- **User Wise** - To select users randomly using the **User** picklist.
- **Group Wise** - To select all users associated with a particular Enterprise group.
- **All** - To select all users on the system.

**Generate Export for:** Select the users as **All**, **Active** or **Inactive** for which Cluster Access Detail is to be exported.

Click the **Export** button. On the **File Download** dialog box, click **Save**. Save the file at a desired location.

The Exported File will display the date-wise user's punches in the following format.

# Access Control Reports

Reports available within the COSEC Access Control option are categorized as under:

*[“Access Zone”](#)*

*[“Time Zone”](#)*

*[“Groups”](#)*

*[“I/O Linking”](#)*

*[“User Access”](#)*

*[“Guard”](#)*

*[“Access Route Master”](#)*

*[“Elevator Access Control”](#)*

*[“Door Held Open”](#)*

*[“Emergency Evacuation”](#)*

*[“Alarm Details”](#)*

## Access Zone

Generates a Panel wise list of all the Access Zones defined in the system.

It also displays the access level selected for the zone along with the access mode (credentials) for the zone. If the Visitor Escort rule and First-IN user rule are activated for the zone; then it will display Active for the respective zones.

### Panel Selection

- **Select Panels:** Select the desired option— **All** or **Panel-Wise**.
  - If you select **All**, all the Panels will be selected.
  - If you select **Panel-Wise**, click **Panel** picklist. The **Picklist For Panel** pop-up appears.

Picklist For Panel

Total Selected: 0 Records

Search  Show Selected

## Guard

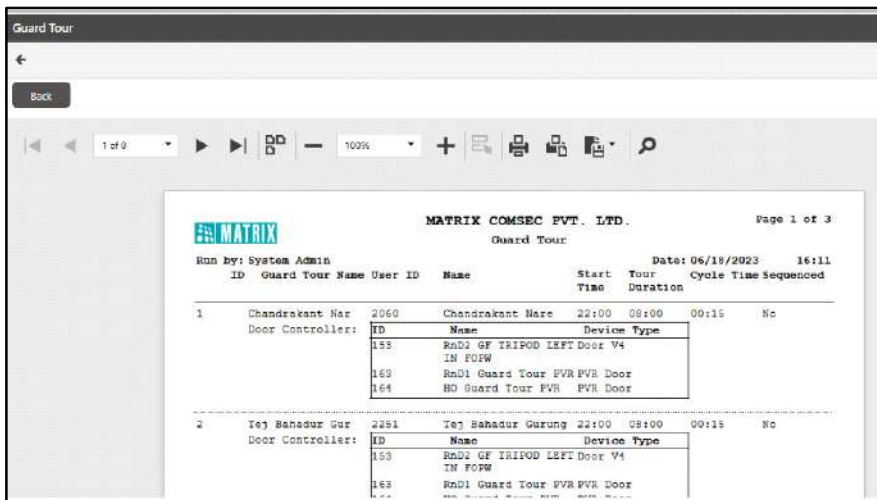

### Guard Tour

This report provides a list of the Guard Tours defined in the system.

**ID Range:** Configure the Start and End ID.

Click **Generate Report**.

### Sample Report

The screenshot shows a web application interface for 'Guard Tour'. It includes a 'Back' button, a navigation bar with '1 of 9' and various icons, and a report area. The report is titled 'MATRIX COMSEC PVT. LTD. Guard Tour' and is 'Page 1 of 3'. It was 'Run by: System Admin' on 'Date: 06/18/2023' at '16:11'. The report contains two main entries, each with a table of details.

ID	Guard Tour Name	User ID	Name	Start Time	Tour Duration	Cycle Time	Sequenced
1	Chandrasekhar Nare	2060	Chandrasekhar Nare	22:00	08:00	00:15	No
Door Controller:							
ID	Name	Device	Type				
153	RND2 GF TRIPOD LEFT Door V4	IN FOFW					
163	RND1 Guard Tour PVR PVR Door						
164	NO Guard Tour PVR PVR Door						
2	Tej Bahadur Gurung	2251	Tej Bahadur Gurung	22:00	08:00	00:15	No
Door Controller:							
ID	Name	Device	Type				
153	RND2 GF TRIPOD LEFT Door V4	IN FOFW					
163	RND1 Guard Tour PVR PVR Door						

### Tour Details

This report provides a list of the Guard Tours details as defined in the system.

Configure the Optional Parameters and Tour Selection in Tour details as shown below.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

- **Format Selection:** Select the desired option—**Format 1** or **Format 2**.

*Format 1 can be generated when there are upto 8 devices in the tour only. If there are more than 8 devices this report will not be generated (error "No Data Found" will be displayed).*

*Format 2 does not have any dependency on number of devices.*

### Tour Selection

- **Select Tour:** Select the desired option—**All** or **Tour-Wise**.
- If you select All, click Generate Report. All the details regarding the Tour Guard will be generated.

- If you select **Tour-Wise**, click **Tour** picklist. The **Picklist For Tour** pop-up appears.

## Elevator Floor Group Master

This report lists the details of the specific Elevator Floor Group or All Floor Groups.

Configure the following parameters:

### Elevator Floor Group Selection

- **Select Elevator Floor Group:** Select the desired option — **All**, or **Elevator Floor Group Wise**.
  - If you select **All**, details regarding all the Elevator Floor Group will be included.
  - If you select **Elevator Floor Group Wise**, click the **Elevator Floor Group** picklist. The **Picklist For Elevator Floor Group** pop-up appears.

Picklist For Elevator Floor Group

Total Selected: 0 Records

Search  [Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	EFloorGrp
<input type="checkbox"/>	2	EFloorGrp2
<input type="checkbox"/>	3	EFloorGrp3
<input type="checkbox"/>	4	EFloorGrp4
<input type="checkbox"/>	5	EFloorGrp5

OK Cancel

You can either select particular Elevator Floor Group or can select all Elevator Floor Group at once.

To select particular Elevator Floor Groups, select the check boxes of the desired Elevator Floor Groups.

The screenshot shows a dialog box titled "Picklist For Elevator Floor Group". At the top, a green bar indicates "Total Selected: 2 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. Underneath, there is a "Select All" checkbox which is currently unchecked. The main part of the dialog is a table with three columns: a checkbox, "ID ▲", and "Name". The table contains five rows of data:

<input type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	Elevator Floor Group 1
<input checked="" type="checkbox"/>	2	Elevator Floor Group 2
<input type="checkbox"/>	3	Elevator Floor Group 3
<input type="checkbox"/>	4	Elevator Floor Group 4
<input type="checkbox"/>	5	Elevator Floor Group 5

At the bottom of the dialog are "OK" and "Cancel" buttons.

OR

To select all the Elevator Floor Groups at once, select the **Select All** check box. The Elevator Floor Groups on all the pages will be selected.

The screenshot shows the same dialog box as before, but now the "Select All" checkbox is checked. The table below it shows that all five records are selected, with checkboxes checked in the first column:

<input checked="" type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	Elevator Floor Group 1
<input checked="" type="checkbox"/>	2	Elevator Floor Group 2
<input checked="" type="checkbox"/>	3	Elevator Floor Group 3
<input checked="" type="checkbox"/>	4	Elevator Floor Group 4
<input checked="" type="checkbox"/>	5	Elevator Floor Group 5

The "Total Selected" bar at the top now shows "Total Selected: 5 Records". The "OK" and "Cancel" buttons remain at the bottom.

The selected Elevator Floor Groups appear in the grid.

The screenshot shows the 'Elevator Floor Group Master' window. At the top, there's a 'Select Elevator Floor Group' dropdown set to 'Elevator Floor Group Wise'. Below it is a table with columns 'ID' and 'Name'. The table contains two rows: '1 Elevator Floor Group 1' and '2 Elevator Floor Group 2'. To the right of each row is a trash icon. Below the table is a 'Generate Report For' dropdown set to 'All Users' and a 'Generate Report' button.

You can also delete the desired Elevator Floor Groups. To do so, click **Delete**  of the respective Elevator Floor Group.

- **Generate Report For:** Select the desired option — **All Users, Active Users, Inactive Users.**

Click **Generate Reports**. The report appears as per the set filter.

#### Sample Report

The screenshot shows the 'Elevator Floor Group Master' window with a report displayed. The report header includes 'MATRIX COMSEC PVT. LTD. Elevator Floor Group Master' and 'Page 1 of 1'. The report body contains a table with the following data:

Sr No	Elevator ID	Elevator Name	Floor ID	Floor Name	Time Schedule Group ID	Time Schedule Group Name
1:Elevator Floor Group 1	1	Elevator__1	1	Floor1	Assigned User:0	
4:Elevator Floor Group 4	4	Elevator__4	1	Floor4	Assigned User:0	
5:Elevator Floor Group 5	5	Elevator__5	1	Floor5	Assigned User:0	

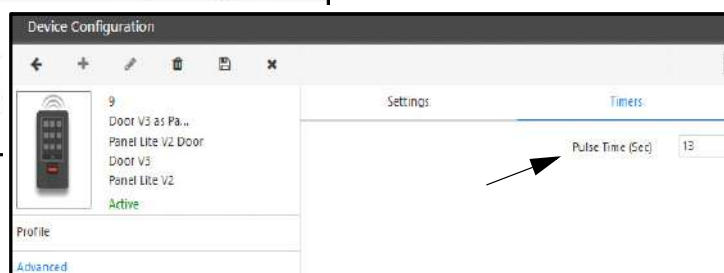

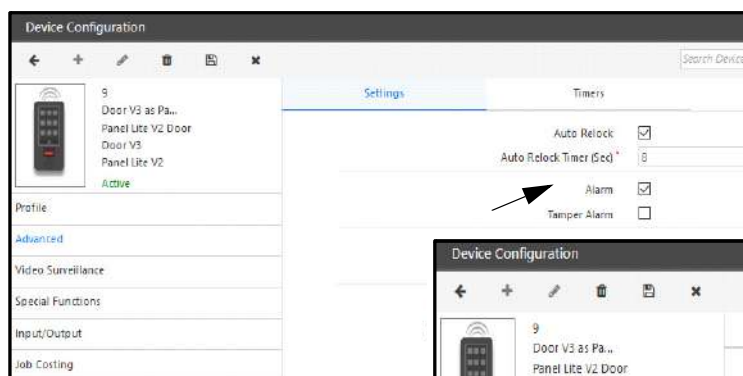

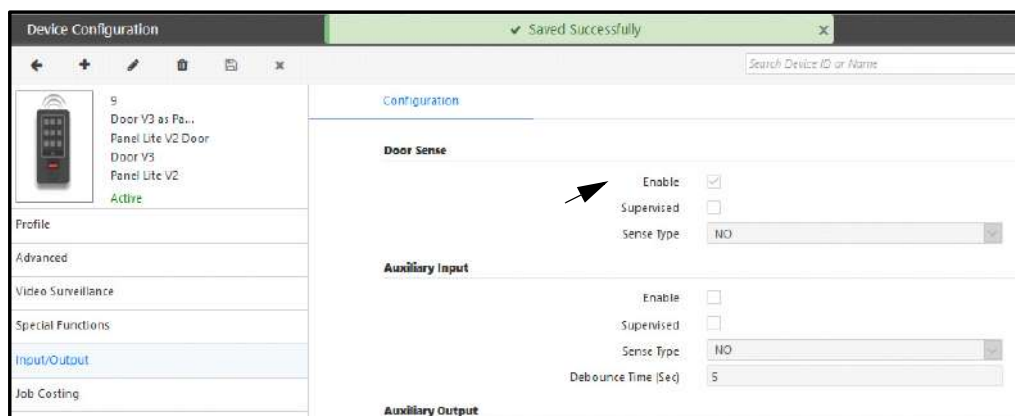

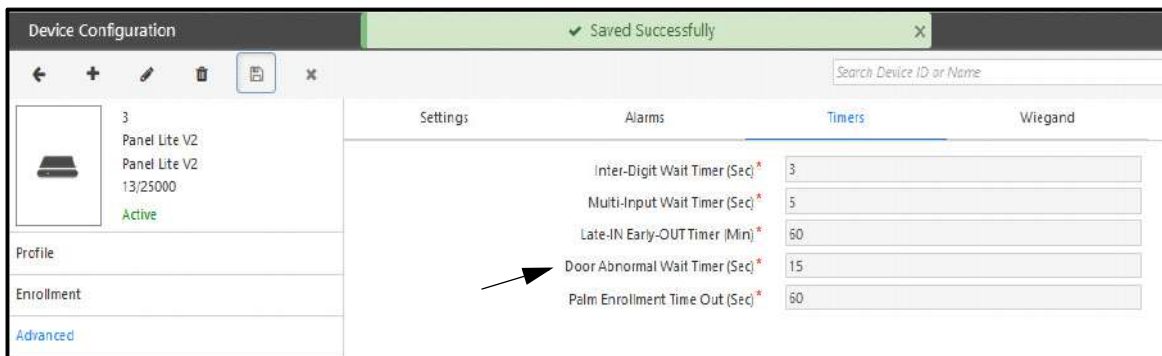

## Door Held Open

This report provides a list of the occasions when the door has been held open for more than the permissible limits.

**Date:** Configure the start and end dates for which the report is be generated.

Click **Generate Reports**.

Make sure the following configurations for Door Abnormal Wait Timer, Door Sense, Enable Alarm, Pulse Timer must be done for the respective doors.

When Door Opens and closes within the Pulse timer duration; then no Alarm will be generated.

		225	28/05/2018 04:40:37 PM	NGT Direct Door	NGT Direct Door-Device-2	Request	← Message Request Received

The user punches on the door and the door opens with **Door Open/Close-Open** event.

When the door remains open for long time i.e. the till the expiry of pulse timer then **Door Held open too long** alarm is generated.

- Eg: User punches at 4:45:30 and Pulse timer duration= 13sec so Door Held Open too long alarm will be generated at 4:45:43

If the door is not closed even after the lapse of pulse timer and remains open till the expiry of Door Abnormal Wait timer then **Door Abnormal Event** alarm is generated.

- Now the Door Abnormal Wait timer= 15sec so after the 15 seconds of Door Held Open alarm i.e. (4:45:43 + 0:00:15= 4:45:58); Door Abnormal Event alarm will be generated at 4:45:58.

## Emergency Evacuation

Generates a list of people who are present and missing in/from a secured zone at the time of emergency.

**Date:** Select the start and end date for which the report is to be generated.

**Time:** Select the start and end time for which the report is to be generated.

### Optional Parameters

- **User Type:** Select the desired option — **Users**, **Visitor**, or **Both**.

If you select **Users** as the User Type, configure the following:

- **Select Site:** Select the desired option — **All** or **Selected**.
  - If you select **All**, the details regarding the Emergency Evacuation for all the sites will be included.
  - If you select **Selected**, click the picklist. The picklist for **Select Sites** pop-up appears.

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	Site 5
6	Site 6
7	Site 7
8	Site 8
9	Site 9
10	Site 10

You can either select particular sites or can select all the sites at once.

To select particular sites, select the check boxes of the desired sites.

The 'Select Sites' dialog box displays a table with 10 records. The first two records, 'Factory' (ID 1) and 'HO' (ID 2), are selected. The 'Total Selected' bar at the top indicates 2 records. The 'Select All' checkbox is unchecked. The pagination shows '1 - 10 of 11 records' and the first page is active.

<input type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	Factory
<input checked="" type="checkbox"/>	2	HO
<input type="checkbox"/>	3	RnD1
<input type="checkbox"/>	4	RnD2
<input type="checkbox"/>	5	Site 5
<input type="checkbox"/>	6	Site 6
<input type="checkbox"/>	7	Site 7
<input type="checkbox"/>	8	Site 8
<input type="checkbox"/>	9	Site 9
<input type="checkbox"/>	10	Site 10

OR

To select all the sites select the **Select All** check box. The sites on all the pages will be selected.

The 'Select Sites' dialog box displays the same table as the first screenshot, but now all 10 records are selected. The 'Total Selected' bar at the top indicates 11 records. The 'Select All' checkbox is checked. The pagination shows '1 - 10 of 11 records' and the first page is active.

<input checked="" type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	Factory
<input checked="" type="checkbox"/>	2	HO
<input checked="" type="checkbox"/>	3	RnD1
<input checked="" type="checkbox"/>	4	RnD2
<input checked="" type="checkbox"/>	5	Site 5
<input checked="" type="checkbox"/>	6	Site 6
<input checked="" type="checkbox"/>	7	Site 7
<input checked="" type="checkbox"/>	8	Site 8
<input checked="" type="checkbox"/>	9	Site 9
<input checked="" type="checkbox"/>	10	Site 10

Click **OK**. All the selected sites appear in a grid.

The screenshot shows a web interface for user selection. At the top, there are dropdowns for 'User Type' (set to 'Users') and 'Select Site' (set to 'Selected'). Below these are input fields for 'ID' and 'Name'. A search bar is located on the left. The main part of the interface is a table with the following data:

ID	Name	
1	Factory	
2	HQ	
3	RnD1	
4	RnD2	

At the bottom, there is a 'Save' button and a dropdown for 'Organization Name in Header As Per' set to 'User Selection'.

You can also delete the desired sites. To do so, click **Delete** icon of the respective sites.

Click **Save**.

## User Selection

- **Select Users:** Select the desired option — **All**, **Group Wise**, or **User Wise**.

If you select **User Wise**, click the **User** picklist. The **Picklist For All Users** pop-up appears.

The screenshot shows a pop-up window titled 'Picklist For All Users'. It has a search bar and a 'Show Selected' link. The main content is a table with the following data:

<input type="checkbox"/>	User ID ▲	Name
<input type="checkbox"/>	1	SALIM ANSARI
<input type="checkbox"/>	10	RAJENDRA GOSWAMI
<input type="checkbox"/>	1001	ANKITKUMAR SOHLIYA
<input type="checkbox"/>	1002	MEGHA H SHUKLA
<input type="checkbox"/>	1003	UMESH M TALANPURI
<input type="checkbox"/>	1004	DARSHAK B PATEL
<input type="checkbox"/>	1007	DHAVAL I PATEL
<input type="checkbox"/>	1008	MAYANK K KORAT
<input type="checkbox"/>	1009	DIPTI K RATHWA
<input type="checkbox"/>	1010	RAHUL S SHAH

At the bottom, there is a pagination bar showing '1 - 10 of 2479 records' and a set of navigation buttons. The 'OK' and 'Cancel' buttons are at the very bottom.

Select the desired check boxes from the list. Click **OK**.

The selected user appears in the grid.

The screenshot shows the 'Select Users' interface. At the top, there is a 'Select Users' dropdown set to 'User Wise'. Below it, there are input fields for 'User ID' and 'Name'. A search bar is present. The main grid displays the following data:

User ID	Name	
1	SALIM ANSARI	
10	RAJENDRA GOSWAMI	
1001	ANVITKUNAR SOHLIYA	
1002	MEGHA H SHUKLA	

At the bottom, there is a 'Generate Report For' dropdown set to 'All Users' and a 'Generate Report' button.

You can also delete the desired user. To do so, click **Delete** of the respective user.

If you select **Group Wise**, select the desired enterprise group from the **Select Group** drop-down list — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

The selected group appears in the grid.

The screenshot shows the 'Select Users' interface with 'Select Users' set to 'Group Wise' and 'Select Group' set to 'Organization'. Below these are input fields for 'Organization ID' and 'Name'. A search bar is present. The main grid displays the following data:

ID	Name	Group	
1	MATRIX COMSEC PVT. LTD.	Organization	
2	SAMARTH	Organization	
3	AVDHOOT	Organization	
4	ELSENGARD	Organization	

At the bottom, there is a 'Generate Report For' dropdown set to 'All Users' and a 'Generate Report' button.

You can also delete the desired groups. To do so, click **Delete** of the respective group.

If you select **All**, then all users will be selected.

- **Generate Report For:** If you have selected **Users** as the User Type, select the desired option — **All Users**, **Active Users**, **Inactive Users**.

If you select **Visitor** as the User Type, configure the following parameters:

- **Select Site:** Select the desired option — **All** or **Selected**.
  - If you select **All**, the details regarding the Emergency Evacuation for all the sites will be included.

- If you select **Selected**, click the picklist. The picklist for **Select Sites** pop-up appears.

The 'Select Sites' pop-up window displays a table with 10 records. The 'Total Selected' status at the top indicates 0 records. The table columns are ID and Name. The records are as follows:

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	Site 5
6	Site 6
7	Site 7
8	Site 8
9	Site 9
10	Site 10

At the bottom, it shows '1 - 10 of 11 records' and navigation buttons. The 'OK' and 'Cancel' buttons are at the very bottom.

You can either select particular sites or can select all the sites at once.

To select particular sites, select the check boxes of the desired sites.

The 'Select Sites' pop-up window displays the same table as before, but now with 2 records selected (IDs 1 and 2). The 'Total Selected' status at the top indicates 2 records. The records are as follows:

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	Site 5
6	Site 6
7	Site 7
8	Site 8
9	Site 9
10	Site 10

The checkboxes for IDs 1 and 2 are checked. The rest of the interface remains the same.

**OR**

To select all the sites select the **Select All** check box. The sites on all the pages will be selected.

The 'Select Sites' pop-up window displays a green header bar with the text 'Total Selected: 0 Records'. Below this is a search bar with the placeholder 'Search' and a magnifying glass icon, and a 'Show Selected' link. A 'Select All' checkbox is present. The main area contains a table with columns 'ID' and 'Name'. The table lists 10 records: Factory, HO, RnD1, RnD2, Site 5, Site 6, Site 7, Site 8, Site 9, and Site 10. Each record has an unchecked checkbox in the 'ID' column. At the bottom, it shows '1 - 10 of 11 records' and a pagination control with '1' selected. 'OK' and 'Cancel' buttons are at the bottom.

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	Site 5
6	Site 6
7	Site 7
8	Site 8
9	Site 9
10	Site 10

You can either select particular sites or can select all the sites at once.

To select particular sites, select the check boxes of the desired sites.

The 'Select Sites' pop-up window displays a green header bar with the text 'Total Selected: 2 Records'. Below this is a search bar with the placeholder 'Search' and a magnifying glass icon, and a 'Show Selected' link. A 'Select All' checkbox is present. The main area contains a table with columns 'ID' and 'Name'. The table lists 10 records: Factory, HO, RnD1, RnD2, Site 5, Site 6, Site 7, Site 8, Site 9, and Site 10. The checkboxes for 'Factory' (ID 1) and 'HO' (ID 2) are checked. At the bottom, it shows '1 - 10 of 11 records' and a pagination control with '1' selected. 'OK' and 'Cancel' buttons are at the bottom.

The COSEC Web based Time-Attendance Module enables organization to customize various time-attendance policies like Late-In, Overtime, C-OFF etc for the users and automate them. It allows an organization to have different time schedules and holidays for its different facilities. Elaborate reports and views are also available for people working at different levels.

The COSEC Time and Attendance system is a combination of hardware and software where

- Hardware is used to record time of an user from a credential and
- Software is used to process the time according to the Attendance Policy.

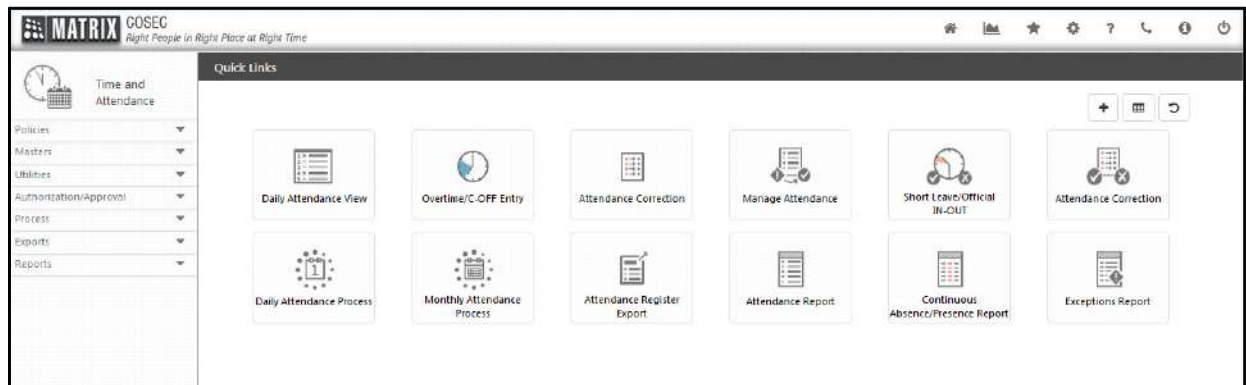

The **Benefits** of Time and Attendance system are mentioned as below:

- Eliminate human error in employee time records.
- Prevent buddy punching and fraudulent time keeping records.
- Significantly increase employee and manager satisfaction.
- Cut down on administrative time and cost.
- Monitor and analyze absence to reduce impact on productivity.
- Significantly cut down on payroll processing time.
- Adapt to existing HR policies.
- Eliminate payments for unapproved or fraudulent overtime.
- Give employees self-service access.

The **Features** of Time and Attendance system are mentioned as below:

- Support for Multiple working shift time
- User wise Late In & Early Out Policy, Overtime Policy, Compensatory OFF Policy
- User wise Absentee Policy for Week off and Holiday
- Manual Entry and Correction
- Past Adjustment
- Authorization
- Integration with Payroll
- SMS and E-mail Alert Notification
- View Attendance Details

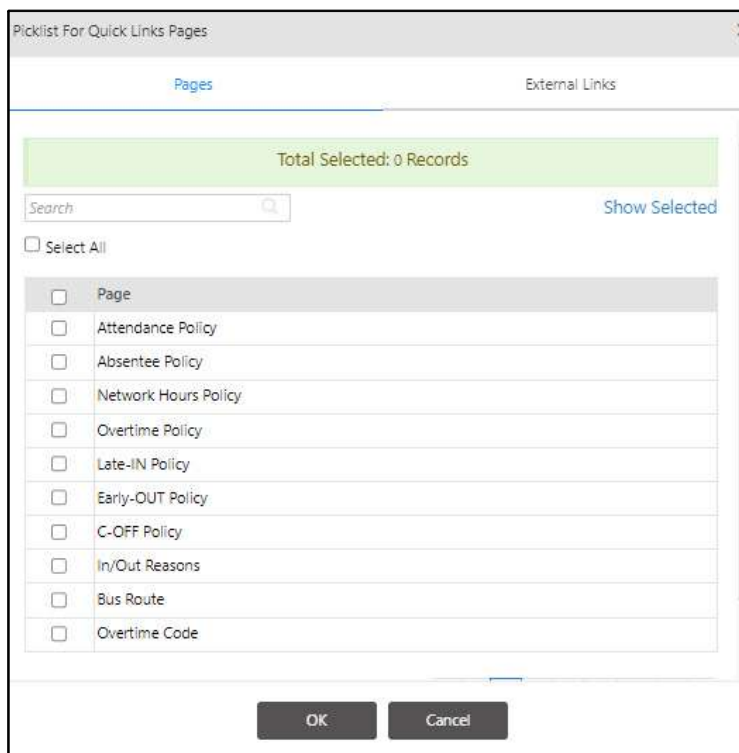

To use the Time and Attendance functionality, select the **Time and Attendance** module icon  on the module selection page. The **Time and Attendance** page appears on the screen as shown below.

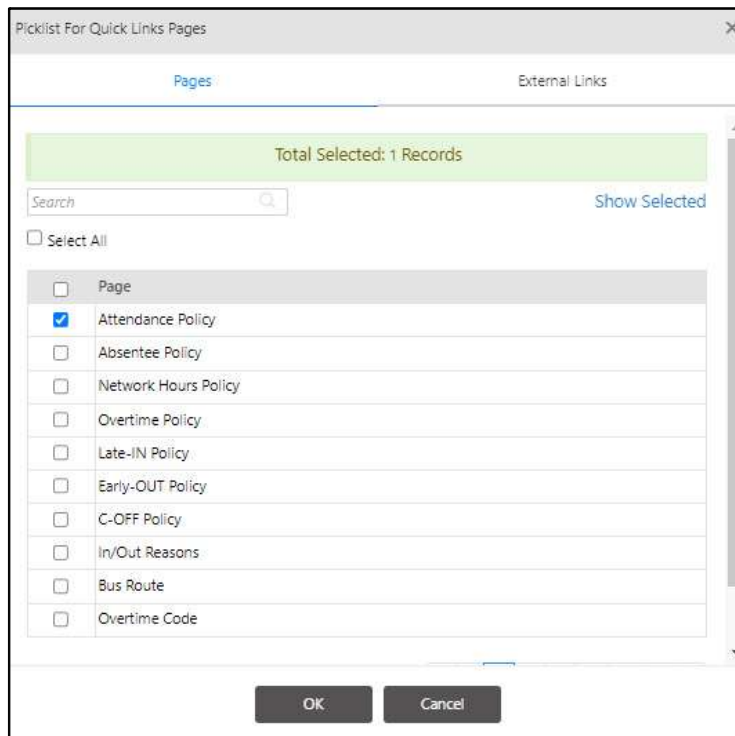

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link, Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

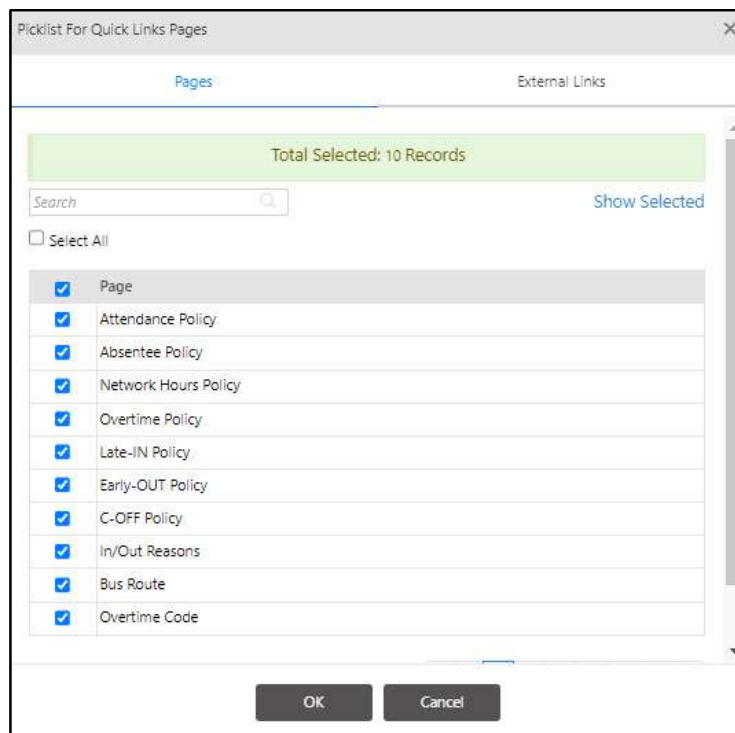

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

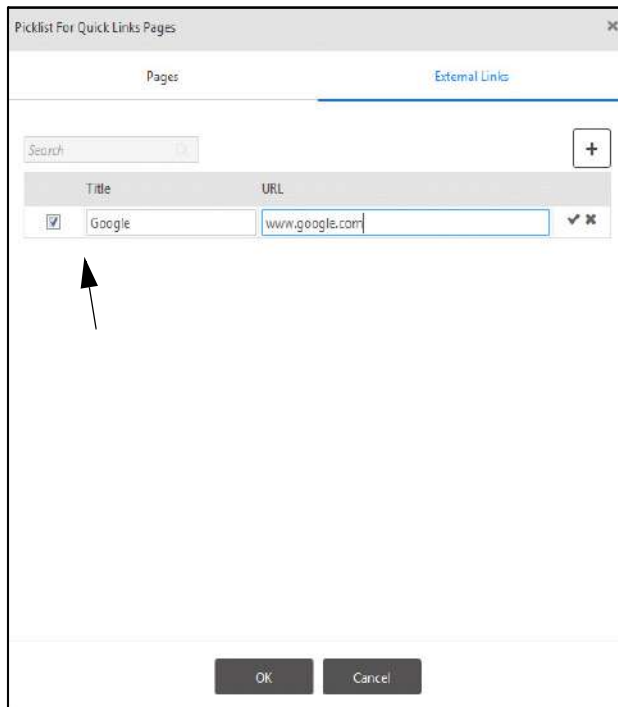

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

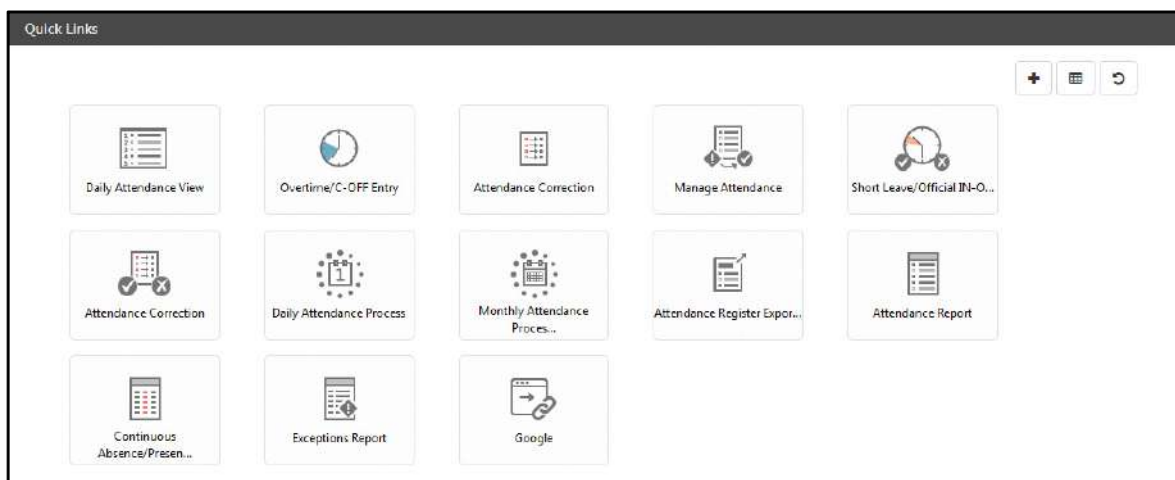

## Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the checkbox to display the Quick Link for the configured link.

Title	URL
<input checked="" type="checkbox"/> Google	www.google.com

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

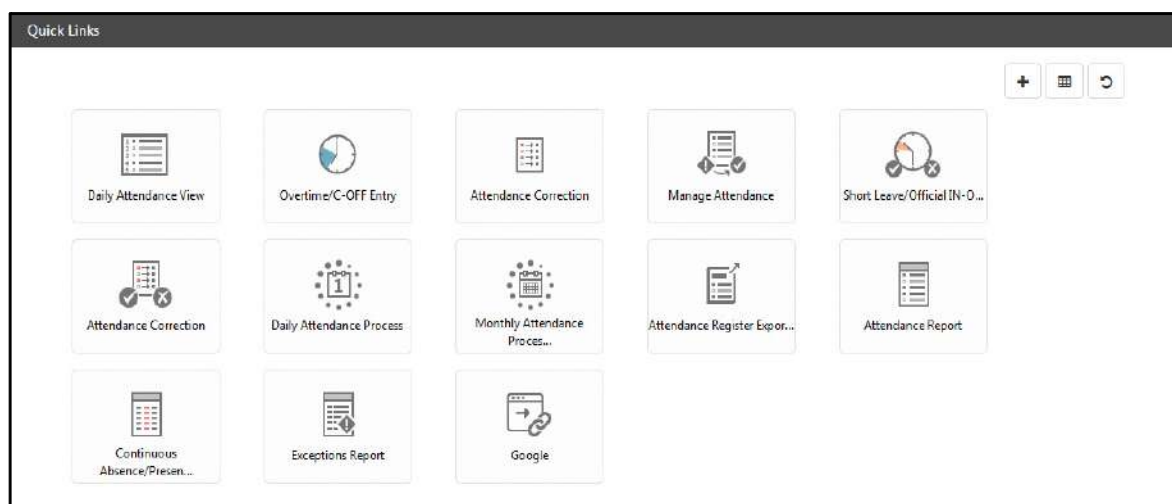

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

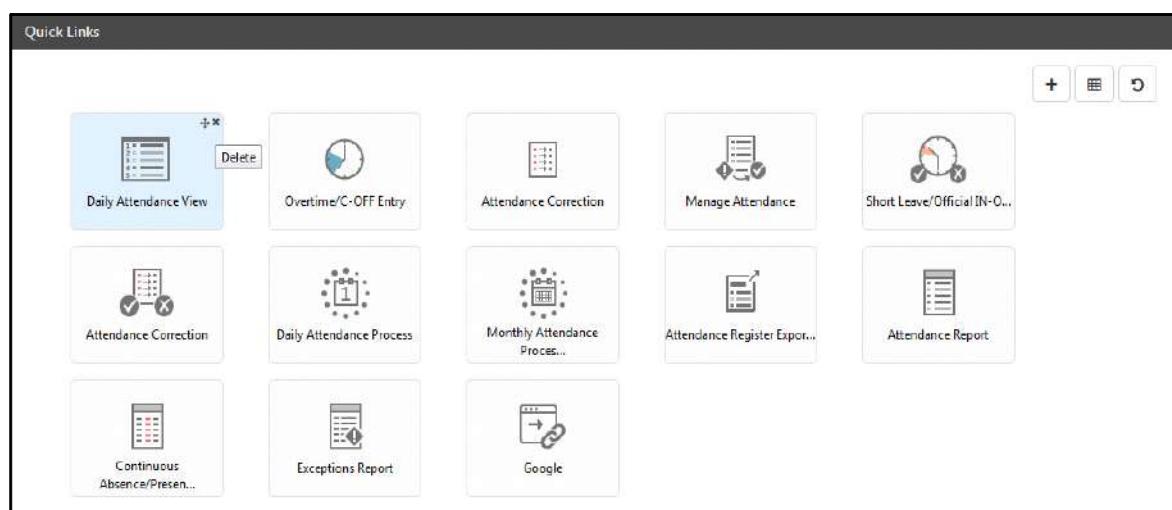

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

Quick links are displayed as per rights given to System Account and ESS users.

## Time and Attendance Dashboard

To view the Dashboard, click the Dashboard button  on the **Time and Attendance** page. It displays basic information of the module under the following categories:

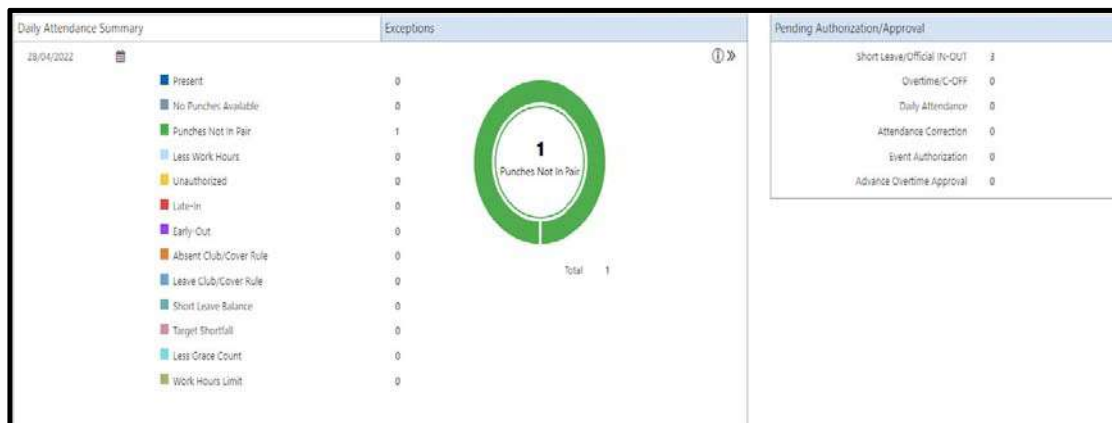

### Daily Attendance Summary

**Total Users:** Total No. of active T&A users.

- **Reported:** Total No. of users who have shifts scheduled on the current day and at least one punch as well.
- **Not Yet Reported:** Total no. of all unreported users whose punches are unavailable for current date, though their shift is scheduled and are not on Week-Off, Public Holiday, Leave or Tour.
- **On Leave:** Total No. of leaves on the current day.
- **On Tour:** Total No. of tours on the current day.
- **On Week Off:** Total No. of users on Week Off on the current day.
- **On Holiday:** Total No. of users on holiday on the current day.
- **On Field Break:** Total No. of users on field break on the current day.
- **On Rest Day:** Total No. of users on rest day on the current day.

**Scheduled Users:** Total no. of active users whose working shift is scheduled for the current day.

**Scheduled Shifts:** Total no. of scheduled shifts for the current day.

## Exceptions

- **Present:** Total No. of users who have punched for current day.
- **No Punches Available:** Total No. of users whose punches are not available for current day.
- **Punches Not in Pair:** Total No. of users whose punches are not in pair for current day.
- **Less Work Hours:** Total No. of users whose working hours are less than the required hours to complete the shift for the current day.
- **Unauthorized:** Total No. of users whose punches are not authorized for current day.
- **Late-IN:** Total No. of users who have started their shift late on the current day.
- **Early-OUT:** Total No. of users who have left their work early on the current day.
- **Absent Club/Cover Rule:** Total No. of users who are Absent due to club/cover rule on current day.
- **Leave Club/Cover Rule:** Total No. of users who are Absent due to leave club/cover rule on current day.
- **Short Leave Balance:** Total No. of users who are Absent due to exceeding limit of short leave balance.
- **Target Shortfall:** Total No. of users who are Absent due to target shortfall.
- **Less Grace Count:** Total No. of users who are Absent due to exceeding limit of allowed less grace count in flexible shift.
- **Work Hours Limit:** Total No. of users who are Absent due to exceeding work hours limit.

## Pending Authorization/Approval

- **Short Leave/ Official IN-OUT** - Total No. of pending applications for Short Leave and Official IN-OUT marking.
- **Overtime/C-OFF:** Total No. of pending applications for overtime/C-OFF approval.
- **Daily Attendance:** Total No. of all users who need to be authorized daily for attendance.
- **Attendance Correction:** Total No. of pending applications for attendance correction.
- **Event Authorization:** Total No. of events pending for authorization.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The Latest values on Dashboard are updated on clicking the **Refresh**  button.

# Attendance Policy

---

An Attendance Policy can be defined as a set of rules governing the attendance system that an organization follows for payroll calculation purposes. COSEC has a provision for administrators to configure such policies as per the company standards and regulations.

Different organizations follow different attendance policies, depending on which, resultant factors such as attendance period, attendance summary, attendance marking and previous attendance adjustments vary. The Attendance Policy option enables users to define policies as per site requirements. Later, each policy can be linked with a user or group of users.

[“General Parameters”](#)

[“Short Leave/Official Hours Restrictions Parameters”](#)

[“Absent Marking Rule”](#)

[“Auto Attendance Correction”](#)

[“Flexible Working Settings”](#)

[“Attendance Correction-Short Leave/Official Hours Application Restrictions”](#)

To define an Attendance Policy, Select the **Time & Attendance module > Policies> Attendance Policy**.

The **Attendance Policy** page appears on your screen as follows:

The screenshot displays the 'Attendance Policy' configuration window. At the top, there are fields for 'Attendance Policy' (ID: 1) and 'Attendance Policy-1'. Below these is a 'Default' checkbox which is checked. The 'Attendance Period' is set to 'Calendar Month'. Under 'Yearly Period For Leave Balance', the 'Start-End Month' is set from 'January' to 'December'. The bottom section contains several expandable tabs: 'General', 'Short Leave/Official Hours Restrictions', 'Absent Marking Rule', 'Auto Attendance Correction', 'Flexible Working Settings', and 'Attendance Correction-Short Leave/Official Hours Application Restrictions'.

Click the **New** button to define a new Attendance Policy.

**Attendance Policy:** Enter a user-friendly name for the Attendance Policy. The ID will auto generated by the system.

**Default:** Select this checkbox if the new Attendance Policy is to be set as default. The new users will be linked with this Attendance Policy by default. You can change the attendance policy of user from User Configuration > T&A> Policy.

**Attendance Period:** Select the attendance period for the policy as Calendar Month or Customized.

- **Calendar Month:** This option allows the user to set the attendance period as per the calendar month.

- **Customized:** This option enables the user to define the customized start date of the month. In this case the system will automatically calculate the end date as follows:

Attendance Period	Customized
Month Start-End Date	25 24

**Example1:** 25th August 2016 to 24th September 2016 is considered as the attendance month of September 2016.

The shift schedule for a user (who is joining on 1st sept) for the month of September is shown as below.

User

749

Vivek

Attendance Period

September

2016

Mon	Tue	Wed	Thu	Fri	Sat	Sun
			25	26	27	28
29	30	31	1	2	3	4
GS	GS	GS	GS	GS	GS	GS WO
5	6	7	8	9	10	11
GS	GS	GS	GS	GS	GS WO	GS WO
12	13	14	15	16	17	18
GS	GS	GS	GS	GS	GS	GS WO
19	20	21	22	23	24	
GS	GS	GS	GS	GS	GS WO	

**Example2:** If Month Start-End is 15 to 14. Then from 15th August 2016 to 14th September 2016 is considered for the September 2016. If user joins on 1st September; then only 14 days will be counted in his attendance period of September month.

- **Yearly Period For Leave Balance:** Specify the starting month of the calendar year from which the system will start calculating the Leave Balance. The system automatically calculates the ending month as shown.

Yearly Period For Leave Balance	
Start-End Month	January December

Once the above parameters have been defined, you can configure the other parameters on this page as discussed in the following sections.

## General Parameters

On the *Attendance Policy* page, expand the **General** panel. The **General** section enables the administrator to configure the following parameters.

The screenshot shows the 'General' configuration panel. It includes the following settings:

- Max Punches To Consider**: A dropdown menu set to '2'.
- Deduct Out Time**: A dropdown menu set to 'Always' and a text input field set to '1-999' Mins.
- Duplicate Punch Period (Mins)**: A text input field set to '0'.
- Out Punch From Exit Reader**: An unchecked checkbox.
- Always Mark First Punch As IN Punch**: An unchecked checkbox.
- Event Authorization**: A section header.
- Authorization Required**: A checked checkbox with an information icon.
- Event Source**: A list of checkboxes, all of which are checked: 'Device', 'ESS', 'User Assigned Locations', 'User Unassigned Locations', and 'Others'.
- Auth Required for at least one Event of the day**: An unchecked checkbox with an information icon.
- Daily Attendance Authorization Required**: A checked checkbox.
- Biometric Credential Must For Attendance**: An unchecked checkbox.
- Extra Hours Checked With Auth OT/C-OFF**: A checked checkbox.
- Auto Shift Correction**: An unchecked checkbox.

The screenshot shows the 'Attendance Process Calibration' configuration panel. It includes the following settings:

- Auto Shift Correction**: An unchecked checkbox.
- Attendance Correction In Closed Period**: A checked checkbox.
- Adjustment Generated For Closed Period**: An unchecked checkbox.
- Valid Period For Adjustment (Months)**: A text input field set to '0'.
- Attendance Process Calibration**: A section header.
- Enable**: An unchecked checkbox.
- Max Early-IN Allowed (Hrs)**: A text input field with a placeholder 'HH:MM'.
- Max Late-OUT Allowed (Hrs)**: A text input field with a placeholder 'HH:MM'.
- Priority**: A dropdown menu set to 'Early-IN (Next Shift)'.
- Max Working Hours Per Day (Hrs)**: A text input field with a placeholder 'HH:MM'.

- **Maximum Punches to Consider:** This parameter enables the user to define the maximum number of punches per day which would be considered as a valid punch to be used in the Attendance calculation of the users. The values which can be assigned to this parameter are limited to 2, 4, 6, 8, 10 or 12, N.

### Example: 4 punch user

The first and last punch of the user is displayed in First IN and Last OUT columns of Daily Attendance view. The other punches (for example: 2nd and 3rd punch for **4 punch user**) can be viewed from Attendance Correction page as shown below:

Date	Shift	First IN	Last OUT	1st Half	2nd Half
01/09/2016	GS	08:00	19:00	PR	PR

Attendance Correction

<b>1 IN</b> Date: 01/09/2016 Time: 08:00 Special Function: IN Reason: 	<b>2 OUT</b> Date: 01/09/2016 Time: 10:00 Special Function: OUT Reason: 
<b>3 IN</b> Date: 01/09/2016 Time: 11:00 Special Function: IN Reason: 	<b>4 OUT</b> Date: 01/09/2016 Time: 19:00 Special Function: OUT Reason: 

- **Deduct Out Time:** For N-punch user, you can select the option to deduct the out timings from the total work hours.
  - **Always:** When Always is selected, then out timings will be deducted always.
  - **Beyond:** For “Beyond” option, specify the time in minutes, beyond which the out timings will be deducted from the working hours.
  - **If Greater than:** For “If Greater than” option, specify the time in minutes. If out time is greater than the specified time then the out timings will be deducted from the working hours.

Punches	Punch timings	Always	Beyond 15 minutes	Greater than 15 minutes
		OUT Time	OUT Time	OUT Time
IN Punch	09:00			
OUT Punch	10:00			
IN Punch	10:30	00:30	00:15 (30 mins -15 mins)	00:30 (actual 30 min outtime)
OUT Punch	12:00			
IN Punch	15:00	03:00	02:45 (3 hrs-15 mins)	03:00 (actual 3 hrs outtime)
OUT Punch	16:00			
IN Punch	16:05	00:05		
OUT Punch	21:00			
<b>N-Punch Hours</b>		08:25 hours	09:00 hours	08:30 hours
<b>Total OUT Time</b>		03:35 hours	03:00 hours	03:30 hours

- **Duplicate Punch Period (mins):** This parameter enables the user to define the time period in minutes between punches, which would be considered by the system as a duplicate punch. If the system identifies a duplicate punch then the first punch of the day will be considered as the IN punch and the last punch of the day will be considered as the OUT punch.

Now you can click **Save** button to save the Attendance Policy as shown below.

- **Out Punch from Exit Reader:** Select this checkbox to enable OUT punches to be allowed only on an Exit Reader. Hence an employee's exit event will be identified only when the OUT punch is made at an Exit Reader. To use this functionality it is essential to have either an external reader or another DOOR which is configured as an Exit reader or DOOR.

*If this box is left unchecked, the system considers the first punch of the day as the IN punch and the last punch of the day as the OUT punch. Hence, to enable this functionality, the Administrator needs to ensure that all the out punches occur only at the readers whose mode is defined as Exit.*

If this checkbox is enabled and device is not in exit mode, then out punch will not be shown.

**For example:** The N punch user is punching on the same device. His all the punches are shown as IN punch. And the Out time is not shown.

Device - Door V3-Device-9	IN	05/09/2016	13:01				
Device - Door V3-Device-9	IN	05/09/2016	20:00				

After the Daily Attendance process, the user will be marked Absent on that day as shown below:

*This will be enabled only if Automatic OT and C-OFF authorization is disabled in corresponding policy rules in the Time & Attendance module.*

- **Auto Shift Correction:** This parameter enables the user to specify whether shift correction is required to be done manually or automatically by the system. If this option is enabled, the HR user need not go and manually edit the shift.

*Shift correction is possible only among shifts in the same schedule group.*

*If Shift Changes have been done manually for the selected dates/day, then Auto Shift Correction will not be applicable.*

- **Allow Attendance Correction in Closed Period:** If this parameter is enabled then the system will permit users to edit data of previously closed attendance period.
- **Adjustment Generated For Closed Period:** This parameter enables the user to allow the system to calculate adjustments based on the corrections made for the previous paid attendance period.
- **Valid Period for Adjustment (Months):** This parameter enables the user to specify the maximum number of attendance periods in months allowed for previous adjustment calculations.

## Attendance Process Calibration

These Attendance processing parameters can be calibrated to determine how a user's punch is posted on COSEC. Select the Enable checkbox to enable the feature for all users on whom this policy is assigned.

- **Max Early-IN Allowed (Hrs):** Maximum number of hours before shift-start time during which a punch should be considered as an Early-IN punch. Default value is 02:00 hours.
- **Max Late-OUT Allowed (Hrs):** Maximum number of hours after shift-end time during which a punch should be considered as a Late-OUT punch. Default value is 02:00 hours.
- **Priority:** This parameter assigns posting priority to an intermediate punch between two shifts. The administrator can determine whether such a punch is to be posted as an Early-IN punch for the next shift or a Late-OUT punch for the previous shift.
- **Max Working Hours Per Day (Hrs):** The maximum number of working hours to be considered per day for punch posting. All punches falling within this duration will be posted for the same day as per shift-based priority (if any). Default value is 16:00 hours.

Attendance Process Calibration parameters can also be defined at the global system level. For more details, refer to, ["Time Attendance Policy"](#) in ["Defining Global Policies"](#).

## Short Leave/Official Hours Restrictions Parameters

The administrator can define certain restrictions on employees for reporting late or leaving earlier than the official shift timings. A Short Leave is a personal time concession on official work hours, that an employee is permitted to take in addition to official breaks. This option enables the administrator to configure the parameters related to short leaves and official hours restrictions as shown.

The user can use/apply short leave when he has used late-in or early-out more than the number of times allowed. So using short leave converts the absent punches to present. See ["Applying Short leave on Late-IN occurrences"](#).

Short leave hours availed are not required to be compensated by working extra hours.

## Short Leave Check In Attendance Period

- **Enable:** Select this checkbox to enable a check on the number of times a short leave can be taken over a defined period of time.
- **Maximum Minutes Allowed:** Define the maximum number of minutes in a month that can be permitted for Short Leave.
- **Maximum Count Allowed:** Define the maximum number of Short leaves to be allowed in an attendance period.

## Duration Check Per Short Leave Entry

- **Enable:** Select this checkbox if you want to enable a check on the duration of a Short Leave.
- **Minimum Duration (In Minutes):** Specify the minimum duration (in minutes) allowed in a day for Short Leave.

- **Maximum Duration (In Minutes):** Specify the maximum duration (in minutes) allowed in a day for Short Leave. This duration has to be greater than the minimum personal duration allowed.
- **Range Based Short Leave:** Select this checkbox to enable short leave deduction on the basis of availed short leave duration when a short leave is applied.
- **Range (In Minutes):** Click Add and specify the range (in minutes) for Short Leave duration based on which deduction is to be calculated.
- **Deduction:** Specify the deduction to be made from user's available short leave count for the range defined. Click the OK button to save the range and the deduction. User can define multiple ranges and save them in the policy, as shown below.

**Example:** If range is from 30min to 60min and short leave count deduction is 1; Then if user takes short leave o duration in the specified range say 45min, then 1 short leave will be deducted.

Range (From)	Range (To)	Deduction
30	60	1
61	90	2
91	180	3

## Consider Grace In Short Leave

This option enables a grace period to be considered in addition to Short Leave duration. Enable the following options for the type of grace period to be added to the short leave duration:

- For Shift Late-IN (Late entry)
- For Shift Early-OUT (Early exit)
- For Break Late-IN (Late entry after break)
- For Break Early-OUT (Early exit for break)

Say, the short leave duration is 30 minutes and the Shift Late-IN option is enabled (say, grace period is 30 minutes), then the short leave duration can be stretched upto a maximum of 120 minutes.

For Shift Late-IN	<input type="checkbox"/>
For Shift Early-OUT	<input type="checkbox"/>
For Break Late-IN	<input type="checkbox"/>
For Break Early-OUT	<input type="checkbox"/>
Short Leave Authorization Required	<input type="checkbox"/>
Add Short Leave Hours In Work Hours	<input type="checkbox"/>
Official IN/OUT Authorization Required	<input type="checkbox"/>
Add Official Hours In Work Hours	<input type="checkbox"/>
Club Short Leave / Official With Break	<input checked="" type="checkbox"/>

## Authorization for Short leave/Official hours

- **Short Leave Authorization Required:** Select this checkbox to enable a requirement for authorization in order to take a Short Leave.

**Eg:** If employee makes Entry for short leave from ESS, then his application goes for authorization to his reporting incharge.

- **Add Short Leave Hours in Work Hours:** Select the checkbox to enable the inclusion of short leave hours in work hours.

**Eg:** If shift working hrs is 9 hours, and short leave allowed is 1hour. Employee takes short leave of 1hr on 6/7/16. Then total working hours on 6th will be considered as 9 hrs though he has worked only for 8 hours.

- **Official IN/OUT Authorization Required:** Check this box if the Official hours occurrences have to be further authorized by a supervisor before regularization.

**Eg:** If employee makes Entry for Official In/OUT from ESS, then his application goes for authorization to his reporting in-charge

- **Add Official Hours In Work Hours:** In the event of this parameter being enabled the system will include the official hours in the working hours calculation.

**Eg:** If shift working hrs is 9 hours. The employee goes for official work and spends 3 hours. So If this check box is enabled then 3 hrs will be counted in total work hours.

- **Club Short Leave/Official with Break:** Select the checkbox to enable the inclusion of short leave or official hours with Break hours.

This checkbox will be enabled by default. So any 2nd and 3rd punch (official or short leave) will be considered as break punches.

If this checkbox is disabled then system will consider the punch pair as break punches when it is not accompanied with any special function or with break special function. For flexible users, Break-Duration will be calculated when 2 punches are made.

## Absent Marking Rule

This option enables the administrator to configure the parameters relating to the Late In and Early Out rules of the organization as shown.

The screenshot shows a web-based configuration window titled "Absent Marking Rule". It contains four main sections for configuring different types of absent marking rules:

- Late-IN/Early-OUT Check:** Includes "Marking Type As Per" (set to "Monthly Count") and "Mode" (set to "Independent").
- Late-IN Occurrence Check:** Includes an "Enable" checkbox (unchecked), "Maximum Allowed Count Per Month" (set to "0"), "Calculation Basis" (set to "Continuous"), and "Action on Exceeding Max Late-IN Allowed" (set to "Half Day Absent").
- Early-OUT Occurrence Check:** Includes an "Enable" checkbox (unchecked), "Maximum Allowed Count Per Month" (set to "0"), "Calculation Basis" (set to "Continuous"), and "Action on Exceeding Max Early-OUT Allowed" (set to "Half Day Absent").
- Less Working Hours Check:** Includes an "Enable" checkbox (unchecked), "Daily Allowed Limit (Min)" (set to "0"), "Mark Absent As Per" (set to "Monthly Count"), "Monthly Allowed Count" (set to "7-31"), "Absent Marking Type" (set to "Continuous"), and "Mark Absent" (set to "Half Day").

### Late-IN/Early-OUT Check

- **Marking Type As Per:** Select the desired option — Monthly Count or Monthly Duration.

If you select **Monthly Count** then maximum allowed Late-IN and Early-OUT will have to be specified in terms of count, whereas if you select **Monthly Duration**, it must be specified in terms of duration (mins).

- **Mode:** Select the desired option — Combined, Independent.

If you select **Combined** the parameters to be configured will be applicable for both Late-IN and Early-OUT.

If you select **Independent**, you need to configure the Late-IN and Early-OUT parameters independently.

## Combined Mode

If you select **Mode** as **Combined** and have selected **Monthly Count** as the **Marking Type As Per** option.

Absent Marking Rule	
<b>Late-IN/Early-OUT Check</b>	
Marking Type As Per	Monthly Count
Mode	Combined
Maximum Late-IN/Early-OUT Allowed Count	3
Calculation Basis	Slab Wise
Action on Exceeding Max Late-IN Allowed	Half Day Absent
Action on Exceeding Max Early-OUT Allowed	Half Day Absent

- **Maximum Late-IN/Early-OUT Allowed Count:** Specify the maximum allowed count for Late-IN or Early-OUT occurrences after which the configured option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Late-IN/Early-OUT Allowed Count** is reached, every Late-IN or Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed**.

If you select In **Slab Wise**, after the **Maximum Late-IN/Early-OUT Allowed Count** is reached, every Late-IN or Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed** and then the count/duration will be reset after the Monthly Attendance Process.

Refer to the examples.

- **Action on Exceeding Max Late-IN Allowed:** After the **Maximum Late-IN/Early-OUT Allowed Count** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

*For Debit Half Day Leave/Debit Full Day Leave options, make sure:*

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

*If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Late-IN Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Late-IN will also be reset*

- **Action on Exceeding Max Early-OUT Allowed:** After the **Maximum Late-IN/Early-OUT Allowed Count** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

For Debit Half Day Leave/Debit Full Day Leave options, make sure:

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Early-OUT Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Early-OUT will also be reset

If you select **Mode** as **Combined** and have selected **Monthly Duration** as the **Marking Type As Per** option.

- **Maximum Late-IN/Early-OUT Allowed (Min):** Specify the maximum allowed minutes for Late-IN or Early-OUT occurrences after which the configured option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Late-IN/Early-OUT Allowed (Min)** is reached, every Late-IN or Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed**.

If you select In **Slab Wise**, after the **Maximum Late-IN/Early-OUT Allowed (Min)** is reached, every Late-IN or Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed/Action on Exceeding Max Early-OUT Allowed** and then the count/duration will be reset after Monthly Attendance Process.

Refer to the examples.

- **Action on Exceeding Max Late-IN Allowed:** After the **Maximum Late-IN/Early-OUT Allowed Count/Maximum Late-IN/Early-OUT Allowed (Min)** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

For Debit Half Day Leave/Debit Full Day Leave options, make sure:

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Late-IN Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Late-IN will also be reset

- **Action on Exceeding Max Early-OUT Allowed:** After the **Maximum Late-IN/Early-OUT Allowed Count/Maximum Late-IN/Early-OUT Allowed (Min)** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

For Debit Half Day Leave/Debit Full Day Leave options, make sure:

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Early-OUT Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Early-OUT will also be reset

## Independent Mode

If you select **Mode** as **Independent**, you need to configure the Late-IN and Early-OUT parameters independently.

If you select **Mode** as **Independent** and have selected **Monthly Count** as the **Marking Type As Per** option.

**Absent Marking Rule**

**Late-IN/Early-OUT Check**

Marking Type As Per: Monthly Count

Mode: Independent

**Late-IN Occurrence Check**

Enable: ☐

Maximum Allowed Count Per Month: 0

Calculation Basis: Continuous

Action on Exceeding Max Late-IN Allowed: Half Day Absent

**Early-OUT Occurrence Check**

Enable: ☐

Maximum Allowed Count Per Month: 0

Calculation Basis: Continuous

Action on Exceeding Max Early-OUT Allowed: Half Day Absent

### Late-IN Occurrence Check

- **Enable:** Select the check box to enable. A check will be kept on the number of Late-IN occurrences within a defined attendance period.
- **Maximum Allowed Count Per Month:** Specify the maximum allowed count for Late-IN occurrences after which the configured option set in **Action on Exceeding Max Late-IN Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Allowed Count Per Month** is reached, every Late-IN occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed**.

If you select In **Slab Wise**, after the **Maximum Allowed Count Per Month** is reached, every Late-IN occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed** and then the count will be reset after Monthly Attendance Process.

Refer to the examples.

- **Action on Exceeding Max Late-IN Allowed:** After the **Maximum Allowed Count Per Month** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

*For Debit Half Day Leave/Debit Full Day Leave options, make sure:*

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

*If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Late-IN Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Late-IN will also be reset*

### Early-OUT Occurrence Check

- **Enable:** Select the check box to enable. A check will be kept on the number of Early-OUT occurrences within a defined attendance period.
- **Maximum Allowed Count Per Month:** Specify the maximum allowed count for Early-OUT occurrences after which the configured option set in **Action on Exceeding Max Early-OUT Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Allowed Count Per Month** is reached, every Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Early-OUT Allowed**.

If you select In **Slab Wise**, after the **Maximum Allowed Count Per Month** is reached, every Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Early-OUT Allowed** and then the count will be reset after Monthly Attendance Process.

- **Action on Exceeding Max Early-OUT Allowed:** After the **Maximum Allowed Count Per Month** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

For Debit Half Day Leave/Debit Full Day Leave options, make sure:

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Early-OUT Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Early-OUT will also be reset

If you select **Mode** as **Independent** and have selected **Monthly Duration** as the **Marking Type As Per** option.

### Late-IN Occurrence Check

- **Enable:** Select the check box to enable. A check will be kept on the duration of Late-IN occurrences within a defined attendance period.
- **Maximum Late-IN Allowed (Min):** Specify the maximum allowed duration for Late-IN occurrences after which the configured option set in **Action on Exceeding Max Late-IN Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Late-IN Allowed (Min)** is reached, every Late-IN occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed**.

If you select In **Slab Wise**, after the **Maximum Late-IN Allowed (Min)** is reached, every Late-IN occurrence will be marked as per the option set in **Action on Exceeding Max Late-IN Allowed** and then the duration will be reset after Monthly Attendance Process.

Refer to the examples.

- **Action on Exceeding Max Late-IN Allowed:** After the **Maximum Late-IN Allowed (Min)** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

*For Debit Half Day Leave/Debit Full Day Leave options, make sure:*

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

*If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Late-IN Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Late-IN will also be reset*

### Early-OUT Occurrence Check

- **Enable:** Select the check box to enable. A check will be kept on the duration of Early-OUT occurrences within a defined attendance period.
- **Maximum Early-OUT Allowed (Min):** Specify the maximum allowed duration for Early-OUT occurrences after which the configured option set in **Action on Exceeding Max Early-OUT Allowed** should be executed.
- **Calculation Basis:** Select the desired option — **Continuous** or **Slab Wise**.

If you select **Continuous**, after the **Maximum Early-OUT Allowed (Min)** is reached, every Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Early-OUT Allowed**.

If you select In **Slab Wise**, after the **Maximum Early-OUT Allowed (Min)** is reached, every Early-OUT occurrence will be marked as per the option set in **Action on Exceeding Max Early-OUT Allowed** and then the duration will be reset after Monthly Attendance Process.

Refer to the examples.

- **Action on Exceeding Max Early-OUT Allowed:** After the **Maximum Early-OUT Allowed (Min)** is reached, select the desired action to be taken — Half Day Absent, Full Day Absent, Debit Half Day Leave, Debit Full Day Leave.

*For Debit Half Day Leave/Debit Full Day Leave options, make sure:*

- User is assigned a Leave Group in which any Paid Leave type with **Enable Balance Check** check box enabled.
- User is assigned a Leave Group with **Auto Debit Leave** check box enabled against the desired Paid Leave type.
- Attendance Policy with Debit Leave option configured as **Action on Exceeding Max Late-IN** or **Early-OUT** or both allowed is assigned to the user.

*If on a particular date if Half Day Absent/Full Day Absent is marked for a user due to **Action on Exceeding Max Early-OUT Allowed** and a Leave is found for the same date, then in such a case the user will not be marked as Absent and the Count of Early-OUT will also be reset.*

## Less Working Hours Check

This option enabled you to configure less working hours (shift duration-work hours) for a day and monitor the less working hours availed by the users.

Less Working Hours Check	
Enable	<input type="checkbox"/>
Daily Allowed Limit (Min)	<input type="text" value="0"/>
Mark Absent As Per	<input type="text" value="Monthly Duration"/>
Monthly Allowed Limit (Mins)	<input type="text" value="0"/>
Absent Marking Type	<input type="text" value="Continuous"/>
Mark Absent	<input type="text" value="Half Day"/>

Configure the following:

- **Enable:** Select the check box to enable.
- **Daily Allowed Limit (Min):** Specify the minutes of less working hours allowed for a day.
- **Mark Absent As Per:** Select the desired option — Monthly Count, Monthly Duration.Both.

If you wish to configure the count as well as duration, select Both and configure **Month Count** as well as **Monthly Allowed Limit (Mins)**.

- **Monthly Allowed Limit (Mins):** If you select **Month Duration** as the **Mark Absent As Per** option, configure the **Monthly Allowed Limit (Mins)**. Specify the minutes of less working hours allowed in a month.
- **Monthly Allowed Count:** If you select **Month Count** as the **Mark Absent As Per** option, configure the **Monthly Allowed Count**. Specify the number of times less working hours should be allowed in a month.
- **Absent Marking Type:** Select the desired option — **Continuous** or **Slab Wise**.
  - **Continuous type:** After the maximum count/duration is reached as configured in **Monthly Allowed Count/Monthly Allowed Limit (Mins)**, the action as configured in will user will be marked absent as per the option set in **Mark Absent** till the month end.
  - **Slab Wise:** After the maximum count/duration is reached as configured in **Monthly Allowed Count/Monthly Allowed Limit (Mins)**, the user will marked absent as per the option set in **Mark Absent**. After each slab, the count/duration will be reset after Monthly Attendance Process.
- **Mark Absent:** Select the desired option — Half Day, Full Day— when summation of user's less working hours exceed the duration set in **Monthly Allowed Limit (Mins)** or count set in **Monthly Allowed Count** per month.

## Example1:Combined Mode

### Continuous

The user is allowed for combined count of Late-IN and Early-OUT 3 times a month. For Late-IN, Half Day Absent Slab Wise Marking and for Early-OUT, Full Day Absent Slab Wise marking.

The Daily Attendance View displays the following punches of a user.

Initially the punches after 3rd late-in or early-out will be shown as present.

Daily Attendance View

09/11/2016	GS	09:00	17:40	AB	AB		00:20	07:40			01:00			Full Day AB:Early-OUT Limit	

The user is marked half day absent (for Late-IN limit) on 5/11/2016 and full day absent (for Early-OUT limit) on 7/11/2016 due to the completion of combined count.

Thereafter for each Late-IN or Early-OUT, user will be marked Absent.

## Example2: Combined mode

### Slab-Wise Marking

The user is allowed for combined count of Late-IN and Early-OUT 3 times a month. For Late-IN, Half Day Absent Slab Wise Marking and for Early-OUT, Full Day Slab Wise Marking.

The Daily Attendance View shows the following punches of a user.

Initially the punches after 3rd late-in or early-out will be shown as present. But after the Monthly Attendance Process the user will be marked Absent due to Late-IN limit or Early-OUT limit as shown below:

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark	Details
01/11/2016	GS	09:10	18:30	PR	PR			08:20	00:30		01:00

03/11/2016	GS	09:25	19:00	PR	PR	00:15		08:35	01:00		01:00				
04/11/2016	GS	09:00	17:55	PR	PR		00:05	07:55			01:00				
05/11/2016	GS	09:27	19:30	AB	PR	00:17		09:03	01:30		01:00			1st Half AB:Late-IN Limit	
06/11/2016	GS - WO			WO	WO										
07/11/2016	GS	09:00	17:50	PR	PR		00:10	07:50			01:00				
08/11/2016	GS	09:00	19:00	PR	PR			09:00	01:00		01:00			After reset, 3 counts availed again	
09/11/2016	GS	09:00	17:40	PR	PR		00:20	07:40			01:00				
10/11/2016	GS	09:20	19:00	PR	PR		00:10	08:40	01:00		01:00				
11/11/2016	GS	09:00	17:50	AB	AB		00:10	07:50			01:00			Full Day AB:Early-OUT Limit	
12/11/2016	GS			AB	AB									No Punches Available	

On 5/11/2016, user is marked half day absent (for late-IN) due to the completion of combined count.

As the marking is Slab-wise, so the user will be marked absent and the slab will be reset. And the user can now again avail maximum 3 Late-IN and Early-OUT shown on 7th,9th and 10th again.

On 11th the user is marked full day absent (for Early-OUT) and again the slab will be reset.

## Example3: Independent mode

### Slab-Wise Marking

The user is allowed for 3 Late-IN and 3 Early-OUT independently. For Late-IN, Half Day Absent marking (Continuous) and for Early-OUT, Full Day Absent Slab Wise marking.

The Daily Attendance View shows the following punches of a user.

Initially the punches after 3rd Late-IN or Early-OUT will be shown as present. But after the Monthly attendance process the user will be marked Absent due to Late-IN limit or Early-OUT limit as shown below:

09/11/2016	GS	09:00	17:40	AB	AB		00:20	07:40			01:00			Full Day AB:Early-OUT Limit	<div></div>
10/11/2016	GS	09:20	19:00	PR	PR	00:10		08:40	01:00		01:00				<div></div>
11/11/2016	GS	09:00	17:50	PR	PR		00:10	07:50			01:00				<div></div>
12/11/2016	GS	09:20	19:00	AB	PR	00:10		08:40	01:00		01:00			1st Half AB:Late-IN Limit	<div></div>
13/11/2016	GS - WO			WO	WO										<div></div>
14/11/2016	GS	09:20	17:50	AB	PR	00:10	00:10	07:30			01:00			1st Half AB:Late-IN Limit	<div></div>
15/11/2016	GS	09:00	17:45	PR	PR		00:15	07:45			01:00				<div></div>
16/11/2016	GS	09:00	17:55	AB	AB		00:05	07:55			01:00			Full Day AB:Early-OUT Limit	<div></div>
17/11/2016	GS			AB	AB									No Punches Available	<div></div>

The Late-IN and Early-OUT counts are checked independently. The user can avail 3 Early-OUT and 3 Late-IN.

On 9/11/2016, fourth Early-OUT is used, so user is marked full day absent and slab is reset. So he can avail Early-OUT again.

On 12/11/2016, fourth Late-IN is used, so user is marked half day absent. Then onwards if further any Late-IN is used, then user will be marked absent continuously as marked on 14/11/2016.

### Example 3:

Calculation Basis – Slab Wise

Marking Type As Per – Monthly Count

Mode – Combined

Maximum Late-IN/Early-OUT Allowed Count – 2

Action on Exceeding Max Late-IN Allowed – Debit Full Day Leave

Action on Exceeding Max Early-OUT Allowed – Debit Full Day Leave

3 combined Late-IN & Early-OUT encountered against U1

Hence, 1 leave is debited on 3rd. On 4th occurrence, no leave will be debited. However again on 6th occurrence 1 leave will be debited and so on.

### Example4:

Calculation Basis – Continuous

Marking Type As Per – Monthly Count

Mode – Combined

Maximum Late-IN/Early-OUT Allowed Count – 2

Action on Exceeding Max Late-IN Allowed – Debit Full Day Leave

Action on Exceeding Max Early-OUT Allowed – Debit Full Day Leave

3 combined Late-IN & Early-OUT encountered against U1

Hence, 1 leave is debited on 3rd. On 4th occurrence 1 leave will be debited and so on.

## Auto Attendance Correction

This option enables auto-adjustment of user's shortfalls in working duration due to *Late-IN* or *Early-OUT* by making use of available leaves, overtime, short leaves or official hours, based on their assigned priority. Auto Correction configurations performed using this option will be reflected when the attendance data is processed for an attendance period.

**Auto Attendance Correction**

Maximum Minutes Allowed: 0

Maximum Count Allowed: 0

Priority	Name	Up/Down
1	Leaves	▼
2	OverTime	▲▼
3	Short Leave	▲▼
4	Official Hours	▲

- **Leaves:** Enable this option to adjust users' less working hours with available leaves in an attendance period. However, this may not work for certain leave application restrictions (for e.g. if the concerned date falls within a period when leave application is restricted).

## Auto Adjustment with Leave

### Example

Consider PL :minimum application required= 2 and SL: minimum application required=0 is enabled for auto adjustment from Leave group as shown below. PL is at priority 1 and SL is at 2.

Auto Adjustment	Priority	Code	Name	Leave Type	Up/Down	
<input checked="" type="checkbox"/>	1	PL	Privelege leave	Paid Leave	▼	
<input checked="" type="checkbox"/>	2	SL	Sick Leave	Paid Leave	▲ ▼	
<input type="checkbox"/>	3	RH	Restricted leave	Restricted Holiday	▲	

The user attendance punches are shown below.

10/09/2016	GS - WO			WO	WO									
11/09/2016	GS - WO			WO	WO									

After processing the daily and monthly attendance of the user, the Absent days are automatically adjusted by the leave balance of the user.

On 1st AB is replaced by SL because PL has to minimum 2 as per configuration. On 5th to 7th PL is marked making Absent days as present. Similarly leaves are automatically adjusted to mark AB as PR.

C-OFF									

**Overtime:** Enable this option to adjust users' less working hours with available overtime in an attendance period.

**Previous Months For Overtime Hours:** For attendance correction with overtime hours, specify the number of previous months here, for which the overtime should be considered. The value '1' in the field would indicate the overtime for the current month to be considered.

**Short Leave:** Enable this option to adjust users' less working hours with available short leaves in an attendance period.

## Auto Adjustment with Short Leave

The system will consider only the First and Last Punch for marking Short Leaves.

Cases wherein the system remarks mention AB: Less Work Hrs, will only be considered for auto-adjustments using Short Leave.

Short leave will be considered as per the priority set by the Admin for auto-adjustments. For example, if Admin has set Leaves as first priority and then Short Leave, then the system will consider the Leave balance for auto-adjustment and then Short Leave.

### Example 1

Configurations done are as follows:

Shift

GS: 09:00 to 18:00

Time and Attendance -> Policies -> Late In Policy

Maximum Late-IN Allowed (Min) is Disabled

Time and Attendance -> Policies -> Early-Out Policy

Maximum Early-OUT Allowed (Min) is Disabled

Shift and Schedule -> Shift Configuration -> Grace Time Details

Grace Time for Shift Late-IN (Min):0

Grace Time for Shift Early-OUT (Min):0

Time and Attendance -> Policies -> Attendance Policy -> Short Leave/Official Hours Restrictions - Duration Check Per Short Leave Entry

Minimum Duration (Min): 10

Maximum Duration (Min): 15

Time and Attendance -> Policies -> Attendance Policy -> Short Leave/Official Hours Restriction - Short Leave Check In Attendance Period

Maximum Minutes: 75

AllowedMaximum Count Allowed: 5

Date	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Remark	Description for Status change after Monthly Attendance Process is run
02-01-2024	09:10	18:00	PR	AB	-	-	07:50	AB:Less Work Hrs	
After Monthly Attendance Process									

02-01-2024	09:10	18:00	PR	PR			8.00	Present	Here, Short Leave will be considered by the system automatically for in-punch as User punch is within the range set for Short Leave and 1 Short Leave Count will be consumed.Hence it will display Present.
<b>Date</b>	<b>First IN</b>	<b>Last OUT</b>	<b>1st Half</b>	<b>2nd Half</b>	<b>Late-IN</b>	<b>Early-OUT</b>	<b>Work Hours</b>	<b>Remark</b>	<b>Description for Status change after Monthly Attendance Process is run</b>
02-06-2024	09:10	17:50	PR	AB	-	-	07:40	AB:Less Work Hrs	
<b>After Monthly Attendance Process</b>									
02-01-2024	09:10	17:50	PR	PR			8.00	Present	Here, Short Leave will be considered by the system automatically for in-punch as well as out-punch as User punch is within the range set for Short Leave. Hence 2 Short Leave Counts will be consumed. Hence it will display Present.
<b>Date</b>	<b>First IN</b>	<b>Last OUT</b>	<b>1st Half</b>	<b>2nd Half</b>	<b>Late-IN</b>	<b>Early-OUT</b>	<b>Work Hours</b>	<b>Remark</b>	<b>Description for Status change after Monthly Attendance Process is run</b>
02-06-2024	09:10	17:50	PR	AB	-	-	07:40	AB:Less Work Hrs	
<b>After Monthly Attendance Process</b>									

02-06-2024	09:10	17:50	AB	AB			07:40	AB:Less Work Hrs	Here, Maximum Short Leave to be Applied Exceeds 5, hence, Short Leave will be not be considered by the system automatically for in-punch or out-punch even though the User punch is within the range set for Short Leave. Therefore the Total Working Hours will remain as 7:40. Hence it will display AB:Less Work Hrs.
Date	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Remark	Description for Status change after Monthly Attendance Process is run
02-03-2024	09:00	17:30	PR	AB	-	-	07:30	AB:Less Work Hrs	
After Monthly Attendance Process									
02-03-2024	09:00	17:30	PR	AB			07:30	AB:Less Work Hrs	The User punch exceeds the range value set for Short Leave, hence the system will not consider Short Leave for adjustment, Therefore the Total Working Hours will remain as 7:30. Hence it will display AB:Less Work Hrs.

