OK Cancel

.Select desired check boxes from the list. Click **OK**.

The selected users appear in the grid

The screenshot shows the 'Select Users' interface. At the top, there is a dropdown menu labeled 'Select Users' with 'User Wise' selected. Below it, there is a 'User\*' section with 'ID' and 'Name' input fields and a list icon. A search bar is located below the 'User\*' section. The main part of the interface is a table with the following data:

User ID ▲	Name	
1	SALIM ANSARI	
10	RAJENDRA GOSWAMI	

You can also delete the desired User. Click **Delete** of the respective user.

- If you select **Group Wise** option, select the desired enterprise group from the drop-down list— Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1 (Association Maps) Custom Group1/2/3

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

The selected groups appear in the grid.

The screenshot shows the 'Select Users' interface with 'Group Wise' selected in the 'Select Users' dropdown. Below it, there is a 'Select Group' dropdown with 'Organization' selected. Under 'Organization\*', there are 'ID' and 'Name' input fields and a list icon. A search bar is located below the 'Organization\*' section. The main part of the interface is a table with the following data:

ID	Name	Group ▲	
1	MATRIX COMSEC PVT. LTD.	Organization	
5	TECH SERVICES	Organization	
6	CONSULTANT	Organization	
7	CANTEEN	Organization	
8	APPRENTICE	Organization	

You can also delete the desired user. Click **Delete** of the respective user.

- If you select **All** option, then All User will be selected.

**Generate Report For:** Select the desired option from the drop down list— **All Users, Active Users or Inactive Users**.

Click **Generate Report**.

FORM - D RECEIPT OF DISPATCHED JOB ORDER AND SPECIALIZATION										Month: 2020		Year: 2020	
See Job Order 12 of Rule 18 of the Tamil Nadu Shops and Establishments Act, 1948													
Daily Work of Work Order (including overtime) (12 days)													

The COSEC Cafeteria is a Web based cafeteria management tool offering unparalleled ease of use in managing cafeteria operations for a large number of users or employees.

*This functionality is not available with the COSEC Application basic platform license.*

The following are the features of the Cafeteria module.

- Reduced waiting time at the cafeteria thus improving employee productivity
- Meal payment cycle completion within seconds
- Instant reconciliation of contractors invoice/monthly statement
- Easy tracking of usage of subsidized meal/snack programs
- Tracking cafeteria usage by outsiders/visitors
- Trouble free cash management

## Configuration Basics

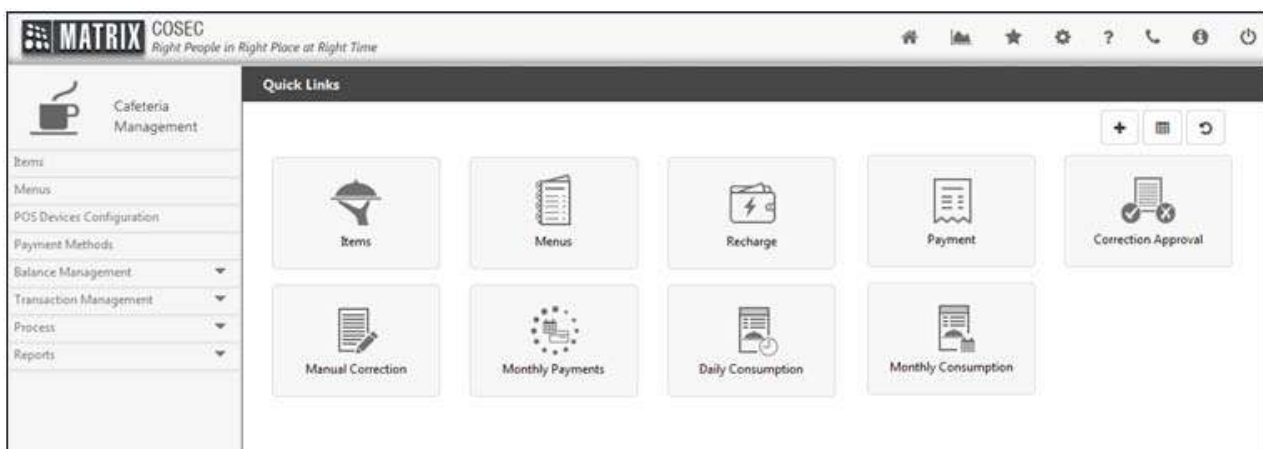

Configure your Cafeteria system in the order noted below:  
Refer to the specified module sections for configuration instructions.

1. Configure Cafeteria Devices from Device Configuration of **Devices** module.
2. Define items from **Items** option of Cafeteria
3. Define menus and assign items to each menu from **Menus** option.
4. Configure menu schedule for each cafe device from **POS (Point Of Sale) Device Configuration** option.
5. Configure parameters for pre-paid and post-paid accounts from the **Payment Methods** option.
6. Assign Cafeteria devices to users from the **User Configuration** option of **Users** module.

*The Monthly process must be run at the end of the month to generate proper cafeteria transactions.*

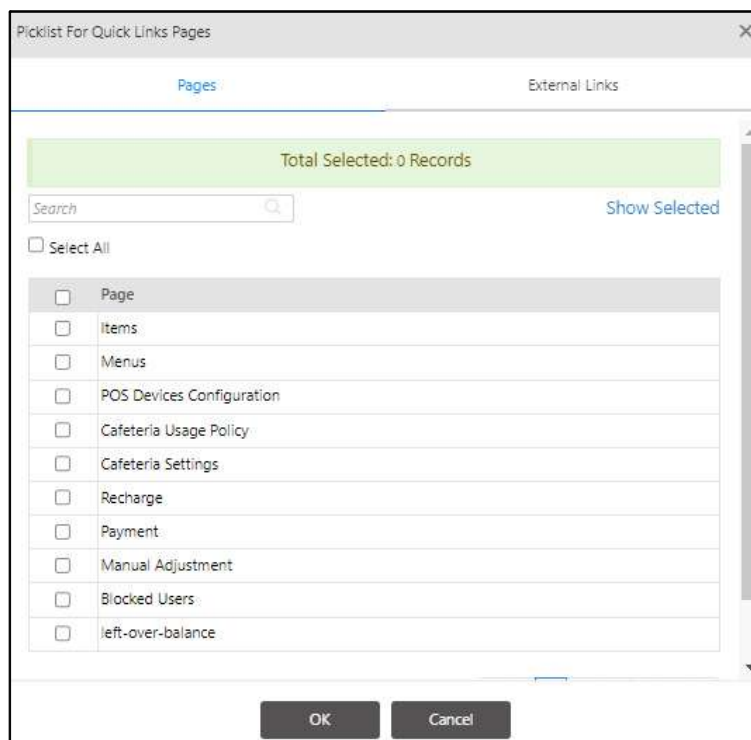

To use the Cafeteria functionality, click on **Cafeteria**  module and the following screen appears.

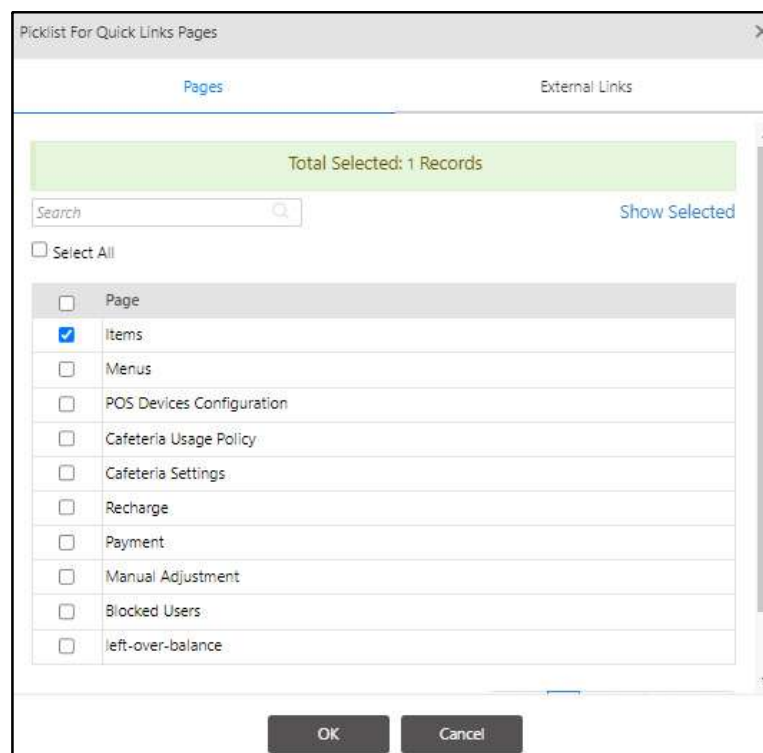

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

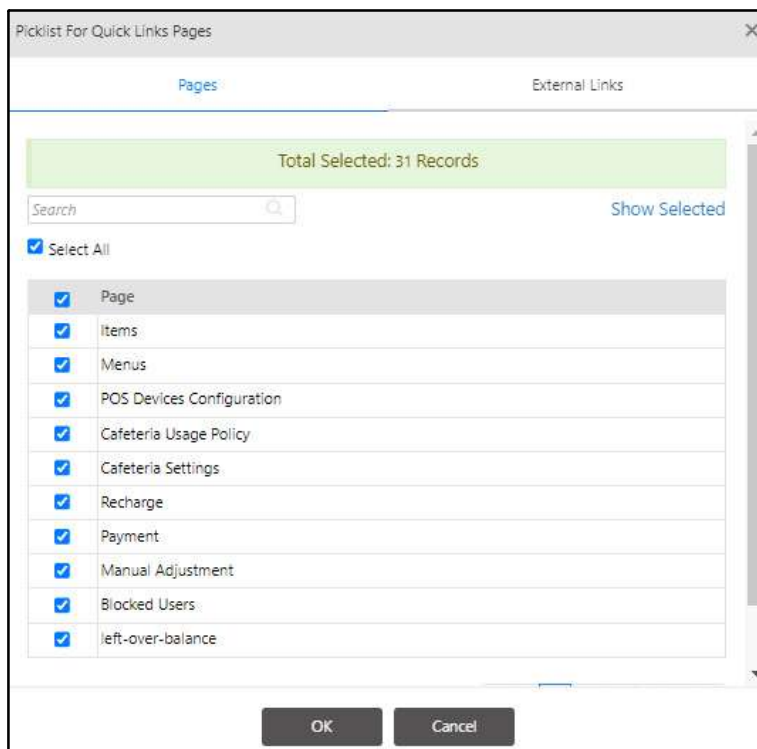

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

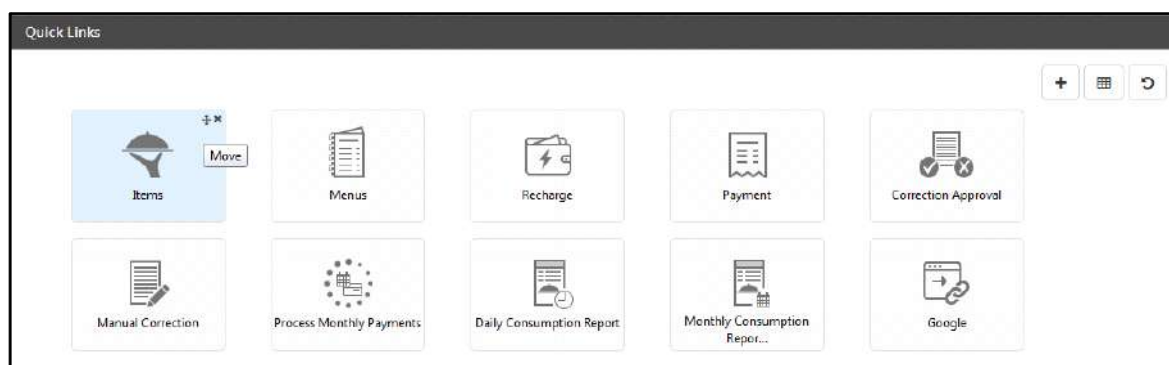

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

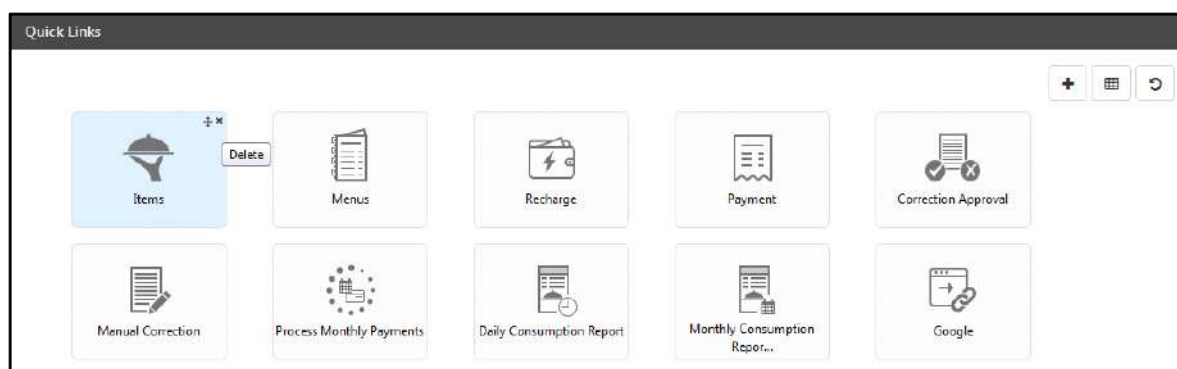

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

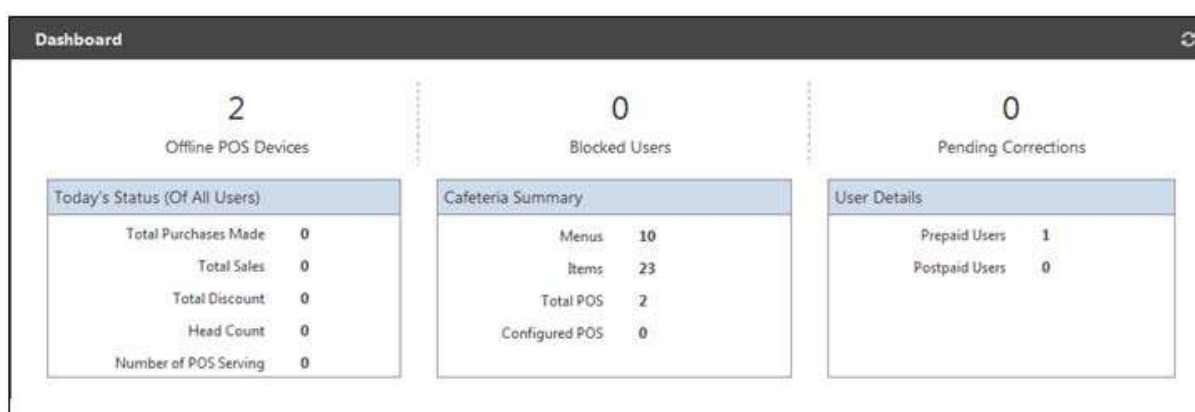

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

## Cafeteria Dashboard

To view the **Cafeteria** Dashboard, click the Dashboard button  on the **Cafeteria** page and the following screen appears.

The Dashboard displays the basic information on Cafeteria module relating to the COSEC Software under the following groups:

- Offline POS Devices: Total no. of POS device which are offline.
- Blocked Users: Total no. of users who are blocked.

- Pending Corrections: Total no. of pending corrections on current day.

#### **Today's Status (Of All Users)**

- Total Purchases Made: Total no. of transactions that were recorded on current day.
- Total Sales: Sum of all the current day transactions amount.
- Total Discount: Sum of all the current day transactions discounts.
- Head Count: Total no. of unique user id found in all the current day transactions.
- Number of POS Serving: Total no. of configured POS with at least one of the menu which is scheduled for today.

#### **Cafeteria Summary**

- Menus: Total no. of menus created in the system.
- Items: Total no. of items configured in the system.
- Total POS: Total no. of devices configured for Cafeteria.
- Configured POS: Total no. of canteen devices to which at least 1 menu assigned to it and also at least one active menu scheduled.

#### **User Details**

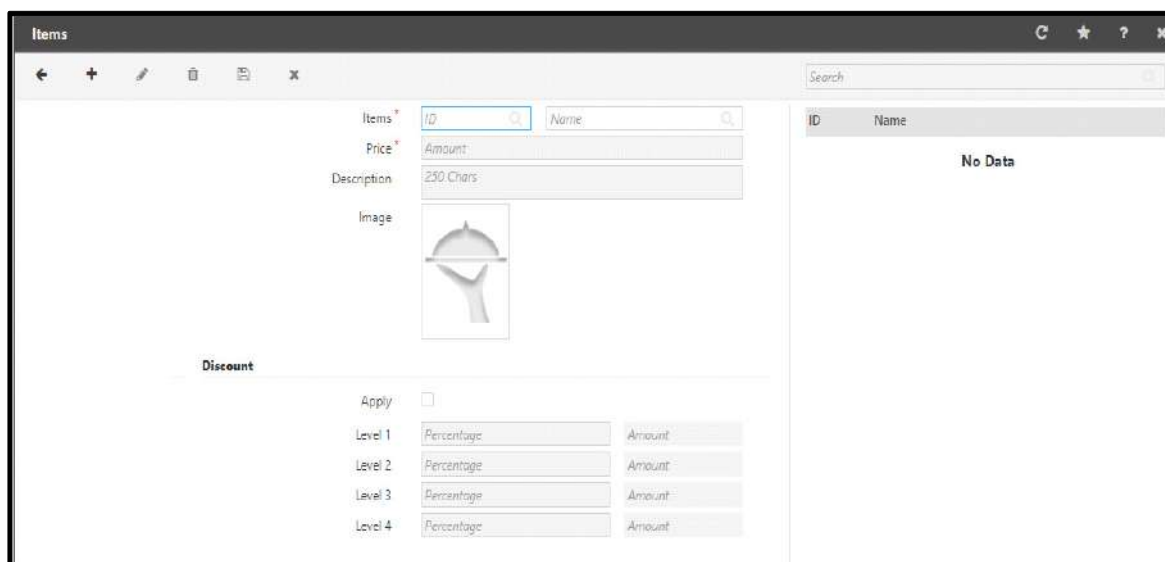

- Prepaid Users: Total no. of canteen users (active) with their account type as prepaid.
- Postpaid Users: Total no. of canteen users (active) with their account type as postpaid.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The latest values on Dashboard are updated on clicking the Refresh  button.

# Items

The Cafeteria module enables to define a list of items that are to be served by the in-house cafeteria during the various menu schedules. You can create maximum **255** items. These items can then be assigned to various menus from the **Menu** option.

To define view items page, go to **Cafeteria Management > Items** and the following screen appears:

The page displays configurations and a list of items which are already defined in the right pane as shown above.

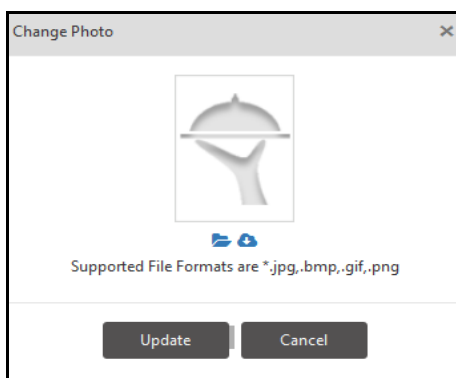

To create a new item click the **New** button and provide the following details:

**Items:** Enter a **Name** for the new item. The **ID** will be generated by the system while saving the item.

**Price:** Specify the cost of the item.

**Description:** Provide a brief description of the item.

**Image:** Click on the Image field to change/upload the photo of the item. A pop-up is generated as shown below. Click on **Browse** image button to select the image and click on **Update** to save the Image.

*Maximum allowed Size to upload the image is 10KB.*

## Discount

- **Apply:** In the event of a discount being applicable on the item, select the checkbox and specify the discount levels as a percentage of the item cost as shown below in the first textbox. The Discount Amount is automatically calculated and displayed in the second textbox based on the Percentage value specified. E.g.: For Level 1, if 50% discount is specified the calculated percentage for 20Rs i.e. 10Rs gets displayed in the second box.

Discount Levels can be assigned to different users. For eg: Discount level 2 with more discount can be given to workers and Discount level1 with less discount can be assigned to managers.

The screenshot shows a web application window titled 'Items'. At the top, a green notification bar says 'Saved Successfully'. The main form on the left has the following fields:

- Items:** A dropdown menu with '4' selected.
- Price:** A text input field containing '20'.
- Description:** A text input field containing '250 chars'.
- Image:** A preview of a samosa.
- Discount:** A section with an 'Apply' checkbox (checked) and four rows for discount levels:

Level	Percentage	Discount Amount
Level 1	50	10.00
Level 2	75	15.00
Level 3	0	0.00
Level 4	0	0.00

On the right side, there is a table listing existing items:

ID	Name
1	Rice
2	Dal
3	Wafers
4	Samosa

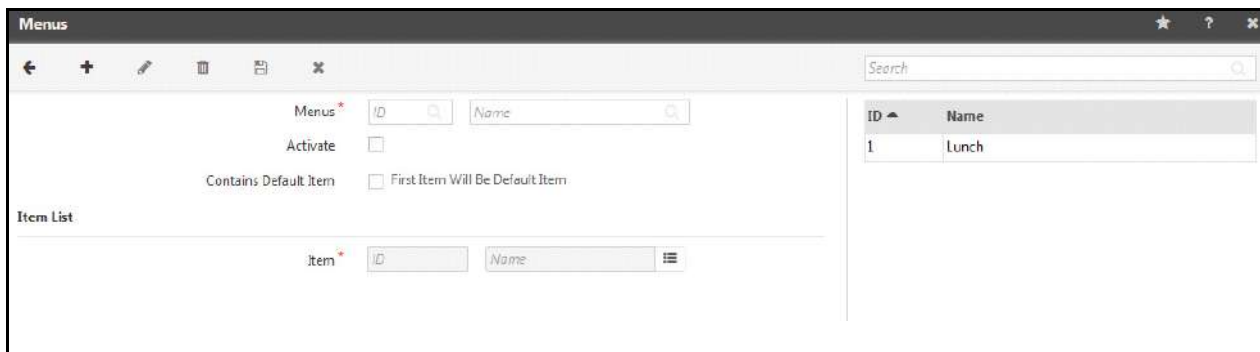

An arrow points to the 'Samosa' row (ID 4) in the table.

Click on **Save** to add the Item to the list. The newly added item gets displayed in the grid on the right side as shown above.

# Menus

This tab enables to define menus which may consist of the items defined from the “Items” page. You can create maximum **999** Menus. These menus can then be assigned to the various Cafeteria devices as per a configured time schedule from the **POS Device Configuration** option.

For defining the Menu, go to **Cafeteria Management > Menus** and the following page appears:

ID	Name
1	Lunch

The above page displays configurations and a grid on the right hand side shows a list of created menus.

To create a new menu, click on the **New** button and enter the following parameters:

- **Menu:** Enter a **Name** for the new menu. The **ID** will be generated by the system while saving the menu.
- **Activate:** Select the check box to enable the menu and set it as active.
- **Contains Default Item:** Enable to set the first assigned item as the default item. In the event of the user directly punching at the Cafeteria door without selecting any item, the system automatically takes the default item as the item ordered and processes the transaction.

*Useful for Canteens selling fixed Breakfast/ Lunch/Dinner.  
Most Selling item can be set as Default.*

## Item List

This section enables to assign items from the item list to the menu.

*Maximum 99 items can be added to a Menu.*

- Click the **Item** picklist. The **Picklist for All Items** pop-up appears.

The dialog box titled "Picklist for All Items" has a green header bar that says "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon. To the right of the search bar is a blue link that says "Show Selected". Below the search bar is a checkbox labeled "Select All". Below this is a table with two columns: "Item Code" and "Item Name". The table contains four rows of data:

<input type="checkbox"/>	Item Code ▲	Item Name
<input type="checkbox"/>	1	Lunch HO
<input type="checkbox"/>	2	Breakfast
<input type="checkbox"/>	3	Lunch Fac
<input type="checkbox"/>	4	Tea HO

At the bottom of the dialog box are two buttons: "OK" and "Cancel".

You can either select particular items or can select all the items at once.

- To select particular items, select the check boxes of the desired items.

The dialog box titled "Picklist for All Items" has a green header bar that says "Total Selected: 1 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon. To the right of the search bar is a blue link that says "Show Selected". Below the search bar is a checkbox labeled "Select All". Below this is a table with two columns: "Item Code" and "Item Name". The table contains four rows of data:

# POS Devices Configuration

The POS Device Configuration functionality enables to assign the menus to devices and allows to schedule the Menu on defined Cafeteria devices for different time periods and days.

For assigning the Menu to device, go to **Cafeteria Management > POS Devices Configuration** tab and the following page appears as shown below:

ID	Name
5	Wireless Door 1st Floor

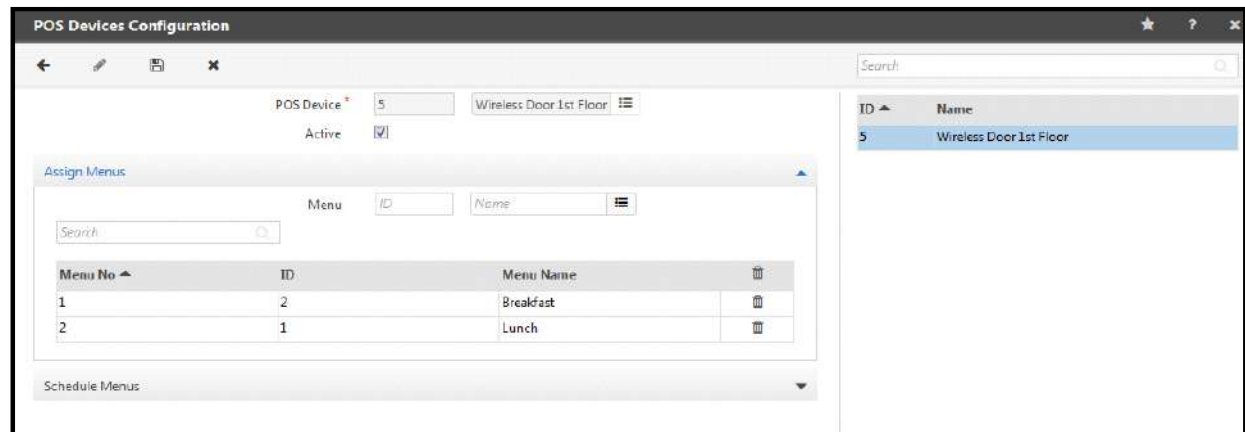

The page displays configurations and a grid on the right side containing devices configured for Cafeteria.

Select a device from the grid and the parameters get loaded in the respective fields

- **Active:** Select the checkbox to activate the selected device.

## Assign Menu

This section enables to assign menus to the selected device. Maximum 99 menus can be assigned to a single device.

Menu No	ID	Menu Name	
1	2	Breakfast	
2	1	Lunch	

- **Menu:** Select menu by clicking on the Picklist button. The selected menu gets displayed in the grid as shown above.

## Schedule Menus

After assigning a menu, schedule can be assigned during which the menu is to be displayed.

Click on **Add** button and the following screen appears.

POS Devices Configuration

POS Device: 5 Wireless Door 1st Floor

Schedule Menus

Search

Menu No	ID	Menu Name	Start Time	End Time	Schedule Days
1	2	Breakfast	08:45	09:00	_ Mo Tu We Th Fr _
2	1	Lunch	12:30	14:00	_ Mo Tu We Th Fr _

Search

ID	Name
5	Wireless Door 1st Floor

Enter the required details:

- **Menu Name:** Select the Menu using the picklist button.
- **Start Time/End Time:** Configure the time period by specifying the **Start Time** and the **End Time** during which the menu will be valid at the selected Cafeteria device.
- **Schedule Days:** Select the checkbox against the appropriate **days** on which the menu is to be considered as valid.
- Click on **OK** to add the selected menu to schedule on the device. Similarly, additional menu schedules can be configured for the selected Cafeteria device.

Click on **Save** once done.

# Cafeteria Usage Policy

The **Cafeteria Usage Policy** enables the administrator to configure cafeteria restrictions based on Item, Menu, Transaction and Shift Duration for Cafeteria Users. You can configure maximum **99** Cafeteria usage policy.

To configure this, go to **Cafeteria Management > Cafeteria Usage Policy** and the following page appears as shown below:

By configuring Cafeteria Usage Policy you can:

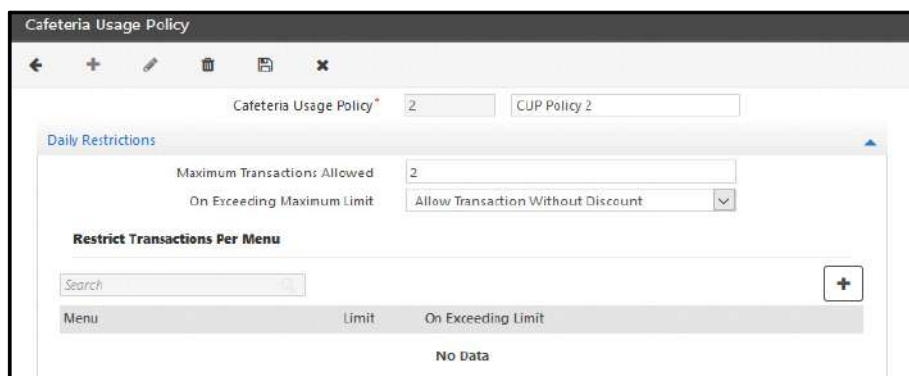

- configure maximum allowed transactions for cafeteria on **Daily**, **Monthly** and **Weekly** basis.
- restrict transaction per menu on daily and monthly basis.
- restrict quantity per items in a menu.
- restrict cafeteria user to access cafeteria out of shift duration & scheduled days.
- allow transactions without discount on exceeding maximum configured limit for all provided restrictions.
- assign defined “Cafeteria Usage Policy” to cafeteria user(s) & any enterprise structure.

To configure new policy, click on **New** button.

Enter the **Name** of policy. The ID will be auto-generated by the system when the policy is saved.

## Daily Restrictions

- **Maximum Transaction Allowed:** Enter the number of cafeteria transactions allowed in a day. The allowed Range is from 1 to 99.
- **On Exceeding Maximum Limit:** When the cafeteria transaction exceeds the maximum allowed limit; then further transaction can be denied by selecting the option Deny transaction or allowed without discount by selecting the option Allow transaction without discount.

## Restrict Transactions Per Menu

- To restrict the cafeteria transaction based on menu, Click on **Add** button. The new row will appear as shown below.

Restrict Transactions Per Menu

## Restrict Quantity Per Item

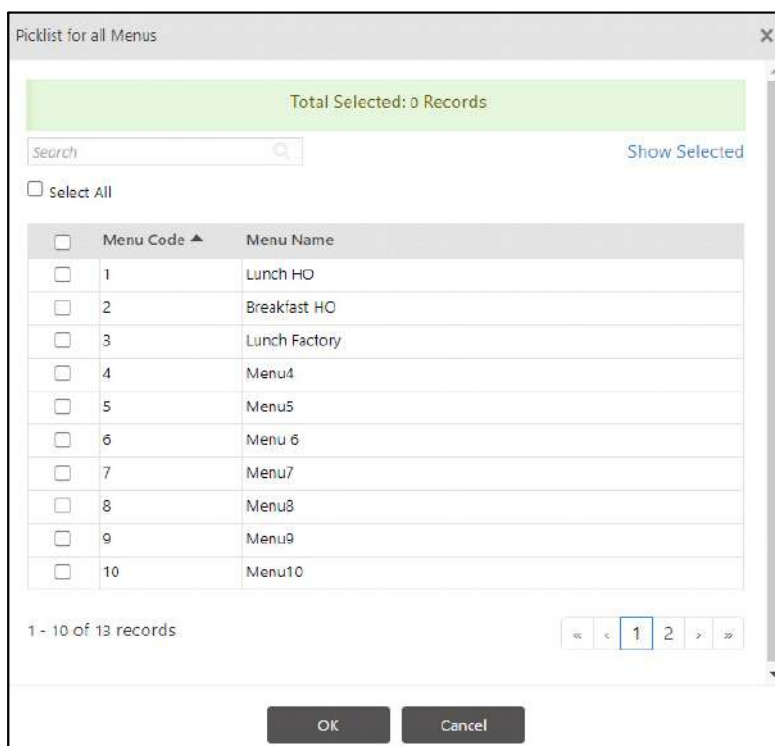

To restrict the cafeteria quantity based on item, Click on **Add** button. The new row will appear as shown below.

The 'Restrict Quantity Per Item' form contains the following fields and controls:

- Select Item:** A text input field containing the value '2'.
- Menu:** A dropdown menu currently set to 'Menu Wise'.
- Select Menus:** Two text input fields, 'ID' and 'Name', each with a list icon on the right.
- Maximum Quantity Allowed:** A text input field containing '0-99'.
- On Exceeding Maximum Quantity:** A dropdown menu set to 'Deny Transaction'.
- Buttons:** 'Add' and 'Cancel' buttons at the bottom right.

- **Select Item:** Click the picklist and select the Item for which restriction is to be made.
- **Menu:** Select the desired option — **Any Menu** or **Menu Wise**.
- If you select **Menu Wise**,
  - **Select Menus:** Click the **Select Menus** picklist. The **Picklist for all Menus** pop-up appears.

The 'Picklist for all Menus' dialog box displays a table of menu records. At the top, it shows 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is located above the table. The table has columns for 'Menu Code' and 'Menu Name'. At the bottom, it shows '1 - 10 of 13 records' and a pagination control with buttons for first, previous, 1, 2, next, and last. 'OK' and 'Cancel' buttons are at the bottom.

## Shift/Day Restrictions

You can also restrict the cafeteria transaction based on Shift/Day.

The screenshot shows a window titled "Shift/Day Restrictions". It contains two main sections. The first section, "Restrict Out of Shift Timings", has a checked checkbox and a dropdown menu currently set to "Deny Transaction". The second section, "Restrict Usage on Day", has a row of checkboxes for the days of the week: Mon, Tue, Wed, Thu, Fri, Sat, Sun, WO, and PH. The checkboxes for Sat, Sun, WO, and PH are checked, while Mon, Tue, Wed, and Thu are unchecked.

- **Restrict Out of Shift Timings:** When the cafeteria transaction is done out of shift timings; then the transaction can be denied by selecting the option **Deny transaction** or allowed without discount by selecting the option **Allow transaction without discount**.
- **Restrict Usage on Day:** The transactions can be restricted on the particular days by selecting the respective check-box. For eg: Here Sat, Sun, WO and PH are restricted for cafeteria transaction. It will not check the configurations done in **Restrict Out of Shift Timings**.

## Pre-order Meal Restrictions

- You can also restrict the cafeteria transaction based on Pre-ordered meal. You can impose restriction on overflowing Pre-ordered quantity.

The screenshot shows a window titled "Pre-order Meal Restrictions". It has a section "Pre-order Based Restriction" with a checked checkbox and a dropdown menu. The dropdown menu is open, showing three options: "Allow Transaction Without Discount", "Deny Transaction", and "Allow Transaction Without Discount" (which is highlighted in blue). Below this, there is a section labeled "Monthly Restrictions" which is currently collapsed.

- Enable the **Pre-order Based Restriction** check box. Then you can select either of the options:
- **Allow Transaction without Discount-** If item's consumed quantity exceeds the pre-ordered quantity of the item in selected menu then it will allow the transaction without discount.
- **Deny Transaction** -If item's consumed quantity exceeds the pre-ordered quantity of the item in selected menu then it will deny the transaction.

## Monthly Restrictions

The screenshot shows a window titled "Cafeteria Usage Policy". It has a toolbar with icons for back, add, edit, delete, save, and close. Below the toolbar, there are two expandable sections: "Daily Restrictions" and "Monthly Restrictions". The "Monthly Restrictions" section is expanded, showing two fields: "Maximum Transactions Allowed" with a text input containing "100", and "On Exceeding Maximum Limit" with a dropdown menu set to "Deny Transaction".

- **Maximum Transaction Allowed:** Enter the number of cafeteria transactions allowed in a month. The allowed Range is from 1 to 9999.
- **On Exceeding Maximum Limit:** When the cafeteria transaction exceeds the maximum allowed limit; then further transaction can be denied by selecting the option Deny transaction or allowed without discount by selecting the option Allow transaction without discount.

### Restrict Transactions Per Menu

- To restrict the cafeteria transaction based on menu, click on **Add** button. The new row will appear as shown below.

Restrict Transactions Per Menu

## Restrict Quantity Per Item

- To restrict the cafeteria quantity based on item, click on **Add** button. The new row will appear as shown below.

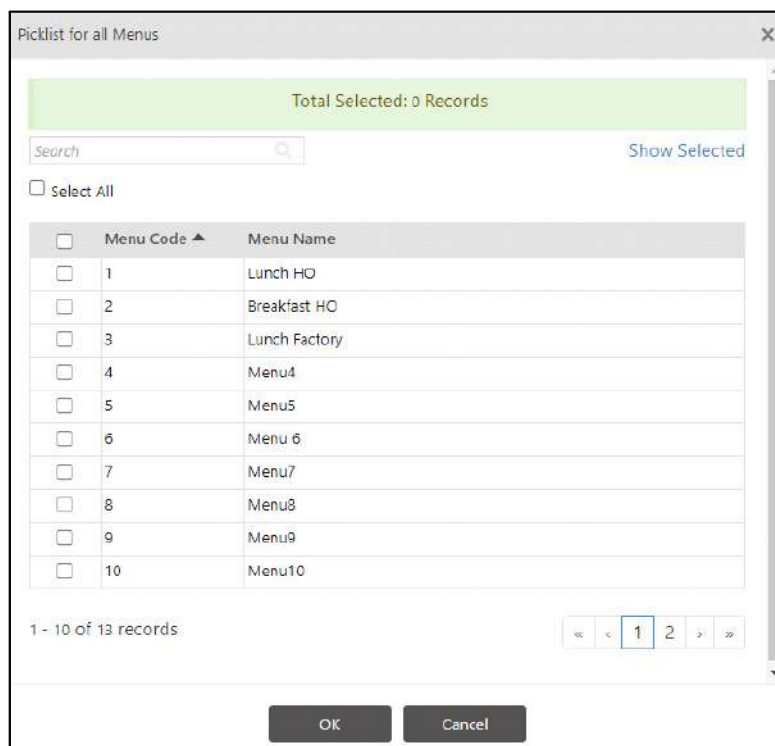

The form titled "Restrict Quantity Per Item" contains the following fields and controls:

- Select Item:** A text input field containing the value "2".
- Menu:** A dropdown menu currently set to "Menu Wise".
- Select Menus:** Two text input fields, "ID" and "Name", each with a picklist icon to its right.
- Maximum Quantity Allowed:** A text input field containing "0-99".
- On Exceeding Maximum Quantity:** A dropdown menu set to "Deny Transaction".
- Buttons:** "Add" and "Cancel" buttons at the bottom right.