## Example 2

Configurations done are as follows:

Shift

GS: 09:00 to 18:00

Time and Attendance -> Policies -> Late In Policy

Maximum Late-IN Allowed (Min) : 10

Time and Attendance -> Policies -> Early-Out Policy

Maximum Early-OUT Allowed (Min) : 25

Shift and Schedule -> Shift Configuration -> Grace Time Details

Grace Time for Shift Late-IN (Min): 5

Grace Time for Shift Early-OUT (Min):5

Time and Attendance -> Policies -> Attendance Policy -> Short Leave/Official Hours Restrictions - Duration Check Per Short Leave Entry

Minimum Duration (Min): 10

Maximum Duration (Min): 15

Time and Attendance -> Policies -> Attendance Policy -> Short Leave/Official Hours Restriction - Short Leave  
Check In Attendance Period

Maximum Minutes: 60

AllowedMaximum Count Allowed: 4

Date	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Remarks	Description for Status change after Monthly Attendance Process is run
02-01-2024	09:15	18:00	PR	AB	00:10	-	07:45	AB:Less Work Hrs	
After Monthly Attendance Process									
			PR	PR			8:00	Present	Shift hours was 8 hrs but the total working hours was "07:45" i.e. user was 15 min late to fulfill his work hours (considering both grace time and minimum hours). But User punch was within the range set min duration = 10min for Short Leave , hence the system will automatically consider Short Leave for adjustment, so user is marked present

Date	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Remarks	Description for Status change after Monthly Attendance Process is run
02-03-2024	09:00	17:30	PR	AB	-	00:25	07:30	AB:Less Work Hrs	
After Monthly Attendance Process									
			PR	AB			07:30	AB:Less Work Hrs	Shift hours was 8 hrs but the total working hours was "07:30" i.e. user was 30 min late to fulfill his work hours (considering both grace time and minimum hours) User punch exceed the range value set for Short Leave, hence the system will not consider Short Leave for adjustment, so user is marked Absent

**Official Hours:** Enable this option to adjust users' less working hours with available official hours in an attendance period.

**Duration Check Per Official Hour Entry:** Enable this option to keep a check on the duration of Official Hours allowed for auto-correction in a day.

**Minimum Duration (In Minutes):** Specify the minimum duration of Official Hours (in minutes) allowed in a day for auto-correction.

**Maximum Duration (In Minutes):** Specify the maximum duration of Official Hours (in minutes) allowed in a day for auto-correction.

**Official Hours Check In Attendance Period:** Enable this option to keep a check on the total duration of Official Hours allowed for auto-correction in an attendance period.

**Maximum Minutes Allowed:** Define the maximum number of minutes in a month that can be permitted for auto-correction using Official Hours.

**Maximum Count Allowed:** Define the maximum number of times in a month that Official Hours can be used auto-correction.

- Set a priority-wise order for Leaves, Overtime, Short Leave and Official Hours, based on which preference would be shown for auto-adjustment of less work hours. Use the **Up/Down** arrow buttons to change priority as shown below.

Priority	Name	Up/Down
1	Leaves	▼
2	OverTime	▲▼
3	Short Leave	▲▼
4	Official Hours	▲

## Flexible Working Settings

This option enables attendance policy configuration for a Flexible type of user. A Flexible type user can be created from User Configuration (T&A) in *Users* module.

The screenshot displays the 'User Configuration' window for a user named Sunil sharma (ID: 430, Active). The 'Attendance' tab is selected, and the 'Policy' sub-tab is active. The 'Flexible' attendance marking type is chosen. The 'Min Working Hours Required' section shows 'Half Day' set to 02:00 and 'Full Day' set to 04:00. Other settings include 'Enable Attendance Calculation' (checked), 'Max Punches To Be Considered' (Set to Select), 'Bypass Finger/Palm For Attendance' (unchecked), 'Max Short Leaves Allowed' (empty field), and 'OT/C-OFF Eligibility' (Set to None). An arrow points to the 'Min Working Hours Required' label.

A Flexible category user's attendance is checked against his/her minimum working hours required and a "present" status is marked on the basis of fulfillment of daily, weekly or monthly targets.

Daily targets for a Flexible user may be set from the *User Configuration* page, while weekly or monthly targets can be defined using the *Attendance Policy* page.

On the **Attendance Policy** page, select the **Flexible Working Settings** tab.

**Consider Daily Hours:** Select one of the following options to determine how the daily work hours should be considered in case of a Flexible user -

- **Flexible For 24 Hrs:** If this option is selected, then user should be marked present depending on work done and irrespective of the time within which it was done.
- **From Shift Start:** If this option is selected, then work hours before shift start time should not be considered.
- **Till Shift End:** If this option is selected, then work hours after shift end time should not be considered.
- **From Shift Start To Shift End:** If this option is selected, then work hours before shift start time and after shift end time should not be considered.

### Grace For Work Hours

- **Daily Grace Limit (In Minutes) :** The value mentioned in Daily Grace Limit (In Minutes) indicates the duration for which grace should be allowed in the minimum working hours which are required in a day to mark a user half day or full day present. Hence, user should be marked present if these grace minutes are less than the required full day limit and compensating these minutes should not be required.

For e.g. say, Minimum Working Hours Required for Full Day is 5 hours and for Half Day is 3 hours, and Daily Grace Limit is 20 minutes. Now, the employee's work hours for a day is 4 hours 50 minutes. The user will be marked Full Day present.

- **Grace Count (Monthly):** It specifies the number of times in a month that grace will be allowed for the minimum required work hours of a user. For e.g. if Grace Count in the above case is 5, user can work 20 minutes less than the minimum required hours 5 days a month.

**Flexible Hours Calculation:** Specify if the Flexible hours calculation w.r.t. a user's target hours should be done on a **Weekly** or **Monthly** basis. If **None** is selected then the behavior of flexible user type should get affected only due to grace and shift boundary configuration.

### Weekly Basis

- **First Day Of Week:** For Weekly calculation, specify the day which should be considered as the starting day of the week.
- **Apply Daily Work Limit:** If this option is enabled, then user should become present based on half day and full day hours mentioned in "**User Configuration**" page. If this checkbox is unchecked for "Weekly" target and user fulfills the target then user will be marked "present" irrespective of punches.
- **Weekly Target As Per:** Select the option based on which the flexible hours of a user is calculated. One can select from **Fixed Limit** or **Days In A Week** option.
- **Target Hours:** This text-box will be displayed when *Weekly Target As Per* is chosen as **Fixed Limit**. Specify the target hours to be completed in a week by a Flexible type user to mark him "present".
- **Daily Hours (In Full Day):** This text-box will be displayed when *Weekly Target As Per* is chosen as **Days In A Week**. Specify the number of hours to be considered as full day for Flexible type of user to mark him "present" for that week.
- **Grace Hours:** If this checkbox is checked, then the used grace hours should be considered while calculating total work hours in a week.

### Monthly Basis

- **Apply Daily Work Limit:** If this option is enabled, then user should become present based on half day and full day hours mentioned in "**User Configuration**" page. If this checkbox is unchecked for "Monthly" target and user fulfills the target then user will be marked "present" irrespective of punches.
- **Monthly Target As Per:** Select the option based on which the flexible hours of a user is calculated. One can select from **Fixed Limit** or **Days In A Week** option.
- **Target Hours:** This text-box will be displayed when *Monthly Target As Per* is chosen as **Fixed Limit**. Specify the target hours to be completed in a month by a Flexible type user to mark him "present".
- **Daily Hours (In Full Day):** This text-box will be displayed when *Monthly Target As Per* is chosen as **Days In A Week**. Specify the number of hours to be considered as full day for Flexible type of user to mark him "present" for that week.
- **Grace Hours:** If this checkbox is checked, then the used grace hours should be considered while calculating total work hours in a month.

**Deduct Hours From Target:** This parameter ensures that fixed hours should get deducted from weekly/monthly target if any type of leave/tour/C-OFF, WO, PH or FB/RD occurs in a week/month. Also, it allows hours deduction from weekly/monthly target if days are prior to joining date or after leaving date occurs in a respected week or month. To avail this functionality, enable **Not Applicable Day**. Select the relevant check-boxes and enter the number of hours to be deducted against each selected option..

**Deduct Hours From Target**

Leave (Full Day Hrs)	<input checked="" type="checkbox"/>	<input type="text" value="06:00"/>
WO (Full Day Hrs)	<input checked="" type="checkbox"/>	<input type="text" value="06:00"/>
PH (Full Day Hrs)	<input type="checkbox"/>	<input type="text" value="HHMM"/>
FB/RD (Full Day Hrs)	<input type="checkbox"/>	<input type="text" value="HHMM"/>
Not Applicable Day (Full Day Hrs)	<input type="checkbox"/>	<input type="text" value="HHMM"/>

**Example 1:** If Leave occurs in week/month, then 6 hrs will be deducted from target hours. If WO occurs then again 6 hrs will be deducted. So total 12 hrs will be reduced from the target hours if both leave and WO fall in the considering week/month

When full day hours are specified for the **leave**, which is on only for **Half Day**, then [Configured Leave (Full day hours)/2] hours get deducted from target hours. Consider “Example 8: Leave Hour deduction from target Hours for 24 Hrs Flexible User.”

For some cases in which one half is either WO or PH or WO/PH and other half is a leave, then hours deduction from target hours will be based on day status marked in 1st half of the particular day. Consider Following table for understanding the same:

Case No.	1st Half	2nd Half	Deduct Hours From Target Based on
1	WO	PL	Half of Configured <b>WO</b> (Full Day Hours) & Half of Configured <b>Leave</b> (Full Day Hours)
2	PL	WO	Half of Configured <b>Leave</b> (Full Day Hours) & Half of Configured <b>WO</b> (Full Day Hours)
3	PH	PL	Half of Configured <b>PH</b> (Full Day Hours) & Half of Configured <b>Leave</b> (Full Day Hours)
4	PL	PH	Half of Configured <b>Leave</b> (Full Day Hours) & Half of Half of Configured <b>PH</b> (Full Day Hours)
5	WO/PH	PL	Half of Configured <b>WO</b> (Full Day Hours) & Half of Configured <b>Leave</b> (Full Day Hours)
6	PL	WO/PH	Half of Configured <b>Leave</b> (Full Day Hours) & Half of Half of Configured <b>WO</b> (Full Day Hours)

**Shortfall Hours Deduction:** Specify the number of hours to be deducted as Full Day Hours from the weekly/ monthly target shortfall hours, if any.

It is deduction of full day hours and accordingly half will be the half day hours (HD hrs) when target hours are not met by the user.

The shortfall hours (SF hrs) will be target hours (TH)- actual hours (AH).

No. of half days to be marked as absent =SF hrs/ HD hrs

Let us consider an example:

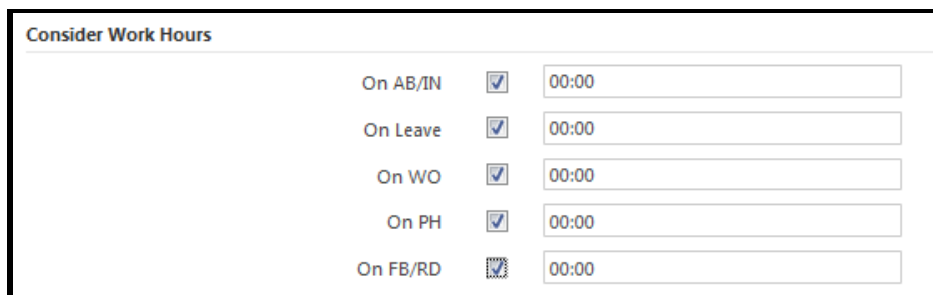

Consider Weekly Target = 40:00  
Consider Weekly Actual work hours done by user = 12:00  
So Weekly Shortfall Hours (SF)= (TH)40- (AH)12 = 28 hours

Deduct (Full Day Hrs) = 08:00  
Hence deduction of Half Day Hrs( HD) = 08:00/2 = 04:00

No. of Half Days to be deducted = (SF/HD)28:00/04:00 = 7  
Hence, 7 half days will be deducted.

### Consider Work Hours

If this checkbox is checked then work hours done on AB/IN, any type of leave/tour/C-OFF, WO, PH or FB/RD in a week/month should be considered in total work hours of that week/month. You can specify the number of hours in the box to be considered.

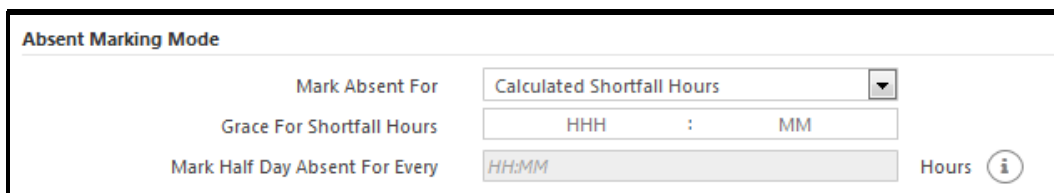

Consider Work Hours		
On AB/IN	<input checked="" type="checkbox"/>	00:00
On Leave	<input checked="" type="checkbox"/>	00:00
On WO	<input checked="" type="checkbox"/>	00:00
On PH	<input checked="" type="checkbox"/>	00:00
On FB/RD	<input checked="" type="checkbox"/>	00:00

If work hours is enabled and value is 00:00, then the actual work done as per punches will be calculated.  
If work hours is enabled and value is other than 00:00, say 08:00 hrs so 08:00 hrs is the minimum required hrs to be considered for work hours. If only 2 hrs of work is done, then it will not be considered.

### Absent Marking Mode

This parameter decides the conditions based on which a person is marked absent.

Absent Marking Mode	
Mark Absent For	Calculated Shortfall Hours
Grace For Shortfall Hours	HHH : MM
Mark Half Day Absent For Every	HH:MM Hours ⓘ

- **Mark Absent For:** Select the mode as “Calculated Shortfall Hours” or “Custom Shortfall Hours” from the drop-down list based on which a person is marked absent.
- **Grace For Shortfall Hours:** Specify the grace hours to be considered in shortfall hours. This means the shortfall hours will be calculated after deducting grace from the actual work hours.  
Shortfall hours = Target hours - Actual work hours - Grace hours
- **Mark Half Day Absent For Every:** Specify the hours after which the person will be marked as absent for half day.

Absent Marking Mode		
Mark Absent For	Custom Shortfall Hours ▼	
Grace For Shortfall Hours	005 : 00	
Mark Half Day Absent For Every	04:00	Hours ⓘ

## Flexible Process

Step1: Calculate Monthly/Weekly Target (Per day hours x No. of day)

Step2: Calculate actual work hours

Step3: Find shortfall (when work hours < target hours)

Step4: Mark AB on the basis of Shortfall

### Example1: Calculated Shortfall

- Deduct (Full day hrs)= 8:00 hrs
- Target hours= 120
- Actual work hours= 110
- Mark Absent For- Calculated Shortfall

Shortfall hours = Target hours- Actual work hours  
= 120- 110= 10 hours

Deduction for Half day hour= 8/2= 4 hours

Now 10/4= 2.5 = 3 halves

So in this case 3 halves will be marked Absent.

### Example2: Custom Shortfall

Grace for Shortfall hours=4 hrs

Mark half day absent for every = 4 hrs

Target hours= 120

Actual work hours= 110

Shortfall hours= Target hrs- Actual work hrs- Grace for shortfall hrs  
= 120- 110-4  
= 6

Deduction for Half day hour= 8/2= 4 hours

Now 6/4= 1.5 = 2 halves

So in this case 2 halves will be marked Absent.

*The Examples for Flexible Policy configuration for 24 hours flexibility is given below.*

*The flexible policy for options "From Shift Start", "Till Shift End" and " From Shift Start to Shift End" is same as " Flexible for 24 hrs"; only the calculation of daily work hours varies.*

### Example3: Flexible for 24 hrs- Target Completing

Min. working hrs for full day- **06:00**

Min. working hrs for half day- **03:00**

Daily Grace Limit= **30min**  
 Grace Count in month = **30**  
 Flexible hrs Calculation- **Weekly Basis**  
 First Day of week- **Tuesday**  
 Apply Daily Work limit- **disabled**  
 Weekly Target as Per- **Fixed Limit**  
 Target hours- **030:00**  
 Grace hours- **disabled**  
 Deduct hours from Target- **all disabled**  
 Shortfall hours deduction - **08:00**  
 Consider Work hours- **all enabled with 00:00**

The user has to complete atleast 2:30 hrs for half day and 5:30 hrs for full day utilizing grace of 30 mins.  
 If weekly work of 30 hrs is done then absent markings will be marked as Present after monthly attendance process.

The punches of the user are shown below:

07/11/2016	GS	09:00	17:00	PR	PR			07:00	01:00		01:00			

41 hrs

By calculating hours from Work hours column, actual hours is 41 hrs

Target hours = 30

As the user completes the target hours i.e. 41 hrs > 30 hrs so any absent marking will be converted into Present after the Monthly Attendance process as shown below.

#### Example 4: Flexible for 24 hrs-Deduct WO hours;Target Completing

All configurations are same as Example3 except Deduct hours from Target

Min. working hrs for full day- **06:00**

Min. working hrs for half day- **03:00**

Daily Grace Limit= **30min**

Grace Count in month = **30**

Flexible hrs Calculation- **Weekly Basis**

First Day of week- **Tuesday**

Apply Daily Work limit- **disabled**

Weekly Target as Per- **Fixed Limit**

Target hours- **030:00**

Grace hours- **disabled**

Deduct hours from Target- **Leave- 06:00, WO-06:00**

Shortfall hours deduction - **08:00**

Consider Work hours- **all enabled with 00:00**

The punches of the user are shown below:

Daily Attendance View

31 hrs

WO is falling on 6th nov considering the week from 1nov Tuesday to 7th nov Monday. So WO hrs i.e. 6 hrs will be deducted from target hours.

Target hours configured = 30 hrs

Thus Actual Target hours = Target hrs - WO hrs

$$=30- 6= 24 \text{ hrs}$$

Actual work hours= 31:00 hrs which is greater than 24 hours.

So after monthly process, absent marking will be converted into Present as shown below.

07/11/2016	GS	09:00	11:30	PR	AB			02:30						AB:Less Work Hrs

28 hrs

IF WO is enabled and work of 8 hrs is done, only then included in total work hrs.

In this case as work on WO is 2 hrs, so it is not considered. Hence actual work hours is 30- WO work hrs  
= 30-2= **28 hrs.**

Target hrs= 54 hrs. (60-6= 54 hrs)

Shortfall hrs= 54- 28= **26 hrs.**

Absent marking = 26/4 = 6.5 i.e. 7 half days will be marked absent as shown below.

Daily Attendance View

</

**Example 7: Flexible for 24 hrs- Including Work hours configuration; Actual Work hrs>= Minimum required.**

Min. working hrs for full day- **06:00**

Min. working hrs for half day- **03:00**

Daily Grace Limit= **30min**

Grace Count in month = **30**

Flexible hrs Calculation- **Weekly Basis**

First Day of week- **Tuesday**

Apply Daily Work limit- **disabled**

Weekly Target as Per- **Fixed Limit**

Target hours- **060:00**

Grace hours- **disabled**

Deduct hours from Target- **Leave- 06:00, WO-06:00**

Shortfall hours deduction - **08:00**

Consider Work hours- **all enabled with 00:00; On WO- 8:00 hrs ;On leave- 8:00 hrs**

The punches of the user are shown below:

07/11/2016	GS	09:00	11:30	AB	AB			02:30						1st Half AB:Target Shortfall

**Example 8: Leave Hour deduction from target Hours for 24 Hrs Flexible User:**

Consider,

Min Required Hours for Half day = **03:00**,

Min Required Hours for Full Day = **06:00**,

Apply Daily Work Limit = checked,

Weekly Target Hours = **50:00**,

For Deduct Hours From Target: WO,PH, Leave = Checked,

WO = 06:00,

PH = 06:00,

Leave = 06:00.

For Consider Work Hours: WO,PH, Leave = Checked.

Deduct (Full Day Hrs) = **06:00**.

Consider Daily View:

Day No.	First Punch	Last Punch	Work Hours	Actual Status		Updated Status		Status Summary
				1st Half	2nd Half	1st Half	2nd Half	
1	09:00	15:00	06:00	PR	PR	PR	AB	2nd half AB: Weekly hours shortfall
2	09:00	15:00	06:00	PR	PR	PR	PR	-
3	09:00	12:00	03:00	PR	PL	AB	PL	1st half AB: Weekly hours shortfall
4	09:00	17:00	08:00	PR	PR	PR	PR	No Punches Available
5	-	-	-	PH	PH	PH	PH	-
6	-	-	-	WO	WO	WO	WO	-
7	-	-	-	WO	WO	WO	WO	-

Consider following calculation:

Days considered = **3.5**

Actual Weekly Target = **29:00**

[= 50:00 - 3:00 (Day 3 2nd Half PL) - 6:00 (Day 5 PH) - 6:00 (Day 6 WO) - 6:00 (Day 7 WO)]

Weekly Work Hours = **23:00**

Weekly Shortfall Hours = **29:00 - 23:00 = 06:00**

No. of half days to be deducted = 06:00 / 3:00 = **2**

## Attendance Correction-Short Leave/Official Hours Application Restrictions

The administrator can define certain restrictions on employees applications for Attendance Correction, Short Leave and/or Official Hours. This option enables the administrator to configure the parameters related to the restrictions that will be applicable to the above mentioned applications.

*For restrictions to be applicable to Attendance Correction Application, make sure the application is applied by On Behalf System Account User from **Time and Attendance> Utilities> Attendance Correction**. For details, refer to [“On Behalf System Account User”](#).*

*For restrictions to be applicable to Short Leave/Official In-Out applications, make sure the Auto-Approve check box against Attendance Correction is disabled. For details, refer [“Roles and Rights Configuration”](#).*

Click Attendance Correction-Short Leave/Official Hours Application Restrictions collapsible panel and configure the following parameters.

- **Apply To:** Select where you want to apply the restrictions from the drop down list—Attendance Correction, Short Leave/Official In-Out, Both.
- **Minimum Days After Attendance Date:** Specify the minimum number of days after the attendance date for which the application should be allowed.
- **Maximum Days After Attendance Date:** Specify the maximum number of days after the attendance date for which the application should be allowed.
- **Restrict Application Within Specified Period:** Select this check box to apply restrictions within a specified period.
- **Restriction Type:** Select the **Restriction Type** from the drop down list— Restrict w.r.t Joining Date, Restrict till Confirmation Date.
  - **Restrict w.r.t Joining Date:** If you select this option, you must configure the Restriction Period.

**Restriction Period:** Specify the number of days or months after joining date, for which application will not be allowed. Valid Value for Days: 1 to 999. Valid Value for Months: 1 to 99.

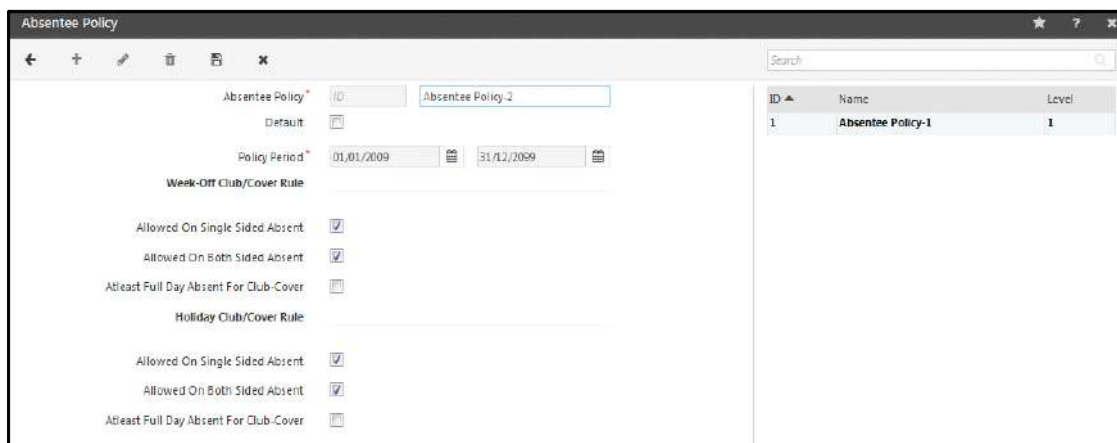

- **Restrict till Confirmation Date:** If you select this option, restriction will be applicable as per the confirmation date available in the database of the user.

# Absentee Policy

The Absentee Policy option enables the user to set rules for marking the absence of an employee in the event of an employee remaining absent on either or both sides of a holiday or week-off. The user can configure a set of rules and group them together in policies.

To define Absentee Policy, click **Time & Attendance > Policies > Absentee Policy**.

The **Absentee Policy** page appears on your screen as shown below.

ID	Name	Level
1	Absentee Policy-1	1

Click the **New** icon to define a new Absentee Policy.

Each Absentee Policy will have a unique **ID** for identification and this is generated by the system automatically when the policy is saved.

Specify a user-friendly name for the Absentee Policy in the **Name** field. Specify the parameters for the other options as described hereunder:

Select the **Default** check box if you want to set the current policy as the default. Users will be linked with this Absentee Policy by default in the event of a user not being linked to any Absentee Policy. Therefore, it is mandatory to define one default Absentee Policy.

Select a start date and the end date for the **Policy Period**.

Configure the absentee policy for **Week-Off** and **Holiday** cases where in the administrator can specify if the week-off or holiday is allowed in case of leaves on a single side or both sides.

Click the **Save** button to save the new policy to the COSEC database. The new *Absentee Policy* will now reflect in the Absentee Policy list as shown.

ID	Name	Level
1	Absentee Policy-1	1
2	Absentee Policy-2	1

Each time the user edits the date fields in an existing policy (other than Attendance Policy) the system creates a new level for the policy as shown. The system thus maintains a record of the existing policy as well as the edited one.

ID	Name	Level
1	Absentee Policy-1	1
2	Absentee Policy-2	1
2	Absentee Policy-2	2

**Example 1:** Consider Allowed on Single Sided Absent is **enabled**. This means the user is allowed to be absent on only single side of week-off. The single side can be second half of previous day or first half of next day or either of the full day.

If “Atleast Full day absent for Club-cover” is enabled, then it is must to be absent for full day for absentee policy to be applicable. See Example:4

Allowed on Both Sided Absent is **disabled**. This means the user is not allowed to be absent on both sides of week-off. The both sides can be second half of previous day and first half of next day or full day on both sides.

In case1: The user is absent on only one side of week off i.e. on 2/9/16.

In case2: The user is absent on both sides of week off i.e. on 9/9/16 and 12/9/16.

04/09/2016	GS - WO			WO	WO										
05/09/2016	GS	09:00	19:00	PR	PR			09:00	01:00		01:00				
06/09/2016	GS	09:00	19:00	PR	PR			09:00	01:00		01:00				
07/09/2016	GS	09:15	19:00	PR	PR	00:15		08:45	01:00		01:00				
08/09/2016	GS	09:00	20:00	PR	PR			10:00	02:00		01:00				
09/09/2016	GS			AB	AB									No Punches Available	
10/09/2016	GS - WO			AB	AB									WO-AB:Absent Cover Rule	
11/09/2016	GS - WO			AB	AB									WO-AB:Absent Cover Rule	
12/09/2016	GS	09:06	10:50	AB	AB	00:06		01:44						AB:Early-OUT	

### Example 2:

In above example if Allowed on Both Sided Absent is also **enabled**; then week-off on 10/9/16 and 11/9/16 will remain as week-off.

### Example 3:

If Allowed on Single Sided Absent is **disabled** and Allowed on Both Sided Absent is **disabled**; then both the week-offs will be marked absent.

### Example 4: Consider

Allowed on Single Sided Absent is **enabled**.

Atleast Full day absent for Club-cover is **enabled**

This means the week-off will become absent if user is full day absent on both sides of weekoff.

- If second half of previous day(Case1) or first half of next day(Case2) is absent. Then after monthly attendance process, week-off will remain as week-off.
- If full day absent on one side(Case3 & Case4), Then after monthly attendance process, week-off will remain as week-off.
- If user is full day absent on both sides of week-off(Case5). Then after monthly attendance process, week-off will become absent.

S.NO	Saturday First half	Saturday Second half	Sunday WO	Monday First half	Monday Second half	WO after monthly process
Case1	PR	AB	WO	-	-	WO
Case2	-	-	WO	AB	PR	WO
Case3	AB	AB	WO	-	-	WO
Case4	-	-	WO	AB	AB	WO
Case5	AB	AB	WO	AB	AB	AB

*The Holiday club/cover rule will work similar to the week-off club/cover rule.*

# Overtime Policy

Overtime Policy is the Policy of a company which consists of rules for providing overtime compensation to the employees.

For example, a company may allow its employees to work overtime for a duration of maximum 2 hours per working day. Hence, this may be converted by the respective HR team into an overtime policy that is applicable to all employees across the organization.

COSEC simplifies and automates such implementations by enabling administrators to configure parameters related to overtime policies.

To configure an Overtime policy, click **Time & Attendance > Policies> Overtime Policy**

Click the **New** button to define a new OT policy.

Enter a **OverTime Policy** name for the new policy in the field provided. The **ID** will be automatically generated by the system for every new policy defined.

Select the **Default** checkbox if the policy is to be stated as the default policy for the system.

Define the **Policy Period** by specifying the Start and End Dates for the span of policy.

**Network Hour Policy:** Select a network hours policy from the picklist.

**Calculation On WO/PH/FB/RD As Aer Weekday:** Select this checkbox to calculate Net-Work Hours and Overtime as per week day's configuration if nothing has been configured for WO/PH.

**Calculation On Restricted Holiday As Per PH:** Select this checkbox to calculate Net-Work Hours and Overtime as per configuration of PH if user has worked on day configured for full day RH leave. If RH is applied for half day, then it will work as per week day.

- Example: The user has worked on RH leave for 10 hours. But the Net-work hours and overtime will not be calculated when this checkbox is enabled.

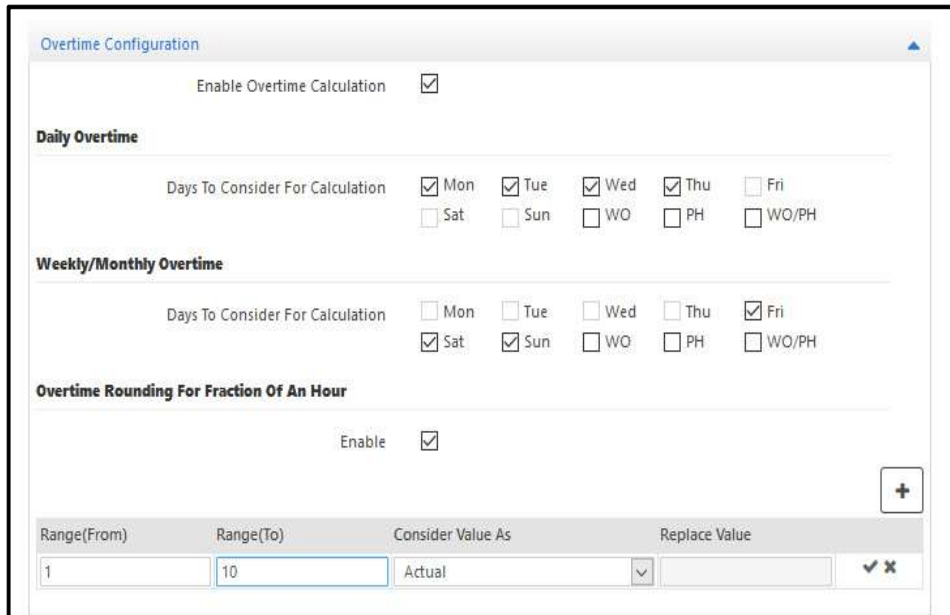

Click **Save** to add the new policy to the database successfully.

## Overtime Configuration

The Overtime Configuration allows you to configure Overtime parameters like **Daily/Weekly/Monthly** and **rounding** of overtime minutes. Refer "[Calculation of Overtime](#)".

For JPC user, refer "[OT for JPC User](#)".

- Select the **Overtime Configuration** tab as shown.

- **Enable Overtime Calculation** - Select this checkbox to enable overtime calculation for all users to whom this Net-work hours and OT policy would be applicable.
- **Daily Overtime** - Select the days of the week which are to be considered for *Daily Overtime* calculation. You can also select WO, PH or WO/PH to calculate daily overtime based on day status.
- **Weekly/Monthly Overtime** - Select the days of the week which are to be considered for *Weekly/Monthly Overtime* calculation. You can also select WO, PH or WO/PH to calculate weekly/monthly overtime based on day status.

*The Days (Mon to Sun) selected for Daily OT will be disabled for Weekly/Monthly OT Selection and vice versa.*

*WO, PH and WO/PH can be selected for both Daily as well as Weekly/Monthly Overtime.*

*For Overtime calculation, the Days will be prioritized and considered based on day status (like WO, PH, WO/PH).*

### For example:

Days selected in 'Daily Overtime > Days To Consider For Calculation' are:

- Monday
- Tuesday
- Friday

- PH

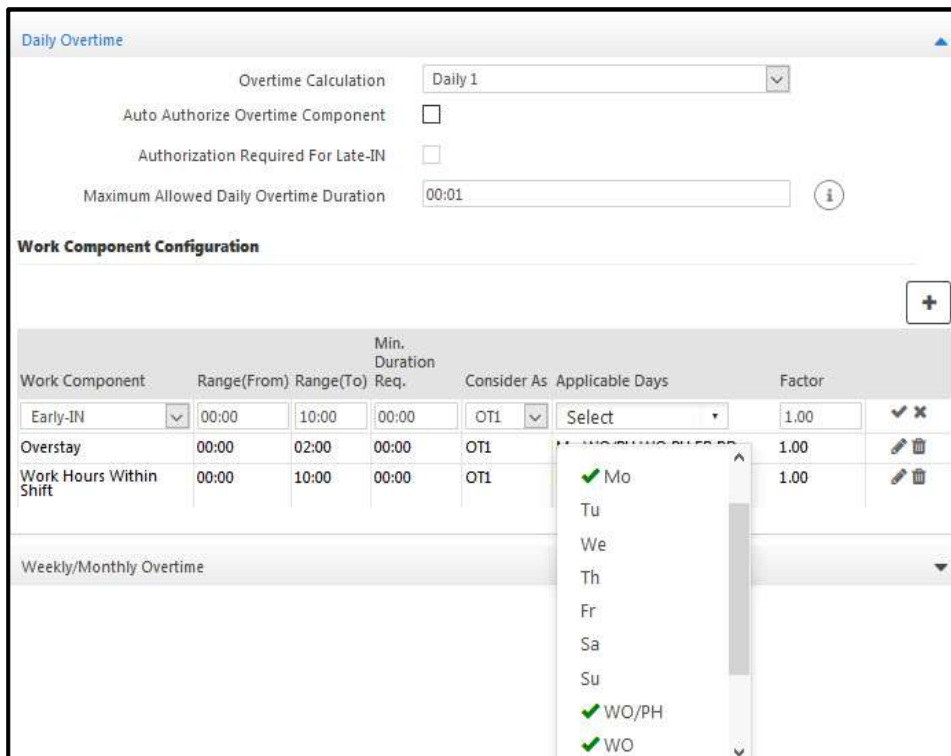

So irrespective of PH falls on any other day like Wednesday, Thursday, Saturday or Sunday, days with day status as PH should be considered in daily overtime calculation.

- **Overtime Rounding For Fraction of An Hour** - Enable this feature for users to obtain rounded values for the final calculated overtime. This allows the administrator to specify how a fractional part of an hour in the final overtime value should be considered for calculation.
  - Activate the Overtime Rounding by checking the **Enable** box.
  - Specify the **range** of overtime hours in minutes which is to be rounded off and select the **replace value** as actual or fixed value.
    - Here we have kept 1 to 10 minutes of range to be rounded off with the **actual value**.
    - If **fixed option** is selected, then mention a fixed value to replace. Suppose if a user has overtime of 8 minutes. And fixed rounding is set for range 1 to 20 minutes at value 10 minutes. Then he will get overtime of 10 minutes.
- Click **Save**  to save the overtime configuration.

## Daily Overtime

This section allows the administrator to configure Daily Overtime calculation.

- Select the **Daily Overtime** tab as shown.

Work Component	Range(From)	Range(To)	Min. Duration Req.	Consider As	Applicable Days	Factor	
Early-IN	00:00	10:00	00:00	OT1	Select	1.00	✓ ✕
Overstay	00:00	02:00	00:00	OT1		1.00	✎ ✕
Work Hours Within Shift	00:00	10:00	00:00	OT1		1.00	✎ ✕

Weekly/Monthly Overtime

- **Overtime Calculation** - Select the type of daily overtime calculation to be performed from the options of Daily1 or Daily2. You can disable the OT as well.

For Daily 1 the Work Components configured here (in Overtime Policy) will be considered for OT calculations, whereas for Daily 2 the Work Components configured in the Network Hours Policy will be considered for OT calculations.

## Overtime Calculation - Daily 1

- **Auto Authorize Overtime Component** - Select this checkbox to enable automatic authorization of daily overtime. In case it is not checked, the reporting in-charge or administrator can authorize the overtime.
- **Authorization Required for Late-IN** - Check this box in case the Late-IN is to be authorized.

### Work Component Configuration

- Click **Add** to configure the Work Components.

Select the desired component — **Early-IN, Overstay, Work hours within Shift, Official IN/OUT Duration Prior Shift, Official IN/OUT Duration Within Shift, Official IN/OUT Duration Post Shift, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift** — and configure the related parameters as shown below.

The components — **Official IN/OUT Duration Prior Shift, Official IN/OUT Duration Within Shift, Official IN/OUT Duration Post Shift, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift** — will be included in the calculation of Overtime for 2, 4, 6, 8, 10, 12, N punch users only.

- **Range (From):** Define the start time from which the work component configured is to be considered for calculation of OT.
- **Range (To):** Define the end time till which the work component configured is to be considered for calculation of OT.
- **Minimum Duration Required:** Define a minimum duration within the range which must be covered to qualify as daily overtime.
- **Consider As:** There are 5 different OT components that appear in the drop-down list. These components are used to differentiate OT calculations. For example OT1, we can add calculated values of Early-in in

this and in other component OT2, we can add calculated values of Overstay. You can assign different OT types to different work components.

- **Applicable Days:** Select the days of the week for which this overtime configuration will be applicable.
- **Factor:** Specify the multiplication factor which should be used against the total calculated overtime for a specified period for overtime pay calculation.

Refer to the example below:

Work Component Configuration							
Work Component	Range (From)	Range (To)	Minimum Duration Required	Consider As	Applicable Days	Factor	
Early-IN	00:00	23:59	00:00	OT1	Su Mo Tu We Th Fr Sa WO/PH WO PH FB RD	1.00	 
Official In/Out Duration Prior Shift	00:00	05:00	00:00	OT1	Su Mo Tu We Th Fr Sa WO/PH WO PH FB RD	1.00	 
Official In/Out Duration Prior Shift	15:00	20:00	02:00	OT1	Su Mo Tu We Th Fr Sa WO/PH WO PH FB RD	1.00	 
Official In/Out Duration Post Shift	00:00	23:59	00:00	OT1	Su Mo Tu We Th Fr Sa WO/PH WO PH FB RD	1.00	 
Short Leave Duration Prior Shift	05:00	10:00	05:00	OT1	Su Mo Tu We Th Fr Sa WO/PH WO PH FB RD	1.00	 

1 - 5 of 7 records

« < 1 2 > »

## Overtime Calculation - Daily 2

- **Auto Authorize Overtime Component:** Select this checkbox to enable automatic authorization of daily overtime. In case it is not enabled, the reporting in-charge or administrator can authorize the overtime.
- **Authorization Required for Late-IN:** Select this checkbox in case the Late-IN is to be authorized.
- **Allow Overlapping Work Components:** Select this checkbox if the overlapping of work components ranges is to be allowed. It may be useful when some Special OT is required to be granted if user works within some special time range along with the existing granted OT.
- **Special OT Time Range:** Specify the time range for eg: 21:00 hrs to 04:00 hrs for which special OT is to be given to the user who has worked within this time range. Refer [“Special OT calculation”](#).

### Work Component Configuration

Click **Add** to configure the parameters.

**Overtime Calculation**

Overtime Calculation: Daily 2

Auto Authorize Overtime Component: ☒

Authorization Required For Late-IN: ☒

Allow Overlapping Work Components: ☒

Special OT Time Range: HH:MM HH:MM

**Work Component Configuration**

Net-Work Hours Range (From)	Net-Work Hours Range (To)	Minimum Duration Required	Consider As	Applicable Days	Factor	Overtime Assignment As Per
00:00	10:00	00:00	OT1	WC/PH WO PH FB RD	1.00	Priority Work Component

- **Net work hours Range:** Define a time range for the Net-work hours in the HHH:MM format to be considered as daily overtime.
- **Min Duration Required Within Range:** Define a minimum duration within the range which must be covered to qualify as daily overtime.
- **Consider As:** There are 5 different OT components that appear in the drop-down list. These components are used to differentiate OT calculations. For example OT1, we can add calculated values of Early-in in this and in other component OT2, we can add calculated values of Overstay. You can assign different OT types to different work components.
- **Applicable Days:** Select the days of the week for which this overtime configuration will be applicable.
- **Multiplication Factor:** Specify the multiplication factor which should be used against the total calculated overtime for a specified period for overtime pay calculation.
- **Overtime Assignment As Per:** Select the option as Priority Work Component or Special Time Range. According to this selection the OT will be assigned. For eg: OT1 is given the Priority Work Component and OT2 is given the Special Time Range component.
- Click the **Save** button to save the overtime configuration.

*For overlapping range of Priority OT and Special Time range OT; if x hr OT is given for time range OT; then priority OT cannot be given for same time hrs. Eg: From 9:00 to 10:00 hrs, Special OT is given to a user. Then priority OT cannot be given for 9:00 to 10:00 hrs.*

*If user is working for more than 1 shift, say for around 24 hours at a time, then he/she should mark OUT punch using special function OT OUT if configured. See Devices> Multi Device Options> Special Functions> Special function-Overtime Out.*

## Daily1 OT and Daily2 OT Examples

Daily 1 overtime calculation will be based on Shift timings as per components Early-IN, Overstay and Work Hours Within Shift.

If configuration for WO, PH and WO/PH is available and also its respective day, then priority to WO, PH and WO/PH should be given.

*"Work Hours Within Shift" = Work Hours - Early-IN - Overstay - Short Leave Hours (if "Add Short Leave Hours In Work Hours" field is checked in "Attendance Policy" page) - Official Hours (If "Add Official Hours In Work Hours" field is checked in "Attendance Policy" page)*

*For flexible type user, only "Work Hours Within Shift" and "Overstay" value are calculated on normal day so similar behavior should be followed for WO, PH and WO/PH where these components should be calculated as per shift as done on normal day.*

*For FB/RD, only "Work Hours Within Shift" component gets calculated.*

### Example1

Shift: 09:00 to 18:30 hours

Punches: 18:00 - 20:00 hours

Work hours (on WO): 02:00

Net- work hours: 02:00 (NOTE: Consider all components for whole component range is configured)

Overtime (**Daily 1**): 00:30 (NOTE: Consider "Work Hours Within Shift" work component for whole component range is configured)

Overtime (**Daily 2**): 02:00

### Example2

Shift: 15:00 - 23:00

Punches: 07:00 - 10:00 [i.e. not within shift]

Work Hours (on WO): 03:00

Net-Work Hours: 03:00 (Early-IN) (NOTE: Consider all components for whole component range is configured)

Overtime (**Daily 1**) = 03:00 (Early-IN) (NOTE: Consider all components for whole component range is configured)

Overtime (**Daily 2**)= 03:00 (Early-IN) (NOTE: Consider "Early-IN" and "Overstay" components for whole component range is configured)

### Example3: Daily 1 with Official In-Out Duration Prior Shift, Official In-Out Duration Within Shift, Official In-Out Duration Post Shift.

You have configured Official In/Out Duration Prior Shift component, as user's official in/out duration starts before the shift start time, then the component of official duration which is prior the shift start time should be considered in Daily 1 overtime calculation.

You have configured Official In/Out Duration Within Shift component, as user's official in/out duration is within shift time, then the component of official duration within shift should be considered in Daily 1 overtime calculation.

You have configured Official In/Out Duration Post Shift component, as user's official in/out duration ends after shift end time, then the component of official duration post shift should be considered in Daily 1 overtime calculation.

### OT is enabled and Daily 1 - OT Configurations

Days To Consider	WO, PH, WO/PH
Component	Early-In, Overstay, Work Hours Within Shift, Official In-Out Duration Prior Shift, Official In-Out Duration Within Shift, Official In-Out Duration Post Shift, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift

Range:	00:00 - 23:59
Min Duration	00:00
Consider As	OT1

#### Shift = 7:00 to 15:00

Consider the following example for Official In-Out.

Punch 1 = 05:00:00 Regular IN

Punch 2 = 06:00:00 Official Out

Punch 3 = 16:00:00 Official IN

Punch 4 = 18:00:00 Regular Out

The calculations will be done as follows:

Official In-Out Duration Prior Shift = 01:00:00

Official In-Out Duration Within Shift = 08:00:00

Official In-Out Duration Post Shift = 01:00:00

Hence it is concluded that according to the configuration of the components, the Official In-Out Duration will be contributing to the overall overtime calculated hours.

#### **Example4: Daily 1 with Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift.**

You have configured Short Leave Duration Prior Shift component, as user's short leave duration starts before the shift start time, then the component of short leave duration which is prior the shift start time should be considered in Daily 1 overtime calculation.

You have configured Short Leave Duration Within Shift component, as user's short leave duration is within shift time, then the component of short leave duration within shift should be considered in Daily 1 overtime calculation.

You have configured Short Leave Duration Post Shift component, as user's short leave duration ends after shift end time, then the component of short leave duration post shift should be considered in Daily 1 overtime calculation.

#### **OT is enabled and Daily 1 - OT Configurations**

Days To Consider	WO, PH, WO/PH
Component	Early-In, Overstay, Work Hours Within Shift, Official In-Out Duration Prior Shift, Official In-Out Duration Within Shift, Official In-Out Duration Post Shift, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift
Range:	00:00 - 23:59
Min Duration	00:00
Consider As	OT1

#### Shift = 7:00 to 15:00

Consider the following example for Short Leave In-Out.

Punch 1 = 05:00:00 Regular IN

Punch 2 = 06:00:00 Short Leave Out

Punch 3 = 16:00:00 Short Leave IN

Punch 4 = 18:00:00 Regular Out

The calculations will be done as follows:

Short Leave Duration Prior Shift = 01:00:00

Short Leave Duration Within Shift = 08:00:00

Short Leave Duration Post Shift = 01:00:00

Hence it is concluded that according to the configuration of the components, the Short Leave In-Out Duration will be contributing to the overall overtime calculated hours.

**Example5: Daily 2 with Official In-Out Duration Prior Shift, Official In-Out Duration Within Shift, Official In-Out Duration Post Shift.**

You have configured Official In/Out Duration Prior Shift component, as user's official in/out duration starts before the shift start time, then the component of official duration which is prior the shift start time should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

You have configured Official In/Out Duration Within Shift component, as user's official in/out duration is within shift time, then the component of official duration within shift should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

You have configured Official In/Out Duration Post Shift component, as user's official in/out duration ends after shift end time, then the component of official duration post shift should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

**Network Hours Policy Configuration**

<u>NetWork Hours Policy</u>		
<u>Network Hours Calculation</u>		
<u>Component</u>	<u>Range</u>	<u>Applicable Days</u>
Work Hours Within Shift	00:00 - 23:59	All
Early IN	00:00 - 23:59	All
Overstay	00:00 - 23:59	All
Short Leave Duration Prior Shift	00:00 - 23:59	All
Short Leave Duration Within Shift	00:00 - 23:59	All
Short Leave Duration Post Shift	00:00 - 23:59	All
Official In-Out Duration Prior Shift	00:00 - 23:59	All
Official In-Out Duration Within Shift	00:00 - 23:59	All
Official In-Out Duration Post Shift	00:00 - 23:59	All

Make sure this Network Hours Policy is assigned in the Overtime Policy.

**OT is enabled and Daily 2 - OT Configurations**

Days To Consider	WO, PH, WO/PH		
Range:	00:00 - 23:59	Applicable Days	WO, PH, WO/PH, FB, RD
Min Duration	00:00		
Consider As	OT1		

### Shift = 7:00 to 15:00

Consider the following example for Official In-Out.

Punch 1 = 05:00:00 Regular IN

Punch 2 = 06:00:00 Official Out

Punch 3 = 16:00:00 Official IN

Punch 4 = 18:00:00 Regular Out

The calculations will be done as follows:

Official In-Out Duration Prior Shift = 01:00:00

Official In-Out Duration Within Shift = 08:00:00

Official In-Out Duration Post Shift = 01:00:00

Hence it is concluded that according to the configuration of the components, the Official In-Out Duration will be contributing to the overall overtime calculated hours only if the desired components have been configured in the Network Hours Policy and the same Policy has been assigned in the Overtime Policy.

### **Example6: Daily 2 with Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift.**

You have configured Short Leave Duration Prior Shift component, as user's short leave duration starts before the shift start time, then the component of short leave duration which is prior the shift start time should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

You have configured Short Leave Duration Within Shift component, as user's short leave duration is within shift time, then the component of short leave duration within shift should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

You have configured Short Leave Duration Post Shift component, as user's short leave duration ends after shift end time, then the component of short leave duration post shift should be considered in Network Hours and later on in overtime as Daily 2 policy is selected.

### **Network Hours Policy Configuration**

<u>NetWork Hours Policy</u>		
<u>Network Hours Calculation</u>		
<u>Component</u>	<u>Range</u>	<u>Applicable Days</u>
Work Hours Within Shift	00:00 - 23:59	All
Early IN	00:00 - 23:59	All
Overstay	00:00 - 23:59	All
Short Leave Duration Prior Shift	00:00 - 23:59	All
Short Leave Duration Within Shift	00:00 - 23:59	All
Short Leave Duration Post Shift	00:00 - 23:59	All
Official In-Out Duration Prior Shift	00:00 - 23:59	All
Official In-Out Duration Within Shift	00:00 - 23:59	All
Official In-Out Duration Post Shift	00:00 - 23:59	All

Make sure this Network Hours Policy is assigned in the Overtime Policy.

**OT is enabled and Daily 2 - OT Configurations**

Days To Consider	WO, PH, WO/PH		
Range:	00:00 - 23:59	Applicable Days	WO, PH, WO/PH, FB, RD
Min Duration	00:00		
Consider As	OT1		

**Shift = 7:00 to 15:00**

Consider the following example for Short Leave In-Out.

Punch 1 = 05:00:00 Regular IN

Punch 2 = 06:00:00 Short Leave Out

Punch 3 = 16:00:00 Short Leave IN

Punch 4 = 18:00:00 Regular Out

The calculations will be done as follows:

Short Leave Duration Prior Shift = 01:00:00

Short Leave Duration Within Shift = 08:00:00

Short Leave Duration Post Shift = 01:00:00

Hence it is concluded that according to the configuration of the components the Short Leave Duration will be contributing to the overall overtime calculated hours only if the desired components have been configured in the Network Hours Policy and the same Policy has been assigned in the Overtime Policy.

## Weekly/Monthly Overtime

This section allows the administrator to configure Weekly/Monthly Overtime calculation.

To configure Weekly/Monthly Overtime,

- Select the **Weekly/Monthly Overtime** tab as shown.

The screenshot shows the 'Weekly/Monthly Overtime' configuration window. It includes the following sections:

- Overtime Calculation:** A dropdown menu set to 'Weekly'.
- Week Start Day:** A dropdown menu set to 'Monday'.
- Auto Authorize Overtime Component:** A checked checkbox.
- Authorization Required For Late-IN:** A checked checkbox.
- Maximum Allowed Weekly Overtime Duration:** Two input fields showing '999' and '59'.
- Consider In Net Work Hours:** A section with four rows: 'Week Offs', 'Holidays', 'Paid Leaves', and 'Not Applicable Day'. Each row has a checkbox and a dropdown menu set to 'Shift Based'. There are also 'HHMM' input fields for each row.
- Consider Work Done on WO/PH/Paid Leaves:** A checked checkbox.
- Work Component Configuration:** A table with columns: 'Net-Work Hours Range(From)', 'Net-Work Hours Range(To)', 'Min. Duration Req.', 'Consider As', and 'Factor'. The table contains one row with values: '00:00', '100:00', '00:00', 'OT1', and '1.00'.

- **Overtime Calculation** - Select the type of overtime calculation (**weekly or monthly**) to be performed from the dropdown list. Select Disabled to disable both weekly/monthly overtime calculation.
- For **Weekly** overtime calculation, the **Week Start Day** is to be specified from the drop-down list as shown to indicate the overtime calculation cycle. So, if Monday is selected as the **Week Start Day**, the weekly overtime will be calculated till the coming Sunday.
- **Auto Authorize Overtime Component** - Select this checkbox to enable automatic authorization of weekly/monthly overtime.
- **Authorization Required for Late-IN** - Select this checkbox in case the Late-IN is to be authorized.

### Consider In Net Work Hours

Select the checkboxes to specify whether **Week Offs**, **Holidays**, **Paid Leaves** or **Not Applicable Day** are to be considered within Net Work Hours for the weekly/monthly overtime calculation.

- You can select **Shift Based** hours to consider complete shift hours in Network hours or
- You can select **Custom hours** and specify specific hours to be included in Net-work hours.

**Consider In Net Work Hours**

Week Offs	<input checked="" type="checkbox"/>	Shift Based	▼	HH:MM
Holidays	<input checked="" type="checkbox"/>	Custom Hours	▼	04:00
Paid Leaves	<input type="checkbox"/>	Shift Based	▼	HH:MM
Not Applicable Day	<input type="checkbox"/>	Shift Based	▼	HH:MM

Consider Work Done on WO/PH/Paid Leaves ☒

**Consider Work Done on WO/PH/Paid Leaves:** If this checkbox is enabled only then work done on WO/PH/Paid leaves will be considered in Net-work hours.

**Example:** If Week Offs is enabled for Shift Based and Holidays for Custom 4 hrs. And “Consider Work Done on WO/PH/Paid Leaves” is enabled:

- Then suppose user has worked for 5 hrs on WO then shift hours (say 8hrs) + work done (5 hrs ) = 13 hrs will be added to the Net work hours.
- Suppose user has done work for 6 hrs on holiday then custom hrs (4 hrs) + work done (6 hrs) will be added to the Net-work hours.

If “Consider Work Done on WO/PH/Paid Leaves” is disabled:

- Then work done on WO/Holidays wont be considered in Net-work hours and only shift hours/custom hours will be considered.
- In case of paid leave with half day present status, then work done on half day hours will be added in the net work hours.
- In case of full day paid leave status, then work done on that day will not be added in the net work hours.

*For work done on a Week Off/Public Holiday, the shift duration for a WO/PH day shall be counted in the week's total net work hours, if and only if, that day of the week is applicable for Weekly OT calculation.*

**Example:** Daily overtime is to be calculated for WO and PH days. Weekly overtime should consider custom hours of 09:00 for Not Applicable Days falling in the week. Any work above 45:00 should be considered as Overtime. Consider Work Done on WO/PH/Paid Leaves" = Unchecked.

Date	Day Type	Work hours
15-4-2019 Monday	Not Applicable	
16-4-2019 Tuesday	Not Applicable	
17-4-2019 Wednesday <b>Joining Date</b>	Normal	9:30
18-4-2019 Thursday	Normal	9:30
19-4-2019 Friday	Normal	9:15

Date	Day Type	Work hours
20-4-2019 Saturday	Week Off	5:00
21-4-2019 Sunday	Week Off	00:00

In above example:

Daily OT generated on 20/04/2019 - **05:00**

Weekly OT - **01:15** (This will be achieved since Net-Work = 09:00 (15/04/2019) + 09:00 (16/14/2019) + 09:30 (17/04/2019) + 09:30 (18/04/2019) + 09:15 (19/11/2018) = 46:15

## Work Component Configuration

- **Work Component** - Select the work component option as **Net-Work Hours**. This indicates that the weekly/monthly overtime will be calculated based on the Net-Work Hours Configuration as performed earlier.
- **Work Component Range** - Define a time range for a user's net work hours in the HHH:MM format to be considered as overtime.
- **Min Duration Required Within Range** - Define a minimum duration within the Work Component Range which must be covered, for the user's net work hours to qualify as overtime.
- **Consider Component As** - This is to designate the selected work component as an overtime type. COSEC allows the definition of up to 5 overtime types on the system - OT1, OT2, OT3, OT4 and OT5.
- **Multiplication Factor** - Specify the multiplication factor which should be used against the total calculated overtime for a specified period for overtime pay calculation.

Click the **Add** button to save the overtime configuration. The work component and its parameters are now reflected in a grid list as shown.

Work Component	Range	Consider AS	Min Duration Req.	Applicable Days	Factor	
Net-Work Hours	100:00 - 200:00	OT1	100:00		0.5	

Click **Save** .

*For users who are auto-authorized for Overtime and are assigned Net-Work Hours & Overtime Policy having Overtime as auto-authorized, an OT authorization request will still be generated if User is late to report for a shift (i.e. after Shift Start Time added with Grace Time for Shift Late-IN).*

## OT for JPC User

### Daily1

#### Example1

Consider 2 punch system, Shift timings: 9:00- 18:00, No Break Configured.

Work Component	Range	Consider as	Minimum required	Applicable days	Multiplication Factor
----------------	-------	-------------	------------------	-----------------	-----------------------

Early-IN	0:00 to 23:59	OT1	00:00	All	1
Overstay	0:00 to 23:59	OT2	00:00	All	1
Work Within Shift	0:00 to 23:59	OT3	00:00	All	1

### JPC Timesheet Transactions

#### Network and OT against transaction

Transaction start	Transaction end	Early IN	Late-OUT	Work within Shift	OT1	OT2	OT3
07:00	15:00	02:00	00:00	06:00	02:00		06:00
15:00	17:00	00:00	00:00	02:00			02:00
17:00	20:00	00:00	02:00	01:00		02:00	01:00

#### Example2

Consider 2 punch system, Shift timings: 9:00- 18:00, No Break Configured

OT	Work Component	Range	Minimum required	Applicable days	Multiplication Factor
OT1	Early-IN	00:00 to 01:00	00:00	All	1
OT2	Early-IN	01:00 to 23:59	00:00	All	1
OT1	Overstay	00:00 to 01:00	00:00	All	1
OT2	Overstay	01:00 to 23:59	00:00	All	1
OT1	Work within Shift	00:00 to 01:00	00:00	All	1
OT2	Work within Shift	01:00 to 23:59	00:00	All	1

#### T&A Transaction and Overtime

IN Punch	OUT Punch	Early IN	Late-OUT	Work within Shift	OT1	OT2
07:00	20:00	02:00	02:00	09:00	03:00	10:00

**OT1**= Early IN (1 hr) + Late-Out (1 hr) + Work within shift (1 hr) = 3 hours

**OT2**= Early IN (1 hr) + Late-Out (1 hr) + Work within shift (8 hr) = 10 hours

### JPC Timesheet Transactions

Transaction start	Transaction end	Early IN	Late-OUT	Work within Shift	OT1	OT2
07:00	15:00	02:00	00:00	06:00	02:00	06:00
15:00	17:00	00:00	00:00	02:00	00:00	02:00

17:00	20:00	00:00	02:00	01:00	01:00	02:00
-------	-------	-------	-------	-------	-------	-------

## Daily2 OT

Consider 2 punch system, Shift timings: 9:00- 18:00, No Break Configured.

Net work hours include: Early-IN, Work Hours Within Shift and Overstay (00:00-23:59)

Range	Consider as	Minimum duration	Applicable days
6:00 to 8:00	OT1	00:00	All
8:00 to 12:00	OT2	00:00	All
12:00 to 23:59	OT3	00:00	All

## No Change in JPC

T&A Punches	Network Hours	Standard Hours	OT1	OT2	OT3
09:00- IN 21:00 –OUT	12:00	06:00	2:00	4:00	-

**Normal Hours:** Hours considered in T&A's Network hours against corresponding JPC transaction i.e. the hours considered in Network hours which are distributed as per JPC's transaction.

Eg: If Network hours is 12 hours and total transactions are of 15 hours so normal hours will be 12 hours only.

**Standard Hours:** Hours not accountable for overtime calculation (Daily 2) i.e. if overtime is to be given after working hours of 9 hours, then standard hours are 9 hours. You can calculate from the Range if given. Suppose Range is 6:00 to 8:00, then OT will be given after 6 hours so the standard hours is 6 hours.

## Network and OT against transaction

Transaction start	Transaction end	Normal Hours	Standard Hours	OT1	OT2	OT3
09:00	15:00	06:00	06:00			
15:00	17:00	02:00	00:00	02:00		
17:00	21:00	04:00	00:00		04:00	

## Specified Award/Penalty against transaction

Transaction start	Transaction end	Award	Penalty
09:00	15:00	03:00	
15:00	17:00		
17:00	21:00		02:00

Network Hours= Network hours+ Award Duration-Penalty Duration  
= 12+3-1 =13:00 hours

So, Standard hours= 6:00

OT1= 2:00, OT2=4:00, OT3=1:00

## Network and OT against transaction after Award/Penalty Consideration

Transaction start	Transaction end	Award	Penalty	Normal Hours	Standard Hours	OT1	OT2	OT3
09:00	15:00	3:00		09:00	06:00	02:00	01:00	
15:00	17:00			02:00	00:00		02:00	
17:00	21:00		2:00	02:00	00:00		01:00	01:00

## OT for Overlapping Time Range

Consider 2 punch system, Special Time Range=21:00 to 04:00

Net-Work Hours include: Early-IN, Work Hours Within Shift, Overstay, Award Duration and Penalty Duration (00:00 - 23:59)

Range	Consider as	Minimum duration	Applicable days	Consider Overtime as per
9:00 to 11:00	OT1	00:00	All	Priority
11:00 to 23:59	OT3	00:00	All	Priority
9:00 to 11:00	OT2	00:00	All	Special Time Range
11:00 to 23:59	OT4	00:00	All	Special Time Range

### Example:1

T&A Punches	Network Hours	Standard Hours	Special OT	Priority OT	OT1	OT2	OT3	OT4
09:00- IN 21:00 –OUT	12:00	06:00	0:00	3:00	2:00		1:00	

### Example:2

T&A Punches	Network Hours	Standard Hours	Special OT	Priority OT	OT1	OT2	OT3	OT4
18:00- IN 06:00 –OUT	12:00	09:00	1:00	2:00	2:00			1:00

**Priority OT:** Overtime calculated against Priority OT Component Range.

**Special OT:** Overtime calculated against Special OT Time Range.

## Special OT calculation

When Daily 2 Overtime configuration is including Special OT components then first it decides the overall Special Overtime and Priority Overtime. Projected OT Start should be figured out considering Eligible Early IN that has actually contributed in the Net-Work Hours.

Net-Work Hours Calculation:

Maintain a variable as Eligible Early IN which should be calculated as sum of the early-in duration that is contributing to Net-Work Hours for the day

## Daily 2 Overtime Calculation:

Steps for figuring out Projected OT Start have been updated to consider Eligible Early IN .

### Example1: With Early IN

Shift Timings= 18:00 to 03:00

Graveyard shift time range: 21:00 to 05:00

### Network hours Configuration

Component	Range	Minimum duration	Applicable days
Early IN	0:00 to 23:59	00:00	Week days
Work within shift	0:00 to 23:59	00:00	Week days
Overstay	0:00 to 23:59	00:00	Week days

### Work Hours Duration

Range	Consider as	Minimum duration	Applicable days	Graveyard Shift
9:00 to 11:00	OT1	00:00	Week days	No
11:00 to 23:59	OT3	00:00	Week days	No
9:00 to 11:00	OT2	00:00	Week days	Yes
11:00 to 23:59	OT4	00:00	Week days	Yes

T&A PUNCHES	Network Hours	Standard Hours	Eligible Early-IN	Projected OT start	OT time range	Special OT	Priority OT	OT 1	OT 2	OT 3	OT 4
15:00- IN 17:00 – OUT 18:00-IN 06:00- OUT	14:00	09:00	2:00	1:00	01:00 to 06:00	4:00	1:00	1: 00	2: 00		2: 00

### Description:

Network hours: (Punch IN time:15:00 hrs to Punch OUT time:06:00 hrs) - (Out time from 17:00 to 18:00 hrs)  
 = 15 hrs - 1 hr  
 = 14:00 hrs

Eligible Early IN: (Punch time:15:00 hrs to Shift start time:18:00 hrs) - (Out time from 17:00 to 18:00 hrs)  
 = 3 hrs - 1 hr  
 = 2 hrs

Projected OT start= Shift start- Eligible Early IN + standard hours  
 = 18:00- 2:00+ 9:00  
 = 01:00 so OT is projected to start from 1am

Thus OT time range= Projected OT start time to OUT punch time  
 = 1 am to 6am

So Total OT is to be given for 1 am to 6am of work = 5 hrs

Special OT is to be given first. Now the special time range or Graveyard shift range is from 21:00 hrs to 05:00 hrs.  
 Hence from 1am to 5am will be given as **Special OT= 4 hrs**

Remaining 1 hr from 5am to 6am will be given as **Priority OT= 1 hr**

The Priority OT of 1 hr will be distributed among OT1 and OT3. As OT1 has range of 2 hours so OT1 will be given 1 hr.

The Special OT of 4 hrs will be distributed among OT2 and OT4. As OT2 has range of 2 hours so OT2 will be given 2 hrs and OT4 as 2 hrs.

### Example2: WithOut Early IN

Consider only work within shift and overstay in Network hours. All other configurations being same.

T&A Punches	Network Hours	Standard Hours	Eligible Early-IN	Projected OT start	OT time range	Special OT	Priority OT	OT 1	OT 2	OT 3	OT 4
15:00- IN 17:00 – OUT 18:00-IN 06:00- OUT	12:00	09:00	Do not calculate as Early-IN is not configured	3:00	03:00 to 06:00	2:00	1:00	1:00	2:00		

Projected OT start= Shift start- Eligible Early IN + standard hours  
= 18:00- 0:00+ 9:00  
= 3:00 hrs

### Example1: Daily2 OT Calculation with Priority OT and Special OT

Consider Network Hours configuration as:

Work Component	Range	Consider as	Minimum duration reqd.	Applicable days	factor	Remarks
Work hours within shift	00:00 to 10:00	work	00:00	M,T,W,Th,F Sa	1	Shift duration is counted in network hrs
Early-IN	00:00 to 02:00	work	00:10	M,T,W,Th,F Sa	1	Min 0 and Max 2 hrs of EI will be calculated for Net-work hours
Overstay	02:00 to 08:00	work	00:30	M,T,W,Th,F Sa	1	Min 2 and Max 8 hrs of Overstay will be calculated for Net-work hours

Consider Overtime Configuration as:

Daily Overtime is enabled for M, T ,W, Th

Consider Daily Overtime Configuration as:

Overtime Calculation is selected as Daily2  
Auto Authorize Overtime component is enabled  
Allow Overlapping work components is enabled  
Special OT time range is 21:00 to 04:00

Range	Consider as	Minimum duration reqd.	Applicable days	Multiplication factor	OT assignment
01:00 to 100:00	OT1	00:00	M,T,W,Th	1	Priority
02:00 to 100:00	OT2	00:10	M,T,W,Th	1	Time Range

### Consider Weekly/Monthly Overtime as Disabled

**Consider shift of the user** is 09:00 to 18:00. Shift duration is 8 hrs with break from 13:00 to 14:00. Break deviation allowed.

**To generate the overtime of the user, Daily and Monthly attendance process must be run.**

Now after the daily and monthly attendance process, the user punches in the Daily attendance view are shown below:

<div> User <input type="text" value="rf"/> Rosy  </div> <div> Attendance Period <input type="text" value="September"/> <input type="text" value="2016"/> </div> <div> View </div>														
Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark

10/09/2016	GS - WO			WO	WO									
11/09/2016	GS - WO			WO	WO									

### Calculation of Network hours

Network hours= Early IN component + Work hours within shift + Overstay component

**On 1st**

- Early IN=1hr

- Work hours within shift=( 9hrs to 18 hr - break duration) =9-1 = 8 hrs
- Overstay= 1hr but overstay range should be minimum 2 hrs to consider for network hours so Overstay=0

So **Network hours=EI + WS+ OS = 1+ 8 +0 = 9hrs** which is shown by arrow on 1st

## 2nd

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 0 + (\text{shift duration} - \text{break hrs}) + (3-2)$   
 $= 0 + (9:00-1:00) + 1 = 8+1 = 9 \text{ hrs}$

## 3rd

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 0 + (\text{shift duration} - \text{break hrs}) + (2-2)$   
 $= 0 + (9:00- 00:30) + 0$   
 $= 8:30 \text{ hrs}$

## 4th

Network hrs is not calculated on Sunday as it is not configured for Sunday.

## 5th

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 00:45 + (\text{shift duration} - \text{break hrs}) + (1\text{hr} < \text{min reqd } 2 \text{ hr})$   
 $= 00:45 + (9:00- 00:15) + 0$   
 $= 00:45 + 8:45 = 9:30$

## 6th

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 1:30 + (\text{shift duration} - \text{break hrs}) + (4-2)$   
 $= 1:30 + (9:00- 01:00) + 2$   
 $= 1:30 + 8:00 + 2 = 11:30$

## 7th

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 0 + (\text{shift duration} - \text{break hrs}) + (5:30-2)$   
 $= 0 + [9:15 \text{ to } 18:00] - 00:10 + 3:30$   
 $= 08:35 + 3:30 = 12:05$

## 8th

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= (3:00 \text{ hrs, but max allowed is } 2:00) + (\text{shift duration} - \text{break hrs}) + (5-2)$   
 $= 2:00 + (9:00- 01:00) + 3$   
 $= 2:00 + 8:00 + 3 = 13:00$

## 9th

Network hours= Early IN component + Work hours within shift + Overstay component  
 $= 0 + (\text{shift duration} - \text{break hrs}) + (5:45-2)$   
 $= 0 + (9:00- 01:00) + 3:45$   
 $= 08:00 + 3:45 = 11:45$

## Calculation of Overtime

Overtime = Network hours- Standard hours

Standard hours is the minimum hours in the Range of network hours to consider for overtime.

From range 01:00 to 100:00, Priority OT1 is configured. So here standard hours is 1:00

From range 02:00 to 100:00, Special OT2 is configured. So here standard hours is 2:00

Date	Network hours	Work done	Overlapping hours with special time range (21:00 to 04:00)	Standard hours	Daily2 on M,T,W,Th	Overtime= Network hours- Standard hours	Special OT OT2	Priority OT OT1
1/9/16	9	8:00 to 19:00	0	1	Th	9-1= 8	-	8:00
2/9/16	9	9:00 to 21:00	0	1	F	NA on Friday	-	-
3/9/16	8:30	9:00 to 20:00	0	1	Sa	NA on Saturday	-	-
4/9/16	NA on Sunday	7:30 to 21:00	0	1	Su	NA on Sunday	-	-
5/9/16	9:30	8:15 to 19:00	0	1	M	8:30	-	8:30
6/9/16	11:30	7:30 to 22:00	1:00	2	T	9:30	1:00	8:30
7/9/16	12:05	9:15 to 23:30	2:30	2	W	10:05	2:30	7:35
8/9/16	13:00	6:00 to 23:00	2:00	2	Th	11:00	2:00	9:00
9/9/16	11:45	9:00 to 23:45	2:45	2	F	NA on Friday	-	-

Here Standard hours is 1:00 when work is not done in special time range of 21:00 to 04:00; other wise standard hours considered will be 2:00 hrs as configured in the range.

Now Daily2 OT is configured from Monday to Thursday. So OT on 1st= 8 hrs. This will be Priority OT which is OT1; so OT1 for 1st = 8:00 hrs

Similarly on 5th, OT1= 9:30 -1 = 8:30 hrs.

On 6th user has worked from 21:00 to 22:00 in special time range, so 1:00 hr will be given to special OT.

Total OT= Network hrs- Standard hrs  
= 11:30 - 2 = 9:30 hrs

Out of total overtime of 9:30 hrs, Special OT **OT2= 1 hr**  
So Priority OT; **OT1=8:30 hrs**

Similarly OT1 and OT2 can be calculated for other days as shown in above table.

## Example2: Weekly OT Calculation

Consider Network Hours configuration as:

Work Component	Range	Consider as	Minimum duration reqd.	Applicable days	factor	Remarks
Work hours within shift	00:00 to 10:00	work	00:00	M,T,W,Th,F Sa	1	Shift duration is counted in network hrs
Early-IN	00:00 to 02:00	work	00:10	M,T,W,Th,F Sa	1	Min 0 and Max 2 hrs of EI will be calculated for Net-work hours
Overstay	02:00 to 08:00	work	00:30	M,T,W,Th,F Sa	1	Min 2 and Max 8 hrs of Overstay will be calculated for Net-work hours

### Consider Overtime Configuration as:

Weekly Overtime is enabled for F, Sa, Sun

### Consider Weekly/Monthly Overtime Configuration as:

Overtime Calculation is selected as Weekly

Week Start Date is selected as Monday

Auto Authorize Overtime component is enabled

Consider in Net work hours is enabled for Week-Offs

Work Component	Range	Consider as	Minimum duration reqd.	Multiplication factor
Net-work hours	00:00 to 100:00	OT3	01:00	1

**Consider shift of the user** is 09:00 to 18:00. Shift duration is 8 hrs with break from 13:00 to 14:00. Break deviation allowed.

**To generate the overtime of the user, Daily and Monthly attendance process must be run.**

Now after the daily and monthly attendance process, the user punches in the Daily attendance view are shown below:

User

rf

Rosy

Attendance Period

September

2016

View

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark

09/09/2016	GS	09:00	23:45	PR	PR			13:45	05:45	11:45	01:00	05:45		
10/09/2016	GS - WO			WO	WO									
11/09/2016	GS - WO			WO	WO							22:00		

For weekly OT, total Net work hours is to be calculated first.

The Network hours is calculated from the components Early IN, Work hours within shift and Overstay on Friday and Saturday.

The weekly OT will be allotted on F,Sa and Su as configured from Overtime configuration.

Now Week Offs check box is enabled in "Consider in Network hours" so shift work hours on the week-off will be considered in net-work hours.

Hence Total Network hours will be calculated from Friday, Saturday and Sunday.

**Calculation of Network hours** is same as done in previous Example1. [See "Calculation of Network hours" on page 1893.](#)

Total Network hours = Friday N/w hrs + Saturday N/w hrs + Sunday shift hours  
= 9:00 + 8:30 + 8:00  
= 25:30 hours

### Calculation of Weekly OT

The total network hours of 25:30 hours will be distributed from Friday to Sunday as OT3 depending on the extra work done on the day. The left over OT will be given on the last day of the week.

On 2/9/16 Friday; Extra work hours = 03:00 so OT3 will be given as 03:00 hours.

On 3/9/16 Saturday; Extra work hours = 02:00 so OT3 will be given as 02:00 hours.

On 4/9/16 Sunday, Remaining hours = 25:30 - (OT allotted on Friday and Saturday)  
= 25:30 - (05:00)  
= 20:30 will be given as OT3; shown by arrow in above screenshot

Similarly for week 5/9/16 to 11/9/16, Total network hours = 11:45 + 8:00 + 8:00  
= 27:45 hours

Overtime can be allotted on 9/9/16 as per the extra work hours as 5:45 hours. So OT3 on 9th is 5:45 hrs.

The Remaining OT will be given to the last day(11/9/16) of the week which is = 27:45 - 05:45 hrs  
= 22:00 hours; shown by arrow in above screenshot

### Example3: Monthly OT Calculation

**Consider Network hours configuration and Overtime configuration same as Weekly OT configuration**

**Consider Weekly/Monthly Overtime Configuration as:**

Overtime Calculation is selected as Monthly

Auto Authorize Overtime component is enabled

Consider in Net work hours is enabled for Week-Offs

Work Component	Range	Consider as	Minimum duration reqd.	Multiplication factor
Net-work hours	00:00 to 100:00	OT4	01:00	1

**Consider shift of the user** is 09:00 to 18:00. Shift duration is 8 hrs with break from 13:00 to 14:00. Break deviation allowed.

**To generate the overtime of the user, Daily and Monthly attendance process must be run.**

Now after the daily and monthly attendance process, the user punches in the Daily attendance view are shown below:

**Calculation of Network hours** is same as done in Example1. See ["Calculation of Network hours" on page 1893](#).

Now Total Network hours for the month is calculated. As Monthly OT is applicable for F, Sa and Su so Network hours for all F, Sa and Su is added.

Date	Network hours	Remarks
2/9/16	9:00	
3/9/16	8:30	
4/9/16	8:00	As WO is enabled to consider for Network hours
9/9/16	11:45	
10/9/16	8	As WO is enabled to consider for Network hours
11/9/16	8	
16/9/16	-	AB
17/9/16	-	PH
18/9/16	8	As WO is enabled to consider for Network hours
23/9/16	8	
24/9/16	8	As WO is enabled to consider for Network hours
25/9/16	8	

**Total Network hours= 84:75 hours**

### Calculation of Monthly OT

The total network hours of 84:75 hours will be distributed from Friday to Sunday as OT4; according to the extra work done on the day.

On 2/9/16 Friday; Extra work hours = 03:00 so OT4 will be given as 03:00 hours. Similarly OT4 will be given to other days (F, Sa, Su)

The left over OT will be given on the last day of the month. As monthly OT is allowed for Friday, Saturday and Sunday so left over OT will be given to last Sunday of the month.

Thus left over OT of 68:00 hours is given on 25/9/16 as shown below

22/09/2016	G5	08:00	19:00	PR	PR			10:00	02:00	09:00	01:00	
23/09/2016	G5	09:00	20:00	PR	PR			10:00	02:00	08:00	01:00	02:00
24/09/2016	G5 - WO			WO	WO							
25/09/2016	G5 - WO			WO	WO							68:00
26/09/2016	G5	09:00	18:30	PR	PR			08:30	00:30	08:00	01:00	
27/09/2016	G5	08:45	21:00	PR	PR			11:15	03:15	09:15	01:00	
28/09/2016	G5			AB	AB							
29/09/2016	G5			AB	AB							
30/09/2016	G5											

### OT Calculation for user with Not Applicable Days configuration:

#### Example 1:

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Weekly Overtime, Days to consider for Overtime= **Sun, Mon, Wed, Thu, Fri, Sat** and **PH**. Also, custom hours = 09:00 for Not Applicable Days falling in the week as well as any work done above **35:00** hours is considered as Overtime.

- "Consider Work Done on WO/PH/Paid Leaves" = **Unchecked**.
- Week-Start = **Monday (15/04/2019)**, Week-End = **Sunday (21/04/2019)**
- Joining Date = **Wednesday (17/04/2019)**
- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
15/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
16/04/2019 (Tuesday)	Normal	-		<b>Not Applicable Day</b>  This day will not be considered as it is not configured in "Overtime Calculation > Weekly/Monthly Overtime > Day to Consider for Calculation".
17/04/2019 (Wednesday)	Normal	9:30	Yes	<b>Joining Date</b>
18/04/2019 (Thursday)	Normal	9:30	Yes	
19/04/2019 (Friday)	Normal	9:15	Yes	
20/04/2019 (Saturday)	Week Off	05:00		
21/04/2019 (Sunday)	Week Off	00:00		

- In above mentioned scenario, OT should be generated as follows:
  - Daily OT on 20/04/2019 - **05:00**
  - Weekly OT – **02:15**
  - This should be achieved since Net-Work = **09:00** (15/04/2019) + 09:30 (17/04/2019) + 09:30 (18/04/2019) + 09:15 (19/11/2018) = **37:15**.

#### Example 2:

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Weekly Overtime, Days to consider for Overtime= **Sun, Mon, Tue, Wed, Thu, Fri, Sat** and **PH**. Also, custom hours = 09:00 for **Not Applicable Days** falling in the week, as well as any work done above **45:00** hours is considered as Overtime.