- Select Item:** Click the picklist and select the Item for which restriction is to be applied.
- Menu:** Select the desired option —**Any Menu** or **Menu Wise**.

If you select **Menu Wise**,

- Select Menus:** Click the **Select Menus** picklist. The **Picklist for all Menus** pop-up appears.

The "Picklist for all Menus" pop-up window displays a table of menu records. At the top, it shows "Total Selected: 0 Records". Below this is a search bar and a "Show Selected" button. A "Select All" checkbox is located above the table. The table has two columns: "Menu Code" and "Menu Name". It lists 10 records, with the first 10 visible. At the bottom, it shows "1 - 10 of 13 records" and a pagination control with buttons for "1" and "2".

*It is advised to configure Daily & Monthly Level limits properly to avoid false restrictions. Suppose Maximum Transactions / Item Limit / Menu Limit on Monthly Level is configured less than Daily Level, in such cases user will be restricted on reaching monthly allowed limit.*

## Weekly Restrictions

- **Weekly Restriction:** Select this check box if you wish to apply weekly restrictions on users based on transaction amount.
- **Maximum Weekly Limit:** Enter the maximum transaction amount that will be allowed to users. When the user's transactions exceed this amount, further transactions will be denied.
- **Week Start Day:** Select the desired day from the drop down list. This day will be considered as the starting day of the week for the user. For example, if you select Tuesday, the week for the user will begin on Tuesday - November 2 and end on Monday - November 8.
- If you want the week for the users to begin from the day they join, then 7 different policies for each day of the week need to be created. These can then be assigned as per the joining day of the users. For example, if you have set the Week Start Day as Monday, User1 joins on Tuesday and User2 joins on Wednesday. In this case, we need to create separate policies, wherein in Policy1 the Week Start day will be set as Monday, in Policy2 it will be Tuesday and in Policy3 it will be set as Wednesday. Now, you can assign Policy2 to User1 and Policy3 to User2.
- If you desire updating the **Week Start Day** for any existing Cafeteria Usage Policy assigned to users, it is recommended you update the day a day before the newly configured **Week Start Day**, to make sure the changes are applied effectively.
- For example, the **Week Start Day** is initially configured as Monday and later you wish to update it as Saturday, then you must update the **Week Start Day** on:
  - Friday after all the transactions for the day have been completed
  - OR
  - Saturday before any transaction for the day is to be encountered.
- Weekly Restrictions are applicable to ARGO, ARGO FACE and VEGA devices only. If you want to print the Current Balance/ Current Month Usage and Weekly Remaining Limit on the Cafeteria receipt, refer to ["Printer Settings"](#) in VEGA Door, ["Printer Settings"](#) in ARGO Door and ["Printer Settings"](#) in ARGO FACE.

*Weekly Restriction is applicable only if the device is connected to the server.*

*The unused weekly balance will not be carry-forwarded to the next week.*

*Pre-ordered meals will not be considered for Weekly Restriction*

# Cafeteria Settings

The **Cafeteria Settings** page enables the administrator to configure parameters for **prepaid** and **postpaid** accounts as per the site requirements.

To configure this, go to **Cafeteria Management > Cafeteria Settings** and the following page appears as shown below:

The screenshot shows the 'Cafeteria Settings' window with the 'Prepaid' tab selected. The settings are organized into sections: Prepaid, Monthly Limit, and Daily Limit. Each section contains several configuration options with checkboxes and input fields.

Section	Setting	Value
Prepaid	Limit Recharge Amount	<input checked="" type="checkbox"/>
	Maximum Recharge Amount *	500
	Balance Management	Server Based
	Device-Server Balance Check	<input checked="" type="checkbox"/>
Monthly Limit	Block User On Max Usage Limit	<input checked="" type="checkbox"/>
	Maximum Usage Limit Per Month *	50
Daily Limit	Block User On Max Usage Limit	<input checked="" type="checkbox"/>
	Maximum Usage Limit Per Day *	22.5
	Restore User On Date Change	<input checked="" type="checkbox"/>

There are three types of settings as described below:

- Prepaid
- Postpaid
- Other Settings

## Prepaid

Prepaid method provides the simple option of recharging the Smart Card to store balance information as and when needed. This eliminates the need of managing cash all the time.

This screenshot is identical to the one above, showing the 'Cafeteria Settings' window with the 'Prepaid' tab selected. It displays the same configuration options and values for the Prepaid, Monthly Limit, and Daily Limit sections.

Section	Setting	Value
Prepaid	Limit Recharge Amount	<input checked="" type="checkbox"/>
	Maximum Recharge Amount *	500
	Balance Management	Server Based
	Device-Server Balance Check	<input checked="" type="checkbox"/>
Monthly Limit	Block User On Max Usage Limit	<input checked="" type="checkbox"/>
	Maximum Usage Limit Per Month *	50
Daily Limit	Block User On Max Usage Limit	<input checked="" type="checkbox"/>
	Maximum Usage Limit Per Day *	22.5
	Restore User On Date Change	<input checked="" type="checkbox"/>

The parameters are:

**Limit Recharge Amount:** Select to enable a limitation to be set on maximum recharge amount for prepaid accounts.

**Maximum Recharge Amount:** Specify the maximum amount with which a prepaid account can be recharged.

**Balance Management:** Specify whether the balance management process for prepaid users should take place at the device side or server side. For Server Based balance management, user credentials supported are fingerprint, Read-Only card and Smart card. For Device Based balance management, however, only Smart Cards are supported.

**Device-Server Balance Check:** For Server Based balance management, You can enable Device-Server Balance Check to enable Device to check Server-side balance before allowing cafeteria transaction. For this, Device and Server must be connected.

*For server communication in the prepaid server based mode, the admin must set HTTP Server configuration on the device webpage for all configured Cafeteria devices.*

### **Monthly Limit**

This section enables to set a maximum monthly usage limit for a prepaid user.

**Block User on Max Usage Limit:** Enable to block a user whose usage has exceeded the monthly limit.

**Max Usage Limit Per Month:** Specify the maximum limit of usage per month.

### **Daily Limit**

This section enables to set a maximum daily usage limit for a prepaid user.

**Block User on Max Usage Limit:** Enable to block a user whose usage has exceeded the daily limit.

**Maximum Usage Limit Per Day:** Specify the maximum limit of usage per day.

**Restore User On Date Change:** Enable to allow a user to be blocked only for a single day and then restore the user at midnight.

## Postpaid

Postpaid method provides the choice of having the bill deducted directly from a user's payroll. Hence, there is no need for manual cash handling at any time.

The screenshot shows the 'Cafeteria Settings' window with the 'Postpaid' tab selected. The interface includes a sidebar with 'Prepaid', 'Postpaid', and 'Other Settings'. The main area contains the following settings:

- Account Reset Mode:** A dropdown menu set to 'Reset To Zero'.
- Allowed Usage Per Month:** A text input field containing '100'.
- Reset Account Automatically:** An unchecked checkbox.
- Monthly Limit:**
  - Block User On Max Usage Limit:** A checked checkbox.
  - Maximum Usage Limit Per Month:** A text input field containing '52'.
  - Accumulate Usage Limit:** A checked checkbox.
- Daily Limit:**
  - Block User On Max Usage Limit:** A checked checkbox.
  - Maximum Usage Limit Per Day:** A text input field containing '12.63'.
  - Restore User On Date Change:** A checked checkbox.

The parameters are:

**Account Reset Mode:** Select a mode from the dropdown list to reset the account. The two modes are:

- **Reset to Zero:** Select this option to reset the postpaid users' accounts to 0 at the start of the month.
- **Deduct User's Allowed Usage:** Select this option to reset the account by using one of the following methods based on the actual usage of postpaid user:

If the total amount (actual usage for the month + previous due) is less than the users allowed usage per month (see below), the account is reset to zero and the total amount is recorded as payment transaction.

If the total amount (actual usage for the month + previous due) is more than the users allowed usage per month, the account will be reset to zero and the balance due "total accumulated amount - allowed usage amount" will be added and stored in the users previous due record. In this case the user's allowed usage amount will be recorded as user's payment transaction.

*On running the Monthly Payments Process, a postpaid account will be reset based on the account reset mode specified by the admin. For more information, See ["Process-Monthly Payments"](#) on page 2492.*

**Allowed Usage Per Month:** Specify the amount for the allowed monthly usage for postpaid accounts. This amount is used specifically as a base for the calculation of a user's accumulated dues and account reset calculations as explained before.

**Reset Account Automatically:** Select the checkbox if the postpaid accounts are to be automatically reset everytime the month changes.

*The Alert Service must be running to function Reset Account automatically.*

### Monthly Limit

This section enables to specify the maximum usage limit amount for a month for a postpaid user. This is not to be confused with *Allowed Usage Per Month* which is used to determine a user's payment dues for a month.

**Block User on Max Usage Limit:** Select the checkbox if the users with postpaid accounts are to be blocked as and when the maximum usage limit is crossed for a month.

**Maximum Usage Limit Per Month:** Specify the maximum limit of usage per month.

**Accumulate Usage Limit:** Enable, if the user has not consumed the *Allowed Usage Per Month* limit for a selected month, and the balance is to be carried forward to the next month's allowed usage.

### Daily Limit

This section enables to specify the maximum usage limit amount for a day for a postpaid user.

**Block User on Max Usage Limit:** Enable to block a user whose usage has exceeded the daily limit.

**Maximum Usage Limit Per Day:** Specify the maximum limit of usage per day.

**Restore User On Date Change:** Enable to allow a user to be blocked only for a single day and then restore the user at midnight.

*The Cafeteria Settings will be the default settings applicable to all Cafeteria enabled users in the system. These settings can however, be overridden from the **User Configuration** page of the **Users** module.*

## Other Settings

From the Other Settings page one can enable the Pre-ordering feature.

The Cafeteria User can pre-order items beforehand from respective menus for the selected date. This helps Cafeteria Admin to have an estimate about the quantity of food to be prepared on given date.

**Enable:** Select to activate the Pre-ordering feature.

**Allowed in Advance(Days):** Specify the number of days before which the Cafeteria user can order the meals in advance. Eg: If 10 days is set. Then on 12th September, you can pre-order meals for upto 22 September.

**Restrict Before Menu Start:** Specify the number of **Days** or **Hours** before which the cafeteria user must finish the ordering of meals so that the food can be prepared for the required quantity.

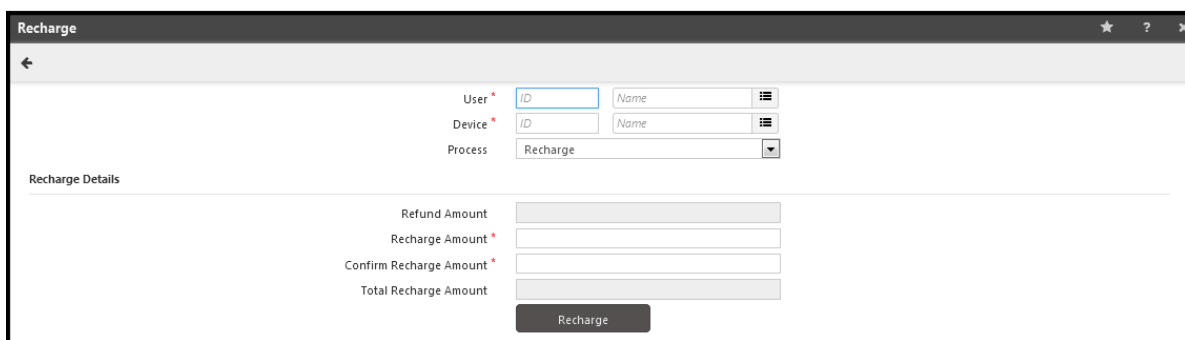

- **Days:** Select Days from the dropdown list and mention the number of days
  - **Hours:** Select the hours from the dropdown list and mention the number of hours.
- [See "Pre-ordered Meals" on page 2480.](#)

Finally, click on **Save** button to save the settings.

# Recharge

The Balance Management option of the Cafeteria module enables the user to recharge the **prepaid** user card from the Cafeteria device. The COSEC Web application sends the configured recharge command to the Cafeteria device from the COSEC Monitor application.

To view the recharge page, go to **Cafeteria Management > Balance Management > Recharge** option and the following page appears as shown below:

- **User:** Select a user from the Cafeteria Prepaid users picklist. The picklist contains users configured from the User module and who have been assigned the Prepaid account from the **Users > User Configuration > Cafeteria** page.
- **Device:** Select a device from the Cafeteria device picklist. The device for the Cafeteria application can be assigned from the *Application* parameter of **Devices module > Device Configuration > Profile** page.

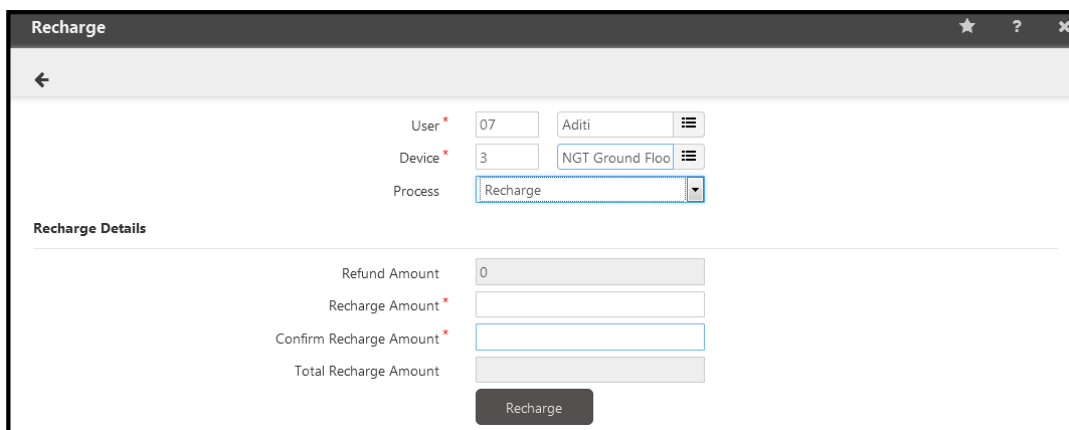

*Only those devices which are enabled for cafeteria are available for the selection.*

*The Device picklist will be enabled for those prepaid user for whom the Balance Management is set as Device based from the User configuration> Cafeteria> Settings.*

*For server based balance management, the device web page must be updated with the HTTP server address.*

- **Process:** Select the Process from the options of **Recharge** or **Reset**.

## Recharge Process

## Recharge Details

- **Refund Amount:** It displays the amount to be refunded to the user by the system. It is an auto generated field.  
**For e.g:** In Prepaid user case, when the user punches at the Cafeteria door the amount is deducted for the selected item. But when the user goes to take that item, if the item is not available at that time so the user is left without that item. In such case he has to be refunded for the item price.
- **Recharge Amount:** Enter the recharge amount by which the prepaid user can be recharged.
- **Confirm Recharge Amount:** Re-enter the recharge amount for confirmation.
- **Total Recharge Amount:** This is the auto generated total amount which includes the summation of Refund Amount and Recharge amount with which the user card will be recharged.

Click on **Recharge**. The system will send the recharge command to the Cafeteria device. The selected user will be prompted to display the card at the device for the recharge process to be completed.

## Reset Process

The screenshot shows a mobile application window titled "Recharge". It features a back arrow in the top left corner. Below the title bar, there are three input fields: "User" with the value "07" and a dropdown menu showing "Aditi"; "Device" with the value "3" and a dropdown menu showing "NGT Ground Floor"; and "Process" with a dropdown menu showing "Reset". Below these fields is a section titled "Recharge Details" which contains a "Reset Type" dropdown menu showing "Reset The Account To Zero (0)". At the bottom of this section is a "Reset" button.

- **Reset Type:** Select the Reset option from the dropdown list of Process field and select the Reset type from the below options:
  - **Reset the Account to Zero(0):** Select this option to reset the value on the prepaid card to 0.
  - **Reset the Account to Available Balance:** If this option is selected, **Reset Amount** field will display the last available balance of the user as found in the COSEC database based on the user's transaction to which the balance on the user card will be reset.

**For E.g.:** If the user has balance of Rs.100, he punches for a value of Rs.20, then available balance will be Rs.80 in user card and COSEC Database. If user punches next time for any value and if due to any reason the card gets garbage value. Then the card can be reset to the available balance in COSEC database i.e. Rs.80.

Click on the **Reset** button after selecting the appropriate option.

# Payment

The Balance Management option of the Cafeteria module enables to record payment transactions against dues for the **postpaid** users.

For making the Payment, go to **Cafeteria Management > Balance Management > Payment** and the following page appears as shown below:

The screenshot shows a web application window titled "Payment". It features a back arrow icon in the top left corner. The form contains the following fields and elements:

- User\***: A dropdown menu with the value "03" and a label "Arushi" next to it.
- Total Due**: A text field displaying "340.32".
- Payment**: A section header for the payment details.
- Amount\***: A text field with the value "300".
- Remark**: An empty text field.
- Process**: A dark button at the bottom right of the form.

- **User**: Select the user from the picklist. The picklist contains users configured from the User module and who have been assigned the Postpaid account from the **Users > User Configuration > Cafeteria** page.
- **Total Due**: It displays the total amount due for the selected user.

## Payment

- **Amount**: Enter the payment amount.
- **Remark**: The user can enter any remark during the payment process.

Click on the **Process** button to process the Payment.

After doing payment of say for Rs. 300, the left over due is shown in **Total Due** field and **Payment Successful** message is displayed as shown below.

The screenshot shows the same "Payment" form as before, but with a green banner at the top indicating a successful transaction. The form fields are now empty, and the "Total Due" field shows a new value.

- Payment Successful**: A green banner at the top of the form.
- User\***: A dropdown menu with the value "03" and a label "Arushi" next to it.
- Total Due**: A text field displaying "40.32".
- Payment**: A section header for the payment details.
- Amount\***: An empty text field.
- Remark**: An empty text field.
- Process**: A dark button at the bottom right of the form.

# Manual Adjustment

This option enables the administrator to perform manual adjustments to user accounts.

Suppose due to some reasons, if the user's punch is not detected, in that case, we can manually adjust the user's account by debiting the required amount manually.

For making the manual adjustment, go to **Cafeteria Management > Balance Management > Manual Adjustment**

*You can do Manual Adjustment for both the users— Prepaid and Postpaid.*

## Prepaid Users

For Prepaid users, following screen appears.

The screenshot shows the 'Manual Adjustment' interface. At the top, there's a search bar and a user selection area with 'User' dropdown set to '07' and 'Aditi' selected. Below this, the 'Account Details For Current Month' section displays several fields: 'Previous Balance' (0.00), 'Current Expense' (85.00), 'Correction Amount' (0.00), 'Total Recharge' (300.00), and 'Total Balance' (215.00). There's also an 'Adjustment' dropdown set to 'Debit', an 'Amount' field with '20', and a 'Remark' field with 'Punch not Detected'. A 'Process' button is at the bottom. On the right, a table lists users with columns 'ID' and 'Name'.

ID	Name
07	Aditi
1567	Sheetal
1678	Supriya
1782	Nidhi

The page displays the grid on the right hand side, containing a list of users (both Prepaid and Postpaid) who are enabled for canteen.

Enter the following parameters:

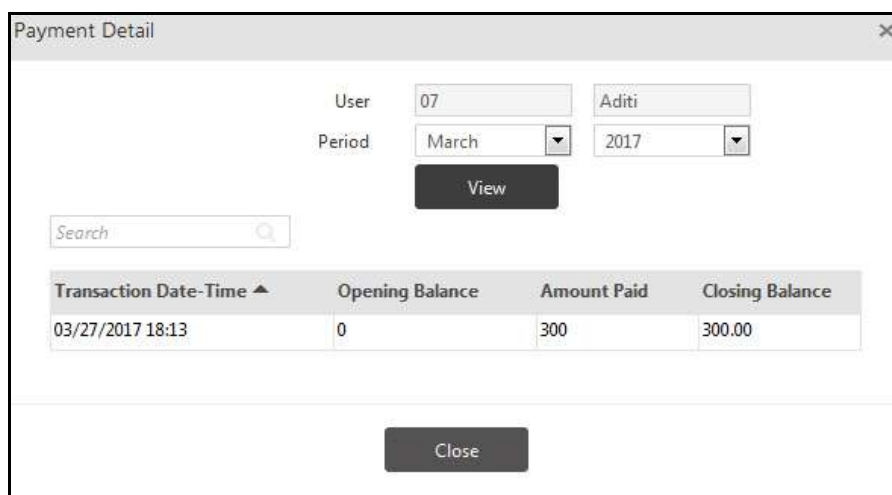

- **User:** Select user from the user picklist or from the grid on right for whom the manual adjustments are to be done.

### Account Details for Current Month

It displays the account details of the selected user as **Previous** and **Current Expense**, **Correction Amount**, **Total Recharge**, and **Total Balance**.

- **Previous Balance:** It displays the previous balance which is carry forwarded to next month for the pre-paid user.
- **Current Expense:** It displays the expense of the month for the pre-paid user.

- **Correction Amount:** It displays the Refund amount to be paid back to the user in case of transaction error. It is equal to the Adjustment Balance + Refund Balance - Reset Balance.
- **Total Recharge:** It displays the total amount of recharge done in current month. Click on  to view the Payment Detail of recharge done by the user for a particular month as shown below.

Payment Detail

# Blocked Users

The COSEC Cafeteria module helps in monitoring Prepaid as well as Postpaid users and helps avoid treacherous usage by allowing users to be blocked on certain violations. Both Prepaid and Postpaid users can be blocked when their usage exceeds a fixed daily or monthly limit as configured for their Cafeteria accounts.

To view the blocked users, go to **Cafeteria Management > Balance Management > Blocked Users**.

The Blocked Users page of the Cafeteria module enables the administrator to view the list of blocked users as well as restore blocked users as and when required. The two ways to Reinstate a blocked user are

- Pay full or part of the Due Amount
- Increase the Usage Limit

The screenshot shows the 'Blocked User' interface. At the top, there's a search bar and a list of blocked users. The main section displays account details for user 'Palak' (ID 3). The details include:

Current Month Account Details	
Previous Due	0.00
Current Due	145.00
Total Payments	0
Total Due	145.00
Blocked On	09/11/2017

Max Usage Limit Per Month	140.00
Previous Month's Accumulated Limit	0
New Usage Limit Per Month	<input type="text"/>

At the bottom, there is an 'Unblock' button. Arrows in the original image point to the 'Current Due' and 'Max Usage Limit Per Month' fields.

The grid on the right displays a list of all the users who are currently blocked due to exceeding the maximum usage limit.

Example: Here the user Palak has purchased the items of price 145.00 which is more than the “Max Usage Limit Per month” of 140; so on next transaction on door; he will be blocked with reason Monthly consumption limited exceeded.

The transactions are shown below.

Transaction Summary

Date: 09/10/2017 09/11/2017

Filter User: Individual

User: 3 Palak

View

Purchase (6)

User ID	Name	Transaction Date-Time	POS Device	Item	Unit Price	Discount	Quantity	Payable
3	Palak	09/11/2017 10:50	NGT Direct Door-Device-2	Vadapav	40	20	1	20.00
3	Palak	09/11/2017 10:41	NGT Direct Door-Device-2	Vadapav	40	20	1	20.00
3	Palak	09/11/2017 10:40	NGT Direct Door-Device-2	Vadapav	40	20	1	20.00
3	Palak	09/11/2017 10:40	NGT Direct Door-Device-2	Puff	40	20	3	60.00

Max Usage Limit Per Month	140.00
Previous Month's Accumulated Limit	0
New Usage Limit Per Month	160

Unblock

ID	Name
3	Palak

Also the limit can be increased from User Configuration.

Click on **Unblock** to unblock the selected user. The user will be restored and he can purchase the item from cafeteria device.

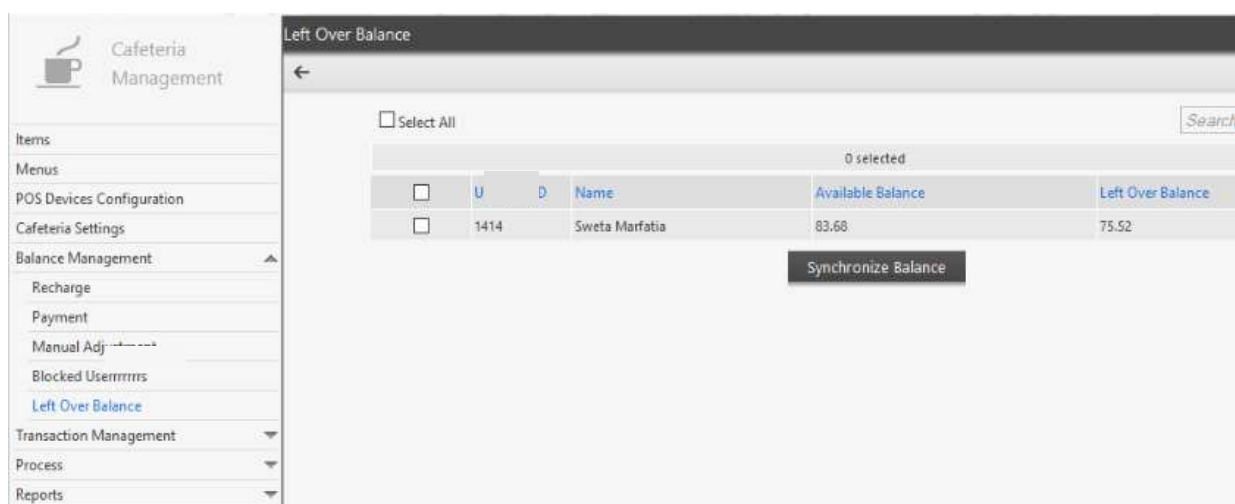

# Left Over Balance

Left Over Balance page will allows the Admin to view users whose Left Over Balance and Available Balance are out of sync. When due to some exceptional cases Left Over Balance is decremented and event is not received from Device or vice versa then Left Over Balance can be manually sync to Available Balance.

For Synchronizing, go to **Cafeteria Management > Balance Management > Left Over Balance** and the following screen appears as shown below:

The grid shows list of all active users (Prepaid Server Based + Device-Server Balance Check -Enabled) for whom Left Over Balance is not equal to Actual balance.

Select the users to be synchronized. You can select a particular user or can select all the users at once.

To select particular users, select the check boxes of the desired users.

**OR**

To select all the users, select the **Select All** check box. The users on all the pages will be selected.

Click **Synchronize Balance** for all selected users to make Left Over Balance = Actual balance for current month.

# Pre-ordered Meals

Pre-ordered Meals enable the Cafeteria Admin to view and have an estimation about the quantity of food to be prepared on the selected date.

Click **Cafeteria Management > Transaction Management > Pre-ordered Meals** from Cafeteria page. The page appears as shown below:

The screenshot shows the 'Pre-ordered Meals' interface. At the top, there's a title bar with a star and a question mark. Below it, a search bar is visible. The main section contains filters: 'Date' (05/05/2017), 'Filter User' (All), and 'Group/User' (ID and Name). A 'View' button is below the filters. Under 'Ordered Items', there's a search bar and a table with columns: Menu ID, Name, Item ID, Name, and Total Quantity. The table currently shows 'No Data'.

**Date:** Select the Date for which list of pre-ordered meals is to be viewed.

**User:** Select the user by filtering from the options of enterprise group or individual user.

*The Pre-ordering of items is done from the ESS account of Cafeteria enabled users.*

*The settings for pre-ordering of meals is done from Cafeteria Management module> Cafeteria Settings > Other Settings.*

Click on **View** button to view the ordered list. It shows the date wise list of items which is pre-ordered by the cafeteria users.

The screenshot shows the 'Pre-ordered Meals' interface with the 'View' button clicked. The table now displays one row of data:

Menu ID	Name	Item ID	Name	Total Quantity
3	Evening snack	5	Puff	4

# Correction Approval

The COSEC application allows the users to apply for corrections to existing transactions from the Cafeteria Transaction Correction page of COSEC ESS module. These applications can be authorized by the administrator from the Correction Approval page of the Cafeteria module.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

For giving correction approval, go to **Cafeteria Management > Transaction Management > Correction Approval** and the following page appears as shown below:

You can either:

- view all the pending applications for Correction Approval
- set the date filters to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#)

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

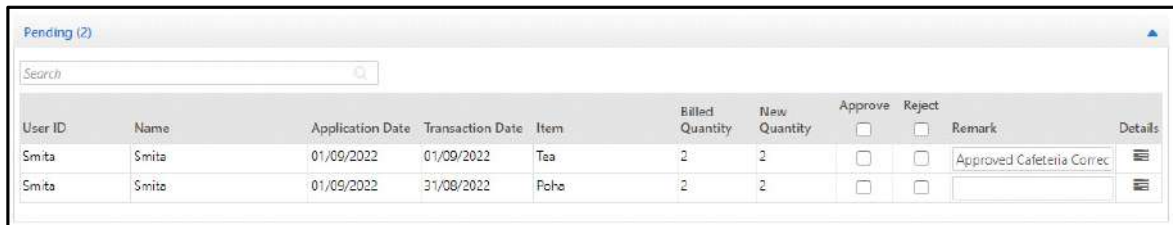

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end dates by clicking the respective date selection buttons. This defines the period for which the applications are to be viewed.

Click the **View** button to view all the pending, approved and rejected applications.

## Pending Applications

Click the **Pending** collapsible panel. All the applications in pending state are displayed.

User ID	Name	Application Date	Transaction Date	Item	Billed Quantity	New Quantity	Approve	Reject	Remark	Details
Smita	Smita	01/09/2022	01/09/2022	Tea	2	2	<input type="checkbox"/>	<input type="checkbox"/>	Approved Cafeteria Correc	
Smita	Smita	01/09/2022	31/08/2022	Poha	2	2	<input type="checkbox"/>	<input type="checkbox"/>		

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

The application will be displayed under respective panel.

You also, click **Details**  of view the details of the transaction. The Transaction Correction Details page appears as shown below:

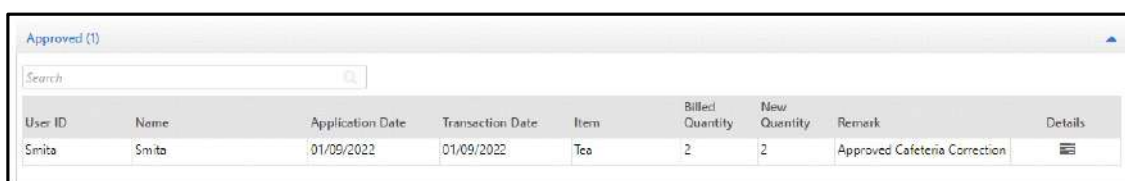

User	Smita	Smita
Transaction Date	01/09/2022	
POS Device	97	ARGO FACE-Device
Item	1	Tea
Price	10.00	
Discount	0	
User's Discount Level	0	
Billed Quantity	2	
Amount Payable	20	
Correction Application Date	01/09/2022	
New Quantity	2	
Payable	20	
Reason	Applied Cafeteria Correction	

Then click on **Save** button to save the authorization.

## Approved Applications

Click the **Approved** collapsible panel to view the approved applications and their details.

User ID	Name	Application Date	Transaction Date	Item	Billed Quantity	New Quantity	Remark	Details
Smita	Smita	01/09/2022	01/09/2022	Tea	2	2	Approved Cafeteria Correction	

Click **Details**  of view the details.

## Rejected Applications

Click the **Rejected** collapsible panel to view the rejected applications and their details.

Rejected (1)								
Search <input type="text"/>								
User ID	Name	Application Date	Transaction Date	Item	Billed Quantity	New Quantity	Remark	Details
Smita	Smita	01/09/2022	31/08/2022	Poha	2	2	Rejected Cafeteria Correction	

Click **Details**  of view the details.

# Manual Correction

Manual Correction page allows Cafeteria user to modify existing transactions as well as add new transactions.

The Correction can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module (For more details refer COSEC Employee Self Service User Manual)

COSEC Web enables all System Account users with appropriate page rights to make Manual Correction using the Cafeteria module. All applications made by the System Account user are pre-approved by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Manual Correction using the Cafeteria module. All applications made by the On Behalf System Account User are pre-approved by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#).

For doing Manual Correction, go to **Cafeteria Management > Transaction Management > Manual Correction** and the following page appears as shown below:

The screenshot shows the 'Manual Correction' page. On the left, there are form fields for 'User' (with a dropdown), 'Transaction Date-Time' (with a calendar icon), 'POS Device' (ID and Name), 'Menu' (ID and Name), 'Item' (ID and Name), 'Application Date', 'Transaction Value' (Quantity and Payable), 'Correction' (New Quantity, Payable, Reason, and Application Status), and a 'Remark' field. On the right, there is a table with the following columns: Transaction Date-Time, Item, Quantity, New Quantity, Application Date, and Status. The table contains one entry: Transaction Date-Time: 15/11/2021 12:00:00, Item: Puff, Quantity: 10, New Quantity: 10, Application Date: 15/11/2021, Status: (green checkmark icon).

The page displays configurations on the left hand side and to the right is a grid containing a list of all user's device-based cafeteria transactions as well as transaction correction applications in pending, approved and rejected state.

**User:** Select a user from the picklist for whom the manual correction is to be made. The transactions of the user will be listed on the right grid.

Select the transaction from the right grid for which correction is to be done.

#### Correction

It displays the fields to be corrected.

- **New Quantity:** Enter the new quantity value for the item. When 'Pre-order Based Restriction' is enabled and Deny Transaction is selected in cafeteria usage policy then entered new quantity should not exceed the pre-ordered quantity of selected item for selected menu.
- **Payable:** It displays the payable amount as per the new quantity specified.
- **Reason:** You can enter the reason for correction.
- **Application Status:** It displays the status of application.
- **Remark:** It displays the remark provided from the Transaction Correction Details window of the Correction Approval page.

Click on **Save** button to save the transaction to the grid. The transaction correction application is then sent for transaction approval.

# Transaction Summary

Transaction Summary helps the admin to track/analyze all the transactions in cafeteria management module.

*The Monthly process must be run at the end of the month to generate proper cafeteria transactions.*

For viewing Transaction Summary, go to **Cafeteria Management > Transaction Management > Transaction Summary** and the following page appears as shown below:

The screenshot shows a web application window titled "Transaction Summary". At the top, there are navigation icons (back, forward, search) and window controls (star, question mark, close). Below these, there are filters: "Date" with two date pickers (04/05/2017 and 05/05/2017), "Filter User" with a dropdown menu set to "All", and "Group/User" with a search box and a list icon. A "View" button is centered below the filters. At the bottom, there is a list of transaction categories, each with a count in parentheses and a dropdown arrow: "Purchase (0)", "Payment (0)", "Recharge (0)", "Reset (0)", and "Manual Credit/Debit (0)".

**Date:** Select the date range by using the Calendar button for which the transaction is to be viewed.

**Filter User:** Select the user based on Enterprise groups or Individual user or All.

**Group/User:** If you select the desired enterprise group—Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3.

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

If you select Individual, then click the **User** picklist. Select the desired User/Worker/Visitor.

Click on **View** to view the transactions divided into **Purchase, Payments, Recharge, Reset** and **Manual Credit/Debit**.

The Purchase, Recharge and Manual Credit/ Debit transactions are shown below:

## Import

Click on **Import** button for importing the Cafeteria transaction summary

Import Transaction Summary

Import Data For

Purchase

File Format

XLS

Import File

Browse...

No file selected.

Upload

Preview Data

Process

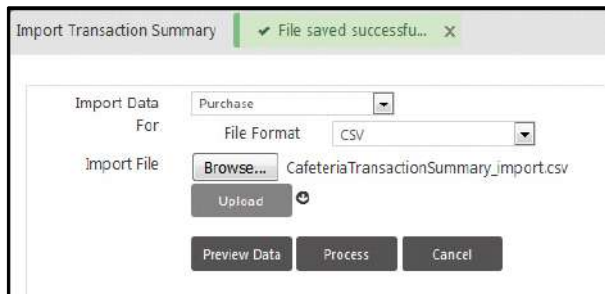

Cancel

**Import Data For:** The Data can be imported for Purchase, Payment, Recharge, Reset and Manual Credit/Debit. You can download the sample import file and enter the data for Cafeteria. Then the updated file can be imported here.