- “Consider Work Done on WO/PH/Paid Leaves” = **Unchecked**.
- Week-Start = **Monday (15/04/2019)**, Week-End = **Sunday (21/04/2019)**
- Joining Date = **Wednesday (17/04/2019)**
- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
15/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable</b>
16/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable</b>

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
17/04/2019 (Wednesday)	Normal	9:30	Yes	Joining Date
18/04/2019 (Thursday)	Normal	9:30	Yes	
19/04/2019 (Friday)	Normal	9:15	Yes	
20/04/2019 (Saturday)	Week Off	05:00		
21/04/2019 (Sunday)	Week Off	00:00		

- In above mentioned scenario, OT should be generated as follows:
  - Daily OT on 20/04/2019 - **05:00**
  - Weekly OT - **01:15**
  - This should be achieved since Net-Work = **09:00** (15/04/2019) + **09:00** (16/14/2019) + 09:30 (17/04/2019) + 09:30 (18/04/2019) + 09:15 (19/04/2018) = **46:15**

### Example 3:

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Monthly Overtime, Days to consider for Overtime= **Mon** and **Tue**. Also, custom hours = 09:00 for **Not Applicable Days** falling in the month, as well as any work done above **90:00** hours is considered as Overtime.

- “Consider Work Done on WO/PH/Paid Leaves” = **Unchecked**.
- Month-Start = **Monday (01/04/2019)**, Month-End = **Tuesday (30/04/2019)**
- Joining Date = **Monday (15/04/2019)**

- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
01/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
02/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>
03/04/2019 (Wednesday).	Normal	-		<b>Not Applicable Days</b>  These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation"
04/04/2019 (Thursday)	Normal	-		
05/04/2019 (Friday)	Normal	-		
06/04/2019 (Saturday)	Week Off	-		
07/04/2019 (Sunday)	Week Off	-		
08/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
09/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>
10/04/2019 (Wednesday)	Normal.	-		<b>Not Applicable Days</b>  These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation"
11/04/2019 (Thursday)	Normal	-		
12/04/2019 (Friday)	Normal	-		
13/04/2019 (Saturday)	Week Off	-		
14/04/2019 (Sunday)	Week Off	-		
15/04/2019 (Monday)	Normal	9:30	Yes	<b>Joining Day</b>
16/04/2019 (Tuesday)	Normal	9:30	Yes	

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
17/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
18/04/2019 (Thursday)	Normal	9:30		
19/04/2019 (Friday)	Normal	9:30		
20/04/2019 (Saturday)	Week OFF	05:00		
21/04/2019 (Sunday)	Week OFF	-		
22/04/2019 (Monday)	Normal	9:30	Yes	
23/04/2019 (Tuesday)	Normal	9:30	Yes	
24/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
25/04/2019 (Thursday)	Normal	9:30		
26/04/2019 (Friday).	Normal	9:30		
27/04/2019 (Saturday)	Week OFF	-		
28/04/2019 (Sunday)	Week OFF	-		
29/04/2019 (Monday)	Normal	9:30	Yes	
30/04/2019 (Tuesday)	Normal	9:30	Yes	

- In above mentioned scenario, OT is generated as follows:
  - Daily OT on 20/04/2019 - **05:00**
  - Monthly OT - **03:00**
  - This is achieved since Net-Work = **09:00** (01/04/2019) + **09:00** (02/04/2019) + **09:00** (08/04/2019) + **09:00** (09/11/2018) + 09:30 (15/04/2019) + 09:30 (16/04/2019) + 09:30 (22/04/2019) + 09:30 (23/04/2018) + 09:30 (29/04/2019) + 09:30 (30/04/2018) = **93:00**.

#### Example 4:

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Monthly Overtime, Days to consider for Overtime= **Mon, Tue, WO** and **PH**. Also, custom hours = 09:00 for **Not Applicable Days**, 09:30 for **WO** and **08:00** for **PH** falling in the month, as well as any work done above **150:00** hours is considered as Overtime.

- “Consider Work Done on WO/PH/Paid Leaves” = **Unchecked**.
- Month-Start = **Monday (01/04/2019)**, Month-End = **Tuesday (30/04/2019)**
- Joining Date = **Monday (15/04/2019)**

- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
01/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
02/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>
03/04/2019 (Wednesday).	Normal	-		<b>Not Applicable Days</b>  These days will not be considered as it is not configured in “Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation”
04/04/2019 (Thursday)	Normal	-		
05/04/2019 (Friday)	Normal	-		
06/04/2019 (Saturday)	Week Off	-	Yes	<b>Not Applicable Day</b>
07/04/2019 (Sunday)	Week Off	-	Yes	<b>Not Applicable Day</b>
08/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
09/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>
10/04/2019 (Wednesday)	Normal.	-		<b>Not Applicable Days</b> These days will not be considered as it is not configured in “Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation”
11/04/2019 (Thursday)	Normal	-		
12/04/2019 (Friday)	PH	-	Yes	<b>Not Applicable Day</b>
13/04/2019 (Saturday)	Week Off	-	Yes	<b>Not Applicable Day</b>
14/04/2019 (Sunday)	Week Off	-	Yes	<b>Not Applicable Day</b>
15/04/2019 (Monday)	Normal	9:30	Yes	<b>Joining Day</b>
16/04/2019 (Tuesday)	Normal	9:30	Yes	

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
17/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
18/04/2019 (Thursday)	Normal	9:30		
19/04/2019 (Friday)	Normal	9:30		
20/04/2019 (Saturday)	Week OFF	05:00	Yes	
21/04/2019 (Sunday)	Week OFF	-	Yes	
22/04/2019 (Monday)	Normal	9:30	Yes	
23/04/2019 (Tuesday)	Normal	9:30	Yes	
24/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
25/04/2019 (Thursday)	Normal	9:30		
26/04/2019 (Friday).	Normal	9:30		
27/04/2019 (Saturday)	Week OFF	-	Yes	
28/04/2019 (Sunday)	Week OFF	-	Yes	
29/04/2019 (Monday)	Normal	9:30	Yes	
30/04/2019 (Tuesday)	Normal	9:30	Yes	

- In above mentioned scenario, OT is generated as follows:
  - Daily OT on 20/04/2019 - **05:00**
  - Monthly OT - **27:00**
  - This is achieved since Net-Work = **09:00** (01/04/2019) + **09:00** (02/04/2019) + **09:30** (06/04/2019) + **09:30** (07/04/2018) + **09:00** (08/04/2019) + **09:00** (09/04/2018) + **08:00** (12/04/2019) + **09:30** (13/04/2018) + **09:30** (14/04/2019) + **09:30** (15/04/2019) + **09:30** (16/04/2019) + **09:30** (20/04/2018) + **09:30** (21/04/2019) + **09:30** (22/04/2019) + **09:30** (23/04/2018) + **09:30** (27/04/2018) + **09:30** (28/04/2019) + **09:30** (29/04/2019) + **09:30** (30/04/2018) = **177.00**

#### Example 5:

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Weekly Overtime, Days to consider for Overtime= **Sun, Mon, Wed, Thu, Fri, Sat** and **PH**. Also, custom hours = 09:00 for **Not Applicable Days** falling in the week, as well as any work done above **40:00** hours is considered as Overtime.

- “Consider Work Done on WO/PH/Paid Leaves” = **Unchecked**.
- Week-Start = **Monday (29/04/2019)**, Week-End = **Sunday (05/05/2019)**
- Joining Date = **Wednesday (01/05/2019)**

- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
29/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
30/04/2019 (Tuesday)	Normal	-		<b>Not Applicable Day</b>  This day will not be considered as it is not configured in “Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation”.
01/05/2019 (Wednesday)	Normal	10:30	Yes	Joining Date
02/05/2019 (Thursday)	Normal	11:00	Yes	
03/05/2019 (Friday)	Normal	10:30	Yes	
04/05/2019 (Saturday)	Week Off	06:30		
05/04/2019 (Sunday)	Week Off	00:00		

- In above mentioned scenario, OT should be generated as follows:
  - Daily OT on 04/05/2019 - **06:30**
  - Weekly OT - **01:00**
  - This is achieved since Net-Work = **09:00** (29/04/2019) + 10:30 (01/05/2019) + 11:00 (02/05/2019) + 10:30 (03/05/2018) = **41:00**.

*For some cases when week or custom month period is overlapping in two months and leaving date falls in same week but in previous month, then monthly attendance process runs for current month & (current month +1) and updates attendance summary table.*

**Example 6:**

For Daily Overtime, Days to consider for Overtime= WO and PH.

For Monthly Overtime, Days to consider for Overtime= **Mon, Tue, WO** and **PH**. Also, custom hours = 09:00 for **Not Applicable Days**, 09:30 for **WO** and 08:00 for **PH** falling in the month, as well as any work done above **150:00** hours is considered as Overtime.

- “Consider Work Done on WO/PH/Paid Leaves” = **Unchecked**.
- Month-Start = **Monday (01/04/2019)**, Week-End = **Tuesday (30/04/2019)**
- Joining Date = **Monday (15/04/2019)**
- Schedule start Date = **Wednesday (10/04/2019)**

- Considering following daily view:

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
01/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
02/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>
03/04/2019 (Wednesday).	Normal	-		<b>Not Applicable Days</b>  These days will not be considered as it is not configured in “Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation”
04/04/2019 (Thursday)	Normal	-		
05/04/2019 (Friday)	Normal	-		
06/04/2019 (Saturday)	Week Off	-	Can't identify whether these days are week off or not as schedule start date is 10/04/2019. In such case these days will not be considered as Saturday and Sunday which are not configured in “Overtime Calculation > Weekly/Monthly Overtime > Day to Consider for Calculation”.	<b>Not Applicable Day</b>
07/04/2019 (Sunday)	Week Off	-		<b>Not Applicable Day</b>
08/04/2019 (Monday)	Normal	-	Yes	<b>Not Applicable Day</b>
09/04/2019 (Tuesday)	Normal	-	Yes	<b>Not Applicable Day</b>

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
10/04/2019 (Wednesday)	Normal.	-		<b>Schedule Start Day</b>  <b>Not Applicable Days</b>  These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation"
11/04/2019 (Thursday)	Normal	-		
12/04/2019 (Friday)	PH	-	Yes	<b>Not Applicable Day</b>
13/04/2019 (Saturday)	Week Off	-	Yes	<b>Not Applicable Day</b>
14/04/2019 (Sunday)	Week Off	-	Yes	<b>Not Applicable Day</b>
15/04/2019 (Monday)	Normal	9:30	Yes	<b>Joining Day</b>
16/04/2019 (Tuesday)	Normal	9:30	Yes	
17/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
18/04/2019 (Thursday)	Normal	9:30		
19/04/2019 (Friday)	Normal	9:30		
20/04/2019 (Saturday)	Week OFF	05:00	Yes	
21/04/2019 (Sunday)	Week OFF	-	Yes	
22/04/2019 (Monday)	Normal	9:30	Yes	
23/04/2019 (Tuesday)	Normal	9:30	Yes	
24/04/2019 (Wednesday)	Normal	9:30		These days will not be considered as it is not configured in "Overtime Calculation > Weekly/ Monthly Overtime > Day to Consider for Calculation".
25/04/2019 (Thursday)	Normal	9:30		
26/04/2019 (Friday).	Normal	9:30		
27/04/2019 (Saturday)	Week OFF	-	Yes	

Date	Day Type	Work Hours	Consider for Weekly/ Monthly Overtime Calculation	Remark
28/04/2019 (Sunday)	Week OFF	-	Yes	
29/04/2019 (Monday)	Normal	9:30	Yes	
30/04/2019 (Tuesday)	Normal	9:30	Yes	

- In above mentioned scenario, OT is generated as follows:
  - Daily OT on 20/04/2019 - **05:00**
  - Monthly OT - **08:00**
  - This is achieved since Net-Work = **09:00** (01/04/2019) + **09:00** (02/04/2019) + **09:00** (08/04/2019) + **09:00** (09/04/2018) + **08:00** (12/04/2019) + **09:30** (13/04/2018) + **09:30** (14/04/2019) + 09:30 (15/04/2019) + 09:30 (16/04/2019) + **09:30** (20/04/2018) + 09:30 (21/04/2019) + 09:30 (22/04/2019) + 09:30 (23/04/2018) + **09:30** (27/04/2018) + **09:30** (28/04/2019) + 09:30 (29/04/2019) + 09:30(30/04/2018) = **158.00**

## Overtime Limit for Alert Message

This feature enables you to send the Overtime Exceed Alert to the respective users and group in-charges based on — Daily, Weekly and Monthly Overtime.

*If for Authorized Overtime, the Weekly/Monthly overtime option is enabled for WO, PH, WO/PH as well as Daily overtime is enabled for the same day, then in this case the Alert would be sent twice to the respective user.*

*You can also configure Push Notification for this feature.*

*Select **Time and Attendance** as the **Alert Filter** and in **Event** select **Overtime Limit Exceeded - Group-Incharge / Overtime Limit Exceeded - User**. Refer [“Configuring Alert Messages”](#) for details.*

Generated Overtime

Daily Overtime Limit
HH:MM

Weekly Overtime Limit
HHH : MM

Week Start Day
Monday

Monthly Overtime Limit
HHH : MM

Configure the following parameters:

- Overtime Alert Calculation:** Select the desired method of overtime calculation for alert based on — **Generated Overtime** and **Authorized Overtime**.

Generated Overtime is the time generated by the system once the user exceeds the overtime limit.  
Authorized Overtime is the overtime approved by the Admin.

- **Daily Overtime Limit:** Enter daily overtime limit time after which the Overtime Exceed Alert will be triggered.
- **Weekly Overtime Limit:** Enter time in 24 hours format to set it as Overtime exceed limit for Weekly Overtime Alert.

Make sure you have enabled **Weekly** in *Weekly/Monthly Overtime> Overtime Calculation*.

- **Week Start Day:** Select a day from the dropdown list to set it as a week start for Weekly Overtime Limit.

Make sure you have selected Weekly in *Weekly/Monthly Overtime> Overtime Calculation*.

If **Weekly** is configured under **Weekly/Monthly Overtime**, then display the selected **Week Start Day**.

- **Monthly Overtime Limit:** Enter time in 24 hours format to set it as Overtime exceed limit for Monthly Overtime Alert.

Make sure you have selected Monthly in *Weekly/Monthly Overtime> Overtime Calculation*.

The triggering of the **Overtime Limit Exceeded** Alert (Weekly/Monthly) will be dependent on the parameters set in the:

- Overtime Policy: **Weekly/Monthly Overtime Limit** set.
- Overtime Policy: **Auto Authorization of Overtime** check box enabled.
- Network Hours Policy: **Total Number of Overtime Hours** configured.

## Examples

Below given examples demonstrate the Overtime limit exceed calculations and alert triggering:

### 1. Only Daily configurations:

- Daily is configured with days Monday, Tuesday, Wednesday, Thursday, Friday, Saturday and Sunday.
- Weekly/Monthly is not configured.
- Daily Overtime Limit is 1 hour.
- Weekly Overtime Limit is 10 hours.
- Week Start Day is Monday.

Refer below given table for Overtime hours:

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
2 Hours	2 Hours	2 Hours	2 Hours	45 Minutes	2 Hours	1 Hour 30 Minutes

- In this case Daily overtime alert will be triggered for Monday, Tuesday, Wednesday and Thursday.
- In this case Daily + Weekly alert will be triggered for Saturday and Sunday (Here Weekly is calculated based on summation of Daily Overtime hours and 10 hours threshold is violated on Saturday and Sunday, hence the alerts are triggered on both the days).

## 2. Only Weekly/Monthly configurations:

- Daily is not configured.
- Weekly/Monthly is configured with WO and PH. Saturday and Sunday are marked as week-off days. Where Monday is first day of the week.
- Weekly Overtime Limit is 2 hours.

Refer below given table for Overtime hours

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
2 Hours	2 Hours	2 Hours	2 Hours	45 Minutes	3 Hours	1 Hour

- In this case Weekly/Monthly alert will be triggered for Saturday and Sunday (Because the limit is exceeded on Saturday it self and again it was violated on Sunday).

## 3. Both Daily and Weekly/Monthly configurations:

- Daily is configured with days Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, WO, PH and WO/PH.
- Weekly/Monthly is configured with WO, PH and WO/PH. Saturday and Sunday are marked as week-off days. Where Monday is first day of the week.
- Daily Overtime Limit is 1 hours.
- Weekly Overtime Limit is 4 hours.

Refer below given table for Overtime hours:

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
2 Hours	2 Hours	2 Hours	2 Hours	45 Minutes	3 Hours	2 Hours

- In case Daily overtime alert will be triggered for Monday, Tuesday, Wednesday and Thursday.
- Here Saturday and Sunday are considered under WO.
- Hence, Daily + Weekly overtime alert will be triggered for Saturday and Sunday (As per Daily configuration it's violated and also, for Weekly it's violated so a single common alert would be sent)

*For calculation of a day falling under Daily and Weekly would be summation of both the Daily Overtime hours + Weekly / Monthly Overtime hours, as per existing logic. Hence user is advised to configure accordingly (In this case it would be Weekly overtime = 7 hours. As WO for Daily + total WO for Weekly).*

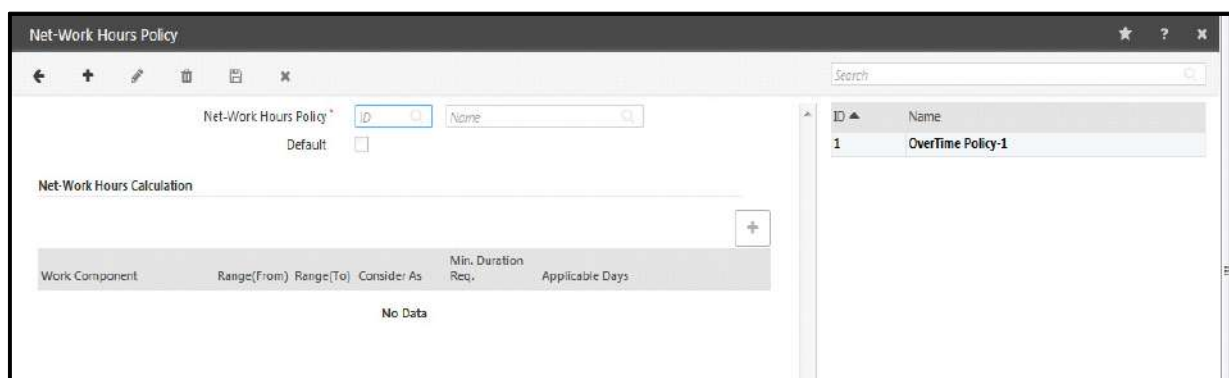

*As per existing if Saturday and Sunday are assigned week-off of Shift and under Overtime Policy if WO is checked, WO would be given priority over the days for considering Overtime component.*

# Net-Work Hours Policy

Certain organizations allow employees to work for extra hours apart from their work hours and pay compensation for the extra work done. This concept of “Overtime” can be designed as per the requirements and work culture practiced in the organization.

Net-Work hours Policy enables to calculate the Net-work hours which is the payable hours of the employee; based on which overtime can be calculated for the user.

To configure a Net-work hours policy, click **Time & Attendance > Policies> Net-Work hours Policy**

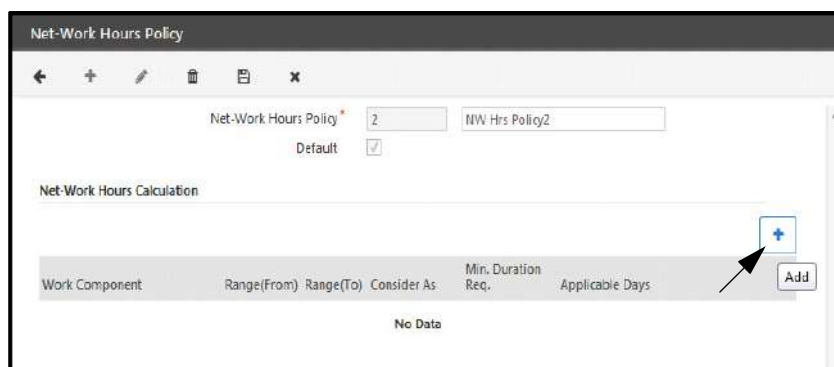

Click on **New** button from the toolbar.

Enter a **Name** for the Net-work hours policy to be created. For eg: NW Hrs Policy2

The **ID** will be auto-generated on saving the policy.

You can enable the **Default** box to make the Net-work hours policy default. When the new user is created, the default policy will be assigned directly.

## Net-Work Hours Calculation

Net-Work hours can comprise of various work components for which Employer wants to pay the employee.

To add and configure Net-Work hours components to the Net-Work hours policy; click on **Add** button as shown above.

The Work Component options are shown below.

Work Component	Range (From)	Range (To)	Consider As	Minimum Duration Required	Applicable Days	Factor
Work Hours Within Shift	HH:MM	HH:MM	Work	HH:MM	Select	1.0
Early-IN						
Overstay						
Break Hours						
Late-IN						
Early-OUT						
In-Grace						
Out-Grace						
Hourly Paid Leave Duration						
Hourly Unpaid Leave Duration						
Short Leave Duration Prior Shift						
Short Leave Duration Within Shift						
Short Leave Duration Post Shift						
Official IN/OUT Duration Prior Shift						
Official IN/OUT Duration Within Shift						
Official IN/OUT Duration Post Shift						
Short Leave Duration						
Official IN/OUT Duration						
Adjusted Work Hours						
Award Duration						

## Work Component

Select the desired Work Component — Work Hours Within Shift, Early-IN, Overstay, Break Hours, Late-IN, Early-OUT, In-Grace, Out-Grace, Hourly Paid Leave Duration, Hourly Unpaid Leave Duration, Adjusted Work Hours, Award Duration, Penalty Duration, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift, Official IN/OUT Duration Prior Shift, Official IN/OUT Duration Within Shift, Official IN/OUT Duration Post Shift, Official IN/OUT Duration, Short Leave Duration.

*The components — Official IN/OUT Duration Prior Shift, Official IN/OUT Duration Within Shift, Official IN/OUT Duration Post Shift, Short Leave Duration Prior Shift, Short Leave Duration Within Shift, Short Leave Duration Post Shift — will be included in the calculation of Net-Work Hours for 2, 4, 6, 8, 10, 12, N punch users only.*

*Short Leave Duration Prior/Within/Post Shift and Short Leave Duration cannot be configured simultaneously.*

*Official IN/OUT Duration Prior/Within/Post Shift and Official IN/OUT Duration cannot be configured simultaneously.*

Let us understand this with the example of selecting Early-IN. Further the configuration of the other parameters is done considering this.

## Range

The “From” and “To” Range is the minimum and maximum hours for which the work component will be considered for calculation of Net-Work hours.

*Example:* For Early-IN component; Enter the Range as 00:30 hrs to 02:00 hrs.

Work Component	Range(From)	Range(To)	Consider As	Min. Duration Req.	Applicable Days	Factor
Early-IN	00:30	02:00	Work	00:00	Select	1.0

This means the employee can avail Early-IN **minimum 30 minutes** before shift start and **maximum 2 hrs** before shift start.

*Example:*

Early IN Range=00:30 to 02:00 hours; Shift= 09:00 to 18:30 hours

Min Duration required within range=00:00 minutes

If shift start is at 09:00 hrs, then the timing before 08:30 hrs and after 07:00 hrs will be considered for Net-Work hours

- Case1: IN Punch at 06:30 hours -> Only 2 hrs will be considered for Net-Work hrs as Early IN range is defined for max 2 hrs.
- Case2: IN Punch at 08:00 hours-> Only 30min will be considered for Net-Work hrs. (from 08:00 to 08:30 hrs)
- Case3: IN Punch at 08:45 hours-> 15 minutes will not be considered for Net-Work hrs as minimum Early IN must be 30 mins.

### Consider As

You can assign the work component to be counted as “Work” or “No work”. If the component is considered for Work, then it will be considered in net-work hours and if No work then it will not be considered in net-work hours calculation.

### Min. Duration Required

This is the minimum duration within Work Component range which is must to be fulfilled by the employee, only then the work component will be considered in Net-Work hours calculation.

*Example:*

Early IN Range=00:00 to 02:00 hours; Shift= 09:00 to 18:30 hours

Min Duration required within range=00:10 minutes

- Case1: IN Punch at 08:45 hours-> Early IN of 15 minutes> Minimum required 10 minutes so Early IN is valid to consider in Net work hours.
- Case2 : IN Punch at 08:52 hours-> Early in of 8 minutes< Minimum required 10 minutes so Early IN is not counted in Network hours.

Work Component	Range(From)	Range(To)	Consider As	Min. Duration Req.	Applicable Days	Factor
Early-IN	00:30	02:00	Work	00:10	Select	1.0

## Applicable Days

Click the drop down and select the days for which the work component will be applicable. Then click **OK** to save the configuration and **Save** button to save the Net-Work hours policy.

Similarly, the configurations for other work components can be done.

## Calculation of Net-Work hours with different components

Consider shift of employee be 09:00 to 18:00 hours. Total duration is 09:00 hours. Break duration is 01:00 hour with deviation allowed. Shift duration is 08:00 hours.

### 1. Work Hours within Shift

Range= 00:00 to 08:00

IN Punch	OUT Punch	Working Hours	Work hours within Shift	Net-Work hours
09:00	18:30	09:00 (from 09:00 to 18:00)	08:00 Working hrs - Lunch hrs = 9-1=8	08:00

## 2. Early-IN

Range= 00:00 to 02:00

Min. duration reqd = 00:10

IN Punch	OUT Punch	Working Hours	Early-IN	Net-Work hours
08:30	18:00	09:00	00:30 Shift start time- IN Punch =9:00- 8:30 = 00:30	00:30

## 3. Overstay

Range= 00:00 to 04:00

Min. duration reqd = 02:00

IN Punch	OUT Punch	Working Hours	Overstay	Net-Work hours
09:00	21:00	12:00	03:00 OUT Punch- Shift End time =21:00- 18:00 = 03:00	03:00

## 4. Break Hours

Range= 00:00 to 01:00

Min. duration reqd = 00:10

IN Punch	Break OUT	Break IN	OUT Punch	Working Hours	Break	Net-Work hours
09:00	13:00	13:40	18:00	09:00	00:40 Break IN- Break OUT =13:40-13:00= 00:40	00:40

See "Shift Configuration> Break details" for Break duration configuration.

## 5. Late-IN

Range= 00:00 to 00:45

Min. duration reqd = 00:10

IN Punch	OUT Punch	Working Hours	Late-IN	Net-Work hours
09:20	18:30	08:40	00:20 IN Punch- Shift start =09:20-09:00= 00:20	00:20

See "Late IN Policy" for Late-IN configuration.

## 6. Early-OUT

Range= 00:00 to 00:45

Min. duration reqd = 00:10

IN Punch	OUT Punch	Working Hours	Early-OUT	Net-Work hours
----------	-----------	---------------	-----------	----------------

09:00	17:30	08:00	00:30 Shift End- OUT Punch =18:00-17:30= 00:30	00:30
-------	-------	-------	--	-------

See "Early OUT Policy" for Early-OUT configuration.

## 7. IN Grace

Range= 00:00 to 00:45

Min. duration reqd = 00:05

IN Punch	OUT Punch	Working Hours	IN Grace	Net-Work hours
09:07	18:00	08:23	00:07 IN Punch- Shift start =09:07-09:00= 00:07	00:07

Consider Grace time for Shift Late-IN= 10min

See "Shift Configuration> Grace time details" for Grace duration configuration.

## 8. OUT Grace

Range= 00:00 to 00:45

Min. duration reqd = 00:05

IN Punch	OUT Punch	Working Hours	OUT Grace	Net-Work hours
09:00	17:55	08:25	00:05 Shift End- OUT Punch =18:00-17:55= 00:05	00:05

Consider Grace time for Shift Early-OUT= 15min

See "Shift Configuration> Grace time details" for Grace duration configuration.

## 9. Short Leave Duration

Range= 00:00 to 01:00

Min. duration reqd = 00:30

IN Punch	OUT Punch	Working Hours	Short Leave Duration	Net-Work hours
09:00	17:00	07:30	01:00 Shift End- OUT Punch =18:00-17:00= 01:00	01:00

See "Attendance Policy" for Short leave hours configuration.

Considering the components "Working hours within shift" and "Short Leave duration" together in Net work hours calculation:

Net work hours= Working hours within shift (7:30 hours) + Official IN/OUT duration (01:00hours)  
= 08:30 hours

## 10. Official IN/OUT Duration

Range= 00:00 to 08:00

Min. duration reqd = 02:00

Official IN/ OUT	IN Punch	OUT Punch	Working Hours	Official hours	Net-Work hours
------------------	----------	-----------	---------------	----------------	----------------

Official OUT	09:00	15:00	05:30	03:00 Shift End- OUT Punch =18:00-15:00= 03:00	03:00
Official IN	12:30	18:00	05:00	03:30 IN Punch- Shift Start =12:30- 09:00= 03:30	03:30

See "Attendance Policy" for Official hours configuration.

Considering the components "Working hours within shift" and "Official OUT" together in Net work hours calculation:  
Net work hours= Working hours within shift (5:30 hours) + Official IN/OUT duration (03:00hours)  
= 08:30 hours

## 11. Adjusted Work Hours

Range= 00:00 to 10:00

Min. duration reqd = 00:10

IN Punch	OUT Punch	Working Hours	Adjusted Work Hours	Net-Work hours
09:00	16:00	06:30	01:30 Shift Duration- OUT Punch =08:00-06:30= 01:30	01:30

Considering the components "Working hours within shift" and "Adjusted Work hours" together in Net work hours calculation:

Net work hours= Working hours within shift + Adjusted Work Hours  
=06:30 +01:30 =8:00 hours

To enable the Adjusted Work Hours feature, go to Attendance Policy> Auto Attendance Correction. check the Overtime Enable box. And select the number of months to consider as previous months for overtime hours.

For example of Official In-Out and Short Leave In-Out, refer to "Daily1 OT and Daily2 OT Examples" (numbers 5 and 6).

## Adjustment of Work hours from previous OT

Adjusting the work hours implies that available overtime from the previous selected months can be used to adjust the shortfall hours of the user to mark him present.

Suppose on 20/11/16 the employee punches out at 16:00 hours which is before the shift end time. The working hours is 06:30 hours which is less than the required 08:00 hours. So the employee is marked as Absent due to less working hours.

As the Overtime is available from previous days of the month so that OT is adjusted on 20th to make complete 8 hours and hence user is marked Present.

Hence 01:30 hours is given as adjusted work hours from the available OT hours and the employee is marked as Present.

# Late-IN Policy

Late-IN in COSEC is an attendance feature that allows special configurations for users who report later than the expected reporting time. Late-IN policies assign different rules to late-coming users based on their roles and functions. This option allows a user to define the parameters for Late-IN policies which can then be assigned to individual users or group of users.

To define Late-IN Policies, Click the **Time & Attendance Module > Policies > Late-IN Policy**.

The following **Late-IN Policy** settings page appears on your screen.

ID	Name	Level
1	Late In Policy-1	1

Click on **New** button to define a new Late-IN Policy.

**Late-IN Policy:** Specify a user-friendly name for the Late-IN Policy. The ID will be generated by the system automatically when the policy is saved.

**Default:** Select this check box if you wish to set the current policy as the default one. Users will be linked with this Late-In Policy by default in the event of a user not being linked to any Late-In Policy. Therefore, it is mandatory to define one default Late-In Policy.

**Policy Period:** Click on the calendar button and select the **From** and **To** dates. This would specify the validity period of the Late-IN policy. This can be edited only after the policy is saved.

**Late-IN Applicable:** Select this check box to enable this policy.

**Max Late-IN Allowed (Min):** Specify the maximum allowed time duration (in minutes) for which Late-IN is allowed.

**Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min):** Select this check box, if you wish that the current day should be marked as full day as absent on exceeding the duration as configured in **Max Late-IN Allowed (Min)**. If this is disabled then system will consider it as Half Day Absent.

*If a system markers a user as Absent on a date due to the option **Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min)** being enabled and the system also finds that the user has applied for leave for the same date, then in such a case the user will not be marked as Absent, even if Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min) is enabled.*

**Enable Rounding For Fraction Of An Hour:** Select this check box to enable the rounding off rule for the Late In time.

Click **Add** and configure the following:

- In the **Range (From)** and **Range (To)** fields, specify the time duration in minutes
- In **Consider Value As** select the desired option — Actual, Fixed value of late-in to be considered.
- In **Replace Value** enter the value to be considered. This is applicable only when **Fixed** is selected in **Consider Value As**.

For example: From 1 to 10 minutes of Late In; Actual value will be considered. From 11 to 15 mins, fixed 15 mins will be considered as Late In. From 16 to 30 mins, fixed 30 mins will be considered as Late In.

Click **OK** to save the configuration.

Range (From)	Range (To)	Consider Value As	Replace Value
16	30	Fixed	30
1	10	Actual	
11	15	Fixed	15

Once the above parameters have been defined click **Save** to save the changes in the policy.

The new policy appears in the grid on the right.

*In case a particular policy is edited, the application creates a new level of the policy with the same ID and name as can be seen in the grid below. In the event of a conflict in dates or some rule then the parameters as defined in the policy with the highest level will be considered as the valid policy for that user.*

### Example1:

#### Late IN with Grace Time

Shift is from 9:00 to 18:00 hours.

If Late-in allowed is kept as 10 minutes, Grace time is included in working hours and Grace time for shift late-in as 30 minutes, then IN punch till 9:30 will be considered in grace period as shown on 1/7/16.

IN punch after completion of grace time(30 min) will be considered in late-in duration. The IN punch of 9:42 is Late-IN by 12 minutes.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime
01/07/2016	GS	09:15	18:00	PR	PR			07:45			01:00	
02/07/2016	GS - WO	09:00	18:00	WO	WO			05:00			01:00	
03/07/2016	GS - WO			WO	WO							
04/07/2016	GS	09:42	18:30	PR	PR	00:12		07:48	00:30		01:00	
05/07/2016	GS											

If Grace time is not included in working hours and Grace time for shift late-in is 0, then punch after 9:00hrs will be marked as Late-IN as shown below: See Grace time configuration in Shift Configuration.

06/07/2016	GS	09:05	18:30	PR	PR	00:05		08:25	00:30		01:00
07/07/2016	GS	09:25	18:30	PR	PR	00:25		08:05	00:30		01:00

## Example2:

### *Applying Short leave on Late-IN occurrences*

#### Shift

- 09:00 to 18:00 hours; Min required for half day- 2hrs, full day- 4 hrs

#### Grace Time (Go to Shifts & Schedules> Shift Configuration)

- Include Grace time in working hrs enabled
- Grace time for shift late-IN - 30min

#### Late-IN Policy (Go to T&A> Late- IN policy)

- Maximum Late-IN allowed- 30 min
- Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min) - Enabled

#### Short leave allowed (Go to Attendance Policy> Short Leave/ Official Hours Restriction)

- Maximum minutes allowed- 180
  - Maximum count allowed- 3
- Duration check per short leave entry:
- minimum- 5 min,
  - maximum-60 min

#### Absent Marking Rule (Go to Attendance Policy >Absent marking rule)

##### Under Late-IN/Early-OUT Check

- Marking Type As Per- Monthly Count
- Mode- Independent

##### Under Late-IN Occurrence Check

- Select the Enable check box to enable Late-IN occurrences check
- Maximum Allowed Count Per Month- 3
- Calculation Basis - Continuous
- Action on Exceeding Max Late-IN Allowed- Full Day Absent

The user punches are shown below:

Daily Attendance View														
<div> <div>User 1220 Sheetal</div> <div>Attendance Period October 2016</div> <div>View</div> </div>														
Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net Work	Break Hours	Actual Overtime	Authorized Overtime	Remark

12/10/2016	MS	09:37	20:00	AB	AB	00:07		10:23	02:00	10:23		05:00		Full Day AB:Late-IN Limit

The user is allowed to take grace period of 30 minutes i.e. he can come upto 9:30 without being marked as Late-IN. When the user comes after 9:30, he will be marked present with Late-IN.

Also when user comes after 9.30, for example 9.31, then for the current day he/she is marked as Full Day Absent and this is not counted in Late-IN.

The user can take late-ins for 3 times in a month as configured. When he comes late for 4th time, his punch will be marked present. But after processing monthly attendance, he will be marked absent as full day absent as configured in the Absent Marking Rule.

So, on 4th late-IN on 8-10-16, the user will be marked as absent as shown above.

If you are allowed to avail short leave hours, then you can apply the short leave on 8-10-16 which will convert your absent to present.

To apply Short Leave, go to T&A >Utilities> Attendance Correction as shown below.

### Example3:

#### Shift

- Shift Time: 09:45 – 17:45

#### Late-IN Policy (Go to T&A> Late- IN policy)

- Maximum Late-IN Allowed (Min): 30 minutes (10:15-10:45)
- Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min) - Enabled

#### Grace Time

- Grace Time for Shift Late-IN (Min): 30 minutes (09:45-10:15)

U1 Punch Time: 10:46- 17:25

As the IN-punch time exceeds the allowed Late-IN time duration, U1 is marked as Full Day Absent. Here even though the minimum work hours are fulfilled, but end user will be marked Full Day Absent due to enabling of flag- Full Day Absent Marking on Exceeding Max Late-IN Allowed (Min).

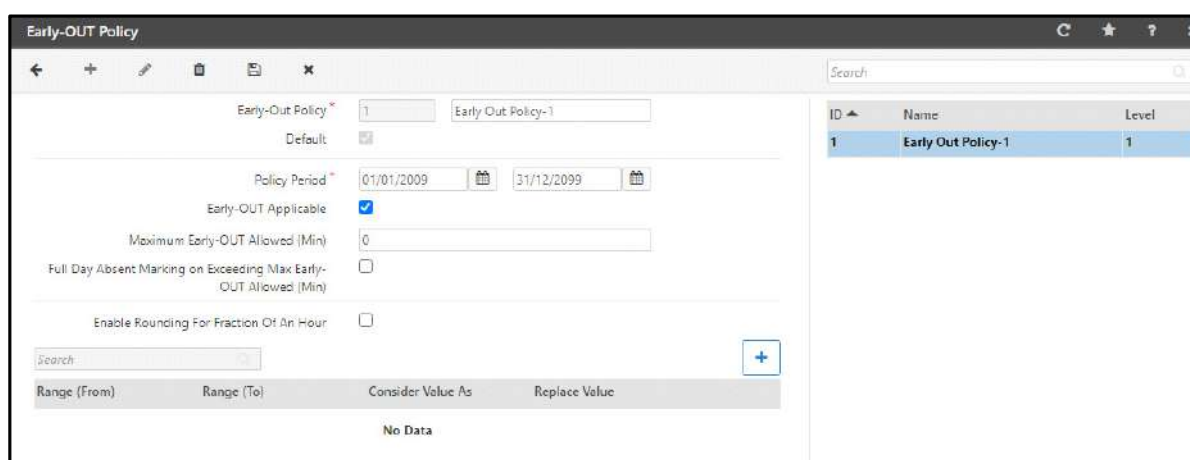

# Early-OUT Policy

Early-OUT in COSEC is an attendance feature that allows special configurations for users who exit the workplace earlier than the expected time. The application provides the functionality to assign different Early-OUT rules to users based on their roles and functions. This option allows user to define the parameters for the Early-OUT policies which can then be assigned to individual users or group of users.

An Early-OUT policy involves grouping of set of rules with varying parameters related to the early punching out of employees.

To configure an Early-OUT Policy, Click the **Time and Attendance Module > Policies > Early-OUT Policy**.

The **Early-OUT Policy** page appears on your screen as shown below.

ID	Name	Level
1	Early Out Policy-1	1

- Click **New** to define a new Early-Out Policy.
- Configure the following options as required:
  - **ID**: Each Early-OUT Policy will have a unique ID for identification and this is generated by the system automatically when the policy is saved.
  - **Name**: Specify a user-friendly name for the Early-Out Policy.
  - **Default**: Select this check box if you wish to set the current policy as the default one. Users will be linked with this Early-Out Policy by default in the event of a user not being linked to any Early-Out Policy. Therefore, it is mandatory to define one default Early-Out Policy.
  - **Policy Period**: Click on the Calendar picker button to select the **From** and **To** dates. This would specify the period of validity for the Early-Out policy. This can be edited only after the policy is saved.
  - **Early-OUT Applicable**: Select this check box to enable this policy.
  - **Max Early-OUT Allowed (Min)**: Specify the maximum time in minutes for which the early out is allowed.
  - **Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min)**: Select this check box, if you wish that the current day should be marked as full day as absent on exceeding the duration as

configured in **Max Early-OUT Allowed (Min)**. If this is disabled then system will consider it as Half Day Absent.

*If a system markers a user as Absent on a date due to the option **Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min)** being enabled and the system also finds that the user has applied for leave for the same date, then in such a case the user will not be marked as Absent, even if Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min) is enabled.*

- **Enable Rounding For Fraction Of An Hour:** Check this box to enable the rounding off rule for the Early-Out time.
- Click **Add** and configure the following:
  - In the **Range (From)** and **Range (To)** fields, specify the time duration in minutes.
  - In **Consider Value As** select the desired option — Actual, Fixed value of late-in to be considered
  - In Replace Value enter the value to be considered. This is applicable only when Fixed is selected in **Consider Value As**.

For example: From 1 to 10 minutes of Early Out; Actual value will be considered. From 11 to 15mins, fixed 15 mins will be considered as Early Out. From 16 to 30 mins, fixed 30 mins will be considered as Early Out.

Click **OK** to save the configuration.

Range (From)	Range (To)	Consider Value As	Replace Value
16	30	Fixed	30
1	10	Actual	
11	15	Fixed	15

- Once the above parameters have been defined click **Save** to save the changes in the policy.
- The new policy appears in the grid on the right.

ID	Name	Level
1	Late In Policy-1	1
2	Late In Policy-2	1

## Example1

### Early Out with Grace time

Shift is from 9:00 to 18:00 hours

If Early-Out allowed is configured as 10 minutes, Grace time is included in working hours and Grace time for shift Early-Out as 30 minutes, then Out punch before 30 mins of shift end i.e. till 17:30 will be considered in grace period as shown on 1/2/17 and 2/2/17.

Also the Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min) is enabled then in such cases if the Early-Out time exceeds the user will be marked as Full Day Absent and this will not be counted in Early-Out.

Early-OUT Policy

Early-Out\* 2 Early Out Policy-2

Default ☒

Policy Period\* 01/01/2009 31/12/2099

Early-OUT Applicable ☒

Max Early-OUT Allowed (Min) 10

Shift Configuration

Shift\* 12 Early Out Shift

Shift Type Normal

Shift Timings\* 09:00 18:00 08:00

Minimum Required Hours

For Half Day\* 02:00

For Full Day\* 04:00

Min. Hours Required Within Shift Duration ☐

Shift Allowance ☐

Break Details

Grace Time Details

Include Grace Time In Working Hours ☒

Grace Time For Shift Late-IN 0

Overlap Grace Time With Shift Late-IN ☐

Grace Time For Shift Early-OUT 30

Overlap Grace Time With Shift Early-OUT ☐

Out punch after availing grace time(30 min) will be considered as Early-Out duration.

The Out punch of 17:20 is Early-Out by 10 minutes which is within the max allowed limit of 10 mins. So the Out punch is marked PR on 3/2/17.

Taking this same example further if Full Day Absent Marking on Exceeding Max Early-Out is enabled and the user punches at 17:21. In this case user will be marked as full day absent and it will not be considered as Early-Out.

The Out punch of 17:15 is Early-Out by 15 minutes which is beyond the max allowed limit of 10 mins. So the Out punch is marked AB on 4/2/17 with Remark of AB: Early -Out.

To apply Short Leave, go to T&A >Utilities> Attendance Correction.

### Example-3

Shift Time: 09:45 – 17:45

Grace Time for Shift Early-OUT (Min): 30 minutes (17:15-17:45)

Maximum Early-OUT Allowed (Min): 30 minutes (16:45-17:15)

Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min): Enabled

U1 Punch Time: 09:00- 16:00

As the OUT-punch time exceeds the allowed Early-OUT time duration, U1 is marked as Full Day Absent. Here even though the minimum work hours are fulfilled, but end user will be marked Full Day Absent due to enabling of flag- Full Day Absent Marking on Exceeding Max Early-OUT Allowed (Min).

# C-OFF Policy

A Compensatory-Off (C-OFF) can be defined as paid time-off awarded to an eligible employee in return for working additional hours during an attendance period. Accrued compensatory leave may be used to provide time-off from work at a later date of the employee's choice, but within a valid time period.

To define a C-OFF Policy, click **Time & Attendance > Policies > C-OFF Policy**.

The **C-OFF Policy** page opens as shown below.

ID	Name	Level
1	COFF Policy-1	1

Click on **New** button to define a new C-OFF Policy.

**C-OFF Policy**- Specify a user-friendly name for the C-OFF Policy. The ID will be generated by the system automatically when the policy is saved.

**Default** - Select this checkbox to mark the C-OFF Policy as default.

**Policy Period** - Click on the calendar button and select the **From** and **To** dates. This would specify the period of validity for the C-OFF policy. This can be edited only after the policy is saved.

**Minimum Overtime Required for C-OFF** - Specify the minimum number of overtime hours in HH:MM format which would be required for granting C-OFF to the user.

**C-OFF Authorized in Multiples Of** - Specify the multiples of timing as per which C-OFF will be authorized to the employee. Example If 01:00 is set here, then C-OFF can be authorized in multiples of 1h. This means you cannot give 2h 30 mins as C-OFF but 2h or 3 h is allowed.

**C-OFF Validity Type** - The C-OFF Validity Type can be either **Monthly**, **Yearly** or in terms of **Days**.

On selecting the **Monthly** (or **Days**) option, specify the maximum number of months (or days) in the **C-OFF Validity** field, before which the C-OFF has to be availed. For the **Yearly** option, select the day and month of the year when the available C-OFFs will lapse.

- **Minimum C-OFF For Half Day Off** - Specify the hours in HH:MM format which would be the minimum hours required for half day marking.
- **Minimum C-OFF For Full Day Off** - Specify the hours in HH:MM format which would be the minimum hours required for full day marking.

- **Auto Authorize C-OFF** - Select this checkbox for automatic authorization of C-OFF.

Click **Save** button to add the new policy.

## Configuration to give OT and C-OFF to user

### Example1: If Only Overtime is to be given to user

Select **OT/C-OFF Eligibility** for the user as **Only Overtime** from the drop down options as shown below.

The screenshot shows the 'User Configuration' window for user '2 Chirag Active'. The 'Attendance' tab is selected. In the 'Policy' section, the 'OT/C-OFF Eligibility' dropdown menu is open, displaying the following options: 'Only Overtime', 'None', 'Only Overtime' (which is highlighted in blue), 'Only C-OFF', and 'Both'. Other settings visible include 'Enable Attendance Calculation' (checked), 'Attendance Marking Type' (Normal), 'Max Punches To Be Considered' (Select), 'Bypass Finger/Palm For Attendance' (unchecked), 'Max Short Leaves Allowed' (empty), 'Authorize C-OFF On' (unchecked), 'Bus Route' (empty), 'Enable Auto Tour Application' (unchecked), 'Tour' (empty), 'Base Site Selection' (ID, Name), and 'Auto Authorize Tour Application' (unchecked). The left sidebar contains links for Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, Job Costing, and Field Visit Management.

**The Overtime Policy configuration for user is:**

**Overtime Configuration:** Daily Overtime is enabled for Monday to Saturday.

**Daily Overtime:** Daily1

Work Component	Range	Consider as	Minimum duration reqd.	Applicable days	Multiplication factor
Early-IN	00:00 to 04:00	OT1	00:00	M,T,W,Th,F,Sa	1
Overstay	00:00 to 04:00	OT2	00:00	M,T,W,Th,F,Sa	1

**Auto Authorize Overtime Component** must be disabled.

The **Daily Attendance View** shows the user punches and generated overtime as shown below.

**Example3: If Both OT & C-OFF are to be given to user.**  
**(How to give OT on week days and C-OFF on WO automatically?)**

Select **OT/C-OFF Eligibility** for the user as **Both** from the drop down options. Select **Authorize C-OFF on** as “WO” as shown below. So OT will be given from Monday to Saturday as configured from Overtime Configuration and C-OFF will be given on Sunday.

The screenshot shows the 'User Configuration' window for a user named 'Isha'. The 'Attendance' tab is selected, showing the 'Policy' section. The 'OT/C-OFF Eligibility' is set to 'Both'. The 'Authorize C-OFF On' section has 'WO' checked, and 'PH', 'FB', 'RD', 'WO/PH', and 'Normal Day' are unchecked. The 'Enable Attendance Calculation' checkbox is checked, and the 'Attendance Marking Type' is set to 'Normal'. The 'Max Punches To Be Considered' is set to 'Select'. The 'Bypass Finger/Palm For Attendance' checkbox is unchecked. The 'Max Short Leaves Allowed' is set to 'Both'. The 'Bus Route' section has 'ID' and 'Name' fields. The 'Enable Auto Tour Application' checkbox is unchecked, and the 'Base Site Selection' has 'ID' and 'Name' fields. The 'Auto Authorize Tour Application' checkbox is unchecked.

**Overtime Policy & Daily Overtime**

Enable “Calculation on WO/PH/FB/RD as per Weekday”  
Daily1 components are configured from Sunday to Saturday  
For auto-authorizing overtime, enable “Auto Authorize Overtime component”.

The screenshot shows the 'Overtime Policy' window. The 'OverTime Policy' is set to '2' and 'OT Policy-Daily1'. The 'Default' checkbox is checked. The 'Policy Period' is set to '01/01/2009' to '31/12/2099'. The 'Net-Work Policy' is set to '1' and 'OverTime Policy-1'. The 'Calculation On WO/PH/FB/RD As Per Weekday' checkbox is checked. The 'Calculation On Restricted Holiday As Per PH' checkbox is unchecked. The 'Overtime Configuration' section is expanded, showing the 'Daily Overtime' section. The 'Overtime Calculation' is set to 'Daily 1'. The 'Auto Authorize Overtime Component' checkbox is checked. The 'Authorization Required For Late-IN' checkbox is unchecked. A table on the right lists the policies: '1 OverTime Policy-1', '2 OT Policy-Daily1', and '3 OT Policy-Daily2'.

# In/Out Reasons

In some organizations, employees may be required to offer valid reasons for In/Out punch events or to explain attendance exceptions. Such valid reasons can be pre-defined by the system administrator as per the organizational policies and requirement. These pre-defined In/Out reasons can be then used for manual attendance correction by HR users or for personal/official entry marking by employees using the **Employee Self Service** module.

To define a new In/Out Reason, click **Time & Attendance > Masters > In/Out Reasons**.

The **In/Out Reasons** page will appear as shown.

ID	Reason
1	Meeting with Client
2	Health not fine
3	Presentation

Click **New** button to create new reason.

The In/Out Reason **ID** is automatically system-generated for every new reason created.

Enter a brief description of the In/Out Reason in the **Reason** field. This can be of a maximum length of 30 characters (For e.g. "Sickness" or "Meeting with Client").

In the **Type** field, select **IN** or **OUT** to specify the type of punch with which the reason is to be associated.

Click **Save** button to save the new In/Out reason.

*Maximum number of In/Out Reasons that can be created on COSEC is 999.*

*While applying for the Attendance correction, you can select the In/OUT reason for the respective punches.*

# Bus Route

---

The COSEC application allows the administrator to define bus routes which in turn can then be assigned to users from the **User Configuration** option of the **Users** module.

To define a new Bus Route, click **Time & Attendance > Masters > Bus Route**.

The **Bus Route** page appears on your screen as follows:

The screenshot shows the 'Bus Route' configuration page. It features a toolbar with icons for back, add, edit, delete, save, and close. A search bar is located in the top right. The main form has a 'Bus Route' label with an asterisk, followed by an 'ID' field containing 'Waghodia Route' and an 'Active' checkbox that is checked. On the right, there is a table with two columns: 'ID' and 'Name'. The table contains one row with the ID '1' and the Name 'Makarapura Route'.

ID	Name
1	Makarapura Route

Click **New** to enter the details of a new Bus Route.

Each Bus Route will have a unique **ID** for identification and this is generated by system automatically when the bus route is saved.

Specify a name for the Bus Route in the **Name** field which can be a maximum of 30 characters.

Select the **Active** checkbox to enable the Bus Route.

Click **Save** to save the configured bus route.

# Overtime Code

Each Overtime type defined in COSEC can be re-labelled as per the site requirement using the *Overtime Code* functionality. For example, an organization may wish to rename the overtime type “OT1” as “OThlf” based on a “0.5” multiplication factor they implement for pay calculation. Such overtime codes can be up to 5 *characters* long.

To do this, click **Time & Attendance > Masters > Overtime Code**.

The **Overtime Code** page appears as follows:

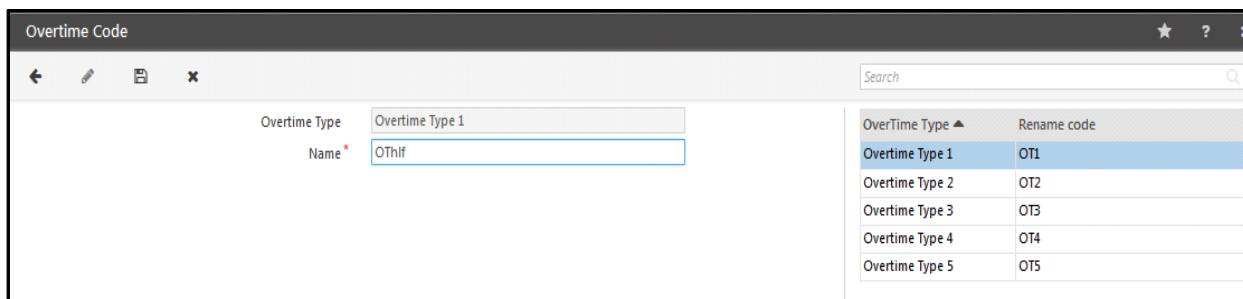

OverTime Type	Rename code
Overtime Type 1	OT1
Overtime Type 2	OT2
Overtime Type 3	OT3
Overtime Type 4	OT4
Overtime Type 5	OT5

Select an **Overtime Type** from the list on the right-hand side of the page (say, “Overtime Type1”).

In the **Name** field, enter a new overtime code.

Click **Save** button. The new overtime code will appear on the overtime type list as follows:

OverTime Type	Rename code
Overtime Type 1	OT1
Overtime Type 2	OT2
Overtime Type 3	OT3
Overtime Type 4	OT4
Overtime Type 5	OT5

OverTime Type	Rename code
Overtime Type 1	OThlf
Overtime Type 2	OT2
Overtime Type 3	OT3
Overtime Type 4	OT4
Overtime Type 5	OT5

# Attendance Summary

The **Attendance Summary** summarizes and displays all attendance data of a user for the chosen attendance period. It provides easy viewing of attendance details to the HR administrator.

To access this functionality, click **Time & Attendance > Utilities > Attendance Summary**.

The **Attendance Summary** page will appear as follows:

The screenshot shows the 'Attendance Summary' page with a title bar containing a star and a question mark. Below the title bar are navigation arrows. The main content area has two filters: 'User' with a text input '1690' and a dropdown 'Priyank Bora', and 'Attendance Period' with a month dropdown 'March' and a year dropdown '2017'. Below these filters are two tabs: 'Summary' (selected) and 'Details'.

**User:** Select a user from the picklist whose attendance summary is to be viewed.

**Attendance Period:** Select the month and year as the Attendance Period for which the summary is to be obtained.

## Viewing Attendance Summary

To view the *Attendance Summary* for a user, click the **Summary** section as shown below.

The screenshot shows the 'Attendance Summary' page with the 'Summary' tab selected. The filters are the same as in the previous screenshot. The main content area displays attendance data for March 2017. On the left, there are input fields for 'Presents' (1.0), 'Absents' (20.0), 'Paid Leaves' (0.0), 'Unpaid Leaves' (0.0), 'Tours' (0.0), 'Week-Offs' (8), and 'Holidays' (2). On the right, there is a calendar for March 2017. Below these, there are input fields for 'Work Hours' (00:18), 'Extra Work' (00:18), 'Net Work Hours' (HH:MM), 'Break Hours' (HH:MM), 'Authorized Overtime' (HH:MM), and 'Generated Overtime' (00:18). At the bottom, there is a section for 'Available Short Leaves' (0), 'Available Short Leave Duration' (00:00), 'Late-IN' (0), 'Early-OUT' (0), and 'Availed/Allowed Less Work Duration (Mins)' (0/0).

Mo	Tu	We	Th	Fr	Sa	Su
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	31		

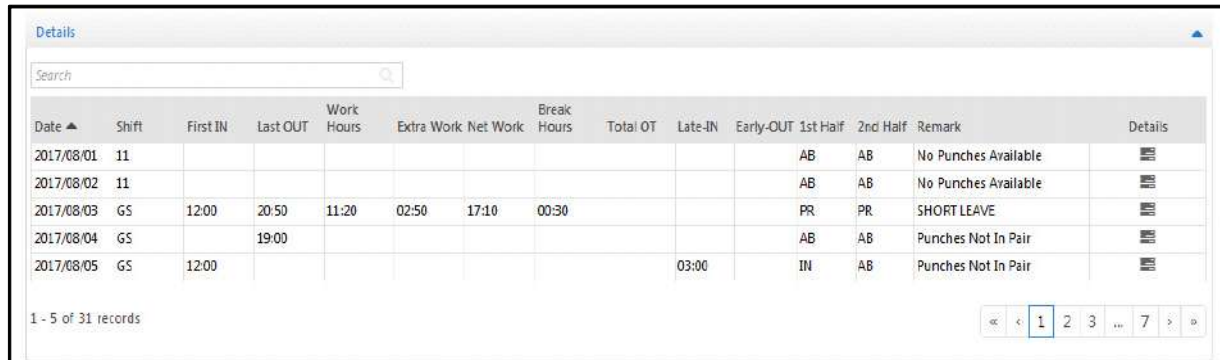

The attendance summary of the selected user appears with the corresponding number of days or hours for each field as shown above.

The administrator can also view a detailed overtime summary by clicking the overtime summary  button next to the **Generated Overtime** field.

The Overtime Summary presents the individual overtime hours for OT1, OT2, OT3, OT4 and OT5 and the respective Authorized overtime. It also displays other overtime details such as Total unauthorized and authorized overtime, total manual debit/credit, availed and available overtime for the selected user.

## Viewing Attendance Details

To view attendance details for the selected user, click the **Details** section as shown below.

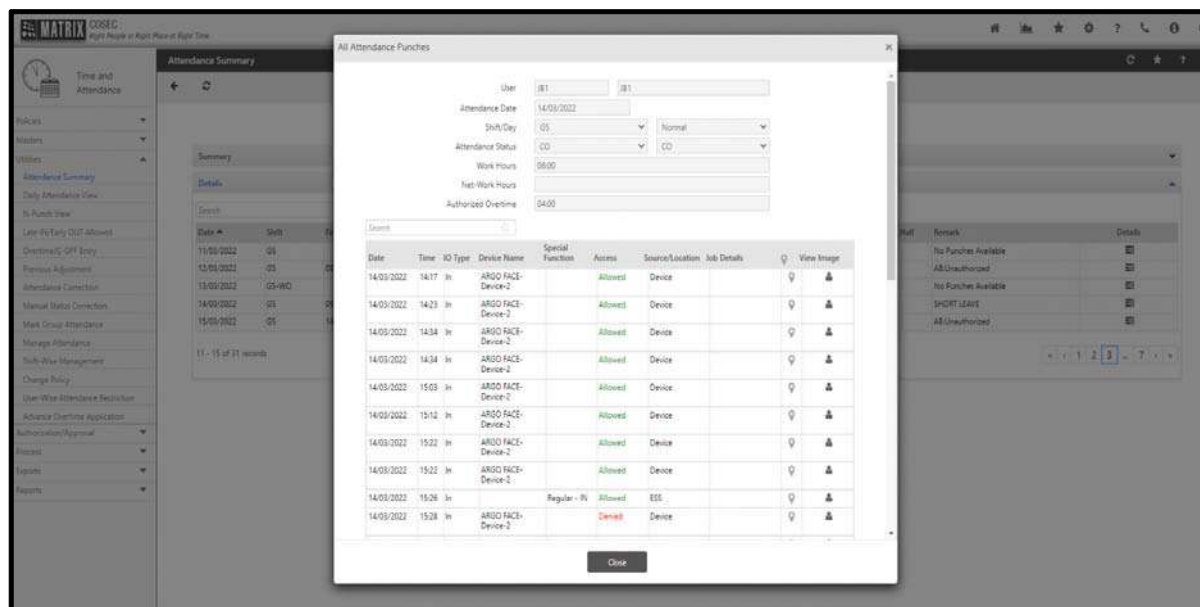

Date	Shift	First IN	Last OUT	Work Hours	Extra Work	Net Work	Break Hours	Total OT	Late-IN	Early-OUT	1st Half	2nd Half	Remark	Details
2017/08/01	11										AB	AB	No Punches Available	
2017/08/02	11										AB	AB	No Punches Available	
2017/08/03	GS	12:00	20:50	11:20	02:50	17:10	00:30				PR	PR	SHORT LEAVE	
2017/08/04	GS		19:00								AB	AB	Punches Not In Pair	
2017/08/05	GS	12:00							03:00		IN	AB	Punches Not In Pair	

1 - 5 of 31 records

The **Details** section displays the attendance details for individual days of the defined attendance period for the selected employee.

To view the details of attendance punches for a day, click the **Details**  icon corresponding to the respective **Date** row. The **All Attendance Punches** window appears as shown.

Date	Time	IO Type	Device Name	Special Function	Access	Source/Location	Job Details	View Image
14/09/2022	14:17	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	14:23	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	14:34	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	14:34	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	15:03	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	15:10	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	15:22	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	15:22	In	ARGO FACE-Device-2		Allowed	Device		
14/09/2022	15:26	In	Regular - IN		Allowed	ESS		
14/09/2022	15:28	In	ARGO FACE-Device-2		Denied	Device		

Click **Close** to close the window.

If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.

# Daily Attendance View

The Daily Attendance View displays all attendance data of a user for a chosen Attendance Period. This feature in COSEC provides easy viewing of attendance details for the HR administrator.

To access this functionality, click **Time & Attendance > Utilities > Daily Attendance View** and the following screen appears.

There are two tabs displayed namely:

- View
- Template Configuration

To customize the Template Configuration, make sure you have the Daily Attendance View - Add, Edit, Delete rights. For details, refer to [“Roles and Rights Configuration”](#). These rights are applicable only to the Template Configuration tab.

For the View tab, only Daily Attendance View - View right is applicable.

Select **Template Configuration** tab to customize the view that you want to see in **Daily Attendance View Page**.

In the right pane, the **Default View** template is displayed.

You can either edit the **Default View** Template or add a new template as per your requirement.

## Editing the Default View Template

Click Default View Template in the right pane.

In Template, by default the name displayed is **Default View**. You can change it if required.

The template parameters are displayed under **Field Configuration**.

**Field Type:** Select the type from the options - **Database** and **Custom**.

**Field Value:** This will be displayed according to the Field Type you select:

- If you select **Database**, select the desired value from the drop down list.
- If you select **Custom**, configure the desired value. To do so, enter “~” and the list appears. Select the desired parameters from this list or you can also configure any sql expression here. If you want to enter parameters other than those from the selection list make sure you add these within the square bracket, for example [Day Type].

*Few fields have been removed from Template mapping in this release. If you get an error while accessing a **Default View** existing template, then you need to create a new template.*

**Display Name:** Configure the desired name you wish to assign to the selected Field Value.

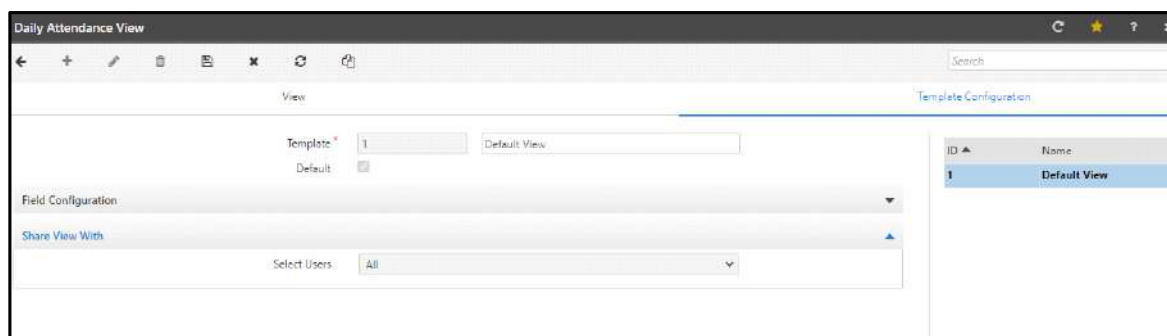

According to the configuration you have set, the details will be displayed in the grid.

The Parameters in the grid are:

- **View/Export:** Clear the check boxes of the respective parameters, if you do not wish to view or export it. By default, it is enabled (selected). The Date parameter cannot be edited. If you wish to disable the **View/Export** for all the parameter, clear the check box in the header row under **View/Export**.
- **Display Summary:** Clear the check boxes of the respective parameters, if you do not wish to display their summary. By default, it is enabled (selected). If you wish to disable the **Display Summary** for all the parameter, clear the check box in the header row under **Display Summary**.
- Click **Delete**, if you wish to delete the parameter.

- **UP/Down:** Click the Up or Down arrow to change the sequence of the desired parameter in the list.

**Share View With:** You can share this template with others. In **Default View**, by default it is applicable to all users.

Click **Save**.

In case you overwrote a Default View Template and you desire to restore it again, then select the **Reset**  , in the top menu bar.

## Adding a New Template

In the **Template Configuration** tab, click Add button to add a new template and configure the following parameters:

**Template:** Configure the desired name you wish to assign to the new template.

**Default:** Select the checkbox if **Default View** template parameters are to be restored as configuration in the new template.

The template parameters are displayed under **Field Configuration**

**Field Type:** Select the type from the option - **Database** and **Custom**.

**Field Value:** This will be displayed according to the Field Type you select:

- If you select **Database**, select the desired value from the drop down list.
- If you select **Custom**, configure the desired value. To do so, enter“~” and the list appears. Select the desired parameters from this list or you can also configure any sql expression here.

*You can also create a **Custom Column Name** by creating formula with **Field Value** selection as per your choice.*

*For example if you have selected three **Field Values**: ~ First In~ ~ Last Out~ ~Punch Date~*

*You can provide the **Display Name** for above selected field values as 'Total Duration' which should be considered as **Custom Column Name**.*

*Few fields have been removed from Template mapping in this release. If you get an error while accessing an existing template, then you need to create a new template.*

**Display Name:** Configure the desired name you wish to assign to the selected Field Value.

According to the configuration you have set, the details will be displayed in the grid.

The parameters in the grid are:

**View/Export:** Select the check boxes of the desired fields, if these should be displayed in the Daily Attendance View Page. The Date parameter cannot be edited.

**Display Summary:** Click the checkboxes of the desired parameters to view as summary. It will only display the summary for the parameters that have time calculations.

Click **Delete**, if you wish to delete the parameter.

**UP/Down:** Click the Up or Down arrow to change the sequence of the desired parameter in the list.

Fields	Field Type	View/Export	Display Summary	Up/Down
Date	Database	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Morning	Database	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Afternoon	Database	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Overtime	Database	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

**Share View With:** You can share this template with others. Select the desired option – **Group Wise**, **User Wise** or **All**.

If you select **Group Wise**, select the Group and Organization.

If you select **User Wise**, select the user.

Select Users: All

Click **Save**.

This new template will appear in the right pane

Now Click the **View** tab to display the configured template.

**User:** Select the user from the picklist whose Attendance details are to be viewed.

**Attendance Period:** Attendance Period can be selected in two ways: Month-wise and Date-wise.

- **Month-wise:** Selecting this option will display the attendance of the particular month. Select the month and year from the drop down list for which the daily attendance is to be viewed.
- **From/To Date:** Selecting this option will display the attendance of the range selected in the Attendance Period. Select the starting and ending date using the date selection button for which the daily attendance is to be viewed. For a single day select the same date in both the fields.

**Display View as Per:** Select the type of view you desire from the drop down list. All the created templates will appear in the list.

**Display Summary:** Select the desired option — **Week-Wise, Overall, Both** or **None**.

- If you select **Week- Wise**, it will display the total weekly summary.
- If you select **Overall**, it will display the data summary as per the Attendance Period set.
- If you select **Both**, it will display both weekly as well as monthly summary.
- If you select **None**, it will display the users data without any details of total. According to the configuration you have set and the type of template selected, the details will be displayed in the grid.

**Starting Day of the Week:** Select the starting day of the week from the drop down list. Based on the day selected, weekly attendance view will be shown in the grid.

The attendance details with In time, Out time, Work hours, Extra work hours and other shift details appear in the grid.

Date	Shift	First IN	Last OUT	1st Half	2nd Half	Late-IN	Early-OUT	Work Hours	Extra Work	Net-Work	Break Hours	Generated Overtime	Authorized Overtime	Remark	Details

# N-Punch View

The term *N-Punch* stands for “n” number of punches and is a system for punch calculation on COSEC. This means that all the available attendance punches of a user on a particular day will be considered for his work hours calculation. The **N-Punch View** functionality enables you to view the details of punch timings and manually edit details if required for a selected date. This is applicable only to users for whom the N-Punch calculation is enabled in their respective Attendance Policies.

To enable the N-Punch system for a user, go to **Time and Attendance > Policies > Attendance Policy**. Select the applicable policy and set the **Max Punches to Consider** parameter. For details, refer to [“Attendance Policy”](#).

To access this functionality, click **Time & Attendance > Utilities > N-Punch View**.

The page will be displayed on your screen as follows:

Source	IO Type	Date	Time	Out Time	Special Function	Edit	
Device - NGT Direct Door-Device-1	IN	03/05/2017	09:10				
Device - NGT Direct Door-Device-1	OUT	03/05/2017	13:00				
Device - NGT Direct Door-Device-1	IN	03/05/2017	14:00	01:00			
Device - NGT Direct Door-Device-1	OUT	03/05/2017	19:00				

Gross Work Hours: 09:50   Total Out Time: 01:00   N-Punch Work Hours: 08:50   Extra Work Hours: 00:30   Authorized Overtime: 09:30   Status: PR AB

**User:** Select a user from the **User** picklist. This picklist will show only N punch users.

**Attendance Date:** Select the Attendance Date for which user punches are to be viewed. Click the button to specify a custom period for date selection. All punches for the selected date are displayed as shown in the grid.

To add a punch manually, Click the **ADD** button. The new row in the grid will appear.

Source	IO Type	Date	Time	Out Time	Special Function	Edit	
		03/05/2017	20:00				
Device - NGT Direct Door-Device-1	IN	03/05/2017	09:10				
Device - NGT Direct Door-Device-1	OUT	03/05/2017	13:00				
Device - NGT Direct Door-Device-1	IN	03/05/2017	14:00	01:00			
Device - NGT Direct Door-Device-1	OUT	03/05/2017	19:00				

Enter the timing for the punch. Then click OK. The punch will be automatically saved as IN punch and it will be added to the grid list as a *Manual Entry*.

The screenshot shows the 'N-Punch View' window. At the top, there are fields for 'User' (4), 'Attendance Date' (03/05/2017), and 'Shift' (G5). Below these is a table with columns: Source, IO Type, Date, Time, Out Time, Special Function, Edit, and a trash icon. The table contains five rows of device punches and one 'Manual Entry' row. The 'Manual Entry' row is highlighted in blue, and an arrow points to it.

Source	IO Type	Date	Time	Out Time	Special Function	Edit	
Device - NGT Direct Door-Device-1	IN	03/05/2017	09:10				
Device - NGT Direct Door-Device-1	OUT	03/05/2017	13:00				
Device - NGT Direct Door-Device-1	IN	03/05/2017	14:00	01:00			
Device - NGT Direct Door-Device-1	OUT	03/05/2017	19:00				
Manual Entry	IN	03/05/2017	20:00				

The **IO** dropdown list will appear (for punch type selection) only if the **Out Punch From Exit Reader** option is enabled during Attendance Policy configuration of the selected user. Else, the day's first punch will automatically be counted as an IN punch, the second as OUT punch, the third as IN punch and so on.

To edit a punch, click the  button. Edit the punch data and add a special function if required. Click OK to save the changes.

The screenshot shows the 'N-Punch View' window with the 'Manual Entry' row selected. A dropdown menu is open for the 'Special Function' column, showing options: Select, Select, Official Out, Short Leave Out, Early-Out Allowed, Overtime Out, and Regular Out. Below the table, there are summary fields: Gross Work Hours (10:50), Total Out Time (01:00), N-Punch Work Hours (09:50), Extra Work Hours (01:30), Authorized Overtime (01:30), and Status (PR, PR).

Source	IO Type	Date	Time	Out Time	Special Function	Edit	
Device - NGT Direct Door-Device-1	IN	03/05/2017	09:10				
Device - NGT Direct Door-Device-1	OUT	03/05/2017	13:00				
Device - NGT Direct Door-Device-1	IN	03/05/2017	14:00	01:00			
Device - NGT Direct Door-Device-1	OUT	03/05/2017	19:00				
Manual Entry	IN	03/05/2017	20:00

# Late-IN/Early-OUT Allowed

An HR administrator may, at times, be required to provide special allowance for employees to come in late or leave early on a particular day. Such a requirement may arise due to various reasons such as bus service failure, unnatural weather conditions, red alerts or festivities. On such an occasion, the administrator can use the **Late-IN/Early-OUT Allowed** functionality to allow all Late-IN or Early-OUT punches for the specified day.

To access this functionality,

click **Time & Attendance > Utilities > Late-IN/Early-OUT Allowed**.

The **Late-IN/Early-OUT Allowed** page appears as shown below:

ID	Date	Type	Start Time	End Time
No Data				

Select a date from the date selection picklist in the **Override On** field, on which the Late-IN/Early-OUT Policy is to be overridden.

*System will allow the application of this feature only on a day on or before the current date.*

Select **LateIn** or **EarlyOut** as the **Override Policy** to be applied.

Enter the start and end time in the **Start Time - End Time** fields in the HH:MM format. This defines the duration for which the override policy will be allowed on the chosen date.

The **Reason** field is available only for the **LateIn** policy. Select the reason from the drop down list as **Other** or **BusLate** as shown.

Reason	Other
Bus Route	Other
Remark	BusLate

If the reason for Late-IN is due to the late arrival of bus, then the **BusLate** option should be selected. For all other reasons, **Other** can be selected.

For **BusLate**, select the particular bus route from the **Bus Route** detail picklist.

Add a remark on the Late-IN if required in the **Remark** field.

In the **Device Selection** section, select a **Panel/Direct Door** from the drop down list and select the door. This is the door on which user would be punching. The Late-In punch will be updated after monthly attendance process.

Click **Save** button to save the changes.

The screenshot displays a web application interface for managing attendance overrides. The main form is titled "Late-IN/Early-OUT Allowed" and includes a green status bar at the top indicating "Saved Successfully". The form is divided into several sections:

- Override On:** A date field set to "08/05/2017".
- Override Policy:** A dropdown menu set to "Late-IN".
- Start Time - End Time:** Two time fields set to "09:00" and "10:00".
- Reason:** A dropdown menu set to "BusLate".
- Bus Route:** A dropdown menu set to "Makarpura Route".
- Remark:** A text field containing "Bus Puncture".
- Device Selection:** Two dropdown menus: "Panel/Direct Door" set to "NGT Direct Door-Device-1" and "Door" set to "All".

On the right side of the form, there is a table with the following columns: ID, Date, Type, Start Time, and End Time. The table contains one entry:

ID	Date	Type	Start Time	End Time
1705090001	08/05/2017	Late-IN	09:00	10:00

# Overtime/C-OFF Entry

This option enables the HR administrator to manually enter Overtime/C-OFF details for an employee as well as credit/debit OT/C-OFF in cases where an employee has not been able to mark the entry or exit times.

*Authorized Overtime = Authorized OT + Manual Credit OT - Manual Debit OT*

To access this functionality, click **Time & Attendance > Utilities > Overtime/C-OFF Entry**.

The **Overtime/C-OFF Entry** page appears as follows:

1. Select a **User** from the picklist for whom the manual Overtime/C-OFF entry is to be made.
2. Select the **Attendance Date** from the calendar button. Click the “Modification Allowed” button to specify the period within which overtime/C-OFF entry should be allowed.
3. On the selection of the **Custom Period** option, the system allows you to enter the number of months prior to the current date for which the attendance details can be viewed.

Once the attendance period is defined, the Overtime/C-OFF Entry page appears as follows.

4. Select the date from the right grid or by calendar button for which OT/ C-OFF entry is to be made.

5. To view attendance details for the selected date, select the **Attendance Details** section as shown. It shows the work hours details and Total Available Overtime of the user.

6. In the **Manual Overtime/C-OFF Entry** section, select the **Component** for which manual entry is to be done. For e.g. to make an entry for "OT4", select component **OT4**.
7. Specify the **Entry Type** as **Credit** or **Debit**.
8. Enter a **Value** for the hours which are to be credited or debited to the selected component in the HH:MM format as shown.

**Manual Overtime/C-OFF Entry**

The manual entry will now reflect in the OT/C-OFF balance for the selected user and can be used for encashment, leave application etc.

# Previous Adjustment

This option enables the HR user to update previous adjustment data of an employee (from a closed attendance period) in the current attendance records. This may include entry for adjustment in attendance days, OT hours, working hours and shifts allowance. Such adjustment is then reflected in the attendance data of the current attendance period. This feature can be useful to the HR user for effective payroll calculation.

Previous Adjustment entry can be of two types:

- System Generated - Previous adjustment entry is automatically generated by the system in the following cases:
  - After Leave Application and Approval
  - Tour Application and Approval
  - Manual Correction in Attendance Period
  - Shift Count (More than 1 shift attended by employee)
- Manual - Previous adjustment entry is manually done by the HR user for an employee.

A “closed” attendance period in COSEC, is a previous attendance period for which attendance data has already been processed and changes can no longer be made. This is based on the Monthly Process configuration for an attendance period. To enable attendance correction or attendance adjustment for a closed attendance period, go to **Time & Attendance > Attendance Policy > General**.

To manually enter previous adjustment data, click **Time & Attendance > Utilities > Previous Adjustment**.

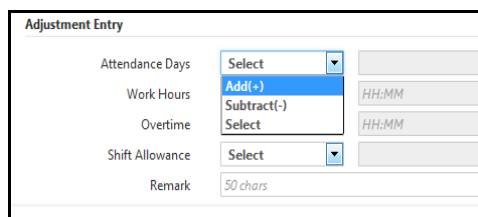

The **Previous Adjustment** page is displayed as shown.

The screenshot shows the 'Previous Adjustment Entry' form. At the top, there's a 'User' section with 'ID' and 'Name' fields. Below that is 'Previous Attendance Date For Adjustment' with a 'From Date' field. The 'Attendance Details' section includes 'Current', 'First Half', 'Second Half', 'Work Hours', 'Extra Work Hours', and 'Shift Allowance'. The 'Target Month For Adjustment Values' section shows 'October' and '2019'. The 'Adjustment Entry' section has 'Attendance Days', 'Work Hours', 'Overtime', and 'Shift Allowance' fields, each with a 'Select' dropdown and a text input. The 'Remark' field is at the bottom with a '50 chars' limit. A 'Previous Adjustment Records' link is at the bottom left.

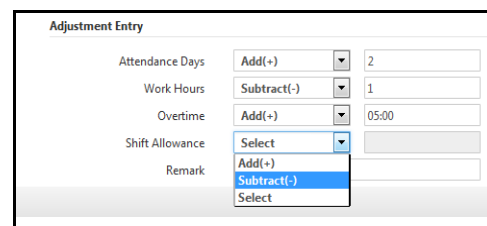

1. Click **New** .
2. In the **User** field, enter a user ID or select a user by clicking the picklist button.

3. In the **Previous Attendance Date for Adjustment** field, enter a date by clicking the date selection button. This is the previous date for which the adjustment is to be done.
4. In the **Attendance Details** field, select **Current** or **Previous** to load the current or previous attendance details for system-generated adjustment. These details will include **First Half**, **Second Half**, **Working Hours**, **Extra Work Hours** and **Shift Allowance**.
5. In the **Target Month For Adjustment Values**, select the month and year in which the previous adjustment is to be reflected.
6. Under **Adjustment Entry**, there are four options for which adjustment entry can be made - Attendance Days, Work Hours, Overtime and Shift Allowance. Select “**Add(+)**” or “**Subtract(-)**” from the dropdown list against each entry to add or deduct the respective field value. This can be assigned in the adjoining fields as shown. Add a **Remark** if required.