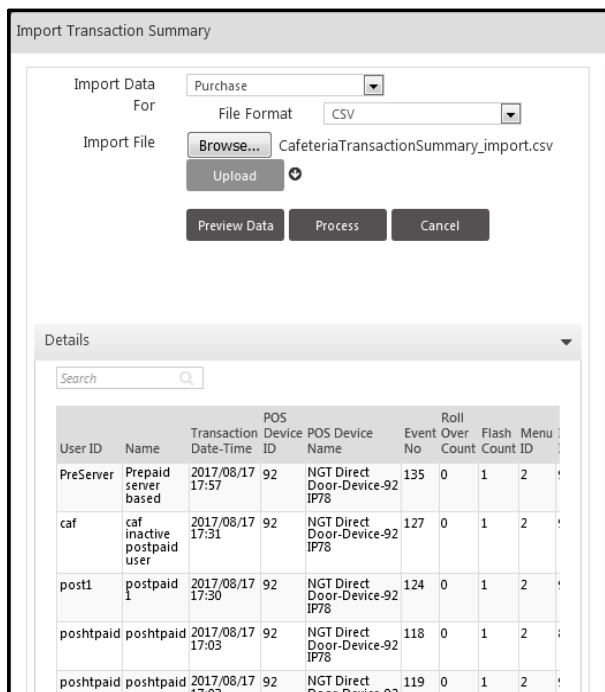

**File Format** - Select the format for the file to be imported. The options available are XLS or CSV.

**Import File** - Browse the path of the file and select the file from which the data is to be imported.

Click **Upload** button to save the file.

The **Preview Data** button enables the administrator to view the data in the respective worksheets to confirm that the data is in order prior to giving the process command.

User ID	Name	Transaction Date-Time	POS Device ID	POS Device Name	Event No	Roll Over Count	Flash Count	Menu ID
PreServer	Prepaid server based	2017/08/17 17:57	92	NGT Direct Door-Device-92 IP78	135	0	1	2
caf	caf inactive postpaid user	2017/08/17 17:31	92	NGT Direct Door-Device-92 IP78	127	0	1	2
post1	postpaid	2017/08/17 17:30	92	NGT Direct Door-Device-92 IP78	124	0	1	2
poshtpaid	poshtpaid	2017/08/17 17:03	92	NGT Direct Door-Device-92 IP78	118	0	1	2
poshtpaid	poshtpaid	2017/08/17 17:03	92	NGT Direct Door-Device-92	119	0	1	2

Now you can click on **Process** to process the import of data.

*The value specified in Name, Transaction Date-Time, Opening Balance & Closing Balance fields will be ignored on import. Hence the presence of these fields in imported sheet is optional.*

# Process-Monthly Payments

This option enables the administrator to manually run certain processes required for reconciliation of the postpaid user accounts. The following processes will run on selecting this option.

- Updation of users' account details by subtracting the users' allowed usage amount or reset to zero (as set from the Payment page) from the total due amount and recording transactions for the payments processed along with their details.
- If a user is blocked and if after the payment the user's new balance is less than the user's max usage limit, then the user should be unblocked and the change is to be updated to all the canteen devices.
- Perform the same process as that of automatic reset function.

To run the monthly payment process, go to **Cafeteria Management > Process > Monthly Payments** and the following page appears as shown below.

The screenshot shows a web application window titled "Process Monthly Payments". At the top, there is a navigation bar with a back arrow, a star icon, a question mark icon, and a close icon. Below the navigation bar, the "Attendance Period" is set to "February" and "2017". The "Select Users" section includes a "Select Users" dropdown menu set to "User Wise", a "User" label with a red asterisk, and input fields for "ID" and "Name". A search bar with the placeholder "Search" and a magnifying glass icon is also present. Below the search bar, a table displays user information:

User ID ▲	Name	
07	Aditi	

At the bottom of the form, there is a "Process" button.

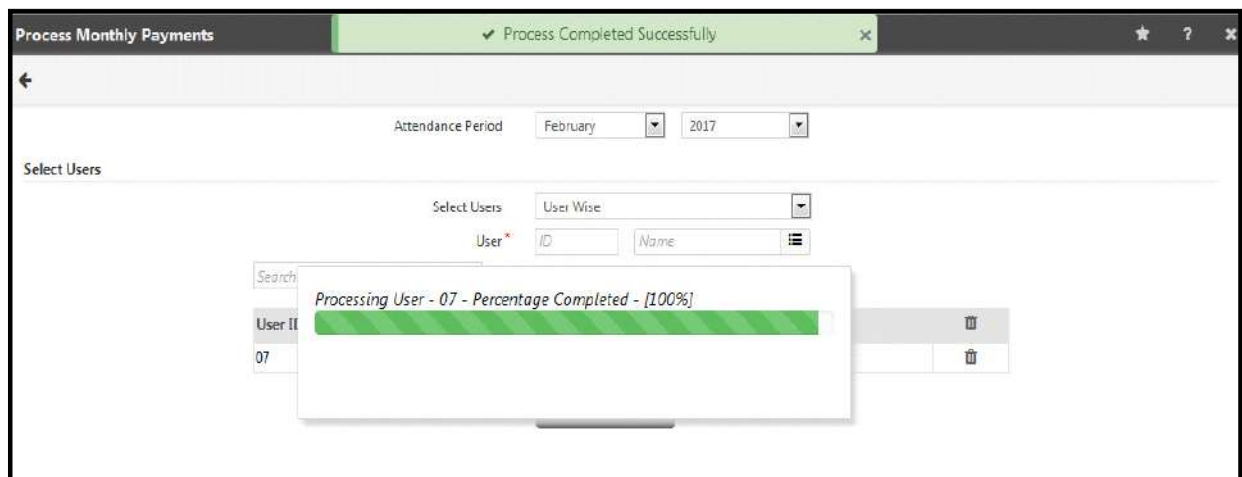

**Attendance Period:** Select the month and the year for which the monthly payment process is to be run.

The administrator can now select the group of users whose monthly payment is to be processed.

**Select Users:** The Multiple users can be selected based on the following filter options:

- **User Wise:** Enables administrator to select users from the User Picklist window.
- **Group Wise:** Enables the administrator to select all users belonging to a particular group.
- **All:** Enables administrator to select all active users in the database.

Once the users have been selected, click on the **Process** button to start the process as shown on the screen below.

*Cafeteria Monthly Payment Process can also be automated using the Task Scheduler.*

*Go to **Admin > System Utilities > Task Scheduler** and select "Cafeteria Payment Process" to automate the Monthly Payment.*

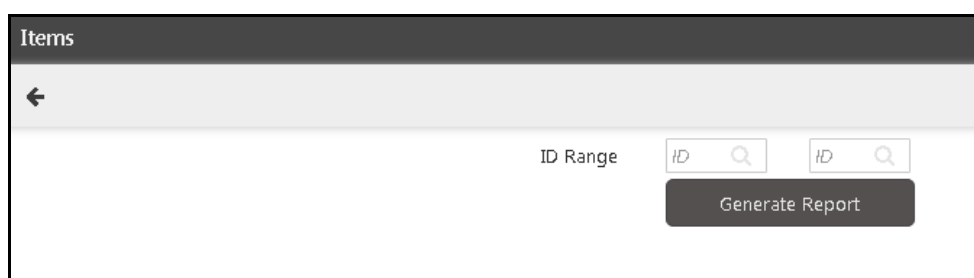

# Cafeteria Reports

These reports can be obtained using the **Reports** section under the **Cafeteria Management** add-on module. The Reports can be categorized as follows:

- “Item”
- “Menu”
- “Menu Schedule”
- “User Reports”
- “Cafeteria Reports”

## Item

This report displays the price and discount details of the selected items.

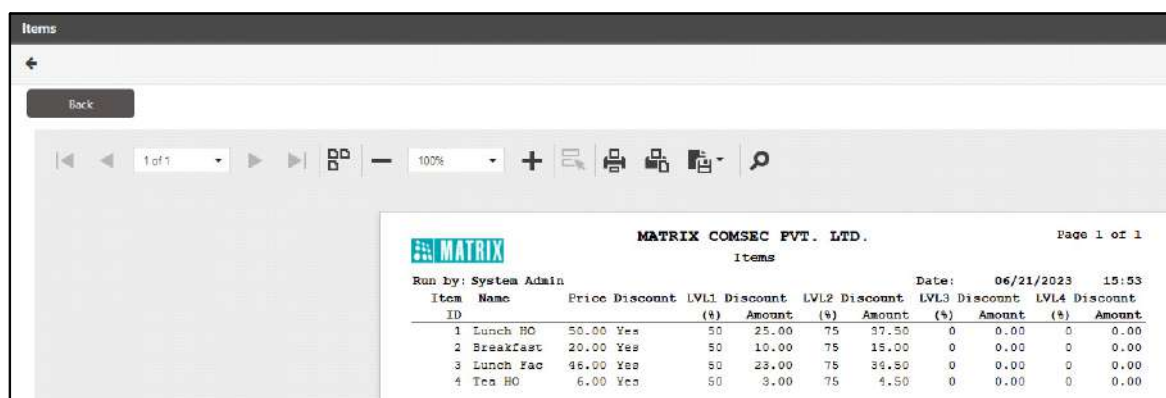

Configure the following parameter:

- **Range ID:** Specify the required ID Range of the items.

Click **Generate Report**.

## Users Account Details

This report displays a detailed list of user's account details, who have been assigned the Cafeteria facility.

The screenshot shows a web application window titled 'Users Account Details'. It contains two main sections: 'Optional Parameters' and 'User Selection'. In the 'Optional Parameters' section, there are two dropdown menus: 'Group By' (set to 'Organization') and 'Organization Name in Header As Per' (set to 'User Selection'). The 'User Selection' section has a 'Select Users' dropdown (set to 'User Wise'), a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown (set to 'All Users'). A 'Generate Report' button is located at the bottom right of the form.

Configure the following parameters:

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list— Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header as per your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise** or **All**.
  - If you select **User Wise**,

- Click the **User** picklist. The **Picklist for Users/Visitor Profiles** pop-up appears.

## Credit/Debit

This report displays the monthly credit due for the selected postpaid user.

The screenshot shows a web-based configuration interface for a 'Credit/Debit' report. At the top, there are dropdowns for 'For Month-Year' (set to 'June') and '2023'. Below this is a section titled 'Optional Parameters' which contains two dropdowns: 'Group By' (set to 'Organization') and 'Organization Name in Header As Per' (set to 'User Selection'). Underneath is a section titled 'User Selection' with a 'Select Users' dropdown (set to 'User Wise'), a 'User\*' field with sub-fields for 'ID' and 'Name', and a 'Generate Report For' dropdown (set to 'All Users'). A 'Generate Report' button is located at the bottom center.

Configure the following parameters:

- **For Month-Year:** Select the month and the year for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header as per your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise** or **All**.
  - If you select **User Wise**,

- Click the **User** picklist. The **Picklist for Users/Visitor Profiles** pop-up appears.

 For a Cafeteria Item, there will be multiple entries for each discount level (maximum entries as per the discount levels are 5 (Maximum Discount Level: Level 0, Level 1, Level 2, Level 3 and Level 4).

Duplicate entries in the report can be displayed in cases where transactions for an item with and without discount level are encountered, wherein the discount level is applied but the discount amount is set to 0.00.

## Device-Wise Consumption

This report displays the device-wise details of the items consumed for a selected date range for the selected cafeteria devices.

The screenshot shows a web application window titled "Device-Wise Consumption". It contains several input fields and a button. At the top, there are two date pickers labeled "Date" with values "06/11/2023" and "06/18/2023". Below this is a section labeled "Optional Parameters" containing a "Format Selection" dropdown menu set to "Daily Item Consumption". Underneath is a "Device Selection" section with a "Select Devices" dropdown menu set to "Door-Wise". Below this, there are two input fields: "Door" with the value "10" and "Name" with a search icon. At the bottom center is a "Generate Report" button.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Format Selection:** Select the desired option — **Daily Item Consumption** or **Item Consumption Summary**.

### Device Selection

- **Select Device:** Select the desired option — **Door- Wise** or **All**.
- If you select **Door-Wise**,
  - Click the **Door** picklist. The **Picklist For Door** pop-up appears.

The screenshot shows a "Picklist For Door" pop-up window. At the top, it says "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a "Show Selected" link. The main part of the window is a table with two columns: "ID" and "Name". The table contains 19 rows of data. At the bottom left, it says "1 - 10 of 19 records". At the bottom right, there are pagination controls showing "1" and "2". At the very bottom, there are "OK" and "Cancel" buttons.

## Daily Consumption

This report displays the daily consumption for the selected month, user and item. The details can be viewed either item wise or user wise for the selected date range.

The screenshot shows the 'Daily Consumption' report configuration window. At the top, there are date pickers for 'Date' with values '06/18/2023' and '06/18/2023'. Below this is the 'Optional Parameters' section. It includes a 'Group By' dropdown set to 'User', a 'User Type' section with checkboxes for 'All' (checked), 'User', and 'Visitor', a 'Select Items' dropdown set to 'All', and an 'Organization Name in Header As Per' dropdown set to 'User Selection'. Below the 'Optional Parameters' is the 'User Selection' section, which includes a 'Select Users' dropdown set to 'User Wise', a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown set to 'All Users'. At the bottom center is a 'Generate Report' button.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired option — **User** or **Item**
- **User Type:** Select the desired check boxes— **All**, **User** or **Visitor**.
- **Select Items:** Select the desired option— **All** or **Selected**.
  - If you select **All**, all the items will be included in the report.
  - If you select **Selected**,

- Click the **Selected** picklist. The **Select Menu Items** pop-up appears.

The screenshot shows the 'Select Menu Items' window with a green header bar indicating 'Total Selected: 0 Records'. Below the header is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main table lists four items: Lunch HO (code 1), Breakfast (code 2), Lunch Fac (code 3), and Tea HO (code 4). All checkboxes in the table are unchecked. At the bottom are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	Item Code ▲	Item Name
<input type="checkbox"/>	1	Lunch HO
<input type="checkbox"/>	2	Breakfast
<input type="checkbox"/>	3	Lunch Fac
<input type="checkbox"/>	4	Tea HO

- You can either select particular menu items or can select all the menu items at once.
- To select particular menu item, select the check boxes of the desired menu items.

The screenshot shows the 'Select Menu Items' window with a green header bar indicating 'Total Selected: 2 Records'. Below the header is a search bar and a 'Show Selected' link. A 'Select All' checkbox is present. The main table lists four items: Lunch HO (code 1), Breakfast (code 2), Lunch Fac (code 3), and Tea HO (code 4). The checkboxes for 'Lunch HO' and 'Breakfast' are checked, while 'Lunch Fac' and 'Tea HO' are unchecked. At the bottom are 'OK' and 'Cancel' buttons.

## Monthly Consumption

This report displays the monthly consumption for the selected month, user and item.

The screenshot shows the 'Monthly Consumption' report configuration window. At the top, there are dropdowns for 'For Month-Year' (set to June) and '2023'. Below this is the 'Optional Parameters' section, which includes a 'Group By' dropdown (set to User), a 'User Type' section with checkboxes for 'All' (checked), 'User', and 'Visitor', a 'Select Items' dropdown (set to All), and an 'Organization Name in Header As Per' dropdown (set to User Selection). The 'User Selection' section includes a 'Select Users' dropdown (set to User Wise), a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown (set to All Users). A 'Generate Report' button is located at the bottom center.

Configure the following parameters:

- **For Month-Year:** Select the month and the year for which report is to be generated.

### Optional Parameters

- **Group By:** Select the desired option — **User** or **Item**
- **User Type:** Select the desired check boxes— **All**, **User** or **Visitor**.
- **Select Item:** Select the desired option— **All** or **Selected**.
  - If you select **All**, all the items will be included in the report.
  - If you select **Selected**,

- Click the **Selected** picklist. The **Select Menu Items** pop-up appears.

The screenshot shows the 'Select Menu Items' window with a green header bar indicating 'Total Selected: 0 Records'. Below the header is a search bar with the placeholder text 'Search' and a magnifying glass icon. To the right of the search bar is a 'Show Selected' button. Below the search bar is a 'Select All' checkbox. The main area contains a table with the following data:

<input type="checkbox"/>	Item Code ▲	Item Name
<input type="checkbox"/>	1	Lunch HO
<input type="checkbox"/>	2	Breakfast
<input type="checkbox"/>	3	Lunch Fac
<input type="checkbox"/>	4	Tea HO

At the bottom of the window are 'OK' and 'Cancel' buttons.

- You can either select particular menu items or can select all the menu items at once.
- To select particular menu item, select the check boxes of the desired menu items.

The screenshot shows the 'Select Menu Items' window with a green header bar indicating 'Total Selected: 2 Records'. The COSEC VMS tracks and manages visitors to the organization increasing overall security and enhancing productivity of security and reception personnel.

*This functionality is not available with the COSEC Application basic platform license.*

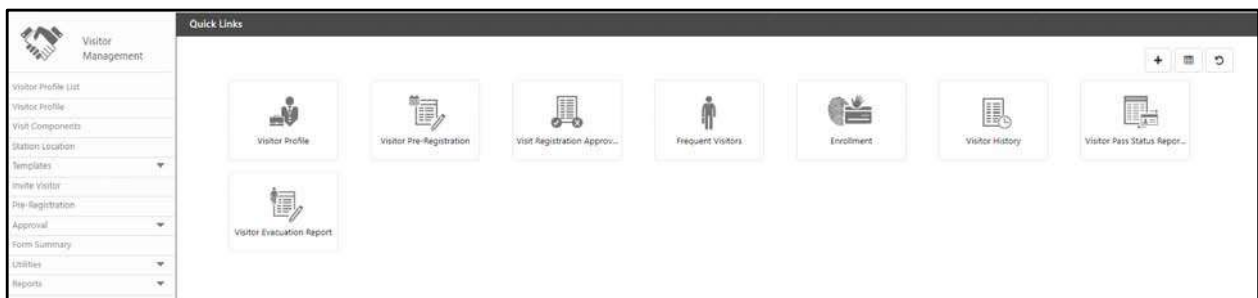

## Host Initiated Visit

## Visitor Initiated Visit

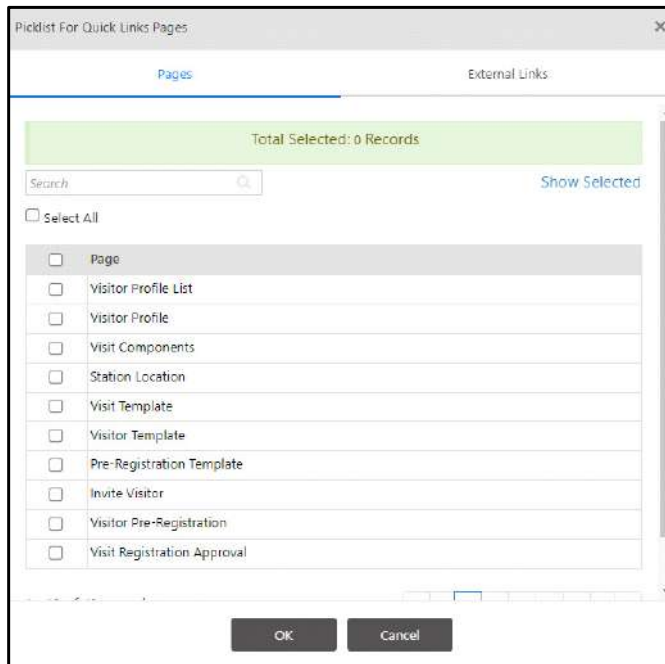

To use the Visitor Management functionality, Click on **Visitor Management**  Module. The Visitor Management Page will appear on your screen.

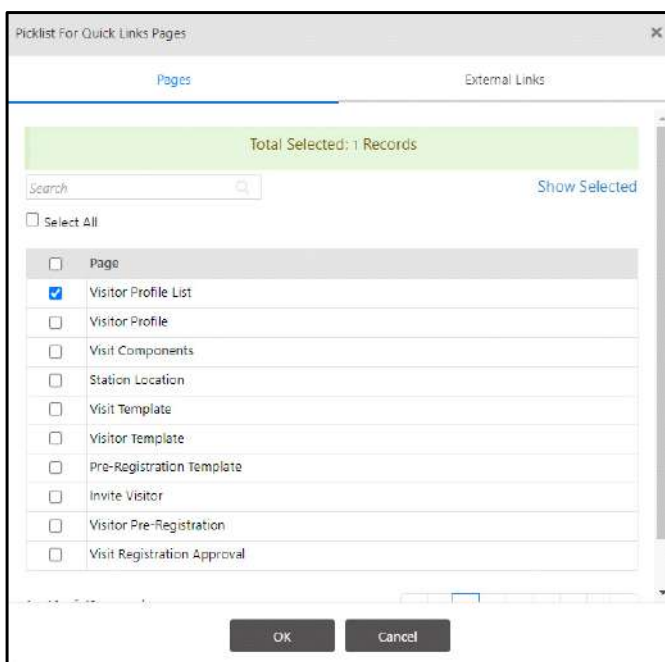

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

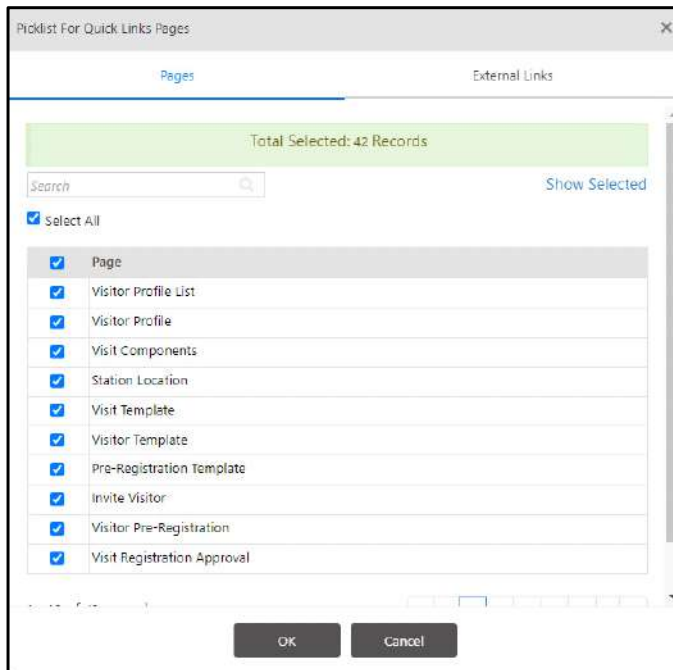

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

**OR**

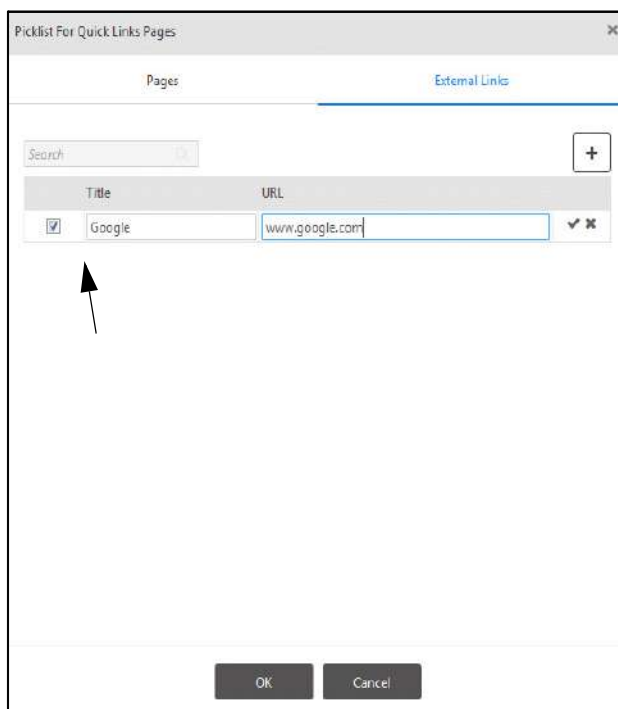

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

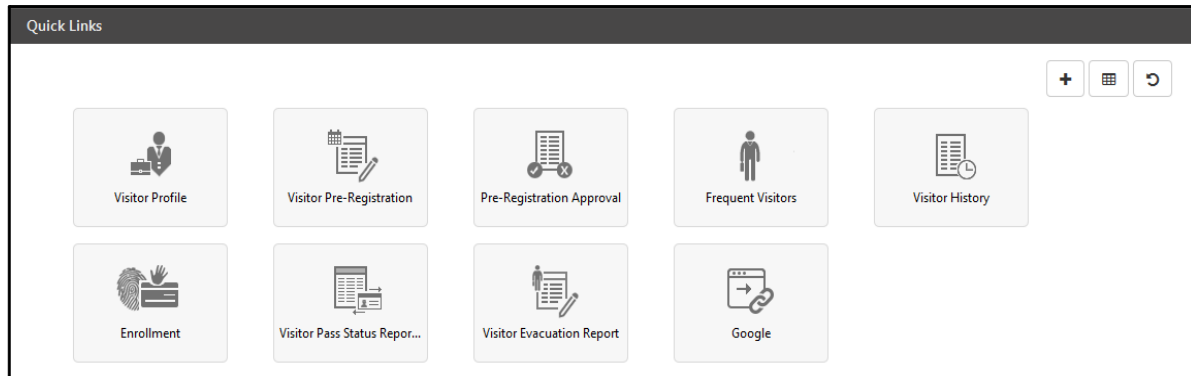

#### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

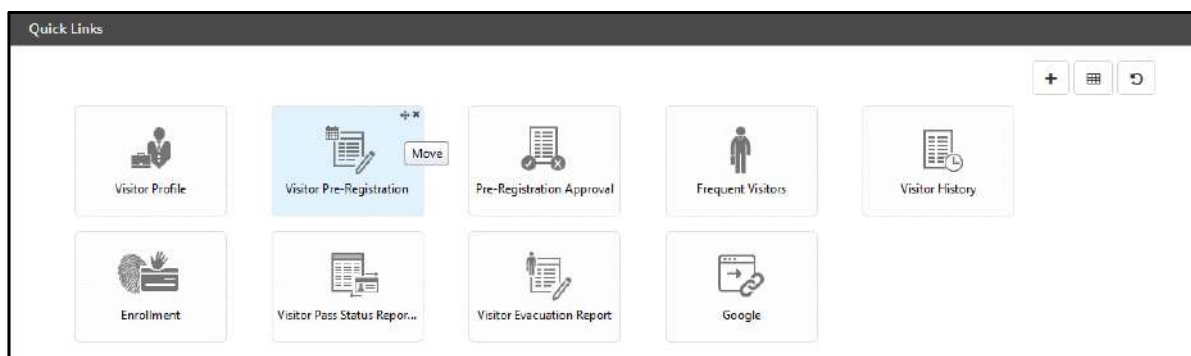

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

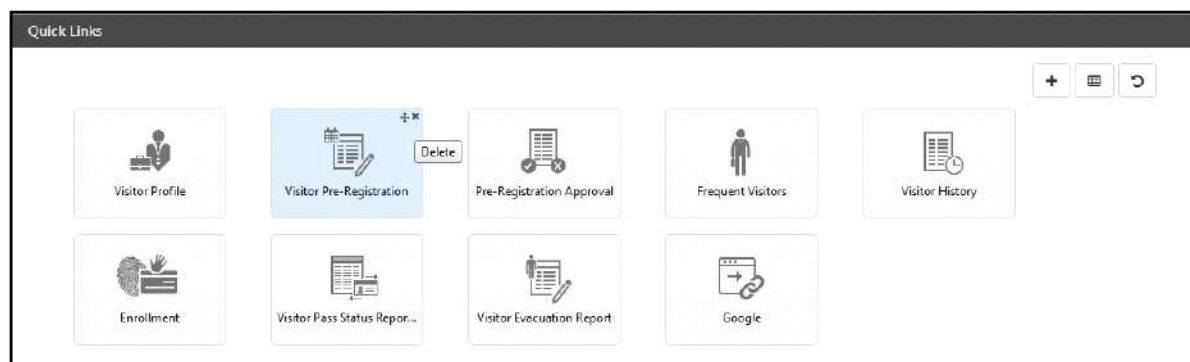

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

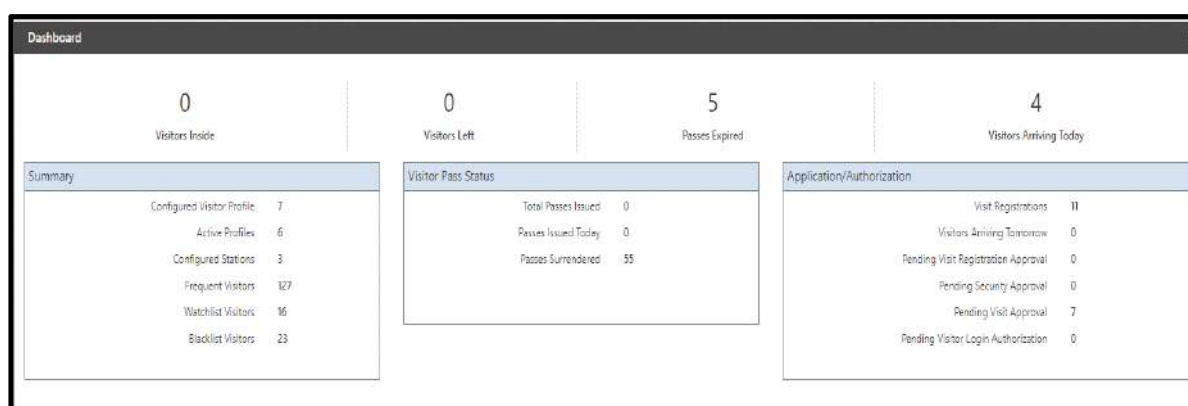

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

## Visitor Management Dashboard

To view the **Visitor Management** Dashboard, click Dashboard  on the **Visitor Management** page and the following screen appears.

The Dashboard displays the basic information on VMS module relating to the COSEC Software under the following groups:

- **Visitors Inside**- Total number of visitors whose pass is created on the current day and Visit Start time has begun.
- **Visitors Left**- Total number of visitors whose passes have been surrendered.
- **Passes Expired**- Total number of the visitors whose Visit time has ended but passes have not been surrendered.
- **Visitors Arriving Today**- Total number of Pre-registrations of visitor who are arriving on current day.Count of only Approved visitors is displayed who belong to the Host users as per logged in System Account's User Rights.

**Example:** Suppose DN is system account user having rights of Organization R&D and AS is system account user having rights of Organization HO (Group-wise rights).

When DN logs into COSEC Web then VMS dashboard will show visitor registration details made by the host users belonging to R&D only. DN cannot view the details of visitors of HO.

### Summary

- **Configured Visitor Profile**- Total number of visitor profiles created in system.
- **Active Profiles**- Total number of visitor profiles which are currently Active.

- Configured Stations- Total number of Stations configured in the System.
- Frequent Visitors- Total number of visitors registered in the module.
- Watchlist Visitors- Total number of visitors added to the watchlist.
- Blacklist Visitors- Total number of visitors added to the Blacklist

#### Visitor Pass Status

- Total Passes Issued- Total number of passes created from all stations which have not yet been surrendered or expired.
- Passes Issued today- Total number of passes that are created today from all stations.
- Passes Surrendered- Total number of expired passes which have been surrendered.

#### Application/Authorization

- Visit Registrations- Total number of Pre-registrations of visitor whose arriving date is either current day or future date who belong to the Host users as per logged in System Account's User Rights.

*Along with current logic, only Host Initiated Visitor Pre-Registration applications will be considered for count.*

- Visitors Arriving Tomorrow- Total number of Pre-registrations of visitor whose arriving date is current date +1; who belong to the Host users as per logged in System Account's User Rights.
- Pending Authorization- Total number of Pre-registrations whose authorization is pending; who belongs to the Host users as per logged in System Account's User Rights.

*Along with current logic, Only Host Initiated Visitor Pre-Registration applications will be considered for count.*

- Pending Visit Registration Approval- It displays the number of visits initiated by Host or Visitor pending for approval by the RIC.
- Pending Security Approval- Total number of visit request for which security clearance is pending.
- Pending Visit Approval- It displays the number of visits initiated by the Visitor pending for approval by the Host.
- Pending Visitor Login Authorization- The number of pending authorizations when the visitor accesses the **Skip to Login** feature while logging in into the Visitor Web Portal.

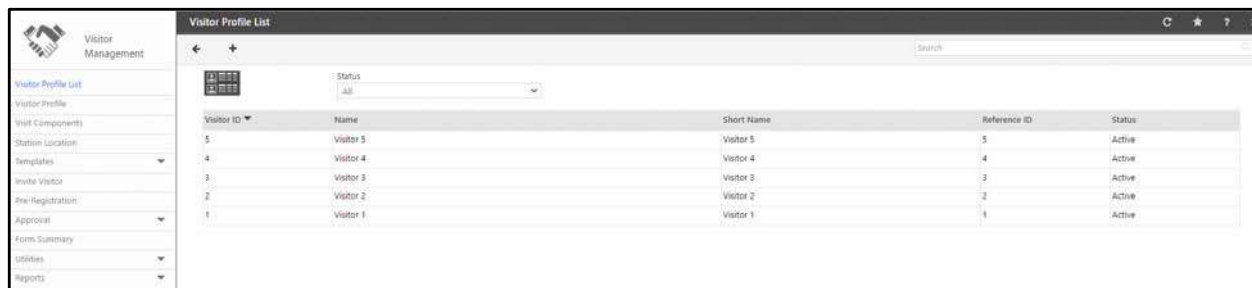

For more information on the above Dashboard options, click the respective information links on the Dashboard.

The latest values on Dashboard are updated on clicking the Refresh  button.

# Visitor Profile List

The Visitor Profile List displays all the visitor profiles configured in COSEC.

To view the existing visitors or to add a new visitor, click **Visitor Management module > Visitor Profile List**.

The screenshot shows the 'Visitor Profile List' window. On the left is a sidebar with navigation options: Visitor Management, Visitor Profile List (selected), Visitor Profile, Visit Components, Visitor Location, Templates, Invite Visitor, Pre-Registration, Approval, Form Summary, Updates, and Reports. The main area displays a table of visitor profiles. At the top of the table is a search bar and a status filter dropdown set to 'All'. The table has columns for Visitor ID, Name, Short Name, Reference ID, and Status.

Visitor ID	Name	Short Name	Reference ID	Status
5	Visitor 5	Visitor 5	5	Active
4	Visitor 4	Visitor 4	4	Active
3	Visitor 3	Visitor 3	3	Active
2	Visitor 2	Visitor 2	2	Active
1	Visitor 1	Visitor 1	1	Active

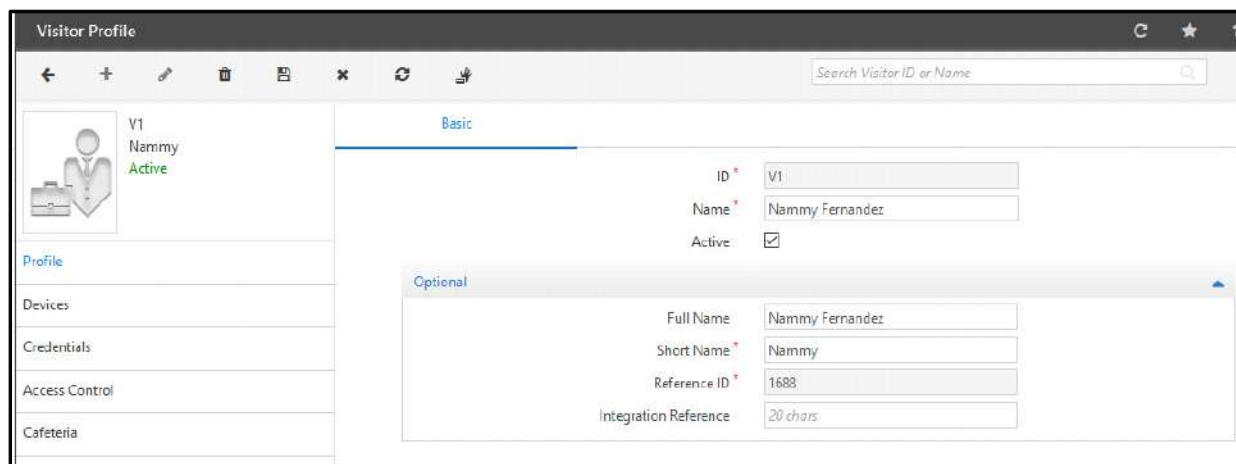

The Visitor Profile List will display only those profiles for which rights are assigned to the SA, that is as per the enterprise groups assigned to the visitor profile.

For example, if for Visitor Profile1 in Groups, Organization is ORG1 and if the rights for ORG1 are not assigned to the SA, then through the SA login the Visitor Profile List will not display Visitor Profile1.

For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#) as well as [“Group”](#) under [“Visitor Profile”](#).

## Adding Visitor

To add a new visitor, click on **New** button. The Visitor Profile page will appear.

The screenshot shows the 'Visitor Profile' configuration page. On the left is a sidebar with options: Profile (selected), Devices, Credentials, Access Control, and Cafeteria. The main area is divided into 'Basic' and 'Optional' sections. The 'Basic' section contains fields for ID (V1), Name (Nammy Fernandez), and an Active checkbox (checked). The 'Optional' section contains fields for Full Name (Nammy Fernandez), Short Name (Nammy), Reference ID (1688), and Integration Reference (20 chars).

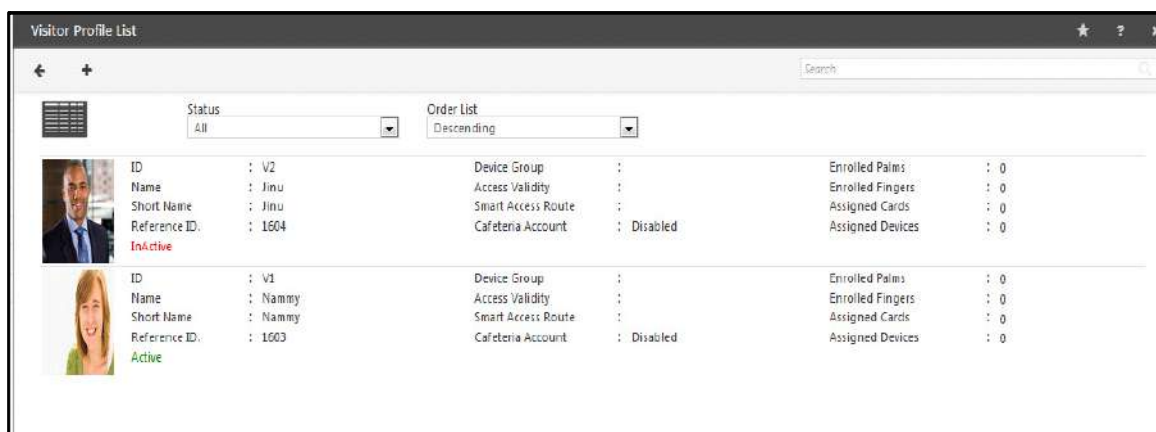

Enter the **ID** and **Name** of the visitor. Then save the details. The Visitor will be added to the list. For detailed configuration see **VMS module> Visitor Profile**.