The screenshot shows the 'Adjustment Entry' form. It has four rows: 'Attendance Days', 'Work Hours', 'Overtime', and 'Shift Allowance'. Each row has a dropdown menu and a text input field. The 'Work Hours' dropdown is open, showing 'Add(+)' and 'Subtract(-)' options. The 'Remark' field at the bottom has a placeholder text '50 chars'.

The screenshot shows the 'Adjustment Entry' form with values entered. 'Attendance Days' is set to 'Add(+)' with a value of '2'. 'Work Hours' is set to 'Subtract(-)' with a value of '1'. 'Overtime' is set to 'Add(+)' with a value of '05:00'. 'Shift Allowance' is set to 'Select'. The 'Remark' field is empty. The 'Work Hours' and 'Shift Allowance' dropdowns are open, showing 'Add(+)', 'Subtract(-)', and 'Select' options.

7. Click **Save**  to save the adjustment. The saved record will appear under the **Previous Adjustment Records** collapsible panel.

# Attendance Correction

Attendance corrections are required in the event of modifications being needed in the entry or exit times posted in the daily attendance data of users, or if new entry or exit data for a user is needed to be entered for a particular date manually. This feature is often useful for HR users in rectifying reported issues of missing or forgotten punches.

Attendance correction can be executed by — “[System Admin](#)” or an “[On Behalf Account User](#)”.

The System Admin can modify the attendance time as well as assign Special functions for the user in the same application.

The On Behalf Account User can modify the attendance time as well as the Short Leave IN/Out time. For this two separate applications need to be made. Refer “[Attendance Correction Application](#)” and “[Short Leave/Official IN-OUT Application](#)”.

To create and assign roles and rights to the System Admin User or On Behalf Account User, refer to “[Managing System Accounts](#)”.

## System Admin

To correct employee attendance manually, click **Time & Attendance > Utilities > Attendance Correction**.

The **Attendance Correction** page will open as follows:

The screenshot shows the 'Attendance Correction' application window. On the left, there is a form with the following fields: 'User' (with a picklist showing 'ID' and 'Name'), 'Attendance Date' (with a date picker and 'Custom Months' dropdown), 'Shift/Day' (with a dropdown showing 'GS' and 'Normal'), 'Attendance Status' (with a dropdown showing 'None'), 'Manual Status Marking' (with a dropdown), 'Status Summary' (with a text area), and 'Remark' (with a text area). Below these fields are three expandable sections: 'Attendance Correction', 'Break Punches', and 'Attendance Details'. On the right, there is a table with columns: 'Date', 'Shift', '1st Half', '2nd Half', 'First IN', 'Last OUT', and 'Work Hours'. The table currently displays 'No Data'.

**User:** Select a User from the user selection picklist whose attendance correction is to be done. The selected user's attendance data for the last attendance period will be loaded in the right side grid.

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
08/02/2017	GS	PR	AB	08:45	17:00	07:15
06/02/2017	GS	AB	AB			
04/02/2017	GS	AB	AB	09:00	16:00	06:00
02/02/2017	GS	AB	PR	08:45	19:00	08:15
01/02/2017	GS	AB	AB			

**Attendance Date:** Select the date from the calendar button or select the date from the right grid for which manual correction is to be done.

By default, attendance correction for the selected user will be allowed for any date within the last attendance period. However, to change this, click the *Set Modification Allowed Selection* button to define a period within which attendance correction should be allowed. You can select custom period of week or months by selecting the required option.

Click the **Events** button to view all attendance punches for the selected user on the selected date. The Attendance punches along with location is shown as below.

Date	Time	ID Type	Device Name	Special Function	Access	Source/Location	Job Details
14/03/2022	14:17	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	14:23	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	14:34	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	14:34	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:03	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:12	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:22	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:22	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:22	In	ARGO FACE-Device-2		Allowed	Device	
14/03/2022	15:26	In	ARGO FACE-Device-2	Regular - IN	Allowed	ESS	
14/03/2022	15:28	In	ARGO FACE-Device-2		Denied	Device	
14/03/2022	15:28	In	ARGO FACE-Device-2		Allowed	Device	J1 - Job1
14/03/2022	15:48	In	ARGO FACE-Device-2		Allowed	Device	J1 - Job1
14/03/2022	15:50	In	ARGO FACE-Device-2		Allowed	Device	J1 - Job1
14/03/2022	15:54	In	ARGO FACE-Device-2		Allowed	Device	J1 - Job1

If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.

In the following example, the user's attendance status for the selected date is "AB" (absent) for the second half, and is to be marked present.

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
03/02/2017	GS	PR	AB	08:45	17:00	07:15
06/02/2017	GS	AB	AB			
04/02/2017	GS	PR	AB	09:00	16:00	06:00
02/02/2017	GS	AB	PR	09:45	19:00	08:15
01/02/2017	GS	AB	AB			

Change the **Shift/Day** marking and **Manual Status Marking**, if required.

*Shifts changed from Attendance Correction will be treated as Attendance Correction Applications. The Shift Change Alert will be triggered, if configured. For details, refer to ["Configuring Alert Messages"](#).*

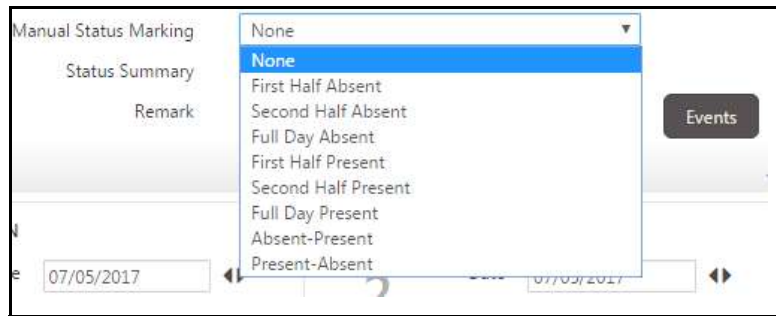

*Shifts are changed from multiple locations, then in such cases the last approved shift change will be taken into consideration. To know more refer to ["Shift Change Application/Approval"](#).*

Shifts can be changed from:

- **Shift Change Application:** When shifts are changed from this page then Shift Change Application requests will be generated only if the Auto Approve check box is disabled. For details, refer to ["Shift Change Application/Approval"](#).
- **Manage Shift:** When shifts are changed from this page then Shift Change Application requests will be generated only if the Auto Approve check box is disabled. For details, refer to ["Manage Shift"](#).
- **Manage Attendance:** When shifts are changed from this page then Shift Change Application requests will not be generated. For details, refer to ["Manage Attendance"](#).
- **Import from:**
  - Admin Module > System Utilities > Import Data > Import Data For (Shift Schedule)
  - Shift and Schedules Module > Utilities > Manual Schedule Import
  - In Shift and Schedules Module > Utilities > Manage Shift > Import > Change Shift with Import File

From Import the Shift Change Application requests will be generated only if the Auto Approve check box of the respective page is disabled. For details, refer to ["Importing Data"](#), ["Manual Schedule Import"](#) and ["Manage Shift"](#).

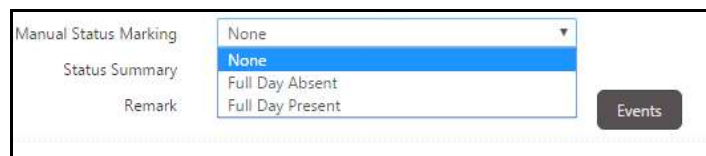

**Manual Status Marking** has following options:

The screenshot shows the 'Manual Status Marking' interface. A dropdown menu is open, displaying the following options: None, First Half Absent, Second Half Absent, Full Day Absent, First Half Present, Second Half Present, Full Day Present, Absent-Present, and Present-Absent. The 'None' option is currently selected. To the right of the dropdown is an 'Events' button. Below the dropdown, there are date fields showing '07/05/2017' and '07/03/2017'.

For a particular user, if **Restrict Half Day Considerations** is enabled in the page User > User configuration > T&A, then in **Manual Status Marking** drop down list, only full day attendance options will be visible and all the other half day options will be restricted for that particular user as shown in the screen below.

The screenshot shows the 'Manual Status Marking' interface with the dropdown menu open. Only three options are visible: None, Full Day Absent, and Full Day Present. The 'None' option is selected. An 'Events' button is visible to the right of the dropdown.

You have to add a **Remark** to the application in the respective field.

## Attendance Correction/Special Functions

Expand the Attendance Correction panel to manually enter/edit the IN and OUT punch timings as required in the **Time** field.

You can also specify a **Special Function** such as a *Short Leave IN*, *Early-OUT Allowed* etc. to mark the entry or exit. An IN/OUT Reason can be selected if required.

The screenshot shows the 'Attendance Correction' panel. It is divided into two sections: '1' for IN and '2' for OUT. Each section has fields for Date, Time, Sp. Function, and Reason. In the IN section, the Date is 04/02/2017 and the Time is 09:00. In the OUT section, the Date is 04/02/2017 and the Time is 18:30. The Sp. Function and Reason fields are currently set to 'Select'.

The punch correction will be authorized automatically if it is done by system administrator.

Example:

Consider a user having following attendance correction for 03/08/2019(Week-Off) and 04/08/2019(Week-Off) on special function selected as Official Work Hour and Short Leave respectively. The punches are corrected as shown below:

For 03/08/2019:

Attendance Correction

1 IN  
Date 03/08/2019  
Time 11:00  
Sp. Function Official IN  
In Reason Select

2 OUT  
Date 03/08/2019  
Time 15:00  
Sp. Function Official OUT  
Out Reason Select

For 04/08/2019:

Attendance Correction

1 IN  
Date 04/08/2019  
Time 10:00  
Sp. Function ShortLeave IN  
In Reason Select

2 OUT  
Date 04/08/2019  
Time 17:30  
Sp. Function ShortLeave OUT  
Out Reason Select

## Break Punches

Expand the **Break Correction** panel to manually edit/enter punch timings for Break Start and Break End. To do this select an existing punch from the **Break Start** dropdown list as shown.

Break Correction

Break Start  
Punch  
Date  
Time

Punch1-08:30  
Punch2-12:08  
Punch3-12:32  
Punch4-17:02  
Punch5-  
Punch6-  
Punch7-  
Punch8-

The next available punch will automatically be selected as the **Break End** punch (vice versa, when editing the Break End punch timing i.e. the previous available punch is selected for Break Start).

Break Correction

Break Start  
Punch Punch2-12:08  
Date 04/10/2013  
Time 12:08

Break End  
Punch Punch3-12:32  
Date 04/10/2013  
Time 12:32

If no punch is available before or after the selected punch, a new punch can be created by manually entering the punch timing.

1. Enter/Edit the selected punch timing as shown.

For N punch user, break punch correction is done from All Punches window from Attendance Correction.

2. Click **Save**  to successfully update the manual corrections on the system.

## Attendance Details

Expand the **Attendance Details** panel to view details such as the user's Work Hours, Break Hours, Authorized Overtime Hours etc. for the selected date. Select the  button to view additional details.

$\text{Authorized Overtime} = \text{Authorized OT} + \text{Manual Credit OT} - \text{Manual Debit OT}$

Now let us see an example to understand how punch posting works when Break and Short Leave/Official Hours are taken consecutively,

Consider Shift Start = 09:00, Shift End = 18:30, Break Start = 13:00 and Break End = 13:50 , Break Deduction Type is set as Actual Break Duration. Short Leave Authorization is required.

Punch1	Punch2	Punch3	Punch4
09:00	12:00 Short leave Out	14:00 Break End	19:00

Punch1	Punch2	Punch3	Punch4
	Application with 'Short Leave Start' as 12:00 and 'Short Leave End' as 13:00 (Configured Break Start) is created.	When punch of 14:00 arrives, a new application with Short Leave start as 12:00 and Short Leave end as 14:00 will be sent. Also the punch at 12:00 is copied at Break start field. Hence the break hours are calculated as per the configurations.	

Break Details	Punch1	Punch2	Punch3	Punch4	Break duration	Short leave duration
Break deviation is allowed	09:00	12:00 Short leave Out	13:50 Break End	19:00	00:50 (From 13:00 to 13:50)	01:00 (From 12:00 to 13:00)
Break deviation is not allowed	09:00	12:00 Short leave Out	13:30 Break End	19:00	00:30 (From 13:00 to 13:30)	01:00 (From 12:00 to 13:00)

*If the Applied duration (End time of short leave - Start of short leave) is greater than the maximum limit of short leave or less than the Minimum limit of short leave then Posted duration will be 00:00 hours.*

Suppose the range of short leave is 00:01 to 00:90 hours.

Punch1	Punch2	Punch3	Punch4	Applied Duration	Posted Duration
09:00	13:00	13:30	16:00 Short leave Out	02:30	00:00 (As 02:30 00:90)

*If the Grace in Shift Late-IN is allowed then the grace duration will be added to the short leave duration provided the total short leave duration does not exceed the maximum range of short leave allowed.*

Suppose the grace for Late-IN is 30 minutes. Short leave duration is of 90 minutes.

Punch1	Punch2	Punch3	Punch4	Short leave duration
09:30 (30 minutes from shift start)	13:00	13:30	17:30 Short leave Out (60 minutes before the shift ends)	00:90 (30 minutes + 60 minutes)

Case1: If the Punch1 is at 09:40 then it will not be added to the short leave duration.

Case2: If the Punch4 is at 17:00 then 90 minutes of short leave is utilized so no more addition of 30 minutes of grace.

## On Behalf Account User

### Attendance Correction Application

To correct the attendance manually for the desired user, click **Time & Attendance > Utilities > Attendance Correction**.

*Attendance Corrections application restrictions will be applicable as configured in the Attendance Policy. To know more refer to. [“Attendance Correction-Short Leave/Official Hours Application Restrictions”](#)*

The **Attendance Correction** page will open as follows:

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
06/10/2021	AB	AB				
07/10/2021	AB	AB				
08/10/2021	AB	AB				
09/10/2021	AB	AB				

**User:** Select a User from the user selection picklist whose attendance correction is to be done. The selected user's attendance data for the last attendance period will be loaded in the right side grid.

**Attendance Date:** Select the date from the calendar button or select the date from the right grid for which manual correction is to be done.

By default, attendance correction for the selected user will be allowed for any date within the last attendance period. However, to change this, click the *Set Modification Allowed Selection* button to define a period within which attendance correction should be allowed. You can select custom period of week or months by selecting the required option.

Change the **Shift/Day** marking, if required.

*If shifts are updated from Attendance Correction, these will be treated as Attendance Correction Application.*

*If shifts are changed from Attendance Correction and an existing Shift Change Application for the same is pending, then a validation message will appear and the same will not be possible from Attendance Correction.*

*Shifts are changed from multiple locations, then in such cases the last approved shift change will be taken into consideration. To know more refer to [“Shift Change Application/Approval”](#).*

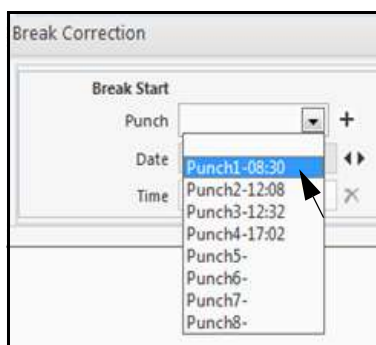

You have to add a **Remark** to the application in the respective field.

Click to expand the **Attendance Correction** collapsible panel to manually enter/edit the IN and OUT punch timings as required in the **Time** field.

The correction application will be sent to the RIC or will be authorized automatically, depending on the rights assigned to the On Behalf Account User. For more details refer "[On Behalf System Account User](#)". To receive a notification alert once the final verdict for such application is provided by the RIC, make sure you have configured the desired Mobile Number/Email ID in "[Optional](#)" as well as configure the Attendance Correction Approval/Rejection Alert parameters. For details refer to "[Configuring Alert Messages](#)".

### Break Punches

Click to expand the **Break Correction** collapsible panel to manually edit/enter punch timings for Break Start and Break End. To do this select an existing punch from the **Break Start** dropdown list as shown.

The next available punch will automatically be selected as the **Break End** punch (vice versa, when editing the Break End punch timing i.e. the previous available punch is selected for Break Start).

If no punch is available before or after the selected punch, a new punch can be created by manually, by clicking **Add** or selecting the **New Punch** option and then entering the punch timing.

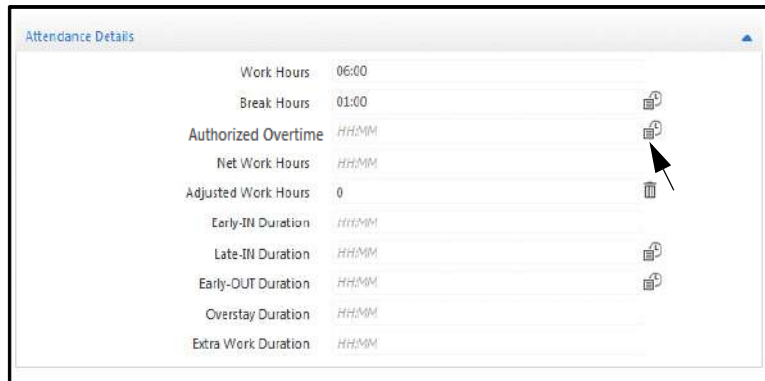

Enter/Edit the selected punch timing as shown.

Click **Save**  to successfully update the manual corrections on the system.

## Attendance Details

Expand the **Attendance Details** panel to view details such as the user's Work Hours, Break Hours, Authorized Overtime Hours etc. for the selected date. Select the  button to view additional details.

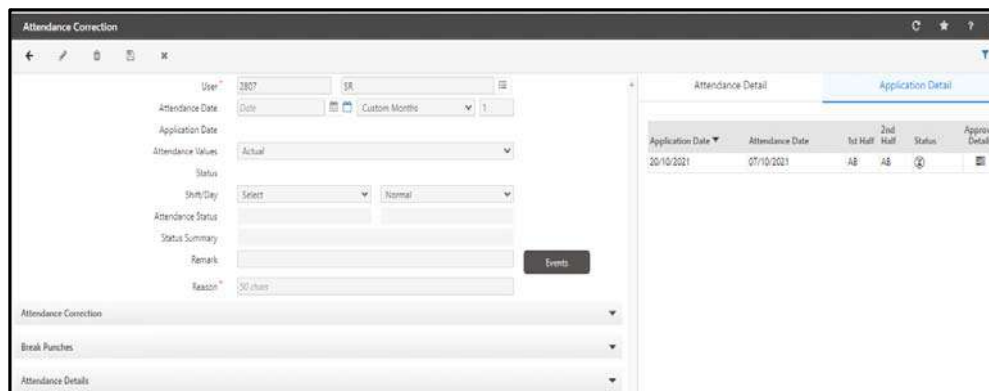

The 'Attendance Details' form displays various time-related fields for a selected user and date. The fields are arranged in a list with corresponding input types (text, time, or duration). A mouse cursor is pointing at the document icon next to the 'Authorized Overtime' field.

Field	Value
Work Hours	06:00
Break Hours	01:00
Authorized Overtime	HH:MM
Net Work Hours	HH:MM
Adjusted Work Hours	0
Early-IN Duration	HH:MM
Late-IN Duration	HH:MM
Early-OUT Duration	HH:MM
Overstay Duration	HH:MM
Extra Work Duration	HH:MM

*Authorized Overtime = Authorized OT + Manual Credit OT - Manual Debit OT*

To view the status of the application, click the **Application Details** tab in the right grid.

The 'Attendance Correction' form is divided into two main sections. The left section contains input fields for user selection, application date, attendance values, status, shift/day, attendance status, status summary, remark, and reason. The right section contains a tabbed interface with 'Attendance Detail' and 'Application Detail' tabs. The 'Application Detail' tab is active, showing a table with columns for Application Date, Attendance Date, 1st Half, 2nd Half, Status, and Approval Details.

Application Date	Attendance Date	1st Half	2nd Half	Status	Approval Details
20/10/2021	07/10/2021	AB	AB		

## Short Leave/Official IN-OUT Application

To apply for Short Leave/Official IN-OUT Application manually for the desired user, click **Time & Attendance > Utilities > Short Leave/Official IN-OUT Entry**

The **Short Leave/Official IN-OUT Entry** page will open as follows:

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
06/10/2021	AB	AB		10:58	11:46	00:48
07/10/2021	AB	AB		14:47	19:25	03:38

**User:** Select a User from the user selection picklist whose Short Leave/Official IN-OUT Application is to be done. The selected user's data for the last attendance period will be loaded in the right side grid.

**Attendance Date:** Select the date from the calendar button or select the date from the right grid for which manual correction is to be done.

By default, Short Leave/Official IN-OUT for the selected user will be allowed for any date within the last attendance period. However, to change this, click the *Set Modification Allowed Selection* button to define a period within which correction should be allowed. You can select custom period of week or months by selecting the required option.

Click to expand the **Short Leave/Official Hours Entry** collapsible panel.

Under **IN/ OUT**, select the desired **Special Function** — *Short Leave IN, Official IN or Short Leave-OUT Official-OUT* to mark the entry or exit.

If required, you can enter the **Reason**. To do so, click **Edit** and enter the reason.

The correction application will be sent to the RIC or will be authorized automatically, depending on the rights assigned to the On Behalf Account User. For more details refer "[On Behalf System Account User](#)". To receive a notification alert once the final verdict for such application is provided, make sure you have configured the desired Mobile Number/Email ID in "[Optional](#)" as well as configure the Short Leave / Official Approval/ Rejection Alert parameters. For details refer to "[Configuring Alert Messages](#)".

## Attendance Details

Expand the **Attendance Details** panel to view details such as the user's Work Hours, Break Hours, Authorized Overtime Hours etc. for the selected date. Select the button to view additional details.

**Attendance Details**

# Manual Status Correction

The *Manual Status Correction* functionality is applicable when the attendance status of multiple users is to be updated simultaneously for a selected date range. This allows the administrator to make uniform status changes (e.g. To mark all users “present”) for the same dates and apply it to all or selected users on COSEC.

To perform Manual Status Correction, click **Time & Attendance >Utilities > Manual Status Correction**.

The page will open as follows:

The screenshot shows the 'Manual Status Correction' web application interface. At the top, there are date selection fields for 'Date' with a range from 13/09/2020 to 13/09/2020. Below this is a 'Manual Status Marking' dropdown menu set to 'Full Day Present', and a 'Remark' text field containing 'Marked Status Manually'. The 'User Selection' section includes a 'Select Users' dropdown set to 'User Wise', and a search bar. Below the search bar is a table with columns 'User ID', 'Name', and a delete icon. The table contains five rows of data: (1, Athira), (10, Utsook), (11, Raj), (2, Rushi), and (3, Vipul). At the bottom of the table, it says '1 - 5 of 10 records'. A 'Process' button is located at the bottom center of the interface.

User ID	Name
1	Athira
10	Utsook
11	Raj
2	Rushi
3	Vipul

**Date:** Select a date range for the Manual Status Correction of selected users.

**Manual Status Marking:** Select a Manual Status Marking option depending upon the new status to be applied for the users.

**Remark:** Add a **Remark** while marking the status correction.

**Select Users:** Select the user by filtering the option of **User Wise**, **Group Wise** or **All** for whom the status correction is to be applied.

Click the **Process** button. The status for all selected users will be updated once the processing is complete. In the figure below, all the selected users will be marked **Full Day Present**.

# Mark Group Attendance

The Mark Group Attendance page allows the SA to mark the attendance of group of people in a single go.

SA can upload group images of users and the system will recognize each user from the image and then it will mark their attendance automatically.

*For Group FR feature to work in ARGO FACE, ensure that:*

- *Free Scan is selected as the Capturing Mode.*
- *Server Assisted is selected as the FR Mode.*
- *the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

*For Group FR feature to work in ARGO and VEGA, ensure that*

- *Free Scan is selected as the Capturing Mode.*
- *Local or Server Assisted is selected as the FR Mode.*
- *if you select Server Assisted as the FR Mode, then the desired Identification Service is selected in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

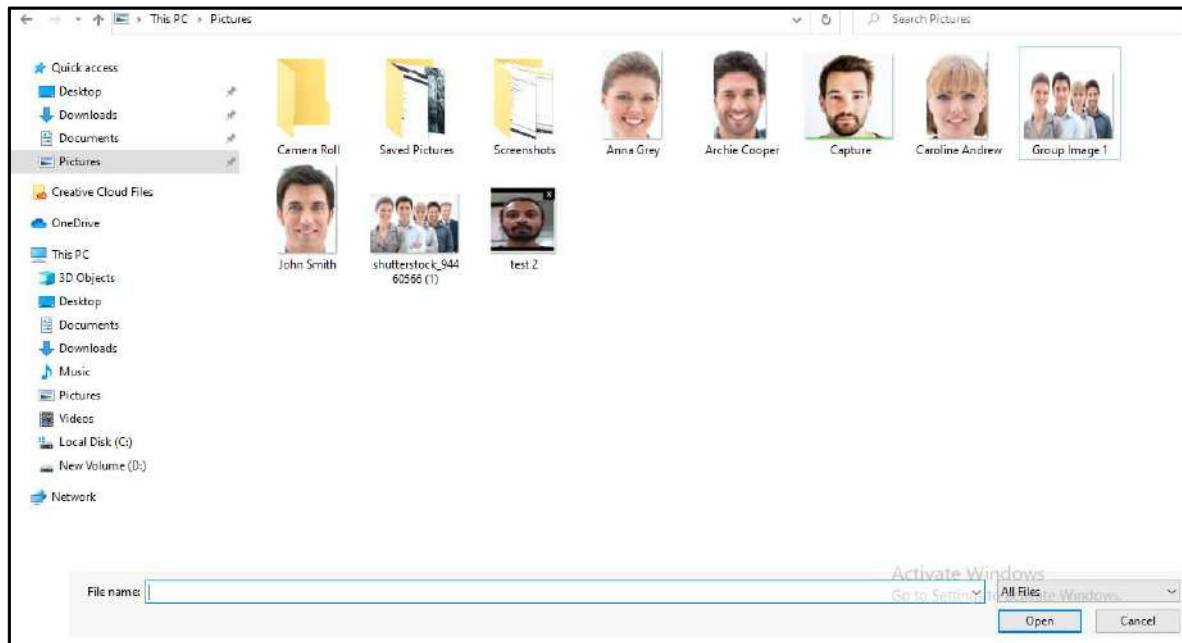

*For details refer to “[ARGO Door](#)”, “[VEGA Door](#)” and “[ARGO FACE Door](#)”.*

To perform Mark Group Attendance, click **Time & Attendance > Utilities > Mark Group Attendance** and the following page appears:

Click **Add** to upload a new group image and configure the following parameters:

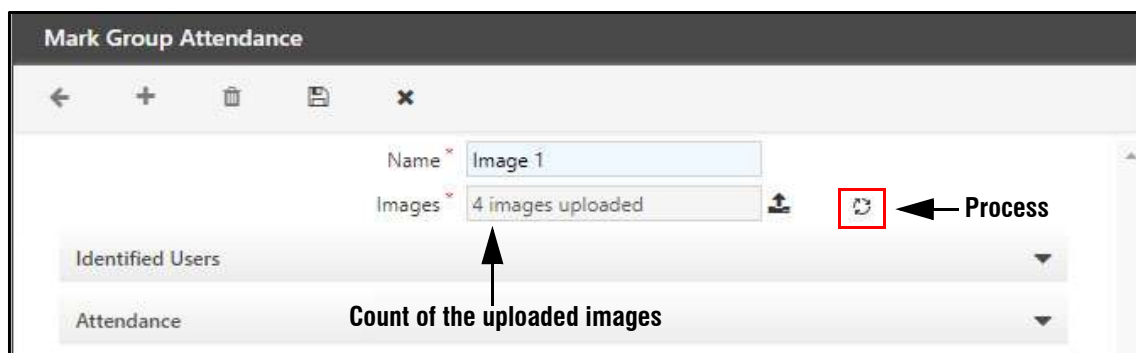

- **Name:** Enter the desired **Name**.
- **Images:** To upload group image/s of users, click **Upload File**  and the dialog box appears as shown below.

Now select the desired image/s. Here, the image format supported are .jpg, and the size of a single image must be a maximum of 15 MB.

You can upload maximum of 20 photos at a time. The text box displays the count of the uploaded images.

Once you upload the image/s, **Process**  icon will be visible.

Click **Process** to perform the Face Recognition (FR) process on the uploaded image/s.

Once the FR process is successfully performed on these images, the list of recognized users will be added and displayed in the **Identified Users** list. For more information, refer ["Identified Users"](#).

After the FR process, the **Preview**  icon will be visible which will allow you to preview the uploaded group image/s.

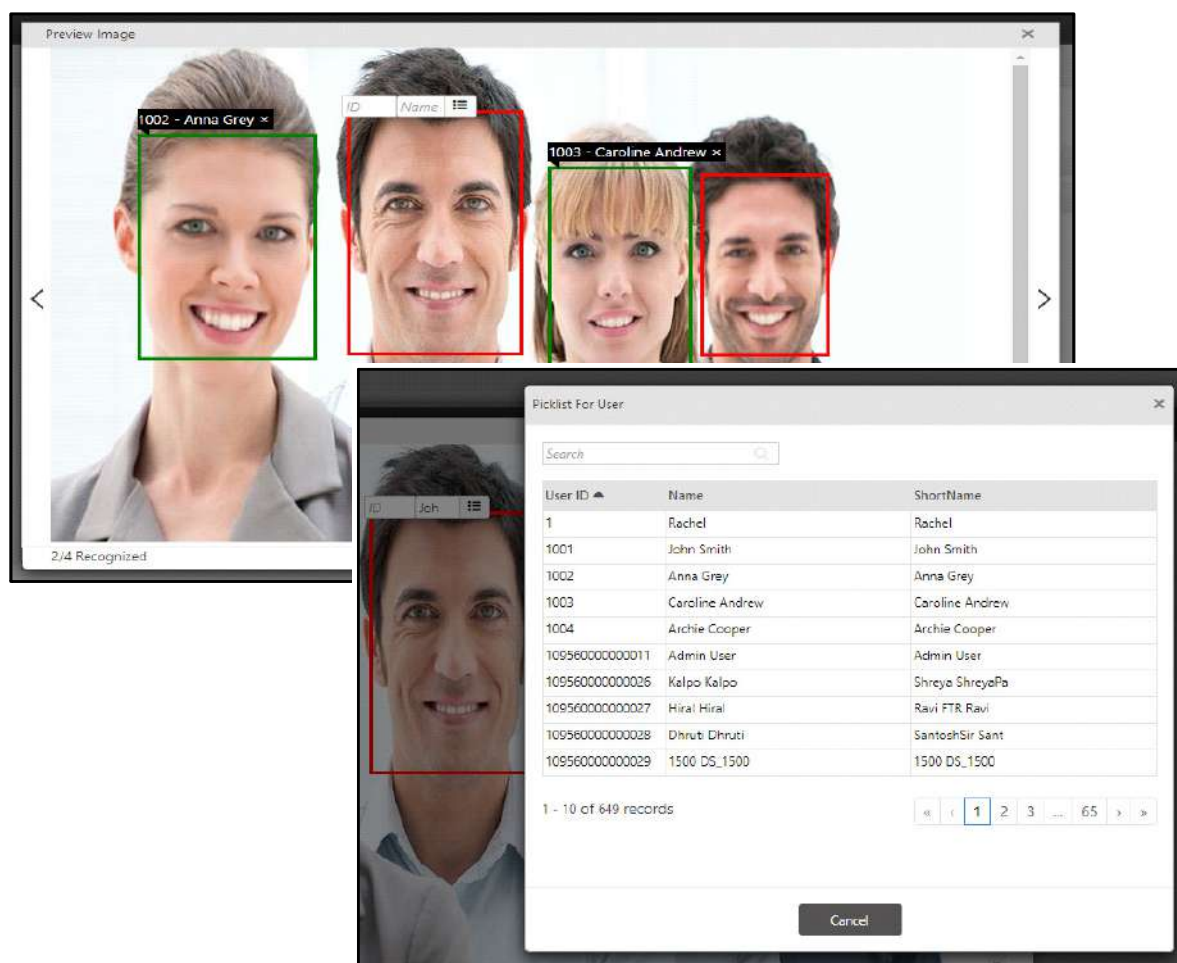

Click **Preview**  icon and the **Preview Image** window appears with the uploaded image/s as shown below.

The faces identified by the system will have a green frame with a name and ID tag mentioned.

Now, there can be few faces in the group image/s which are not identified by the system. Such faces will have a red frame. You can manually tag the name against such faces of the users from the **Preview Image** window.

To manually tag the names against the faces of the users, click on the red frame and a user picklist will be displayed as shown below.

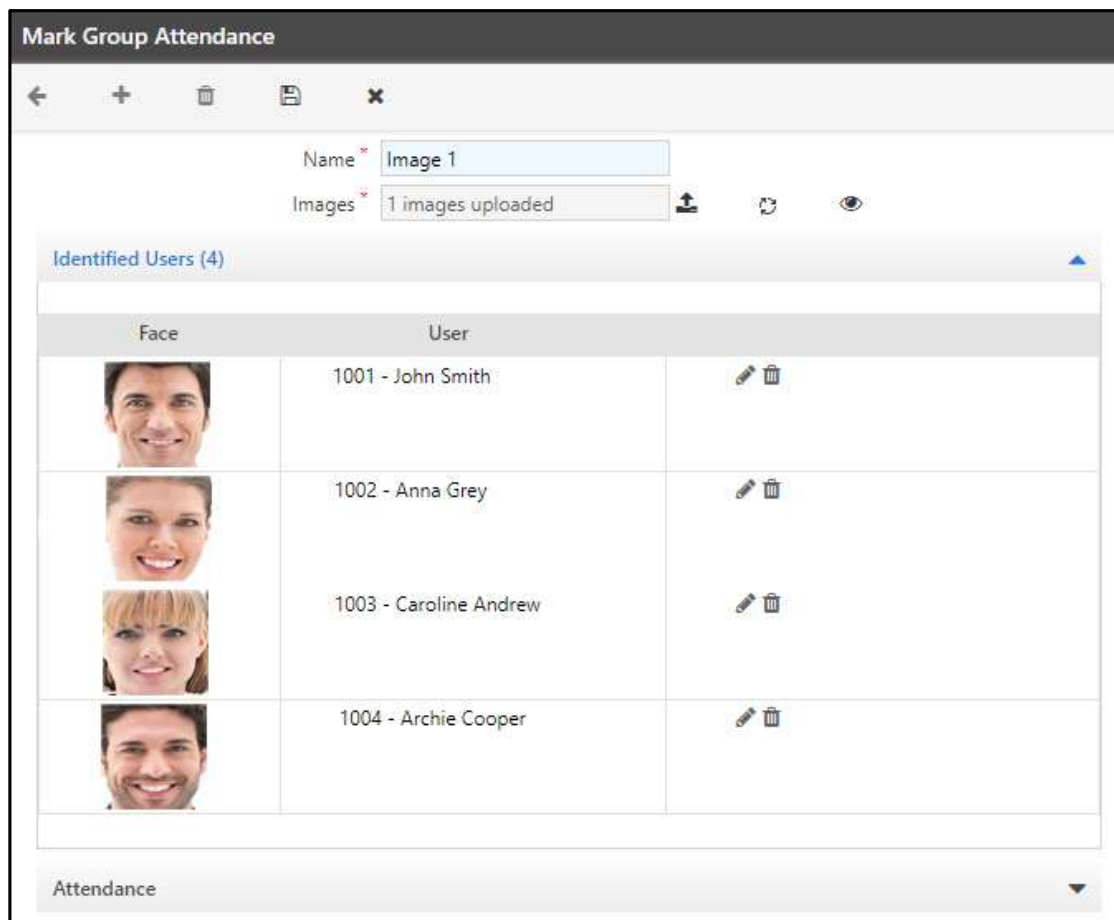

Select the respective user name from the picklist or manually enter the user name/ID.

Then these faces will be added to the **Identified Users** list along with the system identified users.

## Identified Users

- It displays the list of the identified users after the FR Process. For SA, all recognized users will be displayed in this list.

- Identified Users include system recognized users as well as manually tagged users from the photos.
- Attendance will be marked for only those users that are displayed in this list.
- Single face of the user will be displayed in the grid along with the User's ID and Name for SA to authenticate the list.
- You can also edit the user name against the faces of users available in the image. To edit, click **Edit**  icon.

Attendance

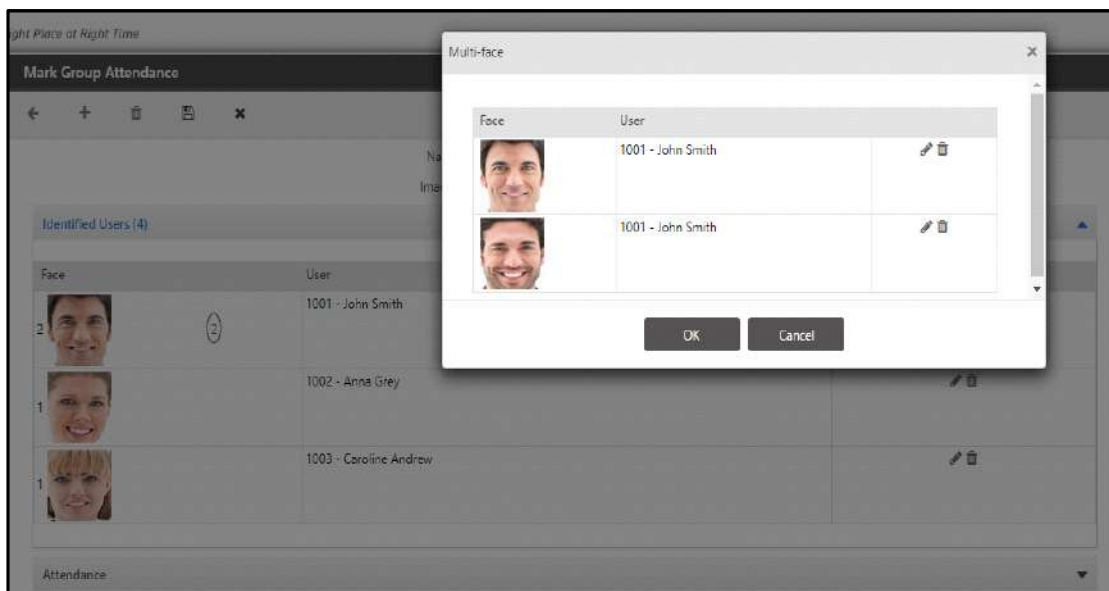

▼

- Select the respective user name from the picklist again or manually enter the desired user name/ID. Then click **OK** ✓. To discard, click **Cancel** ✕.
- If multiple faces of the same user are identified, then only single face will be displayed in the grid and the number of faces identified will be displayed as shown below.

#### Number of faces identified of a single user

- To view other identified faces of the same user, click on the numeric value of the identified faces of the user.
- Multi-face** window appears where you will be able to view more images of that user.

- You can also edit the user name against the faces in case of false identification. To edit, click **Edit** .
- Select the respective user name from the picklist again or manually enter the desired user name/ID. Then click **OK** . To discard, click **Cancel** .

- If same user is tagged against multiple faces, then entry of those faces will be merged and displayed as a single entry in the grid.
- To delete any entry of the identified user from the list, click **Delete** .

When any entry is deleted from the list, then the user tagged against that face will be untagged and that face will be considered as detected but not recognized.

## Attendance

To mark the attendance of the users in the group:

- Make sure there are one or more entries in the **Identified User** list to configure **Attendance**.
- Enter the desired **Date** and **Time** for which the attendance of the user is to be marked.
- Select the desired **Event** from the options — IN Punch or Out Punch.
- Select the desired **Special Function**.
- Select the desired **Location Selection** from the options — Configured Location or Custom.
  - If **Location Selection** is selected as Configured Location, then select the desired configured **Location** from the picklist.
  - If **Location Selection** is selected as Custom, then enter the Latitude/Longitude co-ordinates or click on the  icon and select the location manually.
- Enter the desired **Remark** for marking the attendance for the user.
- Click on the **Save** button. Once saved SA will be able to view the added entry but will not be allowed to edit the entry.
- SA can delete a group attendance entry by clicking on the **Delete**.
- On delete, images uploaded and Identified User list should be cleared for database.

# Manage Attendance

This page allows admin to handle single as well as multiple users' attendance efficiently. It allows various provisions like changing shift, applying leave/ tour/ c-off, marking status manually and regularizing user's attendance as well as shifting the punches automatically. Also you can do editing of Punches, viewing users' count based on filtering of exceptions and applying latest changes to other user's records.

Click **Time & Attendance > Utilities > Manage Attendance**. The Manage Attendance page is shown as below.

The screenshot shows the 'Manage Attendance' interface. At the top, there are navigation icons (back, forward, refresh). Below these, there are two date pickers: 'Date' with '01/08/2023' and '24/08/2023'. There are also two user picklists, both showing 'U2'. A 'View' button is located below the user picklists.

**Date:** Select the From and To Date to view the attendance data for the selected date range.

**User:** Select the user from the picklist for whom the attendance data is to be viewed and managed.

Click the **View** button to view the attendance data in the grid. The user punches for the selected date are shown in the grid. When a single user is selected, the Attendance summary is displayed on the right side as shown below.

The screenshot shows the 'Manage Attendance' page with the 'View' button clicked. The main area displays a grid of attendance data for user 'U2' from 01/08/2023 to 07/08/2023. The grid has columns for each day of the week. The status for each day is shown in a colored box: 'PR' (Present) in green, 'AB' (Absent) in red, 'WO' (Week-Off) in blue, and 'H' (Holiday) in yellow. To the right of the grid, there is an 'Attendance Summary For 01/08/2023 - 24/08/2023' section. It includes a user profile icon and a list of attendance metrics.

User ID	User Name	01-Aug Tue	02-Aug Wed	03-Aug Thu	04-Aug Fri	05-Aug Sat	06-Aug Sun	07-Aug Mon
U2	U2	PR	PR	AB	AB	AB	WO	AB

Present	2
Absent	19
Leave	0
Tour	0
Week-Off	3
Holiday	0
Field Break	0
Rest Day	0
Work Hours	16:00
Extra Work	00:00
Net-Work Hours	00:00
Break Hours	02:00
Authorized Overtime	00:00
Generated Overtime	00:00
Hourly Paid Leave	00:00
Hourly Unpaid Leave	00:00

Click on **Filter**  to select the multiple users based on Exceptions or Enterprise groups.

See ["Exception Selection" on page 1986](#).

## User Selection

For multiple user selection, the options are:

- **User wise:** Individual user can be selected from the picklist
- **Group wise:** Users can be selected based on the selection of enterprise group.
- **All:** All the active users can be selected.

When multiple users are selected, Count of users according to the configured exceptions and selected date-range is displayed on right side as shown below.

## Shift Punch

This is applicable when **Maximum Punches to be considered** is set as 2,4,6,8 or 12. For details, refer to "T&A" in "Configuring Users".

There may be multiple shifts in an organization. In such cases, if any user punches after a long overstay in the night shift, then the last OUT punch will be considered in the next day. For rectification, you have to delete that particular punch from next day and add it in the same day manually.

To shift punches you need to manually adjust the entire, this is tedious and time consuming, hence the provision to shift punches automatically has been provided.

Let us understand this with the help of an example:

Shift 1: 19:00 to 03:00

Shift 2: 04:00 to 12:00

U1 IN-Punch on 01-08-2023:1900

U1 OUT-Punch on 02-08-2023: 11.00

The system considers IN-Punch for 01-08-2023 as 19:00. But instead of considering 11.00 as OUT-Punch for 01-08-2023, it considers it as IN-Punch for 02-08-2023.

In this case the you need to adjust the entries manually. Two manual entries need to be made, one for OUT-Punch on 01-08-2023 and another for the IN-Punch on 02-08-2023.

To avoid this the there are two buttons provided as **PREVIOUS** and **NEXT**.

If you wish to move the Punches of 02-08-2023 to 01-08-2023, click the **PREVIOUS** button. The punch time along with the date will be shifted to 01-08-2023.

While shifting punches, Special Functions will not be considered.

If multiple punches are there then on click of **PREVIOUS**, all punches prior to the selected punch will also be shifted. The same functionality is also applicable if **NEXT** is clicked.

If **Exit Reader** check box is enabled, in such cases when punch shifting is been done accordingly sorting of punch will be performed and IN punch will be posted to IN position and OUT punch will be posted to OUT position.

## Exception Selection

Click the filter  button to configure the exceptions to filter users based on those exceptions.

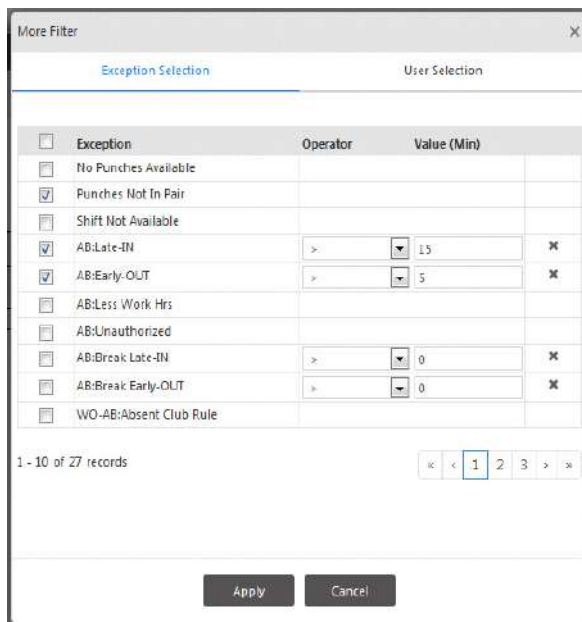

Check the boxes from **Exception Selection** list as shown below as per which the users will be filtered. Now select the users from the **User Selection**.

Then click **Apply** to save the selection. The users will be displayed based on configuration of exceptions.

*The filter applied on Date and exceptions will appear on OR condition.*

**Eg:** Suppose 5 users are selected from User selection but exceptions are available for only 3 users; then data for 3 users will be generated.

Apply Cancel

**Exceptions** are those instances where the punch behavior of a user deviates from the expected organizational practice and requires a need for manual intervention by the HR administrator.

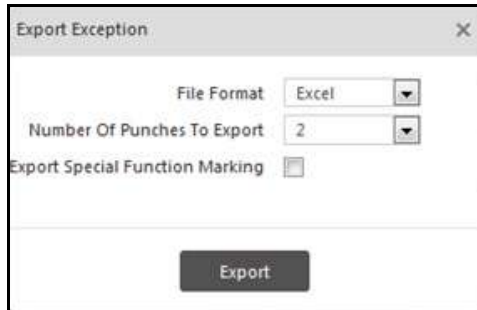

- For instance, absence of punches for a working day or a missing punch may be considered as an attendance exception. So if an employee forgets to punch IN/OUT on a particular working day and is marked absent for the whole day, the punches can be updated by the HR administrator by manual correction from "Manage Attendance".
- For exceptions related to time eg: AB:Late-IN, the operator can be selected and minimum value can be specified; comparing which the exceptions will be generated. The exceptions can be exported in excel sheet which can be manually corrected and then the sheet can be imported.
- Example: AB: Late-IN >15mins. The users who are marked Absent due to late-in of 15 mins or more within the selected date-range would be considered in exception.

## Export & Import

The user can export the exception data in XLS format to the local drive of a computer. This data can then be manually corrected and updated on the system by importing the excel sheet.

## Export

The data to be exported can be configured and selected from the “[Exception Selection](#)” filter. After selecting the exceptions, select the user from “[User Selection](#)” filter. Now click Export  button. The Export Exception page appears as shown below.

The dialog box titled "Export Exception" contains the following fields:

- File Format: Excel (dropdown menu)
- Number Of Punches To Export: 2 (dropdown menu)
- Export Special Function Marking: ☐
- Export button

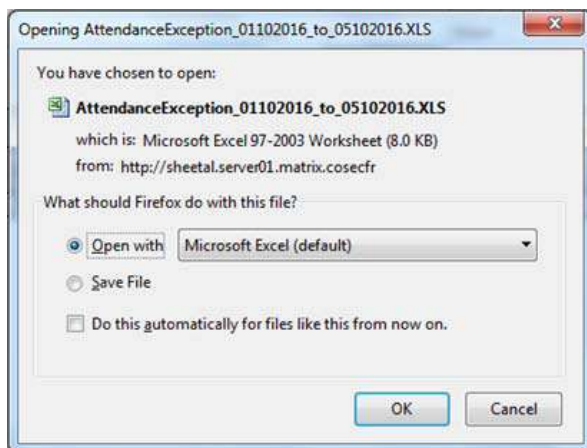

Select the file format as Excel, CSV or XLSX.

Select the **Number of Punches To Export** for each user using the drop-down list.

Select the **Export Special Function Marking** to export special Function IDs with Punches.

Click the **Export** button.

The following pop up window will appear prompting to open or save the file on a local drive.

After saving the file, click the download folder and open the file.

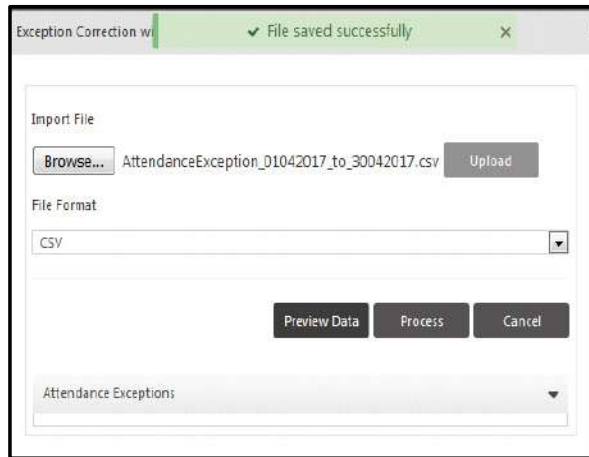

The exported exception file is shown as below.

A	B	C	D	E	F	G	H	I	J
Attendance Date	UserId	User Name	Shift	WO	PH	Punch1	Punch2	BreakStart	BreakEnd
04/10/2016	5	Chirag	GS	0	0	04/10/2016 09:00:00	04/10/2016 14:00:00

## Import

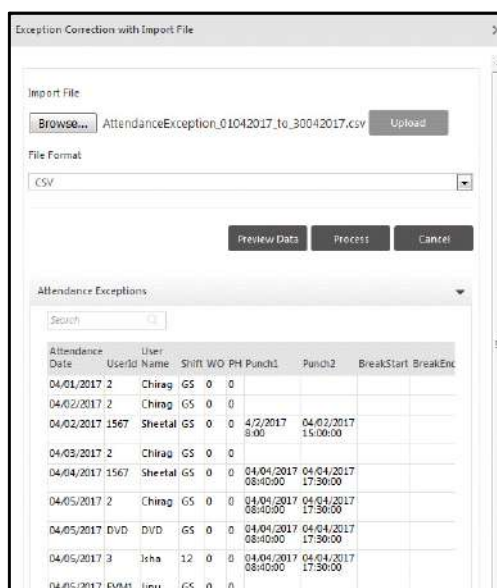

You can make the necessary manual corrections to the exported file. Save the file and note down the file location.

Click the **Import**  icon to import the exception file.

**Browse** the file and click **Upload** button to upload the manually corrected exception file.

Select a **File Format** (XLS or CSV) for uploading. You can preview the data by clicking **Preview Data** button. The changes made in data will be shown as below.

Attendance Date	User Id	User Name	Shift	WO	PH	Punch1	Punch2	BreakStart	BreakEnd

## To do Attendance Correction

Selecting any date from user's daily attendance grid and correct it using available options.

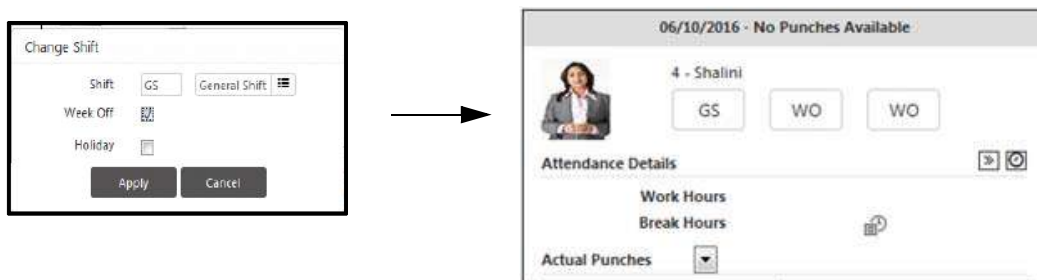

- **Change Shift:**

If no shift has been assigned to the user then you can assign the shift. You can change and assign another shift. Also WO/Holiday can be assigned on the selected day.

Click on the shift to be changed as shown below. The **Change Shift** pop up appears. Click the picklist  and select the shift to be replaced.

The GS shift is selected and Week Off is enabled as shown below. Click on Apply. The shift on 6/10/16 changes to GS-WO.

*If Shifts are changed from Manage Attendance, these requests will be auto-approved and the shifts will be updated. The Shift Change Alert will be triggered, if configured. For details, refer to [“Configuring Alert Messages”](#).*

*Shifts are changed from multiple locations, then in such cases the last approved shift change will be taken into consideration. To know more refer to [“Shift Change Application/Approval”](#).*

- **Mark Manual Status:**

The user's attendance status for the selected date is "AB" (absent) for the first half, and is to be marked present.

		01/08/2023 - 07/08/2023

U2	U2	PR   PR	PR   PR	AB   PR	AB   AB	AB   AB	WO   WO	AB   AB

AB:Late-IN

Click on AB and select the option **Mark Status Manually**. Now select the required option for **Manual Status Marking** from the drop down options. Here "First Half Present" is selected as shown below. Then click Apply.

After the manual status is selected and applied, the punch status will be changed from AB to PR as shown below.

Regularizing With Manual Entry ▾

**Target Work Hours** 0

- To add **Break Punches**, Select "Break Punches" by clicking .

The screenshot shows the 'Present' interface for user U2. The 'Attendance Details' section displays Work Hours as 08:00 and Break Hours as 01:00. The 'Actual Punches' dropdown menu is open, showing options: 'Actual Punches', 'Break Punches' (highlighted), and 'Regularized Punches'. Below the menu, there are fields for Date (05/08/2023), Time (18:00), Sp. Function, In Reason, Out Reason, and navigation buttons for '<< PREVIOUS' and 'NEXT >>'. The 'Suggested Changes' section at the bottom shows 'Regularizing With' set to 'Manual Entry' and 'Target Work Hours' set to 0.

The screenshot shows the 'Present' interface for user U2. The 'Attendance Details' section displays Work Hours as 08:00 and Break Hours as 01:00. The 'Break Punches' section is expanded, showing two punch entry fields. Each field has a 'Punch' dropdown (set to 'Select'), a 'Date' field (05/08/2023), and a 'Time' field (HH:MM). There are also '+' and 'x' buttons for each field.

Enter the Break Start time and Break End time. Click **Apply Changes** ☒ to save the added break time

The screenshot shows the 'Present' interface for user U2. The 'Attendance Details' section displays Work Hours as 08:00 and Break Hours as 01:00. The 'Break Punches' section is expanded, showing two punch entry fields. Each field has a 'Punch' dropdown (set to 'Select'), a 'Date' field (05/08/2023), and a 'Time' field (13:00 and 14:00 respectively). There are also '+' and 'x' buttons for each field.

### Shift Punches to Previous or Next Day

This feature enables you to shift all the punches on a day either to a previous day or a next day.

Let us understand this with the help of an example:

There are two shifts in a company

Shift 1: 20:00 to 04:00

Shift 2: 5:00 to 13:00

User A is assigned a Shift1 as well as Shift 2

For example: on the date 21-07-2023 he punches at 20:00 and the system considers this as the in-punch

Now, after completing the first shift , he punches at 04:30 (date changes to 22-07-2023), now the system considers this as the in-punch for Shift2 which is wrong.

To correct this you must click the previous button.

### Suggested Changes

The system shows the suggestions using which the exception can be eliminated and the selected user can be marked present.

The suggestions available for regularizing are:

- **Shift** - To regularize a record by assigning the suggested shift. Any other suitable shift can also be selected and assigned.
- **Leave** - To regularize a record by using suggested leaves. A half day or full day leave will be suggested depending on the number of hours to be covered. If leave balance is available, the leave will be approved instantly.

*This is applicable for only paid leaves and c-off. Other leave types where balance is not required can also be applied. Tour can also be applied.*

However, this may not work for certain leave application restrictions (for e.g. if the date of regularization falls within a period when leave application is restricted.).

- **Late-IN** - To regularize a record using the *Late-IN Allowed* special function. Using this special function will not affect the user's available *Late-IN*.
- **Early-OUT** - To regularize a record using the *Early-OUT Allowed* special function. Using this special function will not affect the user's available *Early-OUT*.
- **Available Overtime** - To regularize a record using the *available overtime* of the user (sum total of user's *authorized overtime* and *manually credited overtime*). However, no partial adjustment will be done, i.e. if 3 hours are to be adjusted but available overtime is 2.5 hours, no adjustment will be allowed.

*The total available overtime will be considered for the period specified for overtime adjustment in the **Attendance Correction with Overtime** option in the user's Attendance Policy. If this option is disabled, the available overtime will be considered for the previous month only.*

- **Short Leave** - To regularize the user's attendance using available short leaves.
- **Manual Entry** - To regularize a record by manually adding or editing the available punches. Select the record from the grid. Enter the target work hours to be achieved in order to mark the user present. Click on Apply. The punches are adjusted automatically according to target work hours and attendance status gets updated.

If shift hours for full day is 8:00 hrs, then you must enter target work hours as 08:00 to make user full day present.

# Shift-Wise Management

The **Shift-Wise Management** functionality allows the administrator to view and manage the shift-based attendance and reporting status of employees for a chosen date. To know more about shift-based attendance, refer to the **Shift and Schedule** module.

To access this functionality, click **Time & Attendance > Utilities > Shift-Wise Management**

The **Shift-Wise Management** page will open as shown:

Shift ID ▲	Name	Assigned	Scheduled	On Leave/Tour	On Week-Off	On Holiday	Reported	Not Yet Reported
		5	4	1	0	0	1	3
FB	Field break	1	1	0	0	0	0	1
GS	General Shift	16	13	1	2	0	3	10
NE	newshift	1	1	0	0	0	0	1
NS	Night Shift	1	1	0	0	0	0	1

**Attendance Date:** Select a date from the date selection picklist for which you want to view the shift-wise details.

**Filter Users:** Select an individual user or multiple users associated with a specific enterprise group from the Filter Users drop down list.

**Group/User:** Specify an enterprise group or user using the given picklist.

Once the above fields are specified, click the **View** button.

The shift-based details for the specified date and users will be displayed as follows:

Shift ID ▲	Name	Assigned	Scheduled	On Leave/Tour	On Week-Off	On Holiday	Reported	Not Yet Reported
		5	4	1	0	0	1	3
FB	Field break	1	1	0	0	0	0	1
GS	General Shift	16	13	1	2	0	3	10
NE	newshift	1	1	0	0	0	0	1
NS	Night Shift	1	1	0	0	0	0	1

The above list displays the following columns:

- **Shift ID:** This column displays the IDs of all the shifts for the specified date.
- **Name:** This column displays the names of the shifts.
- **Assigned:** This column displays the number of users who are assigned the selected shift for the specific date.

- **Scheduled:** This column displays the number of users scheduled for the respective shifts for the specific date.
- **On Leave/Tour:** This column displays the number of users on a shift who are on leave/tour.
- **On Week-Off:** This column displays the number of users on a shift who are on week-off.
- **On Holiday:** This column displays the number of users on a shift who are on holiday.
- **Reported:** This column displays the total number of users on the shift who have reported on the selected date.
- **Not Yet Reported:** This column displays the total number of users on the shift who have not yet reported on the selected date.

To view a detailed list of users whose numbers are represented on the columns, click the respective number link. This will open a pop up window with the list of users.

The admin can use this pop up window to update the shift and day status of the users by selecting the user from the list and selecting the Shift/Day from the drop down list.

Not Yet Reported (3)

Click the **Update** button to save the changes in shift.

# Change Policy

The **Change Policy** function is used to change the current effective *Time and Attendance* policy for a user or multiple users to another policy configured in the system. Such changes can be made for the following *Time and Attendance* policies:

- Absentee Policy
- Overtime Policy
- Late-IN Policy
- Early-OUT Policy
- C-OFF Policy

*An Attendance Policy cannot be changed using this feature. To change the Attendance Policy for a user, go to Users> User Configuration> T&A> Policy.*

*You can change the policies upto maximum 99 times.*

To change the Policy, click **Time & Attendance > Utilities > Change Policy**

The **Change Policy** page opens as follows:

The screenshot shows the 'Change Policy' web application interface. On the left, there are two tabs: 'Single User' (selected) and 'Multiple User'. The main area is titled 'User Attendance Details' and contains a table with the following data:

Policy Type	Policy Name
Attendance Policy	Attendance Policy-1
Absentee Policy	Absentee Policy-1
Overtime Policy	Overtime Policy-1
Late-IN Policy	Late IN Policy-2
Early-OUT Policy	Early Out Policy-2
C-OFF Policy	COFF Policy-1

Below the table, there are several input fields and a button:

- User:** A dropdown menu with '07' selected.
- Change Policy:** A dropdown menu with 'Select' selected.
- Date:** Two date selection buttons.
- New Policy:** Two input fields for 'ID' and 'Name'.
- Remark:** A text input field.
- Apply:** A button to submit the changes.

At the bottom, there is a section titled 'User Attendance Change Records' with a dropdown arrow.

The Change Policy function can be performed for single users as well as multiple users at a time.

## Single User

To change the policy for a single user, select the **Single User** tab.

**User:** Select the user from the user selection picklist whose policy is to be changed.

The **User Attendance Details** section displays the current policies assigned to the selected user.

**Change Policy:** Select the policy type which is to be changed.

**Date:** Select the Start and End dates from the date selection button for which the policy change would apply.

**New Policy:** Select a new policy from the picklist to replace the old policy.  
For eg: Late- IN Policy is to be changed from Late-IN Policy-2 to Late-IN Policy-1.

**Remark:** A remark related to the new policy change can be entered in the Remark field.

User Attendance Details

Attendance Policy: Attendance Policy-1  
 Absentee Policy: Absentee Policy-1  
 Overtime Policy: OverTime Policy-1  
 Late-IN Policy: Late In Policy-2  
 Early-OUT Policy: Early Out Policy-2  
 C-OFF Policy: COFF Policy-1

Change Policy\*: Late-IN  
 Date\*: 01/03/2017 to 31/03/2017  
 New Policy\*: 1, Late In Policy-1  
 Remark: Late-IN-1 to be given from 1st March

Apply

User Attendance Change Records

Click the **Apply** button to apply the policy change. The changed policy will be reflected in the User Attendance Details section only when the Date range includes the current date.

Else; New Policy will be reflected in the **User Attendance Change Records** section as shown.

User ID	Change Policy	From Date	To Date	New Policy
07	Late-IN	01/01/2009	31/12/2099	Late In Policy-2
07	Late-IN	01/03/2017	31/03/2017	Late In Policy-1

## Multiple Users

To change policy for multiple users at a time, select the **Multiple User** tab.

Change Policy

Single User  
Multiple User

Change Policy\*: Absentee  
 Date\*: 01/03/2017 to 31/03/2017  
 New Policy\*: 2, Absentee Policy-2  
 Remark: Absentee Policy change

Select Users: User Wise  
 User\*: ID, Name

Apply

**Change Policy:** Select the policy type which is to be changed for multiple users.

**Date:** Select the Start and End dates from the date selection button for which the policy change would apply.

**New Policy:** Select a new policy from the picklist to replace the old policy.

**Remark:** A remark related to the new policy change can be entered in the Remark field.

**Select Users:** Once Change Policy has been configured, select the users for whom the policy change is to be applied using the filter options of Userwise, Groupwise or All.:

- Userwise - To select random users from a user picklist.
- Groupwise - To select a group of users from the Select Group dropdown list.
- All - To select all users active on the system.

Once the users are specified, click the **Apply** button to apply the changed policy.

# User-Wise Attendance Restriction

This option enables the application user to assign a User-wise Restriction on selected devices for Attendance Process. The attendance restriction can be assigned to a *single user* or *multiple users*.

To access this functionality, click **Time & Attendance > Utilities > User-Wise Attendance Restriction**.

## Single User Restriction

The screenshot shows the 'User-Wise Attendance Restriction' window in 'Single User' mode. The 'User' field is set to '3' and 'Isha'. Below this, the 'Assigned Devices' table is displayed:

Device Name	Type	Restrict Attendance
Door v2	Door V3	<input type="checkbox"/>
NGT Ground Floor	NGT Direct Door	<input checked="" type="checkbox"/>
Panel Lite V2-Device-9	Panel Lite V2	<input type="checkbox"/>
RnD Panel lite V2	Panel Lite V2	<input type="checkbox"/>
Vega Direct Door	Vega Controller	<input type="checkbox"/>

An 'Apply' button is located at the bottom right of the window.

**User:** Select a user from the User picklist for whom attendance is to be restricted. On selection of user, a list of the **Assigned Devices** is displayed.

Select the appropriate checkboxes under the **Restrict Attendance** column to restrict the user's attendance for the corresponding device as shown in the above figure.

So when the user punches on these devices, the attendance will not be calculated. The user will be allowed access through these devices.

Click the **Apply** button to apply the changes.

## Multiple User Restriction

The screenshot shows the 'User-Wise Attendance Restriction' window in 'Multiple User' mode. The 'Device Filter' is set to 'Randomly'. The 'Device' section has fields for 'ID' and 'Name'. The 'Select Users' section has a dropdown set to 'User Wise' and fields for 'User ID' and 'Name'. An 'Apply' button is located at the bottom right of the window.

**Device Filter:** Select the desired options— **All**, **Device Group** or **Randomly**.

- If you select **All**, then All devices will be selected and will appear in the grid.

You can either select particular devices or can select all the devices at once.

To select particular devices, select the check boxes of the desired devices.

The screenshot shows a window titled "Picklist For Panel and Direct Doors". At the top, a green bar indicates "Total Selected: 3 Records". Below this is a search bar and a "Show Selected" link. A "Select All" checkbox is unchecked. The main table has columns: MID, Name, Type, and Status. Three rows are selected (checked): MID 9 (Panel), MID 10 (Panel 2), and MID 11 (CC2). The bottom of the window shows "1 - 10 of 68 records" and pagination controls with "1" highlighted. "OK" and "Cancel" buttons are at the bottom.

<input type="checkbox"/>	MID ▲	Name	Type	Status
<input checked="" type="checkbox"/>	9	Panel	Panel200	Enable
<input checked="" type="checkbox"/>	10	Panel 2	Panel200	Enable

# Advance Overtime Application

---

Advance Overtime Application is a formal mode of requesting overtime approval before an employee has put in extra working hours as overtime. It enables an organization to keep a track of all the requested, approved/rejected /pending overtime applications.

The Overtime applications can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module

COSEC Web enables all *System Account users* with appropriate page rights to make overtime applications using the *Time and Attendance* module. All applications made by the System Account user are *pre-approved* by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make overtime applications using the *Time and Attendance* module. All applications made by the On Behalf System Account User are *pre-approved* by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#). To receive a notification alert once the final verdict for such application is provided by the RIC, make sure you have configured the desired Mobile Number/Email ID in [“Optional”](#) as well as configure the Advance Overtime Approval/Rejection Alert parameters. For details refer to [“Configuring Alert Messages”](#).

For overtime applications applied in advance using the *Employee Self Service* module, the advance overtime application approvals/rejections have to be done by the respective supervisors of the reporting group by logging into their ESS login. However, such applications can also be approved by the System Account user from the Time and Attendance module of the COSEC Web Application.

*For SA users, make sure you have enabled Advance Overtime Application Rights from Admin> System Accounts> Role and Rights Configuration.*

*For ESS users, make sure you have enabled Advance Overtime Application ESS Rights from Users> Utilities> ESS Role Rights.*

*ESS users can apply for overtime application in advance only using the ESS module and such advance overtime applications require approval either from the Reporting Group In-Charge or the COSEC Web System Account user. Advance Overtime Application directly approved by the System Administrator do not require any further approval from respective supervisors.*

*The Advance Overtime Application applied from Time and Attendance module get approved automatically.*

Advance Overtime Application for an employee can be applied by the System Account user from **Time & Attendance> Utilities> Advance Overtime Application**.

The page appears as shown below:

To generate a new Advance Overtime Application, click on the **Add** button and configure the following parameters.

**User:** Select a user from the picklist for whom this overtime application is being generated.

**Application Date:** This field displays the current date (system generated) on which the application is being generated.

**Attendance Date:** Enter the desired date for which this Overtime Application is being generated. The SA will be allowed to select past dates (only for Night Shift Cases and provided the system has not generated OT hours automatically), current dates (before assigned shift hours) as well as future dates for overtime application.

**OT Hours:** Enter the total duration for which the User wants to work overtime in the format of hours and minutes.

*System Administrator can delete pending/approved/rejected application.*

Click **Approval Details** ≡ icon from the grid available on the left side of the page to view the Approval Details of the already applied application.

Jun 2021		Aug 2021			
0 Pending		1 Approved	1 Rejected		
Application Details					
					
OT Date ▲	Applied OT Hours	Approved OT Hours	Application Date	Status	Approval Details
25/06/2021	02:00	02:00	23/06/2021		
24/06/2021	05:00		23/06/2021		

**Approval Details** window appears as shown below:

It displays the status of the user's application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending , Approved or Rejected .

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

# Authorization or Approval

---

Authorization refers to the act of sanctioning or approving an action, task, manual data entry or event performed on the COSEC Web Application. Authorization for any activity on the COSEC Web Application can be performed by a System Account user with appropriate page rights.

This functionality is useful when the HR administrator in an organization needs to supervise employee attendance and authorize certain data before it is officially recorded for an employee. The Time and Attendance module enables the administrator to perform the following authorizations/approvals for a user:

- “Short Leave/Official In-Out Approval”
- “Overtime/C-OFF Approval”
- “Daily Attendance Approval”
- “Attendance Correction Approval”
- “Event Authorization”
- “Advance Overtime Approval”

*The system requires some of the above authorizations to be enabled during the configuration of the corresponding T&A policy. Entries or applications will be forwarded for authorization/approval only if authorization/approval functionality has been enabled for them.*

# Short Leave/Official In-Out Approval

This option enables the HR user to authorize all Short Leave/Official IN-OUT requests from ESS users who have punched IN late or punched OUT early for a particular day as per the scheduled shift timings. The ESS users can request the Late-IN or Early-OUT events to be authorized as either a Short Leave, if allowed by HR policy, or as official entry or exit events.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

To do this, click **Time & Attendance > Authorization/Approval > Short Leave/Official IN-OUT**.

The **Short Leave/Official IN-OUT Authorization** page opens as follows:

You can either:

- view all the pending applications for Short Leave/Official IN-OUT Authorization
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Authorization”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end date as the duration for which the application status of the Short Leave/Official IN-OUT Authorization is to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click **View**. The Pending, Approved and Rejected collapsible panels appear.

## Pending Authorization

Click the **Pending** collapsible panel.

The **Pending** section lists all employees for whom Short Leave/Official IN-OUT requests are pending for authorization.

The screenshot shows a window titled "Pending (1)" with a search bar and a table of pending applications. The table has columns for User ID, Name, Date, 1st Half, 2nd Half, Special Function, Start, End, Applied Duration, Posted Duration, Work Hours, Approve, Reject, Remark, and Details. A single row is visible for user MV1 on 10/08/2022, with a status of Short Leave and a duration of 09:00 to 10:00.

User ID	Name	Date	1st Half	2nd Half	Special Function	Start	End	Applied Duration	Posted Duration	Work Hours	Approve	Reject	Remark	Details
MV1	MV1	10/08/2022	AB	PR	Short Leave	09:00	10:00	01:00	01:00	07:00	<input type="checkbox"/>	<input type="checkbox"/>		

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

Click the **Details**  icon to view the attendance details of the corresponding user.

**All Attendance Punches** window appears as shown below:

**All Attendance Punches** window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remark** displays the comments provided by the Admin / RIC / System.

Click **Save** to save the authorization.

## Rejected Short Leave/Official IN-OUT

Click the **Rejected** collapsible panel.

This section lists all short leave/official IN-OUT requests that have been rejected. The following screen is an example of **Rejected** list for Official IN-OUT requests for a specific date range:

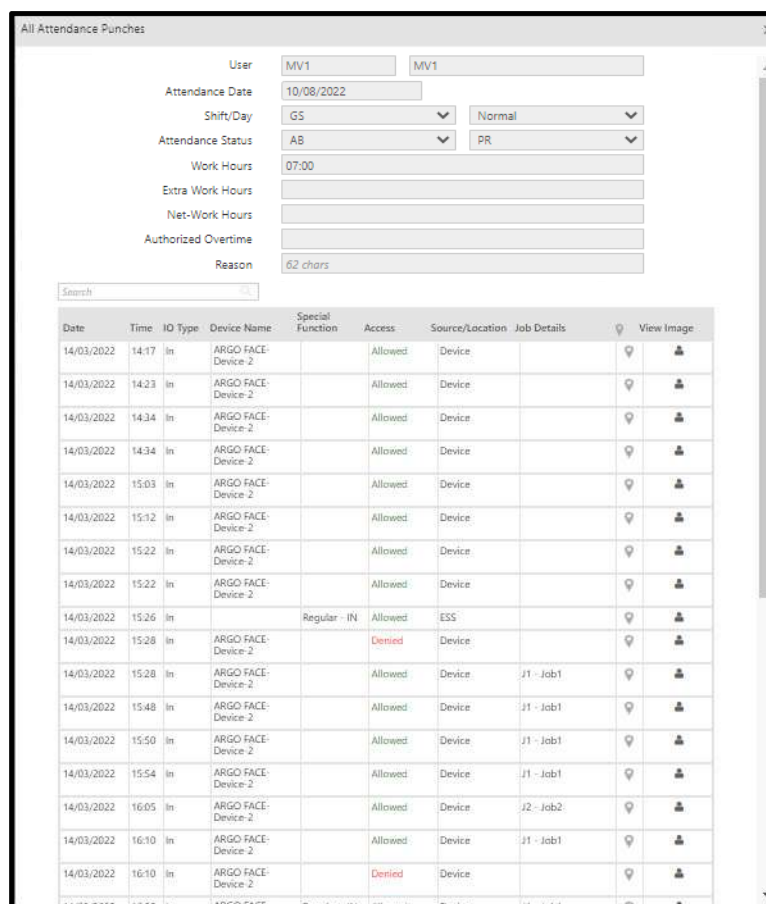

The screenshot shows a web interface titled "Rejected (0)". Below the title is a search bar. A table lists rejected requests with columns: User ID, Name, Date, In-Hold, 2nd Half, Special Function, Shift, End, Applied Duration, Posted Duration, Work Hours, Approve, Reject, Remark, and Details. The first row shows a rejected request for User ID "US", Name "User5", Date "11/04/2021", In-Hold "08", 2nd Half "08", Special Function "Official", Shift "09:00", End "11:14", Applied Duration "02:10", Posted Duration "02:10", Work Hours "00:00". The Approve checkbox is unchecked, and the Reject checkbox is checked. The Remark field contains "Rejected Official11".

User ID	Name	Date	In-Hold	2nd Half	Special Function	Shift	End	Applied Duration	Posted Duration	Work Hours	Approve	Reject	Remark	Details
US	User5	11/04/2021	08	08	Official	09:00	11:14	02:10	02:10	00:00	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rejected Official11	

To change the authorization verdict of any application, select **Approve** checkbox against the corresponding user. Once you approve a rejected application, the record will be moved to the **Approved** section.

Click the **Details**  icon to view the attendance details of the corresponding user.

**All Attendance Punches** window appears as shown below:

The screenshot shows the "All Attendance Punches" window. It has a search bar at the top. Below it are filters for User (MV1), Attendance Date (10/08/2022), Shift/Day (GS), Normal (Normal), Attendance Status (AB), PR (PR), Work Hours (07:00), Extra Work Hours, Net-Work Hours, Authorized Overtime, and Reason (62 chars). Below the filters is a table with columns: Date, Time, IO Type, Device Name, Special Function, Access, Source/Location, Job Details, and View Image. The table lists attendance punches for 14/03/2022. Most punches are "Allowed" and "Device". One punch at 15:26 is "Regular - IN" and "Allowed" with "ESS" as the source. Two punches at 15:28 and 16:10 are "Denied" and "Device".

Date	Time	IO Type	Device Name	Special Function	Access	Source/Location	Job Details	View Image
14/03/2022	14:17	In	ARGO FACE-Device 2		Allowed	Device		 
14/03/2022	14:23	In	ARGO FACE-Device 2		Allowed	Device

**All Attendance Punches** window displays the user's attendance and overtime details.

Click the  button to view source location co-ordinate details for an entry or exit event of the user.

*If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

If there is a Built-In Camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image**  icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

**All Attendance Punches** window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remarks** displays the comments provided by the Admin / RIC / System.

Click **Save** button to save the changes.

*System Administrator can delete pending/approved/rejected application.*

# Overtime/C-OFF Approval

This option enables the HR user to authorize the conversion of an employee's extra work hours into Overtime or C-OFF hours. Extra hours authorized using this option can only be considered for overtime payment or C-OFF hours compensation.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to "[Reporting In-Charge](#)", "[Approval Policy](#)" and "[Configuring Users](#)".

To enable Overtime/C-OFF Authorization, make sure that the "Auto Authorize" option is disabled during both Overtime and C-OFF Policy configuration.

To authorize OT/C-OFF for a user, click **Time & Attendance > Authorization/Approval > Overtime/C-OFF**.

The **Overtime/C-OFF Authorization** page opens as follows:

You can either:

- view all the pending applications for Overtime/C-Off Authorization
- set the filters — Date, Filter Users, Authorization For — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To know more, refer to "[Pending Overtime/C-OFF](#)".

The population on this page depends on the server's database. It might take time to load all pending applications.

## Applications according to Set Filters

- **Date/Attendance Period:** Select this option to enable the date filter.

If you select the Period as Daily, select the start and end dates by clicking the respective date selection buttons.

If you select the Period as Monthly, select the month and year for monthly period. This defines the period for which authorization status is to be viewed for extra work hours.

- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

- **Authorization For:** Select the option as Single Record to authorize single/ individual transaction. Select the option as Multiple Records to authorize multiple transaction records.

### Daily Period- Single Record

User ID	Name	Date	Shift	OT Type	OT Hours	Details
DN	Dinesh	2017/08/25	G5	OT1	00:20	
DN	Dinesh	2017/08/25	G5	OT5	08:30	
DN	Dinesh	2017/08/26	G5	OT1	01:00	
DN	Dinesh	2017/08/26	G5	OT5	08:30	

### Daily Period- Multiple Record

User ID	Name	Date	Shift	OT Type	OT Hours	Details
DN	Dinesh	2017/08/25	G5	OT1	00:20	
DN	Dinesh	2017/08/25	G5	OT5	08:30	
DN	Dinesh	2017/08/26	G5	OT1	01:00	
DN	Dinesh	2017/08/26	G5	OT5	08:30	

### Monthly Period- Single Record

User ID	Name	OT Type	OT Hours	Auth as OT	Auth as C-OFF	Remarks	Authorization Sequence	Details
DN	Dinesh	OT1	03:20	01:00	01:00			
DN	Dinesh	OT3	06:15	03:10	02:34			
DN	Dinesh	OT5	42:30	16:30	17:00			

## Multiple Period- Multiple Record

The screenshot shows the 'Authorization For' dropdown set to 'Multiple Records'. Below it is a 'View' button. A search bar is present. The main table lists pending records for user 'DN' (Dinesh) with columns: User ID, Name, OT Type, OT Hours, Auth as OT, Auth as C-OFF, Remarks, and Details. The table contains three rows of pending records. At the bottom is a 'Define and Authorize' button.