## Viewing Visitor List

The user can view the visitor profiles based on **All/ Active/ Inactive** Status by selecting the desired filter.

Click on the **Photo View**  button on the left. The Visitor Profile information with the photograph is displayed as shown below.

# Visitor Profile

Visitor Profile page enables to add the visitor, assign devices to visitor, enroll the credentials and configure visitor for Cafeteria and Access Control policies.

- [“Profile”](#)
- [“Devices”](#)
- [“Credentials”](#)
- [“Group”](#)
- [“Enroll Credentials”](#)
- [“Access Control”](#)
- [“Cafeteria”](#)
- [“Face Recognition”](#)

To add and configure the Visitor, Click **Visitor Profile** in the Visitor Management module. The Page appears as shown below:

## Profile

Click on **New** to add new Visitor.

### Basic

Enter the **ID** and **Name** of the visitor. This is the Visitor ID which will appear in the Visitor ID picklist in the Visit Details section while creating a pass for the visitor from VMS Utility.

You can create an ID for a regular visitor (eg: Nammy) and assign to that visitor on arrival from the VMS Utility.

Also the generic visitor IDs can be created and assigned to the visitor. Eg: ID: 1, Name: VMS1 is given to visitor Rashmi. Once the pass of Rashmi is surrendered or expired, then VMS1 can be re-issued to another visitor.

Check the **Active** box to activate the visitor on the system.

### Optional

**Full Name-** You can also specify the Full name of the visitor with maximum 200 characters. The supported values are: **A-Z, a-z, 0-9, ( ) , [ ] \_ (underscore), - (Hyphen), . (full Stop), /, &, , (comma), @, ' (single quote), [space]**

A function name followed by ( bracket is invalid in full name. Eg: Thomas S/O Round (will be invalid.

The **Short Name** and **Reference ID** fields will be auto generated. You can change the “Short Name” anytime but the reference ID can be edited only before saving the visitor details.

When Full name of visitor is entered and Name and Short name are blank then Name will be auto updated with 45 characters of full name excluding special characters and Short name will be updated with 15 characters of full name.

Specify the **Integration reference**. This field is provided for integration with third party software applications (eg: Payroll). In third party applications where the visitor ID has more number of characters (say alphanumeric up to 20 characters) and if it wants to integrate with COSEC Application then it can use Integration reference to map COSEC to third party software.

### Upload Photo

Click on the image on left side to upload or change the **Photo**. Browse the image and click on **Update** to upload the photo for the visitor.

Finally click on **Save** button from the toolbar to save the basic details of the visitor

To navigate to previous and next visitor in the list, click on the arrows as shown below.

During check-in by the visitor, the uploaded profile photo (if available) will be displayed for the assigned Visitor Profile. Else, the default profile photo for the assigned Visitor Profile will be displayed.

## Devices

To assign COSEC devices to visitor, click **Devices**. The page appears as shown below:

Note: Device(s) will be automatically retained which are part of any Access Rule(s) assigned to the User. For more details Click here

*When **Auto Device Assignment** is enabled from Admin> System Configuration> Global Policy> Visitor Management, the devices assigned to the Host will now be assigned to the visitor. The **Devices** tab will not be configurable.*

*When any Visitor Profile is assigned to the visitor, then the device list from User Module > User Configuration > Visitor Management will be reflected here in read-only mode.*

## Assign

You can assign Device Group or Individual Devices to the visitor so that the visitor can access the assigned devices using the enrolled credential or visitor card.

To select a **Device Group**, click on the **Device Group** picklist. The **Picklist For Device Group** pop-up appears.

The screenshot shows a window titled "Picklist For Device Group". At the top, a green bar displays "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. A "Select All" checkbox is located below the search bar. The main area contains a table with two columns: "DGID ▲" and "Name". The table lists 10 device groups, each with an unchecked checkbox in the first column. The records are: 1 ACTA Devices, 2 RnD1Visitor, 3 Device Group 3, 4 Device Group 4, 5 Device Group 5, 6 Device Group 6, 7 Device Group 7, 8 Device Group 8, 9 Device Group 9, and 10 Device Group 10. At the bottom left, it says "1 - 10 of 12 records". At the bottom right, there are pagination controls: "<< < 1 2 > >>". The "1" is highlighted with a blue border. At the very bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	DGID ▲	Name
<input type="checkbox"/>	1	ACTA Devices
<input type="checkbox"/>	2	RnD1Visitor
<input type="checkbox"/>	3	Device Group 3
<input type="checkbox"/>	4	Device Group 4
<input type="checkbox"/>	5	Device Group 5
<input type="checkbox"/>	6	Device Group 6
<input type="checkbox"/>	7	Device Group 7
<input type="checkbox"/>	8	Device Group 8
<input type="checkbox"/>	9	Device Group 9
<input type="checkbox"/>	10	Device Group 10

You can either select particular device groups or can select all the device groups at once.

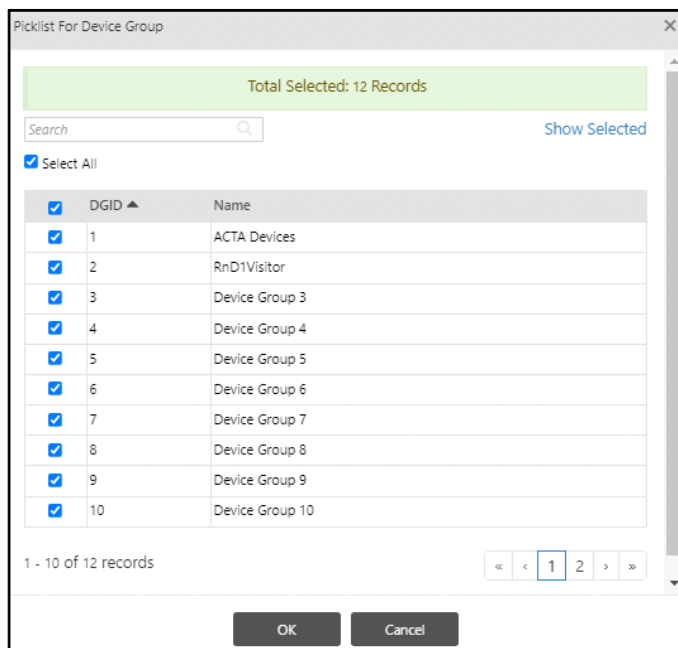

To select particular device groups, select the check boxes for the desired device groups.

This screenshot shows the same "Picklist For Device Group" window, but now three records are selected. The green bar at the top now says "Total Selected: 3 Records". The checkboxes for DGID 1 (ACTA Devices), DGID 2 (RnD1Visitor), and DGID 3 (Device Group 3) are now checked. The other checkboxes remain unchecked. All other UI elements, including the search bar, pagination controls, and buttons, are the same as in the previous screenshot.

<input type="checkbox"/>	DGID ▲	Name
<input checked="" type="checkbox"/>	1	ACTA Devices
<input checked="" type="checkbox"/>	2	RnD1Visitor
<input checked="" type="checkbox"/>	3	Device Group 3
<input type="checkbox"/>	4	Device Group 4
<input type="checkbox"/>	5	Device Group 5
<input type="checkbox"/>	6	Device Group 6
<input type="checkbox"/>	7	Device Group 7
<input type="checkbox"/>	8	Device Group 8
<input type="checkbox"/>	9	Device Group 9
<input type="checkbox"/>	10	Device Group 10

**OR**

To select all the device groups at once, select the **Select All** check box. The device groups on all the pages will be selected.

Click **OK**.

The selected device groups appears in the grid.

You can also delete the desired devices. To do so, click **Delete** of the respective device.

Then click **Save**. The devices belonging to the selected device group/s appear in the grid.

The screenshot shows the 'Assign' tab of the Matrix COSEC System Manual. It features a 'Device Group' section with a search bar and a table of device groups. Below it is a 'Device' section with a search bar and a table of devices. The 'Device' table has columns: Device Name, Type, Restrict Access, and Action. The 'Action' column contains green circular icons.

Device Name	Type	Restrict Access	Action
FACTORY ACCOUNT	Door V3	<input type="checkbox"/>	
Factory Admin FMX	Door FMX	<input type="checkbox"/>	
Factory Canteen FMX	Door FMX	<input type="checkbox"/>	
Factory Production1 ARGO	ARGO	<input type="checkbox"/>	
Factory QC ARGO	ARGO	<input type="checkbox"/>	
Factory QC FMX	Door FMX	<input type="checkbox"/>	
FACTORY STORE	Door V3	<input type="checkbox"/>	
Factory Vega Production-2	Vega Controller	<input type="checkbox"/>	
HO Access VEGA	Vega Controller	<input type="checkbox"/>	
HO TA ARGO	ARGO	<input type="checkbox"/>	

Click **Edit**. You can un-assign the particular device from the assigned Device Group by clicking on icon. Click on the icon to assign the device again.

The screenshot shows the 'Assign' tab of the Matrix COSEC System Manual. It features a 'Device Group' section with a search bar and a table of device groups. Below it is a 'Device' section with a search bar and a table of devices. The 'Device' table has columns: Device Name, Type, Restrict Access, and Action. The 'Action' column contains green circular icons. A tooltip 'Click to Assign' is visible over the 'Action' column of the 'Factory Canteen FMX' row.

Device Name	Type	Restrict Access	Action
FACTORY ACCOUNT	Door V3	<input type="checkbox"/>	
Factory Admin FMX	Door FMX	<input type="checkbox"/>	
Factory Canteen FMX	Door FMX	<input type="checkbox"/>	Click to Assign
Factory Production1 ARGO	ARGO	<input type="checkbox"/>	
Factory QC ARGO	ARGO	<input type="checkbox"/>	
Factory QC FMX	Door FMX	<input type="checkbox"/>	
FACTORY STORE	Door V3	<input type="checkbox"/>	
Factory Vega Production-2	Vega Controller	<input type="checkbox"/>	
HO Access VEGA	Vega Controller	<input type="checkbox"/>	
HO TA ARGO	ARGO	<input type="checkbox"/>	

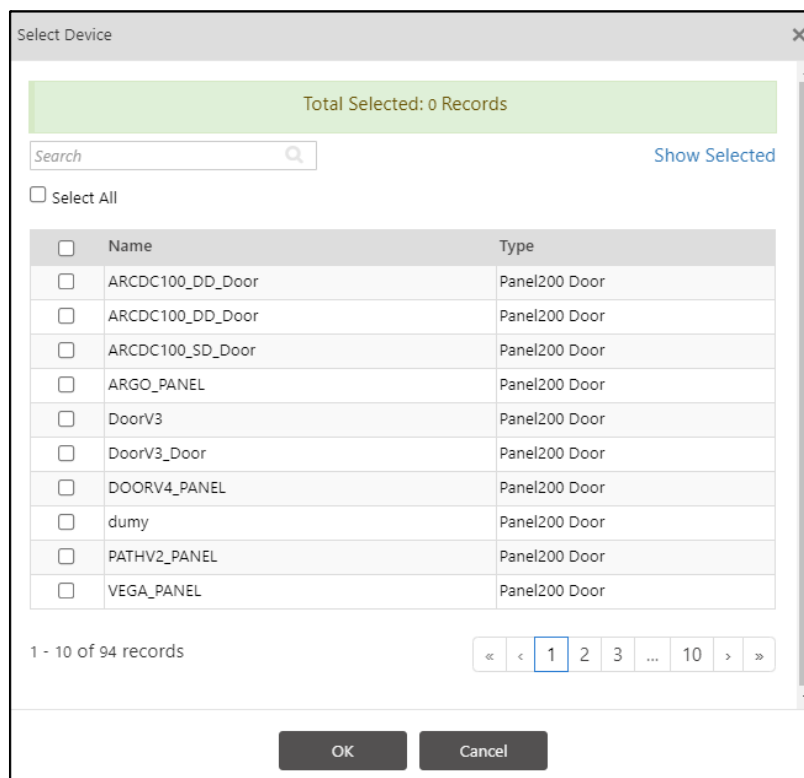

*If any device or a device belonging to any device group is un-assigned against any visitor or is selected for deletion but is a part of the Access Rule which is assigned to that visitor, then those door(s) will be retained against that visitor.*

Select the corresponding **Restrict Access** check boxes to enable these restrictions for the selected visitor on the selected device. If you select the **Restrict Access** check box, then visitor will be restricted for access on that Door. The device will only register the visitor punches for attendance and the door will not open for access.

Similarly, you can also assign devices to the visitor.

To assign a device to the visitor; click the **Device** picklist. The **Select Device** pop-up appears.

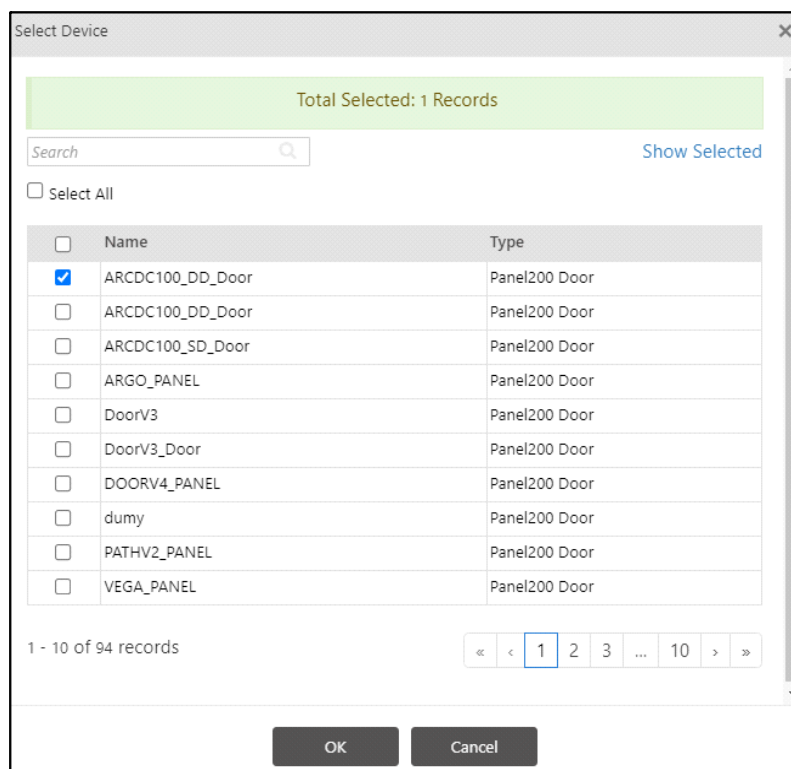

The 'Select Device' pop-up window displays a green header bar with the text 'Total Selected: 0 Records'. Below this is a search bar with the placeholder 'Search' and a magnifying glass icon, followed by a 'Show Selected' link. A 'Select All' checkbox is located below the search bar. The main area contains a table with two columns: 'Name' and 'Type'. The table lists 12 devices, all of which are 'Panel200 Door' type. The first device is 'ARCDC100\_DD\_Door'. Below the table, it shows '1 - 10 of 94 records' and a pagination control with buttons for '<<', '<', '1', '2', '3', '...', '10', '>', and '>>'. At the bottom are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	Name	Type
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_SD_Door	Panel200 Door
<input type="checkbox"/>	ARGO_PANEL	Panel200 Door
<input type="checkbox"/>	DoorV3	Panel200 Door
<input type="checkbox"/>	DoorV3_Door	Panel200 Door
<input type="checkbox"/>	DOORV4_PANEL	Panel200 Door
<input type="checkbox"/>	dumy	Panel200 Door
<input type="checkbox"/>	PATHV2_PANEL	Panel200 Door
<input type="checkbox"/>	VEGA_PANEL	Panel200 Door

You can select particular devices or can select all the devices at once.

To select particular devices, select the check boxes of the desired devices.

The 'Select Device' pop-up window now shows 'Total Selected: 1 Records' in the green header bar. The search bar and 'Show Selected' link remain. The 'Select All' checkbox is still present. In the table, the first device, 'ARCDC100\_DD\_Door', now has its checkbox checked. The rest of the table and the pagination controls are the same as in the previous image. The 'OK' and 'Cancel' buttons are at the bottom.

<input type="checkbox"/>	Name	Type
<input checked="" type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_SD_Door	Panel200 Door
<input type="checkbox"/>	ARGO_PANEL	Panel200 Door
<input type="checkbox"/>	DoorV3	Panel200 Door
<input type="checkbox"/>	DoorV3_Door	Panel200 Door
<input type="checkbox"/>	DOORV4_PANEL	Panel200 Door
<input type="checkbox"/>	dumy	Panel200 Door
<input type="checkbox"/>	PATHV2_PANEL	Panel200 Door
<input type="checkbox"/>	VEGA_PANEL	Panel200 Door

OR

To select all the devices, select the **Select All** check box. The devices on all the pages will be selected.

« < 1 2 3 ... 10 > »

OK Cancel

Click **OK**.

The device/s appear in the grid.

Device Name	Type	Restrict Access	Action
DoorV3	Panel200 Door	<input type="checkbox"/>	
NGT	NGT Direct Door	<input type="checkbox"/>	
Path controller:	Path Controller	<input type="checkbox"/>	
Path V2	Path V2	<input type="checkbox"/>	
Wireless Door:	Wireless Door	<input type="checkbox"/>	

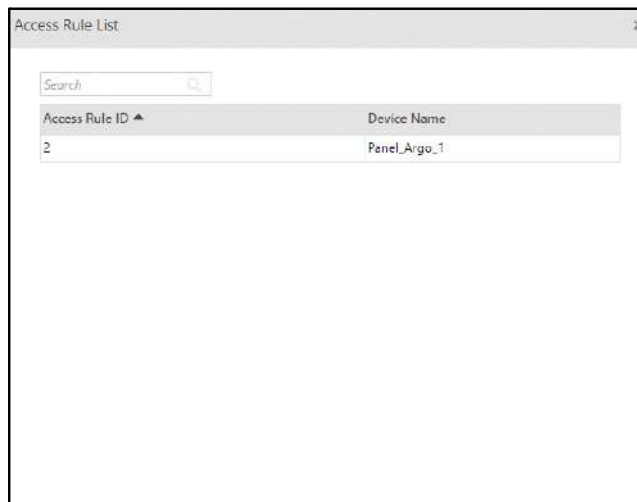

You can also delete the desired device/s. To do so, click **Delete** of the respective device.

*The device picklist will include Panel Doors and Direct Doors only.*

Select the corresponding **Restrict Access** check boxes to enable these restrictions for the selected visitor on the selected device. If you select the **Restrict Access** check box, then visitor will be restricted for access on that Door. The device will only register the visitor punches for attendance and the door will not open for access.

If you wish to check the devices assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The image shows a pop-up window titled "Access Rule List". It contains a search bar at the top with a magnifying glass icon. Below the search bar is a table with two columns: "Access Rule ID" and "Device Name". The table has one row with the values "2" and "Panel\_Argo\_1".

Access Rule ID	Device Name
2	Panel_Argo_1

It displays the list of Devices along with the Access Rule ID against which they are assigned.

Click the **Save** button to save the device selection for assigning to the visitor.

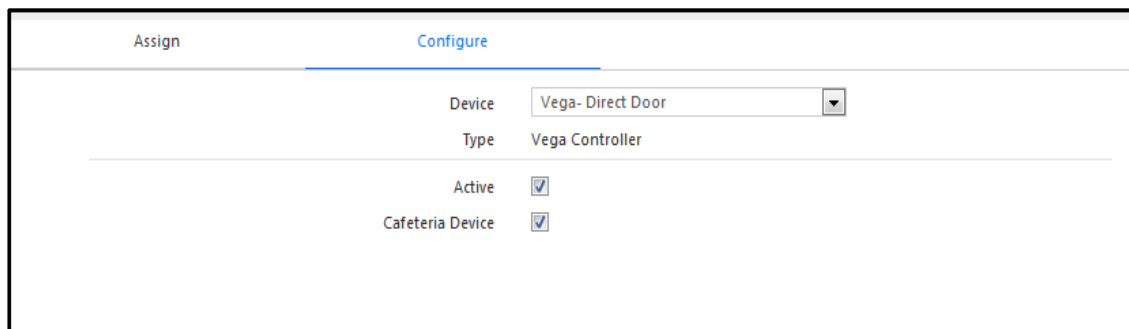

## Configure

*The parameters for "Configure" varies as per the Device selected.*

You can edit the settings on the individual Direct Doors as well as Panel (for Pane Doors) assigned to the visitor. The options displayed under the Configure tab differ as per the Direct Door/Panel selected.

This option is only available with the Access Control add on module.

The image shows the "Configure" tab of a configuration interface. It has two tabs: "Assign" and "Configure", with "Configure" being the active tab. The interface displays the following settings:

- Device:** Vega- Direct Door (selected from a drop-down menu)
- Type:** Vega Controller
- Active:** ☒
- Cafeteria Device:** ☒

**Device:** The list displays the devices assigned to the visitor. Select the desired door/panel from the drop-down list.

**Type:** Displays the type of door as per the selected Device option.

**Active:** The Active check box is selected by default to enable the visitor credentials on the selected device.

## Configuration of Panel200

Assign		Configure	
Device	Panel Lite V2-Device-1		
Type	Panel Lite V2		
Active	<input checked="" type="checkbox"/>		
VIP	<input type="checkbox"/>		
Absentee Rule	<input type="checkbox"/>		
Absent Day(s) Count	60		
Access Profile	Group-1		
Functional Group	Staff		
Home Zone	Zone-1		
Visit Zone	Select		
Access Route	Select		

**VIP:** Select this check box, if the visitor is to be given unrestricted access rights.

**Absentee Rule:** Select this box to enable Absentee Rule feature at visitor level for each Panel200 and Direct door. Make sure this option is enabled at the Panel200 and Direct door levels.

- **Absent Days Count:** Specify the days count ranging from 1 to 365 for which if the user remains absent, he will be marked inactive.

**Access Profile:** Select the Access Profile to be assigned to the user for the selected Panel200.

**Functional Group:** Select the Functional Group to be assigned to the user for the selected Panel200.

**Zone:** Select the user's **Home Zone** and the **Visit Zone** for the selected Panel200.

**Access Route:** The administrator can also assign a defined access route to the user. Select the access route from the drop down list if required.

Select another device and configure the access control options as applicable.

*This option is only available with the **Access Control** add on module.*

Click on **Save** button to save the visitor configuration.

## Credentials

To assign credentials to visitor, click the option **Credentials**. The page appears as shown below.

Visitor Profile	
 V3 Parshv Active	<b>Credentials</b>
Profile	PIN: 101
Devices	Biometric Group No.: 7
<b>Credentials</b>	Roaming User: <input type="checkbox"/>
Access Control	Access Card 1:
Cafeteria	Access Card 2:
Face Recognition	Enrolled Fingers(Suprema Proprietary): 0
	Enrolled Fingers(Suprema ISO): 0
	Enrolled Fingers(Lumidigm ISO): 0
	Enrolled Palm: 0
	Enrolled Face: 0

- **PIN:** Specify the PIN number for the visitor. The PIN number is used as a credential to punch on the door with which the visitor would be recognised by the device, irrespective of the fingerprints. Visitor PIN should be a numeric value consisting maximum of 15 digits. The value entered in this field will only be visible to the System Administrator (SA) user. For all other login users the value in this field will be masked.

*If Dynamic PIN On Pass Creation in Admin> System Configuration> Global Policy> Visitor Management is enabled, then **PIN** will not be configurable. You will be able to view PIN here only during the visit time i.e. when the visitor with the configured Visitor Profile checks-in.*

- **Biometric Group No.:** Specify the Biometric group number to be assigned to the visitor if applicable. It is a number allotted to a group of visitors assigned on a device. This enables the device to match a template against only those visitors who are part of the same Biometric Group thus reducing processing time.

This value is used for Palm/Face Identification of visitor on Identification Server in shorter time span considering visitor first specifies Group No and then punches on the device.

Identification Server will be allocating templates to its child threads on the basis of this field.

- **Access Card 1 & 2:** Enter the Card Serial Number or a Comma separated CSN which is to be assigned to the Visitor Profile.

Format:

- **Card Serial Number** = 1343933547.
- **Comma separated CSN** = 12,345789

The maximum character limit for Card Serial Number (CSN) is 20 digits. While the maximum character limit for Comma separated CSN is 21 digits.

To configure a comma separated card value, make sure you configure a 26-bit card format in the system and then assign the same to the device. To know more, refer "[Card Formats](#)".

This Access Card number will be synced with the devices to allow/deny access to visitors.

COSEC accepts up to two cards per visitor. So if available, the **Access Card 2** number will be displayed.

**If Access via QR** in Admin> System Configuration> Global Policy> Visitor Management is enabled, then Access Card 2 will not be configurable.

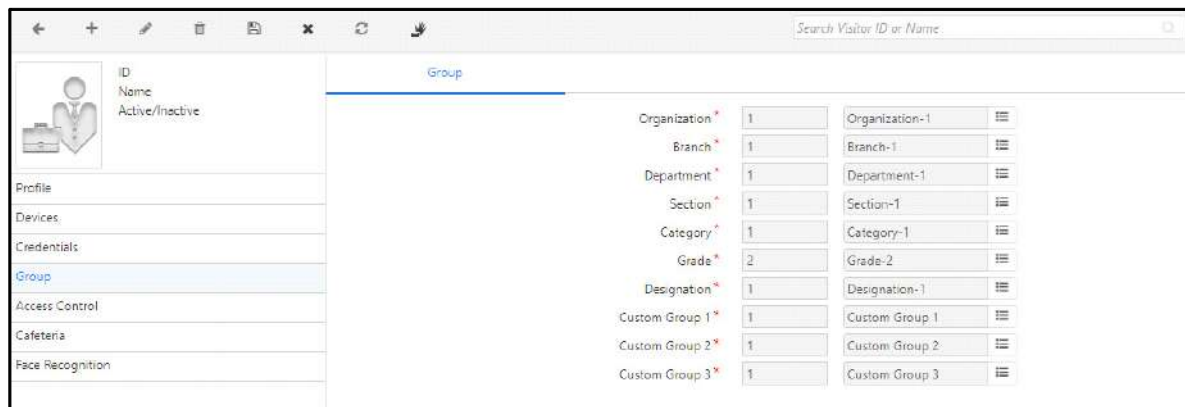

*Access Card 2 will display the value of the QR Code generated while Pass creation.*

Once you save the configurations, hover your mouse over the Comma separated CSN value of any Access Card, the system will display an encoded (converted) value of Comma separated CSN.

- **Enrolled Fingers:** It displays the number of fingerprint templates enrolled for the selected visitor.
- **Enrolled Palms:** It displays the number of palm vein templates enrolled for the selected visitor.
- **Enrolled Face:** It displays the number of Face templates enrolled against the selected visitor.

## Group

This option enables you to assign the Enterprise groups, Reporting group, Approval Policy, Leave group and Week off group to the Visitor.

The screenshot shows a web application interface for configuring a visitor's group. On the left is a sidebar with a list of configuration options: ID, Name, Active/Inactive, Profile, Devices, Credentials, **Group** (highlighted), Access Control, Cafeteria, and Face Recognition. The main area is titled 'Group' and contains a search bar at the top right labeled 'Search Visitor ID or Name'. Below the search bar is a table with two columns. The first column lists various group categories with a red asterisk, and the second column shows the selected value and a picklist button. The data is as follows:

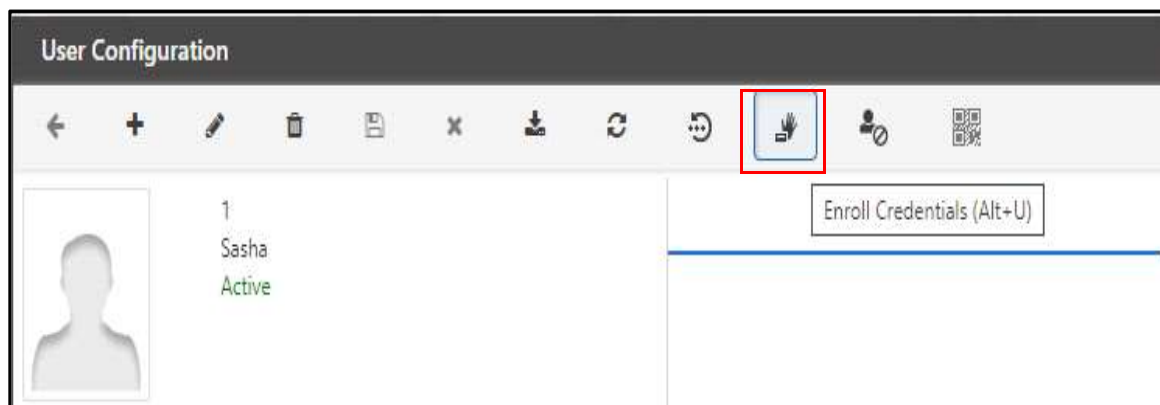

Category	Value	Picklist
Organization *	1	Organization-1
Branch *	1	Branch-1
Department *	1	Department-1
Section *	1	Section-1
Category *	1	Category-1
Grade *	2	Grade-2
Designation *	1	Designation-1
Custom Group 1 *	1	Custom Group 1
Custom Group 2 *	1	Custom Group 2
Custom Group 3 *	1	Custom Group 3

The default groups will be shown in the respective fields. Click on the picklist buttons and select the appropriate enterprise groups — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Groups) to assign to the Visitor.

The picklist options that appear in each enterprise group will be as per the rights assigned to the SA. For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#).

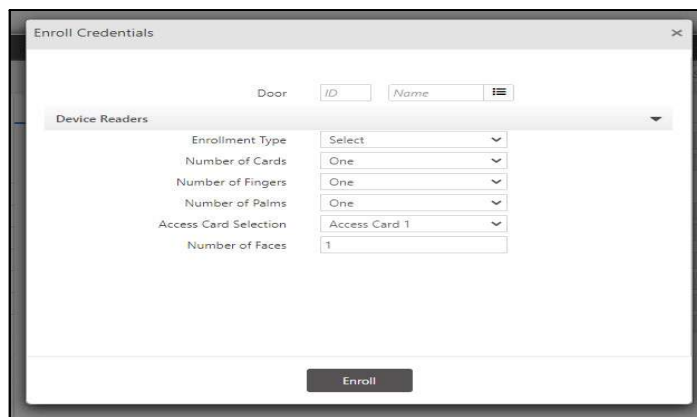

## Enroll Credentials

The Administrator can enroll credentials for the visitor by clicking **Enroll Credentials**  as shown below.

The screenshot shows the 'User Configuration' interface. At the top is a dark header with the title 'User Configuration'. Below the header is a toolbar with various icons. One icon, representing a hand, is highlighted with a red rectangle. To the right of this icon is a button labeled 'Enroll Credentials (Alt+U)'. Below the toolbar, the interface is divided into two main sections. The left section displays a user profile with a placeholder image, the name 'Sasha', and the status 'Active'. The right section is currently empty.

The **Enroll Credentials** window appears as shown below:

The screenshot shows the 'Enroll Credentials' window. At the top, there are fields for 'Door', 'ID', and 'Name'. Below these is a 'Device Readers' section with a dropdown arrow. The configuration options are as follows:

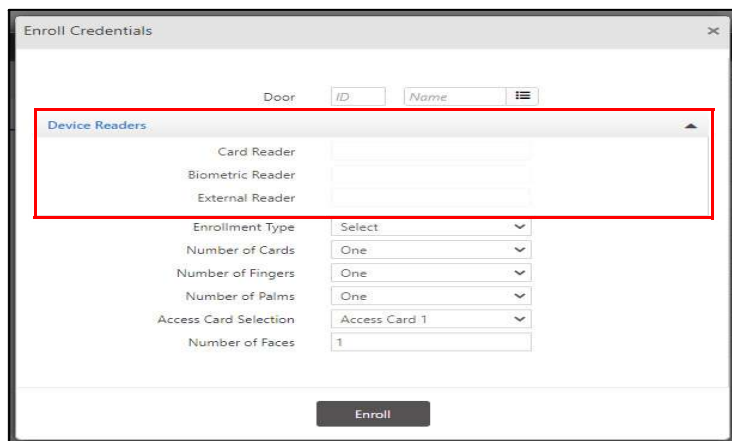

Configuration Option	Value
Enrollment Type	Select
Number of Cards	One
Number of Fingers	One
Number of Palms	One
Access Card Selection	Access Card 1
Number of Faces	1

An 'Enroll' button is located at the bottom center.

- **Door:** Select the desired door from the picklist on which the enrollment is to done.

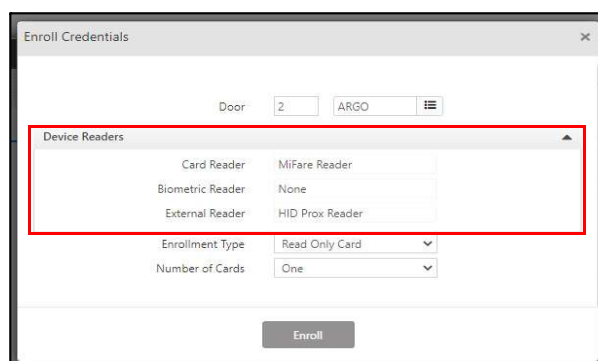

### Device Readers

Device Readers displays the information of the readers configured in the selected **Door**.

This screenshot shows the 'Device Readers' section highlighted with a red box. The section contains three input fields: 'Card Reader', 'Biometric Reader', and 'External Reader'. Below these fields are the same configuration options as in the previous screenshot.

Card Reader, Biometric Reader and External Reader information are displayed here.

This screenshot shows the 'Device Readers' section highlighted with a red box. The specific reader information is as follows:

Reader Type	Value
Card Reader	MiFare Reader
Biometric Reader	None
External Reader	HID Prox Reader

Below the reader information, the 'Enrollment Type' is set to 'Read Only Card' and 'Number of Cards' is set to 'One'. An 'Enroll' button is at the bottom.

- **Enrollment Type:** Select the desired enrollment type — Read Only Card, Smart Card, Biometrics, BiometricsThenCard, Face and Mobile — from the drop-down list.  
Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.

1. **Enrollment Type** = Read Only Card

**Number of Cards:** Select the desired number of cards from the drop down list.

2. **Enrollment Type** = Smart Card

**Number of Cards:** Select the desired number of cards from the drop down list.

**Details on Smart Card**

Select the desired check boxes of the parameters — **Visitor ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.

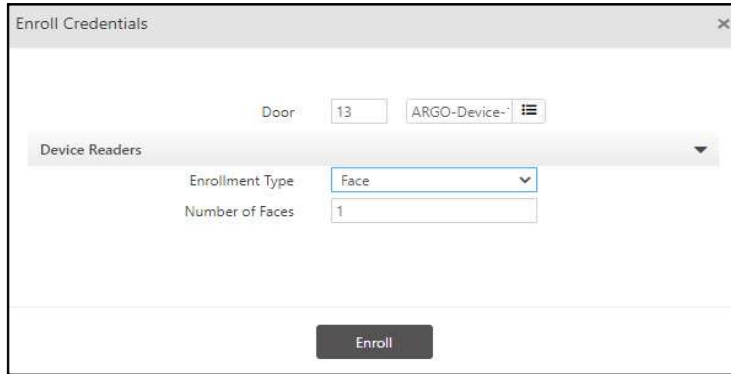

**Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the **Short Name** check box to display it on the Smart Card.

### 3. Enrollment Type = Face

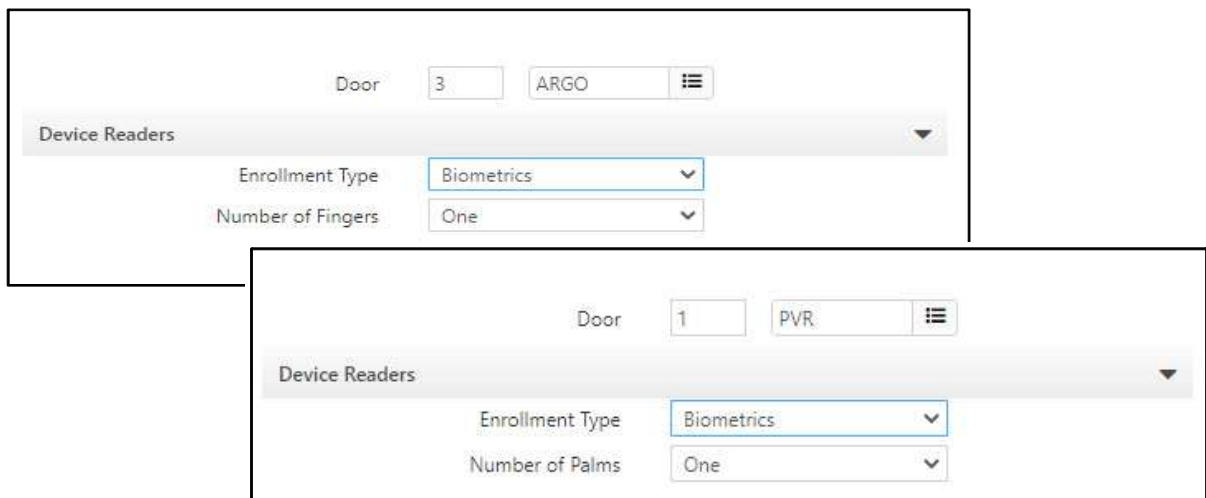

**Number of Faces:** Select the desired number of faces from the dropdown list.

The screenshot shows the 'Enroll Credentials' dialog box. At the top, there are fields for 'Door' (13) and 'ARGO-Device-'. Below these is a 'Device Readers' dropdown menu. Under the dropdown, 'Enrollment Type' is set to 'Face' and 'Number of Faces' is set to '1'. At the bottom, there is an 'Enroll' button.