User ID	Name	OT Type	OT Hours	Auth as OT	Auth as C-OFF	Remarks	Details
DN	Dinesh	OT1	03:20	01:00	01:00		
DN	Dinesh	OT3	08:15	03:10	02:34		
DN	Dinesh	OT5	42:30	16:30	17:00		

Click the **View** button to view the pending and authorized application with their details.

## Pending Overtime/C-OFF

Click the **Pending** collapsible panel.

The **Pending** section lists all users whose extra work hours are pending to be authorized as OT/C-OFF by an HR administrator or Reporting In-charge.

The following example displays a pending authorization requests generated for the user.

## Single Record Authorization

The screenshot shows the 'Authorization For' dropdown set to 'Single Record'. Below it is a 'View' button. A search bar is present. The main table lists pending records for user 'DN' (Dinesh) with columns: User ID, Name, Date, Shift, OT Type, OT Hours, Auth as OT, Auth as C-OFF, Remarks, and Details. The table contains five rows of pending records. The second row is highlighted, showing 'Authorized Overtime/C-OFF' in the Remarks column. At the bottom is a 'Define and Authorize' button.

User ID	Name	Date	Shift	OT Type	OT Hours	Auth as OT	Auth as C-OFF	Remarks	Details
DN	Dinesh	2017/08/07	GS	OT1	01:00				
DN	Dinesh	2017/08/07	GS	OT3	02:00	HHH : MM	HHH : MM	Authorized Overtime/C-OFF	
DN	Dinesh	2017/08/07	GS	OT5	08:30				
DN	Dinesh	2017/08/08	GS	OT3	02:00				
DN	Dinesh	2017/08/08	GS	OT5	08:30				

Select a record of a user from the Pending list which is to be authorized as shown above.

You can authorize the requested hours as **Overtime hours**, **C-OFF hours** or both as required. Enter the number of hours to be authorized as shown below. Here 30 minutes is authorized for OT and 1 hour is authorized for C-OFF.

The screenshot shows the 'Authorization For' dropdown set to 'Single Record'. Below it is a 'View' button. A search bar is present. The main table lists pending records for user 'DN' (Dinesh) with columns: User ID, Name, Date, Shift, OT Type, OT Hours, Auth as OT, Auth as C-OFF, Remarks, and Details. The table contains five rows of pending records. The second row is highlighted, showing 'Authorized Overtime/C-OFF' in the Remarks column. Arrows point to the input fields for 'Auth as OT' (00 : 30) and 'Auth as C-OFF' (1 : 00). At the bottom is a 'Define and Authorize' button.

User ID	Name	Date	Shift	OT Type	OT Hours	Auth as OT	Auth as C-OFF	Remarks	Details
DN	Dinesh	2017/08/07	GS	OT1	01:00				
DN	Dinesh	2017/08/07	GS	OT3	02:00	00 : 30	1 : 00	Authorized Overtime/C-OFF	
DN	Dinesh	2017/08/07	GS	OT5	08:30				
DN	Dinesh	2017/08/08	GS	OT3	02:00				
DN	Dinesh	2017/08/08	GS	OT5	08:30				

You must add a **Remark** while authorization.

Then click **Save** to save the authorization.

The OT/C-OFF Eligibility is configured from User Configuration> T&A> Attendance. The C-OFF hours can be authorized in multiple of specified value in C-OFF Policy.

If the user is eligible for OT and C-OFF, authorization can be done for both.

Once you approve, the record will be moved from the **Pending** section to the **Authorized** section.

The authorized overtime hours will be displayed in the grid as shown below.

User ID	Name	Date	Shift	OT Type	OT Hours	Auth as OT	Auth OT Date	Auth as C-OFF	Auth C-OFF Date	Auth By	Remarks	Details
DN	Dinesh	2017/08/07	GS	OT3	02:00	00:30	2017/09/01	01:00	2017/09/01	SA		

Click the **Details** icon corresponding to the user, to view the detailed attendance record as well as the Advance Overtime Application and its status.

The **All Attendance Punches** window appears as shown below.

**All Attendance Punches** window displays the user's attendance and overtime details.

Click the button to view source location co-ordinate details for an entry or exit event of the user.

If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.

If there is a Built-In Camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image**  icon.

If the event is generated by API then there will not be any image popup window on clicking View Image icon.

**All Attendance Punches** window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

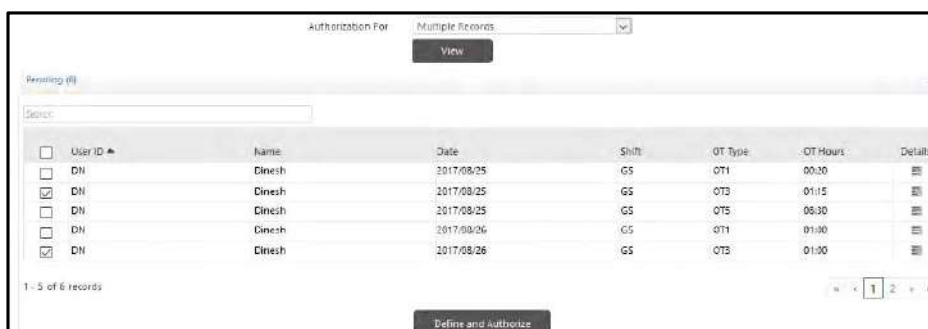

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

**Remark** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

## Multiple Record Authorization

If you want to authorize multiple records at a time then select Multiple Records in “Authorization For” and click View. The page appears as shown below.

Now select the checkboxes for the overtime record to be authorized. For example: Here OT3 on 25th and 26th August is to be authorized for 1 hour.

Click **Define and Authorize** button. The **Configure Authorization Parameters** window appears. You can authorize OT for multiple records in following ways:

- **Authorize:** You can select the option as Available OT or Defined OT hours for OT Type-Wise or Record Wise option.
- Select the option as **Available OT** to authorize the respective available overtime hours for the selected records.

The screenshot shows the 'Configure Authorization Parameters' window. The 'Authorize' dropdown is set to 'Available OT'. The 'Authorization Mode' is 'OT Type-Wise'. The 'Authorize in Terms of' dropdown is set to 'Percentage'. Below this, there are two columns of input fields: 'Define Hours for OT(%)' and 'Define Hours for C-OFF(%)'. The rows are labeled OT1 through OT5. The values entered are: OT1 (50.00, 50.00), OT2 (60, 40.00), OT3 (30, 70.00), OT4 (100.00, 0.00), and OT5 (100.00, 0.00). There are also fields for 'Authorize Hours for Each Record(As Overtime)' and 'Authorize Hours for Each Record(As C-OFF)', both set to 0.00. A 'Remarks' field contains the text 'Authorized Overtime/C-OFF'. An 'Authorize' button is at the bottom.

The screenshot shows the 'Authorized' window with a table of authorized records. The table has columns: User ID, Name, Date, Shift, OT Type, OT Hours, Auth as OT, Auth OT Date, Auth as C-OFF, Auth C-OFF Date, Auth By, Remarks, and Details. Two records are shown: one for DN Dinesh on 2017/08/25 for OT3 with 01:15 OT hours, and another for DN Dinesh on 2017/08/26 for OT3 with 01:00 OT hours. The 'Auth as OT' column shows 00:22 and 00:18 respectively, and the 'Auth C-OFF Date' column shows 2017/09/18 00:52 and 2017/09/18 00:42 respectively.

User ID	Name	Date	Shift	OT Type	OT Hours	Auth as OT	Auth OT Date	Auth as C-OFF	Auth C-OFF Date	Auth By	Remarks	Details
<input type="checkbox"/> DN	Dinesh	2017/08/25	GS	OT3	01:15	00:22	2017/09/18	00:52	2017/09/18	SA		
<input type="checkbox"/> DN	Dinesh	2017/08/26	GS	OT3	01:00	00:18	2017/09/18	00:42	2017/09/18	SA		

OT3 on 25th = 30%of OT=30% of 1:15 hrs= 22 minutes; C-OFF= 70% of 1.15 hrs = 52 minutes

OT3 on 26th = 30%of OT=30% of 1:00 hrs= 18 minutes; C-OFF= 70% of 1.00 hrs = 42 minutes

- Select the option as **Defined OT hours** to define a value of hours to be authorized for selected records.

The screenshot shows the 'Configure Authorization Parameters' window. The 'Authorize' dropdown is set to 'Defined OT Hours'. The 'Authorization Mode' is 'Record-Wise'. The 'Authorize in Terms of' dropdown is set to 'Hours'. Below this, there are two columns of input fields: 'Define Hours for OT' and 'Define Hours for C-OFF'. The rows are labeled OT1 through OT5. The values entered are: OT1 (001, 00), OT2 (001, 00), OT3 (001, 00), OT4 (001, 00), and OT5 (001, 00). There are also fields for 'Authorize Hours for Each Record(As Overtime)' and 'Authorize Hours for Each Record(As C-OFF)', both set to 001 : 00. A 'Remarks' field contains the text '1 hour to be authorized as OT'. An 'Authorize' button is at the bottom.

**Authorization Mode:** Select the mode as **OT-Type Wise** to authorize hours separately for each OT or **Record-Wise** to authorize hours for the selected records.

#### **Available OT**

In the option “**OT Type-Wise**” you can authorize hours based on the OT type (OT1, OT2,...OT5) for the selected records.

- **Authorize in Terms of:** Select the option as **Hours** or **Percentage** of OT/C-OFF based on which number of hours or percentage of hours is to be authorized as Overtime or C-OFF.
- **Hours:** Enter the number of hours to be assigned as overtime for OT1, OT2...OT5. The remaining hours from the available overtime will be assigned to the C-OFF hours.
- **Percentage:** Enter the percentage value to calculate OT1, OT2...OT5 as percentage of available overtime hours. Based on entered OT percentage, C-OFF percentage will appear. For example: If OT1 is set to 40% of OT then C-OFF will be calculated as 60% of OT.

In the option “Record-Wise” you can authorize hours for OT and C-OFF for each records.

- **Authorize in Terms of:** Select the option as **Hours** or **Percentage** of OT/C-OFF based on which number of hours or percentage of hours is to be authorized as Overtime or C-OFF.
- **Hours:** When Hours of OT or Hours of C-OFF is selected then enter the number of hours in the field **Authorize Hours for Each Record (As Overtime)** or **Authorize Hours for Each Record (As C-OFF)** depending on the selection. For example: If available OT hrs is 2 hrs and Authorize hours for each record (As Overtime) is entered as 1:00 hr then remaining 1 hr is given to C-OFF.
- **Percentage:** When Percentage of OT or Percentage of C-OFF is selected then enter the percentage in the field Authorize Hours for Each Record (As Overtime) or Authorize Hours for Each Record (As C-OFF) depending on the selection. For example: If Authorize hours for each record (As Overtime) is entered as 40% then remaining 60% is given to C-OFF.

#### **Defined OT Hours**

In the option “**OT Type-Wise**” you can authorize hours based on the OT type (OT1, OT2,...OT5) for the selected records.

- **Authorize in Terms of:** Select the option as **Hours** or **Percentage** based on which number of hours or percentage of hours is to be authorized as Overtime or C-OFF.
- **Hours:** Enter the number of hours to be assigned as overtime and or C-OFF for OT1, OT2...OT5.
- **Percentage:** Enter the percentage value for overtime and C-OFF to calculate OT1, OT2...OT5.

**All Attendance Punches** window displays the user's attendance and overtime details.

Click the  button to view source location co-ordinate details for an entry or exit event of the user.

*If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

If there is a Built-in camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image**  icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

**All Attendance Punches** window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remark** displays the comments provided by the Admin / RIC / System.

Click **Save** to save the authorization.

# Daily Attendance Approval

The HR administrator may want to review daily IN and OUT punch records for all users before approving these as the official attendance for the day. This may be especially useful in monitoring irregularity in the attendance patterns of employees and in keeping a check on suspected abuse of privileges such as punching on behalf of colleagues or unauthorized visitors.

Authorization for Daily Attendance can be enabled during the configuration of an Attendance Policy from **Time & Attendance > Policies > Attendance Policy > General**. Once enabled, every attendance event from the configured users will pass to the respective reporting in-charges and the COSEC Web system administrator for approval before the user is marked “present”.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

To view and authorize daily attendance, click **Time & Attendance > Authorization/Approval > Daily Attendance**.

The **Attendance Authorization** page opens as follows:

You can either:

- view all the pending applications for Attendance Authorization
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Authorize** check box of the desired entry.

To know more, refer to [“Pending Authorization”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end date as the duration for which the applications for Attendance Authorization are to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button to view the pending and authorized attendance records of the specified users and their details.

## Pending Authorization

Click the **Pending** collapsible panel.

The **Pending** section lists daily attendance records of users that are yet to be sanctioned by the system administrator. All the records in this section are marked "AB" (absent) because they are unauthorized.

User ID	Name	Date	Shift	1st Half	2nd Half	Gross Work	Extra Work	Net Work	Total OT	First IN	Last OUT	Authorize	Remark	Details
AIFS	AIFS	02/08/2022	GS	AB	AB	08:00				09:30	18:00	<input type="checkbox"/>	Revoked	
AIFS	AIFS	03/08/2022	IN	AB						11:20		<input type="checkbox"/>		
KJ	Khushal	01/08/2022	GS	AB	AB	08:00				09:00	18:00	<input type="checkbox"/>		
KJ	Khushal	02/08/2022	GS	UP	UP					15:18		<input type="checkbox"/>		
RIC1	RIC1	03/08/2022	GS	PL	PL					12:20		<input type="checkbox"/>		

When any application is in the Pending state it can be authorized by the Admin or RIC.

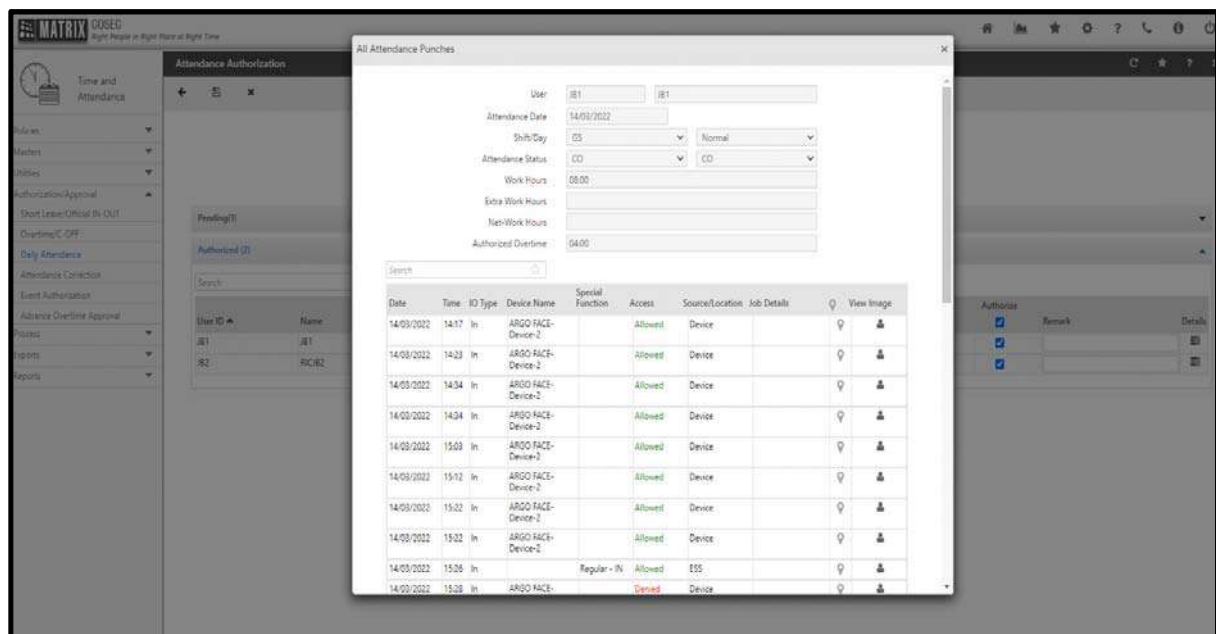

- To authorize the applications selectively, click the respective **Authorize** check box against the user.
- To authorize all the applications simultaneously, click the **Authorize** checkbox in the header column.

Once the Admin authorizes the application, the record will be moved from the **Pending** section to the **Authorized** section.

The default **Remark** for the Authorized application will appear in the respective fields. You can enter your Remark while authorizing the application.

Click the **Details**  icon to view the attendance details of the corresponding user.

**All Attendance Punches** window appears as shown below:

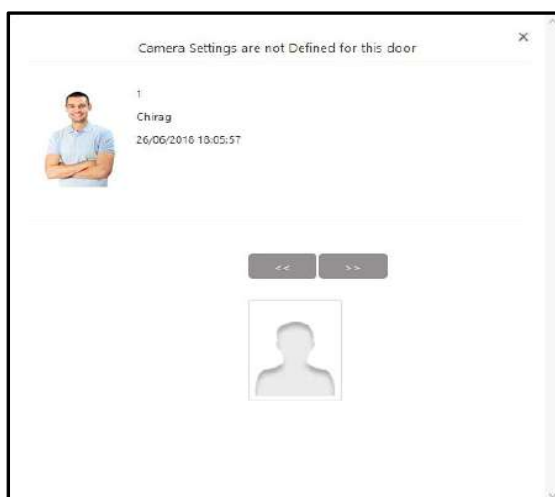

**All Attendance Punches** window displays the user's attendance and overtime details.

Click the button to view source location co-ordinate details for an entry or exit event of the user.

*If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

If there is a Built-In Camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image** icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

**All Attendance Punches** window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

**Remarks** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

## Authorized Attendance

Click the **Authorized** collapsible panel.

This section lists all the daily attendance records that have been authorized. All the authorized records are now marked as “PR” (present) in the following example:

Pending (5)													
Authorized (1)													
Search													
User ID ▲	Name	Date	Shift	1st Half	2nd Half	Gross Work	Extra Work	Net Work	Total OT	First IN	Last OUT	Authorize	Details
1587	Aditi Gupta	01/12/2017	G2	PR	PR	10:00	01:00			09:00	19:00	<input checked="" type="checkbox"/>	Authorized Daily Attendance

*The attendance status (“AB”, “PR” etc.) after attendance is authorized, will depend on criteria such as shift timings, work hours etc. for the respective employee. For e.g. if punches do not match with assigned shift timings, user will be marked “AB”.*

To revoke authorization, clear the **Authorize** checkbox against a user. Then this record will be moved from the **Authorized** section to the **Pending** section again.

Click the **Details** icon to view the attendance details of the corresponding user.

**All Attendance Punches** window appears as shown below:

**Remark** displays the comments provided by the Admin / RIC / System.

Click **Save** to save the authorization.

# Attendance Correction Approval

Attendance Correction may be required by an employee in several instances. It may be required to correct a missed or forgotten punch during the course of a working day or to request modification for an entry or exit event posted for a particular day's attendance data. COSEC allows employees to log in to the ESS module and apply for attendance data corrections.

These attendance correction applications however, are required to be authorized by the COSEC Web system administrator (likely an HR personnel) using the *Time and Attendance* module.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

*Attendance correction performed by a System Account user will always be pre-approved. Attendance Correction applications can also be approved by respective Reporting Group In-charges from the ESS application.*

To authorize attendance correction applications, click **Time & Attendance > Authorization/Approval > Attendance Correction**.

The **Attendance Correction Authorization** page will appear as follows:

You can either:

- view all the pending applications for Attendance Correction Authorization
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more refer to [“Pending Applications”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end dates by clicking the respective date selection buttons. This defines the period for which Attendance Correction Applications are to be viewed. The end date is by default set to the current date and authorization is not allowed for any later date.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button to view all pending, approved and rejected attendance correction applications and their details.

## Pending Applications

Click the **Pending** collapsible panel.

The **Pending** section lists all the attendance correction applications from users waiting to be sanctioned by the system administrator/RIC as shown.

User ID	Name	Application Date	Attendance Date	Shift	WO/PH	1st Punch	2nd Punch	3rd Punch	4th Punch	Approve	Reject	Remark	Details
AIS	AIS	04/08/2022	03/08/2022	GS		11:30	19:00			<input type="checkbox"/>	<input type="checkbox"/>	Approved Attendance Correction	
AnyOneUser	AnyOneUser	04/08/2022	04/08/2022	GS		09:30	20:00			<input type="checkbox"/>	<input type="checkbox"/>	Approved Attendance Correction	

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve/Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter your Remark while authorizing the application.

Click the **Details**  icon to view the attendance details of the corresponding user.

**All Attendance Punches** window appears as shown below:

SA - System Admin	(X) (17/06/2021 15:12)	Rejected Attendance Correction

The **Attendance Values** has the following options:

The screenshot shows the 'All Attendance Punches' window with the 'Attendance Values' dropdown menu open. The dropdown menu has three options: 'Applied', 'On Application', and 'Current'. The 'Applied' option is selected and highlighted in blue. The search filters are set to User (1551SU), Attendance Date (2017/02/06), Shift/Day (GS), Normal, Attendance Status (AB), and Reason (Applied). The table below shows two rows of data for the selected date.

Date	Time	Device Name	Access
2017/02/06	09:00		
2017/02/06	17:00		

- **On Application** - Displays punch details at the time of application.
- **Applied** - Displays applied punch values.
- **Current** - Displays current punch values for the selected date.

As per the option selected in **Attendance Values** the details will be displayed below.

**All Attendance Punches** window displays the user's attendance and break details. It also displays the status of user's attendance correction application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remarks** displays the comments provided by the Admin / RIC / System.

Click **Save** button to save the changes.

# Event Authorization

The Event Authorization plays very important role in terms of attendance of employee. It specifies prior authorization required for the events that should be considered for Attendance. It allows reporting In-charge or System Administrator to validate these events.

*The events will occur only when Authorization Required is enabled from **Time & Attendance > Policies > Attendance Policy > General Parameters > Event Authorization**.*

*Also, the events will depend on the parameters selected from Event Source list-box. Only the selected Event sources will be displayed here.*

The System Administrator can Authorize the events from this page in absence of reporting in-charge.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

To authorize Events, click **Time & Attendance > Authorization/Approval > Event Authorization**.

The **Event Authorization** page will appear as follows:

You can either:

- view all the pending applications for Event Authorization
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Authorize** check box of the desired entry.

To know more refer to [“Pending Events”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end dates by clicking the respective date selection buttons. This defines the period for which User Events are to be viewed. The end date is by default set to the current date and authorization is not allowed for any later date.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button to view all pending and authorized events and their details.

## Pending Events

Click the **Pending** collapsible panel.

The **Pending** section lists all the events from users waiting to be sanctioned by the system administrator as shown:

User ID	Name	Date-Time	I/O	Access	Source	Authorize	Remark	View Image	Details
U1	USER	05/08/2022 09:38	Entry	Allowed	App	<input type="checkbox"/>			
U1	USER	04/08/2022 18:05	Entry	Allowed	App	<input type="checkbox"/>			

- **Access:** Specifies whether the access is allowed/denied to the user.
- **Source:** Displays the sources from where the punch is marked i.e. ESS, Device, Mobile Application, etc.

Select the **Authorize** checkbox against an event to authorize it. The administrator can also select all the applications to authorize at the same time and give the verdict by checking the common Authorized checkbox on the header column.

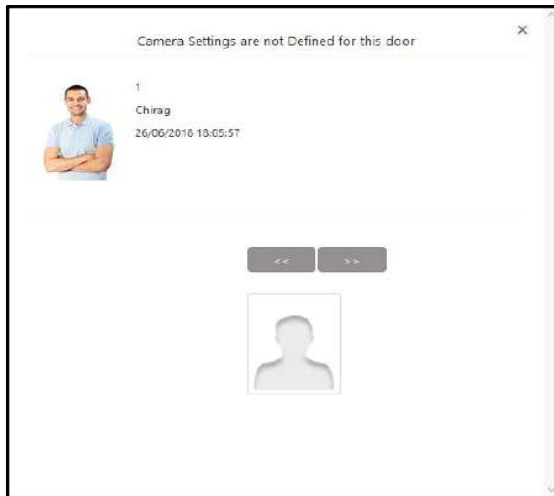

The default **Remark** for the Authorized event application will appear in the respective fields. You can enter your Remark while authorizing the application.

Click the  button to view source location co-ordinate details for an entry or exit event of the user.

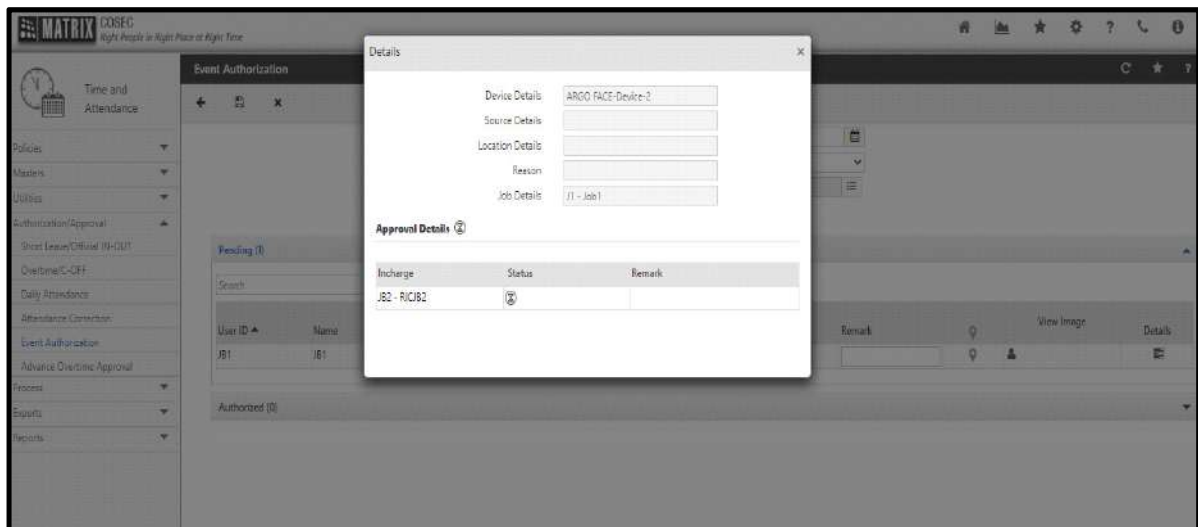

*If Map is not loaded; check the network connection or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

If there is a Built-In Camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image**  icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

The Reason for punching from unassigned location (when punch is made from Application) can be viewed from **Details** . Click on **Details** and the below window appears:

You can view details like — Device Details, Source Details, Location Details, Reason.

It also displays the status of user's event authorization request under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

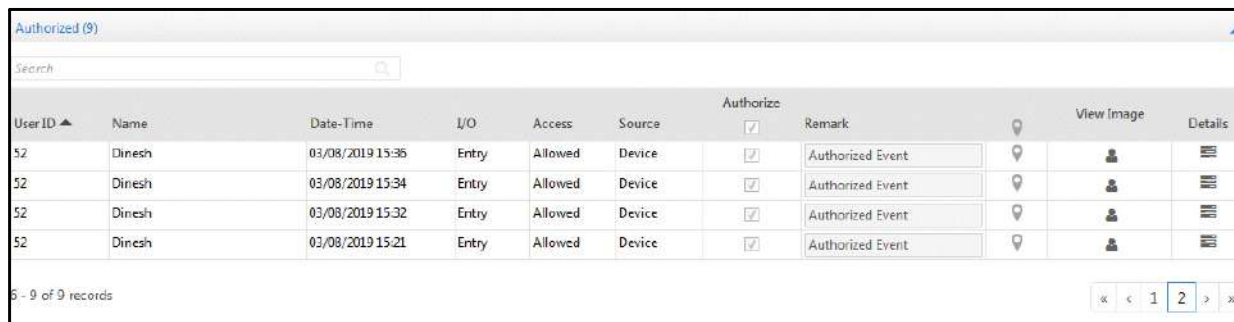

**Remarks** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

## Authorized Events

Click the **Authorized** collapsible panel.

The **Authorized** section displays all the events that have been authorized by the reporting group in-charge or the system administrator. The following screen displays the **Authorized** section.

User ID ▲	Name	Date-Time	I/O	Access	Source	Authorize	Remark	View Image	Details
52	Dinesh	03/08/2019 15:35	Entry	Allowed	Device	<input checked="" type="checkbox"/>	Authorized Event		
52	Dinesh	03/08/2019 15:34	Entry	Allowed	Device	<input checked="" type="checkbox"/>	Authorized Event		
52	Dinesh	03/08/2019 15:32	Entry	Allowed	Device	<input checked="" type="checkbox"/>	Authorized Event		
52	Dinesh	03/08/2019 15:21	Entry	Allowed	Device	<input checked="" type="checkbox"/>	Authorized Event		

6 - 9 of 9 records

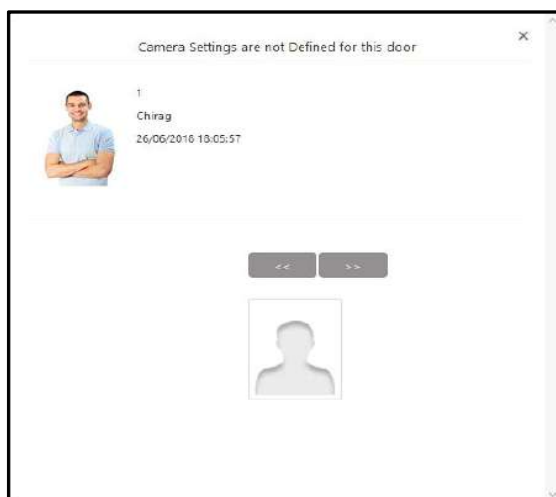

Here, Authorized events can be viewed only.

Click the  button to view source location co-ordinate details for an entry or exit event of the user.

*If Map is not loaded; check the network connection or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

If there is a Built-In Camera to capture the image of the user while punching on the door; you can view that image by clicking on the **View Image**  icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

Click on **Details**  and the below window appears.

Source Details:

Location Details:

Reason:

Job Details: J1 - Job1

**Approval Details** ⓘ

Incharge	Status	Remark
JB2 - RICJB2	⊗	

You can view details like — Device Details, Source Details, Location Details, Reason.

It also displays the status of user's event authorization request under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

**Remarks** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

# Advance Overtime Approval

The Advance Overtime Approval is providing prior approval for the Advance Overtime Applications of the users. This page will be displayed for System Administrator.

*Approval of Advance Overtime Application performed by a System Account user will always be pre-approved.*

*Advance Overtime Applications can also be approved by respective Reporting Group In-charges from the ESS application.*

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

To approve the applications,

click **Time & Attendance > Authorization/Approval > Advance Overtime Approval**.

The **Advance Overtime Approval** page will appear as follows:

The screenshot shows the 'Advance Overtime Approval' web application. At the top, there's a title bar with 'Advance Overtime Approval' and navigation icons. Below the title bar, there's a section for filtering applications. It includes a radio button for 'Show All Pending Applications' (which is selected), a date range selector for 'Overtime Date' with 'From Date' and 'To Date' fields, a 'Filter Users' dropdown menu set to 'All', and a 'Group/User' section with 'ID' and 'Name' input fields and a 'View' button. Below the filters, there's a 'Pending (1)' section with a search bar. Underneath the search bar is a table with the following columns: 'User', 'Name', 'OT Date', 'OT Hours', 'Application Date', 'Approved Hours', 'Approve' (with a checkbox), 'Reject' (with a checkbox), 'Remark', and 'Details'. The table contains one entry for user '1' with name 'Athira', OT Date '15/01/2021', OT Hours '05:00', Application Date '08/01/2021', and Approved Hours '05:00'. The 'Approve' and 'Reject' checkboxes are currently unchecked.

You can either:

- view all the pending applications for Advance Overtime Approval
- set the filters — Overtime Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more refer to "[Pending Overtime/C-OFF](#)".

## Applications according to Set Filters

To Set the Filters,

- **Overtime Date:** Set the start and end dates by clicking the respective date selection buttons. This defines the applications to be displayed within the set dates.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1,/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button to view all pending, authorized and rejected application and their details.

## Pending Applications

Click the **Pending** collapsible panel. The **Pending** section lists all the applications of the users awaiting approval by the System Administrator/RIC as shown below.

Show All Pending Applications ☒

Overtime Date ☐ From Date  To Date

Group/User: ID  Name

View

Pending (1)

Search

User	Name	OT Date	OT Hours	Application Date	Approved Hours	Approve	Reject	Remark	Details
1	Ashira	12/01/2021	05:00	07/01/2021	05:00	<input type="checkbox"/>	<input type="checkbox"/>		

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box
- To approve/reject all the applications simultaneously, click the Approve /Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter your Remark while authorizing the application.

To view the details of a particular application, click on the **Details** . The **Advance Overtime Application Detail** window appears as shown below:

Advance Overtime Application Detail

**Approval Details** ⓘ

Incharge	Status	Remark
SA - System Admin	ⓘ	

**Advance Overtime Application Detail** window displays the user's advance overtime application.

This window also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

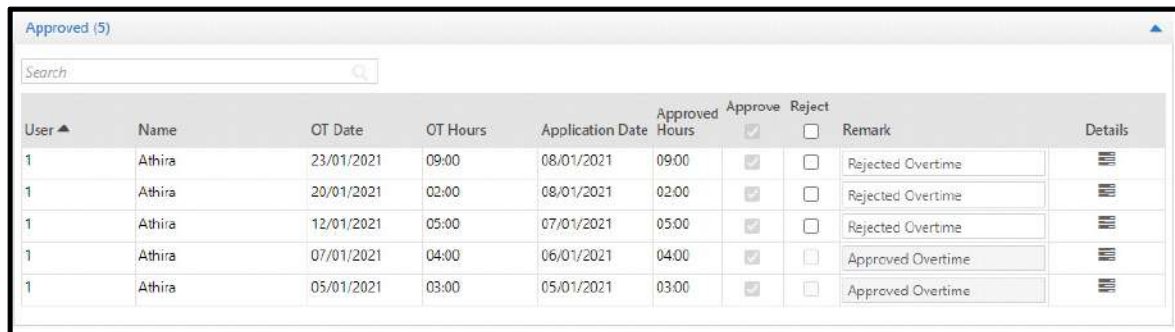

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

**Remarks** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

## Approved Applications

Click the **Approved** collapsible panel. The **Approved** section lists all the applications of the users that have been approved by the Reporting Group In-Charge/System Administrator as shown below.

The screenshot shows a window titled "Approved (5)" with a search bar and a table of approved overtime applications. The table has columns for User, Name, OT Date, OT Hours, Application Date, Approved Hours, Approve, Reject, Remark, and Details. There are five rows of data, all for user "Athira".

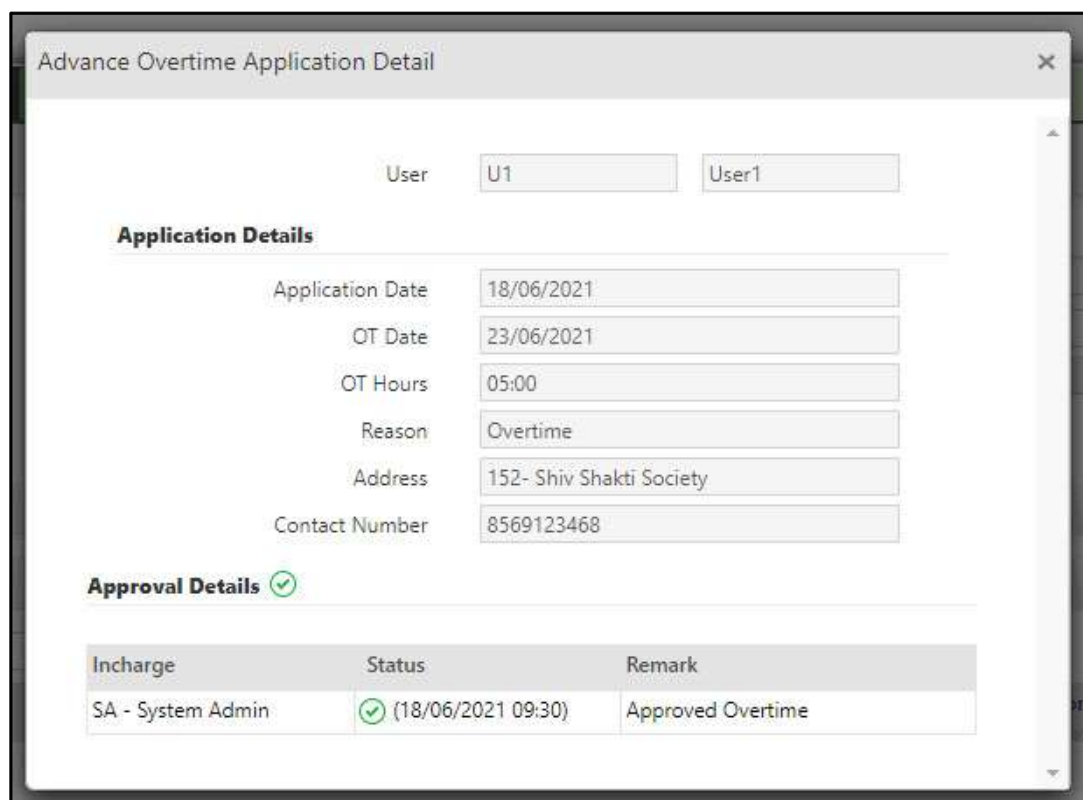

User	Name	OT Date	OT Hours	Application Date	Approved Hours	Approve	Reject	Remark	Details
1	Athira	23/01/2021	09:00	08/01/2021	09:00	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Rejected Overtime	
1	Athira	20/01/2021	02:00	08/01/2021	02:00	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Rejected Overtime	
1	Athira	12/01/2021	05:00	07/01/2021	05:00	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Rejected Overtime	
1	Athira	07/01/2021	04:00	06/01/2021	04:00	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Overtime	
1	Athira	05/01/2021	03:00	05/01/2021	03:00	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Overtime	

The Approved applications of present as well as of future dates can be rejected by the RIC, if required. To do so, select the **Reject** checkbox of the respective application.

The Approved applications of the past dates can only be viewed.

Click the **Details** icon to view the attendance details of the corresponding user.

**Advance Overtime Application Detail** window appears as shown below:

The screenshot shows the "Advance Overtime Application Detail" window. It displays the user "U1" (User1) and their application details. The application details include Application Date (18/06/2021), OT Date (23/06/2021), OT Hours (05:00), Reason (Overtime), Address (152- Shiv Shakti Society), and Contact Number (8569123468). The approval details show the application is approved by "SA - System Admin" on "18/06/2021 09:30" with the remark "Approved Overtime".

Incharge	Status	Remark
SA - System Admin	(18/06/2021 09:30)	Approved Overtime

**Advance Overtime Application Detail** window displays the user's advance overtime application details. It also displays the status of user's application under **Approval Details**. The application's status is displayed in the **Status** column.

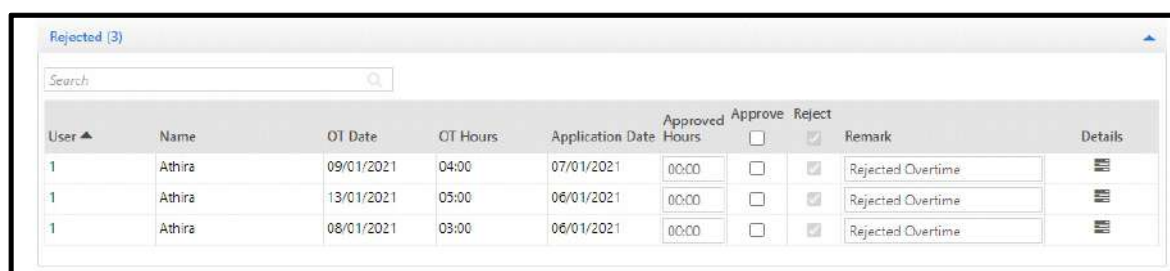

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

**Remark** displays the comments provided by the Admin / RIC / System.

Click **Save** to save the authorization.

## Rejected Applications

Click the **Rejected** collapsible panel. The **Rejected** section lists all the applications of the users that have been rejected by the Reporting Group In-Charge or the System Administrator as shown below.

User	Name	OT Date	OT Hours	Application Date	Approved Hours	Approve	Reject	Remark	Details
1	Athira	09/01/2021	04:00	07/01/2021	00:00	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rejected Overtime	
1	Athira	13/01/2021	05:00	06/01/2021	00:00	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rejected Overtime	
1	Athira	08/01/2021	03:00	06/01/2021	00:00	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rejected Overtime	

The Rejected applications of present as well as future dates can be approved by the Reporting Group In-Charge/ System Administrator, if required. To do so, select the **Approved** checkbox of the respective application and specify the **Approved Hours**.

The Rejected applications of the past dates can only be viewed.

Click the **Details** icon to view the attendance details of the corresponding user.

# Processing Attendance

This option enables an HR user to manually run certain processes required for generation of shifts, daily attendance and month-end attendance data. Attendance data for users is generated as per their entry/exit punches and scheduled entry/exit time. This is achieved by assigning the shifts to the users for each day of the attendance period. Shift schedule generation does the process of assigning shift for each day of the month as per the schedule group allotted to user.

To Process Daily Attendance [See “Processing Daily Attendance” on page 2061.](#)

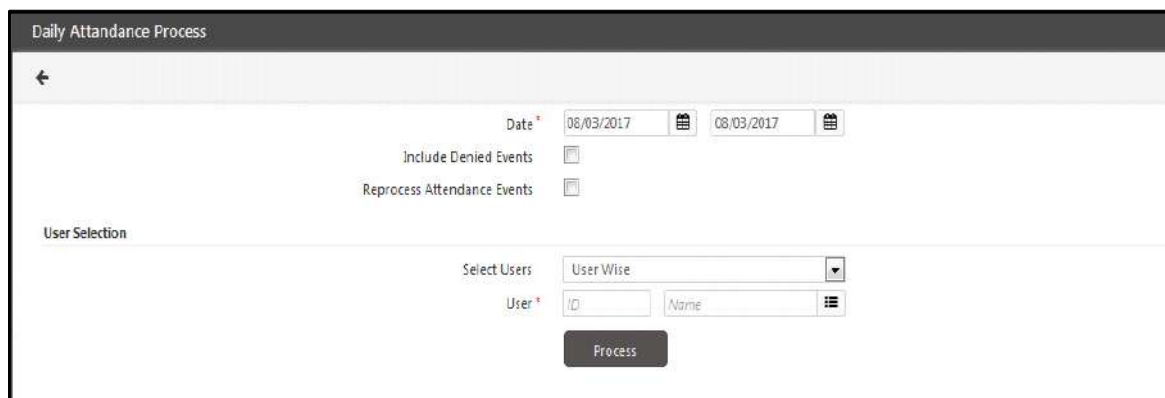

To Process Monthly Attendance [See “Processing Monthly Attendance” on page 2062.](#)

## Processing Daily Attendance

This process will enable the HR user to calculate the times related to attendance marking as per scheduled shift and then mark the attendance for a day. This is on regularized, authorized and summarized based on the Attendance Policy which generate the attendance summary data which can be used as input for salary calculation by any other application after importing the data in required format. Based on the attendance marking events of the day the system calculates the working hours, overtime hours and late-in/early-out hours for the day.

To run the Attendance process, click **Time & Attendance > Process > Daily Attendance**.

The **Daily Attendance Process** page appears as shown:

The following options appear on the **Daily Attendance Process** page for configuration:

- **Date:** Specify the Start and End dates to define the period for which daily attendance is to be processed.
- **Include Denied Events:** Select this checkbox to enable denied user events to be considered for daily attendance processing.
- **Reprocess Attendance Events:** Select this checkbox to reprocess all attendance events based on the new policy settings:

When Time & Attendance policy or shift of user for previous day is changed then it is required to Reprocess Attendance events to correct the attendance calculation.

Example: If user is assigned GS from 1st to 10th of a month. And user is coming in NS from 4th to 7th of month. When you are running the Daily Attendance process on 10th; then it is must to Reprocess Attendance Events to calculate the punches as per the assigned shift.

For the events that requires authorization, Only the authorized events will be considered when **Process** is clicked. Hence, the User Denied Events are not considered for Authorization.

*Indiscriminate use of the **Reprocess Attendance Events** option is not recommended as it will revert all changes made using the **Manual Correction** option.*

*For Site based and Location based Auto Tour feature; when the Tour application is automatically applied/generated; then it cannot be revert back even after reprocessing events. The user has to manually delete/apply for cancellation if needed.*

- **Select Users:** Specify the group of users whose daily attendance data is to be processed in this section. To specify users, select one of the following options in the User Filter dropdown list:
  - **User Wise:** Enables administrator to randomly select users from the user Picklist window.
  - **Group Wise:** Enables the administrator to select all users belonging to a particular group.
  - **All:** Enables administrator to select all active users in the database.

Click the **Process** button to start processing daily attendance data.

## Processing Monthly Attendance

This process will enable the HR user to generate a summary of the attendance period as per the defined attendance policy. In addition, previous adjustment data will be generated for allowed previous closed attendance period. Once this is done, the system allows the HR user to close the current attendance period.

To start the process, click **Time & Attendance > Process > Monthly Attendance**.

The **Monthly Attendance Process** page appears as shown:

The following options appear on the **Monthly Attendance Process** page:

- **Attendance Period:** Select the month and the year for which the process is to be run.

- **Send Alert to Users:** Select this checkbox if an alert message is to be sent to the assigned users at the end of the process.
- **Close Attendance Period:** Select this checkbox to close the chosen attendance period after the process is run. This will ensure that no data can be changed or processed for this period any further.

Suppose the Attendance period for June 2018 is closed and there are pending Award/Penalty authorization applications of June so

- those applications will not be allowed to authorize if Attendance Correction in Attendance Policy is disabled.
- those applications will be allowed to authorize if Attendance Correction in Attendance Policy is enabled for the valid period of adjustment.

*Close Attendance Period check-box will not appear if “Adjustment Generated for Closed Period” in Attendance Policy is enabled.*

- **Select Users:** Specify the group of users whose monthly attendance data is to be processed in this section. To specify users, select one of the following options in the **User Filter** dropdown list:
  - **User Wise:** Enables administrator to randomly select users from the user Picklist window.
  - **Group Wise:** Enables the administrator to select all users belonging to a particular group.
  - **All:** Enables administrator to select all active users in the database.

Click the **Process** button to start processing monthly attendance data.

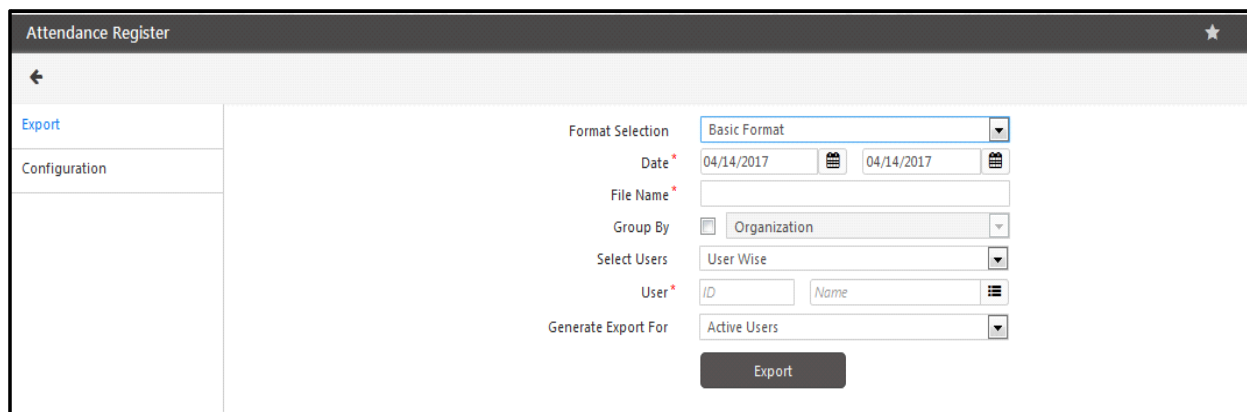

*Monthly Attendance Process can be run for one month in future for custom attendance period. But if process is attempted for an entirely future attendance period w.r.t. current date; then it will not be processed.*

# Attendance Register Export

The COSEC system has the functionality to export attendance register data for a particular period in Excel format. The administrator needs to configure output code for each combination of the attendance status based on the site requirements.

To access this functionality, click **Time & Attendance > Exports > Attendance Register**.

The **Attendance Register** page opens as follows:

The screenshot shows the 'Attendance Register' page with a sidebar on the left containing 'Export' and 'Configuration' links. The main area contains the following fields:

- Format Selection:** A dropdown menu set to 'Basic Format'.
- Date:** Two date pickers showing '04/14/2017'.
- File Name:** A text input field.
- Group By:** A checkbox labeled 'Organization' and a dropdown menu.
- Select Users:** A dropdown menu set to 'User Wise'.
- User:** Two input fields labeled 'ID' and 'Name'.
- Generate Export For:** A dropdown menu set to 'Active Users'.
- Export:** A button at the bottom right.

## Export

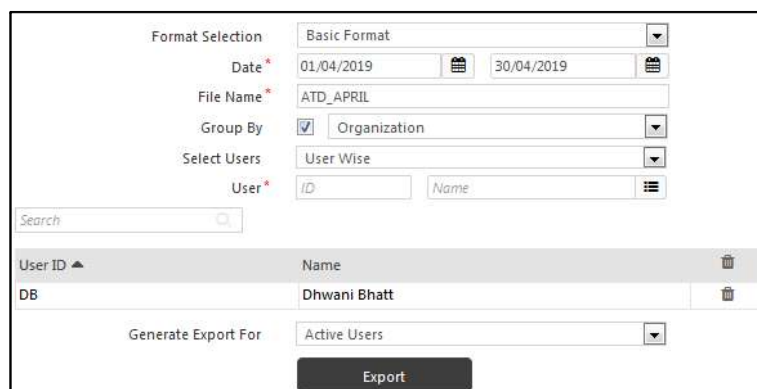

Before Exporting you must do **“Configuration”** for the Export parameters.

**Format Selection:** Select the Format from the options of **Basic Format** and **Form 25**.

### Basic Format

**Date:** If Basic Format is selected then select a date range for data export using the date selection buttons.

**Filename:** Enter an appropriate Filename for the file to be exported as shown.

This screenshot shows the same configuration page as above, but with sample data entered:

- Format Selection:** Basic Format
- Date:** 01/04/2019 to 30/04/2019
- File Name:** ATD\_APRIL
- Group By:** ☒ Organization
- Select Users:** User Wise
- User:** ID and Name fields are empty.
- Generate Export For:** Active Users
- Export:** Button at the bottom.

Below the configuration fields, there is a search bar and a table with the following data:

User ID	Name
DB	Dhwani Bhatt

**Group By:** Select the check box and select the Enterprise group from the drop down list.

**Select Users:** Select the user based on one of the following filters from the drop down list:

- **User Wise** - To select users randomly by clicking the User picklist.
- **Group Wise**- To select all users associated with a particular enterprise group using the **Select Group** dropdown list.
- **ALL** - To select all users active in the system.

**Generate Export For:** You can Generate Export For All Users, Active Users or Inactive users.

Click the **Export** button. You can open or save the exported file at a desired location.

Save the file at a desired location. The following figure illustrates an attendance register exported as an Excel file for the month of July, 2013:

SrNo	User ID	Name	Designation Name	01Jul Mon	02Jul Tue	03Jul Wed	04Jul Thu	05Jul Fri	06Jul Sat	07Jul Sun	08Jul Mon	09Jul Tue	10Jul Wed	11Jul Thu	12Jul Fri	13Jul Sat	14Jul Sun	15Jul Mon	16Jul Tue

Generate Export For: Active Users

Export

**File Name:** Enter an appropriate Filename for the file to be exported.

**Select Users:** Select the user based on the filters of User Wise, Group Wise or All.

**Generate Export for:** You can Generate Export For All Users, Active Users or Inactive users.

Click the **Export** button. You can open or save the exported file at a desired location.

*Before exporting data run the monthly attendance process for the users.*

The Form 25 will be generated in excel format as shown below:

Attendance\_april [Read-Only] [Compatibility Mode] - Microsoft Excel

FileHomeInsertPage LayoutFormulasDataReviewView

</

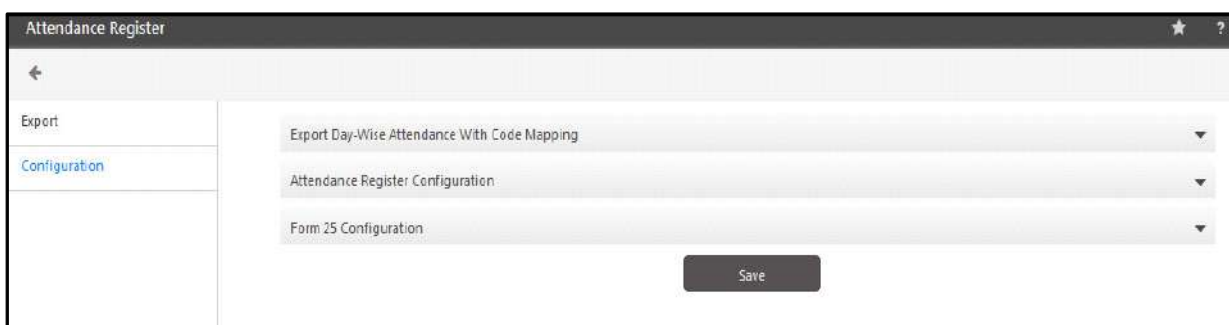

*In case if user applied leave for some future date and was made inactive before that date, then too its reflection in any field after it is made inactive will not be shown anywhere.*

*In "Basic Format" if proper data is required then "Daily Process" must be called.*

## Configuration

Attendance Register Export can be configured to determine which data appears in the exported file and how.

To do this, click **Time & Attendance > Exports > Attendance Register > Configuration**.

There are three collapsible panels:

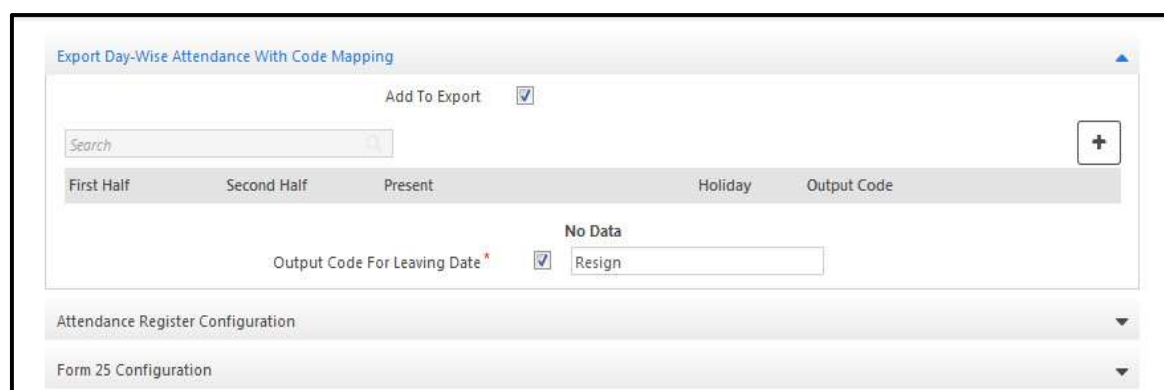

- Export Day-wise Attendance With Code Mapping
- Attendance Register Configuration
- Form 25 Configuration

### Export Day-Wise Attendance With Code Mapping

Click the **Export Day-wise Attendance With Code Mapping** collapsible panel.

Select the **Add to Export** check box to include day-wise attendance with the configured code in the exported file.

This section enables the administrator to map different combinations of attendance statuses for a day to a user defined output code.

Click **Add**  to configure the Output Code for different combinations of First Half and Second Half status.

- Select the desired option from the **First Half** and **Second Half** drop-down lists.
- Select the desired option from the **Present** drop-down list.
- Select the check box in **Holiday** if required.
- Enter the desired code in **Output Code**.

Export Day-Wise Attendance With Code Mapping

Add To Export ☒

Search

First Half ▲	Second Half	Present	Holiday	Output Code	
AB	PR	-	No	PH2	
AB	AB	-	No	A	
PR	AB	-	No	PH1	
PR	PR	-	No	P	
WO	WO	Full Day	No	WF	

1 - 5 of 6 records

Output Code For Leaving Date ☒

« < 1 2 > »

In the above example, the output code for a combination of a “Present” status in the first half, and “Absent” status in the second half for a user is defined as “PH1”. User can also set separate codes for full day present and half day present on a Week Off/Public Holiday, as shown above.

An output code can also be defined against a user’s Leaving Date i.e. the last day of the user in the organization (e.g. “Resign”).

Click to save or click to discard. The added entry appears in the grid.

You can Edit or Delete the desired entry. To edit, click or to delete click of the respective entry.

**Output Code For Leaving Date:** Select the check box to enable and configure the code.

Click **Save**.

## Attendance Register Configuration

Click the **Attendance Register Configuration** collapsible panel.

**Select Fields to Export:** You can select the desired fields or can select all the fields at once.

The screenshot shows the 'Attendance Register Configuration' window. The 'Select Fields To Export' section has a search bar, a 'Select All' checkbox, and a list of fields with checkboxes. The 'Export Per Leave Summary' section has a search bar, an 'Add To Export' checkbox, and a table with columns: Leave ID, Leave Name, and Output Code.

Leave ID	Leave Name	Output Code
CO	C-off	CO
LW	Leave Without Pay	UL
ML	MATERNITY LEAVE	ML
PL	PAID LEAVE	PL

- To select particular fields, select the check boxes for the desired fields to include them during export from the COSEC database.
- OR**
- To select all the fields, select the **Select All** check box to include all the fields during export from the COSEC database. The fields on all the pages will be selected.

**Include Summary in Export:** Select this check box to provide the sum total of the values of specific fields in export.

The following fields can be included in the summation.

- 1.<Daily> Work Hours
- 2.<Daily> Loss Hours
- 3.<Daily> Extra Work Hours
- 4.<Shift-Wise> Attendance
- 5.Shift-Allowance Presence
- 6.Present
- 7.Absent

### Export Per Leave Summary

**Add to Export:** Select the **Add to Export** check box to include the leave summary in exported file.

This section enables the user to define codes for various leave types in the exported file. Eg: The output code for Paid leave is set as "PL1".

Click **Add**  .

- Click the **Leave ID** picklist. The **Picklist For Leave Masters** pop-up appears.Select the desired option.
- Click the **Leave Name** picklist. The **Picklist For Leave Masters** pop-up appears.Select the desired option.
- Enter the desired **Output Code**.

Click  to save or click  to discard. The added entry appears in the grid.

To delete click  of the respective entry.

Click **Save**.

## Form 25 Configuration

Form 25 format displays the attendance details of employees. These may differ from organization to organization. You can configure them as per your requirement.

Enter a custom **Header Message** that will appear on Form 25.

Form 25 Configuration

Header Message

Add To Worked Days ☐ Week-Off ☐ PH

Apply Strict Code Mapping ☒ ⓘ

Save

Select the **Week-Off** and/or **PH** checkboxes to include week-offs and/or public holidays in working days for the selected month.

Select **Apply Strict Code Mapping** check box to apply Code Mapping on all the attendance data which are to be exported. You can configure code mapping from **Export Day-Wise Attendance with Code Mapping**.

To know more about **Export Day-Wise Attendance with Code Mapping**, refer [“Export Day-Wise Attendance With Code Mapping”](#).

Example: Export data on 21/05/2021

Case 1: If Apply Strict Code Mapping = Disabled

*Export Day-Wise Attendance with Code Mapping*

First IN	Second IN	Output Code
IN	AB	AB

In this case, the code mapping is applicable till the date 20/05/2021 while exporting the data.

Case 2: If Apply Strict Code Mapping = Enabled

*Export Day-Wise Attendance with Code Mapping*

First IN	Second IN	Output Code
IN	AB	AB

In this case, the code mapping is applicable till the date 21/05/2021 while exporting the data.

Click **Save** to save these configurations for the next export.

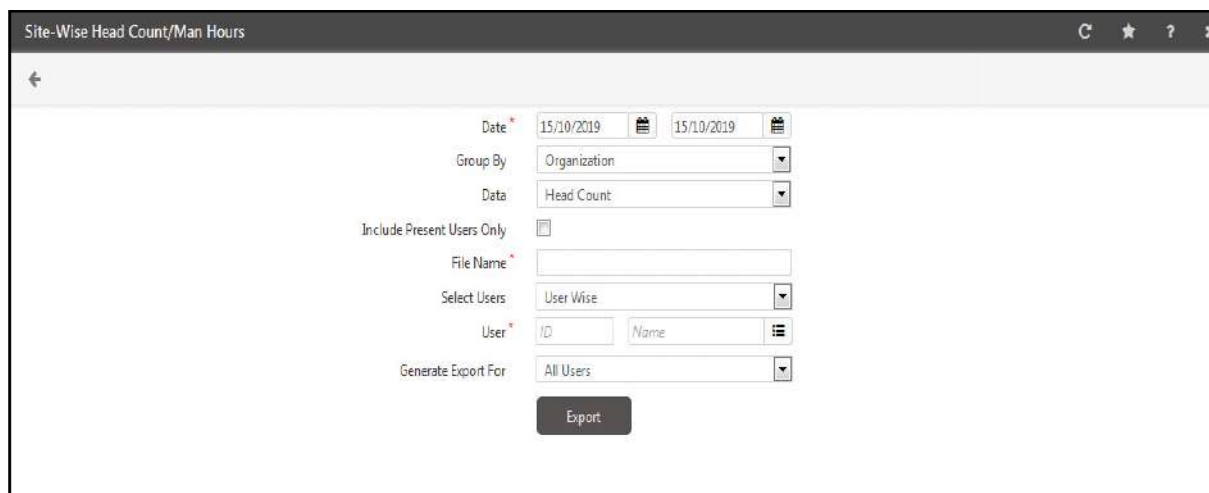

The Exported file is shown in [“Export”](#) section.

# Site-Wise Head Count/Man Hours Export

The COSEC Time and Attendance module enables the export of data in Excel format based on both the total head count of personnel as well as the total man-hours count for all sites associated with a particular enterprise group (such as *Organization, Branch* etc).

To access this functionality, click **Time & Attendance > Exports > Site-Wise Headcount/Man Hours**.

The **Site-Wise Headcount/Man Hours** page opens as follows:

The screenshot shows the 'Site-Wise Head Count/Man Hours' export form. It includes the following fields and controls:

- Date**: Two date pickers showing '15/10/2019'.
- Group By**: A dropdown menu set to 'Organization'.
- Data**: A dropdown menu set to 'Head Count'.
- Include Present Users Only**: An unchecked checkbox.
- File Name**: A text input field.
- Select Users**: A dropdown menu set to 'User Wise'.
- User**: Two input fields for 'ID' and 'Name'.
- Generate Export For**: A dropdown menu set to 'All Users'.
- Export**: A button at the bottom.

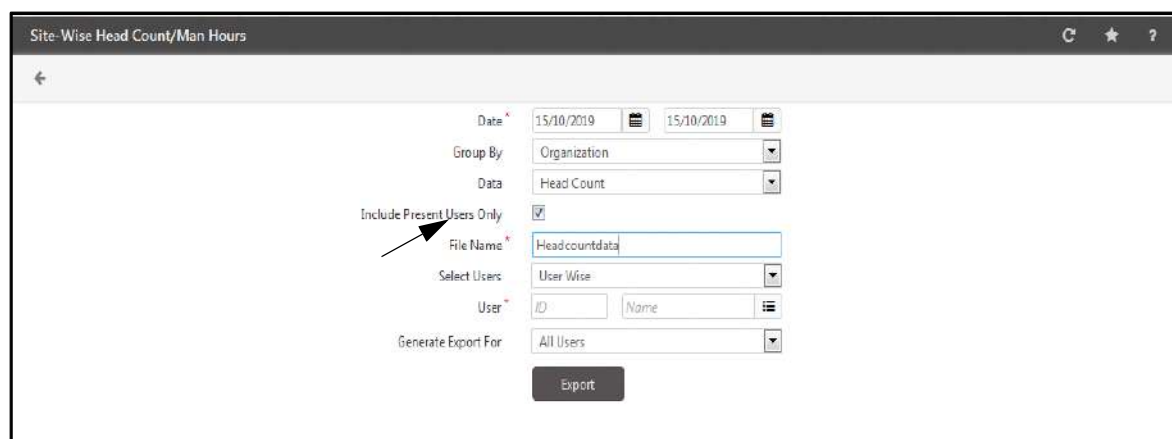

**Date**: Select a date range for data export by selecting the date selection buttons.

**Group By**: Select the desired option — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Data**: Select the desired option— **Head Count**, **Man-hours** or **Work Hours** based on which the Site Wise data is to be exported.

**Include Present Users Only**: Enable this check box to ensure that the headcount is increased only if a user is present for a full day for an attendance date within the specified date range.

**File Name**: Enter an appropriate Filename for the file to be exported.

This screenshot is similar to the previous one but includes annotations:

- An arrow points to the **Include Present Users Only** checkbox, which is now checked.
- The **File Name** input field contains the text 'Headcountdata'.

If you select **Work Hours**, click on **Select Sites**.

**Selected Sites:** Select the desired option— **All** or **Randomly**.

If **All** is selected, then all sites will be selected.

If you select **Randomly**, click **Sites** picklist. The **Picklist For Site** pop-up appears.

The 'Picklist For Site' dialog box is shown with a green header bar indicating 'Total Selected: 0 Records'. Below the header is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main area contains a table with 10 rows, each with a checkbox, a 'Site ID' column, and a 'Name' column. The sites listed are Factory, HO, RnD1, RnD2, Site 5, Site 6, Site 7, Site 8, Site 9, and Site 10. At the bottom, there is a pagination bar showing '1 - 10 of 11 records' and a set of navigation buttons. The 'OK' and 'Cancel' buttons are at the bottom right.

<input type="checkbox"/>	Site ID ▲	Name
<input type="checkbox"/>	1	Factory
<input type="checkbox"/>	2	HO
<input type="checkbox"/>	3	RnD1
<input type="checkbox"/>	4	RnD2
<input type="checkbox"/>	5	Site 5
<input type="checkbox"/>	6	Site 6
<input type="checkbox"/>	7	Site 7
<input type="checkbox"/>	8	Site 8
<input type="checkbox"/>	9	Site 9
<input type="checkbox"/>	10	Site 10

You can either select particular sites or all the sites at once.

To select particular sites, select the check boxes of the desired sites.

The 'Picklist For Site' dialog box is shown with a green header bar indicating 'Total Selected: 2 Records'. Below the header is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main area contains a table with 10 rows, each with a checkbox, a 'Site ID' column, and a 'Name' column. The sites listed are Factory, HO, RnD1, RnD2, Site 5, Site 6, Site 7, Site 8, Site 9, and Site 10. The checkboxes for 'Factory' and 'HO' are checked. At the bottom, there is a pagination bar showing '1 - 10 of 11 records' and a set of navigation buttons. The 'OK' and 'Cancel' buttons are at the bottom right.

# Short Leave/Official Out Time Export

This functionality enables you to export specific data related to Short Leave/Official IN-OUT marking of users such as total duration of short leaves (authorized/unauthorized), total duration of Official Out Time (authorized/unauthorized), reason-wise hours authorized as short leave or official marking etc. The data can be exported in Excel format.

To access this functionality, click **Time & Attendance > Exports > Short Leave/Official Out Time**.

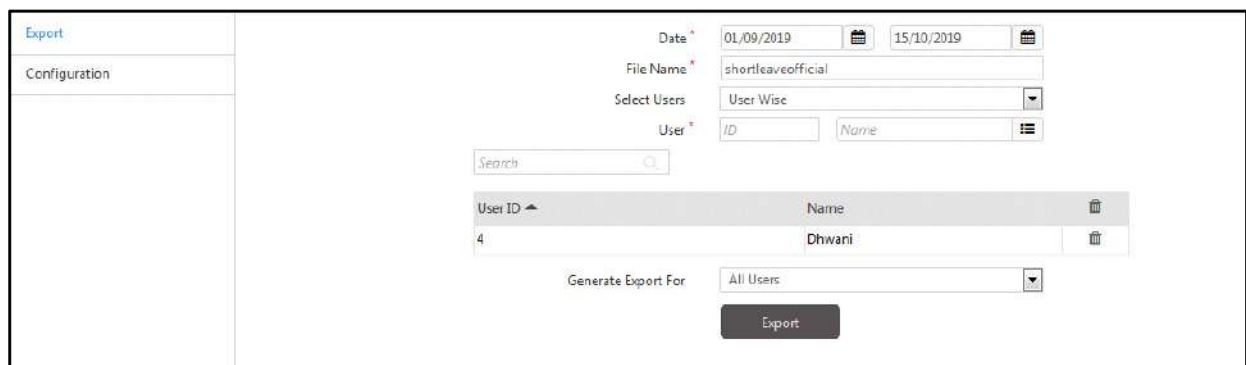

## Export

Before Exporting you must do *“Configuration”* for the Export parameters.

- You can select the **Date** range to export the Short leave, Official out time for the desired duration of the month.
- Specify the alphanumeric **File Name** with upto 20 character as the name of the file to be exported.
- **Select Users:** You can select the users based on filter options of User Wise, Group Wise (Enterprise groups) or All users (active/inactive/ all).
- **Generate Export for:** Select the users as **All**, **Active** or **Inactive** for which Short leave, Official out time is to be exported.

Finally Click on Export button to Export the Short leave, Official out time for the selected user.

Short Leave / Official Out Time From 04/01/2017 To 04/30/2017											
A	B	C	D	E	F	G	H	I	J	K

# Group-Wise Shift Head Count Export

This feature enables the export of data in Excel format for the overall count of users belonging to different enterprise groups (branches, departments, grades etc. say, in a manufacturing facility), reporting across different shifts (say, day and night shifts). The data can be exported in daily and monthly formats once the enterprise groups, shift groups and shift codes have been configured using the Configuration tab.

To access this functionality, click **Time & Attendance > Exports > Group-Wise Shift Headcount**.

## Export

Before Exporting you must do **“Configuration”** for the Export parameters.

**Format Selection:** Select the export format as **Daily Format** or **Monthly Format**.

**Date:** Select a date range for data export by selecting the date selection buttons.

**File Name:** Enter an appropriate Filename for the file to be exported.

**Select Users:** Select one of the following filters from the drop down list:

- **Use Wise** - To select users randomly by clicking the **Select User** button.
- **Select Group** - To select all users associated with a particular enterprise group using the **Select Group** dropdown list.
- **ALL** - To select all users active on the system.

**Generate Export for:** Select the users as **All**, **Active** or **Inactive** for which Group-wise shift headcount is to be exported.

Click on **Export** and save the file at the required location.

## Configuration

The Group-Wise Shift Headcount Export can be configured to view the shift wise head count in the exported file.

### Enterprise Group Configuration

Click the **Enterprise Group Configuration** collapsible panel and configure the following:

- For each **Group-1**, **Group-2** and **Group-3** select the desired enterprise group from the drop-down, for which shift-based headcount data is to be exported. As per the
- **Filter By:** Select the desired option from the dropdown list — Group-1, Group-2 or Group-3.
- **Select Organization/Branch/Department/Designation/Section/Grade/Custom Group1/Custom Group2/Custom Group3/Category:** This option is displayed according to the option selected in Filter By above. For Example: If in Filter By: Group-1 is selected and in Group-1: Category is selected. Then we need to select the desired Category here.

Select the desired option — All, Selected.

- If you select **Selected**, you can select particular categories or can select all the categories at once.
  - To select particular categories, select the check boxes of the desired categories.**OR**
  - To select all the categories, select the Select All check box. The categories on all the pages will be selected.

### Shift Configuration

Click the **Shift Configuration** collapsible panel and configure the following:

## Select Shifts For Export

- Select **Group-1 Shifts**: Click the **Select Group-1 Shift** picklist. The **Picklist For Shift Master** pop-up appears.

# Enterprise Group-Wise Presence Count Export

This feature enables the export of data for the count of presence in selected enterprise groups or shifts out of all the assigned users. Data can be exported in the Excel format once the relevant enterprise groups/shifts have been selected using the *Configuration* tab.

To access this functionality, click **Time & Attendance > Exports > Enterprise Group-Wise Presence Count**.

The screenshot shows the 'Enterprise Group-Wise Presence Count' window. On the left, there is a sidebar with two tabs: 'Export' (highlighted in blue) and 'Configuration'. The main area contains the following fields and controls:

- Date \***: Two date pickers, both set to '15/10/2019'.
- File Name \***: A text input field.
- Show Export Header**: A checkbox, currently unchecked.
- Generate Export For**: A dropdown menu set to 'All Users'.
- Export**: A dark button at the bottom right.

## Export

*Before Exporting you must do "Configuration" for the Export parameters.*

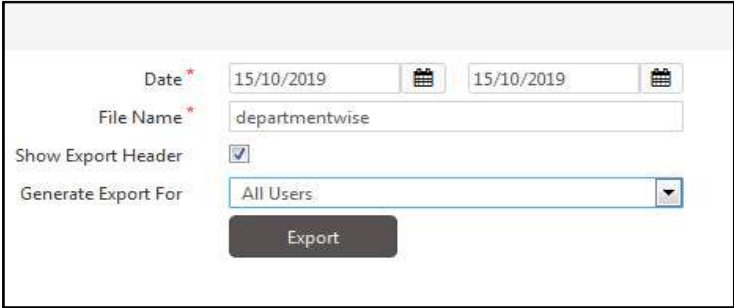

**Date:** Select a date range using the date selection buttons for the data to be exported.

**File Name:** Enter the alphanumeric **File Name** with upto 20 character as the name of the file to be exported.

**Show Export Header:** Check the box to add the header in exported Excel file.

**Generate Export for:** Select the users as **All**, **Active** or **Inactive** for which Enterprise Group-Wise Presence Count is to be exported.

Click on **Export** and save the file at the required location.

This is a detailed view of the configuration form. The fields are filled as follows:

- Date \***: '15/10/2019' (selected twice).
- File Name \***: 'departmentwise'.
- Show Export Header**: Checked (checkbox with a blue checkmark).
- Generate Export For**: 'All Users' (selected in the dropdown).
- Export**: The dark button is visible at the bottom.

Sr. No.	Department	Assigned Users of	1-Branch-1	2-Branch-2	3-RnD	4-HO	Total PR Users

The Exported file is shown in [“Export”](#) section.

# Monthly Hours Summary Export

This export displays authorized overtime components as configured, net-work hours, work hours, shift duration, loss hours, altogether, along with, configurable Attendance Status combinations.

To access this functionality, click **Time & Attendance > Exports > Monthly Hours Summary**.

The Export page has two tabs: Export and Configuration.

## Export

Before Exporting you must do **“Configuration”** for the Export parameters.

- You can select **Month** and **Year** to export the summary for the desired month of year.
- Specify the alphanumeric **File Name** with upto 20 character as the name of the file to be exported.
- **Show Export Header:** Check the box to add the header in exported Excel file.
- **Select Users:** You can select the users based on filter options of User Wise, Group Wise(Enterprise groups) or All users( active/inactive/ all).
- **Generate Export for:** Select the users as All, Active or Inactive for which Monthly Hours Summary is to be exported.

Finally Click on Export button to Export the monthly hours summary for the selected user.

## Configuration

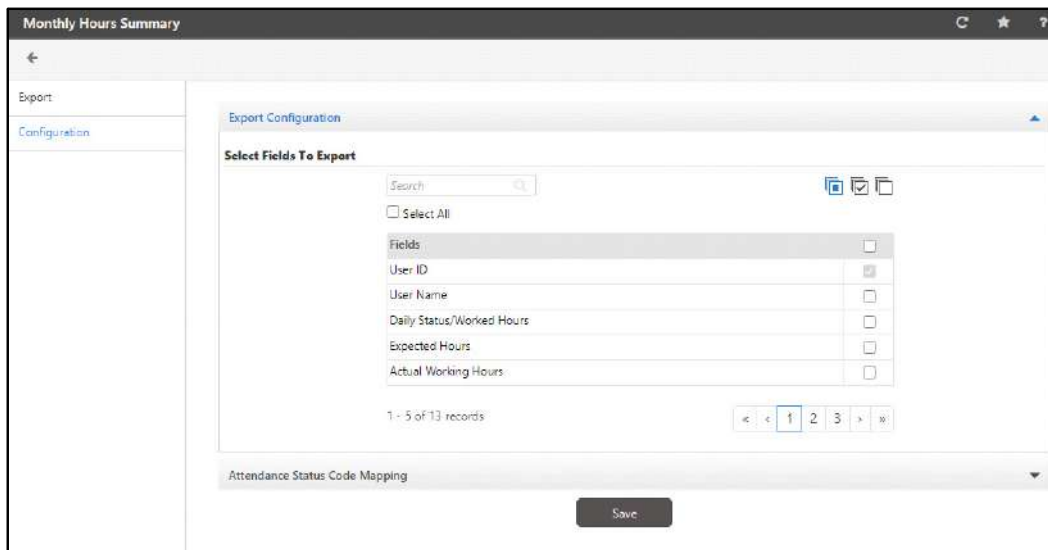

There are two collapsible panels:

- Export Configuration
- Attendance Status Code Mapping

## Export Configuration

Click the **Export Configuration** collapsible panel and configure the following:

**Select Fields To Export:** You can select particular fields or all the fields at once to be exported in the monthly hours summary export file.

To select particular fields, select the check boxes of the desired fields.

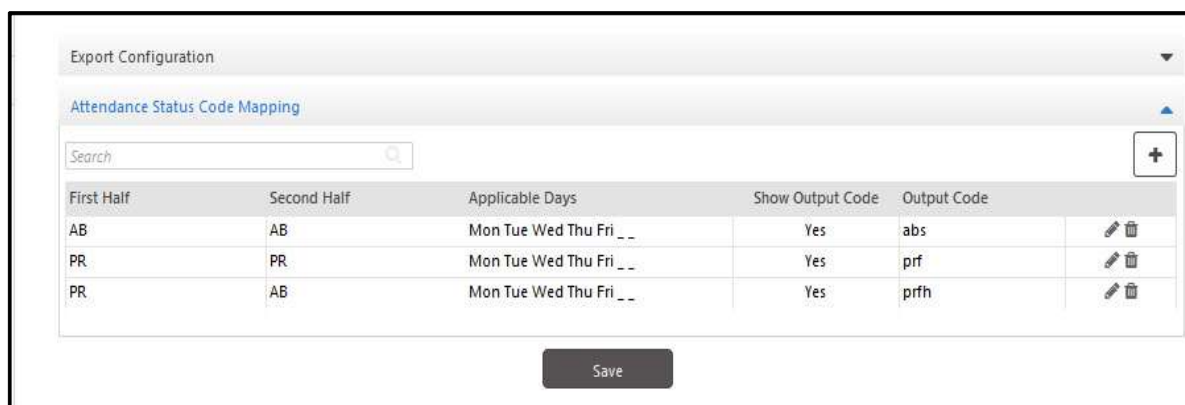

**OR**

To select all the fields at once, select the **Select All** check box. The fields on all the pages will be selected.

## Attendance Status Code Mapping

Click the **Attendance Status Code Mapping** collapsible panel.

Click Add  to configure the output code for various combinations of attendance.

First Half	Second Half	Applicable Days	Show Output Code	Output Code	
AB	AB	Mon Tue Wed Thu Fri _ _	Yes	abs	 
PR	PR	Mon Tue Wed Thu Fri _ _	Yes	prf	 
PR	AB	Mon Tue Wed Thu Fri _ _	Yes	prfh	 

**First Half/Second Half Attendance Status:** Select the desired option as the **First Half** and **Second Half** status from the drop-down list.

**Applicable Days:** Click to select the desired applicable days for which attendance status will be mapped with the output code.

**Show Output Code If Work Not Done:** Select the check box to enable, if you wish an Output Code to be displayed, when no work is done on any day, that is if hours for that day are found as 00:00. This output code will be displayed in the exported file.

**Output Code:** Specify the code to be displayed and mapped with the selected attendance status. For example: for attendance status AB AB in both halves, Output Code displayed will be abs.

Click **Save** to save the configuration.

The Export file in Excel will be generated as shown below:

# Site Wise Monthly Summary Export

This export displays site wise records for user's attendance summary. It is a monthly level export. It is supposed to have individual records for site-wise work done on consecutive date range of selected month.

To access this functionality, click **Time & Attendance > Exports > Site-Wise Monthly Summary**.

The Export page has two tabs: Export and Configuration.

## Export

Before Exporting you must do **"Configuration"** for the Export parameters.

- You can select **Month** and **Year** to export the summary for the desired month of year.
- Specify the alphanumeric **File Name** with upto 20 character as the name of the file to be exported.
- Show Export Header:** Check the box to add the header in exported Excel file.
- Select Users:** You can select the users based on filter options of User Wise, Group Wise (Enterprise groups) or All users (active/inactive/ all).
- Generate Export for:** Select the users as All, Active or Inactive for which Site wise Monthly Summary is to be exported.

Finally Click on **Export** button to Export the Site wise monthly summary for the selected user.

The Export file in Excel will be generated as shown below:

UserR ID	UserR Name	Range Start	Range End	Site ID	Site	Total	Present	Absents	Week	Holiday	Leaves	Tours	C.OFF	All	bn	Non Working Days	AB/Lea	AB/Lea	No Of AB/leave

Leave/Tour/C-OFF ☒ ⓘ

Save

Select the fields to be exported in the Site wise monthly summary export file.

### Custom Export Field Configuration

You can configure customized formula based field to export sheet. It can be created using Field and Operator from the Field Value list.

**Field Name:** Enter a name for the column to be generated in export sheet.

Example:

Select a field say “Presents” and click >. The field “Presents” will move to right side.

Then select operator “+” and click >. The field “+” will move to right side.

Similarly move the “Week Offs” and “Holidays”.

Field Name: PR-WO-PH

Field Value

Total Days  
Presents  
Absents  
Week OTTs  
Holidays  
Leaves  
Tours  
COFF

Presents  
+  
Week Offs  
+  
Holidays

Add Cancel

Click **Add** button. The custom field will be shown in the grid.

Field Name	Field Value
PR-WO-PH	Presents+Week Offs+Holidays

**Export New Entries For Occurrences**

Absent ☒ ⓘ

Leave/Tour/C-OFF ☒ ⓘ

Save

### Export New Entries for Occurrences

**Absent-** Enabling this check box will create new record in export sheet for every Absent range. It will export absent date range and number of days.

**Leave/Tour/C-OFF-** Enabling this check box will create new record in export sheet for every Leave/Tour/C-OFF range. It will export Leave/Tour/C-OFF Code, Date Range, Reason and No. of Days.

### Example:

The export configuration is shown below.

Field Name:

Field Value:

- Total Days
- Presents
- Absents
- Week Offs
- Holidays
- Leaves
- Tours
- COFF

Add Cancel

Field Name	Field Value
All	Total Days+Presents+Absents+Week Offs+Holidays+Leaves+Tours+COFF
bn	Total Days+Presents+Holidays-Tours
Non Working Days	Week Offs+Holidays

# Muster Roll Export

This export generates information of employees' details such as their attendance status, leaves, week-offs pertaining to the shifts assigned to them.

To access this functionality, click **Time & Attendance > Exports > Muster Roll**.

The Export page has two tabs: Export and Configuration.

## Export

Before Exporting you must do **“Configuration”** for the Export parameters.

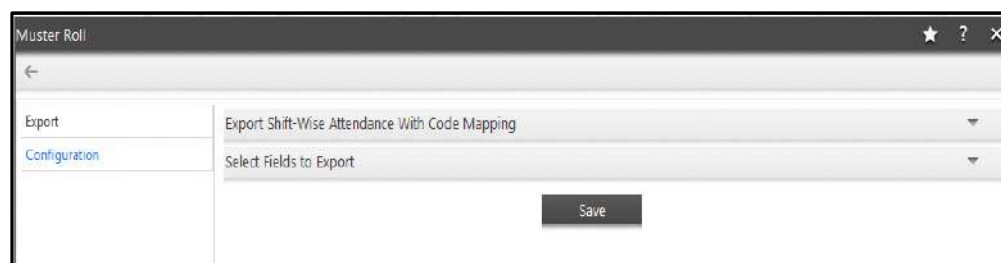

- You can select **From** and **To** date for which the export is to be done.
- Specify the alphanumeric **File Name** with as the name of the file to be exported.
- **Show Export Header:** Check the box to add the header in exported Excel file.
- **Users:** You can select the users Randomly, by selected group (Enterprise groups) or all users (active/ inactive/ all).
- **Generate Export for:** Select the users as All, Active or Inactive for which Muster Export is to be exported.

Finally Click on **Export** button to Export the monthly hours summary for the selected user.

## Configuration

There are two collapsible panels:

- Export Shift-Wise Attendance With Code Mapping
- Select Fields to Export

Click the **Export Shift-Wise Attendance With Code Mapping** collapsible panel and configure the following:

Export Shift-Wise Attendance With Code Mapping

1 - 10 of 60 records

« < 1 2 3 ... 6 > »

OK Cancel

- To select particular shifts, select the check boxes of the desired shifts.

**OR**

- To select all the shifts, select the Select All check box.

**First Half/Second Half Attendance Status:** Select the desired option for the First Half and Second Half from the drop-down list.

**Present:** The Present field will be enabled only If Attendance status selected is WO-Week-Off or PH-Holiday in both drop-downs. When Present check box is enabled, you can select full day or half day to mark present on week off day.

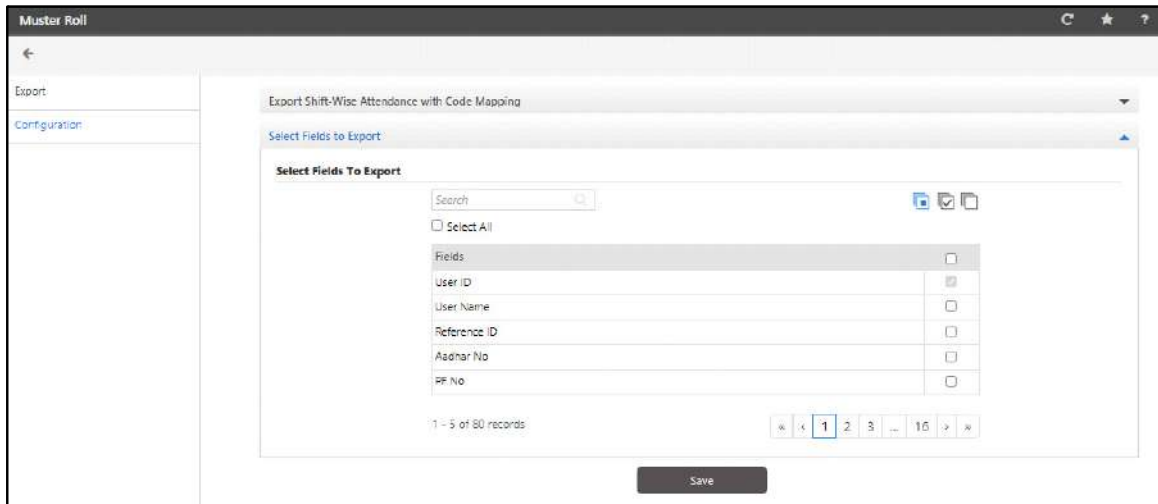

**Holiday:** The Holiday field will be enabled only If Attendance status selected is WO-Week-Off in both drop-downs.

**Output Code 1/2:** Specify the desired code of your choice to map with the Shifts and First Half and Second Half Attendance Status.

For example: For attendance status AB AB in both halves, output code will be displayed as ABS.

Click to save or click to discard. The added entry appears in the grid. Click **Save** to save the configuration.

Click the **Select Fields to Export** collapsible panel.

Select the fields to be exported in the Muster Roll export file. You can select particular fields or can select all the fields at once.

To select particular fields, select the check boxes of the desired fields

**OR**

To select all the fields, select the Select All check box. The fields on all the pages will be selected.

You can select Present, Absent, leaves, Week-offs etc. The field names Field1, Field 2, Field 3 and Field 4 are customizable according to the names defined in Admin > Global Policy > User > Custom Fields.

**Hours Utilization:** This field displays the utilization of Hours in the form of Percentage in exported sheet.

- Hours Utilization = (Gross Work Hours/ Total Planned Hours) \*100  
If Total Planned Hours = 0 then, value of Hours Utilization =0

**Exceeding Planned Hours:** This field displays the value of Hours worked more than planned hours in exported sheet

- If Gross Work Hours > Total Planned Hours, then Exceeding Planned Hours= Gross Work Hours -Total Planned Hours
- If Gross Work Hours < Total Planned Hours, then the value of Exceeding Planned Hours= 0.

Click **Save** to save the configuration.

Then Export the file from “Export” The Export file in Excel will be generated as shown below:

# Time and Attendance Reports

---

These reports can be obtained using the **Reports** section under the **Time and Attendance** add-on module. The **Time and Attendance** Reports can be categorized as follows:

- “Time Management”
- “Absenteeism”
- “Overtime”
- “Exceptions”
- “Monthly Reports”
- “Registers”
- “Yearly Reports”
- “User Defined Reports”
- “Statutory Reports”
- “Charts”

*Before generating Reports, make sure to run the Daily Attendance Process and Monthly Attendance Process to get the proper data in reports*

*Certain Time and Attendance Reports such as Attendance Summary, Attendance Register, Muster Roll etc. provide an **Include Archived Data** check box on the report generation page.*

The screenshot shows a web-based form for report generation. It features two date pickers, both set to 17/06/2014. Below the date pickers is a checkbox labeled 'Include Archived Data' which is checked. To the right of the checkbox is a yellow warning icon and the text 'This will take a long time.'

*Select this check box to enable archived data (if any) to be included at the time of report generation. Retrieving data from archives may take a significantly long time.*

## Time Management

The Time Management Reports are an assortment of detailed and focused reports on the time activities of the users on a site. These include the following reports:

### Late-IN

This report provides a group-wise listing of users with details of Late In events during the specified time period.

Set the report filters as per your requirement.

The screenshot shows the 'Late-IN' report generation window. At the top, there's a date range selector with '06/21/2023' and '06/21/2023'. Below this is the 'Optional Parameters' section, which contains several dropdown menus and input fields: 'Group By' (Organization), 'Group By' (Organization), 'Duration (>)' (0), 'Count (>)' (0), and 'Organization Name in Header As Per' (User Selection). Below the 'Optional Parameters' section is the 'User Selection' section, which includes 'Select Users' (User Wise), 'User' (ID), 'Name', and 'Generate Report For' (All Users). A 'Generate Report' button is located at the bottom of the window.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

You can filter the records by applying two types of Group filters, for example if you select the first group as Branch then with the Branch you can select the other group as Department.

- **Group By:** Select the desired first enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group By:** Select the desired second enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Duration:** Configure the duration of late-in according to which you wish to filter the records.
- **Count:** Configure the number of late-in according to which you wish to filter the records.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

Picklist For All Users

Late By Grand Total:						11:56

## Early-IN

This report provides a group-wise listing of users with details of Early In events during the specified time period.

Set the report filter parameters as per your requirement.

The screenshot shows the 'Early-IN' configuration window. It includes the following fields and options:

- Date:** Two date pickers set to 06/21/2023.
- Optional Parameters:**
  - Group By:** Two dropdown menus, both set to 'Organization'.
  - Duration (>):** A text input field set to 0.
  - Count (>):** A text input field set to 0.
  - Organization Name in Header As Per:** A dropdown menu set to 'User Selection'.
- User Selection:**
  - Select Users:** A dropdown menu set to 'User Wise'.
  - User:** Two input fields for 'ID' and 'Name'.
  - Generate Report For:** A dropdown menu set to 'All Users'.
- Generate Report:** A button at the bottom.

- **Date:** Select the to and from date for which the report is to be generated.

## Optional Parameters

You can filter the records by applying two types of Group filters, for example if you select the first group as Branch then within the Branch you can select the other group as Department.

- **Group By:** Select the desired first enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

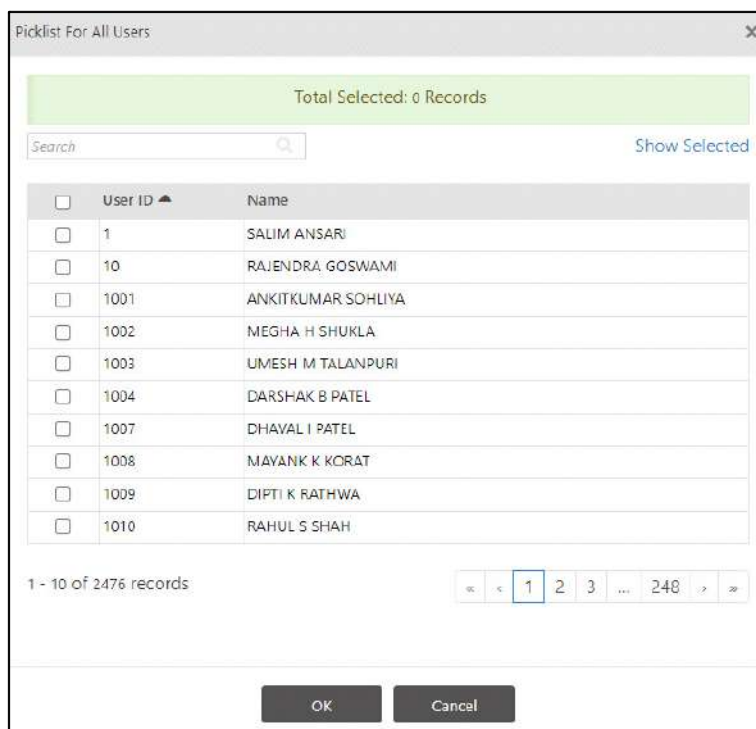

- **Group By:** Select the desired second enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Duration (>):** Configure the duration of early-in according to which you wish to filter the records.
- **Count (>):** Configure the number of early-in according to which you wish to filter the records.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User-Wise**, **Group Wise**, or **All**.
- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

- **Generate Report For:** Select the desired option from the drop-down list— **All Users, Active Users** or **Inactive Users**.
- Click **Generate Report**.

**Example:** Grace Period for Early Out is defined as 5 mins in Shift Configuration. And maximum Early Out allowed is defined as 15 mins in Early OUT policy. So user can go out 20 minutes early than shift end.

If user punches out at 17:55 or afterwards; then that record will not be displayed in Early Out Report. Similarly if user punches before 17:40 then it is more than Early Out allowed so that record will not be displayed here.

Early Out duration is calculated as 17:55 - 17:46 = 00:09.

## Sample Report

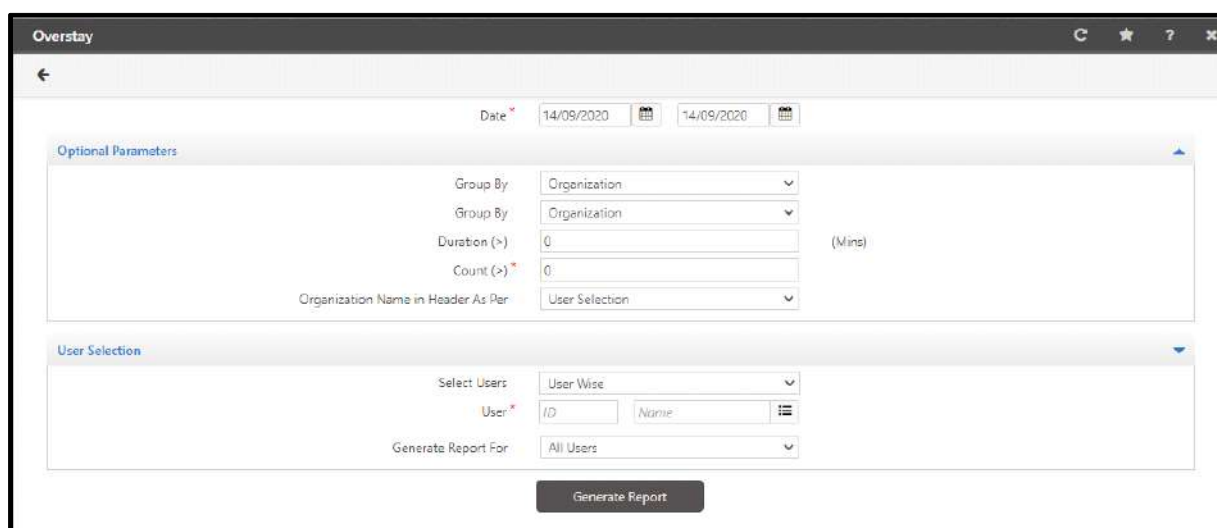

Sr No	User ID	Name	Date	Shift IN	OUT	Early-OUT
1	1	SALIM ANSARI	09/27/2013	22	06:55 15:01	00:59

## Attendance

This report provides attendance data for a specific period and for specified users. You can select from one of the four available templates to view the data in the required format.

Set the report filters as per requirement.

The screenshot shows the 'Attendance' report generation window. At the top, there's a date range selector with '06/21/2023' and '06/21/2023'. Below this is the 'Optional Parameters' section. It contains several dropdown menus: 'Format Selection' (with options Format 1, Format 2, Format 3, Format 4), 'Group By' (with options Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3), 'New Page For Each Group' (with options Disabled, For User/Date, For Enterprise Group), and 'Organization Name in Header As Per' (with options User Selection, Customized Selection). There is also a checkbox for 'Group Needed in Report'. Below the 'Optional Parameters' is the 'User Selection' section. It includes a 'Select Users' dropdown (with options User Wise, Group Wise, All Users), a table with columns 'User\*', 'ID', and 'Name', and a 'Generate Report For' dropdown (with options All Users, User Wise, Group Wise). A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Format Selection:** Select the desired format — Format 1, Format 2, Format 3 or Format 4.

You can filter the records by applying three types of Group filters, for example if you select the first group as Branch then within the Branch you can select the other group as Department and filter it by Date/user.

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group Needed in Report:** Select the check box, to display the name for that particular group in the generated report.
- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group By:** Select the desired option from the drop-down list—**User** or **Date**
- **New Page For Each Group:** If you wish to view records of each user/date on a new page, select the desired option from the drop-down list— **Disabled, For User/Date or For Enterprise Group**.
- **Show Less Details:** If you select **Format 1**, then select the **Show Less Details** check box if required.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —**User-Wise, Group Wise, or All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Attendance Summary

This report provides a group-wise attendance summary for a selected period. You can also view the details of Attendance for particular date, by clicking on the desired Date. The report for the selected Date will be displayed.

Set the report filters as per requirement.

The screenshot shows the 'Attendance Summary' report generation window. At the top, there's a title bar with 'Attendance Summary' and navigation icons. Below it, a date range is set from '06/21/2023' to '06/21/2023'. The 'Optional Parameters' section includes a 'Group By' dropdown set to 'Organization', a 'Format Selection' dropdown set to 'Format 1', a 'Show Less Details' checkbox, and a 'Organization Name in Header As Per' dropdown set to 'User Selection'. The 'User Selection' section includes a 'Select Users' dropdown set to 'Group Wise', a 'Select Group' dropdown set to 'Organization', an 'Organization' section with 'ID' and 'Name' picklists, and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Format Selection:** Select the desired option from the drop-down list— **Format 1** or **Format 2**.
- **Show Less Details:** If you select **Format 1**, then select the **Show Less Details** check box if required.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —**Group Wise**, or **All**.
- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

- The selected Groups appear in the grid.

## Late Arrival Memo

This report provides details of individual or multiple Late Arrival Memos of the selected/all users for the specific duration.

Set the report filters as per requirement.

The screenshot shows the 'Late Arrival Memo' report generation interface. At the top, there is a date range selector with '14/09/2020' as both the start and end dates. Below this, the 'Optional Parameters' section includes a checkbox for 'New Page For Each Group' (unchecked) and a dropdown for 'Organization Name in Header As Per' set to 'User Selection'. The 'User Selection' section contains a 'Select Users' dropdown set to 'User Wise', a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **New Page For Each Group:** Select the check box to display a new page for each group in the generated report.
- **Organization Name In Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —User-Wise, Group Wise, or All.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

				<b>Total:</b>	<b>03:30</b>
You have been marked late on above dates between 05/28/2013 and 05/28/2023					
Total		4	day(s)	03:30	Hrs

## Grace Time Usage

This report provides group-wise details of grace time usage for a specified time period for all or selected users.

For example, the Grace period for Late-IN is set as 10 mins and Grace period for Early-Out is set as 5 mins in Shift configuration. So if the user avails this grace period; then the record is displayed in report.

The shift is **09:00** to **18:00** hours. If user punches IN at **09:10** then Grace IN is **00:10** and user punches out at **17:56** then Grace OUT is **00:04**. Hence total grace time used is **00:14** and this will be displayed in the report.

## Daily Work Hours

This report provides user-wise details of daily work hours for a selected period.

Set the report filters as per requirement.

The screenshot shows the 'Daily Work Hours' report configuration window. At the top, there are date pickers for 'Date' (05/22/2023) and 'To' (06/21/2023). Below this is a 'Work Hours Based Calculation' checkbox. The 'Optional Parameters' section contains several settings: 'Group By' with dropdowns for 'Organization' and 'User'; a 'Group Needed In Report' checkbox; 'New Page For Each Date/User' checkbox; 'Include In Lost Hours' with checkboxes for 'Late-IN' and 'Early-OUT'; 'Add Custom Footer' checkbox; a 'Remark' text field; and 'Organization Name In Header As Per' with a 'User Selection' dropdown. The 'User Selection' section at the bottom includes 'Select Users' (User Wise), 'User' (ID and Name fields), and 'Generate Report For' (All Users). A 'Generate Report' button is at the bottom right.

- **Date:** Select the to and from date for which the report is to be generated.
- **Work Hour Based Calculation:** Select the check box to generated report based on work hour calculation.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group Needed in Report:** Enable the check box, to display the name for that particular group in the generated report.
- **Group By:** Select the desired option from the drop-down list— **User** or **Date**.
- **New Page For Each Date/User:** Select the check box if you want the report on a new page for each Date/ User.
- **Include in Lost Hour:** Select the Late-IN /Early-OUT check box, if you wish to include the same in Lost Hours.
- **Add Custom Footer:** Select the check box to add custom footer messages and configure the desired footer message.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

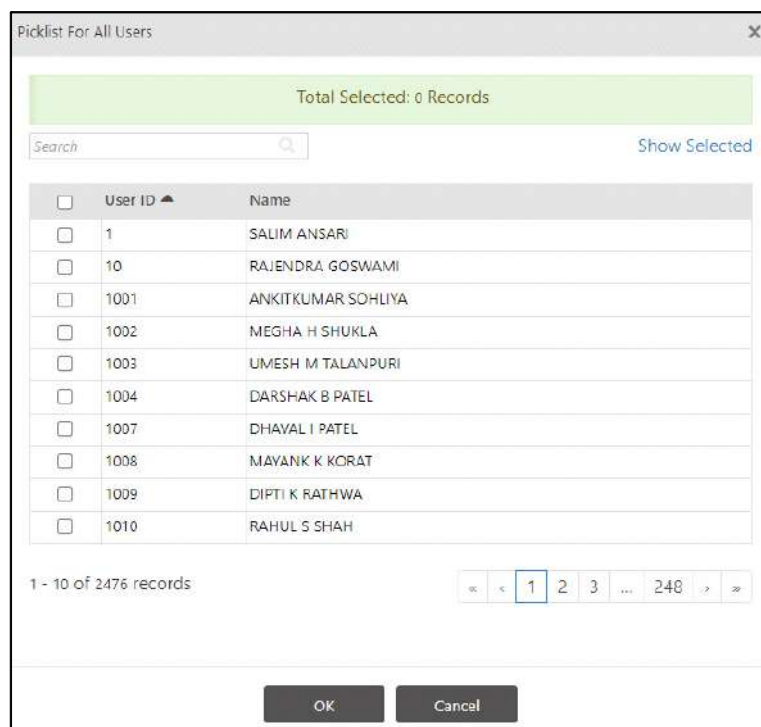

If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

## User Selection

- **Select Users:** Select the desired option —**User-Wise, Group Wise, or All.**
- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Daily Details

This report provides group-wise daily time and attendance details for a specified date-range and in a specified format.

Set the report filters as per requirement.

The screenshot shows the 'Daily Details' report configuration window. At the top, there's a date range selector with '05/22/2023' and '05/22/2023'. Below it, the 'Optional Parameters' section contains several settings: 'Group By' is set to 'Organization', 'Group by' is set to 'User', 'Format Selection' is set to 'All Punches', 'New Page For Each Date/User' is checked, and 'Organization Name in Header As Per' is set to 'User Selection'. The 'User Selection' section below has 'Select Users' set to 'User Wise', a table for 'User\*' with columns 'ID' and 'Name', and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group By:** Select the desired option from the drop-down list—**User** or **Date**.
- **Format Selection:** Select the desired option from the drop-down list— **All Punches, All Punch and Status, First-Last Punch, First-Last Punch with Status, Working Hour Details**.
- **New Page For Each Date/User:** Enable the check to display a new page for each Date/User in the generated report.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —**User Wise, Group Wise, or All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Daily Work Details

This report provides daily work details of selected users for selected period.

Set the report filters as per requirement.

The screenshot shows a web-based interface for generating a 'Daily Work Details' report. At the top, there's a date range selector with '06/22/2023' and '06/22/2023'. Below this is the 'Optional Parameters' section, which includes a 'Group By' dropdown set to 'Organization', a 'New Page For Each User' checkbox that is checked, an 'Add Custom Footer' checkbox that is unchecked, a 'Remark' text field, and an 'Organization Name in Header As Per' dropdown set to 'User Selection'. The 'User Selection' section below has a 'Select Users' dropdown set to 'User Wise', two input fields for 'User' (ID and Name), and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **New Page For Each User:** Enable the check to display a new page for each Date/User in the generated report.
- **Add Custom Footer:** Select the check box to add a Custom Footer. And configure the desired footer.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Break Deviation

When break deviation is allowed for a shift, i.e. for shifts with fixed but flexible break duration, a report can be generated to view the difference between the defined break duration and the actual break taken by employees. This difference is defined as break deviation.

Set the report filters as per requirement.

The screenshot shows a web application window titled "Break Deviation". At the top, there is a date range selector with "Date" and two date inputs: "06/22/2023" and "06/22/2023". Below this is a section titled "Optional Parameters" which contains four fields: "Deviation More Than" (set to "15/Min"), "Deviation Less Than" (set to "15/Min"), "Group By" (set to "Organization"), and "Organization Name in Header As Per" (set to "User Selection"). Below the "Optional Parameters" section is a "User Selection" section. It contains a "Select Users" dropdown menu (set to "User Wise"), a "User #" field with a search icon, and a "Generate Report For" dropdown menu (set to "All Users"). At the bottom of the "User Selection" section is a "Generate Report" button.

- **Date:** Select the to and from date for which the report is to be generated. Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Deviation More Than:** You can filter the Break Deviation by configuring more than five minutes;
- **Deviation Less Than:** You can filter the Break Deviation by configuring less than twenty minutes.
- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Shift-Wise Count Summary

This report provides user summary for all shifts configured on COSEC. Shift Summary fields to be viewed are user selectable.

Set the report filters as per requirement.

The screenshot shows a web application window titled "Shift-Wise Count Summary". At the top, there is a "Date" field set to "06/22/2023". Below this is a section titled "Optional Parameters". Inside this section, there is a "Shift Summary Fields" area with a list of checkboxes: "Assigned", "Scheduled", "On Leave/Tour", "On Week-Off", and "On Holiday", all of which are checked. To the right of these checkboxes is a "User Selection" dropdown menu. Below the "Shift Summary Fields" is a label "Organization Name in Header As Per" followed by a dropdown menu currently showing "User Selection". Below the "Optional Parameters" section is a "User Selection" section. It contains a "Select Users" label, a "User Wise" dropdown menu, and two input fields labeled "User" and "Name". Below these is a "Generate Report For" dropdown menu set to "All Users". At the bottom center of the form is a "Generate Report" button.

- **Date:** Select the date for which the report is to be generated.

### Optional Parameters

- **Shift Summary Shield:** Select the check boxes for desired options for which Shift Summary Report is to be generated.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —User Wise, Group Wise, or All.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Absenteeism

This section allows the user to generate Absenteeism related attendance reports. The following reports fall under this category:

### Absentee

This report provides a group wise list of the users with details of the Absent days during the specified time period.

Set the report filters as per requirement.

The screenshot shows a web application window titled 'Absentee'. It features a date range selector at the top with 'Date' and two date inputs (06/22/2023 and 06/22/2023). Below this is a section titled 'Optional Parameters' containing three dropdown menus: 'Group By' (set to Organization), 'Group By' (set to Organization), and 'Organization Name in Header As Per' (set to User Selection). Underneath is a 'User Selection' section with a 'Select Users' dropdown (set to User Wise), a 'User' section with 'ID' and 'Name' input fields, and a 'Generate Report For' dropdown (set to All Users). A 'Generate Report' button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

You can filter the records by applying two types of Group filters, for example if you select the first group as Branch then within the Branch you can select the other group as Department.

- **Group By:** Select the desired first enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group By:** Select the desired second enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

Select Users: Group Wise

Select Group: Organization

Organization: ID Name

Generate Report For: All Users

Generate Report

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Report Type:** Select the desired type of report — Continuous Absence/Continuous Presence.

If you select **Continuous Absence**, configure the following:

- **Continuous Absent Days:** Enter the minimum number of days for 'Absence' which is required to be counted as 'Continuous Absent Days'. Suppose, 3 days are specified, then the counting will be started and shown into the report only if user is absent for 3 or more days. The absence of less than 3 days will not be considered as Continuous Absent Days.
- **Consider Half Day PR as Full Day PR:** Select this check box to consider a day as full day present even if the user is present for half day.

#### Days to consider as Absent

- **Days:** Select this check box to consider all types of days — AB, Leave, WO, PH, FB, RD, IN or to selected the desired option select the respective check box.

For each type of day enabled, select the desired option:

- **Always:** Select the option to count the entire day as absent.
- **Skip:** Select to Skip the day from counting of continuous absence.
- **Shift Based:** Select to check for assigned work hours of a user. If the work hours for the day are equal or greater than the assigned hours, then count as present else count the day in number of total continuous absent days.
- **Custom Hours:** Select and specify the custom work hours which is required to be completed on the day. If the work hours are equal or greater than the specified hours then, count as present else count the day in number of total continuous absent days. If you select Custom Hours, enter the time in HH:MM format.

If you select **Continuous Presence**, configure the following:

- **Filter Based On:** Select the desired option as — Hours, Days.
- **Continuous Present Days/Hours:** If you select **Days** as the **Filter Based On** option then configure the minimum number of days to be considered for Continuous Present.

If you select **Hours** as the **Filter Based On** option then configure the minimum number of hours to be considered for Continuous Present.

**Consider Half Day PR as Full Day PR:** Select this check box to consider a day as full day present even if the user is present for half day.

#### Days to consider as Present

- **Days:** Select this check box to consider all types of days — AB, Leave, WO, PH, FB, RD, IN or to selected the desired option select the respective check box.

For each type of day enabled, select the desired option:

- **Always:** Select the option to count the entire day as absent.
- **Skip:** Select to Skip the day from counting of continuous absence.

- **Shift Based:** Select to check for assigned work hours of a user. If the work hours for the day are equal or greater than the assigned hours, then count as present else count the day in number of total continuous absent days.
- **Custom Hours:** Select and specify the custom work hours which is required to be completed on the day. If the work hours are equal or greater than the specified hours then, count as present else count the day in number of total continuous absent days. If you select Custom Hours, enter the time in HH:MM format.

## User Selection

- **Select Users:** Select the desired option — **Group Wise, All.**
- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
- The selected Group appear in the grid.

## Users Presence & Overtime

This report provides a user wise list of the users with details of the User Attendance and Overtime during the specified time period.

Set the report filters as per requirement.

The screenshot shows the 'User Presence & Overtime' report configuration window. At the top, there are date pickers for 'Date' set to 09/27/2023. Below this is a section for 'Optional Parameters' containing a dropdown for 'Organization Name in Header As Per' set to 'User Selection'. Another section, 'User Selection', contains a 'Select Users' dropdown set to 'User Wise', and input fields for 'User' (ID and Name). At the bottom, there is a 'Generate Report For' dropdown set to 'All Users' and a 'Generate Report' button.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —**User-Wise**, **Group Wise**, or **All**.
- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

The screenshot shows the 'Picklist For All Users' pop-up window. At the top, it says 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' button. The main part of the window is a table with two columns: 'User ID' and 'Name'. The table contains 10 rows of user data. At the bottom, there is a pagination bar showing '1 - 10 of 2476 records' and a page number '1'.

## Exceptions

This section allows the user to generate Attendance Exception related attendance reports. The following reports fall under this category:

### Exceptions

This report lists group wise list of the users with details of the Attendance Exceptions along with the work hours during the specified time period.

Set the report filters as per requirement.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

You can filter the records by applying two types of Group filters, for example if you select the first group as Branch then within the Branch you can select the other group as Department.

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Exception:** Select the desired check boxes for exceptions according to which you wish to filter the records.
- **Work Hours:** Configure the duration of work hours according to which you wish to filter the records.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option — **User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Attendance Exception

This report provides a group wise list of the users with details of the Attendance Exceptions during the specified time period.

Set the report filters as per requirement.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Format Selection:** Select the desired format from the drop-down list— **Format 1**, **Format 2** or **Format 3**.
- **Exception Type:** Select the desired check boxes for exceptions according to which you wish to filter the records.
- **Add Custom Footer:** Select the check box if you wish to add a custom footer to the report and specify the desired footer.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option —**User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Monthly Reports

This section allows the user to generate Monthly Reports related to various attendance parameters. The following reports fall under this category:

### Muster Roll

This report provides a group wise list of the users with details of the Muster Roll for the specified month and year.

Set the report filters as per requirement.

The screenshot shows a web application window titled "Muster Roll". At the top, there are two dropdown menus for "For Month-Year" with "June" and "2023" selected. Below these is a checkbox labeled "Include Archived Data" which is currently unchecked. A section titled "Optional Parameters" is expanded, showing a dropdown for "Organization Name in Header As Per" with "User Selection" chosen. Below this is another section titled "User Selection" which contains a "Select Users" dropdown set to "User Wise", and two input fields for "ID" and "Name". At the bottom of this section is a "Generate Report For" dropdown set to "All Users". A "Generate Report" button is located at the very bottom of the form.

- **For Month-Year:** Select the month and year for which the report is to be generated.
- **Include Archived Data:** Select the check box if you wish to include archived data for the Muster Roll report.

### Optional Parameters

- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option— **User-Wise, Group Wise** or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears

## Absentee Detail

This report provides a group wise list of the users with details of the Absent days for the specified month and year.

Set the report filters as per requirement.

- **For Month-Year:** Select the month and year for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

### User Selection

- **Select Users:** Select the desired option— **Group Wise** or **All**
- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
- The selected Groups appear in the grid.

ID	Name	Group	
1	MATRIX COMSEC PVT. LTD.	Organization	
2	SAMARTH	Organization	
3	AVDHQOT	Organization	
4	ELSENGARD	Organization	

**Generate Report**

- You can also delete particular group. To do so, click **Delete** of the respective group
- If you select **All**, then all users will be selected.
- **Generate Report For:** Select the desired option from the drop-down list— **All Users**, **Active Users** or **Inactive Users**.

- Click **Generate Report**.

## User Defined Reports

This section allows the user to generate user defined attendance reports. The following reports fall under this category:

### Muster Roll

Use the “[Attendance Status Template](#)” option in this section to customize the Output Code for different Attendance Status combinations for First and Second Half. Output Codes defined here will reflect accordingly in the User-defined **Muster Roll** report.

This report provides a group wise list of the users with details of the Muster Roll with user defined attendance status for the specified month and year.

Set the report filters as per requirement.

The screenshot shows the 'Muster Roll' report generation interface. It includes a 'For Month-Year' dropdown set to 'July 2023'. Under 'Optional Parameters', there is a 'Display Legend On' section with checkboxes for 'First Page', 'Last Page', and 'All Pages'. Below this is a 'User Selection' section with a 'User Wise' dropdown and input fields for 'User ID' and 'Name'. At the bottom, there is a 'Generate Report' button.

- **For Month-Year:** Select the month year to specify the time period for which the data is to be generated.

### Optional Parameters

- **Display Legend On:** Select the check boxes of the desired option— **First Page**, **Last Page** or **All pages**.

- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

## User Selection

- **Select Users:** Select the desired option —**User-Wise**, **Group Wise**, or **All**.
- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Attendance Status Template

The Attendance Status Template allows you to create Attendance Status and configure the desired Output Code for the same. You can also customize the Output Code for different combinations of First Half and Second Half by selecting the status.

Attendance Status Template		Search	
ID	1	First Half	Second Half
Output Status Length	4	PL	PL
Attendance Status	PL-ABD LEAVE	PL	PL
Output Code	PL	PL	PL
		PR	PR
		AB	AB
		AB	AB
		IN	AB
		WO	WO
		TR	TR
		PH	PH

Click **Add**  to add a new Attendance Template. Configure the following parameters:

- **ID:** This field is un-editable as the ID is assigned automatically.
- **Output Status Length:** Select the desired maximum length of characters that can be configured as the Output Code.
- **Attendance Status:** Select the desired Attendance Status for First Half from the first drop-down list and for Second Half from the second drop-down list.

Once you select the Attendance Status, click **Select Reason** and click again to select the desired reason from the list. The list of reasons varies according to the selected Attendance Status.

The selected reason appears in the text box.

- **Output Code:** Specify the Output Code to be displayed in the reports for the selected Attendance Status.

Click **Save**  to save the configuration. The new Attendance Template appears in the list on the right hand side.

First Half	Second Half	Output Code
PL	PL	PL
PR	AB	AB
PR	PR	PR
AB	PR	AB
AB	AB	AB
IN	AB	AB
WO	WO	WO
TR	TR	TR
PH	PH	PH
CL	CL	CL

You can edit or delete the desired Attendance Template.

Click **Edit**  to edit the Template.

Click **Delete**  to delete the Template.

## Statutory Reports

This section allows the user to generate reports based on the requirement of certain governmental organizations that are required to follow statutory formats for the employee data. The following reports fall under this category:

### Form T

The Form T is based on the statutory norms of government monthly attendance summary register. This report provides a group wise list of the users with details of the Attendance for the specified month and year.

Set the report filters as per requirement.

Form T

For Month-Year: July 2023

Custom Attendance Period: ☐

Month Start-End Date: 2 End Date

Optional Parameters

Message: 500 Chom

Organization Name: 700 Chom

Organization Address: 700 Chom

Leave: ID Name

## Form 28

The Form 28 is based on the statutory norms of government monthly wage register. This report provides a group wise list of the users with combined details of the Muster Roll and Wages for the specified month and year.

Set the report filters as per requirement.

The screenshot shows a web application window titled 'Form 28'. It contains two main sections: 'Optional Parameters' and 'User Selection'.

**Optional Parameters:**

- For Month-Year:** A dropdown menu showing 'July' and a year dropdown showing '2022'.
- Custom Attendance Period:** A checkbox that is currently unchecked.
- Month Start-End Date:** A dropdown menu showing '2' and an 'End Date' field.
- Report Format:** A dropdown menu showing 'Format 1'.
- Message:** A text input field containing '730 Chars'.
- Organization Name:** A text input field containing 'ABC Ltd'.
- Organization Address:** A text input field containing 'Makarपुरा GIDC, Vadodara'.
- Save:** A button to save the configuration.

**User Selection:**

- Select Users:** A dropdown menu showing 'User Wise'.
- User:** A text input field containing 'ID' and a 'Name' field.
- Generate Report For:** A dropdown menu showing 'All Users'.
- Generate Report:** A button to generate the report.

- **For Month-Year:** Select the month year to specify the time period for which the data is to be generated.
- **Custom Attendance Period:** Select the check box if you wish to customize the month Month Start-End Date.
- **Month Start-End Date:** Select the desired Start Date for the month. The End Date automatically appears besides the Start Date.

### Optional Parameters

- **Report Format:** Select the desired option from the drop-down list—Format 1 or Format 2.
- **Message:** Specify the message details as per requirement.
- **Organization Name:** Specify the Organization Name as per requirement.
- **Organization Address:** Specify the Organization Address as per requirement.

This screenshot shows a close-up of the 'Optional Parameters' section. It includes the same fields as the previous screenshot: 'Report Format' (Format 1), 'Message' (730 Chars), 'Organization Name' (ABC Ltd), and 'Organization Address' (Makarपुरा GIDC, Vadodara). A 'Save' button is visible at the bottom right of this section.

- Click **Save** to save the configurations.

### User Selection

- **Select Users:** Select the desired option —**User-Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Charts

This section allows the user to generate attendance related reports in the form of Pie Charts and Bar Graphs. The following reports fall under this category:

## Time Loss

This report provides a group wise Time Loss data during the specified time period in the form of a Bar Graph.

Set the report filters as per requirement.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Select For:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

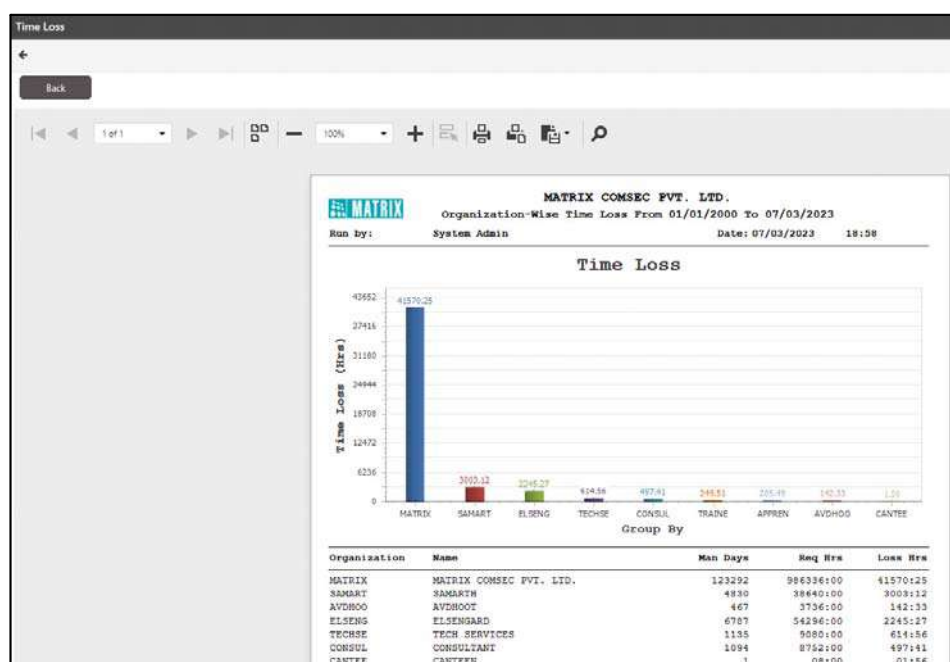

### User Selection

- **Select Users:** Select the desired option— **Group-Wise** or **All**
- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
- The selected Groups appear in the grid.

Search <input type="text"/>			
ID	Name	Group	
1	MATRIX COMSEC PVT. LTD.	Organization	
2	SAMARTH	Organization	
3	AVDHGOT	Organization	
4	ELSENGARD	Organization	
Generate Report			

- You can also delete particular group. To do so, click **Delete** of the respective group.
- If you select **All**, then all groups will be selected.
- Click **Generate Report**.

## Sample Report

## Overtime

This report provides a group wise Overtime data during the specified time period in the form of a Bar Graph.

Set the report filters as per requirement.

The screenshot shows the 'Overtime' report generation interface. It includes a date range selector set to '07/03/2023' to '07/03/2023'. Under 'Optional Parameters', there is a 'Select For' dropdown set to 'Organization' and an 'Organization Name in Header As Per' dropdown set to 'User Selection'. Under 'User Selection', there is a 'Select Users' dropdown set to 'Group Wise', a 'Select Group' dropdown set to 'Organization', and an 'Organization' field with 'ID' and 'Name' sub-fields. A 'Generate Report' button is located at the bottom.

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Select For:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.
- **Organization Name in Header As Per:** Select the desired option — User Selection or Customized Selection.

If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

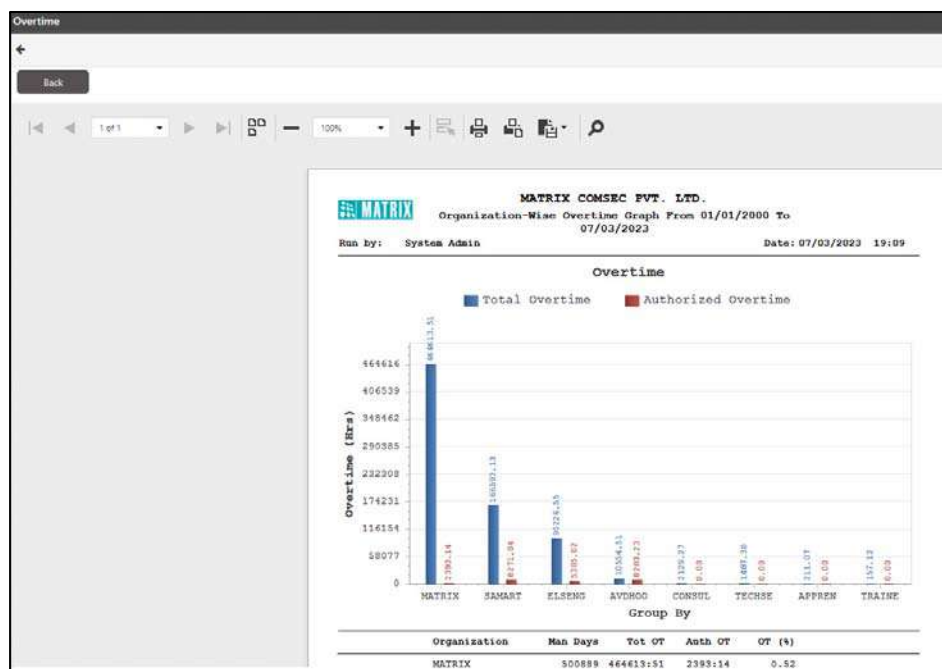

## User Selection

- **Select Users:** Select the desired option —**Group Wise**, or **All**.
- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.
- For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.
- The selected Groups appear in the grid.

## Sample Report

The COSEC Leave Management gives wide options for HR to create different leave types like PL, CL, SL, EL, ML, OD etc. with different parameters like balance check enable/disable, paid/unpaid leave, lay off, accumulation, minimum and maximum leaves availed at a time etc.

With the COSEC Leave Management module, you have an efficient way to:

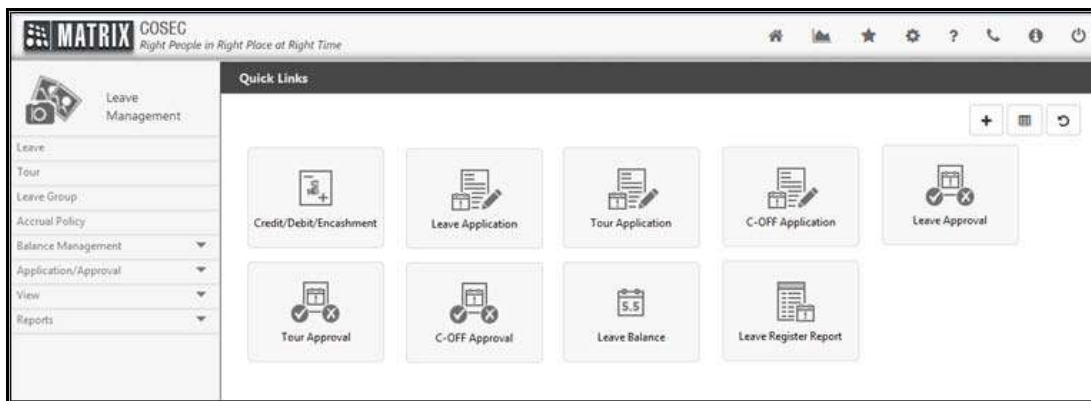

- Set up and change leave rules and policies
- Submit and record a leave request, before, during or after the leave occurs.
- Change or cancel a leave request
- Get information on leave entitlements
- Review employee leave data including leave summary.

To use this functionality, click on the **Leave Management**

module. The Leave Management page will

appear on your screen as shown below.

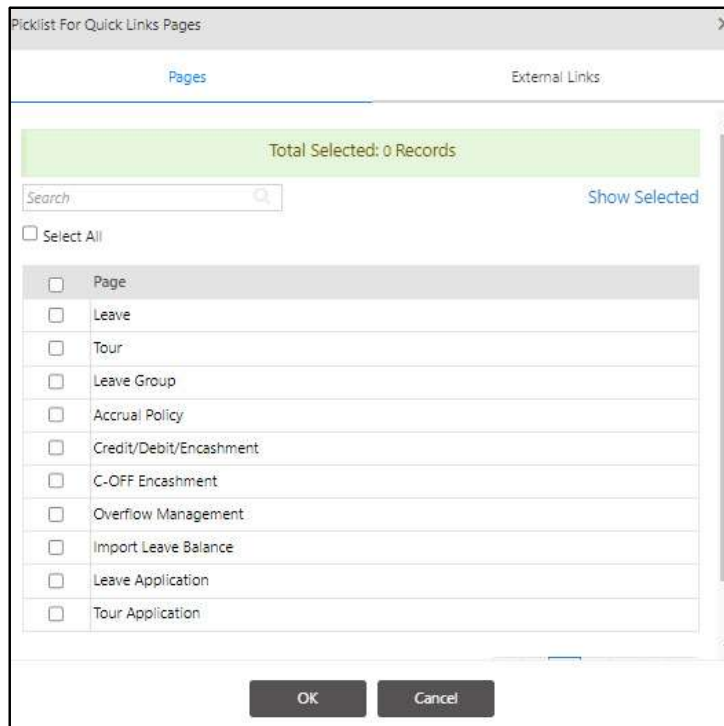

*This functionality is available only with the COSEC **Time and Attendance** module license.*

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link, Select Layout** and **Reset to Default**.

## Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

## Select Layout

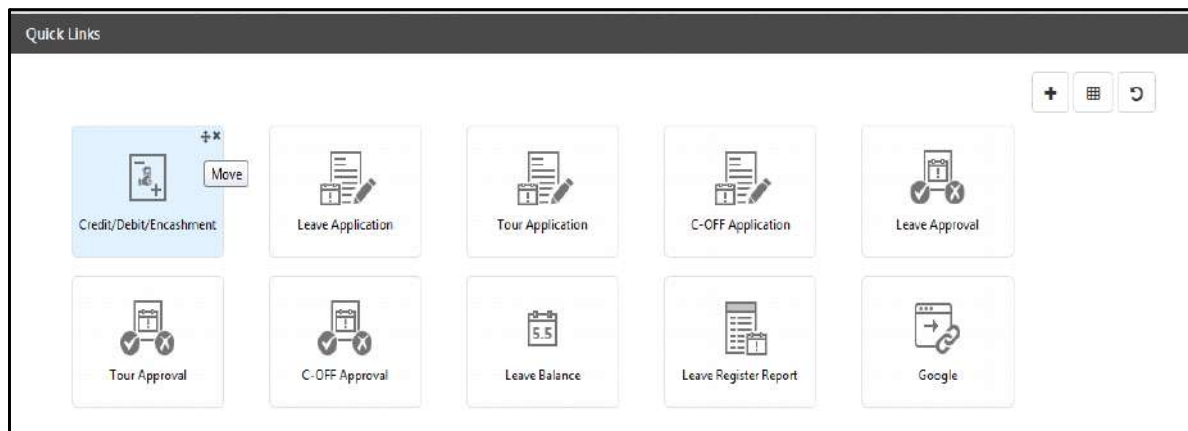

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

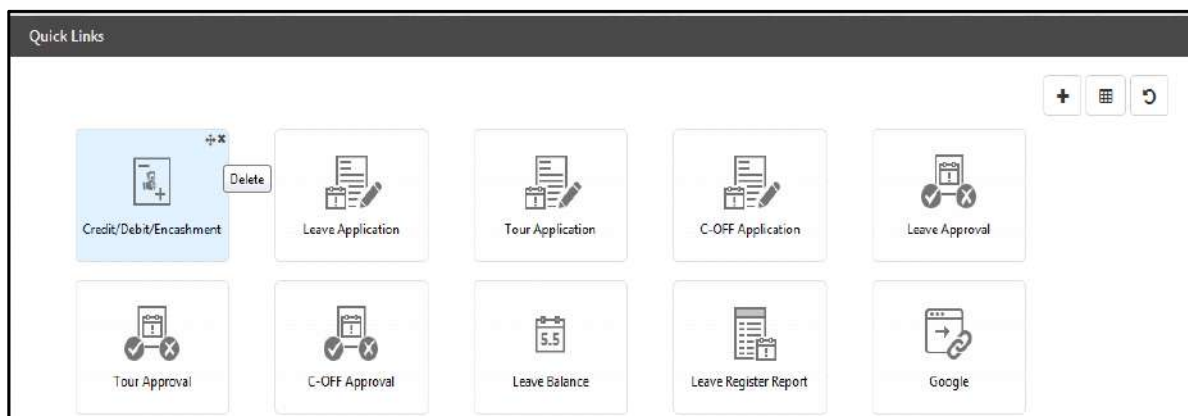

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

Quick links are displayed as per rights given to System Account and ESS users.

## Leave Management Dashboard

To view the **Leave Management** Dashboard, click the Dashboard button  on the **Leave Management** page. The Dashboard displays two panels: User Summary and Pending Approval as shown below.

## User Summary

User Summary panel displays a bar graph indicating the number of users on leave, on tour and on C-OFF for particular month or day as per the settings configured. Click **Settings** icon on the title bar of the panel and the following screen appears.

The screenshot shows the 'User Summary' settings dialog box. It contains three dropdown menus: 'View' set to 'Cumulative Data', 'Period' set to 'Daily', and 'User Selection' set to 'All Users'. There are 'View' and 'Cancel' buttons at the bottom.

Configure the following details based on which the graph is to be obtained.

- **View:** Select the view from the dropdown list to be displayed in the graph. Options are: Cumulative Data and Trending Data.
- **Period:** Select the period for which data is to be obtained as monthly or daily.
- **User Selection:** Select the users from the enterprise groups or All users based on which the data is to be obtained.

Click **View** button and the data is displayed in the form of a graph as shown below.

The screenshot shows the 'User Summary' settings dialog box with updated values. The 'View' dropdown is now 'Trending Data', the 'Period' is 'Monthly', and there are date pickers for 'Feb 2017' and 'May 2017'. The 'User Selection' remains 'All Users'. 'View' and 'Cancel' buttons are at the bottom.

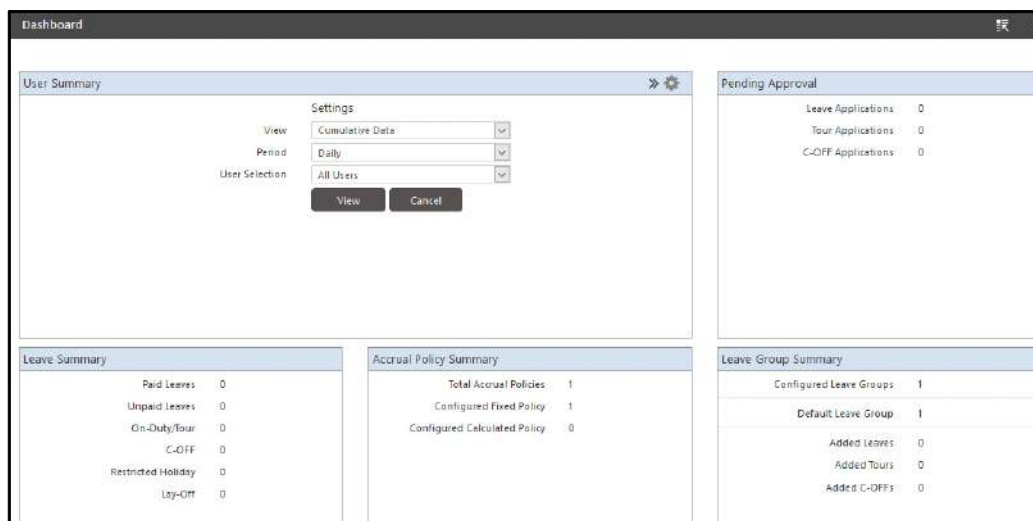

## Pending Approval

It displays the total number of leave applications, tour applications and C-OFF applications in pending state. This number will depend on the login user based on their rights on users/groups.

*The information displayed here will consider only such group of users on whom the login user has rights.*

Click on **Advanced** button to view the advanced details of leave management dashboard.

# Configuring Leaves

The COSEC Leave Management module enables the HR administrator to define multiple leaves as per the company policy. Leaves other than the commonly used leaves, can also be created and parameters for such leaves can be defined as per the organization's requirement.

## Defining New Leaves

To define a new leave, go to **Leave Management > Leave** and the following page appears.

Code	Name
SL	Sick Leave

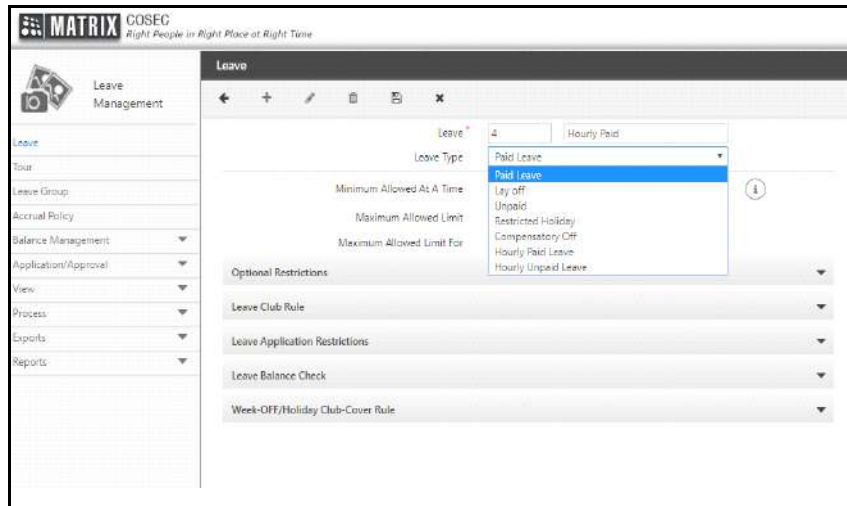

The page displays configurations on the left side and to the right is a grid containing existing created leaves.

To add a new leave, click the new button **+** and configure the below given parameters:

- **Leave:** Every new leave must be defined with a **Code** and a **Name**. Enter the details in the respective fields. The leave code can be of maximum 2 alphanumeric characters. For example, for the leave name "Maternity Leave", the leave code can be "ML".
- **Leave Type:** Select the type of leave or the leave category from the dropdown list to indicate whether the leave is one of the following types —
  - **Paid Leave-** This leave can be availed when the user has sufficient balance. When the user avails the paid leave, then his salary for that day is not deducted as it is managed by deducting from the total leave balance.

If you select **Paid Leave**, then configure the below parameters:

- *"Optional Restrictions"*
- *"Leave Club Rule"*
- *"Leave Application Restrictions"*
- *"Keeping Check on Leave Balance"*
- *"Week-OFF/Holiday Club-Cover Rule"*

- **Lay Off-** This leave is granted to regularize unexplained absence resulting into discontinuation of service. It is a type of unpaid leave.

If you select **Lay Off**, then configure the below parameters:

- *“Optional Restrictions”*
- *“Leave Club Rule”*
- *“Leave Application Restrictions”*
- *“Week-OFF/Holiday Club-Cover Rule”*

- **Unpaid-** This leave can be availed when the user do not have Paid leave balance. This will result in loss of pay for the day when leave is availed.

If you select **Unpaid**, then configure the below parameters:

- *“Optional Restrictions”*
- *“Leave Club Rule”*
- *“Leave Application Restrictions”*
- *“Week-OFF/Holiday Club-Cover Rule”*

- **Restricted Holiday-** This is an optional holiday which the user can avail for cultural reasons or celebrations.

If you select **Restricted Holiday**, then configure the below parameters:

- *“Optional Restrictions”*
- *“Leave Club Rule”*
- *“Leave Application Restrictions”*
- *“Keeping Check on Leave Balance”*
- *“Week-OFF/Holiday Club-Cover Rule”*

- **Compensatory Off-** This is an hourly based leave which can be availed when the user has authorized overtime hours.

If you select **Compensatory Off**, then configure the below parameters:

- *“Optional Restrictions”*
- *“Leave Club Rule”*
- *“Leave Application Restrictions”*
- *“Week-OFF/Holiday Club-Cover Rule”*

- **Hourly Leave** - This is an hourly based leave, where the user can get leave considering hours as per their requirement instead of taking *Full Day* or *Half Day* leave.

Select **Hourly Paid Leave** or **Hourly Unpaid Leave** from given drop down list.

**Hourly Paid Leave** will be deducted from the accumulated Leave balance whereas **Hourly Unpaid Leave** will result in salary deduction.

If you select **Hourly Leave**, then configure the below parameters:

- *“Optional Restrictions”*
- *“Leave Club Rule”*
- *“Leave Application Restrictions”*
- *“Week-OFF/Holiday Club-Cover Rule”*

*If you select the “**Hourly Unpaid Leave**” in leave type, then the option of **Leave balance Check** will be disabled.*

If you select **Leave Type** other than **Hourly Paid Leave** or **Hourly Unpaid Leave**, then configure the following parameters:

- **Minimum Allowed At a Time:** Specify the minimum number of days for which the employees can apply leave at one time.
- **Maximum Allowed Limit:** Specify the maximum number of days for which the employees can apply leave.
- **Maximum Allowed Limit For:** Select the application for which the maximum limit can be set.
- **Single App:** If this option is selected and the maximum allowed limit is configured as 2, then an employee will be able to apply for a maximum of 2 leaves at a time.
- **Consecutive Apps:** In this case, the maximum allowed limit applies not only to a single application but to all applications made consecutively for the same leave type before or after it.

**E.g.:** In case of this leave, an employee can apply for a total of 2 leaves inclusive of all applications for the same leave type before or after the current leave application. So if an employee applies for a “Sick Leave” from 2nd-3rd December, he will not be allowed to apply for a sick leave for 4th-5th December in this case. But if he applies leave from 5th-7th December, he will be able to do so.

However, for Single Application, a new sick leave of 2 days can be applied for, 4th-5th December.

If you select **Leave Type** as **Hourly Paid Leave** or **Hourly Unpaid Leave**, then configure below parameters:

- **Minimum Allowed Duration**

Set the minimum hours that should be used while applying for hourly leaves. (i.e., if the minimum value is set as 01:00, and the user wishes to apply hourly leave with less than 01:00 of applied duration, then the system will not allow for such leave application.)

- **Max Allowed Duration Per Application**

Set the maximum hours per application that should be used while applying for hourly leaves. (i.e., if the maximum value is set as 04:00, and the user wishes to apply hourly leave with more than 04:00 of applied duration, then the system will not allow for such leave application.)

- **Max Allowed Duration Per Day**

Set the maximum hours per day that should be used while applying for Hourly leaves.

*Minimum allowed duration, maximum allowed duration per day/per application are applicable on posted duration and not on applied duration.*

Click **Save** to define the new leave on the system successfully. The leave gets displayed in the grid as shown in the screen below.

### Example: Hourly Leave

#### 1. Shift Configuration (*Shifts and Schedules Module > Shift Configuration*)

Shift	9:00 - 18:00
Minimum hours required for Half Day	2 hours
Minimum hours required for Full Day	4 hours
Break (Break Deviation - Disable)	12:00 - 13:00
Grace for Shift Late IN (Overlap Grace time with Shift Late IN - Disable)	30 minutes
Include Grace in Work Hours	Enable
Late IN	60 minutes
Add Break Late IN in Total Late IN	Enable
Early OUT	60 minutes
Add Break Early OUT in Total Early OUT	Enable

## 2. Hourly Leave Configuration (*Leave Management Module> Leave*)

Type	Hourly Paid Leave
Minimum Allowed Duration	00:00
Max Allowed Duration Per Application	08:00
Max Allowed Duration Per Day	12:00
Add Leave Hours into Work Hours	Enable

## 3. User Punches for 1st January

IN Punch	OUT Punch	IN Punch	OUT Punch
10:00	11:30	13:00	14:00

## 4. Hourly Leave Applied for 1st January (*Leave Management Module> Leave Application*)

Attendance Date	01/01/2021
From	02/01/2021
To	02/01/2021
Applied	03:30
Posted	03:30

## 5. Attendance Details (*Time and Attendance Module> Attendance Correction > Attendance Details*)

Status	PR - PR
Work Hours:	6 hours
Grace Time:	30 minutes (09:00 - 09:30)
Late IN	30 minutes (09:30 - 10:00)
Early OUT Total	60 minutes [30 minutes Shift Early OUT (17:30 - 18:00) + 30 minutes Break Early OUT (11:30 - 12:00)]

- Now, select the desired leave from the grid and click **Edit** to configure additional parameters for the leave as described in the following sections.

Once used on the system (e.g. for leave application), a leave cannot be modified or deleted. Therefore the HR administrator must configure leaves with care before they are used on the system.

### Optional Restrictions

These options can be used to impose certain leave application rights and requirements on employees. To configure this, expand the Optional Restrictions panel and the following screen appears.

- **Allowed Users:** Select an option specifying whether the selected leave should be applicable to all users or to either male or female users.
- **Medical Certificate Required:** Select the desired option from the drop down list— None, Ensure Availability, Upload Document.

Select **None** if you do not want the applicant to submit the medical certificate.

Select **Ensure availability**, if you just want to check the documents are available with the applicant and keep the medical document upload optional.

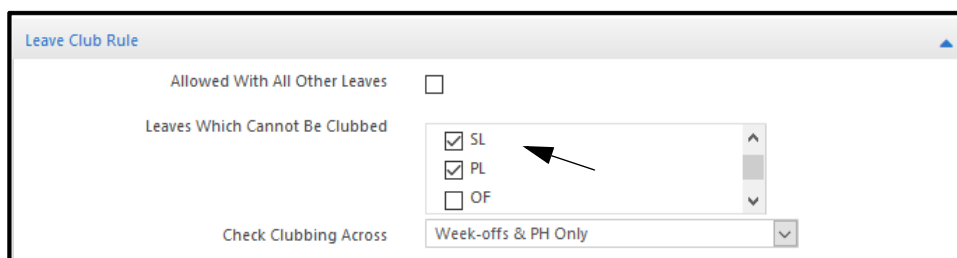

Select **Upload Document**, if you want to make it mandatory for the applicant to upload the document.

- **Min. Leave For Certificate Compulsion:** Specify a minimum period (in days) for leave application within which the applicant needs to submit the medical certificate.

Example: If 3 days are specified, then the user will be required to submit a medical certificate on taking leave for 3 or more than 3 days. And if he takes leave for 2 days then medical certificate is not required to be submitted to the company.

## Leave Club Rule

The concept of **Leave Club Rule** in COSEC allows employees to use the selected leave along with other leaves configured in the system. For instance, an employee may be allowed to club a Compensatory Off with a Casual Leave in certain organizations, while others may not allow it. To define this rule, expand the **Leave Club Rule** panel as shown below.

- **Allowed With All Other Leaves:** Select the checkbox to allow the selected leave to be clubbed with any other leave pre-configured in the system.
- **Leaves Which Cannot Be Clubbed:** If some leaves are not to be allowed for clubbing with the selected leave, specify such leaves by selecting the appropriate checkboxes corresponding to each leave. Scroll up or down to view the entire list of available leaves on the system. These are the pre-created leaves.

*While configuring a new Leave, if you do not wish to club this leave with other leaves, click the **Self** checkbox. After this Leave is saved the name assigned to this leave will be displayed instead of Self.*

- **Check Clubbing Across:** Select the option for checking the leave clubbing rule across weekdays, week offs or both.

Suppose if invalid leave clubbing is detected (e.g. say, two leaves which cannot be clubbed are applied on either side of a Week-Off), user will not be able to apply for the leave.

- **Week-Offs & PH Only:** In this leave clubbing will be checked only for WO and PH.
- **Normal Days:** In this leave clubbing will be checked only for Normal days i.e. week days.
- **Both:** In this leave clubbing will be checked for both WO, PH and Week days.

### Example1: Leaves Which Cannot Be Clubbed

Create a PL leave and configure the parameter "**Leaves Which Cannot Be Clubbed**" as shown in the above screen.

Now, apply one Casual Leave on 14th November either from ESS module or from Leave Management module and then apply one Paid Leave on 15th November.

On applying leave for 15th November, the system displays an error message stating "This leave should not be clubbed with CL" as shown in the screen below.

**Leave Application**

! This Leave should not be clubbed with CL

From Date: 05/11/2016 To Date: 05/11/2016 Full Day

Applied Days: 1 Posted Days:

Leave: P - Paid Leave Current Balance: 10.00

**Reason And Contact Info**

Reason: 50 Char Address: 20 Char Contact Number: 20 Char Medical Certificate Required: ☐

Submit Cancel

Oct 2016 Dec 2016 Availed Leaves : 1

32.5 days Absent 1 day Pending 0 day Approved 0 day Rejected

Attendance Details

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
09/11/2016	NS	AB	AB			
08/11/2016	NS	AB	AB			
07/11/2016	GS	AB	AB			
05/11/2016	GS	AB	AB			
04/11/2016	GS	AB	AB			
03/11/2016	GS	IN	AB	12:26		
02/11/2016	GS	AB	AB			

8 - 14 of 38 records

Thus, if you try to apply Casual Leave and Paid Leave one after another, the system will not allow to do so and displays the error message as shown in the above screen.

### Example 2: Check Clubbing Across Week-Off/Holiday

Create a PL leave and configure the parameters “Leaves Which Cannot Be Clubbed” and select **Check Clubbing Across** as “**Week-Offs & PH only**” as shown in the below screen.

**Leave Club Rule**

Allowed With All Other Leaves: ☐

Leaves Which Cannot Be Clubbed: ☒ Casual Leave ☐ Head Office ☒ Paid Leave

Check Clubbing Across Week-Off/Holiday: ☒

Check Clubbing Across: Normal Days, Normal Days, **Week-offs & PH Only**, Both

Leave Application Restrictions

5th Nov	6th Nov	7 Nov	Remarks
CL	WO	PL	CL and PL cannot be clubbed

Now, apply one Casual Leave on 5th November either from ESS module or from Leave Management module and then apply one Paid Leave on 7th November. 6th November is the Week-Off.

On applying leave for 7th November, the system displays an error message stating “This leave should not be clubbed with CL” as shown in the screen below.

**Leave Application** ! This Leave should not be clubbed with CL

From Date: 07/11/2016 To Date: 07/11/2016 Full Day

Applied Days: 1 Posted Days:

Leave: P - Paid Leave Current Balance: 10.00

Reason And Contact Info:

Reason: 50 Char Address: 30 Char Contact Number: 20 Char Medical Certificate Required: ☐

Submit Cancel

Oct 2016 Dec 2016 Availed Leaves : 1

32.5 days Absent 1 day Pending 0 day Approved 0 day Rejected

Application Details Show All

From	To	Leave	Application Date	Application Type	Status
05/11/2016	05/11/2016	CL	17/11/2016	New	

Thus, if **Check Clubbing Across Week-Off & PH** option is enabled while configuring the leave and if you try to apply Casual Leave and Paid Leave one after another, the system will not allow to do so and will display an error message as shown in the above screen.

Similarly, if leaves are applied between the Public Holidays, then also the user will be restricted from applying.

#### Example 3: Check Clubbing across Normal days

Friday	Saturday	Sunday	Monday	Tuesday	Remarks
GS	WO	WO	GS	GS	
			SL	PL	SL and PL cannot be clubbed on normal days

The rule is configured to not allow SL & PL together so if the user has applied leave on Monday & Tuesday so while trying to approve the leaves; the leave on Tuesday will not be allowed to be approved.

#### Example 4: Check Clubbing for both i.e. across Normal days and WO/PH

Friday	Saturday	Sunday	Monday	Tuesday	Wednesday	Remarks
GS	WO	WO	GS	GS	GS/PH	
			SL	SL	PL	SL and PL cannot be clubbed on normal days

Normal Days include public holidays falling on weekdays.

The rule is configured to not allow SL & PL together so if the user has applied for leave on Public Holiday then the leave of Wednesday will not be allowed to be approved.

## Leave Application Restrictions

Certain restrictions can be enabled for the leave application process in an organization, making it mandatory for an employee to follow some rules while applying for leaves. For e.g., hospitals and other emergency care facilities often need to arrange for substitutes beforehand, for any employee who goes on a leave. In such cases, employees may be required compulsorily to offer leave notification in advance.

To apply such restrictions, click the **Leave Application Restrictions** panel and configure the required parameters as shown below.

**Leave Type** = Paid Leave, Lay off, Unpaid, Restricted Holiday and Compensatory Off

The screenshot shows the 'Leave Application Restrictions' panel. It contains the following settings:

- Application Allowed Before Leave:** ☒
- Minimum Days Before Leave Start Date:**
- Application Allowed After Leave:** ☒
- Maximum Days After Leave End Date:**
- Restrict Application Within Specified Period:** ☐
- Restriction Type:**
- Restriction Period:**

**Leave Type** = Hourly Paid Leave / Hourly Unpaid Leave

The screenshot shows the 'Leave Application Restrictions' panel for hourly leave types. It contains the following settings:

- Application Allowed Before Leave:** ☒
- Minimum Duration Before Leave Start Date:**
- Application Allowed After Leave:** ☒
- Maximum Duration After Leave End Date:**
- Restrict Application Within Specified Period:** ☐
- Restriction Type:**
- Restriction Period:**

*The effect of these configurations are reflected while applying for leave from the ESS module.*

Leave can be applied prior to the Leave Start Date as well as after the Leave End Date depending on the restriction applied. Leave can be applied even on the Leave Start Day.

- **Application Allowed Before Leave:** Select this checkbox to permit users to apply a leave request prior to as well as on the Leave Start Date.
- **Minimum Days Before Leave Start Date:** When the **Leave Type** is — Paid Leave, Lay off, Unpaid, Restricted Holiday and Compensatory Off, set the minimum day/s required for users to apply a leave request prior to the Leave Start Date.

When the **Leave Type** is Hourly Paid Leave or Hourly Unpaid Leave, you will be required to select desired format — Days or Hours, in which you wish to restrict a user for applying a leave.

If you select **Days**, then set the minimum day/s required for users to apply a leave request prior to the Leave Start Date.

If you select **Hours**, then set the minimum hours required for users to apply a leave request prior to the Leave Start Date/Time.

Users will be restricted to apply the leave request before / after the specified period.

If **Application Allowed Before Leave** is enabled and **Minimum Days Before Leave Start Date** is not specified then the user can apply leave before/ on the Leave Start Date.

#### Example 1: Minimum Days Before Leave Start Date = 2 Days

**Leave Date:** 19/11/2016

In this case, the User will be allowed to apply leave on 17/11/2016.

If the user tries to apply leave on 18/11/2016, he/she will be restricted and the system will display an error as shown below:

**Leave Application**

! Paid Leave application allowed only 2 days before leave start...

From Date: 18/11/2016 To Date: 18/11/2016

Applied Days: 0.5 Posted Days:

Leave: P - Paid Leave Current Balance: 7.50

Reason And Contact Info

09/11/2016	N5	AB	AB			

1 - 7 of 37 records

#### Example 2: Minimum Days Before Leave Start Date (Leave Type = Hourly Paid/Unpaid Leave) = Format: Hours and Minimum Time: 2 Hours

**Leave Date and Time:** 19/11/2016 and 09.00 to 18:00

In this case, the User will be allowed to apply leave on 19/11/2016 at 07:00.

If the user tries to apply leave at 08:00, he/she will be restricted and the system will display an error.

If you set the **Minimum Days Before Leave Start Date**, then **Application Allowed After Leave** and **Max. Days After Leave End Date** will not be configurable.

- **Application Allowed After Leave:** Select this checkbox to permit users to apply a leave request after the Leave End Date.
- **Maximum Days After Leave End Date:** When the **Leave Type** is — Paid Leave, Lay off, Unpaid, Restricted Holiday and Compensatory Off — set the maximum day/s required for users to apply a leave request after the Leave End Date.

When the **Leave Type** is — Hourly Paid Leave or Hourly Unpaid Leave — you will be required to select the desired format — Days or Hours — in which you wish to restrict a user for applying a leave.

If you select **Days**, then set the maximum day/s required for users to apply a leave request after the Leave End Date.

If you select **Hours**, then set the maximum hours required for users to apply a leave request after the Leave End Date/ Time.

Users will be restricted to apply the leave request after the specified period.

Example: **Maximum Days After Leave End Date** = 1

**Leave Date:** 16/11/2016

In this case, the User will be allowed to apply leave on 17/11/2016.

If the user tries to apply leave on 18/11/2016, he/she will be restricted and the system will display an error.

**Example 2: Maximum Days After Leave End Date (Leave Type = Hourly Paid/Unpaid Leave) =**  
Format: Hours and Maximum Time: 2 Hours

**Leave Date and Time:** 19/11/2016 and 09.00 to 18:00

In this case, the User will be allowed to apply leave on 19/11/2016 till 20:00 hour.

If the user tries to apply leave at 21:00 hour, he/she will be restricted and the system will display an error.

There are many different cases related to — **Application Allowed Before Leave, Minimum Days Before Leave Start Date, Application Allowed After Leave, Maximum Days After Leave End Date** — one may encounter while applying a leave. So to understand such scenarios, refer the following cases.

#### **CASE 1: Consider all the possibilities for Leave types other than Hourly Leave.**

A user wants to apply a leave from **20-02-2020** to **22-02-2020**.

<b>Application Allowed Before Leave</b>	<b>Minimum Days Before Leave Start Date</b>	<b>Application Allowed After Leave</b>	<b>Maximum Days After Leave End Date</b>	<b>Valid Leave Application Date Range</b>
Disabled	-	Disabled	-	Not Allowed
Enabled	-	Disabled	-	Till 20-02-2020
Enabled	2	Disabled	-	Till 18-02-2020

Application Allowed Before Leave	Minimum Days Before Leave Start Date	Application Allowed After Leave	Maximum Days After Leave End Date	Valid Leave Application Date Range
Disabled	-	Enabled	-	From 20-02-2020 onwards
Disabled	-	Enabled	0	From 20-02-2020 till 22-02-2020
Disabled	-	Enabled	3	From 20-02-2020 till 25-02-2020
Enabled	-	Enabled	-	All dates
Enabled	-	Enabled	0	Till 22-02-2020
Enabled	-	Enabled	3	Till 25-02-2020
Enabled	2	Enabled	3	Not Possible

**CASE 2: Consider all the possibilities for Leave types — Hourly Paid Leave and Hourly Unpaid Leave.**

A user wants to apply a leave on **20-02-2020** from **14:00 to 18:00** hours.

Application Allowed Before Leave	Minimum Days Before Leave Start Date Format = Hours	Application Allowed After Leave	Maximum Days After Leave End Date Format = Hours	Valid Leave Application Date Range
Disabled	-	Disabled	-	Not Allowed
Enabled	-	Disabled	-	Till 20-02-2020 14:00 hours
Enabled	05:00	Disabled	-	Till 20-02-2020 09:00 hours
Disabled	-	Enabled	-	From 20-02-2020 14:00 hours onwards

Enabled	-	Enabled	03:00	Till 20-02-2020 21:00 hours
Enabled	02:00	Enabled	03:00	Not Possible

**CASE 3: Consider all the possibilities for Leave types — Hourly Paid Leave and Hourly Unpaid Leave.**

A user wants to apply a leave on **20-02-2020** from **14:00** to **18:00** hours.