### 4. Enrollment Type = Biometrics

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop-down list.

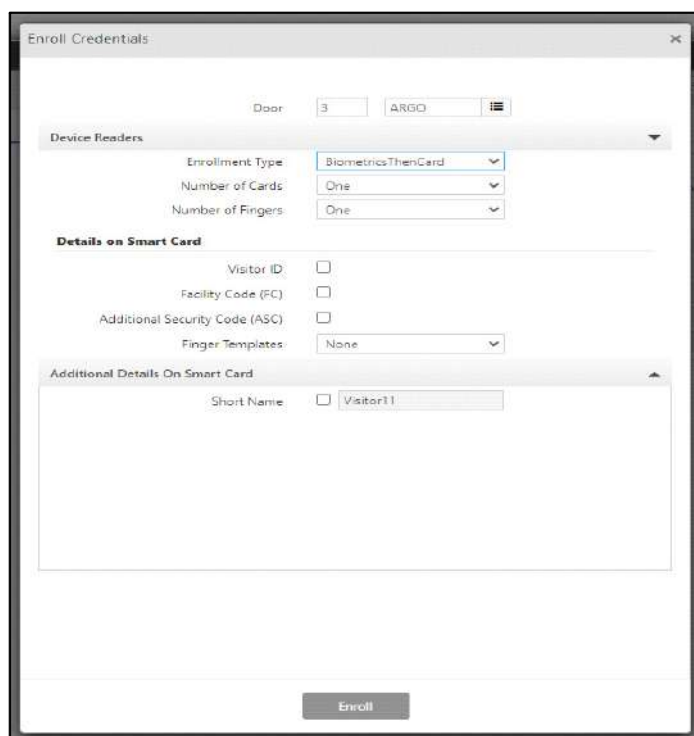

The first screenshot shows the 'Enroll Credentials' dialog box with 'Door' set to '3' and 'ARGO' selected. 'Enrollment Type' is 'Biometrics' and 'Number of Fingers' is 'One'. The second screenshot shows the same dialog box with 'Door' set to '1' and 'PVR' selected. 'Enrollment Type' is 'Biometrics' and 'Number of Palms' is 'One'.

### 5. Enrollment Type = BiometricsThenCard

**Number of Cards:** Select the desired number of cards from the drop-down list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop-down list.

### **Details on Smart Card**

Select the desired check boxes of the parameters — **Visitor ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop-down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the smart card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### **Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

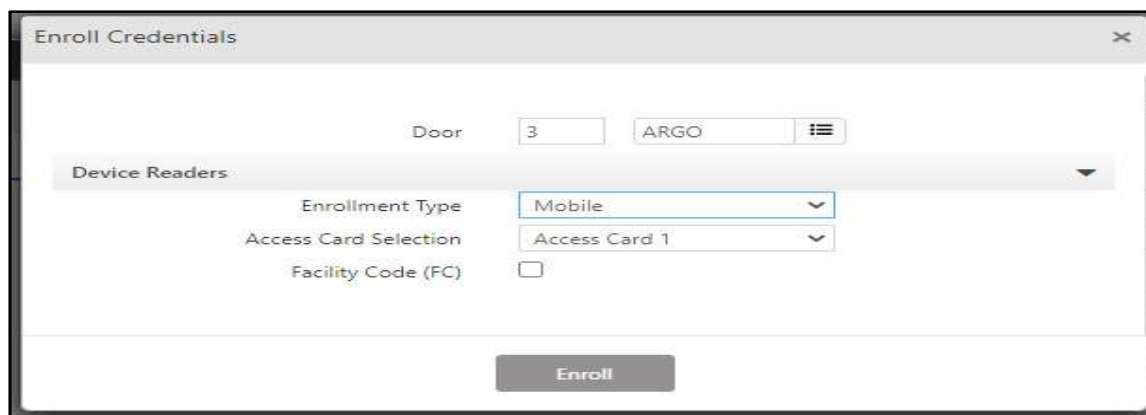

Select the **Short Name** check box to display it on the Smart Card.

## **6. Enrollment Type = Mobile**

*To select **Enrollment Type** as Mobile, the particular device must have BLE support and ensure Bluetooth is ON in the mobile.*

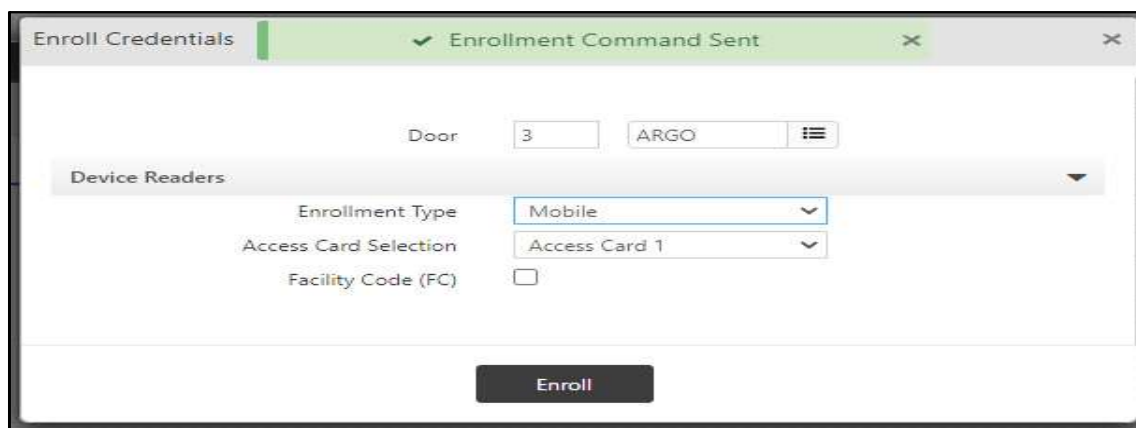

**Access Card Selection:** Select the desired Access Card from the drop down list.

The screenshot shows the 'Enroll Credentials' dialog box. At the top, there is a 'Door' field with the value '3' and a dropdown menu showing 'ARGO'. Below this is a 'Device Readers' section with a dropdown arrow. Underneath, there are three fields: 'Enrollment Type' with a dropdown menu showing 'Mobile', 'Access Card Selection' with a dropdown menu showing 'Access Card 1', and 'Facility Code (FC)' with an unchecked checkbox. At the bottom center is an 'Enroll' button.

**Facility Code (FC):** Select this check box to enroll the Facility Code (FC) against the visitor.

Click **Enroll** to initiate the enrollment process.

This screenshot shows the same 'Enroll Credentials' dialog box, but with a green status bar at the top indicating '✓ Enrollment Command Sent'. The fields and buttons remain the same as in the previous screenshot.

To know more about enrolling credentials of visitors, refer ["Enrollment"](#).

## Access Control

To configure Access Control feature for the visitor, click the option **Access Control**. The page appears as shown below.

*This option is only available with the Access Control add on module.*

### Basic

**ByPass Finger:** You can enable this check-box to bypass the identification of finger on device when the finger print image is not clear or when there is any problem in identifying the visitor.

If the device is set to Access mode as biometrics + card or biometrics+ PIN or any other combinations. Then visitor can access the door using PIN or card, thus bypassing the finger identification.

**ByPass Palm:** You can enable this checkbox to bypass the identification of Palm on device when the Palm Vein image is not clear or when there is any problem in identifying the visitor.

If the device is set to Access mode as biometrics + card or biometrics+ PIN or any other combinations. Then visitor can access the door using PIN or card, thus bypassing the Palm identification.

**Access Validity:** Enable this option if the visitor credential is to be activated for a predefined period.

**Access Validity Date:** Select the date from the calendar button on which the visitor validity will end.

**Access Level:** Select the Access Level to be assigned to the visitor in Smart Identification (SI) mode. If the Access level of visitor is greater than the Access level of device; only then the visitor can access the device.

**Holiday Schedule:** Select the Holiday schedule to be assigned to the visitor from the drop down list. The Holiday Schedule is configured from Shifts and Schedule module.

## Advance

The screenshot shows the 'Visitor Profile' window with the 'Advance' tab selected. The left sidebar contains a list of profile attributes: Profile, Devices, Credentials, Group, Access Control (highlighted), Cafeteria, and Face Recognition. The main area is divided into two sections. The top section contains settings for 'Enable Advance Access Control' (checked), 'Smart Access Route' (with ID and Name picklists), and 'Maximum Route Level' (set to 75). Below this is the 'Enable Elevator Access Control' (unchecked) section with an 'Elevator Floor Group' picklist. The bottom section is the 'Access Rule List', which includes a search bar and a table with two columns: ID and Name. The table contains two entries: ID 13 with Name 'test' and ID 15 with Name 'test2'.

ID	Name
13	test
15	test2

**Enable Advance Access Control:** Check this box to enable the advance access control feature.

**Smart Access Route:** Select the Smart Access Route to be assigned to the visitor from the Access Route picklist. The Smart Access Route is configured from **Access Control module> Smart Access> Smart Access Route**.

**Max Route Level:** Select the route level upto which the visitor is to be allowed access from the drop down list. Suppose if Max Route level of visitor is 5, then devices in the route with Access level greater than 5 will not be allowed to access by the visitor.

**Enable Elevator Access Control:** Check this box to enable the Elevator access control feature for the visitor.

**Elevator Floor Group:** Click the picklist and select the Elevator floor group to be assigned to the visitor. The visitor can access the floors of the Elevators included in Elevator Floor Group.

The Elevator Floor group is created from Access Control> Elevator Access Control> Elevator floor group.

**Access Rule List:** This table displays the list of Access Rule/s assigned to the visitor.

## Cafeteria

This option is only available with the Cafeteria add on module. On clicking the Cafeteria option the following page appears.

### Setting

The screenshot shows the 'Visitor Profile' settings interface. On the left, a sidebar lists various settings: Profile, Devices, Credentials, Group, Access Control, Cafeteria (highlighted), and Face Recognition. The main area is titled 'Settings' and contains the following configuration options:

- Enable Account:** A checkbox that is checked.
- Enable Offline Transaction:** A dropdown menu currently set to 'None'.
- Discount Level:** A dropdown menu currently set to 'None'.
- Account Type:** A dropdown menu currently set to 'Pre-Paid'.
- Balance Management:** A dropdown menu currently set to 'Device Based'.
- Device-Server Balance Check:** An unchecked checkbox.
- Cafeteria Usage Policy:** Two input fields, one labeled 'ID' and one labeled 'Name', with a menu icon to the right.

**Enable Account:** Check the box to enable the visitor to access the assigned Cafeteria devices.

**Enable Offline Transaction-** Select the desired option from the drop-down list for the visitor to perform the offline transaction.

- Select **None**, if you do not want to allow transactions to be made by the Visitor when the device is in offline mode.
- Select **Allow With Discount**, if you want to allow transactions with discount to be made by the Visitor, when the device is in offline mode.
- Select **Allow Without Discount**, if you want to allow transactions without discount to be made by the Visitor, when the device is in offline mode.

**Discount Level:** Select the appropriate Discount Level from the drop down list.

**Account Type:** Select the Account Type from the options of **Pre-Paid** and **Post-Paid**.

#### **Pre-paid Account**

- For **Pre-Paid** account type, specify whether the **Balance Management** should be **Device-based** or **Server-based**.
- When Balance Management is selected as **Server based**, then you can enable **Device-Server Balance Check**. This will allow Device to check Server-side balance before allowing transaction. For this, Device and Server must be connected.

### Post-paid Account

- For **Post-Paid** account type, enter the **Allowed Usage Per Month** based on which monthly dues for the user can be calculated.

Enable Account	<input checked="" type="checkbox"/>	
Enable Offline Transaction	None	
Discount Level	None	
Account Type	Post-Paid	
Allowed Usage Per Month *	0.00	
Cafeteria Usage Policy	ID	Name

**Cafeteria Usage Policy-** Select the cafeteria usage policy to assign to the user based on which cafeteria transaction restrictions will be applied to the Visitor.

### Face Recognition

In this feature, visitor can access the device or mark the attendance by verifying his Face as the credential. The Face Recognition tab appears as shown below:

The screenshot displays a software interface for managing visitor settings. On the left, a sidebar contains a user profile card with fields for ID, Name, and Active status, followed by a list of settings: Profile, Devices, Credentials, Group, Access Control, Cafeteria, and Face Recognition. The 'Face Recognition' option is highlighted. The main content area shows the 'Settings' tab for Face Recognition, which includes an 'Enable Face Recognition' checkbox.

**Enable Face Recognition:** Check this box to enable Face Recognition feature for access control of visitors.

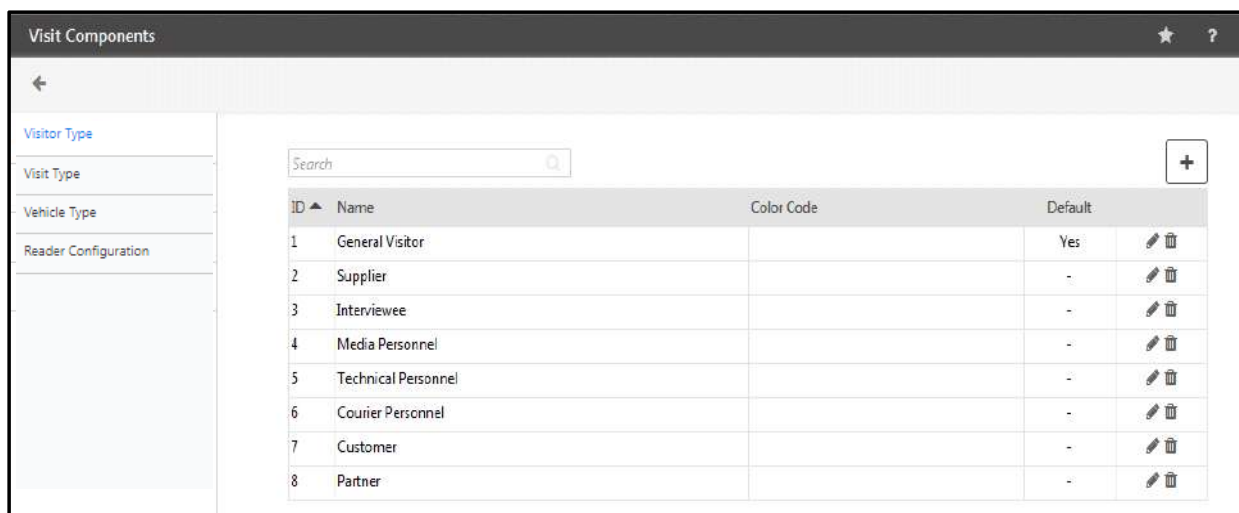

# Visit Components

Visit Components display the Visitor Types, Visit Types, Vehicle Type and Station Location of Visitor.

To view and add the Visit Components, select **Visitor Management module > Visit Component**. The Page appears as shown below:

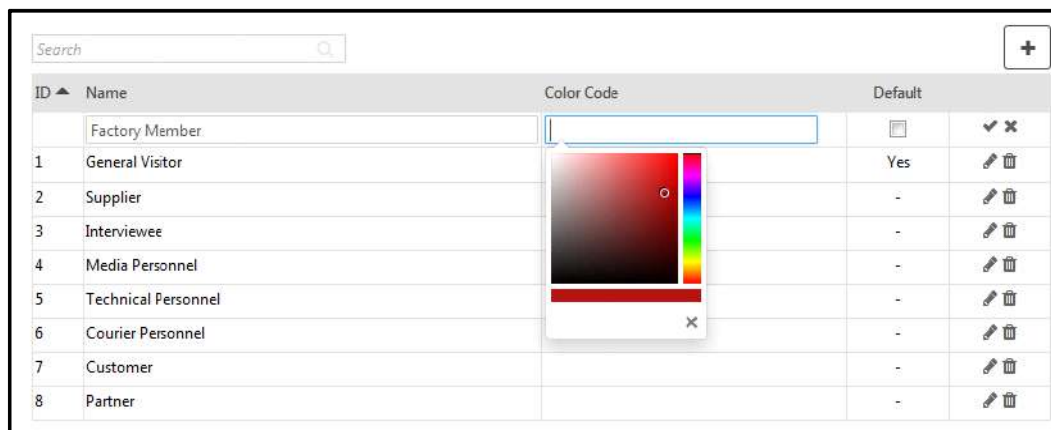

## Visitor Type

The Visitor Type option enables the user to define various types of visitors as per the site requirements.

ID	Name	Color Code	Default	
1	General Visitor		Yes	 
2	Supplier		-	 
3	Interviewee		-	 
4	Media Personnel		-	 
5	Technical Personnel		-	 
6	Courier Personnel		-	 
7	Customer		-	 
8	Partner		-	 

To add a new visitor type click on **Add** button. The new row will appear where you can enter the details of visitor type.

ID	Name	Color Code	Default	
	Factory Member		<input type="checkbox"/>	 
1	General Visitor		Yes	 
2	Supplier		-	 
3	Interviewee		-	 
4	Media Personnel		-	 
5	Technical Personnel		-	 
6	Courier Personnel		-	 
7	Customer		-	 
8	Partner		-	 

Specify the **Name** of the Visitor type like Customer, Supplier, Interviewee etc.

Click on the **Color Code** box. Select the **Color** for the visitor type by dragging the mouse. The respective Color and the **Color Code** appears with the color selection as shown below.

ID ▲	Name	Color Code	Default	
	Factory Member	#c2191e	<input checked="" type="checkbox"/>	✓ ✕
1	General Visitor		Yes	✎ ✕
2	Supplier		-	✎ ✕
3	Interviewee		-	✎ ✕
4	Media Personnel		-	✎ ✕
5	Technical Personnel		-	✎ ✕
6	Courier Personnel		-	✎ ✕

Check the **Default** box to set this as the default visitor type.

Click on **OK** to save the visitor type. The **ID** will be automatically generated. The visitor type will be displayed in the grid as shown below. The details can be edited by clicking **Edit** button.

ID ▲	Name	Color Code	Default	
1	General Visitor		-	✎ ✕
2	Supplier		-	✎ ✕
3	Interviewee		-	✎ ✕
4	Media Personnel		-	✎ ✕
5	Technical Personnel		-	✎ ✕
6	Courier Personnel		-	✎ ✕
7	Customer		-	✎ ✕
8	Partner		-	✎ ✕
9	Factory Member	#c2191e	Yes	✎ ✕

## Visit Type

Visit Type option enables the user to define various types of visits as per the site requirements.

✎ ✕

Specify the **Name** of the Visit type.

Check the **Default** box to set this as the default visit type. You cannot delete the default visit type.

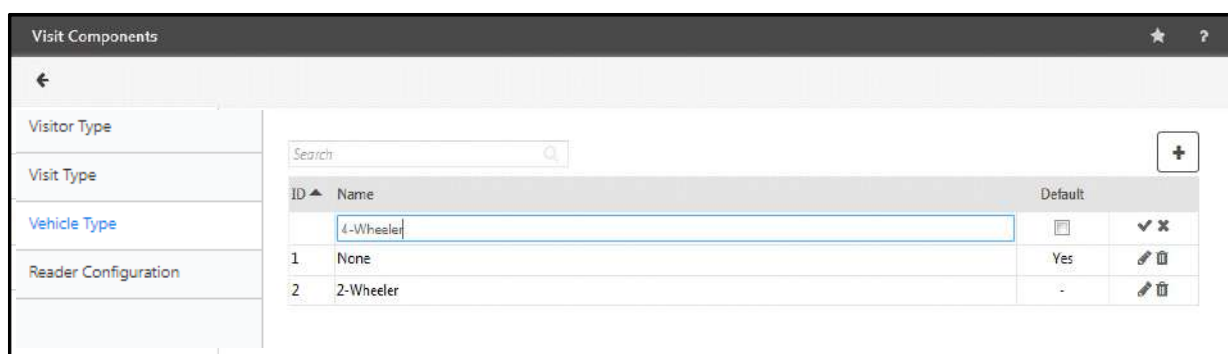

Click on **OK** to save the Visit type. The **ID** will be automatically generated. The visit type will be displayed in the grid as shown below. The details can be edited by clicking **Edit** button.

ID	Name	Default	
1	Personal	Yes	 
2	Official	-	 
3	Technical	-	 

## Vehicle Type

Vehicle Type option enables the user to define the types of vehicles carried by the visitors as per the site requirements.

ID	Name	Default	
	4-Wheeler	<input type="checkbox"/>	 
1	None	Yes	 
2	2-Wheeler	-	 

To add a new vehicle type click on **Add** button. The new row will appear where you can enter the name of vehicle type.

Specify the **Name** of the Vehicle type which the visitor would be carrying.

Check the **Default** box to set this as the default vehicle type. You cannot delete the default vehicle type.

Click on **OK** to save the Vehicle type. The **ID** will be automatically generated.

## Reader Configuration

In this section, System Account User can map VMS Utility field & Response tag. Click Add button.

Select the **VMS field names** which are VMS Utility fields from the drop down list.

Enter the **Response tag** for the selected VMS field names as shown below.

So, whenever a document (say Driving License, PAN Card, Passport etc) is scanned with Samsotech scanning device in VMS Utility, the visitor's detail will be received in response with its respective tag. Now, this received visitor's data will automatically appear in Visitor details section in VMS Utility.

The visitor details will appear according to the mapping done on 'Reader Configuration' page.

ID	VMS - Field Name	Response Tag
	Visitor Name	

For example: Visitor Name field is mapped with Response <firstName> as shown below.

ID	VMS - Field Name	Response Tag
	Mobile No	<personalNumber>
1	Visitor Name	<firstName>

The other fields are mapped with the respective tags as shown below.

ID	VMS - Field Name	Response Tag
1	Visitor Name	<firstName>
2	Mobile No	<personalNumber>
3	Organization	CompanyNameEnglish
4	D.O.B	<dateOfBirth>
5	Nationality	<nationality_fullname>
6	Gender	<gender>

# Visit Template

Make sure SA has the necessary rights to access Visit Template. Refer [“Roles and Rights Configuration”](#).

This page enables the Admin to create multiple customized Visit templates. Once you create the Visit template, you can assign any of these templates to a Station Location. For details refer to [“Station Location”](#).

To view and create a new Visit template, click **Visitor Management module > Templates > Visit Template**. The page appears as shown below:

To create a new Visit template click on **Add** button and configure the following parameters:

- **ID:** This is an auto-generated field.
- **Visit Template:** Assign a name to the template.
- **Default:** Select this check box to set this template as the default Visit template.

To create a customized template, do the following:

- You can select the desired parameters from the list. In **Additional Details** section, active custom fields will be displayed.

*To configure custom fields, select Admin> System Configuration> Global Policy> Visitor Management.*

- You can edit only the parameters with the edit icon. Click on **Edit**  .
- Select Mandatory check box, if you want a particular parameter to be configured by the Visitor compulsorily.
- Select Active check box, if you want a particular parameter to be displayed in the template.
- To save the particular parameter details click **OK**  or click **Cancel**  to discard.

Once you configure all the parameters, click **Save**.

You can also create a duplicate template. To do so, select the desired template from the right pane. Click **Duplicate**

**Visit Template**  . A duplicate Template with the identical configuration will be created. Now you can save the new Visit Template with the desired name.

# Visitor Template

Make sure SA has the necessary rights to access Visitor Template. Refer [“Roles and Rights Configuration”](#).

This page enables the Admin to create multiple Visitor templates. Once you create the Visitor template, you can assign any of these templates to a Station Location. For details refer to [“Station Location”](#).

To view and create a new Visitor template, click **Visitor Management module > Templates > Visitor Template**. The page appears as shown below:

To create a new Visitor template click on **Add** button and configure the following parameters:

- **ID:** This is an auto-generated field.
- **Visitor Template:** Assign a name to the template.
- **Default:** Select this check box to set this template as the default Visitor template.

To create a customized template, do the following:

- You can select the desired parameters from the list — **Basic, Personal, Details, Address**, sections. In **Details** section, custom fields will be displayed.

*To configure custom fields, select Admin> System Configuration> Global Policy> Visit Management.*

- You can edit only the parameters with the edit icon. Click on **Edit** .
- Select Mandatory check box, if you want a particular parameter to be configured by the Visitor compulsorily.
- Select Active check box, if you want a particular parameter to be displayed in the template.
- To save the particular parameter details click **OK**  or click **Cancel**  to discard.

Once you configure all the parameters, click **Save**.

You can also create a duplicate template. To do so, select the desired template from the right pane. Click **Duplicate**

**Visitor Template** . A duplicate Template with the identical configuration will be created. Now you can save the new Visitor Template with the desired name.

# Pre-Registration Template

Make sure SA has the View and Edit rights for Pre-Registration Template page. Refer [“Roles and Rights Configuration”](#).

This page enables the Admin to customize the Pre-Registration template. You can pre-register a visitor once the Pre-Registration template is customized. The Pre-Registration page parameters will appear according to this template for both System Account User and Host Users.

To view and edit the Pre-Registration template, click **Visitor Management module > Templates > Pre-Registration Template**.

Field Name	Type	Mandatory	Active
Host User	Search Textbox	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Additional Hosts	Textbox with Picklist	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Field Name	Type	Mandatory	Active
Mobile No.	Textbox	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Visitor Name	Textbox	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Organization Name	Textbox	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Email	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Date of Birth	Date Picker	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Designation Name	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Address	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
City	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
State	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Country	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Pincode	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Gender	Drop Down	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Nationality	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ID Proof 1	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ID Proof 2	Textbox	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Visitor Type	Drop Down	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Additional Visitors	Input List	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Only one Pre-Registration template appears by default. You can only edit the **Default** template.

To customize the template, do the following:

- The template is divided into the following sections — **Host Details, Visitor Details, Visit Details, Custom Fields** and **Vehicle Details**.

To configure custom fields, select Admin > System Configuration > Global Policy > Visit Management.

*Certain parameters like Visit Until Date, Visit Start Time and Visit End Time are Mandatory as per Visit Details in Pre-registration Template. But through COSEC Web API if these parameters are not passed in API but alternate parameters Visit Days, Visit Arrival Time and Visiting Hours per Day respectively are passed, then API will be successful even though mandatory parameters are not passed in API.*

- Each section has a set of parameters.
- Select the **Mandatory** check box of the desired parameters, if you wish to make the configuration of those parameters compulsory in the Pre-Registration page.
- Select the **Active** check box of the desired parameters, if you wish that these parameters should be displayed in the Pre-Registration page.

Once you configure all the parameters, click **Save**. The following pop-up appears.

- Click **Yes** to confirm. The parameters will appear accordingly on the [“Pre-Registration”](#) page. The parameters set as mandatory in the template will also be applicable while importing parameters from the Import sheet. For details, refer to [“Import Visitor and Visit”](#).

# Invite Visitor

The Invite Visitor option is used by Host to invite a registered/ non-registered Visitor through Link via Email/SMS.

The Link will be sent as SMS/Email as per the Alert Configurations done. Make sure you have selected Visitor Management as the Alert Filter and Invite Visitor as the Event. Now, under Additional Message Parameters, make sure you select the desired option — SMS or Email or both.

Here Host needs to initiate a link and send it to the Visitor, which results in registration of the Visitor on the application and passes the parameters which would automatically create a visit.

Restrictions will be imposed if configured in Visit Creation Restriction under *“Visitor Management Policy”*.

When a Visitor accepts the visit request without making any change, then that application will be sent to the host’s RIC for further approval.

When a Visitor makes some changes or updates any his/her information in the application, then it will be sent first to the Host for approval and then it will be sent to the RIC for approval/rejection.

To Invite a visitor, click **Visitor Management module > Invite Visitor**.

**Invite Visitor**

**Visitor Details**

Name

Mobile No.

Email ID

Organization Name

**Visit Details**

Host User: ID  Name

Visit Date: 29/07/2024

Visit Until Date: 29/07/2024

Repeat Mode: Daily

Repeat Days: Sun Mon Tue Wed Thu Fri Sat

Visit Start Time: 14:13

Visit End Time: 15:13

Purpose:

Additional Visitors:

Visit Station\*: ID  Station Name

Visit Location: Select

Click on the **Add** button to create a new visit invitation for a visitor.

## Visitor Details

Enter the basic details of a visitor for whom the invitation is being created.

- **Name:** Enter the name of the visitor.
- **Mobile No.:** Enter the valid 10 digit contact number of the respective visitor.
- **Email Id:** Enter the valid email id of the respective visitor.

*Make sure you configure atleast one — Mobile No. or Email ID, so that the Invite Link can be sent.*

*If you have selected SMS or WhatsApp in Alert Configuration, make sure you configure the Mobile No. and if you have selected Email, make sure you configure the Email ID. If there is a mis-match the Link will not be sent.*

*If you have selected SMS/ WhatsApp and Email in Alert Configuration, make sure you configure both the Mobile No. and Email ID.*

- **Organization Name:** Enter the name of an organization, the respective visitor belongs to.

## Visit Details

Enter the basic details of the Visit.

- **Host User:** Enter the name of the Host; who is inviting the respective Visitor or choose the name from the picklist.
- **Visit Date:** Enter the date of Visit of the Visitor.
- **Visit Until Date:** Enter the end date of the Visit of the Visitor.
- **Repeat Mode:** Select the Repeat Mode from the drop-down list options — Daily or Weekly.
- **Repeat Days:** If the Repeat Mode is selected as **Weekly**, select the Repeat Days on which the visit is to be repeated.
- **Visit Start Time:** Enter the start time of the visit in hh:mm format or click **Time Picker**  and set the time using the Up and Down arrow buttons.
- **Visit End Time:** Enter the end time of the visit in hh:mm format or **Time Picker**  and set the time using the Up and Down arrow buttons.

*While entering the time make sure that the Visit Time should be later than or equal to the current time i.e. the time when the host is creating the Invitation Link.*

- **Purpose:** Provide the purpose of this Visit. E.g. Interview, Official Meeting, Personal etc.
- **Additional Visitors:** Enter the number of additional Visitors who are going to visit along with the respective Visitor.
- **Visit Station:** Select the desired station where the Visitor will meet the Host from the picklist.
- **Visit Location:** Select the desired location from the drop-down list — Configured location or Custom Location.

If “Configured Location” is selected; then you can select the **location** from the picklist.

If “Custom Location” is selected; then you can select the **location** from Google Map. The latitude and longitude of location will appear accordingly.

After entering all the details about the visitor and the visit, click **Send Link**.

You can even copy the link and send it to the visitor. To do so, click on **Copy Link** .

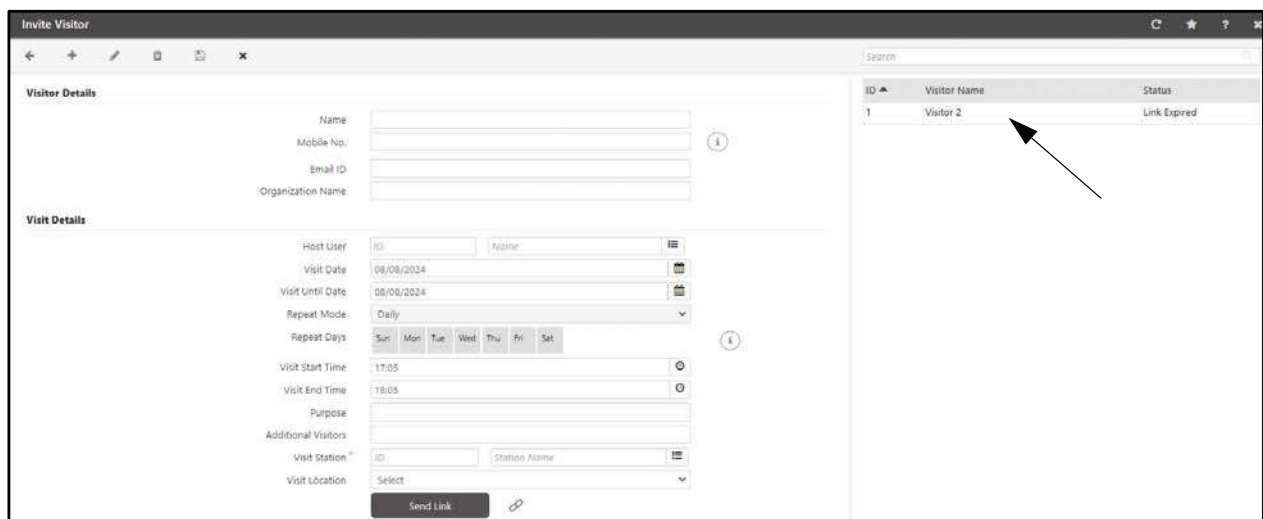

To edit any of the above details, click on the **Edit** button. After editing click on **Save** button.

*The Visit application will be sent to RIC only if 'Authorization For Visitor initiated Visit' parameter in Admin> System Configuration> Global Policy> Visitor Management is set to 'Always' or if the visit is outside the shift in global policy.*

## Link Expiry

The Invite Visitor Link will expire after its expiry date and the status of that link will be displayed on the right side grid. **Copy Link**  will no longer be accessible once the link is expired.

ID	Visitor Name	Status
1	Visitor 2	Link Expired

When any Invite Visitor Link is accessed by a visitor, the system will compare the current system date with the Expiry Date.

- If Current Date is before or same as the Expiry Date, then access to the Link will be allowed.
- If Current Date is after the Expiry Date, then access to Link will be restricted.

Let's understand this with the help of the following cases:

- **Case 1:** When a Visit Date is defined in the Invite, then the system considers Visit Date as an Expiry Date.

For example: Invite for Visitor is generated on 1st of March 2021, and Invite is generated with Visit Date as 10th March 2021, then Link Expiry Date will be 10th of March 2021.

- **Case 2:** When a Visit Date is not defined in the Invite, then the system considers Expiry Date = Request Date + 15 days.

For example: Invite for Visitor is generated on 1st of March 2021, then Link Expiry should be 16th of March 2021.

*Value of Expiry Date will not be updated whenever the application data is modified.*

# Pre-Registration

---

Pre-Registration option is used by the host (i.e. an employee to whom the visitor is expected to meet) by providing the details of the visitor and expected date and time.

Pre-registration can be done from COSEC Web Application or COSEC ESS Application as well as by Visitors from the Visitor Portal.

The Pre-registration can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module (For more details refer COSEC Employee Self Service User Manual)

COSEC Web enables all *System Account users* with appropriate page rights to make Pre-registration using the *Visitor Management* module. All applications made by the System Account user are *pre-approved* by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Pre-registration using the *Visitor Management* module. All applications made by the On Behalf System Account User are *pre-approved* by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to [“On Behalf System Account User”](#).

The Employee Self Service module enables users to login and enter details of their expected visitors. The pre-registration of the visitors is then sent for the approval to the Reporting In-charge.

The Visitor Portal enables the Visitors to initiate Visit Registration requests. The Registration requests of the visitors are sent for the approval to the Host and after their approval they are sent for approval to the Reporting In-charge.

Alerts can be configured, if required. For details refer to [“Visitor Pre-registration Requests and Approvals”](#).

*Both “Host Initiated” and “Visitor Initiated” pre-registration applications will be displayed on this Pre-Registration page.*

For more information refer, [“Visitor Management Policy”](#).

The parameters for Pre-Registration appear as per the [“Pre-Registration Template”](#). You need to edit the template as required before pre-registering the visitors.

For Pre-registering the visitors from COSEC Web Application, click **Visitor Management module> Pre-Registration**.

Field 10

**Visit Date:** Enter the expected date of the visit in dd/mm/yyyy format or click **Calendar** and select the date.

**Visit Until Date:** Enter the date of the visit in dd/mm/yyyy format or click **Calendar** and select the date until the visit is expected to continue.

- If the visit is for single day then Repeat Mode will be disabled.
- If the visit is expected for multiple days; then select the Visit Until date accordingly. Select the Repeat Mode and set the repeat pattern for visit.

**Repeat Mode:** Select the Repeat Mode from the drop-down list options — Daily or Weekly.

**Repeat Days:** If the Repeat Mode is selected as **Weekly**, select the Repeat Days on which the visit is to be repeated.

**Visit Start Time:** Enter the expected start time of the visit in hh:mm format or click **Time Picker**  and set the time using the Up and Down arrow buttons.

**Visit End Time:** Enter the expected end time of the visit in hh:mm format or click **Time Picker**  and set the time using the Up and Down arrow buttons.

**Visit Type:** Select the visit type from the drop-down list options — Personal or Official.

**Visit Station:** Select the Visit Station from the picklist where the Visitor will meet the Host. The Visit Station picklist displays a list of all the Stations created from the Station Location page. For details, refer to [“Station Location”](#).

**Visit Location:** The location can be selected where visit is to be held from the options of Configured location or Custom Location.

- If “Configured Location” is selected; then you can select the **location** from the picklist.
- If “Custom Location” is selected; then you can select the **location** from Google Map. The latitude and longitude of location will appear accordingly.

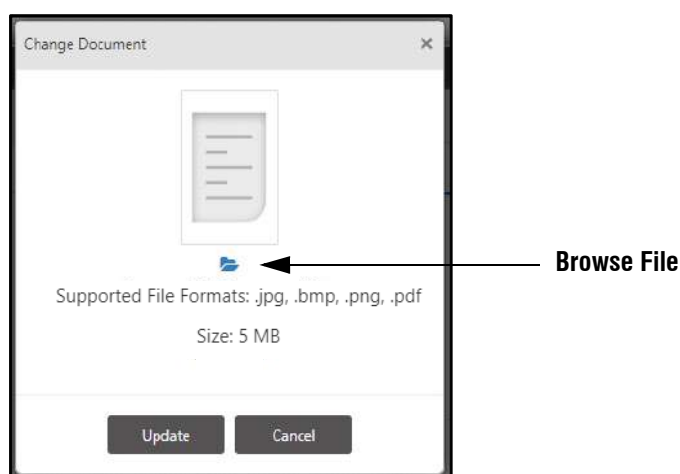

**Purpose:** Specify the purpose or the reason of the visit.

**Status:** It will show the status of application. If the pre-registration entry is done by a system account user (i.e. sa, se, so type users) then the entry will be auto approved with the login user’s id itself.