<b>Application Allowed Before Leave</b>	<b>Minimum Days Before Leave Start Date</b> Format = Days	<b>Application Allowed After Leave</b>	<b>Maximum Days After Leave End Date</b> Format = Days	<b>Valid Leave Application Date Range</b>
Disabled	-	Disabled	-	Not Allowed
Enabled	-	Disabled	-	Till 20-02-2020
Enabled	2	Disabled	-	Till 18-02-2020
Disabled	-	Enabled	-	From 20-02-2020 onwards
Disabled	-	Enabled	0	From 20-02-2020 to 21-02-2020
Disabled	-	Enabled	3	From 20-02-2020 to 24-02-2020
Enabled	-	Enabled	-	All days allowed
Enabled	-	Enabled	0	Till 21-02-2020
Enabled	-	Enabled	3	Till 24-02-2020
Enabled	2	Enabled	3	Not Possible

**CASE 4: Consider all the possibilities for Leave types — Hourly Paid Leave and Hourly Unpaid Leave.**

A user wants to apply a leave from **20-02-2020, 20:00** hours to **21-02-2020, 04:00** hours.

<b>Application Allowed Before Leave</b>	<b>Minimum Days Before Leave Start Date</b> Format = Hours	<b>Application Allowed After Leave</b>	<b>Maximum Days After Leave End Date</b> Format = Days	<b>Valid Leave Application Date Range</b>
Disabled	-	Disabled	-	Not Allowed
Enabled	-	Disabled	-	Till 20-02-2020 20:00 hours
Enabled	05:00	Disabled	-	Till 20-02-2020 15:00 hours
Disabled	-	Enabled	-	From 20-02-2020 onwards
Disabled	-	Enabled	-	20-02-2020 to 21-02-2020
Disabled	-	Enabled	3	20-02-2020 to 24-02-2020
Enabled	-	Enabled	-	All days at any time
Enabled	-	Enabled	0	Till 21-02-2020
Enabled	-	Enabled	3	Till 24-02-2020
Enabled	02:00	Enabled	3	Not Possible

**CASE 5: Consider all the possibilities for Leave types — Hourly Paid Leave and Hourly Unpaid Leave.**

A user wants to apply a leave from **20-02-2020, 20:00 hours** to **21-02-2020, 04:00 hours**.

Application Allowed Before Leave	Minimum Days Before Leave Start Date Format = Days	Application Allowed After Leave	Maximum Days After Leave End Date Format = Hours	Valid Leave Application Date Range
Disabled	-	Disabled	-	Not Allowed
Enabled	-	Disabled	-	Till 20-02-2020
Enabled	2	Disabled	-	Till 18-02-2020
Disabled	-	Enabled	-	From 20-02-2020 20:00 hours onwards
Disabled	-	Enabled	05:00	From 20-02-2020 20:00 hours to 21-02-2020 09:00 hours
Enabled	-	Enabled	-	All days at any time
Enabled	-	Enabled	05:00	Till 21-02-2020 09:00 hours
Enabled	02:00	Enabled	03:00	Not Possible

- **Restrict Application Within Specified Period:** Enable the checkbox to impose a restriction on leave application for a specific period. This is usually used in certain organizations where employees are restricted from taking paid leaves during their probationary period.
- **Restriction Type:** Select the type of restriction till which an employee cannot apply for leave. The restriction type can be till the employee's Confirmation Date or for a specific duration (**Restriction Period**) starting from the employee's Joining Date.

For this restriction to work, care must be taken to save user's joining and confirmation dates in COSEC before any leaves are applied. Also, any auto-attendance correction or attendance regularization using leaves for dates that fall within the Restriction Period will be overruled.

**Example:** Consider The restriction type as "Joining Date" and specify the Restriction Period as "month" and number of months as "6" for "PL" leave type. Current month is "November".

Now, if a user Rosy has joined in the month of July and she tries to apply for leave, then she will not be allowed for the restricted period.

## Keeping Check on Leave Balance

This option allows the HR administrator to keep a check on the leave balance of any user configured in COSEC. To do this, expand the **Leave Balance Check** panel as shown below.

The screenshot shows the 'Leave Balance Check' configuration panel. It contains several sections with checkboxes and input fields:

- Enable Balance Check:** A checkbox that is checked.
- Maximum Limit In Attendance Period:** A section with an 'Enable' checkbox (unchecked) and a 'Maximum Limit' input field.
- Carry Forward To Next Year:** A section with an 'Enable' checkbox (unchecked) and a 'Maximum Carry Forward Limit Check' input field.
- Balance Mgmt. From Other Leave:** A section with an 'Enable' checkbox (checked), a 'Balance To Be Managed From' dropdown menu set to 'Casual Leave', and a 'Multiplication Factor For Deduction' input field set to '1'.
- Leave Encashment:** A section with an 'Enable' checkbox (unchecked) and a 'Min. Balance Check After Encashment' input field.
- Maximum Accumulation Check:** A section with an 'Enable' checkbox (unchecked) and a 'Maximum Accumulation Check' input field set to '0.00'.

- **Enable Balance Check:** Select the checkbox to enable users to check their leave balance. If disabled for a particular leave then users cannot credit/debit/encash leaves to this type of leave. But when the user will apply for leave from the ESS module it will act as unpaid leave. But it is recommended that this option is enabled so that the user can use other facilities of leaves.

## Maximum Limit in Attendance Period

Select the checkbox to maintain an upper limit restriction for leaves applied in Attendance Period. Specify the maximum allowed leave limit in attendance period for the specific leave type.

**Example:** Suppose the maximum limit in Attendance Period is 4 for Casual Leave type. Then user will be allowed to apply leave for 4 days only. Now, if user tries to apply leave for more than 4 days in a month then he will not be allowed to apply for any more casual leave in that particular month and will receive an error message on the screen as shown below.

### Carry Forward To Next Year

- **Enable:** Select the checkbox to enable the unused leave balance to be carried over to the next year.
- **Maximum Carry Forward Limit Check:** Select the checkbox to put a restriction on the number of leaves to be carry forwarded to the next year. Specify the maximum number of leaves in the textbox that can be carried forward to the next year. E.g. If for one year the leave balance is 40 leaves and the maximum leave to be carry forwarded is 10, then only 10 leaves will be carry forwarded to the next year. While the remaining 30 leaves will get lapsed.

### Balance Mgmt. From Other Leave

- **Enable:** Select the checkbox, if the balance of another leave defined on the system is to be managed from the currently selected leave.

- **Balance To Be Managed From:** Select the leave from the dropdown list to be managed from the leave being configured.
- **Multiplication Factor For Deduction:** Enter a value for this balance management. E.g. If the value specified is 1 for Casual Leave, then 1 leave of Privilege Leave will be given to the Casual leave when the Casual Leave balance becomes 0 and still Casual Leave is applied.

**Example:** Balance to be Managed From is selected as “Casual Leave” and the multiplication factor is specified as “1” for Privilege type of leave.

### Leave Application Scenario

Suppose the Availed Balance of Casual Leave is 2 days in the Leave Balance page as shown in the screen below.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2016	Dec	CL	Casual Leave	0.00	10.00	0.00	0.00	2.00	8.00	0.00
2016	Dec	PL	Privilege	0.00					0.00	0.00
2016	Dec	SL	Sick Leave	0.00					0.00	0.00

Now apply one Privilege leave.

From	To	Leave	Application Date	Application Type	Status
15/12/2016	15/12/2016	PL	19/12/2016	New	✓
12/12/2016	13/12/2016	CL	19/12/2016	New	✓

Once the leave gets applied, check the balance from the Leave Balance page.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availd	Closing	Overflow
2016	Nov	CL	Casual Leave	0.00	20.00	0.00	0.00	3.0	17.00	0.00
2016	Nov	PL	Privilege Leave	0.00				0.0	0.00	0.00
2016	Nov	SL	Sick Leave	0.00	10.00	0.00	0.00	0.0	10.00	0.00

The Availd balance of Casual Leave becomes 3 and Privilege Leave is still 0. This is because the Privilege Leave balance is managed from Casual Leave balance. Hence, any leave applied, credited, debited or encashed will be deducted from Casual Leave only and not from the Privilege Leave.

### Credit Scenario

Now if 3 leaves are credited for Privilege Leave from **Balance Management > Credit/Debit/Encashment** page, then the balance of 3 leaves will be credited to Casual Leave. The number of leaves credited to Privilege Leave can be viewed from the **Leave Balance** page.

### Debit Scenario

If 3 leaves are debited for Privilege Leave from **Balance Management > Credit/Debit/Encashment** page, then the balance of 3 leaves will be debited from Casual Leave and not the Privilege Leave. The number of leaves debited from Privilege Leave can be viewed from the **Leave Balance** page.

### Encashment Scenario

If 3 leaves are encashed for Privilege Leave from **Balance Management > Credit/Debit/Encashment** page, then the balance of 3 leaves encashed will be deducted from the Casual Leave only. The number of leaves encashed for Privilege Leave can be viewed from the **Leave Balance** page. For encashment the Leave Encashment checkbox should be enabled.

### Leave Encashment

- **Enable:** Select the checkbox to make the selected leave available for encashment.
- **Min. Balance Check After Encashment:** Select the checkbox to define whether the system should maintain a certain balance before allowing encashment. If enabled, enter the minimum required leave balance for allowing encashment.

**Example:** If 2 is specified and out of total 5 leaves; 4 leaves are applied for encashment, then the user will not be allowed as minimum 2 leaves are required to be left in the leave balance after encashment.

### Maximum Accumulation Check

- **Enable:** Select the checkbox and enter a value for Maximum Accumulation Check to enable restriction on maximum leave balance accumulation for a year. In case a leave credit is made that causes the leave balance to exceed the specified Maximum Accumulation limit, only a partial credit will be allowed.

**Example:** Say, a user's leave balance is 48 and Maximum Accumulation limit is of 50 leaves, then a maximum leave credit of 2 leaves shall be allowed.

## Week-OFF/Holiday Club-Cover Rule

This is a conditional rule that enables the administrator to determine whether a Week-Off/Holiday that lies in continuity with a leave (either before, after or on both sides of Week-Off/Holiday), should be allowed. If this is not allowed, then the Week-Off/Holiday will be clubbed/covered by the system as a leave.

To apply this rule, expand the **Week-OFF/Holiday Club-Cover Rule** panel as shown below.

The screenshot shows a configuration panel titled "Week-Off/Holiday Club-Cover Rule". It is divided into two sections: "Week-Off Club/Cover Rule" and "Holiday Club/Cover Rule".

**Week-Off Club/Cover Rule**

- Allowed On Single Sided Leave: ☒
- Allowed On Both Sided Leave: ☒
- Atleast Full Day Leave For Club-Cover: ☐
- Enable Minimum Limit Check: ☒
- Minimum Limit Around Week-Off \*:

**Holiday Club/Cover Rule**

- Allowed On Single Sided Leave: ☒
- Allowed On Both Sided Leave: ☒
- Atleast Full Day Leave For Club-Cover: ☐
- Enable Minimum Limit Check: ☐
- Minimum Limit Around Holiday:

Select the appropriate checkboxes to apply Week-Off/Holiday club and cover rule for the following conditions:

### Week-Off Club/Cover Rule

- **Allowed on Single Sided Leave:** Leave is allowed only if the user is on leave on any one side of the Week-Off. Single side can be second half of previous day or first half of next day or either of the full day.  
  
**E.g.** If Week Off is on 6th November (Sunday) and Leave is applied for 5th November (Saturday) then user will be allowed to apply. But if the user applies for leave on 7th November (Monday) also then he will not be allowed to apply and an error message will be displayed on the screen.
- **Allowed on Both Sided Leave:** Leave is allowed only if the user is on leave on both sides of a Week-Off. The both sides can be second half of previous day or first half of the next day or full day on both the sides of Week-Off. In this case single sided leave will not be considered. i.e. If leave is applied for 5th November only and Week Off is on 6th November, then user will not be allowed. He will have to apply for leave on 7th November also.
- **Atleast Full Day Leave For Club-Cover** - Applies club-cover rule for the following scenarios:
  - When **Allowed on Single Sided Leave** is also checked, Week-Off will be allowed only if the user is on a *full day leave* on any one side of a Week-Off.

- When **Allowed on Both Sided Leave** is also checked, Week-Off will be allowed only if the user is on a *full day leave* on both sides of a Week-Off.
- **Enable Minimum Limit Check** - Select this checkbox to enable a check on the minimum number of leaves that can be availed on both sides of a Week-Off.
- **Minimum limit around Week-Off**: Specify the minimum number of leaves that can be applied around the week-off. This check will be applicable only for similar leave types on both sides of a Week-Off.

**Example:** Consider Minimum Limit Around Week-Off as “3” as shown in the screen below.

**Week-Off/Holiday Club-Cover Rule**

**Week-Off Club/Cover Rule**

Allowed On Single Sided Leave ☒

Allowed On Both Sided Leave ☒

Atleast Full Day Leave For Club-Cover ☐

Enable Minimum Limit Check ☒

Minimum Limit Around Week-Off\* 3.0

Now apply Casual Leave from 4th November to 8th November as shown in the screen below.

**Leave Application**

! All Days are not Posted because of Weekly Off in Application...

User: 1 Rony

Application Details Show All

From	To	Leave	Application Date	Application Type	Status
18/11/2016	18/11/2016	11	17/11/2016	New	✓
21/10/2016	21/10/2016	P1	17/11/2016	New	✓

The user will not be allowed to apply leave and an error message will be displayed as shown in the screen above.

This is because only “3” leaves can be applied around the week-off and in the above example leave is applied for “4” days.

Thus, the user will not be allowed to apply leave more than the number configured in the parameter “Minimum Limit Around Week-Off”.

## Holiday Club/Cover Rule

The Holiday Club/Cover Rule will work similar to the Week-Off Club/Cover rule. Hence, for examples and better understanding of parameters See “Week-Off Club/Cover Rule” on page 2311.

- **Allowed on Single Sided Leave** - Holiday is allowed only if the user is on leave on any one side of the Holiday. Single side can be second half of previous day or first half of next day or either of the full day.
- **Allowed on Both Sided Leave** - Holiday is allowed only if the user is on leave on both sides of a Holiday. The both sides can be second half of previous day or first half of the next day or full day on both the sides of holiday.
- **Atleast Full Day Leave For Club-Cover** - Applies club-cover rule for the following scenarios:
  - When **Allowed on Single Sided Leave** is also checked, Holiday will be allowed only if the user is on a *full day leave* on any one side of a Holiday.
  - When **Allowed on Both Sided Leave** is also checked, Holiday will be allowed only if the user is on a *full day leave* on both sides of a Holiday.
- **Enable Minimum Limit Check** - Select this checkbox to enable a check on the minimum number of leaves that can be availed on both sides of a Public Holiday.
- **Minimum limit around Holiday**: Specify the minimum number of leaves that can be applied around the holiday. This check will be applicable only for similar leave types on both sides of a Holiday.

Once all the parameters get configured, click **Save** button and the created leave gets displayed in the grid as shown in the screen below.

Code	Name
11	1234
C1	C-OFF1
C2	C-OFF2
C3	C-OFF3
CF	C-OFF
CL	Casual Leave
P	Paid Leave
P1	Primary Leave
PL	Privilege Leave
SL	Sick Leave

You can also delete the created leave by selecting the leave from the grid and clicking **Delete** button.

# Tours

A tour is an official trip undertaken by an employee for work-related purposes. Many organizations follow a formal procedure for tour application and approval. This procedure may vary depending upon organizational norms and practices. For example, some establishments may allow employees to club tours with other leaves, while others may not.

The Leave Management module supports creation of customized tour types alongside a flexible option to generate tour applications and tour authorization by the concerned personnel. This section will describe the process of tour configuration, application and approval as performed using the *Leave Management* module.

*Tour Application and Approval can be performed both using the **Leave Management** module by system-account users with appropriate page rights, as well as using the **Employee Self Service** module by employees and their respective reporting in-charges. For more information on tour application/approval via ESS, please refer to the respective user documentation.*

## Defining New Tours

To define a new tour, go to **Leave Management > Tour** and the following page appears.

Code	Name
HO	Head Office
US	USA

The page displays configurations on the left side and a grid containing existing tours on the right hand side.

*Tours and Leaves on COSEC have a similar configuration. To know more about configuring for leaves, refer to ["Defining New Leaves"](#).*

- **Tour:** Every new tour must be defined with a **Code** and a **Name**. Enter the details in the respective fields. The tour Code can be of maximum 2 alphanumeric characters. For example, for the tour name "Head Office", the leave code has been assigned as "HO".
- **Tour Type:** Select the tour type as **Tour/ON Duty**.
- **Minimum Allowed At A Time:** Specify the minimum number of tours in days which will be allowed to employees at a time.
- **Maximum Allowed Limit:** Specify the maximum number of tours in days which will be allowed to employees at a time.

- **Maximum Allowed Limit For:** The maximum allowed limit can be set for:
  - **Single App** - Here the maximum allowed limit is applicable only to a single tour application. Hence when, the Maximum Allowed Limit for a Single Application is 5, then an employee will be able to apply for a maximum of 5 days of tour at a time.
  - **Consecutive Apps** - Here the maximum allowed limit applies not only to a single application but to all applications for the same tour made consecutively before or after it.

### Optional Restrictions

This options can be used to impose certain tour application rights and requirements on employees. To configure this, expand the **Optional Restrictions** panel as shown below.

- **Allowed Users:** Select an option from the dropdown list to specify whether the tour should be applicable to all users or only to either male or female users.
- **Tour Document Required:** Select the desired option from the drop down list— None, Ensure Availability, Upload Document.

Select **None** if you do not want the applicant to submit the tour document.

Select **Ensure availability**, if you just want to check the documents are available with the applicant and keep the tour document upload optional.

Select **Upload Document**, if you want to make it mandatory for the applicant to upload the document.

- **Min. Tour Days for Document Compulsion:** Specify a minimum period (in days) for Tour application within which the applicant needs to submit the tour document.

Example: If 2 days are configured as **Min. Tour Days for Document Compulsion**, then user will be required to submit document on tour within 2 or more days

### Tour Club Rule

The concept of **Tour Club Rule** in COSEC allows employees to use the selected tour along with other leaves configured in the system. To define this rule, expand the **Tour Club Rule** tab as shown below.

- **Allowed With All Other Tour:** Select the checkbox to allow the selected tour to be clubbed with any other leave pre-configured in the system.
- **Tours Which Cannot Be Clubbed:** If all leaves are not to be allowed for clubbing with the selected tour, specify such leaves by selecting the appropriate checkboxes corresponding to each leave. Scroll up or down to view the entire list of available leaves on the system.
- **Check Clubbing Across:** Select the option for checking the tour clubbing rule across weekdays, week offs or both.  
Suppose if invalid tour clubbing is detected (e.g. say, two leaves which cannot be clubbed are applied on either side of a Week-Off), user will not be able to apply for the leave.
  - **Week-Offs & PH Only:** In this tour clubbing will be checked only for WO and PH.
  - **Normal Days:** In this tour clubbing will be checked only for Normal days i.e. week days.
  - **Both:** In this tour clubbing will be checked for both WO, PH and Week days.

### Tour Application Restrictions

Certain restrictions can also be enabled for the tour application process in an organization, making it mandatory for an employee to follow some rules when applying for tours. To apply such restrictions, click the **Tour Application Restrictions** collapsible panel as shown below.

The screenshot shows a panel titled "Tour Application Restrictions" with the following settings:

- Consider Application on Week-Off: ☐
- Consider Application on Holiday: ☐
- Application Allowed Before Tour: ☒
- Minimum Days Before Tour Start Date:
- Application Allowed After Tour: ☒
- Maximum Days After Tour End Date:
- Restrict Application Within Specified Period: ☐
- Restriction Type:
- Restriction Period:

- **Consider Application on Week-Off:** Select this check box if you wish to allow employees to apply for Tour on Weekly-Off. By default it is disabled.

If the check box is enabled and the employee applies for Tour, then this will be reflected in the Posted Days. For example if Tour is applied for Sunday (which is a Weekly Off - WO), then Sunday will display Tour (TR - after approval) instead of Weekly Off (WO).

In the following condition Auto Week Off Assignment functionality will not work:

- Tour is applied for and approved for the Week-Off
- Auto Week Off Assignment is enabled (either from Shifts and Schedules > Shift Schedule or Week Off Group) as in this case the Week Off is converted to Tour.

In the following condition Absentee Policy > Week-Off Club/Cover Rule functionality will not work:

- Tour is applied for and approved for the Week-Off
- Week-Off Club/Cover Rule > Allowed On Single Sided Absent is enabled (from Time and Attendance > Policies > Absentee Policy > Week-Off Club/Cover Rule) and the user is Absent on both side of Week Off as in this case the Week Off is converted to Tour.

- **Consider Application on Holiday:** Select this check box if you wish to allow employees to apply for Tour on Holiday. By default it is disabled.

If the check box is enabled and the employee applies for Tour, then this will be reflected in the Tour Posted Days. For example if Tour is applied for Monday (which is a Paid Holiday-PH), then Monday will display Tour (TR - after approval) instead of Paid Holiday (PH).

In the following condition Absentee Policy > Holiday Club/Cover Rule > Allowed On Single Sided Absent functionality will not work:

- Tour is applied for and approved for the Holiday
- Holiday Club/Cover Rule > Allowed On Single Sided Absent is enabled (from Time and Attendance > Policies > Absentee Policy > Holiday Club/Cover Rule) and the user is Absent on both side of Holiday as in this case the Holiday is converted to Tour.

- **Application Allowed Before Tour:** Select this option for allowing employees to apply before going on tour. By default it is in enabled state.
- **Min. Days Before Tour Start Date:** Specify the minimum number of days from the tour start date, after which application for the tour taken will not be allowed any more.
- **Application Allowed After Tour:** Select this option for allowing employees to apply after going on tour. By default it is in enabled state.
- **Max. Days After Tour End Date:** Specify the maximum number of days after the tour ends, after which application for the tour taken won't be allowed any more.

### Week-OFF/Holiday Club-Cover Rule

To configure this option for tours, refer to ["Week-OFF/Holiday Club-Cover Rule"](#) for leave configuration.

Once all the parameters get configured, click **Save** button and the created tour gets displayed in the grid as shown in the screen below.

# Leave Group

This option enables the user to club multiple leaves into groups to assign them to users. The COSEC system has a capacity to create unlimited leave groups with different IDs and leaves as member of the groups.

To create a new leave group, go to **Leave Management module > Leave Group** and the following screen appears.

The screenshot displays the 'Leave Group' management interface. At the top, there's a header bar with a search bar and a list of groups. Below this, the 'Leave Rounding Parameters' section contains several settings: 'Default' (checked), 'Enable Pro-rata' (unchecked), 'Enable Leave Rounding' (unchecked), 'Credit Leave in Multiples Of' (set to 0), and 'Rounding Limit' (set to Lower). The 'Group Members' section features a table with columns for 'Leave', 'ID', 'Name', 'Priority', 'Code', 'Name', 'Leave Type', 'Up/Down', and an icon. The table is currently empty, showing 'No Data'.

Click **Add** to add a new leave group and configure the following parameters:

**Leave Group:** Configure a **Name** for the new leave group. The ID will be generated by the system while saving the group.

## Leave Rounding Parameters

- **Default:** Select this check box if you wish to set the current leave group as the default one.
- **Enable Pro-rata:** Select the check box to enable leave credit on pro-rata basis (that is on the basis of the actual number of days worked by an employee). This shall be applicable to all leaves added in the new leave group. **For example:** The user has joined a company on 21st of month. You are crediting 10 leaves but actually 3.5 leaves will be credited to the user on Pro-rata basis.

*The users who are expected to get credited leaves using pro-rata should be assigned a Leave Group wherein **Enable Pro-rata** check box is enabled.*

*Make sure **Apply Pro-rata** check box is also enabled in Balance Management > Credit/Debit/Encashment page to apply pro-rata for the selected users.*

- **Enable Leave Rounding:** If **Enable Pro-rata** is enabled then you can enable leave rounding. This will allow the leaves to be credited in multiples of value as set in **Credit Leave in Multiples Of**.
- **Credit Leave in Multiples of:** You can enter a value, in whose multiples, the leave will be credited. The Valid values are 0.00 to 1.00.
- **Rounding Limit:** Select the desired option — Lower, Upper.

If you select **Lower**, credited leave should be rounded to the largest multiple of the value as set in **Credit Leave in Multiples Of**, which is less than the actual leave value calculated as per Pro-rata.

If **Upper** is selected, credited leave should be rounded to the smallest multiple of value as set in **Credit Leave in Multiples Of**, which is greater than the current leave value calculated as per Pro-rata.

#### Example: Pro-rata with rounding

Joining Date of selected User = 21/06/2016

Credit Leave for June, 2016 = 1.75 [for whole month]

Credit Leaves in Multiples of = 0.25

Thus, according to pro-rata calculation, the credited leave = (No. of leaves to be credited in month/ No. of days in month)\* [(No. of days in month- Date of joining) +1] = [(1.75/30)\*(30-21+1)] = 0.58

0.58 will be rounded off to lower limit as 0.5 days or Upper limit as 0.75 days as described in table:

Rounding Limit	Selection of value as per rounding limit and comparison with credited leave	
Lower	select a value in multiples of 0.25 such that it is the greatest value in multiples of 0.25 which is <b>less</b> than the current leave value calculated as per pro-rata feature.	The leave amount credited for selected user for June, 2016 is <b>0.5</b> days.
Upper	select a value in multiples of 0.25 such that it is the smallest value in multiples of 0.25 which is <b>greater</b> than the current leave value calculated as per pro-rata feature.	The leave amount credited for selected user for June, 2016 is <b>0.75</b> days.

#### Group Members

You can add different leave types to the leave group.To do so,

- **Leave:** Click the **Leave** picklist. The **Picklist For Leave Masters** pop-up appears.

ID ▲ Name

1 Leave Group-1

Each Leave type has the following details/options:

- **Auto Adjustment:** Select this check box if you wish to consider the leave type for auto adjustment. For details refer T&A > Attendance Policy > Auto Attendance Correction > Auto Adjustment with Leave in [“Auto Attendance Correction”](#).
- **Auto Debit Leave:** Select the check box if you wish to automatically deduct leave from the leave balance of users. This check box is configurable for Paid Leave types with **Enable Balance Check** check box enabled and Attendance Policy wherein **Action on Exceeding Max Late-IN or Early-OUT or Both** are configured as **Debit Leave** and the same is also assigned to the users. For details refer to [“Absent Marking Rule”](#).

*If **Balance To Be Managed From** is configured for a **Paid Leave** intended for Debit Leave functionality, the system will deduct leave from the balance associated with the configured source. However, if a multiplication factor is set for that leave, it will not be considered. For example, if 5 leaves were to be debited from Paid Leave (due to Auto Debit Leave functionality), and Paid Leave's Balance To Be Managed From is set as KL with a multiplication factor for deduction as 2, then only 5 leaves will be deducted from KL and the multiplication factor will be discarded.*

*For any leave that has **Optional Restrictions** set for **Allowed User**, these restrictions will be taken into account during the execution of the auto debit leave functionality. For instance, if PL is designated only for female users, and auto debit leave functionality attempts to deduct PL from male users, no leave will be deducted for the male users due the restrictions in place.*

*In cases wherein both Auto Adjustment and Auto Debit are enabled, the system will prioritize Auto Debit. It is possible that Auto Adjustment might not be executed if the leave balance is exhausted during the Auto Debit process.*

- **Negative Balance Handling:** This check box is configurable only if you have enabled the **Auto Debit Leave** check box. Select this check box if you wish to automatically debit leave even if there is no/negative leave balance. If this check box is disabled, then the system will check for other Paid Leave for Auto Debit and if no leave balance is found in any leaves as per the priority then the Auto Debit Leave functionality will not be executed.
- **Priority:** It displays the Priority assigned to the Leave for executing further actions. By default, priority will be defined as per the order in which the leaves are added in the grid of the leave group. However, you can change the same using the **Up/Down**  arrows. As per the set priorities of the leaves in the group, the leaves will be used in set sequence to cover any absence in attendance.
- **Code:** Displays the code assigned to the leave.
- **Name Leave Type:** Displays the name assigned to the leave.
- **Leave Type:** Displays the type of leave.
- **Up/Down:** These arrows are used to move the Leave type up/down to set its Priority.
- **Delete:** Click the delete icon to remove the leave from the grid.

Click **Save** to save the configured leave group.

*The Leave Group must be assigned to the user from **User module > User Configuration > Group** so that user can use the leaves available in the leave group, provided there is sufficient leave balance.*

# Accrual Policy

Many organizations prefer the concept of providing leaves to their employees in the form of accruals i.e. advance credit of paid leave balance which can be used over a definite period of time. This leave balance is credited to employees as per the accrual policy of the organization. The Accrual Policy feature in COSEC enables the HR administrator to set parameters for crediting leaves to an employee based on predefined rules. The user can configure a set of rules and group them together in policies.

To define an Accrual Policy, go to **Leave Management > Accrual Policy** and the following screen appears.

Month	Value
January	0.00
February	0.00
March	0.00
April	0.00
May	0.00
June	0.00
July	0.00
August	0.00
September	0.00
October	0.00
November	0.00
December	0.00

The page displays configurations on the left side and a grid on the right hand side containing created accrual policies.

To add a new accrual policy click the New button and provide the following parameters:

- **Accrual Policy:** Every new leave policy is automatically assigned a system-generated **ID**. Enter a suitable **Name** for the new policy.
- **Policy Period:** Select the policy period for monthly or yearly accrual of leaves.

*An organization should always operate either on Yearly period or Monthly period approach completely for leave management. Using a mixed period approach must be avoided to prevent data mismatch.*

- **Accrual Mode:** Select the mode which determines how leaves are to be credited to users on whom this Accrual Policy applies. This will depend on the Policy Period selected. Specify the Accrual Mode as one of the following:

- **Fixed** - For Monthly accrual, this mode enables the user to define the number of leaves to be credited for each month of the year as shown in the following figure:

**Accrual Policy**

Accrual Policy \* ID: [ ] Name: [ ]

Policy Period: Monthly

Accrual Mode: Fixed

Credit In Terms Of: Days

**Month-Wise Fixed Accrual**

January	0.00
February	0.00
March	0.00
April	0.00
May	0.00
June	0.00
July	0.00
August	0.00
September	0.00
October	0.00
November	0.00
December	0.00

Search

ID	Name
1	Leave_Policy_1
2	Leave_Policy_2

For **Yearly** accrual, define number of credit days for single credit of leaves for the entire year.

**Accrual Policy**

Accrual Policy \* ID: [ ] Name: [Leave\_Policy\_2]

Policy Period: Yearly

Accrual Mode: Fixed

Credit In Terms Of: Days

**Year-Wise Fixed Accrual**

Credit Days: 21

- **Credit In Terms of:** Select the type of term for which you want to credit the accrual policy. You will get only two option in the list **Days** and **Hours**.

**Accrual Policy**

Accrual Policy \* ID: [ ] Name: [Leave\_Policy\_2]

Policy Period: Yearly

Accrual Mode: Fixed

Credit In Terms Of: Days

**Year-Wise Fixed Accrual**

Credit Days: 21

- If you select **Days** from the list then you have to enter credit days.
- If you select **Hours** from the list then you have to enter credit hours in HHH:MM format.

The top screenshot shows the 'Accrual Policy' form with the following settings: ID: Leave\_Policy\_2, Policy Period: Yearly, Accrual Mode: Fixed, Credit In Terms Of: Days, and Credit Days: 21. An arrow points to the 'Credit Days' field.

The bottom screenshot shows the same form with 'Credit In Terms Of' set to 'Hours' and 'Credit Hours' set to 120:00. An arrow points to the 'Credit Hours' field.

- **Calculated** - This mode enables the user to configure parameters for leave credit based on the attendance of the user in a previous attendance period. This previous attendance period can be defined using the **Previous Months to consider** (in case of Monthly accrual) or **Previous Year to Consider** (in case of Yearly accrual) drop-down list. Specify the number of months (or year) from the previous attendance period against which the leave accrual is to be calculated as shown below.

The screenshot shows the 'Accrual Policy' form with 'Accrual Mode' set to 'Calculated'. The 'Credit In Terms Of' is set to 'Hours'. Under 'Considered Attendance', 'Previous Year To Consider' is 1, 'Attendance Days' is 'Payable Days', and 'Payable Days' is 'Presents'. Below this is an 'Optional Parameters For Calculation' section with a table for 'Considered Attendance'.

From	To	Replace Value	Fixed Value
No Data			

- **Attendance Days:** Once the previous attendance period is defined, specify whether the attendance days to be considered for calculation should be the user's **Payable Days** or **Non-Payable Days** as shown.
- **Payable Days:** If user's Payable Days are selected for calculation, specify one of the following components against which the leave credit calculation is to be performed:
  - **Presents** - Total number of days on which the user was present.
  - **Paid Leaves** - Total number of days on which the user took paid leaves.
  - **Presents/Paid Leaves** - Total number of days on which the user was either present or took paid leave.

- **Non-Payable Days:** If user's Non-Payable Days are selected for calculation, specify one of the following components against which the leave credit calculation is to be performed:
  - **Un-Paid Leaves** - Total number of days on which the user took un-paid leaves.
  - **Absents** - Total number of days on which the user was absent.
  - **Un-Paid Leaves/Absents** - Total number of days on which the user was either absent or took un-paid leave.

Considered Attendance				
<input type="text" value="Search"/>				+
From ▲	To	Replace Value	Fixed Value	
1	19	Fixed	1.00	
20	25	Fixed	3.00	

Click **Add** button. Enter the Calculated Days Range (From-To) and specify the fixed value of leave which will be credited to the user.

*The From day value can start with "0" and you can enter the values in multiples of 0.5*

The administrator can credit a fixed number of leaves to a user, based on the previous attendance data, as specified above.

For example, the administrator can specify that a user who was present for a minimum of 20 days and a maximum of 25 days in the previous 1 month attendance period, will be credited 3 leaves. This can be configured as shown in the above example.

Click **Save** to define this new Accrual Policy on the system. Every new policy created on the system, will be reflected on the policy list on the right hand side of the **Accrual Policy** page as shown below.

### Optional Parameters For Calculation

Optionally, the following parameters can be defined for a calculated Accrual Policy, on expanding the **Optional Parameters For Calculation** tab as shown:

Optional Parameters For Calculation

Include Week-Offs ☐

Include Holidays ☐

Include Overtime ☐

Include Overtime All

Overtime For Half Day Conversion

- **Include Week-Offs** - Select this check box to include week-offs of the previous attendance period in the leave credit calculation.
- **Include Holidays** - Select this check box to include holidays of the previous attendance period in the leave credit calculation.
- **Include Overtime** - Select this check box to include overtime of the previous attendance period in the leave credit calculation. In the **Include Overtime** dropdown list, specify which overtime hours are to be considered when overtime is included in leave credit calculation.
- **Overtime For Half Day Conversion** - Specify the minimum number of hours required for overtime to be converted to a half day in leave credit calculation.

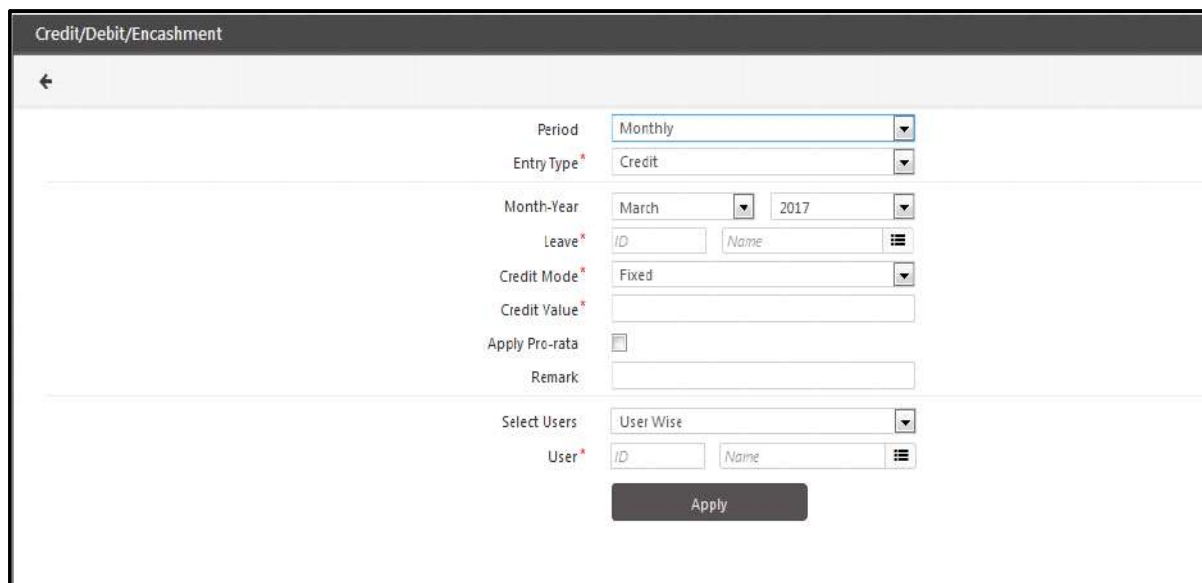

Click the **Add** button to save this configuration.

# Leave Credit/Debit/Encashment

This option enables the HR administrator to credit a certain value of leave to the user on monthly or yearly basis. Also the leave can be debited or encashed from the existing leave balance and thus helps in the Leave balance adjustment process. The leave balance adjustment can be done for a single user or multiple users.

Also See [“How to credit leaves to the Employees automatically?”](#) on page 2331.

To credit or debit leaves for users, go to **Leave Management> Balance Management > Credit/Debit/Encashment** and the following screen appears.

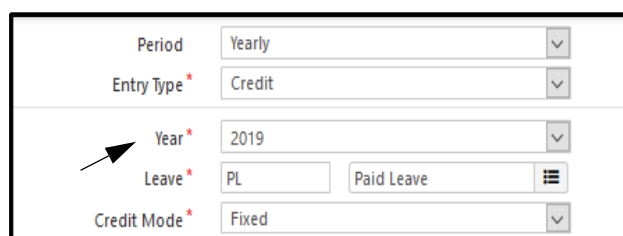

**Period:** Select the period as Monthly or Yearly for the credit/debit of leaves.

- For Monthly period, specify the **Month-Year** for which the leave credit/debit is to be performed.
- For Yearly period, specify the **Year** for which the leave credit/debit is to be performed.

*For Custom yearly period say for April 2018 to March 2019; leave can be credited by selecting year 2019 as shown below.*

**Entry Type:** Select the entry type as **Credit** or **Debit** (For encashing of leaves see [“Click on Save button to save the leave credit schedule.”](#))

*An organization should always operate either on Yearly period or Monthly period approach completely for leave management. Using a mixed period approach must be avoided to prevent data mismatch.*

**Leave:** Select a Leave from the leave selection picklist which is to be credited or debited to the user. The leaves are created from the Leave page.

**Credit/Debit/Encashment**

Period: Monthly  
 Entry Type: Credit  
 Month-Year: January 2020

 User: ID Name

**Picklist For Leave Masters**

LeaveID	Name
1	RANDOM LEAVE
2	Divali
3	Random Leave 2
HP	Hourly Paid Leave
PL	Paid Leave

Cancel

**Credit Mode:** If leaves are to be credited, select the mode as one of the following:

- **Fixed:** On selecting this option, specify the number of leaves to be credited in the **Credit Value** field.
- **Using Accrual Policy:** On selecting this option, select the Accrual Policy using the pick list button based on which leaves will be credited.

*If user's joining date lies in the current year then yearly credit/debit of leave should be done in the joining month-year. Also leave cannot be credited after the leaving date of user.*

For the Fixed Credit Mode/Fixed Accrual Mode (See ["Accrual Policy"](#)), the administrator has an option to apply Pro-rata calculation on the credit of leaves.

**Apply Pro-rata:** Select the checkbox to enable credit of leaves on pro-rata basis (i.e. on the basis of the actual number of days worked). For more details on Pro-rata see ["Leave Group"](#).

**Credit/Debit/Encashment**

Period: Monthly  
 Entry Type: Credit

**Remark:** If required provide remark for crediting or debiting the leave.

**Select Users:** Select a user or multiple users for whom the selected leave is to be credited or debited from the dropdown list.

Users can be selected from the filter options of User Wise, Group Wise, and All.

**Debit Value:** If a leave is to be debited from users, specify the number of days to be debited from the current leave balance in the **Debit Value** field as shown. In the following example, 2 leaves are being debited from the user's leave balance for "PL".

The screenshot shows the 'Credit/Debit/Encashment' form with the following fields and values:

- Period: Monthly
- Entry Type: Debit
- Month-year: March 2017
- Leave: PL (Paid Leave)
- Debit Value: 2
- Apply Pro-rata: ☐
- Remark: (empty)
- Select Users: User Wise
- User: 1678 (Supriya)

The form includes a search bar and a table listing the selected user. An 'Apply' button is at the bottom.

Using Accrual Policy, leave credit is done as shown below

The screenshot shows the 'Credit/Debit/Encashment' form with the following fields and values:

- Period: Monthly
- Entry Type: Credit
- Month-Year: March 2017
- Leave: SL (Sick Leave)
- Credit Mode: Using Accrual Policy
- Accrual Policy: 1 (Leave\_Policy\_1)
- Apply Pro-rata: ☒
- Remark: (empty)
- Select Users: All

The form includes an 'Apply' button at the bottom.

## How to credit leaves to the Employees automatically?

### Prerequisites:

"User/Employee should be assigned the Leave group which consists of the leave to be credited.

"If different number of leave is to be credited, then Accrual Policy is to be defined.

"The COSEC Alert Service on the server computer should be "ON" before setting the Task Scheduler.

To credit the leaves automatically, following steps should be performed:

#### A. Set “Schedule Parameters”

1. Go to Admin > System Utilities > Task Scheduler.
  2. Create a task scheduler for the task Leave Credit Schedule by clicking on Add button.
  3. Specify the Schedule Run Time at which the leave will be credited automatically say at 9:00 am.
  4. Select the Schedule Run Day from the options of Monthly or Weekly.
- “For Monthly option, check the boxes to select the months and select the date of the month on which the leave is to be credited.
- “For Weekly option, select the day of the week on which the leave is to be credited.

#### B. Set “Task Parameters”

1. To credit a fixed number of leave for every month, select the credit method as Fixed.  
Now select the leave to be credited and specify the number of leaves say 1.5 PL as shown in below figure.

The screenshot shows the 'Task Scheduler' window. The 'Schedule Name' is 'Leave Schedule' and it is 'Active'. Under 'Schedule Parameter', the 'Task' is 'Leave Credit Schedule', 'Run Schedule' is 'Monthly', and 'Every (Day Of The Month)' is '1'. The months from Jan to Dec are all checked. The 'Schedule Run Time' is 'HH:MM'. A 'Task Parameters' sub-window is open, showing 'Leave Selection' with 'Credit Method' as 'Fixed', 'Leave' as 'Paid Leave', and 'No of Days' as '1.5'. The 'Apply Pro-rate' checkbox is unchecked. The 'Processing Period' is set to 'Current'. A 'Filter' button is at the bottom left. On the right, a table lists the schedule:

ID	Schedule Name
1	Leave Credit Task

2. To credit a variable number of leave for different months, select the credit method as Policy. Now select the leave to be credited and select the leave credit policy i.e. the accrual policy from the picklist as shown in below figure.
3. Now, Select the Processing period i.e. the period (month or week) for which leave is to be credited.

For example:

If Processing period is Next. On first of January, 1.5 PL will be credited for February.

If Processing period is Current. On first of January, 1.5 PL will be credited for January.

If Processing period is Previous. On first of January, 1.5 PL will be credited for December.

The “Previous” option for Processing Period is available from COSEC V7R2 onwards.

#### C. Select the Users

1. Select the user filter option of User Wise if selected user is required to be credited the leaves.

2. Select the user filter option of Group Wise if a particular group of users are required to be credited the leaves.
3. Select the user filter option of All if all the active users are required to be credited the leaves.

Click on **Save** button to save the leave credit schedule.

## Leave Encashment

It has been described earlier how some leaves can be defined as encashable leaves i.e. an employee can receive remuneration against such leaves, when unused over a defined attendance period ("Configuring Leaves"). Using the Leave Encashment feature, the administrator can assign encashment to selected users for a definite attendance period.

To encash leave, go to **Leave Management > Balance Management > Credit/Debit/Encashment** and the following screen appears.

The screenshot shows the 'Credit/Debit/Encashment' form. The fields are as follows:

- Period: Yearly
- Entry Type: Encashment
- Year: 2016
- Leave: CL (Casual Leave)
- Encashment Mode: Available
- Encashment Value: (empty)
- Apply Pro-rata: ☐
- Remark: (empty)
- Select Users: User Wise
- User: ID (1567), Name (Sheetal)

At the bottom, there is an 'Apply' button.

**Entry Type:** Select the Entry Type as **Encashment** from the dropdown list as shown above.

**Period:** Specify the Month-Year for which the leave encashment is to be performed.

**Leave:** Select a leave using the picklist which is to be encashed by the user. This picklist contains only those leaves for which the Leave Encashment checkbox is enabled while configuring the leave.

*For a leave to be available for encashment, the user must ensure that the **Leave Encashment** option is enabled while defining the particular leave. To know more, please refer to ["Defining New Leaves"](#). The same leave must also be added to the default Leave Group applicable to the organization.*

**Encashment Mode:** Select the encashment mode from the dropdown list which can be used to define the number of leaves to be encashed from current leave balance for selected user. You can select one of the following options:

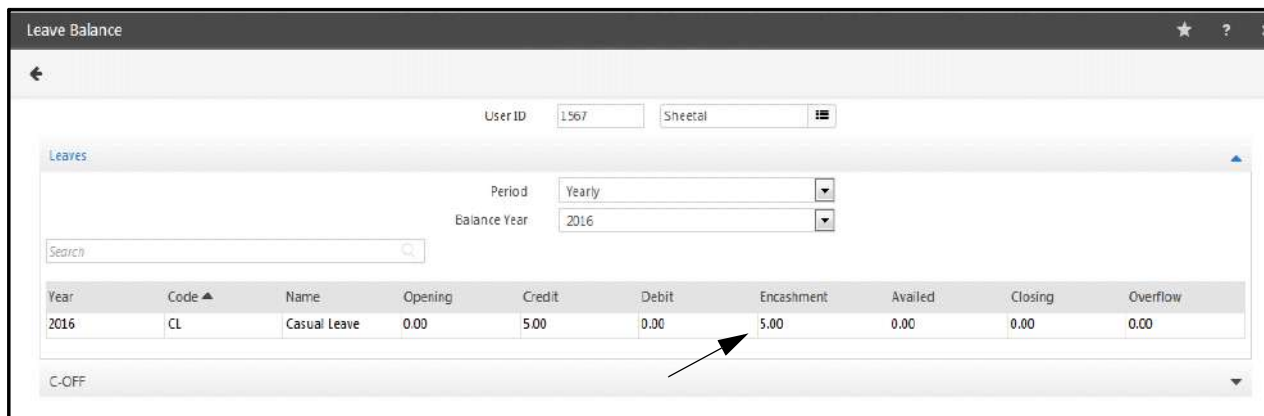

- **Defined:** Encash leaves for the number of days as defined in the **Encashment Value** field. Example: If available CL is 5, and defined encashment value is 3 then 3 CL out of available 5 CL will be encashed.
- **Available:** Encash all available leaves in leave balance. Example: If available CL is 5, then 5 CL will be encashed.

**Remark:** If required provide remark for encashing the leave.

**Select Users:** Select a user or multiple users for whom the selected leave is to be encashed from the dropdown list. Users can be selected from the filter options of User Wise, Group Wise or All.

Click the **Apply** button to apply the leave encashment settings on the specified users.

The number of Encashed leave appears in Leave Balance page as shown below.

The screenshot shows the 'Leave Balance' interface. At the top, there are input fields for 'User ID' (1967) and 'Sheetal'. Below these, a 'Leaves' section contains a 'Period' dropdown set to 'Yearly' and a 'Balance Year' dropdown set to '2016'. A search bar is also present. The main part of the interface is a table with the following columns: Year, Code, Name, Opening, Credit, Debit, Encashment, Availed, Closing, and Overflow. The table contains one row for the year 2016, with Code 'CL' and Name 'Casual Leave'. The values are: Opening 0.00, Credit 5.00, Debit 0.00, Encashment 5.00, Availed 0.00, Closing 0.00, and Overflow 0.00. An arrow points to the 'Encashment' value of 5.00. At the bottom left, there is a 'C-OFF' label.

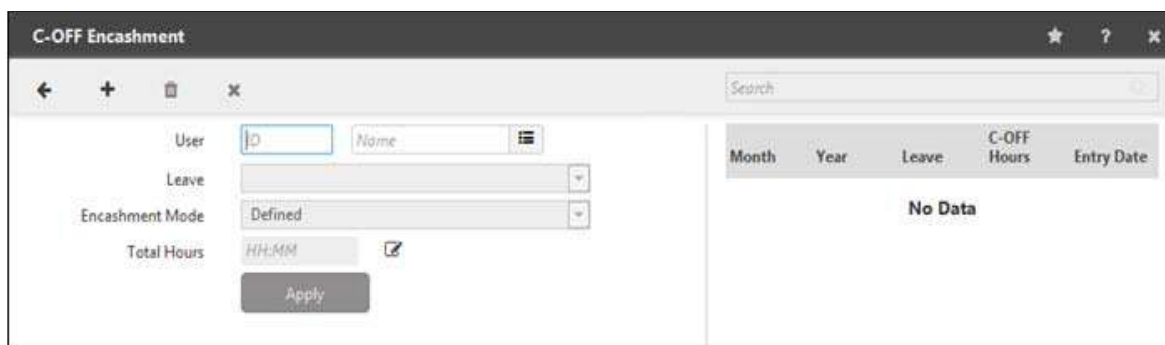

Year	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2016	CL	Casual Leave	0.00	5.00	0.00	5.00	0.00	0.00	0.00

# C-OFF Encashment

Sometimes, employees may choose to encash accumulated C-OFFs instead of using them, if C-OFF encashment is permitted by the organization. C-OFF encashment is a concept similar to Leave encashment. On COSEC, this feature can be configured by an HR administrator using the *C-OFF Encashment* functionality.

To encash C-OFFs for a user, go to **Leave Management > Balance Management > C-OFF Encashment** and the following screen appears.

The page displays configurations on the left hand side and to the right is a grid containing details like: the month and year in which the C-Off hours is credited, the leave type, C-Off hours availed and the date of applying for encashment.

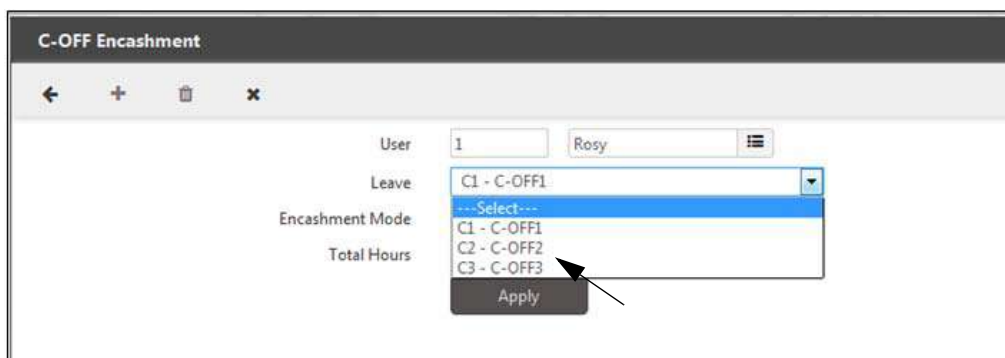

To encash C-Off click the **New** button and enter the following parameters:

- **User:** Select a **User** from the user picklist for whom the C-OFF encashment is to be performed.
- **Leave:** Select a leave from the dropdown list. All *Compensatory-Off* type of leaves available to this user will appear in this dropdown list for selection.

*For a leave to be available for C-OFF encashment, the user must ensure that the **Leave Encashment** option is enabled while defining a *Compensatory-Off* leave type. To know more, please refer to [“Defining New Leaves”](#). The same leave must also be added to the default Leave Group applicable to the organization.*

In the following example, there are two leaves available to the selected user:

- **Encashment Mode:** Select the mode for encashment from one of the following options -

- **Defined** - This mode indicates that the encashment is to be performed against the number of C-OFF hours defined by the HR administrator in the **Total Hours** field. To specify the number of hours, click the Total Hours picklist button. The **C-OFF Selection** pop-up window displays the **Available C-OFF** hours for the selected user. In the **Select C-OFF** field, specify the number of hours (HH:MM format) from the Available C-OFF hours which are to be encashed for the user. Click the **Select** button.

In the following example for **Defined** mode, the available C-OFF for the selected user is 04:00 hours of which 03:00 hours are selected for encashment.

Attendance Date	Available C-OFF	Select C-OFF
01/10/2016	04:00	03:00
03/10/2016	01:00	

Update Close

- **Available** - This mode indicates that the encashment is to be performed against the total available C-OFF hours for the selected user. Hence, for the same user as the above example, in the Available mode, the encashment will be performed for 5:00 hours as shown below.

User: 1 Rosy  
 Leave: C1 - C-OFF1  
 Encashment Mode: Available  
 Total Hours: 05:00  
 Apply

Month	Year	Leave	C-OFF Hours	Entry Date
No Data				

Click the **Apply** button to apply for encashment and the saved leave gets displayed in the grid as shown below.

✓ Saved Successfully

User: perry  
 Leave: C1 - C-OFF1  
 Encashment Mode: Available  
 Total Hours: 01:00  
 Apply

Month	Year	Leave	C-OFF Hours	Entry Date
Nov	2016	C1	01:00	09/11/2016
Nov	2016	C1	04:00	09/11/2016

# Overflow Management

*Overflow Adjustment* is a concept essential in order to check an employee's leave balance from overflowing at any point of time. This means that the leave balance of an employee should never accumulate more leaves than the maximum accumulation limit set for the employee.

The administrator can set a check on the maximum accumulation of leaves in a user's leave balance using the **Leave Balance Check** option while defining a new leave. To know more about this configuration, refer to ["Defining New Leaves"](#).

Cancellation of leave applications may be a common cause for such overflow because it restores the leave balance that was deducted on application of a leave. This may sometimes cause any additionally credited leaves to overflow over the maximum leave accumulation limit for the user. To manage this, the HR administrator can determine how the overflowing leaves should be treated, as per the company policy.

In such a scenario, one of the following can be done:

- Allowing the overflowing leaves to be *reused*.
- *Encashment* of overflowing leaves.
- *Discarding* the overflowing leaves.

To manage leave overflow, go to **Leave Management > Balance Management > Overflow Management** and the following screen appears.

The screenshot shows a web form titled "Overflow Management". It includes a back arrow in the top left. The form has several sections: "User" with a dropdown menu, "Leave" with a dropdown menu, "Overflow" with a dropdown menu, "Adjustment Type" with a dropdown menu currently showing "Discard", and "Adjustment Value \*" with a text input field. An "Apply" button is located at the bottom right of the form.

**User:** Select a User from the picklist for whom the overflow adjustment is to be performed.

**Leave:** Select a leave from the dropdown list for which the overflow is to be adjusted. This list contains only those leaves in which the "maximum accumulation check" checkbox is enabled at the time of configuration of the selected leave.

**Overflow:** The system automatically retrieves and displays the number of overflowing leaves in the field. This value is generated when the accumulated leave exceeds its maximum leave specified from the ["Keeping Check on Leave Balance"](#) section.

I.e. If the maximum accumulated check specified is 20 days and the user applies leave for 2 days. Then the leave balance becomes 18 days. Now, if the admin credits 2 days then again the leave balance will become 20 days. Now, in case for any reason if the applied leave gets rejected or cancelled then it gets credited to the user giving a balance of 22 leaves which is more than the value specified in the Maximum Accumulated check. So this extra 2 days is the value displayed in overflow.

**Adjustment Type:** Select the adjustment type for the overflowing leaves as **Discard**, **Reuse** or **Encash** as shown below.

A screenshot of a web form showing the 'Adjustment Type' dropdown menu. The menu is open, displaying three options: 'Discard', 'Reuse', and 'Encash'. The 'Discard' option is currently selected and highlighted in blue. Above the dropdown, the 'Leave' field is set to 'O1 - SL' and the 'Overflow' field is set to '1.00'. The 'User' field shows 'overflow1' and 'Ramesh'.

**Adjustment Value:** Specify the number of overflowing leaves to be discarded, reused or encashed in the field.

- If the **Adjustment Type** is **Reuse** or **Encash**, then specify the period for which adjustment is to be done.

A screenshot of the web form with 'Adjustment Type' set to 'Reuse'. The 'Adjustment Value' field is set to '1.00'. The 'Period' dropdown is set to 'Monthly'. The 'Credit/Encash To Period' fields are set to 'March' and '2017'. An 'Apply' button is visible at the bottom.

A screenshot of the web form with 'Adjustment Type' set to 'Encash'. The 'Adjustment Value' field is set to '1.00'. The 'Period' dropdown is set to 'Yearly'. The 'Credit/Encash To Period' field is set to '2017'. An 'Apply' button is visible at the bottom.

- Select the **Period as Monthly** for monthly adjustment of overflow leaves.
  - Select the month and year for which the overflow leave is to be credited in Reuse adjustment or encashed in Encash type of adjustment.
- Select the **Period as Yearly** for yearly adjustment of overflow leaves.
  - Select the year for which the overflow leave is to be credited in Reuse adjustment or encashed in Encash type of adjustment.
- If **Discard** option is selected only specify the adjustment value of leave to be discarded.

An organization should always operate either on Yearly period or Monthly period approach completely for leave management. Using a mixed period approach must be avoided to prevent data mismatch.

Click the **Apply** button to perform the overflow adjustment.

The overflow leave is shown in Leave Balance page as shown below.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Aailed	Closing	Overflow
2017	Mar	O1	SL	0.00	7.50	0.00	0.00	0.00	6.50	1.00
2017	Mar	O2	PL	1.00	0.00	0.00	0.00	0.00	1.00	0.00
2017	Mar	O3	CF	0.00					0.00	0.00

After the encash adjustment of overflow leave, it will be shown in Encashment as shown below.

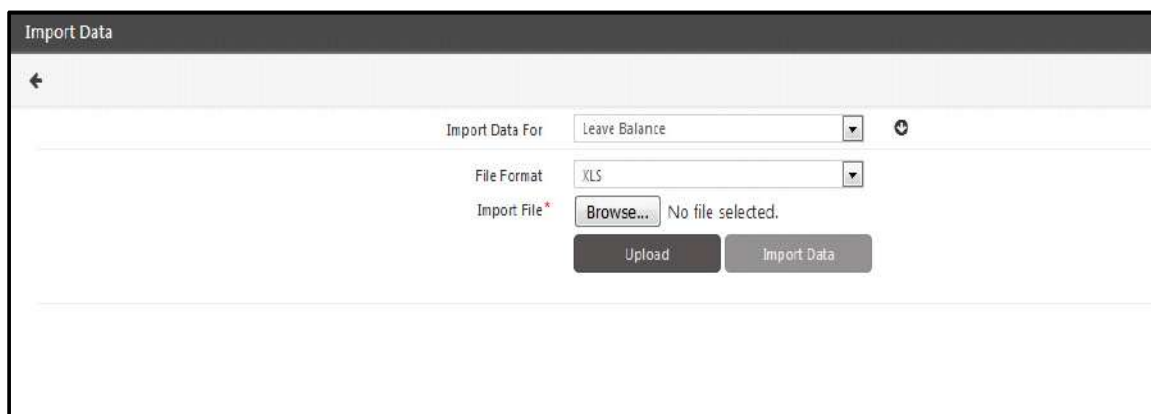

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Aailed	Closing	Overflow
2017	Mar	O1	SL	0.00	7.50	0.00	1.00	0.00	6.50	0.00
2017	Mar	O2	PL	1.00	0.00	0.00	0.00	0.00	1.00	0.00
2017	Mar	O3	CF	0.00					0.00	0.00

# Import Leave Balance

The COSEC application has an inbuilt utility for enabling users to import data from excel files with predefined format. This would thus save the end user a lot of time and effort in having to make individual data entries at the application level.

This can be done by downloading the sample import file by clicking the  button on the **Import Data** page. The user can thus insert all the data in the sample file and then upload it to the system.

To import leave balance data from a file, go to **Leave Management > Balance Management > Import Leave Balance** and the following screen appears.

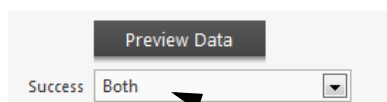

The following options appear for configuration on the **Import Data** page.

- **Import Data For** - Select the table from the dropdown list to which the data is to be imported.
- **File Format** - Select the file format of the specific file from the dropdown list. The options available are XLS and CSV.
- **Import File** - Browse and select the file from which the data is to be imported.

The **Preview Data** button enables the administrator to view the data in the respective worksheets to confirm that the data is in order prior to giving the import command.

Click on **Import Data**. The system will import all the relevant valid entries from the sheet and will display the status in the bottom grid. On successful import the, “Success” status will appear in the data preview as “Yes”. Else, a “No” status will appear with an error description as shown.

User can also filter import result records on the basis of their success value (Yes/No) using the **Success** dropdown list.

*Administrator needs to ensure that the ASP.NET user has full rights on the folder containing the Excel or .csv file for the import data operation.*

# Leave Application/Approval

---

Leave Application is a formal mode of requesting leave approval before or after an employee has taken a leave. It enables an organization to keep a track of all requested and approved leaves and enables the HR administrator or reporting in-charge to address issues such as irregularities in the attendance of employees or shortage of resources due to overlapping leaves.

The Leave applications can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module

COSEC Web enables all *System Account users* with appropriate page rights to make leave applications using the Leave Management module. All applications made by the System Account user are pre-approved by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make leave applications using the *Leave Management* module. All applications made by the On Behalf System Account User are pre-approved by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#). To receive a notification alert once the final verdict for such application is provided by the RIC, make sure you have configured the desired Mobile Number/Email ID in [“Optional”](#) as well as configure the Leave Approval/Leave Rejection Alert parameters. For details refer to [“Configuring Alert Messages”](#).

For leave applications made using the Employee Self Service module, the leave approval has to be done by the respective supervisors of the reporting group by logging into the ESS. However, such leaves can also be sanctioned by a System Account user from the Leave Management module on the COSEC Web Application.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

For leave approval [See “Leave Approval” on page 2362](#).

*ESS users can apply for leaves only using the ESS module and such leave applications require approval either from the reporting group in-charge or the COSEC Web system account user. Leaves directly approved by the system administrator do not require any further approval from respective supervisors.*

*The Leave applied from Leave Management module gets approved automatically.*

*Applied leaves can be modified or cancelled after they have been approved or rejected. Once a leave application is modified it will be submitted for approval, and once the verdict is given, it can be modified again.*

*Once the modification/cancellation application is approved/rejected, an employee can apply for modification/cancellation of it ones again.*

You can apply for Leaves as follows:

- [“Applying for a Leave \(Leave Type - Paid\)”](#)
- [“Applying for a Leave \(Leave Type- Unpaid, Layoffs, Hourly\)”](#)

For Leave Type - Compensatory-OFF, refer to [“C-OFF Application/Approval”](#).

For Leave Type - Restricted Holiday, refer to [“Restricted Holidays”](#).

## Applying for a Leave (Leave Type - Paid)

This section describes how to apply for a leave using the Leave Management module.

Leave applications can be applied for a particular day/s of the month.

For leave applications within the same month, refer to [“Leave Applications for a Single Day or Multiple Days within the same Month”](#).

When leave applications are applied for across months it is dependent on the available balance of each month. For details refer to [“Leaves Applications across Months/Years”](#).

Similarly, if leave applications are applied across years, it is dependent on the Yearly Period for Leave Balance configured, whether the check box Carry Forward to Next Year is enabled or disabled as well as if Manual Leave Credit has been provided for next year or not. For details refer to [“Leaves Applications across Months/Years”](#).

To view the details of the leaves, refer to [“Leave Balance”](#).

### Leave Applications for a Single Day or Multiple Days within the same Month

To apply for a leave, click **Leave Management > Application/Approval > Leave Application** and the following screen appears.

The screenshot shows the 'Leave Application' form. On the left, there are input fields for 'User' (with a dropdown), 'Application Date', 'Consideration In Terms Of' (set to 'Both'), 'From' (with 'From Date' and 'Full Day' dropdown), 'To' (with 'To Date' and 'Full Day' dropdown), 'Applied Duration', 'Posted Duration', 'Leave' (with a 'Select' dropdown), and 'Current Balance'. Below these is the 'Reason And Contact Info' section with fields for 'Reason' (50 Char), 'Address' (30 Char), and 'Contact Number' (20 Char), along with 'Submit' and 'Cancel' buttons. On the right, there's a summary section showing 'Dec 2019' and 'Feb 2020' with 'Availed Leaves Days: 0' and 'Hours 000:00'. Below this are four buttons: '0 day Absent', '0 Pending', '0 Approved', and '0 Rejected'. At the bottom right, there's an 'Attendance Details' table with columns: Date, Shift, 1st Half, 2nd Half, First IN, Last OUT, and Work Hours. The table currently shows 'No Data'.

The page displays configurations on the left hand side and to the right is the attendance details of the user along with all the leave application details of a particular user for a particular month. It also displays the number of leaves availed, total absent days, total leaves pending, approved and rejected.

To apply a new leave, click **New** button and enter the following parameters:

**User:** Select user from the picklist for whom the leave application is to be made.

**Application Date:** It indicates the date for which application is going to be created. Thus, “Application Date” is not editable because its an system-generated field which shows current date.

**Consideration In Terms Of:** Select the option for which type of leave you want to apply, from the given list.

**From/To Date:** Select the starting and ending date for the leave period using the date selection button. For a single day select the same date in both the fields.

- Specify whether the leave should be considered for **Full Day**, **First Half** or **Second Half** for a single day. For more than 1 leave specify the starting day of leave as full day or second half and ending leave day as full day or first half as shown below.

For a particular user, if **Restrict Half Day Considerations** is enabled in the page User > User configuration > T&A, then in **From/To Date** only full day attendance options will be visible and all the other half day options will be disabled for that particular user as shown in the screen below.

**Leave:** Select the type of leave to be applied from the dropdown list. This list displays all leaves defined on the system as shown below.

Leave P - Paid Leave

Current Balance CL - Casual Leave

P - Paid Leave

PL - Privilege Leave

SL - Sick Leave

1. This feature cannot be used to apply for Compensatory-OFF leave types. Hence such leaves defined on the system will not appear on the Leave selection list. To know more about applying for C-OFF, refer to "[C-OFF Application/Approval](#)".

2. The application and Approval of Restricted holiday type leave is described in "[Restricted Holidays](#)".

**Current Balance:** It displays the current leave balance which guides the user to apply for the leave and accordingly the applied leave will be deducted from the leave balance.

The leaves are credited to the user manually by the administrator or through the scheduler using Accrual Policy. See "[Leave Credit/Debit/Encashment](#)" and "[Accrual Policy](#)"

You can also view the leave balance detail by clicking Details » icon next to the text-box. The **Leave Balance Detail** window will appear which shows the details of Paid Leave type and Restricted Leave type provided if user has the available balance for the leave.

**Example:** The user is applying leave on 7th as shown above. Before applying the type of leave; you must know which leave type has available balance. So click on » to view the available balance.

Leave Balance Detail

User 2551 Rushi Shah

Attendance Period Jan 2020

Search

Code	Name	Opening	Credit	Debit	Encashed	Availed	Closing	Overflow
1	RANDOM LEAVE	00:00	04:00	00:00	00:00	01:15	02:45	00:00
3	Random Leave 2	0	5	0	0	4.5	0.5	0
HP	Hourly Paid Leave	00:00	05:00	00:00	00:00	00:00	05:00	00:00
PL	Paid Leave	0	1.75	0	0	0	1.75	0

Now you know that Paid Leave has balance of 1.75; so you can select the Paid Leave type leave in drop down and click Submit button to apply for leave.

### Reason and Contact Info

- **Reason:** Enter reason for requesting leave.
- **Address:** Provide address of the user for whom the leave application is being made.
- **Contact Number:** Provide the contact number of the user for whom the leave application is being made.
- **Medical Certificate Available:** Select the checkbox to make it mandatory for the applicant to produce a medical certificate as a proof to testify the reason behind the current leave.

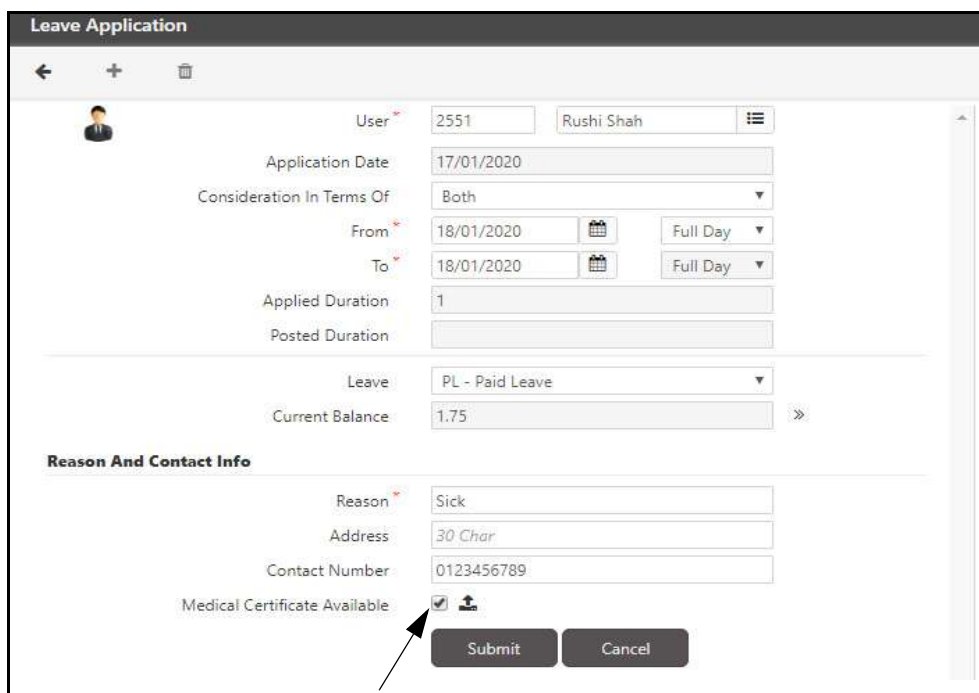

Select this checkbox if you have a Medical Certificate as a proof and reason for the current leave. To upload this certificate, click on the **Upload**  button.

Select the desired file as per the supported formats (.jpg, .bmp, .png, .pdf) and size.

Click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

This option is available only if it is enabled during configuration of the selected leave from the Leave page. For more information, refer to [“Configuring Leaves”](#).

Click **Submit** button to apply for the leave as shown below.

The applied leave gets displayed in the Application Details grid as shown below. If the number of days of the applied leave is more than the current leave balance, then the system will not allow the application to be made.

The screenshot shows the 'Leave Application' form. On the left, the form fields include: User (U4), Application Date (14/06/2021), Consideration In Terms Of (Both), From (21/06/2021), To (21/06/2021), Applied Duration (1.0), Posted Duration (1.0), Leave (PL - Paid Leave), Current Balance (81.50), Reason (Personal), Address (30 Chars), Contact Number (20 Chars), Application Status (Approved (14/06/2021 18:00)), and Remark (Approved Leave n2). On the right, a grid titled 'Application Details' shows a list of applied leaves. The grid has columns: From, To, Leave, Application Date, Application Type, Status, and Approval Details. The grid shows 10 records, with the first 7 records displayed. The first 7 records are: 21/06/2021 to 21/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 19/06/2021 to 19/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 18/06/2021 to 18/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 16/06/2021 to 16/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 15/06/2021 to 15/06/2021, PL, 11/06/2021, New, Status: Red X, Approval Details: Red X; 14/06/2021 to 14/06/2021, PL, 14/06/2021, New, Status: Red X, Approval Details: Red X; 11/06/2021 to 11/06/2021, PL, 10/06/2021, Modification, Status: Red X, Approval Details: Red X. The grid also shows 3.5 days Absent, 0 Pending, 6 Approved, and 4 Rejected. The grid is titled 'Application Details' and has a 'Show All' button. The grid is also titled 'Application Details' and has a 'Show All' button.

From this page you can also view the details of leaves which have been applied for cancellation or for modification from the ESS module, once they get approved or rejected.

To view the leave approved details, select a leave from the grid on the right hand side and the data gets loaded as shown in the screen below.

The screenshot shows the 'Leave Application' form. On the left, the form fields include: User (U4), Application Date (14/06/2021), Consideration In Terms Of (Both), From (21/06/2021), To (21/06/2021), Applied Duration (1.0), Posted Duration (1.0), Leave (PL - Paid Leave), Current Balance (81.50), Reason (Personal), Address (30 Chars), Contact Number (20 Chars), Application Status (Approved (14/06/2021 18:00)), and Remark (Approved Leave n2). On the right, a grid titled 'Application Details' shows a list of applied leaves. The grid has columns: From, To, Leave, Application Date, Application Type, Status, and Approval Details. The grid shows 10 records, with the first 7 records displayed. The first 7 records are: 21/06/2021 to 21/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 19/06/2021 to 19/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 18/06/2021 to 18/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 16/06/2021 to 16/06/2021, PL, 14/06/2021, New, Status: Green checkmark, Approval Details: Green checkmark; 15/06/2021 to 15/06/2021, PL, 11/06/2021, New, Status: Red X, Approval Details: Red X; 14/06/2021 to 14/06/2021, PL, 14/06/2021, New, Status: Red X, Approval Details: Red X; 11/06/2021 to 11/06/2021, PL, 10/06/2021, Modification, Status: Red X, Approval Details: Red X. The grid is titled 'Application Details' and has a 'Show All' button. The grid is also titled 'Application Details' and has a 'Show All' button.

Similarly, you can also view the leave modification details, by selecting a leave from the grid on the right hand side and the data gets loaded as shown in the screen below.

It displays the status of the user's application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending , Approved  or Rejected .

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

### Leaves Applications across Months/Years

The configurations for the Leave Application are similar to that as mentioned above, except that the end date may either be of a different month or year.

### Leave Applications across Months

When Leave Applications are made across two months the leave of each month is deducted from the respective month only.

Consider the following example:

Time and Attendance Module > Attendance Policy > Yearly Period for leave Balance, the Start-End Month is configured as January - December

An Employee has 10 PL at end of July Month. Leaves 1.75 is credited in the month of August. Considering no leave is been applied till now., for month of August the Leave Balance Details will be as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	August	PL	Paid Leave	10.00	1.75	0.00	0.00	0.00	11.75	0.00

An Employee has 11.75 PL at end of August Month. Considering no leave is been applied/credited for Month of September. Leave Balance process is done, hence for month of September the Leave Balance Details will be as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	September	PL	Paid Leave	11.75	0.00	0.00	0.00	0.00	11.75	0.00

#### Case 1:

- Leave Application date = 29/08/2022
- Leave Applied-
  - From Date = 30/08/2022
  - To Date = 02/09/2022
- Applied Days = 4
- Posted Days = 4

In this case, 2 leaves will be availed from the month of August and 2 leave will be availed from the month of September.

Same deduction of leave will be updated in the "Availed" field of Leave Balance View/Reports.

Also, the field of opening and closing balance will be updated and shown as below.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	August	PL	Paid Leave	10.00	1.75	0.00	0.00	2.00	9.75	0.00
2022	September	PL	Paid Leave	9.75	0.00	0.00	0.00	2.00	7.75	0.00

Now, if the leave applied is rejected by SA/RIC or cases where the leave application is deleted by the user, in all these case the leave balance deducted from respective months, will be credited back to their respective months, that is 2 leave to be credited back in month of August and 2 leave to be credited back in month of September.

#### Case 2:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	August	PL	Paid Leave	10.00	1.75	0.00	0.00	0.00	11.75	0.00
2022	September	PL	Paid Leave	11.75	0.00	0.00	0.00	0.00	11.75	0.00

- Leave Application date = 10/08/2022
- Leave Applied-
  - From Date = 18/08/2022
  - To Date = 02/09/2022
- Applied Days = 16
- Posted Days = 12 (10 days of August and 2 days of September)

- Assuming week-off days of August are 20,21,27,28\

Hence, applied leave days for the month of August is 10, then September's opening balance will be 1.75 and applied days for the month of September is 2. Balance is not sufficient for the month of September hence the application cannot be applied and validation to be provided.

### Leave Applications across Years

When leave applications are made across years then it is dependent on:

- Time and Attendance > Policies > Attendance Policy > Yearly Period for Leave Balance
- Leave Management > Leave > Leave Balance Check > Carry Forward to Next Year, whether enabled or disabled.
- whether Manual Credit has been provided or not.

Let us understand this with the help of the following example:

- Time and Attendance Module > Attendance Policy > Yearly Period for leave Balance, Start-End Month is configured as January - December
- An Employee has 10 PL at end of November month. Considering no leave is applied till now. Hence, for the month of December the Leave Balance Details are as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	December	PL	Paid Leave	10.00	0.00	0.00	0.00	0.00	10.00	0.00

#### Case1:

Leave Management > Leave > Leave Balance Check > Carry Forward To Next Year is disabled and no manual leave credit has been provided.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	December	PL	Paid Leave	10.00	0.00	0.00	0.00	0.00	10.00	0.00
2023	January	PL	Paid Leave	0.00	0.00	0.00	0.00	0.00	0.00	0.00

When leave is applied From Date = 29/12/2022 and To Date = 03/01/2023, then in such a case the application will not be allowed as sufficient leave balance is not available for January.

#### Case 2:

Leave Management > Leave > Leave Balance Check > Carry Forward To Next Year is enabled and Maximum Carry Forward Limit Check is disabled.

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	December	PL	Paid Leave	10.00	0.00	0.00	0.00	0.00	10.00	0.00
2023	January	PL	Paid Leave	10.00	0.00	0.00	0.00	0.00	10.00	0.00

- Leave Application date = 10/12/2022
- Leave Applied
  - From Date = 16/12/2022
  - To Date = 02/01/2023
- Applied Days = 18

- Posted Days = 12 (11 days for month of December and 1 day for month of January)

Assuming week-off days 17,18,24,25 and 31 of December and 1 of January. Applied days for the month of December are 11 and Month of January is 1. Here, Balance is not sufficient for either month then leave application cannot be applied.

Similarly, if balance is not available for any one month also then also leave application cannot be applied.

### Case 3:

Leave Management > Leave > Leave Balance Check > Carry Forward To Next Year is enabled

Maximum Carry Forward Limit is enabled and Maximum Limit is set as 5

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	December	PL	Paid Leave	10.00	0.00	0.00	0.00	0.00	10.00	0.00
2023	January	PL	Paid Leave	5.00	0.00	0.00	0.00	0.00	5.00	0.00

- Leave Application date = 10/12/2022
- Leave Applied
  - From Date = 29/12/2022
  - To Date = 03/01/2023
- Applied Days = 6
- Posted Days = 4 (Assuming 2 day week off i.e. 31/12/2022 and 01/01/2023)

In the above case, 2 leave will be availed from December month and 2 leave will be availed from January month. Same deduction of leave balance will be visible in the "Availed" field of in Leave Balance View/Reports.

The opening and closing balance will be as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2022	December	PL	Paid Leave	10.00	0.00	0.00	0.00	2.00	8.00	0.00
2023	January	PL	Paid Leave	5.00	0.00	0.00	0.00	2.00	3.00	0.00

### Manual Credit

- Time and Attendance Module > Attendance Policy > Yearly Period for leave Balance
  - Start-End Month: September - August
- An Employee has 10 PL at end of July Month. Leaves= 1.75 gets credited in the month of August. Considering no leave is applied till now. Hence, for month of August the Leave Balance Details are as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2021	August	PL	Paid Leave	10.00	1.75	0.00	0.00	0.00	11.75	0.00

### Case 1:

- Leave Management > Leave > Leave Balance Check > Carry Forward To Next Year is disabled
- Manual Leave credited= 5 for Month of September.