**Custom Fields:** There are 10 additional fields in which you can enter the desired details of the visitors as per your requirement.

These are visible only after they are configured in **Visit Custom Fields** from **Admin> System Configuration> Global Policy> Visitor Management**. For example Security Number, ID Proof, Nominee Name. To know how to configure custom fields, refer [“Visit Custom Fields”](#).

You can upload the documents in Custom Fields, by clicking **Upload**  button. Then **Change Document** pop-up appears as shown below.

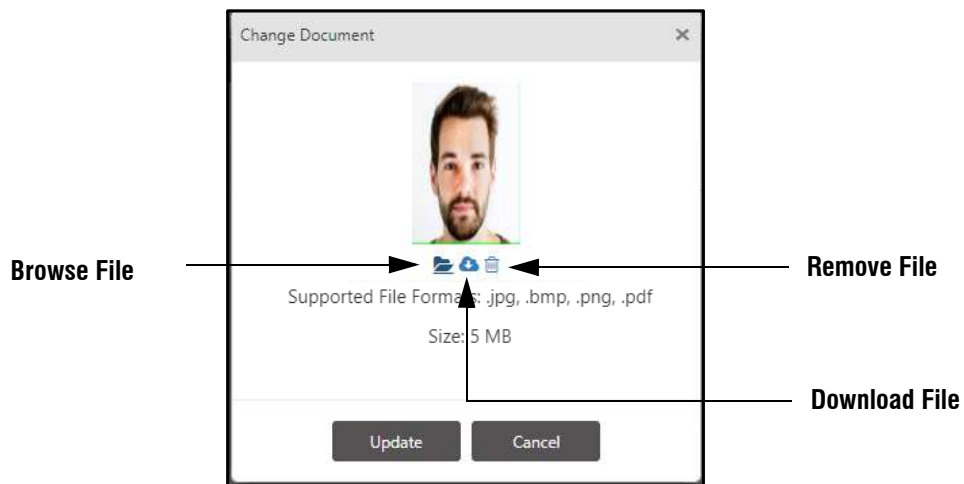

Click **Browse File**  .

Select the desired file as per the supported formats and size (.jpg, .bmp, .png, .pdf) from your local PC. After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**

 again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File** .

To remove the uploaded file, click **Remove File** .

Then click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

## Vehicle Details

For pre-registration of a visitor's vehicle, enter the vehicle's registration no., vehicle type and description.

Vehicle Details	
Registration No.	<input type="text" value="15 Chars"/>
Vehicle Type	<input type="text" value="None"/>
Description	<input type="text" value="50 Chars"/>

Click on **Save** to save the visitor details for pre-registration.

The Pre-registered Visitor will be reflected in the COSEC VMS Application (desktop application) through which the security personnel or reception person can monitor the visitor and issue the pass.

*In order to receive an alert when Watchlist visitor creates a visit make sure you have configured an alert in Admin> System Configuration> Alert Message Configuration. Set the Alert Filter as Visitor Management and Event as Create Visit- Watchlist/Blacklist. For details refer to ["Configuring Alert Messages"](#).*

*The SA/Host will not be able to create a visit for a Blacklist visitor.*

## Visit Logs

This section is visible only when the application is in View or Edit mode.

Appointment No.	Visit Date	Visitor Name	Status	Approval Details
240729000001	29/07/2024	Visitor 1	Approved	

**Application Date Time:** It displays the date and time when visitor has successfully planned visit.

**RIC Approval:** This is visible only when 'Authorization for Visitor Pre-Registration' is set in global policy & final verdict is given for respective application.

**Host/Visitor Approval:** This is visible when host/Visitor has either Approved/Rejected any visit application. If the Pre-registration is done by system account user, then the date and time same as that of Application Date Time is displayed.

**Security Clearance:** If **Security Approval For Visitor E-Pass** is enabled in global policy, then the date and time of Security Clearance appears. If the Pre-registration is done by system account user, then Security Clearance is not required and the date and time same as that of Application Date Time is displayed.

**Visitor Checked IN:** This is Date & Time when visitor has checked-IN.

**Visit Started:** This is Date & Time when Host has started visit.

**Visit Stopped:** This is Date & Time when Host has stopped visit.

**Visitor-Checked-Out:** This is Date & Time when visitor has checked out.

## Reschedule/Cancel/Transfer Visit

You can reschedule, cancel or transfer the visit of a pre-registered visitor to another host.

To **Reschedule** the visit, select the desired pre-registered visitor from the right pane. The details will be displayed on the left side. You can modify the details as per your requirement.

To **Cancel** the visit, refer ["Cancel Visit"](#).

To **Transfer** the visit to another host, refer "[Transfer Visit](#)".

*Cancel Visit and Transfer Visit is not applicable for rejected applications.*

*Before the visitor has checked in, you can reschedule, cancel or transfer visit as per your requirement.*

## Cancel Visit

Select the desired pre-registered visitor from the right pane.

Click **Cancel Visit** collapsible panel and configure the following parameters.

**Cancel:** Select this check box, to enable Cancel Visit for a pre- registered visitor.

**Cancellation Reason:** Specify the reason for which you want to cancel the visit for a pre-registered visitor.

Click **Save**. The status of the visit is updated as Rejected in the right pane.

## Transfer Visit

Select the desired pre-registered visitor from the right pane.

Click **Transfer Visit** collapsible panel and configure the following parameters.

**Transfer:** Select this check box, to enable Transfer Visit for a pre-registered visitor to another host.

**Transferred Host:** Enter the ID and Name of the Host or select the Transferred Host from the picklist. The picklist displays the authorized host list.

Click **Save**. The visit is transferred to the new host.

# Visit Registration Approval

---

The Visit Registration requests of visitors can be approved/rejected by an Admin or the Host/RIC of the user.

If the visit registration entry is done by a system account user (i.e. SA, SE, SO users) then the entry will be auto approved with the login user's id itself.

SA can approve/reject Visit Registration applications initiated by both Visitor and Host.

To approve a Visitor Initiated Visit requests SA needs to:

1. Approve the request from Visit Approval Page. To know more about Visit Approval, refer [“Visit Approval”](#).
2. Approve the request from Visit Registration Approval page.

The approval is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

If the Visit Registration request is initiated by the Visitor then it will be sent to the Host for Approval. After the Host approves it, it will be sent to the RIC, if the Host is assigned an RIC.

If the Visit Registration request is initiated by the Host then it will be sent to the RIC, if the Host is assigned an RIC.

In both cases the RIC will receive Alerts if configured.

For details refer to [“Visitor Pre-registration Requests and Approvals”](#).

For the visit registration approval of visitors, click **Visitor Management module > Approval > Visit Registration Approval**.

You can either:

- view all the pending Visit Registration Applications
- set the date filter to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Application”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the start and end dates by clicking the respective date selection buttons for which authorization status is to be viewed for Visit Registration.

Click **View** to view the pending, approved and rejected status of all Visit Registration applications.

## Pending Application

When any application is in the Pending state it can be authorized by the Admin or RIC.

Click the **Pending** collapsible panel.

Visit Start	Visit End	Visit Time	Visitor Name	Host	Visit Type	Initiated By	Approve	Reject	Remark	Details
2022/08/05	2022/08/05	09:00 - 10:00	RE	mitali	Personal	Host	<input type="checkbox"/>	<input type="checkbox"/>		

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject check box in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

To view the details of the Visit registration for the pending application, click **Details** . The **Visit Registration Detail** window appears as shown below.

# Security Approval

A visit request generated either from VMS utility or Visitor Portal after approval of host user is displayed in **Security Approval** page. Hence, this page enables the Security User or System Admin User to give clearance for approved Visit request application, allowing visitors to generate E-pass and perform visit successfully.

The visit requests on this page will only be received when **Security Approval For Visitor E-Pass** = 'Checked' from **Global Policy > Visitor Management Policy**.

For the Security approval of visit request, click **Visitor Management module > Approval > Security Approval**.

You can either:

- view all the pending Security Approval Applications
- set the date filter to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Applications”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Visit Date:** Select this option to enable the visit date filter. Select the start and end dates by clicking respective date selection buttons for which security clearance is to be given.

Click the **View** button to view the **Pending**, **Approved** and **Rejected** status of all Visit applications.

## Pending Applications

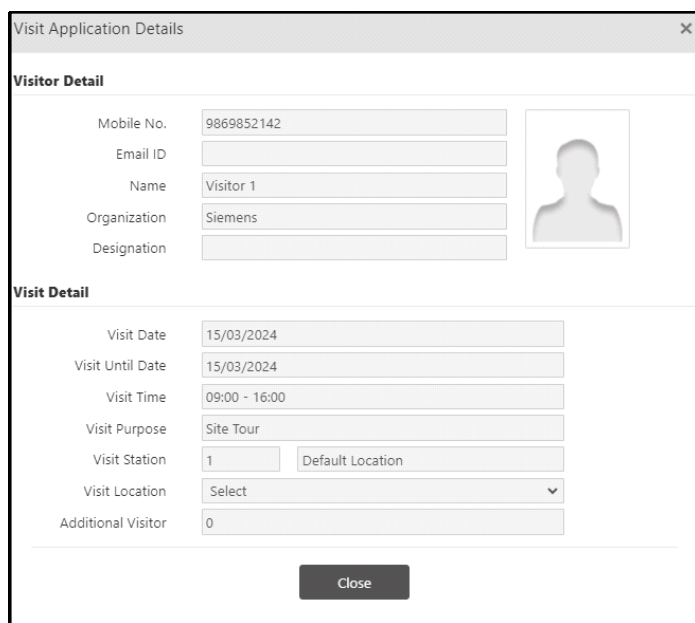

Click the **Pending** collapsible panel.

## Approved Application

Click the **Approved** collapsible panel.

The approved applications with their details are displayed.

## Rejected Application

Click the **Rejected** collapsible panel.

The rejected applications with their details are displayed.

# Visitor Login Authorization

To access Visitor Portal OTP is required. But when the visitor is not allowed to carry Mobile Phone, in that case visitor won't be able to login via SMS or Email. Hence visitor can click on "Skip to Login" to login into Visitor Portal. Such visitors will be verified and given verdict by Security User or System Admin User using **Visitor Login Authorization** page.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to "[Reporting In-Charge](#)", "[Approval Policy](#)" and "[Configuring Users](#)".

For the approval of visitor login, click **Visitor Management module > Approval > Visitor Login Authorization**.

You can either:

- view all the pending Visitor Login Authorizations
- set the date filter to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to "[Pending Login Requests](#)".

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Visit Date:** Select this option to enable the visit date filter. Select the start and end dates by clicking respective date selection buttons for which login requests are to be fetched.

Once the visitor enters details in Basic, Personal, Document and Address section of Visitor Portal then the login request will be generated and can be fetched by the Security User or System Admin User to give the verdict.

These requests can be seen under **Pending** collapsible panel of Visitor Login Authorization Page.

Request submitted successfully. Try to login after some time

Previous Visits Detail

To give verdict to a visitor login application, select the Approve or Reject checkbox and click on **Save**.

The screenshot shows a web interface titled "Pending (1)". It features a search bar at the top. Below it is a table with the following columns: Visitor Name, Mobile No., Email ID, Organization Name, Application Date Time, Approve, Reject, Remark, and Details. A single row is displayed for a visitor named "Nishit" with Mobile No. "9683245216" and Organization Name "Samsung". The Application Date Time is "07/03/2019 12:00". The Approve checkbox is checked, and the Reject checkbox is unchecked. The Remark field contains the text "Allow login without OTP". Below the table, there are two collapsible panels: "Approved/Availed (1)" and "Rejected (0)".

Depending on the given verdict, the request will now be visible either under Approved/Availed panel.

## Approved/Availed Login Requests

Click the **Approved/Availed** collapsible panel.

The screenshot shows a web interface titled "Approved/Availed (619)". It features a search bar at the top. Below it is a table with the following columns: Visitor Name, Mobile No., Email ID, Organization Name, Application Date Time, Remark, Approved By, and Details. The table displays five rows of data:

Visitor Name	Mobile No.	Email ID	Organization Name	Application Date Time	Remark	Approved By	Details
FIVE	5			2021/01/22 08:49	System Auto Approved	System	
HIR	81407	hir@sasdas		2021/03/24 09:35	System Auto Approved	System	
HIR	814	hir@sasdas		2021/03/24 09:41	System Auto Approved	System	
HIRAL	814	hiral@sasdas	MATRIX	2021/03/24 09:33	System Auto Approved	System	
Kratika	789			2021/01/19 14:26	Allow login without OTP	SA	

At the bottom of the table, it says "506 - 510 of 619 records". There is a pagination control at the bottom right showing "102" as the current page, with arrows and other page numbers.

All the approved requests with their details are displayed.

All auto approved visitor login request entries will be also be displayed in Approved/Availed panel, where Approved By displays System. To know how to auto authorize a visitor's login, refer **Auto Authorize Visitor Login** in ["Station Location"](#).

The screenshot shows a web interface titled "Approved/Availed (3)". It features a search bar at the top. Below it is a table with the same columns as the previous screenshot. The table displays three rows of data:

Visitor Name	Mobile No.	Email ID	Organization Name	Application Date Time	Remark	Approved By	Details
HIR	81407	hir@sasdas		2021/03/24 09:35	System Auto Approved	System	
HIR	814	hir@sasdas		2021/03/24 09:41	System Auto Approved	System	
HIRAL	814	hiral@sasdas	MATRIX	2021/03/24 09:33	System Auto Approved	System	

## Rejected Login Requests

Click the **Rejected** collapsible panel.

All the rejected requests with their details are displayed.

Rejected (1)							
<input type="text" value="Search"/>

3	3		3	2020/12/30 11:52	Restrict to login without OTP	SA	

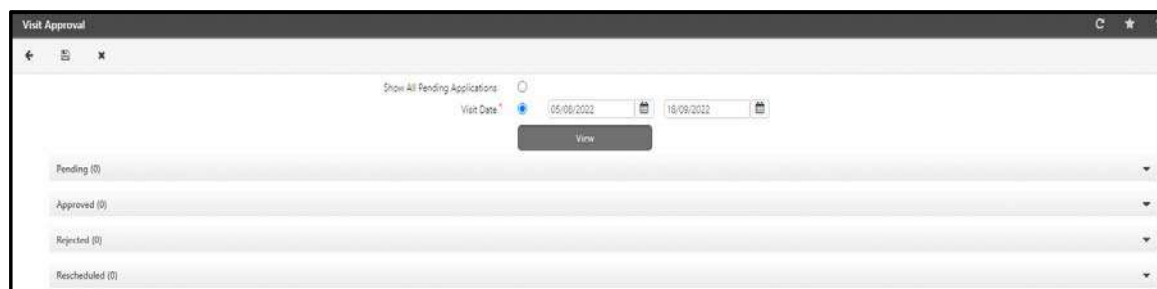

# Visit Approval

---

The System Account User can give verdict on any visit request initiated/rescheduled by a visitor.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

For giving verdict (approve, reject, reschedule & transfer) on visit request, click **Visitor Management module > Approval > Visit Approval**.

You can either:

- view all the pending Visit Approvals
- set the date filter to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To reschedule the application, select the **Reschedule** check box of the desired entry.

To transfer the application, select the **Transfer** check box of the desired entry.

To know more, refer to [“Pending Visit Approvals”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Visit Date:** Select this option to enable the visit date filter. Select the start and end dates by clicking respective date selection buttons for which visit approval to visitor is to be given.

Click **View** to view the pending, approved, rejected and rescheduled status of all Visit requests.

There are four collapsible panels — Pending, Approved, Rejected and Rescheduled.

You can approve, reject, reschedule or transfer the visit request by selecting the respective check box. Click the desired collapsible panel to perform the desired action.

### Pending Visit Approvals

Click the **Pending** collapsible panel.

The Pending Requests with Visit Date, Visit Time, Visitor Name, Host Name, Visit Purpose and Application Current Status are displayed as shown below:

Visit Date	Visit Time	Visitor Name	Host Name	Visit Purpose	Application Current Status	Approve	Reject	Reschedule	Transfer	Details
2022/07/24	11:26 - 12:26	33	visitorhost		Transferred by System Admin	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

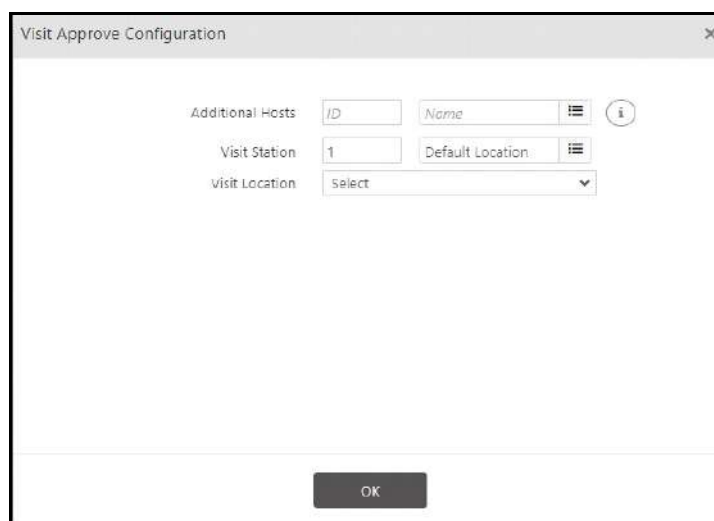

You can perform the following actions:

- “Approve a Visit”
- “Reject a Visit”
- “Reschedule a Visit”
- “Transfer a Visit”

### Approve a Visit

Select the check box if you wish to approve the visit request application.

Click  . The Visit Approve Configuration pop-up appears from where the verdict can be configured.

Visit Approve Configuration

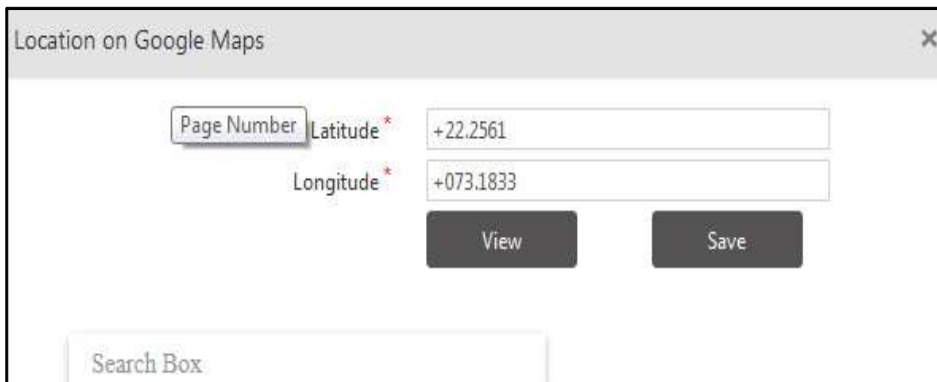

Additional Hosts:    

Visit Station:  Default Location: 

Visit Location:  

## Visit Approve Configuration

- **Additional Hosts:** Enter the Additional Hosts ID and Name manually or select the same from the picklist.
- **Visit Station:** Select the station of the Visit from the picklist. All the stations displays a list of all the Stations created from the Station Location page. For details, refer to [“Station Location”](#).
- **Visit Location:** Select the location of the Visit from the drop down list — Configured Location or Custom Location.
  - If you select **Configured Location**, then configure the Location Code and Name. You can either enter the Location Code and Name manually or you can select the same from the picklist.
  - If you select **Custom Location**, then click  , to select the location from the Google Map. The Location on Google Maps pop-up appears as shown below.

The image shows a pop-up window titled "Location on Google Maps" with a close button (X) in the top right corner. Inside the window, there are two input fields: "Latitude" with a red asterisk and a value of "+22.2561", and "Longitude" with a red asterisk and a value of "+073.1833". Below these fields are two buttons: "View" and "Save". At the bottom of the window, there is a "Search Box" with a magnifying glass icon.

- **Location on Google Maps**

**Latitude:** Specify the Latitude of the location on Google Maps.

**Longitude:** Specify the Longitude of the location on Google Maps.

Click **View**, to view the location.

Click **Save**, to save the location.

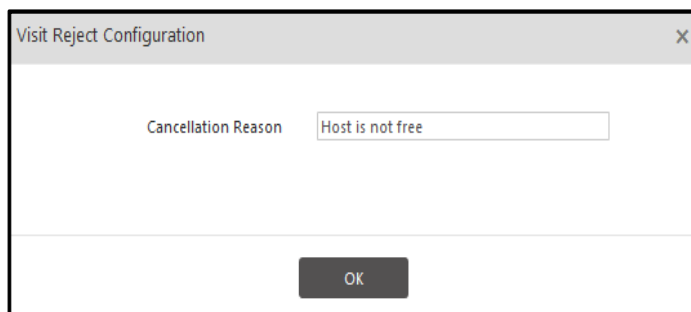

Click **OK** to save the Visit Approve Configuration.

Click **Save**  , to save the changes. The application will now appear in the Approved panel.

## Reject a Visit

Select the check box if you wish to reject the visit request application.

Click  . The Visit Reject Configuration pop-up appears as shown below.

Visit Reject Configuration

Cancellation Reason: Host is not free

OK

## Visit Reject Configuration

- **Cancellation Reason:** Specify the reason for which you want to cancel the visit of the visitor.

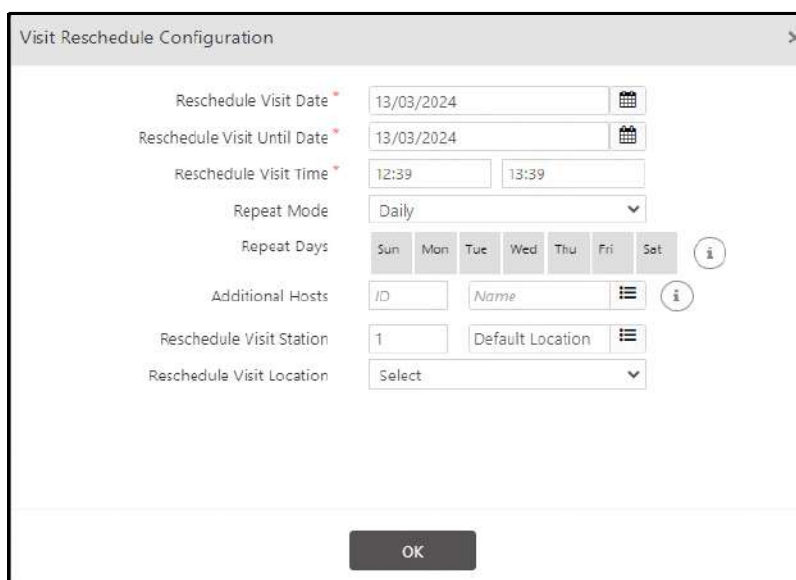

Click **OK** to save the Visit Reject Configuration.

Click **Save**  to save the changes. The application will now appear in the Rejected panel.

## Reschedule a Visit

Select the check box if you wish to reschedule a visit for the visitor. Restrictions will be imposed if configured in Visit Creation Restriction under *“Visitor Management Policy”*.

Click . The Visit Reschedule Configuration pop-up appears as shown below.

Visit Reschedule Configuration

Reschedule Visit Date: 13/03/2024

Reschedule Visit Until Date: 13/03/2024

Reschedule Visit Time: 12:39 13:39

Repeat Mode: Daily

Repeat Days: Sun Mon Tue Wed Thu Fri Sat

Additional Hosts: ID Name

Reschedule Visit Station: 1 Default Location

Reschedule Visit Location: Select

OK

## Visit Reschedule Configuration

- **Reschedule Visit Date:** Select the desired date on which the visit needs to be rescheduled.
- **Reschedule Visit Until Date:** Select the desired date until which the visit needs to be rescheduled.
- **Reschedule Visit Time:** Specify the new visit time on which the visit needs to be rescheduled.

- **Repeat Mode and Repeat Days:** Select the Repeat Mode from the drop down list—weekly or daily, if you wish to repeat the Visit. Select the days for which you wish to repeat the Visit.
- **Additional Hosts:** Enter the Additional Hosts ID and Name manually or select the same from the picklist.
- **Reschedule Visit Station:** Select the station for the Visit from the picklist. The picklist displays a list of all the Stations created from the Station Location page. For details, refer to [“Station Location”](#).
- **Reschedule Visit Location:** Select the location of the Visit from the drop down list—Configured Location or Custom Location. For details, refer [“Visit Approve Configuration”](#).

Click **OK** to save the Visit Reschedule Configuration.

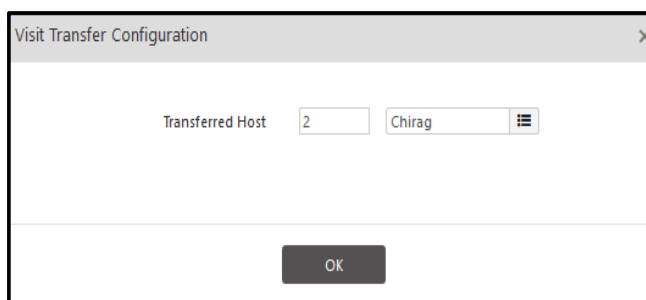

Click **Save**  to save the changes. The application will now appear in the Rescheduled panel.

## Transfer a Visit

The visit can be transferred to another host user by selecting the host from the pick list.

For transferring the visit of a visitor to another host, select the check box.

Click . The Visit Transfer Configuration pop-up appears as shown below.

The image shows a 'Visit Transfer Configuration' dialog box. It has a title bar with a close button (X). Inside, there is a label 'Transferred Host' followed by a text input field containing the number '2' and a picklist button. The picklist is open, showing the name 'Chirag'. At the bottom of the dialog is an 'OK' button.

## Visit Transfer Configuration

- **Transferred Host:** Enter the ID and Name of the Host manually or select the Transferred Host from the pick list.

Click **OK** to save the Visit Transfer Configuration.

Click **Save**  to save the changes. The application will now appear in the Pending panel with the updates.

If “Security Clearance for Visitor E-Pass” is enabled in Global policy then the approved application will go to the Security (Linked ESS user with System Account) for Security Clearance. Then 'Visit Transfer Alert' will be sent to Visitor.

*Make sure you have configured an alert for Visit Transfer. To do so:*

*Click Admin Module >System Configuration > Alert Message Configuration.*

*In the **Alert Filter** select Visitor Management from the drop-down list and select the **Event** as Visit Transfer from the drop down list. To know more, refer [“Configuring Alert Messages”](#)*

## Details

Click the corresponding **Details**  to view the visit application details. It displays the parameters of Visitor Detail, Visit Detail and Visit Logs. The Visit Application Details pop-up appears as shown below.

## Approved Visit Approvals

Click **Approved** collapsible panel.

The Approved applications with Visit Date, Visit Time, Visitor Name, Host Name, Visit Purpose and Application Current Status are displayed as shown below:

Approved (2)							
Search							
Visit Date ▲	Visit Time	Visitor Name	Host Name	Visit Purpose	Application Current Status	Reject	Reschedule
2022/07/14	10:33 - 11:33	33	mitali		Security Clearance - Pending	<input type="checkbox"/>	<input type="checkbox"/>
2022/07/14	17:33 - 18:30	TEST	visitorhost		Pending by RIC	<input type="checkbox"/>	<input type="checkbox"/>
						Transfer	Details
						<input type="checkbox"/>	<input type="checkbox"/>

Select the respective check box, if you wish to reject, reschedule or transfer the visit request.

To reject the visit request, refer [“Reject a Visit”](#).

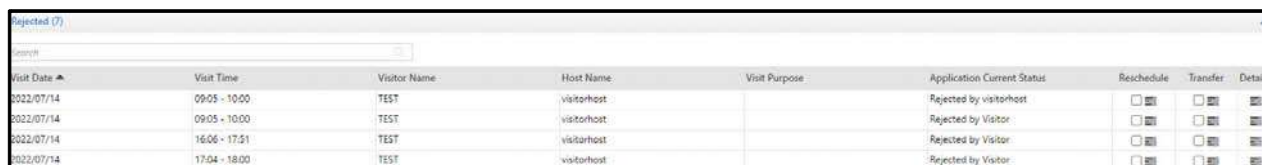

To reschedule the visit request, refer [“Reschedule a Visit”](#).

To transfer the visit request, refer [“Transfer a Visit”](#).

## Rejected Visit Approvals

Click **Rejected** collapsible panel.

The Rejected applications with Visit Date, Visit Time, Visitor Name, Host Name, Visit Purpose and Application Current Status are displayed as shown below:

Visit Date	Visit Time	Visitor Name	Host Name	Visit Purpose	Application Current Status	Reschedule	Transfer	Details
2022/07/14	09:05 - 10:00	TEST	visitorhost		Rejected by visitorhost	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2022/07/14	09:05 - 10:00	TEST	visitorhost		Rejected by Visitor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2022/07/14	16:06 - 17:51	TEST	visitorhost		Rejected by Visitor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2022/07/14	17:04 - 18:00	TEST	visitorhost		Rejected by Visitor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the respective check box, if you wish to reschedule or transfer the visit request.

To reschedule the visit request, refer [“Reschedule a Visit”](#).

To transfer the visit request, refer [“Transfer a Visit”](#).

## Rescheduled Visit Approvals

Click **Rescheduled** collapsible panel.

The Rescheduled applications with Visit Date, Visit Time, Visitor Name, Host Name, Visit Purpose and Application Current Status are displayed as shown below:

Visit Date	Visit Time	Visitor Name	Host Name	Visit Purpose	Application Current Status	Reject	Reschedule	Transfer	Details
2022/07/19	10:35 - 11:38	SS	mitali		Rescheduled by System Admin - Pending	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2022/07/21	11:00 - 12:00	SS	mitali		Rescheduled by System Admin - Pending	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the respective check box, if you wish to reject, reschedule or transfer the visit request.

To reject the visit request, refer [“Reject a Visit”](#).

To reschedule the visit request, refer [“Reschedule a Visit”](#).

To transfer the visit request, refer [“Transfer a Visit”](#).

# Form Summary

After the Forms are submitted by the Visitors, the details are displayed in the Form Summary. Form Summary displays the complete form response submitted by the Visitor along with its score summary.

To view Form Summary,

- Click **Visitor Management> Form Summary**.
- The **Form Summary** page appears. You can filter the records by settings various filter as per your requirement.

The screenshot shows the 'Form Summary' page with the following filter fields: Station (with a dropdown arrow), Name (with a dropdown arrow), Visitor (with a dropdown arrow), Mobile No (with a dropdown arrow), Name (with a dropdown arrow), Date (with a date range selector), and Form Type (with a dropdown arrow). Below these fields is a 'Preview' button. Below the button is a table with the following columns: Sr. No., Date/Time, Form, Attempt, Final Score, Assessment Criteria(%), Agreement, and Status. The table is currently empty, with 'No Data' displayed below it.

- **Station:** You can enter the Station ID or Name manually or you can click the picklist to select the same. This is the Station from where the response Form was submitted.
- **Visitor:** You can enter the desired Visitor's Mobile Number or Name manually or you can click the picklist to select the same.
- **Date:** Enter the desired From and To dates. This is the range during which the response Form was submitted by the Visitor.
- **Form Type:** Select the desired Form Type— Login, Check-In, Check-Out from the drop down list.

Click **Preview**. The records are displayed in the Response Table as per the set filters.

Sr. No.	Date/Time	Form	Attempt	Final Score	Assessment Criteria(%)	Agreement	Status
1	05/07/2022 00:42:14	Editedform1	13	0	NA	Accepted	Pass
2	04/07/2022 17:11:11	Editedform1	12	0	NA	Accepted	Pass
3	04/07/2022 16:09:43	Editedform1	11	0	NA	Accepted	Pass
4	04/07/2022 16:07:38	Editedform1	10	0	NA	Accepted	Pass
5	04/07/2022 15:50:29	Editedform1	9	0	NA	Accepted	Pass

1 - 5 of 13 records

**Response Table:** The Response Table displays the records with the following details:

- **Sr. No.:** It displays numerical sequence of the Form.
- **Date/Time:** It displays the date and time when the particular Form was submitted.
- **Form:** It displays the Form name.
- **Attempt:** It displays the number of attempts made by the Visitor for filling the Form.
- **Final Score:** It displays the score achieved by the Visitor along with the maximum achievable score.

*This is applicable only for Single-Choice and Multi-Choice questions.*

- **Assessment Criteria:** It displays the assessment criteria applied to the form. This parameter depends on the configuration done in **Admin Module > Form Builder**. For more details, refer to [“Form Builder”](#).
- **Agreement:** It displays whether the Agreement is accepted, declined or not provided with the Form.
- **Status:** It displays the status of the Visitor’s Form as Pass or Fail.

Click the Form whose details you wish to view.

The **Form** collapsible panel appears.

The screenshot shows a web interface titled 'Form' with a tab labeled 'Section 1'. It contains three question entries, each with a question number, the question text, the marks obtained, the provided answer, and the correct answer.

Question	Marks Obtained	Provided Answer	Correct Answer
(1) What is the actual name of company	1	Matrix Comsec Pvt. Ltd.	Matrix Comsec Pvt. Ltd.
(2) Which is logical Address?	0	MAC Address	IP Address
(3) Which are the products of matrix cosec company	0	PBX	PBX Access Control System

Click the **Form** collapsible panel.

The complete Form response submitted by the Visitor along with the details — section, question number, question, provided answer, correct answer and marks obtained is displayed.

*The marks obtained is applicable only for Single-Choice and Multi-Choice questions.*

# Set and Sync Credentials

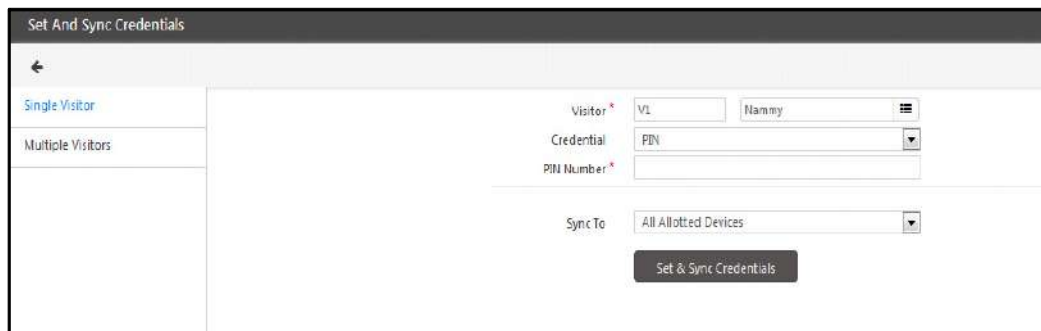

The **Set and Sync Credential** option provides a simple method of setting visitor credentials to devices. However the administrator needs to ensure that the visitors have been created in the system. And the visitor credentials are enrolled from Visitor Profile.

The COSEC system has six major types of visitor credentials which can be assigned to visitors:

- PIN
- Cards (Read only and Smart Cards)
- Fingerprint Templates
- Palm Templates
- Visitor Photo
- Face Template

To access this functionality, select the **Visitor Management module > Utilities > Set and Sync Credentials**.

The **Set and Sync Credentials** page appears as shown below.

## Single Visitor

**Visitor** - Select a visitor from the visitor picklist whose credentials are to be set to the device.

**Credential** - Select the specific credential of the visitor which is to be set. The options are —

- PIN
- Cards
- FP Template
- Palm Template
- User Photo
- Face Template

Depending on the credential configure the values of the same.

*If **Dynamic PIN On Pass Creation** in Admin> System Configuration> Global Policy> Visitor Management is enabled, then PIN will not be configurable. You will be able to view PIN here only during the visit time i.e. when the visitor with the configured Visitor Profile checks-in.*

*If **Access via QR** in Admin> System Configuration> Global Policy> Visitor Management is enabled, then Card 2 will not be configurable.*

Set & Sync Credentials

## Multiple Visitors

**Credential** - Select the credential to be set for multiple visitors. The credential options are —

- FP Template
- Palm Template
- User Photo
- Face Template

**Select Visitor**- You can select the individual visitors by selecting **Visitor Wise** option or all the visitors by selecting option **All**. For **Visitor Wise** option select the individual visitors from the picklist.

The screenshot shows the 'Set And Sync Credentials' window. On the left, there is a sidebar with 'Single Visitor' and 'Multiple Visitors' (selected). The main area has a 'Credential' dropdown set to 'Palm Template'. Below it, 'Select Visitor' is set to 'Visitor Wise'. A 'Visitor' section contains a search bar and a table with two rows: 'V1' with name 'Nanmy' and 'V3' with name 'Pershv'. At the bottom, 'Sync To' is set to 'All Allotted PVR Devices' and a 'Set & Sync Credentials' button is visible.

The screenshot shows the 'Set And Sync Credentials' window. On the left, there is a sidebar with 'Single Visitor' and 'Multiple Visitors' (selected). The main area has a 'Credential' dropdown set to 'Palm Template'. Below it, 'Select Visitor' is set to 'All'. At the bottom, 'Sync To' is set to 'All Allotted PVR Devices' and a 'Set & Sync Credentials' button is visible.

**Sync To** - Select the Devices where the selected credentials are to be set for the multiple visitor. The options for Sync will depend on the credential selected.

- **All Allotted Devices** - This option appears for FP Template only. Select this to set credentials on all allotted devices.
- **All Allotted PVR Devices** - This option appears for Palm Template only. Select this to set credentials on all allotted PVR devices.
- **All Allotted NGT & Vega Controllers** - This option appears for Visitor Photo only. Select this to set credentials on all allotted NGT and Vega controllers.
- **All Allotted MODE, Vega and FMX Devices**- This option appears for Face Template only. Select this to set face credential on all MODE, Vega and FMX devices.