- Hence Leave Balance Details are as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2021	August	PL	Paid Leave	10.00	1.75	0.00	0.00	0.00	11.75	0.00
2021	September	PL	Paid Leave	0.00	5.00	0.00	0.00	0.00	5.00	0.00

- Leave Application date = 30/08/2021
- Leave Application-
  - From Date = 30/08/2021
  - To Date = 02/09/2021
- Applied Days = 4
- Posted Days = 4
- Now, 2 leave will be availed from the month of August and 2 leaves will be availed from the month of September.
- Hence, Leave Balance Details will be as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2021	August	PL	Paid Leave	10.00	1.75	0.00	0.00	2.00	9.75	0.00
2021	September	PL	Paid Leave	0.00	5.00	0.00	0.00	2.00	3.00	0.00

If the leave application is rejected by SA/RIC or if the application is deleted by the user, in all these case the leave balance deducted from respective months, will be credited back to their respective months, that is 2 leave will be credited back in month of August and 2 leave will be credited back in month of September.

Hence the after the rejection/cancellation the leave balance for months of August and September will be as follows:

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2021	August	PL	Paid Leave	10.00	1.75	0.00	0.00	0.00	11.75	0.00
2021	September	PL	Paid Leave	0.00	5.00	0.00	0.00	0.00	5.00	0.00

## Applying for a Leave (Leave Type- Unpaid, Layoffs, Hourly)

This section describes how to apply for a leave using the Leave Management module.

To do this, click to **Leave Management module > Application/Approval > Leave Application** and the following screen appears.

The screenshot displays the 'Leave Application' interface. On the left, the configuration section includes a 'User' dropdown, 'Application Date', 'Consideration In Terms Of' (set to 'Both'), 'From' and 'To' date pickers, 'Applied Duration' and 'Posted Duration' fields, a 'Leave' type selector, 'Current Balance', and a 'Reason And Contact Info' section with fields for 'Reason', 'Address', and 'Contact Number'. On the right, the attendance details section shows a summary: '0 day Absent', '0 Pending', '0 Approved', and '0 Rejected'. Below this is a table for 'Attendance Details' with columns: Date, Shift, 1st Half, 2nd Half, First IN, Last OUT, and Work Hours. The table currently displays 'No Data'.

The page displays configurations on the left hand side and to the right is the attendance details of the user along with all the leave application details of a particular user for a particular month. It also displays the number of leaves availed, total absent days, total leaves pending, approved and rejected.

To apply a new leave, click **New** button and enter the following parameters:

**User:** Select user from the picklist for whom the leave application is to be made.

**Application Date:** It indicates the date for which application is going to be created. Thus, "Application Date" is not editable because its an system-generated field which shows current date.

**Consideration In Terms Of:** Select the option for which type of leave you want to apply, from the list — Both, First Half Only, Second Half Only, Hourly.

If you wish to apply for Hourly Leave then select **Hourly** as the **Consideration In Terms Of** option.

Then the Leave option will display the Hourly Leave Type — Paid, Unpaid — as configured by you from Leave Management Module > Leave.

**Leave Application**

First Half

For a particular user, if **Restrict Half Day Considerations** is enabled in the page User > User configuration > T&A, then in **From/To Date** only full day attendance options will be visible and all the other half day options will be disabled for that particular user as shown in the screen below.

**Applied Duration:** It displays the total time duration for which the leave has been applied.

**Posted Duration:** It displays the number of working duration posted between the leave applied. It is automatically calculated by the system.

**Leave:** Select the type of leave to be applied from the dropdown list. This list displays all leaves defined on the system as shown below.

**Current Balance:** It displays the current leave balance which guides the user to apply for the leave and accordingly the applied leave will be deducted from the leave balance.

*The leaves are credited to the user manually by the administrator or through the scheduler using Accrual Policy. See [“Leave Credit/Debit/Encashment”](#) and [“Accrual Policy”](#).*

You can also view the leave balance detail by clicking Details » icon next to the text-box. The **Leave Balance Detail** window will appear which shows the details of Paid Leave type and Restricted Leave type provided if user has the available balance for the leave.

PL	Paid Leave	0					0	0
RH	Restricted Holiday	0					0	0

Now you know that Hourly Leave has balance of 19.30; so you can select the Hourly Leave type leave in drop down and click Submit button to apply for leave.

### Reason and Contact Info

- **Reason:** Enter reason for requesting leave.
- **Address:** Provide address of the user for whom the leave application is being made.
- **Contact Number:** Provide the contact number of the user for whom the leave application is being made.

- **Medical Certificate Available:** Select the checkbox to make it mandatory for the applicant to produce a medical certificate as a proof to testify the reason behind the current leave.

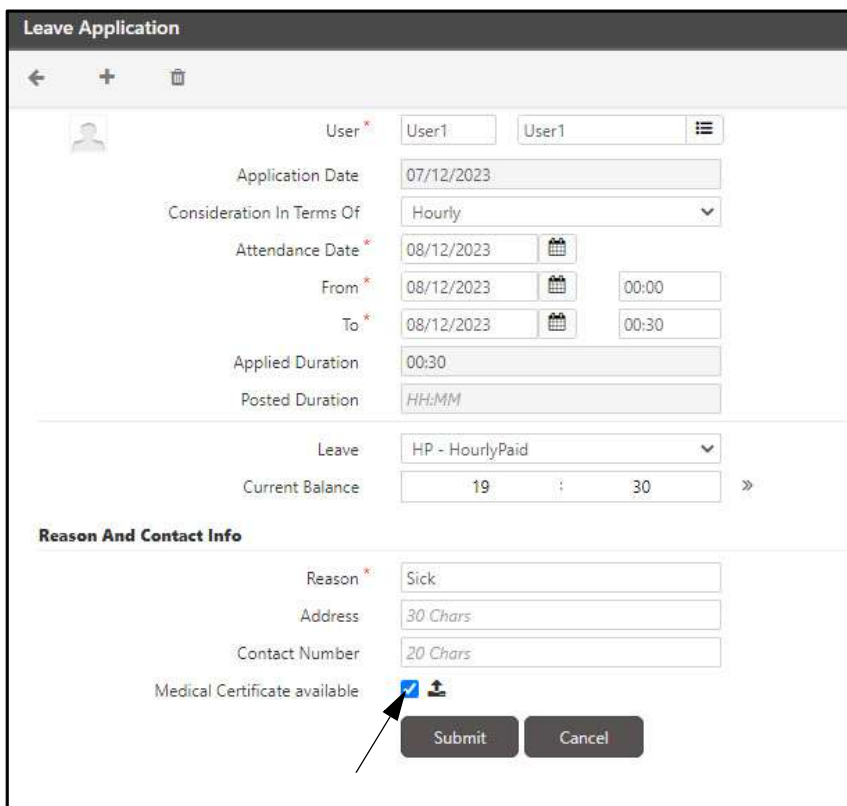

Select this checkbox if you have a Medical Certificate as a proof and reason for the current leave. To upload this certificate, click on the **Upload**  button.

Select the desired file as per the supported formats (.jpg, .bmp, .png, .pdf) and size.

Click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

This option is available only if it is enabled during configuration of the selected leave from the Leave page. For more information, refer [“Configuring Leaves”](#).

Submit Cancel

Click **Submit** button to apply for the leave as shown below.

The applied leave gets displayed in the Application Details grid as shown below. If the number of days of the applied leave is more than the current leave balance, then the system will not allow the application to be made.

The screenshot shows the 'Leave Application' form. On the left, there are fields for User (User1), Application Date (07/12/2023), Consideration In Terms Of (Hourly), Attendance Date (03/12/2023), From (03/12/2023 00:00), To (03/12/2023 00:30), Applied Duration (00:30), Posted Duration (00:30), Leave (HP - HourlyPaid), and Current Balance (17 / 30). Below these are fields for Reason (Sick), Address (30 Chars), Contact Number (20 Chars), Medical Certificate available (checkbox), Application Status (Approved (07/12/2023 11:42)), and Remark (Approved Leave). On the right, there is a summary section showing 'Nov 2023', 'Jan 2024', and 'Availed Leaves Days : 0 | Hours 02:30'. Below this is a status bar with '3 days Absent', '2 Pending', '2 Approved', and '1 Rejected'. The 'Application Details' section shows a table of applied leaves:

From	To	Leave	Application Date	Application Type	Status	Approval Details
10/12/2023	10/12/2023	HP	07/12/2023	New	(X)	
08/12/2023	08/12/2023	HP	07/12/2023	New	✓	
07/12/2023	07/12/2023	HP	07/12/2023	New	✓	
06/12/2023	06/12/2023	HP	07/12/2023	New	(X)	
03/12/2023	03/12/2023	HP	07/12/2023	Modification	(X)	

From this page you can also view the details of leaves which have been applied for cancellation or for modification from the ESS module, once they get approved or rejected.

To view the leave cancellation details, select a leave from the grid on the right hand side and the data gets loaded in the left grid.

Similarly, you can also view the leave modification details, by selecting a leave from the grid on the right hand side and the data gets loaded in the left grid.

This screenshot is identical to the previous one, but with an arrow pointing to the last row in the 'Application Details' grid, which is highlighted in blue. This row represents a modification application for the period 03/12/2023 to 03/12/2023, with status (X).

Click **Details**  icon from the grid available on the left side of the page to view the Approval Details of the already applied application.

Approval Details 		
Incharge	Status	Remark
SA - System Admin	 (07/12/2023 10:26)	

It displays the status of the user's application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending  , Approved  or Rejected  .

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

## Leave Approval

The system administrator can view, approve or reject leaves that have been applied by the ESS user. The administrator also has the right to reject any pre-approved leaves and vice versa, if required.

To access this functionality,

Go to **Leave Management > Application/Approval > Leave Approval** and the following screen appears.

The screenshot shows the 'Leave Approval' interface. At the top, there's a 'Show All Pending Applications' button. Below it are filters: 'Leave Date' with a date range from 18/12/2019 to 01/02/2020, 'Filter Users' set to 'Individual', and a 'User' dropdown showing '2551' and 'Rushi Shah'. A 'View' button is below the filters. The main content area has three collapsible panels: 'Pending (0)', 'Approved (5)', and 'Rejected (0)'. The 'Approved (5)' panel is expanded, showing a table of approved leave applications. The table has columns: User, Name, From, To, Leave, Application Date, Posted Duration, Approve, Reject, Remark, and Details. There are five rows of data, all for user 2551 (Rushi Shah).

User	Name	From	To	Leave	Application Date	Posted Duration	Approve	Reject	Remark	Details
2551	Rushi Shah	23/01/2020	23/01/2020	Paid Leave	17/01/2020	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
2551	Rushi Shah	20/01/2020	22/01/2020	Random Leave 2	16/01/2020	2.5	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Leave Modification	
2551	Rushi Shah	18/01/2020	19/01/2020	Random Leave 2	17/01/2020	2.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
2551	Rushi Shah	17/01/2020 10:00	17/01/2020 10:45	RANDOM LEAVE	16/01/2020	00:45	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Leave	
2551	Rushi Shah	16/01/2020 10:00	16/01/2020 10:30	RANDOM LEAVE	16/01/2020	00:30	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Leave	

By default, the Admin can view all pending applications from the last one month period. However, sometimes users may also apply for leaves on future dates.

You can either:

- view all the pending Leave Approval Applications
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter. You can view all pending leave applications, including those made for future dates.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#).

## Applications according to Set Filters

To Set the Filters,

- **Leave Date:** Select and specify the start and end dates using the calendar buttons to define the period for which leave approval status is to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1,/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

- Click the **View** button and all the pending, approved and rejected leave applications along with their details will be displayed.

## Pending Applications

Click the **Pending** collapsible panel. The **Pending** section lists all the leave/cancellation/modification applications pending for authorization by the reporting in-charge or HR administrator as shown below.

The screenshot shows the 'Leave Approval' application window. At the top, there's a header bar with the title 'Leave Approval' and navigation icons. Below the header, there's a section for filters. It includes a radio button for 'Show All Pending Applications', a 'Leave Date' section with two date pickers (24/10/2017 and 08/12/2017), a 'Filter Users' dropdown menu set to 'All', and a 'Group/User' section with two input fields for 'ID' and 'Name'. A 'View' button is located below these filters. The main content area is divided into three collapsible panels: 'Pending (4)', 'Approved (3)', and 'Rejected (0)'. The 'Pending (4)' panel is expanded, showing a table of pending applications. The table has columns for User ID, Name, From Date, To Date, Leave, Application Type, Application Date, Posted Days, Approve, Reject, Remark, and Details. There are four rows of data, all for 'apta user'. The first row is for 'Paid Leave' (New), the second for 'Paid Leave' (New), the third for 'Leave without pay' (Modified), and the fourth for 'Maternity Leave' (New). Each row has checkboxes for 'Approve' and 'Reject'. The 'Details' column contains a magnifying glass icon for each row. Below the table, there are three more collapsible panels: 'Approved (3)' and 'Rejected (0)'. An arrow points to the 'Details' icon in the first row of the 'Pending' table.

User ID	Name	From Date	To Date	Leave	Application Type	Application Date	Posted Days	Approve	Reject	Remark	Details
apta	apta user	01/11/2017	01/11/2017	Paid Leave	New	02/11/2017	0.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Leave	
apta	apta user	30/10/2017	30/10/2017	Paid Leave	New	31/10/2017	1.0	<input type="checkbox"/>	<input type="checkbox"/>		
apta	apta user	27/10/2017	27/10/2017	Leave without pay	Modified	31/10/2017	0.5	<input type="checkbox"/>	<input type="checkbox"/>		
apta	apta user	24/10/2017	24/10/2017	Maternity Leave	New	31/10/2017	0.5	<input type="checkbox"/>	<input type="checkbox"/>		

When any application is in the Pending state it can be authorized by the Admin or RIC.

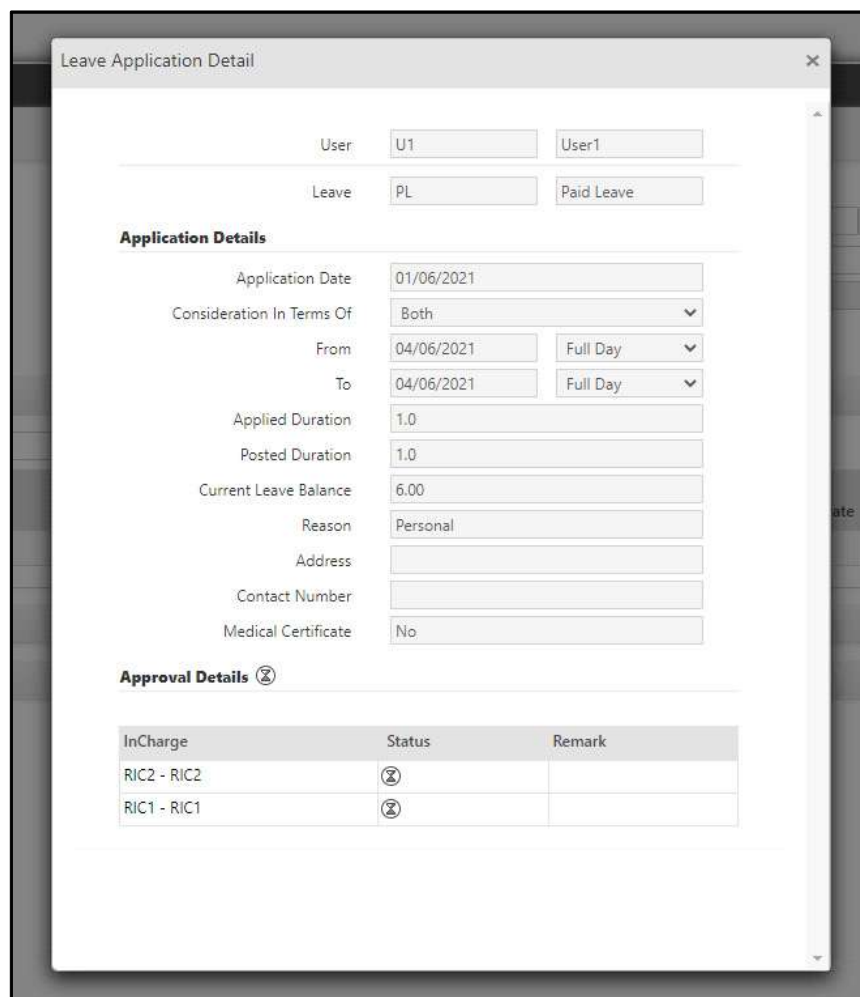

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

Click the **Details**  icon to view the details of the applied leave.

**Leave Application Detail** window appears as shown below:

**Leave Application Detail**

### Half Day Restriction on posted days

On the Leave Approval page, **Half Day restriction on posted days** feature restricts the administrator to approve the posted half day leave application for that particular user.

Consider a scenario where the user has applied for the half day leave from the ESS login page and the Application has been sent for approval to the administrator.

Suppose after posting the half day leave application, **Restrict Half Day Considerations** has been enabled in the page User > User configuration > T&A for that particular user. Now when the Administrator will try to approve the Leave Application for that user, then it will show the error in the Error List that "Half-day Application is restricted for this User" as shown in the screen below.

The screenshot shows the 'Leave Approval' window. At the top, there's a tab 'Check Process Error List For User Record Not Processed.' Below it, there are filters for 'Show All Pending Applications', 'Leave Date' (From Date, To Date), 'User Selection' (All), and 'Group/User' (ID, Name). A 'View' button is present. Below the filters, there's a section 'Pending (17)' and an 'Error List' section. The 'Error List' contains a table with one row of error data. An arrow points to the 'Description' column of this row.

User ID	Name	Appl Date	From Date	To Date	Leave	Status	Description
1687	Aditi Gupta	07/18/2017	07/06/2017	07/06/2017	CL-ggg	Pending	Half-day Application is restricted for this User

# Tour Application/Approval

An employee who has to go out of the office premises for official work E.g. Meeting, for specific number of days or hours, often needs to use this type of leave. The application process for Tour on COSEC Web is similar to the leave application.

The Tour applications can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module (For more details refer COSEC Employee Self Service User Manual)

COSEC Web enables all System Account users with appropriate page rights to make tour applications using the Leave Management module. All applications made by the System Account user are pre-approved by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make leave applications using the Leave Management module. All applications made by the On Behalf System Account User are pre-approved by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#).

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

*The Tour applied from System Administrator login gets approved automatically.*

## Applying for Tour

This section describes how to apply for a tour using the Leave Management module.

To do this, go to the **Leave Management > Application/Approval > Tour Application** and the following screen appears.

Date	Shift	1st Half	2nd Half	First IN	Last OUT	Work Hours
04/17/2017		AB	AB			
03/29/2017	GS	AB	AB			
03/28/2017	GS	AB	AB			
03/27/2017	GS	AB	AB			
03/25/2017	GS	AB	AB			
03/24/2017	GS	AB	AB			
03/23/2017	GS	AB	AB			

The page displays configurations on the left hand side and to the right is the attendance details of the user along with all the tour application details of a particular user for a particular month. It also displays the number of tours availed, total absent days, total tours pending, approved and rejected.

To apply a new tour for a user, click **New** button.

**User:** Select the user for whom the tour is to be applied.

**From Date:** Select the starting date for the tour period using the date selection button and specify whether the tour is to be considered for Full Day or start only from the Second Half.

**To Date:** Select the end date for the tour period using the date selection button and specify whether the tour is to be considered for Full Day or end right after the First Half.

For a particular user, if **Restrict Half Day Considerations** is enabled in the page User > User configuration > T&A, then in **From/To Date** only full day attendance options will be visible and all the other half day options will be disabled for that particular user as shown in the screen below.

The screenshot shows the 'Tour Application' form. At the top, there are navigation icons (back, add, delete). The form is divided into sections. The first section contains 'User' (U1), 'From Date' (with a calendar icon), 'To Date' (with a calendar icon), 'Applied Days', and 'Posted Days'. Below this is a 'Tour' dropdown menu showing 'TO - Tour-1'. The next section is 'Reason And Contact Info', which includes 'Reason' (Official), 'Address' (30 Chars), 'Contact Number' (20 Chars), and a 'Tour Document Available' checkbox. At the bottom are 'Submit' and 'Cancel' buttons. An arrow points to the 'Full Day' dropdown menu for the 'To Date' field.

**Applied Days:** The system automatically calculates the number of days the tour has been applied for.

**Posted Days:** The posted days are the actual days for which the tour will be applied. It will be automatically calculated by the system after saving the application.

**Tour:** Select a tour from the Tour drop down list, for which the application is to be made. It displays the list of tours available in the Leave Group assigned to the user.

Tours and Leaves on COSEC have a similar configuration and application process. To know more about applying for leaves, refer to "[Leave Application/Approval](#)".

### Reason and Contact Info

- **Reason:** Enter reason for requesting the tour.
- **Address:** Enter the address of the user for whom the tour application is being made.

- **Contact Number:** Enter the contact number of the user for whom the tour application is being made.
- **Tour Document Available:** Select the checkbox to make it mandatory for the applicant to produce a tour document to specify the reason behind the current tour.

This option is available only if it is enabled during configuration of the selected tour from the **Tour** page. For more information, refer [“Optional Restrictions”](#) in Tour page.

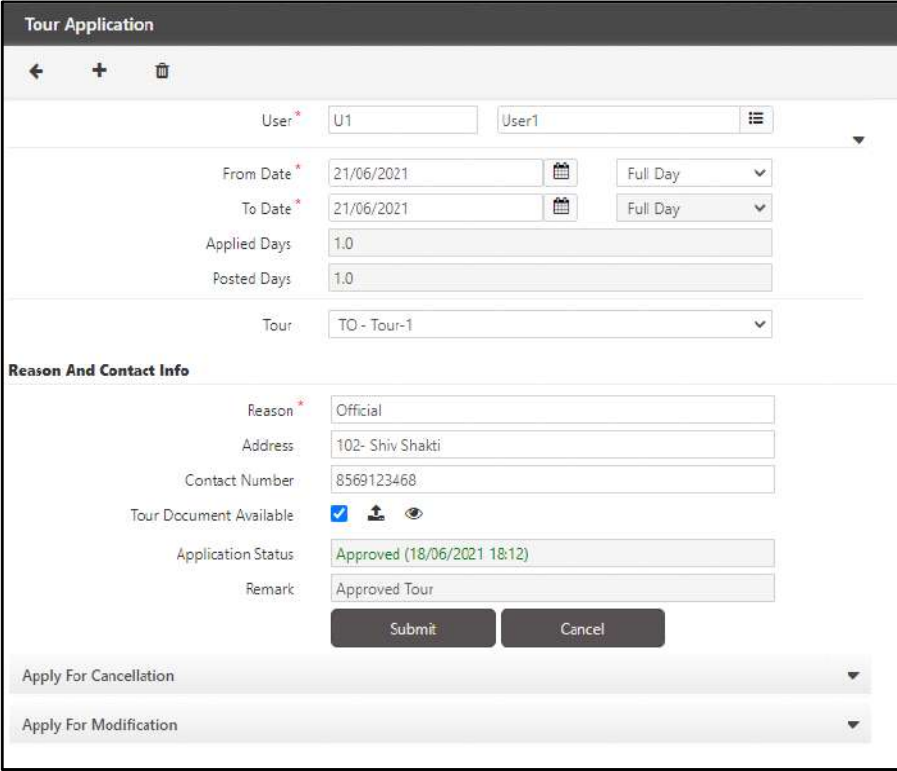

Click on the **Upload**  button and select the respective document.

Select the desired file as per the supported formats (.jpg, .bmp, .png, .pdf).

Then click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

Click the **Submit** button to apply for the tour. If applied successfully, the **Application Status** for the tour will be updated to “Approved”.

Apply For Modification

From this page you can also view the details of tours which have been applied for cancellation or for modification from the ESS module.

Once the tour gets approved or rejected, it can be requested for modification or cancellation from the ESS module.

## Tour Cancellation

The tour cancellation details can be viewed by selecting the tour from the grid on the right hand side as shown below.

The screenshot shows the 'Tour Application' form with the following details:

- User:** 1, Shalini
- From Date:** 03/10/2017, **To Date:** 03/11/2017, **Full Day:** Full Day
- Applied Days:** 2.0, **Posted Days:** 2.0
- Tour:** TR - Tour1
- Reason And Contact Info:**
  - Reason:** 50 Char
  - Address:** 30 Char
  - Contact Number:** 20 Char
  - Application Status:** Approved (04/20/2017 14:39)
- Buttons:** Submit, Cancel
- Apply For Cancellation:**
  - Cancellation Reason:** Tour postpone required
  - Cancellation Status:** Applied (04/20/2017 14:45)
- Apply For Modification:** (collapsed)

On the right side, there is a summary bar and a table:

Mar 2017, May 2017, Availed Tours : 3

22 days Absent, 2 Pending, 1 Approved, 0 Rejected

  - Applied Days:** 1.0, **Posted Days:** 1.0
  - Modification Reason:** Applied Tour Modification
  - Tour Document Available:** ☒
  - Modification Status:** Applied (18/06/2021 18:20)

On the right side, there is a summary bar and a table:

May 2021, Jul 2021

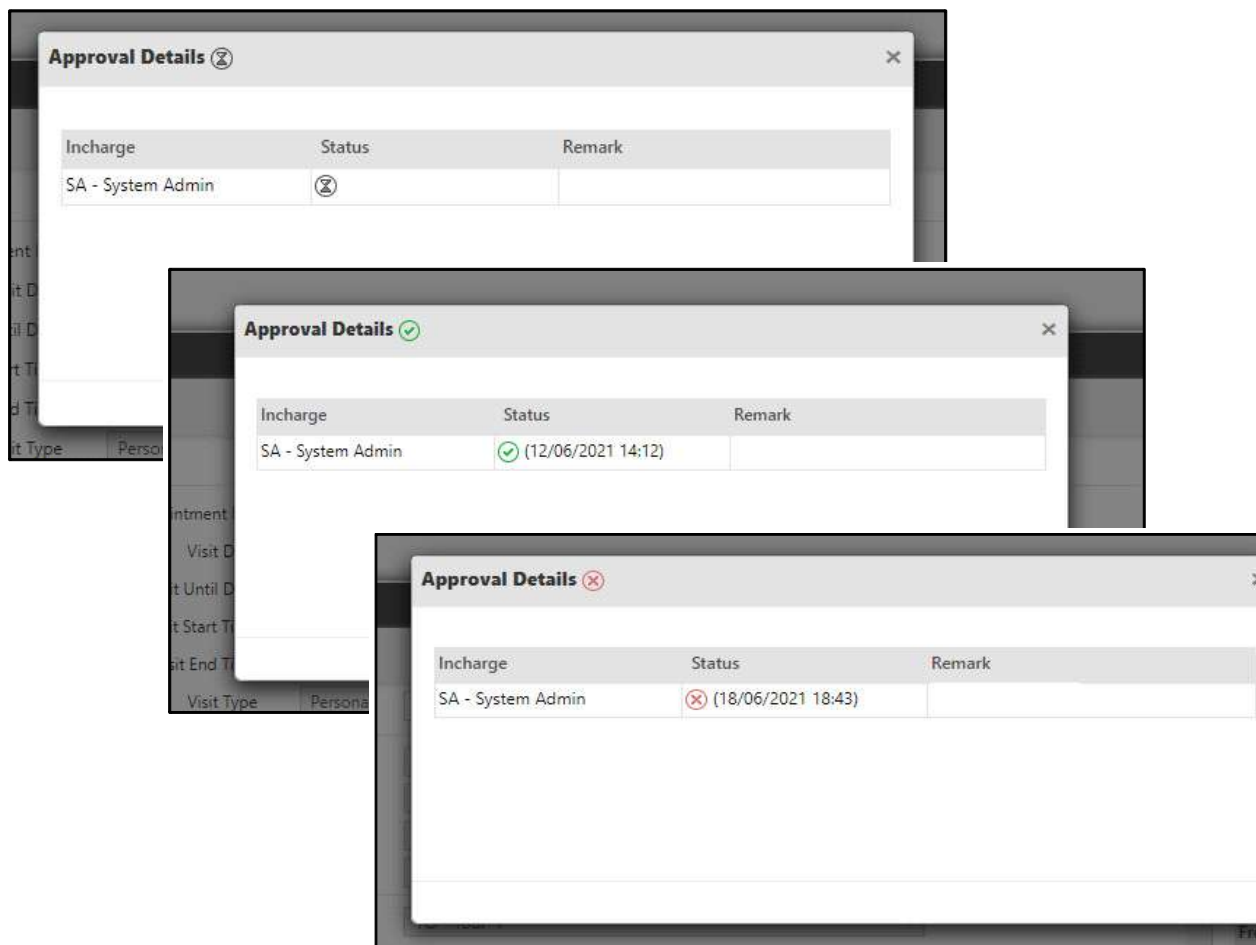

5 days Absent, 1 Pending, 1 Approved, 0 Rejected

From	To	Tour	Application Date	Application Type	Status	Approve Details
23/06/2021	23/06/2021	TO	18/06/2021	Modification	ⓘ	ⓘ
21/06/2021	21/06/2021	TO	18/06/2021	New	✓	

An arrow points to the 'Approve Details' icon (ⓘ) in the table.

Click **Details** ⓘ icon from the grid available on the left side of the page to view the Approval Details of the already applied application.

**Approval Details** window appears as shown below:

It displays the status of the user's application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending ⌚ , Approved ✓ or Rejected ✗ .

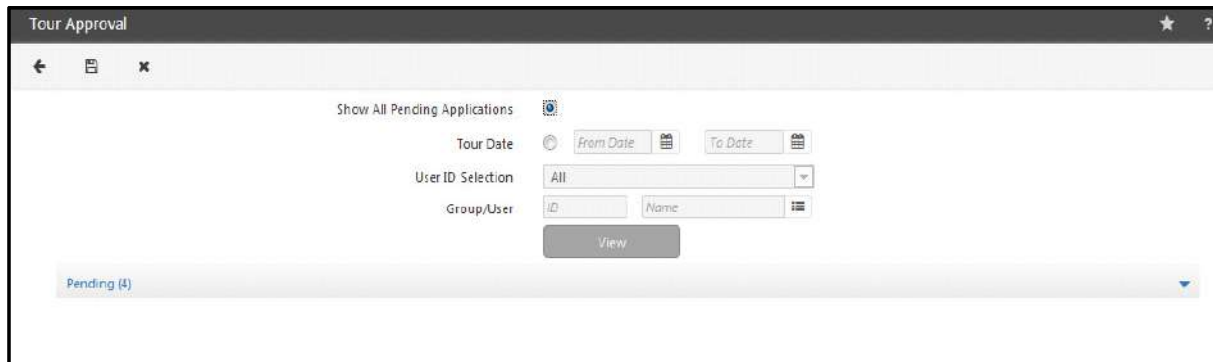

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer [“Approval Policy”](#).

## Tour Approval

The system administrator can view, approve or reject tour applications made by ESS users using the *Tour Approval* functionality. The administrator also has the right to reject any pre-approved tours and vice versa, if required.

To access this functionality, go to the **Leave Management > Application/Approval > Tour Approval** and the following screen appears.

The screenshot shows a web application window titled "Tour Approval". At the top, there is a navigation bar with a back arrow, a document icon, and a close 'x' icon. Below this, the main content area has a header "Show All Pending Applications" with a blue circular icon. Underneath, there are filter controls: "Tour Date" with a circular icon and two date pickers labeled "From Date" and "To Date"; "User ID Selection" with a dropdown menu currently set to "All"; and "Group/User" with two input fields labeled "ID" and "Name" and a list icon. A "View" button is positioned below these filters. At the bottom of the main content area, there is a collapsible panel labeled "Pending (4)" with a downward arrow.

You can either:

- view all the pending Tour Approval Applications
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter. You can view all pending tour applications, including those made for future dates.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

- To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#)

## Applications according to Set Filters

To Set the Filters,

- **Tour Date:** Select the start and end dates as the period for which tour approval status is to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1,/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button to view all pending, approved and rejected tour applications and their details.

## Pending Applications

Click the **Pending** collapsible panel. The **Pending** section lists all the tour applications pending for approval by the reporting in-charge/SA as shown below.

The screenshot shows the 'Tour Approval' window. At the top, there's a 'Show All Pending Applications' button. Below it are filters for 'Tour Date' (From Date, To Date), 'Filter Users' (All), and 'Group/User' (ID, Name). A 'View' button is present. The main section is titled 'Pending (31)' and contains a table of pending applications. The table has columns: User ID, Name, From Date, To Date, Tour, Application Type, Application Date, Posted Days, Approve, Reject, Remark, and Details. The table shows 5 records, with the first three for user 1587 and the last two for user 25. The 'Approve' and 'Reject' columns have checkboxes. The 'Remark' column contains text like 'Approved Tour' and 'Rejected Tour Modification'. The 'Details' column has icons to view more information.

User ID	Name	From Date	To Date	Tour	Application Type	Application Date	Posted Days	Approve	Reject	Remark	Details
1587	Aditi Gupta	03/12/2017	03/12/2017	TOUR	New	03/12/2017	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved Tour	
1587	Aditi Gupta	04/12/2017	05/12/2017	TOUR	Modified	03/12/2017	1.0	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rejected Tour Modification	
1587	Aditi Gupta	05/07/2017	05/07/2017	TOUR	New	18/07/2017	0.5	<input type="checkbox"/>	<input type="checkbox"/>		
25	new club user 18 aug 1-2	02/09/2017	02/09/2017	TOUR	New	25/09/2017	1.0	<input type="checkbox"/>	<input type="checkbox"/>		
25	new club user 18 aug 1-2	09/07/2017	09/07/2017	Tour-Priyank	New	31/08/2017	0.0	<input type="checkbox"/>	<input type="checkbox"/>		

1 - 5 of 31 records

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

Click the **Details** icon to view the application details of the corresponding user.

**Tour Application Detail** window appears as shown below:

*System Administrator can delete pending/approved/rejected application.*

## Half Day Restriction on posted days

On the Tour Approval page, **Half Day restriction on posted days** feature restricts the administrator to approve the posted half day Tour application for that particular user.

Consider a scenario where the user has applied for the half day tour from the ESS login page and the Application has been sent for approval to the administrator.

Suppose after posting the half day tour application, **Restrict Half Day Considerations** has been enabled in the page User > User configuration > T&A for that particular user. Now when the Administrator will try to approve the Tour Application for that user, then it will show the error in the Error List that “Half-day Application is restricted for this User” as shown in the screen below.

The screenshot shows the 'Tour Approval' interface. At the top, there is a notification bar that says 'Check Process Error List For User Record Not Processed.' Below this, there are filters for 'Show All Pending Applications', 'Tour Date' (with 'From Date' and 'To Date' pickers), 'User Selection' (set to 'All'), and 'Group/User' (with 'ID' and 'Name' pickers). A 'View' button is present. Below the filters, there is a section for 'Pending (4)' applications. Underneath, there is an 'Error List' section with a search bar. The error list contains one entry with the following details:

User ID	Name	Appl Date	From Date	To Date	Tour	Status	Description
1687	Aditi Gupta	07/18/2017	07/05/2017	07/05/2017	T2-TOUR	Pending	Half-day Application is restricted for this User

An arrow points to the 'Description' column of the error list entry.

# C-OFF Application/Approval

An employee who has accumulated C-OFF hours often needs to use these within a validity period. C-OFF Application is a formal way of requesting a Complimentary-Off. The application process for C-OFF on COSEC Web is however, distinguished from the application process for other leave types, though both follow a similar functioning. The Application and Approval rights for a C-OFF are similar to those for a leave application. For a better understanding of C-OFF Application and Approval, also refer to [“Leave Application/Approval”](#).

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

## Applying for a C-OFF

This section describes how to apply for a C-OFF using the Leave Management module.

To do this, go to the **Leave Management > Application/Approval > C-OFF Application** and the following screen appears.

The page displays configurations on the left hand side and to the right is the attendance details of the user along with all the C-OFF application details of a particular user for a particular month. It also displays the number of C-OFFs availed, total absent days, total C-OFFs pending, approved and rejected.

To apply a C-OFF for a user, click **New** button.

**User:** Select the user for whom the C-OFF is to be applied.

**From Date:** Select the starting date for the C-OFF using the date selection button and specify whether the C-OFF is to be considered for FullDay or start only from the Second Half.

**To Date:** Select the end date for the C-OFF using the date selection button and specify whether the C-OFF is to be considered for FullDay or end right after the First Half.

For a particular user, if **Restrict Half Day Considerations** is enabled in the page **User > User configuration > T&A**, then in **From/To Date** only full day attendance options will be visible and all the other half day options will be disabled for that particular user as shown in the screen below.

**Applied Days:** The system automatically calculates the number of days the C-OFF has been applied for.

**Posted Days:** The posted days are the number of working days posted between the C-OFF applied. It will be automatically calculated by the system after saving the application. E.g. If a C-OFF is applied for 3 days from 29th October to 31st October and there is a week off in the middle, then posted days will be 2 days only as only the actual working days are considered for C-OFF and not the week off i.e. 30th October.

*The minimum C-OFF balance (in hours) required for taking a half day or full day off is determined during C-OFF Policy configuration. To know more about this, refer to [“C-OFF Policy”](#).*

*While considering Half day application, the value for “Minimum allowed at a time” and “Maximum Allowed Limit” for the leave type is also checked.*

*To know more about how to create a C-OFF type leave, refer to [“Configuring Leaves”](#).*

- **Leave:** Select the type of leave to be applied from the dropdown list. This list displays all C-OFFs defined on the system.
- **Current Balance:** The system automatically retrieves and displays the current balance of C-OFF type leave.
- **Required Balance:** Once the leave is selected, the system retrieves and displays the balance required for applying leave. The user can successfully apply for a C-OFF only if the required balance for leave is lesser than or equal to the current C-OFF hours balance. For e.g., in the following figure, the user has sufficient C-OFF hours balance to apply for 2 days leave which requires a minimum of 18 hours C-OFF as per C-OFF policy. In such a scenario the system will allow the C-OFF application to be made. If the balance is less then the system application will not allow to apply for C-OFF.

**C-OFF Application**

User: 1 Rosy

From Date: 29/10/2016 Full Day

To Date: 31/10/2016 Full Day

Applied Days: 3

Search

Attendance Date	Available C-OFF	Select C-OFF
29/10/2016	28:00	08:00

Select Cancel

### Reason and Contact Info

- **Reason:** Enter reason for requesting C-Off leave.
- **Address:** Provide address of the user for whom the C-Off application is being made.
- **Contact Number:** Provide the contact number of the user for whom the C-Off application is being made.
- **Medical Certificate Available:** Select the checkbox to make it mandatory for the applicant to produce a medical certificate as a proof to testify the reason behind the current C-Off.

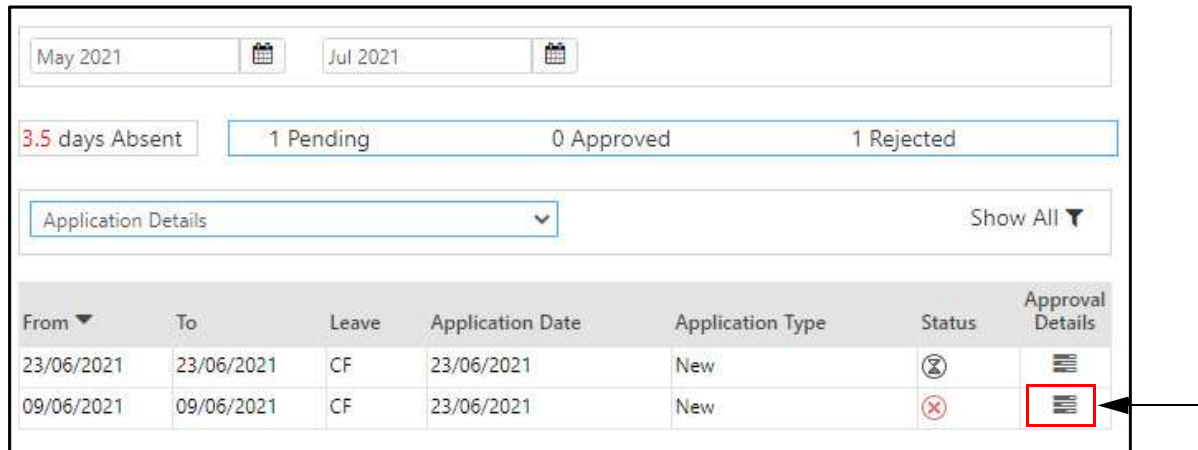

Select this checkbox if you have a Medical Certificate as a proof and reason for the current leave. To upload this certificate, click on the **Upload**  button.

Select the desired file as per the supported formats (.jpg, .bmp, .png, .pdf) and size. Click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

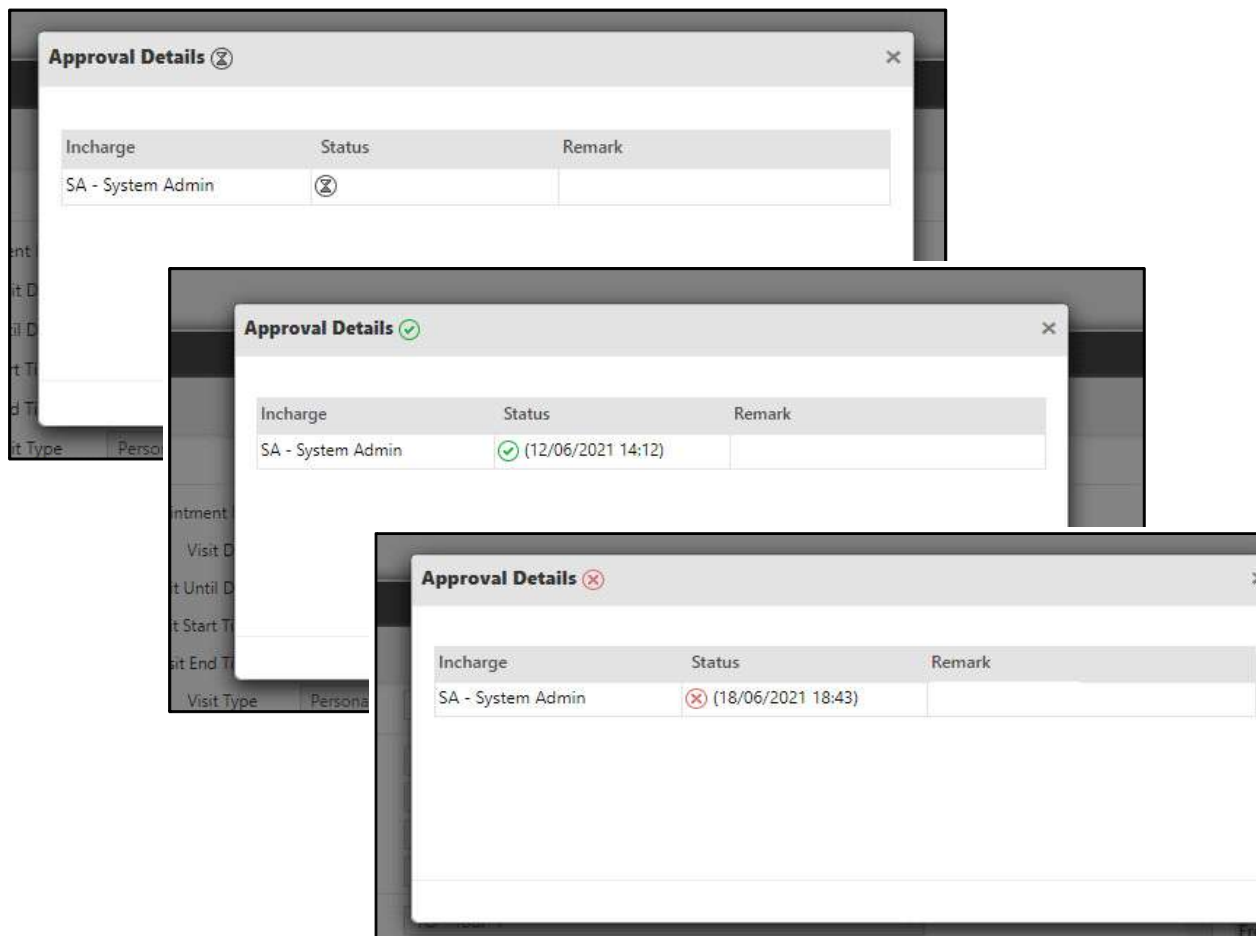

Click the **Submit** button to apply for the C-OFF. If applied successfully, the **Application Status** for the C-OFF will be updated to "Approved".

Click **Details**  icon from the grid available on the left side of the page to view the Approval Details of the already applied application.

From	To	Leave	Application Date	Application Type	Status	Approval Details
23/06/2021	23/06/2021	CF	23/06/2021	New		
09/06/2021	09/06/2021	CF	23/06/2021	New		

**Approval Details** window appears as shown below:

It displays the status of the user's application under **Approval Details**, that is, whether it is — pending, approved or rejected.

The application's status is displayed in the **Status** column as Pending , Approved  or Rejected .

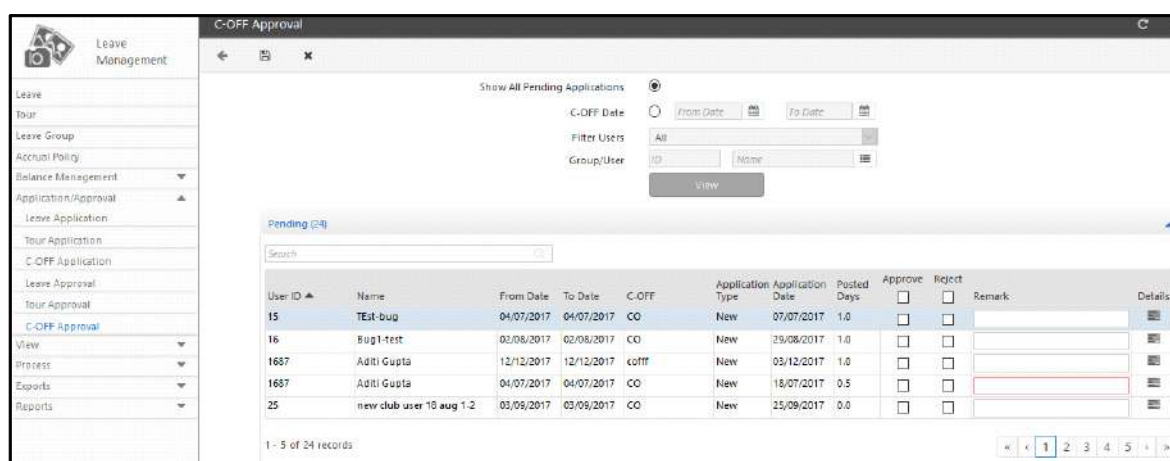

**Remark** displays the comments provided by the Admin/ RIC/ System.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

## C-OFF Approval

The system administrator can view, approve or reject C-OFFs that have been applied for by any ESS user. The administrator also has the right to reject any pre-approved leaves and vice versa, if required.

To access this functionality, go to the **Leave Management > Application/Approval > C-OFF Approval** and the following screen appears.

You can either:

- view all the pending C-OFF Approval Applications
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

By default, the Admin can view all pending C-OFF applications from the last one month period. However, sometimes users may also apply for tours on future dates.

- **Show All Pending Applications:** Select this option to enable the pending application filter. You can view all pending C-OFF applications, including those made for future dates.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#).

## Applications according to Set Filters

To Set the Filters,

- **C-OFF Date:** Select and specify the start and end dates using the calendar buttons to define the period for which C-OFF approval status is to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1,/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click the **View** button and all the pending, approved and rejected C-OFF applications along with their details gets displayed in the grid.

## Pending Applications

Click the **Pending** collapsible panel.

The **Pending** section lists all the C-OFF /cancellation applications waiting to be sanctioned by the reporting in-charge or HR administrator as shown.

Pending (24)

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject checkbox in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

Click the **Details**  icon to view the application details of the applied C-OFF.

**C-OFF Application Detail** window appears as shown below:

**C-OFF Application Detail**

User: U1, User1

C-OFF: CO, COFF

**Application Details**

Application Date: 17/06/2021

Half Day Consideration: Both

From Date: 15/06/2021, Full Day

To Date: 17/06/2021, Full Day

Applied Days: 3.0

Medical Certificate: No

**Approval Details**

Incharge	Status	Remark
SA - System Admin		

**C-OFF Application Detail** window displays the user's application details.

It also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

**Remark** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

*The pending applications can not be authorized if the attendance period is closed while doing monthly attendance process and "Attendance Correction in Closed Period" checkbox is disabled from Time and Attendance> Policies> Attendance Policy> Event Authorization.*

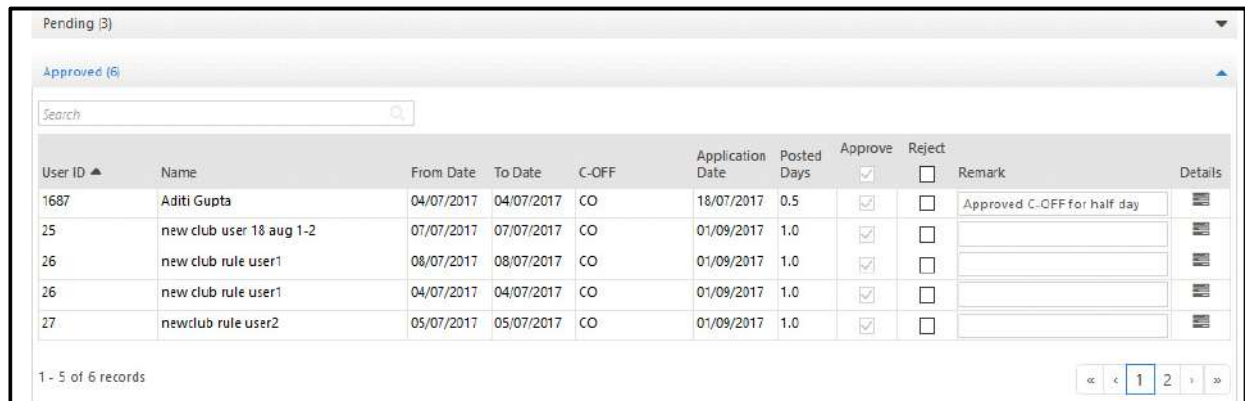

*Even though; the period is closed but if "Attendance Correction in Closed Period" checkbox in Policy is enabled then authorization can be made.*

## Approved Application

Click the **Approved** collapsible panel.

The **Approved** section displays all the C-OFF/cancellation applications that have been approved by the reporting group in-charge or the system administrator. C-OFF applications generated using the **Leave Management** module on COSEC Web will appear in this section by default as they are pre-approved.

The following screen displays the **Approved** section with approved C-OFF applications:

The screenshot shows a web interface with a 'Pending (3)' tab and an 'Approved (6)' tab. Below the tabs is a search bar. The main area contains a table with the following columns: User ID, Name, From Date, To Date, C-OFF, Application Date, Posted Days, Approve, Reject, Remark, and Details. The table lists five records. The first record is for User ID 1687, Aditi Gupta, with a C-OFF of CO from 04/07/2017 to 04/07/2017, approved on 18/07/2017 for 0.5 days, with a remark 'Approved C-OFF for half day'. The other four records are for 'new club rule user1' and 'newclub rule user2' with various dates and application dates. At the bottom, it says '1 - 5 of 6 records' and has pagination controls.

User ID	Name	From Date	To Date	C-OFF	Application Date	Posted Days	Approve	Reject	Remark	Details
1687	Aditi Gupta	04/07/2017	04/07/2017	CO	18/07/2017	0.5	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Approved C-OFF for half day	
25	new club user 18 aug 1-2	07/07/2017	07/07/2017	CO	01/09/2017	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
26	new club rule user1	08/07/2017	08/07/2017	CO	01/09/2017	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
26	new club rule user1	04/07/2017	04/07/2017	CO	01/09/2017	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
27	newclub rule user2	05/07/2017	05/07/2017	CO	01/09/2017	1.0	<input checked="" type="checkbox"/>	<input type="checkbox"/>		

To change the authorization verdict of any application, select **Reject** check box against the corresponding user. Once you reject an approved application, the record will be moved to the **Rejected** section.

Click the **Details**  icon to view the application details of the corresponding user.

*System Administrator can delete pending/approved/rejected application.*

### Half Day Restriction on posted days

On the C-OFF Approval page, **Half Day restriction on posted days** feature restricts the administrator to approve the posted half day C-OFF application for that particular user.

Consider a scenario where the user has applied for the half day tour from the ESS login page and the Application has been sent for approval to the administrator.

Suppose after posting the half day tour application, **Restrict Half Day Considerations** has been enabled in the page User > User configuration > T&A for that particular user. Now when the Administrator will try to approve the C-OFF Application for that user, then it will show the error in the Error List that “Half-day Application is restricted for this User” as shown in the screen below.

The screenshot shows the 'C-OFF Approval' interface. At the top, there is a message bar that says 'Check Process Error List For User Record Not Processed.' Below this, there are filters for 'Show All Pending Applications' (radio button), 'C-OFF Date' (From Date and To Date), 'User Selection' (All), and 'Group/User' (ID and Name). A 'View' button is present. Below the filters, there is a 'Pending (5)' section. Underneath, there is an 'Error List' section with a search bar. The error list contains one entry with the following details:

User ID	Name	Appl Date	From Date	To Date	C-OFF	Status	Description
1687	Aditi Gupta	07/18/2017	07/04/2017	07/04/2017	CO-CO	Pending	Half-day Application is restricted for this User

An arrow points to the 'Description' column of the error list entry.

# Leave Balance

This functionality enables the system administrator to view the leave balance details for a particular user for a particular attendance period.

To view leave balance for a user, go to the **Leave Management > View > Leave Balance** and the following screen appears.

The screenshot shows the 'Leave Balance' screen with the following details:

- User ID:** ID (selected from a list)
- Name:** (empty)
- Period:** Monthly (selected from a dropdown)
- Balance Month-Year:** March (selected from a dropdown), 2017 (selected from a dropdown)
- Search:** (empty search bar)
- Table Headers:** Year, Month, Code, Name, Opening, Credit, Debit, Encashment, Availed, Closing, Overflow
- Table Content:** No Data
- C-OFF:** (selected from a dropdown)

- **User ID:** Select a User from the user picklist for whom the leave balance is to be viewed.
- **Period:** Specify the period as Month and Year for which the balance is to be viewed.
- **Balance:** For Monthly Period, select the Month and Year for which balance is to be viewed. For Yearly Period select the year to view the yearly balance.

The Leave and C-OFF Balance details appears on your screen as shown below. You can also search for a particular record by using the **Search** field.

The screenshot shows the 'Leave Balance' screen with the following details:

- User ID:** 1 (selected from a list)
- Name:** Shalini (selected from a list)
- Period:** Yearly (selected from a dropdown)
- Balance Year:** 2017 (selected from a dropdown)
- Search:** (empty search bar)
- Table Headers:** Year, Code, Name, Opening, Credit, Debit, Encashment, Availed, Closing, Overflow
- Table Content:**

Year	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2017	PL	Paid Leave	0.00	20.00	0.00	0.00	1.50	18.50	0.00
2017	SL	Sick Leave	0.00	10.00	0.00	0.00	0.00	10.00	0.00
- C-OFF:** (selected from a dropdown)

To view C-OFF balance for the selected user, select the **C-OFF** section. The details of the selected user's C-OFF balance, such as validity period, total hours and available C-OFF details will be displayed as follows:

# Leave Balance Process

Leave Balance Process generates the leave balance records of the user till selected month year.

Suppose if organization's policy is of yearly leave crediting and user does not avail leave for first 4 months. In such scenario leave balance record for only start month of the year is available in Database. If user visits leave application page/leave balance view page then no data is shown as record is not available for corresponding month.

So you must run the Leave Balance Process to update the details.

To process the leave balance for a user, Select the **Leave Management >Process > Leave Balance Process**

The **Leave Balance Process** page appears on your screen as follows:

Leave Balance Process

Balance Month-Year: April 2017

Select Users: User Wise

User ID: 1320 Name: SHRUTI SAGAR PATI

Process

Select the **Balance Month-Year** upto which the leave balance is to be processed to view the available balance of leaves.

Select the **user** by filtering the options of User Wise, Group Wise or All for whom the leave balance process is to be run.

Click on **Process** button to execute the process.

The Leave Balance details can be viewed from Leave Management module> View > Leave Balance as shown below.

Leave Balance

User ID: 1320 Name: SHRUTI SAGAR PATI

Period: Monthly

Balance Month-Year: April 2017

Year	Month	Code	Name	Opening	Credit	Debit	Encashment	Availed	Closing	Overflow
2017	Apr	CL	cl	45.00					45.00	0.00
2017	Apr	KL	KLL	0.00					0.00	0.00
2017	Apr	LP	PAID LL	0.00					0.00	0.00
2017	Apr	PL	Paid Leave	0.00					0.00	0.00
2017	Apr	PM	pm	0.00					0.00	0.00

# Leave Register Export

---

To export the records of leave select **Leave Management module > Exports > Leave Register**.

## Export

The **Leave Register** page appears as shown below:

The screenshot shows the 'Leave Register' configuration page. On the left is a sidebar with 'Report' and 'Configuration' options. The main area contains several form fields: 'Period' (Monthly), 'Month Year' (April 2023), 'Group By' (checked, Organization), 'File Name' (empty), 'Select Leave' (All), 'Select Users' (User Wise), 'User' (ID and Name fields), and 'Generate Export For' (All Users). An 'Export' button is at the bottom right.

*Before Exporting you can do “[Configuration](#)” for the Export parameters.*

**Period:** Specify the Period as Monthly or Yearly for which the leave records for user is to be exported.

**Month-Year:** Specify the **Month-Year** (for Monthly period) or **Year** (for Yearly period) for which the leave is to be exported.

**Group By:** Enable the Group By checkbox and select the Enterprise group to export data by grouping them with the Enterprise Group for which the leave is to be exported.

**File Name:** Enter the name of the file to be exported.

**Select Leave:** Select the desired option from the drop down list—**All** or **Selected**

If you select **All**, click on **Export**.

If you select **Selected**, click on the **Leave** picklist. The **Picklist For Leave Master** pop-up appears.

The dialog box titled "Picklist For Leave Masters" has a close button (X) in the top right corner. A green header bar displays "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. A "Select All" checkbox is located below the search bar. The main area contains a table with two columns: "Leave Code" and "Name". The table lists five leave types: HR (Paid Leave), P1 (Maternity Leave), P2 (Casual Leave), PL (Sick Leave), and RH (Annual Leave). Each row has an unchecked checkbox in the "Leave Code" column. At the bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	Leave Code ▲	Name
<input type="checkbox"/>	HR	Paid Leave
<input type="checkbox"/>	P1	Maternity Leave
<input type="checkbox"/>	P2	Casual Leave
<input type="checkbox"/>	PL	Sick Leave
<input type="checkbox"/>	RH	Annual Leave

You can either select particular leave type or can select all the leave types at once.

To select particular leave type, select the check box of the desired leave types.

The dialog box titled "Picklist For Leave Masters" has a close button (X) in the top right corner. A green header bar displays "Total Selected: 1 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. A "Select All" checkbox is located below the search bar. The main area contains a table with two columns: "Leave Code" and "Name". The table lists five leave types: HR (Paid Leave), P1 (Maternity Leave), P2 (Casual Leave), PL (Sick Leave), and RH (Annual Leave). The checkbox for HR is checked, while the others are unchecked. At the bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	Leave Code ▲	Name
<input checked="" type="checkbox"/>	HR	Paid Leave
<input type="checkbox"/>	P1	Maternity Leave
<input type="checkbox"/>	P2	Casual Leave
<input type="checkbox"/>	PL	Sick Leave
<input type="checkbox"/>	RH	Annual Leave

OR

To select all the leave types at once, select the **Select All** check box. The leave types on all the pages will be selected.

1 - 4 of 2489 records

« ‹ 1 2 3 ... 249 › »

You can also delete the desired User. Click on **Delete** of the respective user.

If you select **Group Wise** option, select the desired enterprise group from the drop-down list—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

If the desired check boxes is selected, it will appear in the grid.

## Configuration

In Configuration tab, select the check-boxes for the fields to be exported in Leave register. To export the Enterprise group details in export sheet, you must select the desired enterprise code and/ enterprise name checkboxes.

The screenshot shows the 'Leave Register' configuration window. On the left, there is a sidebar with two tabs: 'Export' and 'Configuration'. The 'Configuration' tab is active. The main area is titled 'Select Fields to Export' and contains a search bar. Below the search bar is a table with the following fields and checkboxes:

Fields	
User ID	<input checked="" type="checkbox"/>
User Name	<input checked="" type="checkbox"/>
Reference ID	<input type="checkbox"/>
Field 1	<input type="checkbox"/>
Field 2	<input type="checkbox"/>

Below the table, it says '1 - 5 of 37 records'. At the bottom right, there is a 'Save' button.

Click on **Save** to save the configuration. Now you can export the leave register from “Export” tab.

# Leave Reports

The *COSEC Leave Management* module allows you to create and view an assortment of detailed and focused reports related to the leave management system. These reports can be viewed on the screen or printed at any time. The following Leave Reports can be generated using the **Reports** section under the **Leave Management** module:

- “Leave”
- “Leave Group”
- “Leave Application”
- “Leave Encashment”
- “Leave Credit/Debit”
- “Leave Register”
- “C-OFF Register”
- “Monthly Leave Details”
- “Statutory Leave Reports”

## Leave

This report provides a detailed list of all leaves configured in the system.

## Leave Application

This report generates a detailed list of leave applications made during the specified date range.

Set the report filters as per requirement.

Date
06/19/2023
06/19/2023

Optional Parameters

Group By: Organization
Application Type: All
Select:

- ☒ Pending
- ☐ Approved
- ☐ Rejected
- ☐ Cancellation-Pending
- ☐ Modification

Group By: Date
Select Leave/Tour: All
Organization Name in Header As Per: User Selection

User Selection

Select Users: User Wise
User: ID Name
Generate Report For: All Users

Generate Report

**Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1 (Association Maps), Custom 2/3.

**Application Type:** Select the desired option— **All**, **Leave Application** or **Tour Application**.

The screenshot shows a form with two dropdown menus and a list of checkboxes. The first dropdown, labeled 'Group By', is set to 'Organization'. The second dropdown, labeled 'Application Type', is set to 'Leave Application'. Below these, under the 'Select' label, is a list of five items with checkboxes: 'Pending' (checked), 'Approved' (checked), 'Rejected' (unchecked), 'Cancellation-Pending' (checked), and 'Modification-Pending' (checked).

**Select:** Select the desired check boxes to enable — **Pending**, **Approved**, **Rejected**, **Cancellation-Pending** and / or **Modification-Pending**

**Group By:** You can view and generate the report as per the option you select — **Date** or **User**.

**Select Leave/Tour:** Select the desired option— **All** or **Selected**.

- If you select **All**, to include all the Leave/Tour Types.
- If you select **Selected**, click the **Select Leave/Tour** picklist. The **Picklist For Leave Masters** pop-up appears.

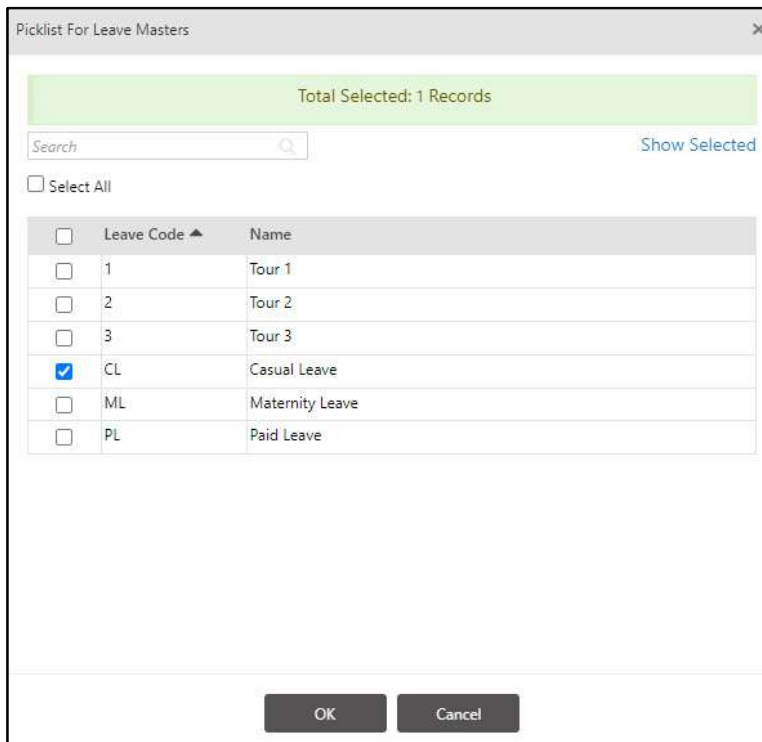

The screenshot shows a pop-up window titled 'Picklist For Leave Masters'. At the top, it says 'Total Selected: 0 Records'. Below this is a search bar with the placeholder text 'Search' and a magnifying glass icon, and a 'Show Selected' link. There is a 'Select All' checkbox. Below the search bar is a table with two columns: 'Leave Code' and 'Name'. The table contains six rows of data, each with an unchecked checkbox in the first column.

<input type="checkbox"/>	Leave Code ▲	Name
<input type="checkbox"/>	1	Tour 1
<input type="checkbox"/>	2	Tour 2
<input type="checkbox"/>	3	Tour 3
<input type="checkbox"/>	CL	Casual Leave
<input type="checkbox"/>	ML	Maternity Leave
<input type="checkbox"/>	PL	Paid Leave

At the bottom of the window are two buttons: 'OK' and 'Cancel'.

You can either select particular Leave/Tour Types or can select all the Leave/Tour Types at once.

To select particular Leave/Tour Types, select the check boxes of the desired Leave/Tour Types.

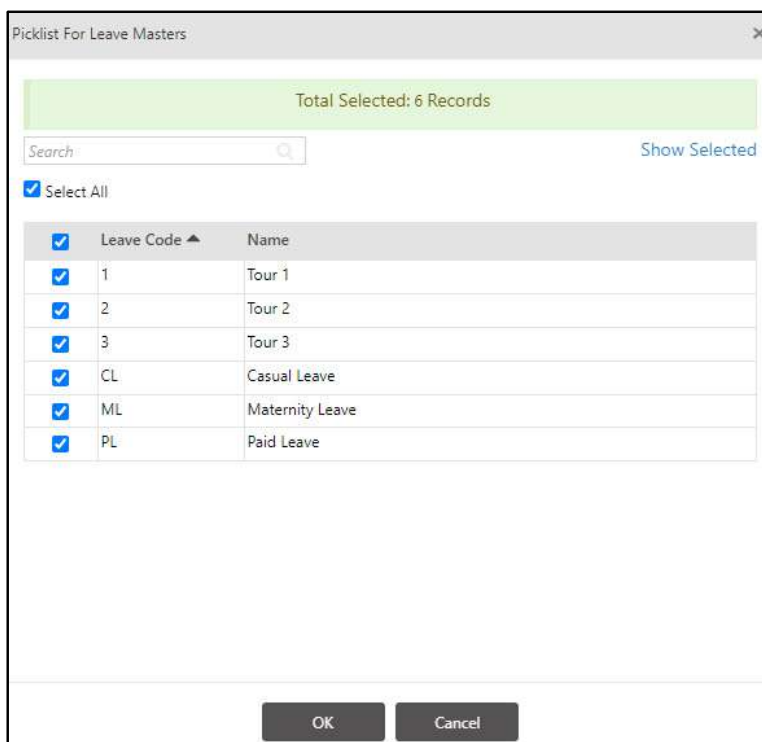

The screenshot shows a dialog box titled "Picklist For Leave Masters". At the top, a green bar indicates "Total Selected: 1 Records". Below this is a search bar with the text "Search" and a magnifying glass icon, and a "Show Selected" link. A "Select All" checkbox is present and is currently unchecked. The main area contains a table with columns "Leave Code" and "Name". The table lists six items: "1" (Tour 1), "2" (Tour 2), "3" (Tour 3), "CL" (Casual Leave), "ML" (Maternity Leave), and "PL" (Paid Leave). Only the checkbox for "CL" is checked. At the bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	Leave Code ▲	Name
<input type="checkbox"/>	1	Tour 1
<input type="checkbox"/>	2	Tour 2
<input type="checkbox"/>	3	Tour 3
<input checked="" type="checkbox"/>	CL	Casual Leave
<input type="checkbox"/>	ML	Maternity Leave
<input type="checkbox"/>	PL	Paid Leave

**OR**

To select all the Leave/Tour Types at once, select the **Select All** check box. The Leave/Tour Types on all the pages will be selected.

The screenshot shows the same dialog box, but now the "Select All" checkbox is checked. The table shows all six items with their checkboxes checked. The green bar at the top now indicates "Total Selected: 6 Records".

<input checked="" type="checkbox"/>	Leave Code ▲	Name
<input checked="" type="checkbox"/>	1	Tour 1
<input checked="" type="checkbox"/>	2	Tour 2
<input checked="" type="checkbox"/>	3	Tour 3
<input checked="" type="checkbox"/>	CL	Casual Leave
<input checked="" type="checkbox"/>	ML	Maternity Leave
<input checked="" type="checkbox"/>	PL	Paid Leave

- Click **OK**.

The selected Leave/Tour Types appear in the grid.

You can also delete the desired Leave/Tour Types. To do so, click **Delete**  of the respective Leave/Tour Types.

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click on Customize Report Header.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

## User selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click on **User** picklist. The **Picklist for All Users** pop-up appears.

<input type="checkbox"/>	User ID	Name
<input type="checkbox"/>	1	SALIM ANSARI
<input type="checkbox"/>	10	RAJENDRA GOSWAMI
<input type="checkbox"/>	1001	ANKITKUMAR SOHLIYA

## Leave Credit/Debit

This report provides a detailed group-wise listing of all leaves credited or debited from the leave balance of the employees.

Set the filter as per your requirement:

The screenshot shows the 'Leave Credit/Debit' report filter interface. It includes a title bar with a back arrow, a search icon, a star, and a help icon. The main form has the following sections:

- Period:** A dropdown menu set to 'Monthly'.
- For Month-Year:** Two dropdown menus set to 'June' and '2025'.
- Optional Parameters:** A section with two dropdown menus: 'Group By' set to 'Organization' and 'Organization Name in Header As Per' set to 'User Selection'.
- User Selection:** A section with a 'Select Users' dropdown set to 'User Wise', a 'User\*' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown set to 'All Users'.
- Generate Report:** A button at the bottom center.

**Period:** Select the desired option — Monthly, Yearly.

**For Month-Year:** If you have selected the Period as **Monthly**, select the desired **Month** and **Year**.  
If you have selected the Period as **Yearly**, select the desired **Year**.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom 1/2/3.

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.  
If you select Customized Selection, click on Customize Report Header.

You can select the desired option from the drop down list or can also add a new header according to your choice.

### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click on **User** picklist. The **Picklist for All Users** pop-up appears.

## Leave Register

This report provides a user-wise listing of all leave details of employees for the specified date range.

Set the filter as per your requirement:

The screenshot shows the 'Leave Register' report configuration window. It includes a 'Period' dropdown set to 'Monthly', and 'For Month-Year' fields set to 'June' and '2023'. Below these are 'Optional Parameters' for 'Group By' (Organization), 'Select Leave' (All), and 'Organization Name in Header As Per' (User Selection). The 'User Selection' section has 'Select Users' set to 'User Wise', a table with 'ID' and 'Name' columns, and 'Generate Report For' set to 'All Users'. A 'Generate Report' button is at the bottom.

**Period:** Select the desired option from the drop down list— **Monthly** or **Yearly**

**For Month-Year:** If you have selected **Yearly** as the **Period**, select the **Year**.

If you have selected **Monthly** as the **Period**, select the **Start/End Month** and **Start/End Year**.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Select Leave:** Select the desired option— **All** or **Selected**

- If you select **All**, all Leave types will be included.

- If you select **Selected**, click the Selected picklist. The **Picklist For Leave Masters** pop-up appears.

The dialog box titled "Picklist For Leave Masters" has a close button (X) in the top right corner. Below the title bar is a green header bar with the text "Total Selected: 0 Records". Underneath is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a blue link "Show Selected". Below the search bar is a checkbox labeled "Select All". The main area contains a table with the following columns: "Leave Code" (with a small upward arrow icon) and "Name". The table has six rows of data:

<input type="checkbox"/>	Leave Code ▲	Name
<input type="checkbox"/>	1	Tour 1
<input type="checkbox"/>	2	Tour 2
<input type="checkbox"/>	3	Tour 3
<input type="checkbox"/>	CL	Casual Leave
<input type="checkbox"/>	ML	Maternity Leave
<input type="checkbox"/>	PL	Paid Leave

At the bottom of the dialog box are two buttons: "OK" and "Cancel".

You can either select particular or can select all the leave types at once.

To select particular leave type, select the check boxes of the desired leave types.

The dialog box titled "Picklist For Leave Masters" has a close button (X) in the top right corner. Below the title bar is a green header bar with the text "Total Selected: 1 Records". ## C-OFF Register

This report provides a user-wise list of all Complimentary-Off details of employees for the specified date range.

Set the filter as per your requirement

The screenshot shows the 'C-OFF Register' window. At the top, there are date pickers for 'Date' with values '06/19/2023' and '06/19/2023'. Below this is the 'Optional Parameters' section with a 'Group By' dropdown set to 'Organization'. The 'User Selection' section has a 'Select Users' dropdown set to 'User Wise', a 'User' picklist with 'ID' and 'Name' options, and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is at the bottom.

**Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.

### User Selection

**Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

The screenshot shows the 'Picklist For All Users' pop-up window. It has a search bar at the top with the text 'Search' and a magnifying glass icon. To the right of the search bar is a 'Show Selected' button. Below the search bar is a table with columns 'User ID' and 'Name'. The table contains 10 rows of data. At the bottom of the table, it says '1 - 10 of 2469 records'. Below this is a pagination bar with buttons for '<<', '<', '1', '2', '3', '...', '247', '>', and '>>'. At the bottom of the window are 'OK' and 'Cancel' buttons.

## Monthly Leave Details

This report provides month and enterprise-group-wise details of dates on which approved leave applications exist for specified users and selected leave types or tours.

Set the filter as per your requirement:

The screenshot shows a web application window titled "Monthly Leave Details". At the top, there are navigation icons (back, refresh, star, help). Below the title bar, there are two dropdown menus for "For Month-Year", currently set to "June" and "2023". Under the "Optional Parameters" section, there is a "Group By" dropdown set to "Organization". Below that is a "Select Leave/Tour" section with a list of checkboxes: "Paid Leave" (checked), "Lay Off", "Unpaid Leave", "Restricted Holiday", and "Compensatory". The "User Selection" section includes a "Select Users" dropdown set to "User Wise", a "User" field with "ID" and "Name" sub-fields, and a "Generate Report For" dropdown set to "All Users". At the bottom center is a "Generate Report" button.

**For Month Year:** Select the month year to specify the time period for which the data is to be generated.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1(Association Maps), Custom Group 2/3.

**Select Leave/Tour:** Click on the desired option —Paid Leave, Lay Off, Unpaid Leave, Restricted Holiday, Compensatory Off, Tour, Hourly Paid Leave, Hourly Unpaid Leave.

### User Selection

**Select User:** Select the desired option — **User Wise, Group Wise, or All.**

- If you select **User Wise**, click on **User** picklist. The **Picklist for All Users** pop-up appears.

## Statutory Leave Reports

This report provides annual leave transaction reports **Form B, Form 15** and **Form Q** as per statutory norms.

Set the filter as per your requirement:

## Form B

Configure the following parameters

The screenshot shows a web application interface titled "Form B". At the top, there is a "Year" dropdown menu set to "2023". Below this is a section titled "Optional Parameters". Inside this section, there is a "Filter By" dropdown menu set to "Casual Leaves". Below the filter, there are two input fields: "ID" and "Name". A "Search" button is located to the left of these fields. Below the search fields, there is a table with columns "Code" and "Name". The table is currently empty, and a "No Data" message is displayed below it. A "Save" button is located at the bottom of the "Optional Parameters" section. Below the "Optional Parameters" section is a section titled "User Selection". Inside this section, there is a "Select Users" dropdown menu set to "User Wise". Below this, there are two input fields: "ID" and "Name". A "Generate Report For" dropdown menu is set to "All Users". A "Generate Report" button is located at the bottom of the "User Selection" section.

**Year:** Select the year to specify the time period for which data is to be generated.

### Optional Parameter

**Filter By:** Select the desired option from the drop down list— **Casual Leave** or **Sick Leave**.

If you select Casual Leaves,

- If you select casual leave, then click the **Leave** picklist. The **Picklist For Leave Masters** pop-up appears.

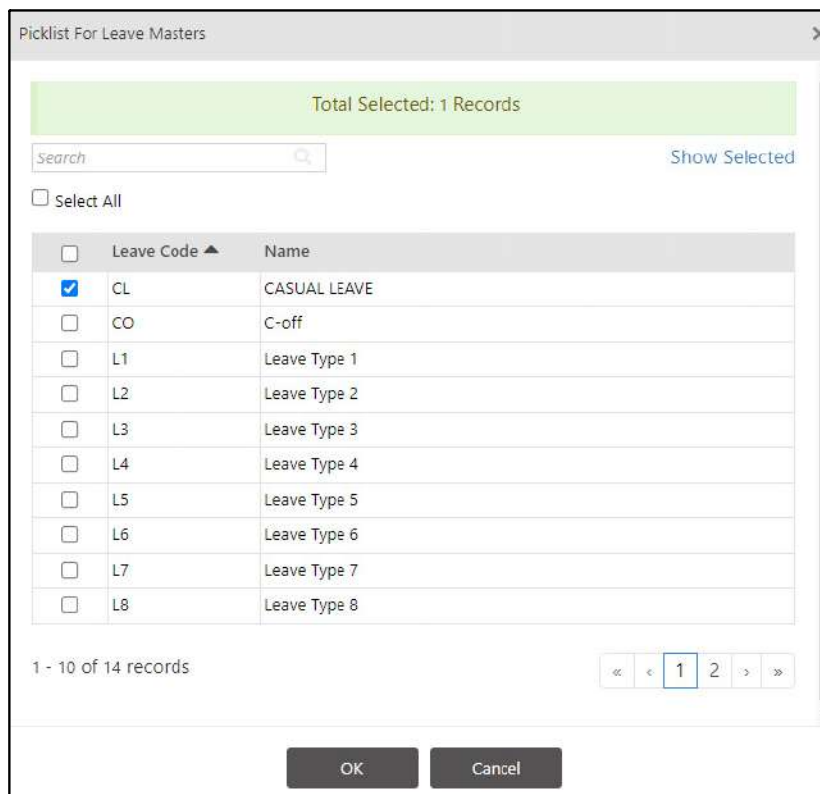

The screenshot shows a pop-up window titled "Picklist For Leave Masters". At the top, there is a green bar with the text "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a "Show Selected" button. Below the search bar, there is a "Select All" checkbox. Below the checkbox, there is a table with columns "Leave Code" and "Name". The table contains 8 rows of data:

Leave Code	Name
CL	CASUAL LEAVE
CO	C-off
L1	Leave Type 1
L2	Leave Type 2
L3	Leave Type 3
L4	Leave Type 4
L5	Leave Type 5
L6	Leave Type 6
L7	Leave Type 7
L8	Leave Type 8

Below the table, there is a pagination bar showing "1 - 10 of 14 records". To the right of the pagination bar, there are navigation buttons: "<<", "<", "1", "2", ">", and ">>". At the bottom of the window, there are "OK" and "Cancel" buttons.

You can either select particular leave types or can select all leave types of leaves at once.

To select particular leave type select the check boxes of the desired leave types.