Click the **Set & Sync Credentials** button to set the multiple visitors credential on the selected devices.

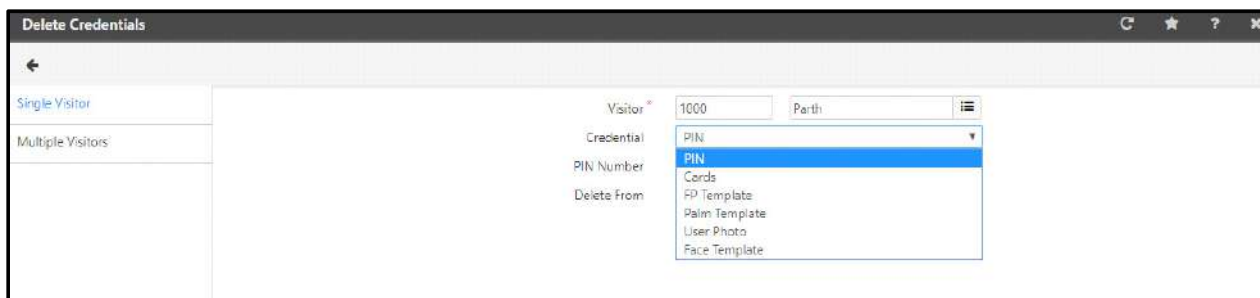

# Delete Credentials

The **Delete Credential** option provides a simple method of Deleting visitor credentials from devices.

To access this functionality, Select the **Visitor Management module > Utilities > Delete Credentials**.

The **Delete Credentials** page appears as shown below.

Some parameter will change according to the selected option in “**Credential**”.

*If you select “**Palm Template**” from the Credential list then a parameter “**Number Of Palm Template**” will be added below. Thus, same will happen with other options.*

## Single Visitor

**Visitor** - Select a visitor from the visitor pick-list whose credentials are to be deleted from the device.

**Credential** - Select the specific credential of the visitor which is to be deleted The options are —

- PIN
- Cards
- FP Template
- Palm Template
- User Photo
- Face Template

Depending on the credential selected, the available PIN number/Card number (CSN)/ FP template number/ Palm template/ Face Template number will be displayed.

**Delete From** - Select the Devices from where the selected credentials are to be deleted for the multiple visitor. The options for Delete will depend on the credential selected.

- **All Allotted Devices** - This option appears for FP Template only. Select this to delete credentials on all allotted devices.
- **All Allotted PVR Devices** - This option appears for Palm Template only. Select this to delete credentials on all allotted PVR devices.
- **All Allotted NGT & Vega Controllers** - This option appears for Visitor Photo only. Select this to delete credentials on all allotted NGT and Vega controllers.

Click the **Delete** button to delete the multiple visitors credential on the selected devices.

# Sync From Device

This feature enables the COSEC system to synchronize visitor credentials between the COSEC database and the devices as well as to other compatible devices. This is useful in case of discrepancies or loss of credential data which might occur in case of system errors or data handling issues.

This functionality enables:

- the system to sync the selected credential from the selected Device
- these credentials fetched from the selected devices will also be synchronized with other compatible devices connected with the server.

**Sync From Device** is applicable for devices with FR Mode as **Local**.

For Panel200, **Sync From Device** is applicable for Face Sync in Panel Door mode as **Via Panel**.

To ensure smooth functioning of this feature, make sure the Server and the devices are upgraded to the same and latest version. Face Images as Credential is supported from Software Version V20R06 and later.

Make sure the **Enable Face Recognition** check box is selected for the visitor whose Face Images are to be synced.

- Click **Visitor Management module > Utilities > Sync From Device**.

The screenshot shows the 'Sync From Device' interface with the 'Single Visitor' tab selected. The interface has a left sidebar with 'Single Visitor' and 'Multiple Visitors' tabs. The main area contains a 'Sync From Device' section with the following fields: 'Device' (with sub-fields 'ID' and 'Name'), 'Credential' (a dropdown menu showing 'Cards'), and 'Visitor' (with sub-fields 'ID' and 'Name'). A 'Sync' button is located at the bottom right of the main area.

The Sync From Device page consists of two tabs — “Single Visitor” and “Multiple Visitors”.

## Single Visitor

This tab enables you to sync the credentials of a single visitor from the device.

This screenshot shows the 'Sync From Device' interface with the 'Single Visitor' tab selected. The 'Device' field is pre-filled with '3' and 'ARGO Direct Door'. The 'Credential' dropdown is set to 'Cards'. The 'Visitor' field is pre-filled with '101' and 'Visitor 1'. The 'Sync' button is visible at the bottom right.

Configure the following parameters:

- **Device:** Click the **Device** picklist. The **Picklist For Panel Doors and Direct Doors** appears.

MID	Name	Type	Status
1	PVR Device_Direct Door	PVR Door	Enable
1	PVR Panel Door	Panel200 Door	Enable
1	ARGO Panel Door	Panel200 Door	Enable
2	ARGO FACE_Direct Door	ARGO FACE	Enable
3	ARGO Direct Door	ARGO	Enable
4	VEGA Direct Door	Vega Controller	Enable

- Select the desired device.
- **Credential:** Select the relevant visitor credential from the drop-down list according to the selected device. The following credentials are supported:
  - Cards
  - FP Templates
  - Palm Templates
  - Face Images

## Sync From Device

- **Visitor:** Click the **Visitor** picklist. The **Picklist For Visitors** pop-up appears.

Visitor ID	Name	ShortName
101	Visitor 1	Visitor 1
102	Visitor 2	Visitor 2
103	Visitor 3	Visitor 3

- Select the desired visitor whose credentials are to be synchronized.
- Click **Sync**. The credentials of the selected visitor will sync to the COSEC database from the selected device and then the same credentials will be synchronized to the other compatible devices.

## Multiple Visitors

This tab enables you to sync the credentials of multiple visitors from the device.

The screenshot shows the 'Sync From Device' window. On the left, there's a sidebar with 'Single Visitor' and 'Multiple Visitors' (highlighted in blue). The main content area has a 'Sync From Device' section. It includes a 'Device' field with a value of '3' and a picklist showing 'ARGO Direct Door'. Below it is a 'Credential' dropdown menu set to 'Cards'. Further down, there's a 'Select Visitor' dropdown set to 'Visitor Wise' and a 'Visitor' section with 'ID' and 'Name' input fields. A 'Sync' button is located at the bottom right of the main area.

Configure the following parameters:

- **Device:** Click the **Device** picklist. The **Picklist For Panel Doors and Direct Doors** appears.

The screenshot shows the 'Picklist For Panel Doors and Direct Doors' dialog. It has a search bar at the top. Below it is a table with the following data:

MID	Name	Type	Status
1	PVR Device_Direct Door	PVR Door	Enable
1	PVR Panel Door	Panel200 Door	Enable
1	ARGO Panel Door	Panel200 Door	Enable
2	ARGO FACE_Direct Door	ARGO FACE	Enable
3	ARGO Direct Door	ARGO	Enable
4	VEGA Direct Door	Vega Controller	Enable

A 'Cancel' button is located at the bottom center of the dialog.

- Select the desired device.
- **Credential:** Select the relevant visitor credential from the drop-down list according to the selected device. The following credentials are supported:
  - Cards
  - FP Templates
  - Palm Templates

- Face Images

## Sync From Device

- **Select Visitor:** Select the desired option — **Visitor Wise** or **All**.
- If you select **Visitor Wise**, click the **Visitor** picklist. The **Picklist for Visitors** pop-up appears.

Picklist For Visitors

Total Selected: 0 Records

Search  [Show Selected](#)

<input type="checkbox"/>	Visitor ID ▲	Name	ShortName
<input type="checkbox"/>	101	Visitor 1	Visitor 1
<input type="checkbox"/>	102	Visitor 2	Visitor 2
<input type="checkbox"/>	103	Visitor 3	Visitor 3

OK Cancel

- Select the check boxes of the desired Visitors. Click **OK**.
- The selected Visitors appear in the grid.

Search

Visitor ID ▲	Name	
101	Visitor 1	

Sync

- You can also delete the desired Visitors. To do so, click **Delete** of the respective Visitor.
- If you select **All**, then all the visitors will be selected.
- Click **Sync**. The credentials of the selected visitors will sync to the COSEC database from the selected device and then the same credentials will be synchronized to the other compatible devices.

# Visitor Events

---

The **Visitor Events** page enables the Admin to view the information regarding the events of the Visitors and track their real time location.

Admin can view visitor's events that is check-in/check-out, auto punch, device punch events etc.

The possible sources from which visitor events can be marked are — Station (VMS Web Portal / VMS Utility), VMS Application, Email and Device.

## Types of Visitor Events

### Check-In/ Check-Out Events

- The visitor check-in and check-out events can be marked via — Station (VMS Web Portal/VMS Utility), Application, Email and Device.
- The visitor check-out event can be marked by the System as well when the visitor surrenders the visitor-pass.

### Auto Punch Events

- When a visitor checks-in for a visit, a Visitor Profile ID is assigned to the visitor for that visit duration. To know more about the Visitor Profile, refer "[Visitor Profile](#)".
- Any events that are received during the visit duration against the Visitor Profile ID, such events will be stored by the system and will be displayed here. Once, the visitor checks-out, only check-in/check-out events will be stored against that Visitor Profile ID.

### Offline Punch Events (Application/ Device)

- Offline punches are those punches that are stored locally by the application/device, when the connectivity to the server is lost.
- When the application/device regains the connectivity to the server, offline punches will be sent to the server.
- When the server receives any offline punches, then the sever will first check the visit-state corresponding to the Visitor Profile.

There can be two possible visit-states:

1. Visit-state= check-in
2. Visit-state= check-out

#### **Case 1:** Visit-state= check-in

In this case, server will accept all offline punches that are sent by the application/device.

#### **Case 2:** Visit-state= check-out

In this case, server will check the time of each offline punch. If the offline punch time is before the check-out punch time, then the server will accept the offline punch.

If the offline punch time is after the check-out punch time, server will discard that punch.

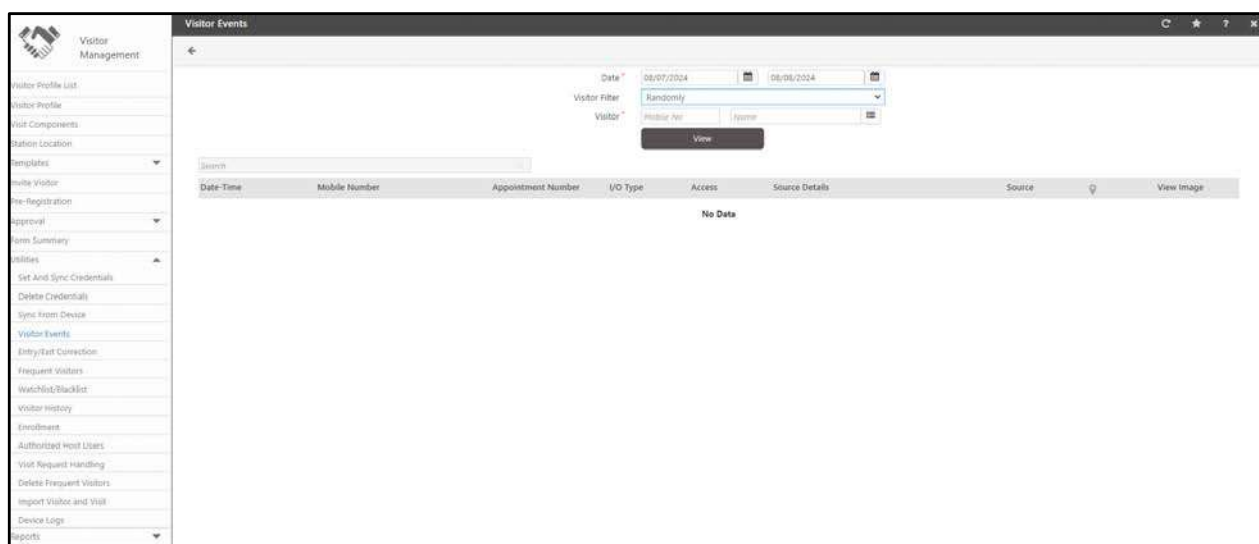

Hence, offline punches that are obtained before the check-out time will only be accepted by the server.

## Device Punch Events

- Visitor punches via Device are stored against the Visitor Profile ID assigned to that Visitor.
- A Visitor Profile can be assigned to multiple Visitors with different Appointment Numbers and when different visitors punch via device, the events generated for these punches will be stored against the Visitor Profile along with the Appointment Numbers.

So when the Admin checks these events, s/he can view which punches were marked by which Visitors on the basis of Appointment Number.

To access this functionality, select the **Visitor Management module > Utilities > Visitor Events** and the page appears as shown below.

Configure the following parameters to view events:

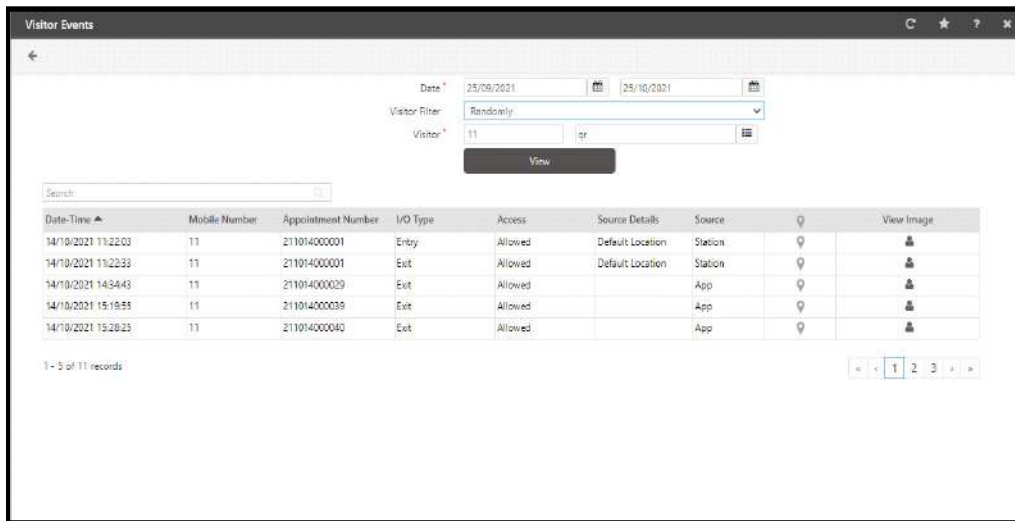

**Date:** Select the desired date range for which the events are to be viewed.

**Visitor Filter:** Select the desired filter from the drop down list.

- **All:** To view events of all the visitors.
- **Randomly:** To view events of the selected visitor. Select the desired **Visitor** from the pick list.

**Visitor:** Enter the **Mobile No.** of the visitor whose events are to be viewed. You can even select the desired visitor from the picklist.

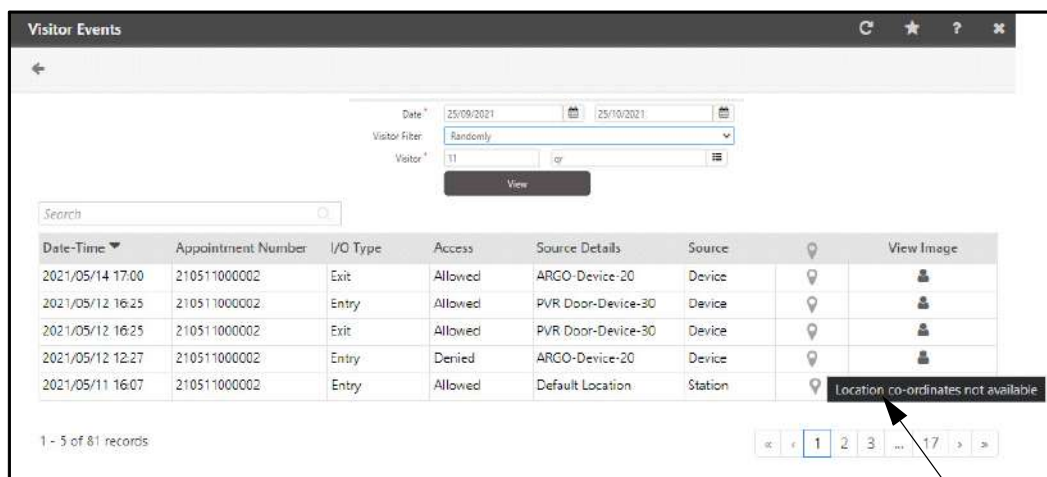

Click **View** and the visitor events will be displayed as shown below:

Visitor Events Details like — Date-Time, Appointment Number, I/O Type, Access, Source Details, Source, Location, View Image — are displayed.

When any event is marked through VMS Application, you will be able to view the Visitor's Location. To view the location details, click on **Location** 📍 icon.

**Case 1:** In case, the Location details are unavailable, on hovering your mouse over **Location** 📍 icon, a message will be displayed saying 'Location Co-ordinates not available' as shown below:

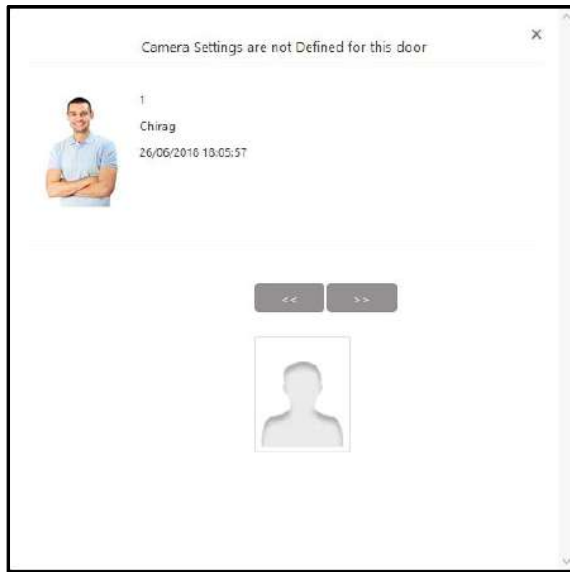

**Case 2:** If you have an Internet access and the Location details are available, click on **Location** 📍 icon and you will be directed to the Google Maps page.

**Case 3:** If you do not have an Internet access but the Location details are available, click on **Location** 📍 icon and a pop-up appears displaying the details of Location in terms of Latitude and Longitude.

*If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.*

Click on **View Image**  to view the captured image of the visitor as shown below. If no image is captured, then this icon will be inactive.

## Entry/Exit Correction

This option enables the application user to manually edit the entry and exit time of the Visitor. In case where the system is unable to recognize the credential of visitor or if the visitor pass is paper pass then the entry or exit of the visitor can be recorded manually.

To do the Entry/ Exit Correction, select **Visitor Management module > Utilities > Entry/ Exit Correction**. The Page appears as shown below:

The screenshot shows the 'Entry/Exit Correction' window. It features a search bar at the top right. Below it, there are input fields for 'Pass Issue Date' and 'Pass Number'. A 'Search' button is located below these fields. A table with columns 'Visit Date', 'Punch Time - In', 'Punch Time - Out', and 'Duration' is displayed, showing 'No Data'. On the right side, there is a list of visitors with columns 'Pass Issue Date', 'Pass Number', and 'Name'.

Pass Issue Date	Pass Number	Name
04/12/2017	170412000003	Dinesh
04/12/2017	170412000002	Jinu Sam
04/12/2017	170412000001	Jinu Sam

The grid on the right displays the Visitors with Pass issue date and Pass number.

Select a visitor from the grid whose Entry/Exit correction is to be done. The visitor Pass and In/Out details will be generated in the respective fields.

The screenshot shows the 'Entry/Exit Correction' window with a visitor selected. The 'Pass Issue Date' field is now populated with '04/12/2017' and the 'Pass Number' field is populated with '170412000003'. The 'Visit Date' field is also populated with '04/12/2017' and the 'Punch Time - In' field is populated with '16:38'. The 'Punch Time - Out' and 'Duration' fields are empty. The visitor list on the right is still visible, with the first entry highlighted.

Visit Date	Punch Time - In	Punch Time - Out	Duration
04/12/2017	16:38		

To do the correction, Click the Edit button in the grid. Enter or edit the **IN-OUT Punch** fields with Entry and Exit time falling within the Visit Hours as shown in Visitor History section.

Then click OK to save the changes. The Duration will be automatically calculated based on entry-exit timings.

# Frequent Visitors

This option displays the list of Frequent Visitors who visits frequently to the company. It enables to add the frequent visitor either to watchlist or blacklist.

The watchlist visitor can be monitored and a blacklist visitor can be restricted for any further visit.

To add or view the frequent visitors, click on **Visitor Management module > Utilities > Frequent Visitors**. The Page appears as shown below:

Visitor Name	Mobile Number
Visitor 1	9869852142
Visitor 2	9871234856
VISITOR 2	123

Click on the **New** button to add a new frequent visitor.

Enter the basic details like **Name, Organization, Mobile number, Last Visit Details** and the required **Additional Details**.

## Additional Details

1. Enrolled fingers is the read only field.
2. The ID Proof 1, ID Proof 2 and Custom fields will appear as entered in Global Policy> Visitor Management.

Under **Additional Details**, you can upload the documents in Custom Fields, by clicking **Upload**  button. Then **Change Document** pop-up appears as shown below.

**Browse File**

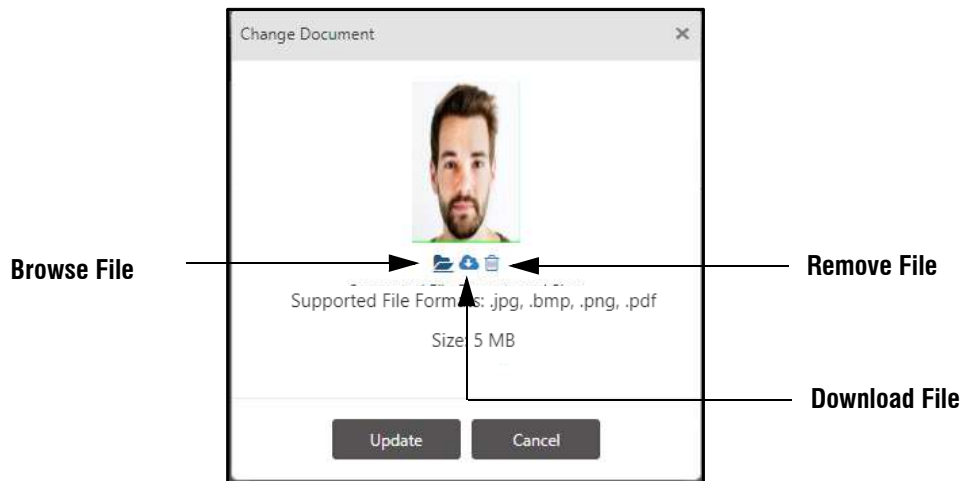

Click **Browse File**  .

To upload, select the desired file as per the supported formats and size (.jpg, .bmp, .png, .pdf) from your local PC.

After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File**  .

To remove the uploaded file, click **Remove File**  .

Then click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

Click **Save** to save the frequent visitor. The grid on the right displays the Visitors with their mobile numbers.

### Frequent Visitor Photo

You can also upload the Visitor photo in Edit mode. Click on the Photo icon, browse the image and click the Update button. Then click Save button to save the visitor photo.

The Last Visit details of the frequent visitor will be displayed here as per the details specified in the VMS Utility.

Visitor 2	9875648724

Now click **Add to Blacklist** button. The selected Visitor will be removed from the Frequent Visitors list and will be added to the Blacklist. For details refer [“Watchlist/Blacklist”](#).

The screenshot shows the 'Watchlist/Blacklist' interface. On the left, there's a form for 'Visitor 2' with fields for Name, Organization (Siemens), and Mobile Number (9875648724). Below this is the 'Last Visit Details' section with fields for Visit Period, Visit Hours, Host User, Escort User, Additional Visitors, Visit Station, Visit Location, Purpose, and Black Listed On. On the right, there's a table with counts for Total (1), Watchlist (0), and Blacklist (1). Below the table is a list of visitors, with 'Visitor 2' highlighted and an arrow pointing to it.

Visitor Name	Mobile Number
Visitor 2	9875648724

The frequent visitor can be moved to Blacklist from VMS Utility also.

In order to receive an alert when a frequent visitor is added to Watchlist/Blacklist make sure you have configured the alert in Admin> System Configuration> Alert Message Configuration. Set the Alert Filter as Visitor Management and Event as Visitor Added - Watchlist/Blacklist. For details refer to [“Configuring Alert Messages”](#).

## Credentials

Configure the following parameters:

The screenshot shows the 'Credentials' configuration window. It has a list of fields for different types of credentials: Enrolled Fingers (Suprema Proprietary), Enrolled Fingers (Suprema ISO), Enrolled Fingers (Lumidigm ISO), Enrolled Fingers (Lumidigm Proprietary), Enrolled Palms, and Enrolled Faces. Each field has a corresponding input box.

**Enrolled Fingers:** It displays the number of fingerprint templates enrolled against the selected visitor. Types of fingerprint templates are — Suprema Proprietary, Suprema ISO, Lumidigm ISO, Lumidigm Proprietary.

**Enrolled Palms:** It displays the number of palm vein templates enrolled against the selected visitor.

**Enrolled Faces:** It displays the number of face templates enrolled against the selected visitor.

# Watchlist/Blacklist

This page displays the list of visitors under watchlist and blacklist. It enables to monitor the visitors creating problems and to restrict their entry into the organisation.

The SA can:

- view the details of the Watchlist/Blacklist visitor.
- edit the details of the Watchlist/Blacklist visitor.
- restore the visitor to frequent visitor from Watchlist/Blacklist.

Select **Visitor Management module > Utilities > Watchlist/Blacklist**. The page appears as shown below:

The screenshot shows the 'Watchlist/Blacklist' page. On the left, there is a form for adding or editing a visitor. The form includes fields for Name, Organization, Mobile Number, Visit Period, Visit Hours, Host User, Escort User, Additional Visitors, Visit Station, Visit Location, Purpose, and Watch Listed On. A 'Restore Visitor' button is at the bottom. On the right, there is a summary table with columns for Total, Watchlist, and Blacklist. Below the table is a list of visitors with their names and mobile numbers.

Total	Watchlist	Blacklist
4	2	2

Visitor Name	Mobile Number
Visitor 1	9869852142
Visitor 2	9871234856
VISITOR 2	123
Visitor 2	9875648724

The screenshot shows the 'Additional Details' section of the form. It includes fields for Address, City, State, Country, PIN/ZIP Code, Email ID, Gender, Date of Birth, Nationality, Enrolled Fingers, ID Proof 1, ID Proof 2, and Custom Fields 1 through 5. A bracket labeled 'Custom Fields' groups the Custom Fields 1 through 5.

**Custom Fields**

- Custom Field 1
- Custom Field 2
- Custom Field 3
- Custom Field 4
- Custom Field 5

The grid in the right pane displays — **Total** visitors, **Watchlist** visitors and **Blacklist** visitors.

Total	Watchlist	Blacklist
4	2	2

Visitor Name ▲	Mobile Number
Visitor 1	9869852142
Visitor 2	9871234856

Custom Fields

The other details like **Vehicle Details**, **Material List**, **Scanned Documents** and **Visitor Events** are displayed in the fields as configured from the VMS Utility.

The screenshot shows a web-based form titled "Vehicle Details". It contains three input fields: "Vehicle Type" with a dropdown menu showing "2-Wheeler", "Vehicle Number" with the text "GJ067890", and "Description" which is empty. Below these fields are three expandable sections: "Material List", "Scanned Documents", and "Visitor Events", each with a downward-pointing arrow.

**Vehicle Details** display the information of the visitor's vehicle.

**Material List** describes the material carried by the visitor.

**Scanned Document** gives the list of visitor's document scanned during pass creation.

**Visitor Events** display the events that are recorded from the pass issue date-time to the surrender date-time.

# Enrollment

To enroll a visitor on the desired device, select the **Visitor Management module > Utilities > Enrollment**.

The **Enrollment** page appears as shown below:

The screenshot shows the 'Enrollment' page with a header bar containing a back arrow, the title 'Enrollment', and icons for refresh, star, and help. Below the header, there are two sections: 'Door' and 'Visitor'. Each section has a red asterisk next to its label and input fields for 'ID' and 'Name'. The 'Device Readers' section is expanded, showing a list of readers. Below this, the 'Visitor Enrollment Status' section is expanded, showing a list of status options. At the bottom, there is an 'Enroll' button.

Door	ID	Name

Select	One	One	Two	Access Card 1	1

Enroll

- **Door:** Select the desired door from the picklist on which the enrollment is to be done.

## Device Readers

Device Readers displays the information of the readers configured in the selected **Door**.

The screenshot shows the 'Device Readers' section with a header bar containing a back arrow, the title 'Device Readers', and icons for refresh, star, and help. Below the header, there are two sections: 'Door' and 'Visitor'. Each section has a red asterisk next to its label and input fields for 'ID' and 'Name'. The 'Device Readers' section is expanded, showing a list of readers. Below this, the 'Visitor Enrollment Status' section is expanded, showing a list of status options. At the bottom, there is an 'Enroll' button.

Door	ID	Name
3		ARGO

Device Readers

Card Reader	Biometric Reader	External Reader
MiFare Reader	None	MiFare-U Reader

Card Reader, Biometric Reader and External Reader information are displayed here.

- **Visitor:** Select the desired visitor from the picklist for whom the enrollment is to be done.

Visitor Enrollment Status	
Enrolled Fingers (Suprema Proprietary)	0
Enrolled Fingers (Suprema ISO)	0
Enrolled Fingers (Lumidigm ISO)	0
Enrolled Fingers (Lumidigm Proprietary)	0
Enrolled Palms	0
Enrolled Card 1	
Enrolled Card 2	
Enrolled Faces	0

### Visitor Enrollment Status

Visitor Enrollment Status displays the information related to the number of already enrolled credentials of the visitor like fingers, palms, cards and faces.

Details like — **Enrolled Fingers (Suprema Proprietary)**, **Enrolled Fingers (Suprema ISO)**, **Enrolled Fingers (Lumidigm ISO)**, **Enrolled Fingers (Lumidigm Proprietary)**, **Enrolled Palms**, **Enrolled Card 1**, **Enrolled Card 2** and **Enrolled Faces** — are displayed here.

- **Enrollment Type:** Select the desired enrollment type — Read Only Card, Smart Card, Face, Biometrics, BiometricsThenCard and Mobile — from the drop down list.

Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

*Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.*

#### 1. Enrollment Type = Read Only Card

**Number of Cards:** Select the desired number of cards from the drop-down list.

Enrollment Type	Read Only Card ▼
Number of Cards	One ▼

#### 2. Enrollment Type = Smart Card

**Number of Cards:** Select the desired number of cards from the drop-down list.

### **Details on Smart Card**

Select the desired check boxes of the parameters — **Visitor ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If **Door** is selected as PVR Door, then **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store the palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### **Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the **Short Name** check box to display it on the Smart Card.

### **3. Enrollment Type = Face**

**Number of Faces:** Select the desired number of face from the dropdown list.

### **4. Enrollment Type = Biometrics**

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

Enrollment Type: Biometrics  
Number of Fingers: One

Enrollment Type: Biometrics  
Number of Palms: One

##### 5. Enrollment Type = BiometricsThenCard

**Number of Cards:** Select the desired number of cards from the drop down list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

Enrollment Type: BiometricsThenCard  
Number of Cards: One  
Number of Fingers: One

**Details on Smart Card**

Visitor ID: ☐  
Facility Code (FC): ☐  
Additional Security Code (ASC): ☐  
Finger Templates: None

**Additional Details On Smart Card**

Short Name: ☐ Visitor11

Enroll

##### **Details on Smart Card**

Select the desired check boxes of the parameters — **Visitor ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

##### **Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the **Short Name** check box to display it on the Smart Card.

## 6. Enrollment Type = Mobile

To select **Enrollment Type** as *Mobile*, the particular device must have BLE support and ensure Bluetooth is ON in the mobile.

**Access Card Selection:** Select the desired Access Card from the drop down list.

Enrollment Type	Mobile
Access Card Selection	Access Card 1
Facility Code (FC)	<input type="checkbox"/>

**Facility Code (FC):** Select this check box to enroll the Facility Code (FC) against the visitor.

After the enrollment process, the visitor must tap on **Tap to Register > Matrix Device** from the ACS Application installed on respective mobile phone and select the same configured Door from **Available Doors**. Thereafter, that visitor can access the device through ACS application for Access Control purpose.

The value in Access Card selected will be consider as Access ID of the visitor. If Access Card selected has no value i.e blank, then after the enrollment process, the system will auto-generate 18 digits number as visitor Access ID and store the same value.

Click **Enroll** to initiate the enrollment process and the enrollment command is sent to the Door.

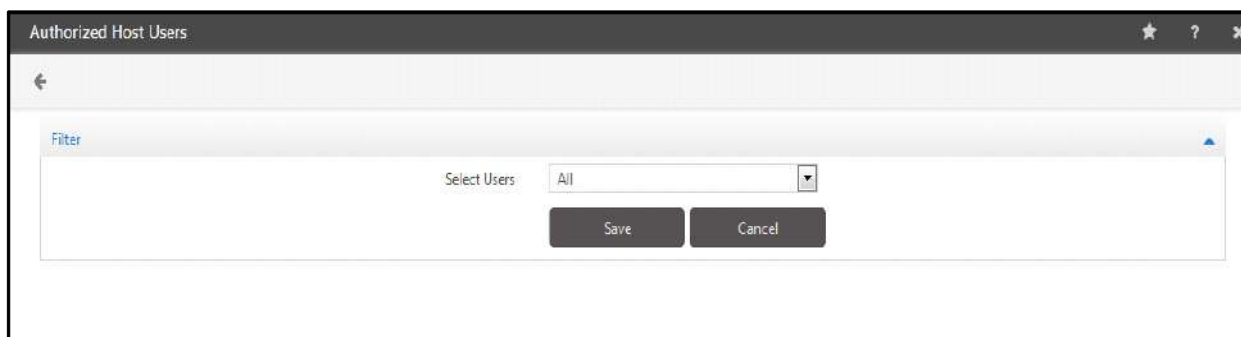

For Panel Door the command is sent to the Panel200 which will communicate further to the Door.

Once all the required credentials of an visitor are enrolled, the number of credentials enrolled will be displayed in the *Visitor Management > Visitor Profile (Select the particular Visitor Profile) > Credentials*.

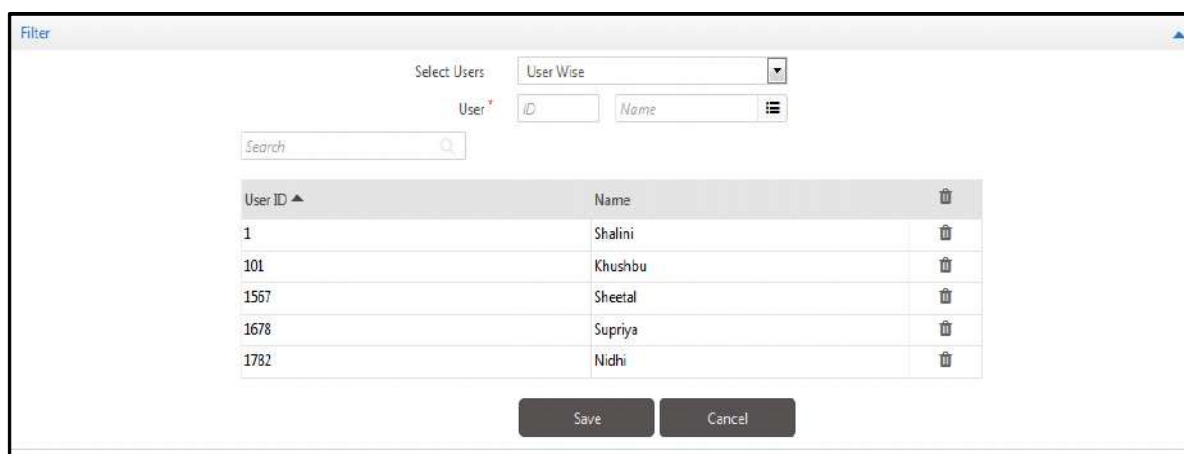

# Authorized Host Users

The selected few users are required to be authorized host users.

Select **Visitor Management module> Utilities> Authorized Host Users**. The Authorized Host Users page appears as shown below:

**Select Users** based on the options — User Wise, Group Wise or All.

User ID	Name
1	Shalini
101	Khushbu
1567	Sheetal
1678	Supriya
1782	Nidhi

The **"Pre-Registration"** of visitors can be done only by authorized host users from ESS account.

A host can also be authorized from the following paths:

- Users> User Configuration> Visitor Management.
- Users> Multi-User Option> User Configuration
- Contract Worker Management> Worker> Worker Profile

Click **Save** to save the selected users. These authorized host users will be available in host user picklist when system account user pre-registers a visitor.

# Visit Request Handling

The Visit Request handling page enables to configure any host user's (based on user rights) visit handling settings such as Auto Transfer & Auto Approval/Rejection of visits.

Select **Visitor Management module> Utilities> Visit Request Handling**. The page appears as shown below:

The screenshot shows the 'Visit Request Handling' interface. At the top, there's a 'Host User' section with a dropdown menu showing '1' and a text field with 'Khushbu'. Below this is the 'Auto Transfer Setting' section, which includes a checkbox for 'Enable Auto Transfer Visit' (checked) and a 'Transfer to User' section with a dropdown menu showing '2' and a text field with 'Chirag'. At the bottom is the 'Auto Approval / Rejection Setting' section, which is currently collapsed.

**Host User:** Select the host user for whom the visit request is to be handled.

## Auto Transfer Setting

**Enable Auto Transfer Visit:** Enable this check-box to automatically transfer the visit to another user.

**Transfer to User:** Select the user from the picklist to whom the visit is to be transferred. The picklist contains all active authorized host users.

## Auto Approval/Rejection Setting

The screenshot shows the 'Visit Request Handling' interface with the 'Auto Approval / Rejection Setting' section expanded. It includes a checkbox for 'Enable Visit Auto Approval/Rejection' (checked). Below this is the 'Working Days' section with checkboxes for Mon, Tue, Wed, Thu, Fri, Sat, and Sun. The 'Working Time' section has two time pickers: '11:00' and '17:00'. The 'Break Time' section has two time pickers: '13:00' and '14:00'. The 'Allowed Overlapping Duration (Mins)' section has a picker with '30'. At the bottom is the 'Unavailability Days' section, which includes a search bar and a table with columns 'Sr. No.', 'Date', and 'Reason'. The table is currently empty, showing 'No Data'.

**Enable Visit Auto Approval/Rejection:** Enable this check-box to automatically approve/reject the visit application.

**Working Days:** Select the days when the automatic visit approval/rejection is to be allowed.

**Working Time:** Enter the From time and To time in 24 hours format during which the visit can be auto approved.

**Break Time:** Enter the Start time and End time of Break duration during which the visit will be auto rejected.

**Allowed Overlapping Duration (Mins):** Enter the duration in minutes. This duration must be overlapping within working time for the visit to auto approve. The valid range is 0 to 999 mins.

### Unavailability Days

This section enables to configure days on which host user is not available i.e. the visit to host user can not be scheduled on the specified days.

Click on **Add** button.

Select the **Date** from the calendar. Enter the **reason** for unavailability. Then click **OK** and **Save** to save the days.

The screenshot shows a window titled "Unavailability Days". It features a search bar at the top right with a "+" icon. Below is a table with columns: "Sr. No.", "Date", "Reason", and action icons. The table contains two entries: one for "25/10/2018" with reason "Meeting with Client" and another for "16/10/2018" with reason "Official Tour".

Sr. No.	Date	Reason	
	25/10/2018	Meeting with Client	✓ ✕
1	16/10/2018	Official Tour	✎ ✕

The screenshot shows a "Visit Request Handling" window with a green status bar indicating "Saved Successfully". It includes fields for "Host User" (1) and "Khushbu". Below are sections for "Auto Transfer Setting" and "Auto Approval / Rejection Setting". The latter includes checkboxes for "Enable Visit Auto Approval/Rejection", "Working Days" (Mon-Fri), "Working Time" (11:00-17:00), "Break Time" (13:00-14:00), and "Allowed Overlapping Duration (Mins)" (30). At the bottom is the "Unavailability Days" table, which lists the same two entries as the previous screenshot.

Host User: 1 Khushbu

# Delete Frequent Visitors

The Delete Frequent Visitors page enables to delete the frequent visitors as available in Visitor Utility.

Select **Visitor Management module> Utilities> Delete Frequent Visitors**. The page appears as shown below:

VisitorID	Visitor Name	Organization	Mobile No.	Visit Date Time
1	Pratibha Singh	Xylem	9824256789	

The frequent visitor's "Visit DateTime" will appear in the grid when pass is created for that frequent visitor.

## Authorize Process

**Username/Password:** Enter the username and password of System Account user to authorize the deletion process. For example: "sa" and "admin".

## Select Visitor

Select the frequent visitor to be deleted by checking the respective box. Then click on **Delete** button.

VisitorID	Visitor Name	Organization	Mobile No.	Visit Date Time
1	Pratibha Singh	Xylem	9824256789	

Click **OK** on Process Confirmation window. The selected visitor will be deleted from the COSEC system.

# Import Visitor and Visit

The COSEC application has an inbuilt utility for enabling users to import visitor and visit data from excel files with predefined format. This would thus save the end user a lot of time and effort in having to make individual visitor entries at the application level.

Make sure you have **View** and **Edit** rights for the **Import Visitor and Visit** page to import the visitors and visits.

The parameters will be mandatory in the Import sheet if set as mandatory in the [“Pre-Registration Template”](#).

To import Visitors and Visits,

Click **Visitor Management > Utilities > Import Visitor and Visit**.

Configure the following parameters:

- **Import Data For:** To download sample import file, click **Download Sample Import file** . The downloaded import sheet displays the details required for importing data. Enter the details to be imported in the **Visitor and Visit** sheet in this sample file and save the file at the desired location.
- **Import Data Of:** Select the desired option from the drop-down list options — Visitor Only, Visit Only, Both — for which you wish to import data.
- **File Format:** Select the desired option from the drop-down list options — XLS or CSV.
- **Import File:** Browse the saved file path from where you wish to import the file. Click **Choose File**. It displays all folders which are in the drive. Select the desired file from the folder.
- Click **Upload** to upload the data. The file will be saved and you can preview the data.

- Click **Preview Data** to preview the data before importing. The data in the uploaded file is displayed as follows.

Import Data For: Visitor and Visit

Import Data Of: Both

File Format: XLS

Import File: Choose File ImportData (1).xls

Preview Data Import Data

MobileNo	VisitorName	Organization	Address	City	State	Country	PINCode	EmailID	Gender	DOB	Designation	Nationality	IDProof1	IDProof2	VisitorCustomField1	VisitorCustomField2	VisitorCustomField3	VisitorCustomField4	VisitorCustomField5	VisitorProfileID
9452326134	Visitor 01	ABB																		
9856412354	Visitor 02	Siemens																		
9857452142	Visitor 03	P&G																		
9652310145	Visitor 04	Amul																		
9752003650	Visitor 05	L&T																		

Administrator needs to ensure that the user has full rights on the folder containing the Excel or CSV file for the import data operation.

- Click **Import Data** to import the Visitors/Visits/Both. The result of import is shown as Success or Failure along with Result Description.

You can also filter the result records.

- Result:** Select the desired option from the drop-down list — Both, Success or Failure— to view the import result.

Import Data For: Visitor and Visit

Import Data Of: Both

File Format: XLS

Import File: Choose File ImportData (1).xls

Preview Data Import Data

9652310145	Visitor 04	Amul																		
9752003650	Visitor 05	L&T																		

# Device Logs

When you have enabled Auto-Device Assignment and the Device User Assignment limit is reached then the devices will not be assigned to the visitor. This list displays such devices with their details along with reason of failure.

To view the Device Logs, click **Visitor Management module > Utilities > Device Logs**.

Configure the following parameters:

- **Date:** Select the to and from date for which the log is to be generated
- **Select Device:** Select the desired option — **All** or **Device-wise**.
  - If you select **All**, the logs will generated for all the devices.

**OR**

- If you select **Device-wise**, click the **Device** picklist. The **Select Device** pop-up appears.

# Visitor Management Reports

---

COSEC Visitor Management module allows you to create and view an assortment of detailed and focused reports on the Visitor activities on your site. These reports can be viewed on the screen or printed at any time. Reports available within the COSEC Visitor management Module are as under:

“Visitor Access”

“Visitor Pass”

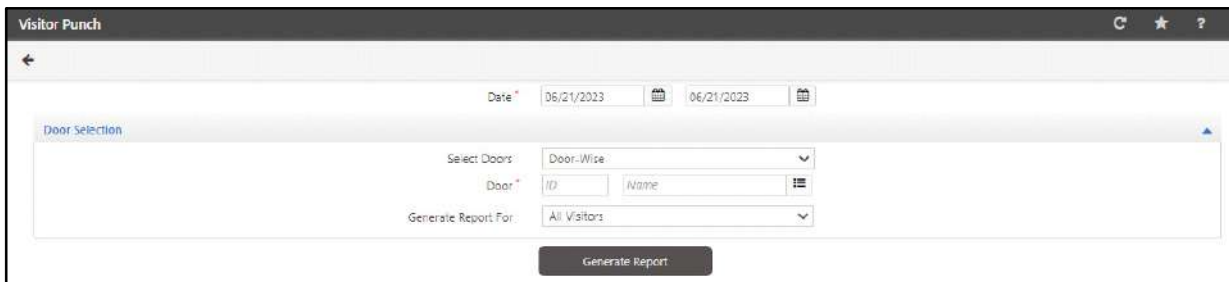

“Visitor Summary”

“Visitor Evacuation”

## Visitor Access

### Visitor Punch

Configure the following parameters:

The screenshot shows a web application window titled "Visitor Punch". At the top, there are navigation icons (back, forward, star, and help). Below the title bar, there is a "Date" section with two date pickers set to "06/21/2023". A "Door Selection" section is expanded, showing a "Select Doors" dropdown menu set to "Door-Wise". Below this, there are two input fields for "ID" and "Name", each with a search icon. At the bottom of the "Door Selection" section, there is a "Generate Report For:" dropdown menu set to "All Visitors". A "Generate Report" button is located at the bottom center of the form.

- **Date:** Select the to and from date for which the report is to be generated.

#### Door Selection

- Click the **Door selection** collapsible panel.
- **Select Doors:** Select the desired option — **All** or **Door-Wise**.
  - If you select **All**, a report of all the devices will be generated with the all the details regarding Visitor Punch.

- If you select **Door-Wise**, click the **Door** picklist. The **Picklist For Door** pop-up appears.

## Visitor Punch Detail

The report generated will display details of the visitors including Name, Entry Date and Time as well as the Host Name for the selected date range. The Exit Date and Time and Total Time of his/her presence in the premises will also be listed.

Configure the following parameter:

Visitor Punch Detail

Date: 15/03/2024 to 15/03/2024

Optional Parameters

Format Selection: Visitor Punch Detail 1

Select Station: All

Generate Report

## Optional Parameter

- **Format Selection:** Select the desired Format — Visitor Punch Detail 1 or Visitor Punch Detail 2 to generate the report. If you select Visitor Punch Detail 1, the report will be generated without Visitor photo and if you select Visitor Punch Detail 2, the report will be generated with Visitor photo.
- **Select Station:** Select the desired option — **All** or **Selected**.
  - If you select **All**, a report for all the stations will be generated. This report will include all the details regarding the Visitor Punch.

- If you select **Selected**, click the **Selected** picklist. The picklist for **Select Station** pop-up appears.

The 'Select Station' dialog box displays a table with 10 rows. The first row is 'RnD1' and the others are 'Station Location 2' through 'Station Location 10'. All checkboxes are unchecked. The status bar at the bottom indicates '1 - 10 of 13 records'.

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	RnD1
<input type="checkbox"/>	2	Station Location 2
<input type="checkbox"/>	3	Station Location 3
<input type="checkbox"/>	4	Station Location 4

## Visitor Punch Exception

Exceptions like absence of In time or Out time of Visitors are listed in the report.

Configure the following parameters:

Date: 06/21/2023 to 06/21/2023

Optional Parameters

Select Station: All

Generate Report

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

- **Select Station:** Select the desired option — **All** or **Selected**.
- If you select **All**, a report of all the exception punches on all the Stations will be generated.

- If you select **Selected**, click the **Selected** picklist. The **Select Station** pop-up appears.

The 'Select Station' pop-up window displays a green header bar with the text 'Total Selected: 0 Records'. Below this is a search bar with the placeholder text 'Search' and a magnifying glass icon, and a 'Show Selected' link. A 'Select All' checkbox is located below the search bar. The main area contains a table with the following columns: 'ID' (with an upward arrow icon) and 'Name'. The table lists 10 records, each with an unchecked checkbox in the first column. The records are:

ID	Name
1	RnD1
2	Station Location 2
3	Station Location 3
4	Station Location 4
5	Station Location 5
6	Station Location 6
7	Station Location 7
8	Station Location 8
9	Station Location 9
10	Station Location 10

At the bottom left, it says '1 - 10 of 13 records'. At the bottom right, there is a pagination control with buttons for 'Previous', 'First', '1', '2', 'Next', and 'Last'. The '1' button is highlighted. At the very bottom are 'OK' and 'Cancel' buttons.

- You can either select particular Station/s or can select all the Stations at once.
- To select particular Station/s, select the check boxes for the desired Stations.

The 'Select Station' pop-up window displays a green header bar with the text 'Total Selected: 2 Records'. Below this is a search bar with the placeholder text 'Search' and a magnifying glass icon, and a 'Show Selected' link. A 'Select All' checkbox is located below the search bar. The main area contains a table with the following columns: 'ID' (with an upward arrow icon) and 'Name'. The table lists 10 records, each with a checkbox in the first column. The first two checkboxes are checked, indicating that 'RnD1' and 'Station Location 2' are selected. The records are:

ID	Name
1	RnD1
2	Station Location 2
3	Station Location 3
4	Station Location 4
5	Station Location 5
6	Station Location 6
7	Station Location 7
8	Station Location 8
9	Station Location 9
10	Station Location 10

At the bottom left, it says '1 - 10 of 13 records'. At the bottom right, there is a pagination control with buttons for 'Previous', 'First', '1', '2', 'Next', and 'Last'. The '1' button is highlighted. At the very bottom are 'OK' and 'Cancel' buttons.

OR

- To select all the Stations at once, select the **Select All** check box. The Station on all the pages will be selected.

## Visitor Pass Status

Configure the following parameters:

The screenshot shows a web application window titled "Visitor Pass Status". It features a "Date" field set to "06/21/2023". Below this is a section labeled "Optional Parameters" containing a "Status" picklist with four checked options: "Issued", "Active", "Expired", and "Surrendered". There is also a "Select Station" dropdown menu currently set to "All". At the bottom of the window is a "Generate Report" button.

- **Date:** Select the date for which report is to be generated.

### Optional Parameters

- **Status:** You can select a particular check box or multiple check boxes — Issued, Active, Expired, Surrendered.
- **Select Station:** Select the desired option— **All** or **Selected**.
  - If you select **All**, the generated report lists out the details of all the Stations.
  - If you select **Selected**, click the **Selected** picklist. The **Select Station** pop-up appears.

The screenshot shows a "Select Station" pop-up window. At the top, it says "Total Selected: 0 Records". Below this is a search bar and a "Show Selected" button. There is a "Select All" checkbox. The main part of the window is a table with columns "ID" and "Name". The table contains 10 rows of data, with IDs 1 through 10 and names "RnD1" through "Station Location 10". At the bottom, it shows "1 - 10 of 13 records" and a pagination control with buttons for "1" and "2". There are "OK" and "Cancel" buttons at the very bottom.

ID	Name
1	RnD1
2	Station Location 2
3	Station Location 3
4	Station Location 4
5	Station Location 5
6	Station Location 6
7	Station Location 7
8	Station Location 8
9	Station Location 9
10	Station Location 10

- You can either select particular Station/s or can select all the Stations at once.

- To select particular Station/s, select the check boxes of the desired Stations.

The 'Select Station' dialog box displays a table with 10 rows. The first two rows are selected, indicated by blue checkmarks in the first column. The table has columns for 'ID' and 'Name'. Below the table, a status bar shows '1 - 10 of 13 records'. At the bottom, there are 'OK' and 'Cancel' buttons.

ID	Name
1	RnD1
2	Station Location 2
3	Station Location 3
4	Station Location 4
5	Station Location 5
6	Station Location 6
7	Station Location 7
8	Station Location 8
9	Station Location 9
10	Station Location 10

OR

- To select all the Stations at once, select the **Select All** check box. The Station on all the pages will be selected.

The 'Select Station' dialog box displays the same table as the previous screenshot, but now all 10 rows are selected, indicated by blue checkmarks in the first column. The 'Select All' checkbox at the top left is now checked. The status bar still shows '1 - 10 of 13 records'. At the bottom, there are 'OK' and 'Cancel' buttons.

ID	Name
1	RnD1
2	Station Location 2
3	Station Location 3
4	Station Location 4
5	Station Location 5
6	Station Location 6
7	Station Location 7
8	Station Location 8
9	Station Location 9
10	Station Location 10

- Click **OK**.

- The selected Stations appear in the grid.

Generate Report

- **Date:** Select the to and from date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired option — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group 1(Association Maps), Custom Group 2/3.
- **Group Needed in Report.:** Select the check box to enable, if required. Enabling this option will display the name for this particular group in the generated report.

Date: 14/03/2024 to 14/03/2024

Group By: Organization

Format Selection: Visitor History 1

Select Station: All

☒ Group Needed In Report

- **Format Selection:** Select the desired Format — Visitor History 1 or Visitor History 2 to generate the report. If you select Visitor History 1, the report will be generated without Visitor photo and if you select Visitor History 2, the report will be generated with Visitor photo.
- **Select Station:** Select the desired option— **All or Selected**.
  - If you select **All**, the generated report lists out all the details regarding the Visitor History for all the Stations.

- If you select **Selected**, click the **Selected** picklist. The **Select Station** pop-up appears.

The 'Select Station' pop-up window displays a green header bar with the text 'Total Selected: 0 Records'. Below this is a search bar with the placeholder text 'Search' and a magnifying glass icon, followed by a 'Show Selected' link. A checkbox labeled 'Select All' is positioned below the search bar. The main area contains a table with the following columns: a checkbox, 'ID' (with an upward arrow), and 'Name'. The table lists 10 records, with IDs 1 through 10 and names 'RnD1' and 'Station Location 2' through 'Station Location 10'. All checkboxes in the table are unchecked. At the bottom left, it says '1 - 10 of 13 records'. At the bottom right, there is a pagination control with buttons for first, previous, 1, 2, next, and last. The '1' button is highlighted. At the very bottom are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	RnD1
<input type="checkbox"/>	2	Station Location 2
<input type="checkbox"/>	3	Station Location 3
<input type="checkbox"/>	4	Station Location 4
<input type="checkbox"/>	5	Station Location 5
<input type="checkbox"/>	6	Station Location 6
<input type="checkbox"/>	7	Station Location 7
<input type="checkbox"/>	8	Station Location 8
<input type="checkbox"/>	9	Station Location 9
<input type="checkbox"/>	10	Station Location 10

- You can either select particular Station/s or can select all the Station at once.
- To select particular Station/s, select the desired check boxes.

This screenshot shows the 'Select Station' pop-up window with the same layout as the previous one, but with two records selected. The green header bar now displays 'Total Selected: 2 Records'. In the table, the checkboxes for ID 1 ('RnD1') and ID 2 ('Station Location 2') are checked. The pagination control at the bottom right remains the same, with '1' highlighted. The 'OK' and 'Cancel' buttons are at the bottom.

<input type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	RnD1

## Visitor Selection

- **Select Visitor:** Select the desired option— **Group Wise** or **All**.
- If you select **All**, the generated report list out all the details for all the Visitors.
- If you select **Group Wise** option, select the desired enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1(Association Maps) Custom Group /2/3

For each enterprise group — Organization, Branch, Department, Designation, Section, Category, Grade, Custom Group1/2/3, click the corresponding picklist to select the desired option/s.

The selected Groups appear in the grid.

The screenshot shows the 'Select Visitors' section with a dropdown menu set to 'Group Wise'. Below it, 'Select Group' is set to 'Organization'. There are input fields for 'Organization \*', 'ID', and 'Name'. A search bar is also present. Below the filters is a table with the following data:

ID	Name	Group
1	DADB	Organization
2	ORG2	Organization

You can also delete particular Group. To do so, click **Delete**  of the respective Group.

- Click **Generate Report**.

## Sample Report

The screenshot shows a 'Visitor Head Count' report. At the top, it says 'DADB' and 'Page 1 of 1'. Below that, it says 'Visitor Head Count From 11/04/2020 To 11/04/2023'. The report is run by 'System Admin' on '11/04/2023 22:37'. The table below shows the following data:

Sr No	Department ID	Name	No of Visitors
1	1	Department-1	13

## Visitor Evacuation

This report lists out the list of Visitors who are present and missing in/from a secured zone at the time of emergency. You can select the desired sites as well as the type of visitors.

Configure the following parameters:

The screenshot shows a window titled "Visitor Evacuation". At the top, there are date and time pickers. Below that, there are two expandable sections: "Optional Parameters" and "Visitor Selection". In "Optional Parameters", there is a "Select Site" dropdown menu currently set to "All". In "Visitor Selection", there is a "Select Visitors" dropdown set to "Visitor Wise", a "Visitor" section with "ID" and "Name" input fields, and a "Generate Report For" dropdown set to "All Visitors". A "Generate Report" button is located at the bottom center.

- **Date:** Select the to and from date for which the report is to be generated.
- **Time:** Specify the time duration for which the report is to be generated.

### Optional Parameter

- **Select Site:** Select the desired option— **All** or **Selected**.
  - If you select **All**, the generated report lists out the Visitor details for all the Sites.
  - If you select **Selected**, click the **Select Site** picklist. The **Select Sites** pop-up appears.

The screenshot shows a "Select Sites" pop-up window. At the top, it says "Total Selected: 0 Records". Below that is a search bar and a "Show Selected" button. There is a "Select All" checkbox. The main part of the window is a table with two columns: "ID" and "Name". The table contains 10 rows of data. At the bottom, it says "1 - 10 of 11 records" and has a pagination control showing "1" as the current page. "OK" and "Cancel" buttons are at the bottom.

ID	Name
1	Factory
2	HO
3	RnD1
4	RnD2
5	site5
6	site6
7	site7
8	site8
9	site9
10	site10

- You can either select particular Site/s or can select all the Sites at once.

- To select particular Site/s, select the check boxes for the desired Site/s.

The 'Select Sites' dialog box displays a table with 10 records. The first two records, 'Factory' (ID 1) and 'HO' (ID 2), are selected. The 'Total Selected' bar at the top indicates 2 records. The 'Select All' checkbox is unchecked. The pagination shows '1 - 10 of 11 records' and the first page is active.

<input type="checkbox"/>	ID ▲	Name
<input checked="" type="checkbox"/>	1	Factory
<input checked="" type="checkbox"/>	2	HO
<input type="checkbox"/>	3	RnD1

## Contract Worker Management

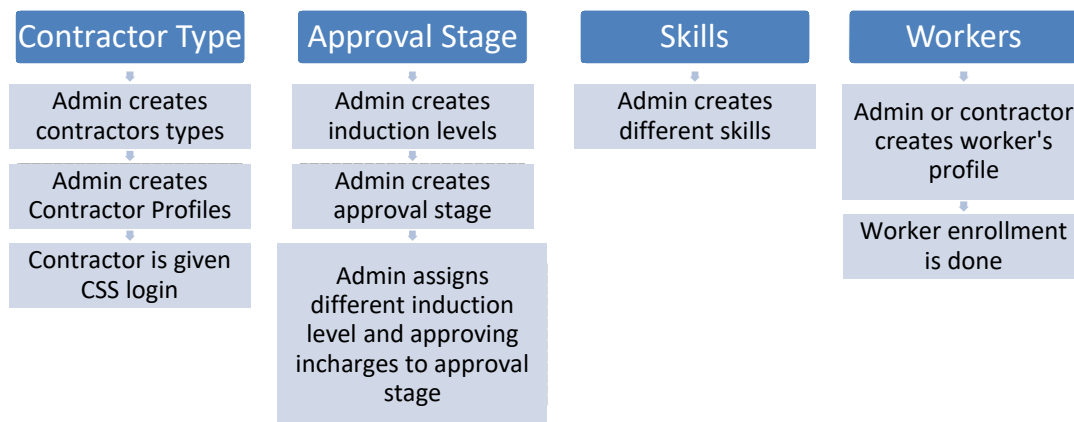

Contract Worker Management (CWM) System is the system which can be used by big and small industries to meet their demand of skilled manpower supply and hence monitoring the contract workers.

CWM comprises of readily available computer hardware, card readers, biometric fingerprint/palm readers, webcams and the software. A typical installation consist of a server where database of all contract workers is maintained.

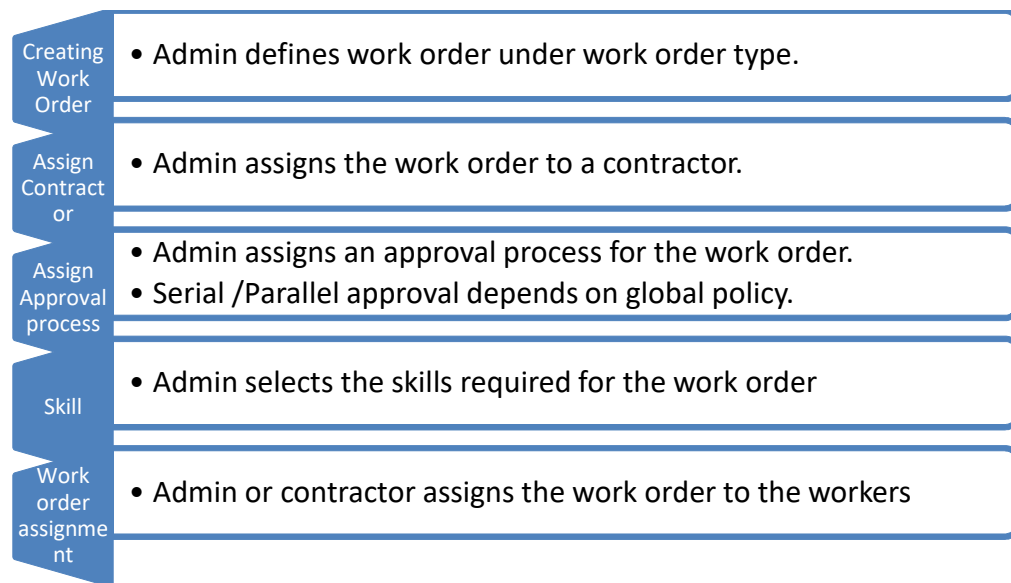

*This functionality will be available only with the COSEC **CWM** license.*

The contract worker management configuration is explained in the following diagram. To start with CWM, the contractor type, approval stages and skills are configured through CWM module. Then workers can be added through CWM or CSS.

### Work Order creation & Worker assignment

After the contractor and workers are added in the system, the work order is created and assigned to the workers as mentioned below.

## Features

1. Approvals and Training through Induction Levels
2. Enrollment of the contract workers based on
  - RFID Cards
  - Biometric Fingerprints
  - Palm Vein Templates
3. Planning and Scheduling for future Work Orders
4. Location wise Entry/Exit Access Control
5. Maintaining Attendance Records of Workers
6. Detailed Reports

## Benefits of CWM

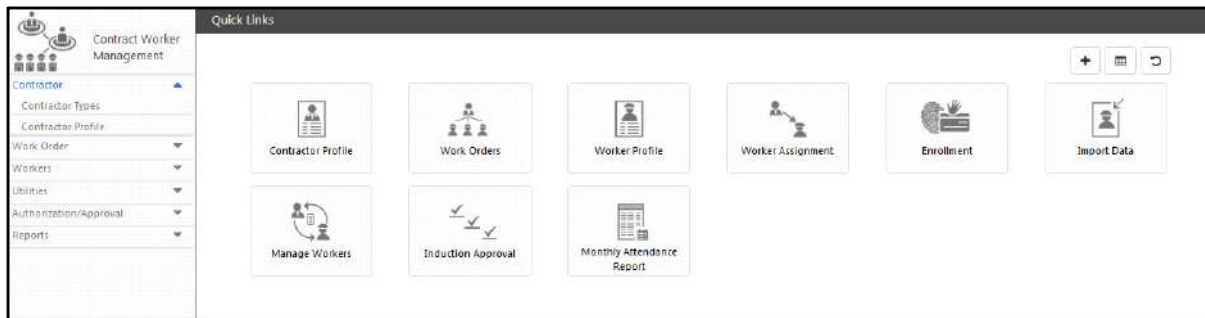

1. The probability of payroll inflation by falsifying the records of workers deployed gets totally eliminated.
2. The company gets reports on the time spent by each worker to enable accurate calculating of billing for various contractors.
3. It will ensure that the blacklisted workers do not get entry into the work area, even under different identity or through another contractor.
4. The company can get warnings when a worker is nearing maximum number of days' attendance after which he will become eligible to various benefits which regular employees are entitled to.
5. Workers can be scheduled more accurately, thus minimizing the possibility of excess worker hiring.
6. The company can ensure that workers of the desired skill only get deployed.

To use this functionality, Click on the **Contract Worker Management** module. The Contract Worker Management page will appear on your screen.

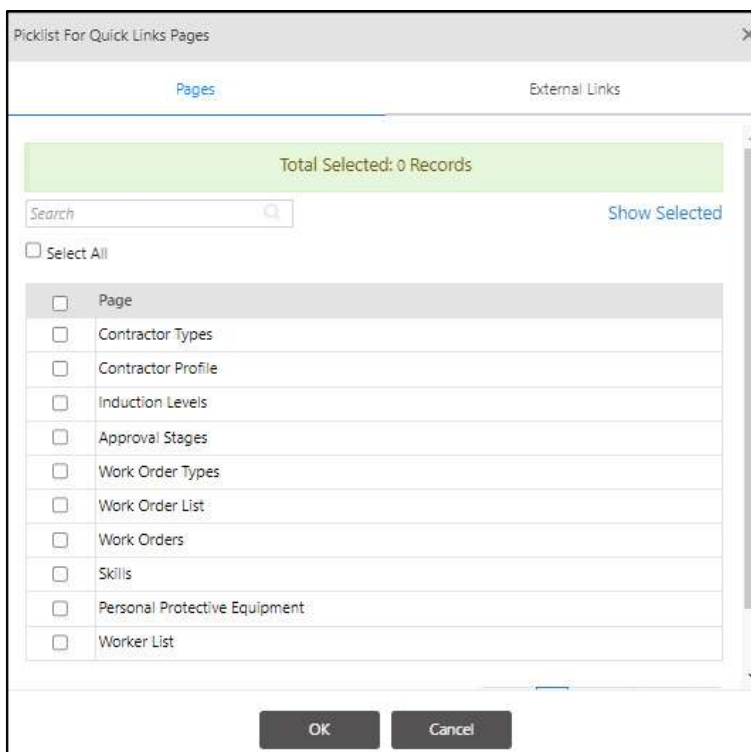

module. The Contract Worker

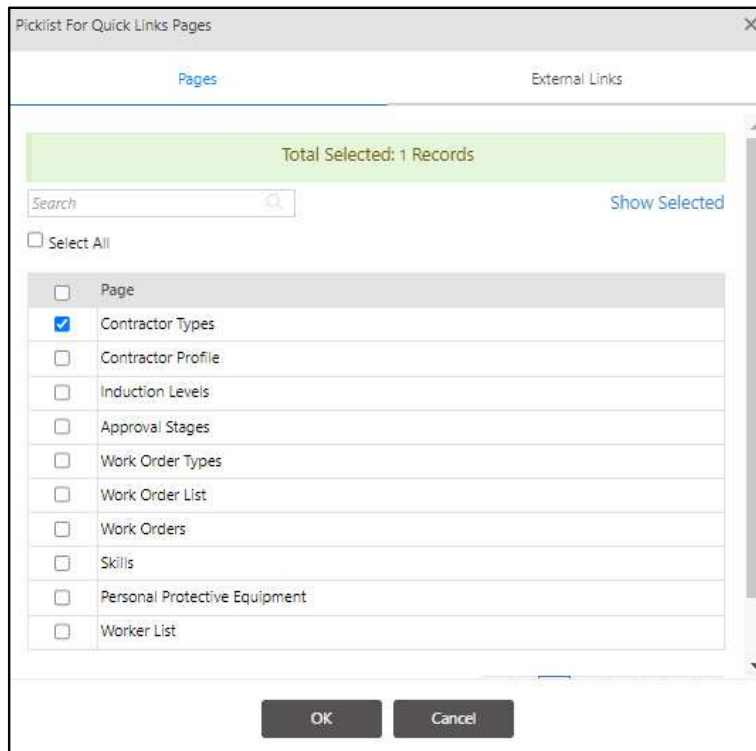

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

### Add Quick Links

- Click **Add** . The **Picklist For Quick Links Pages** pop-up appears.

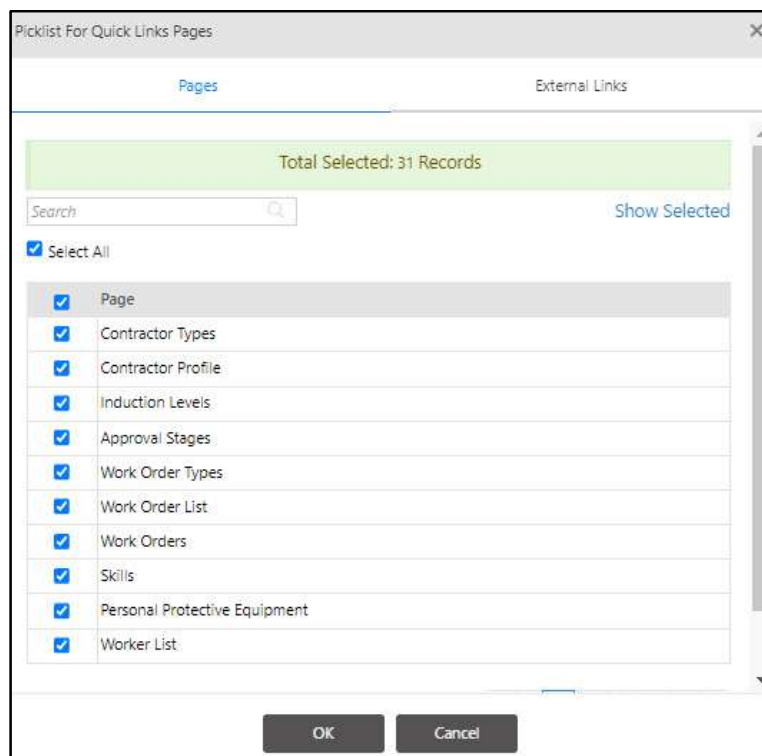

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

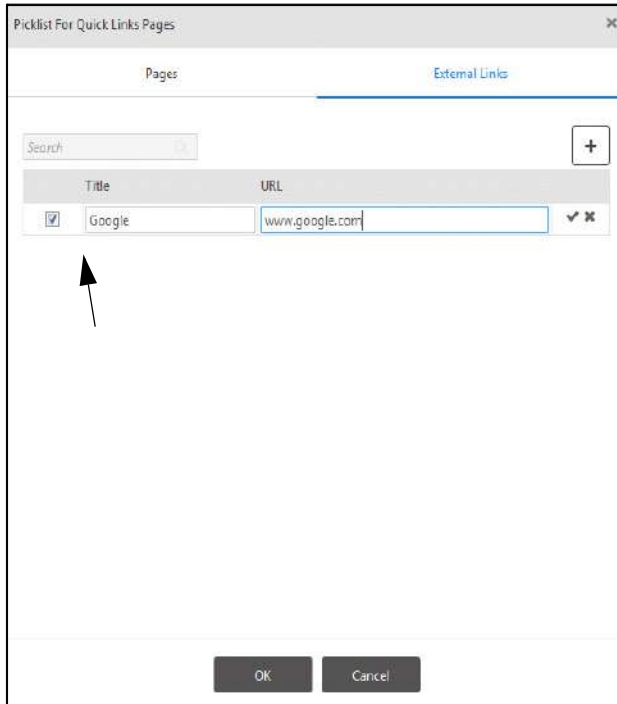

- Click **OK**.

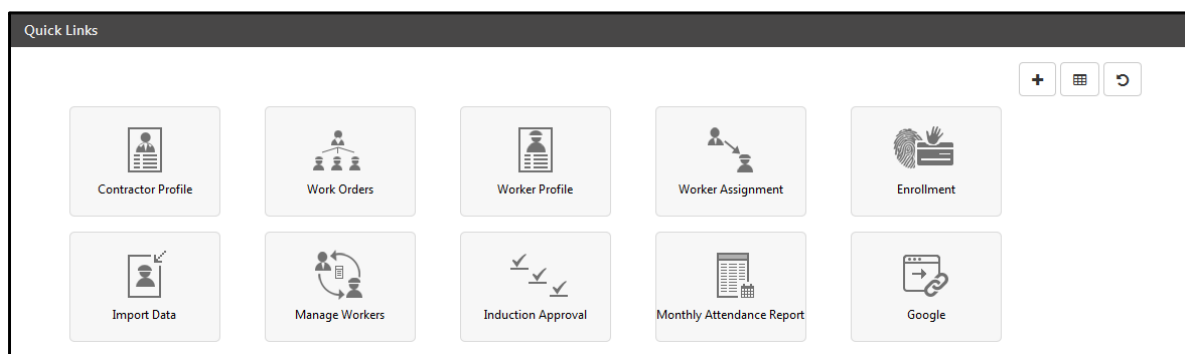

- The Quick Links for selected pages appear on the Quick Link page.

### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the checkbox to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

### Select Layout

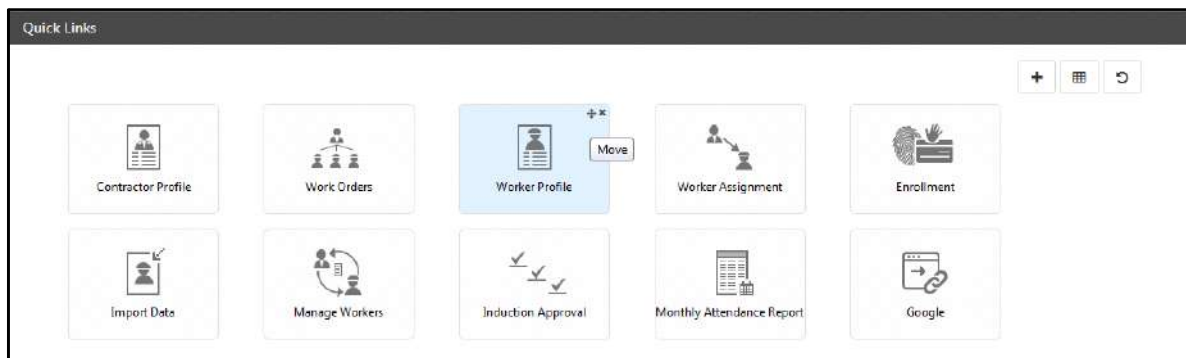

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

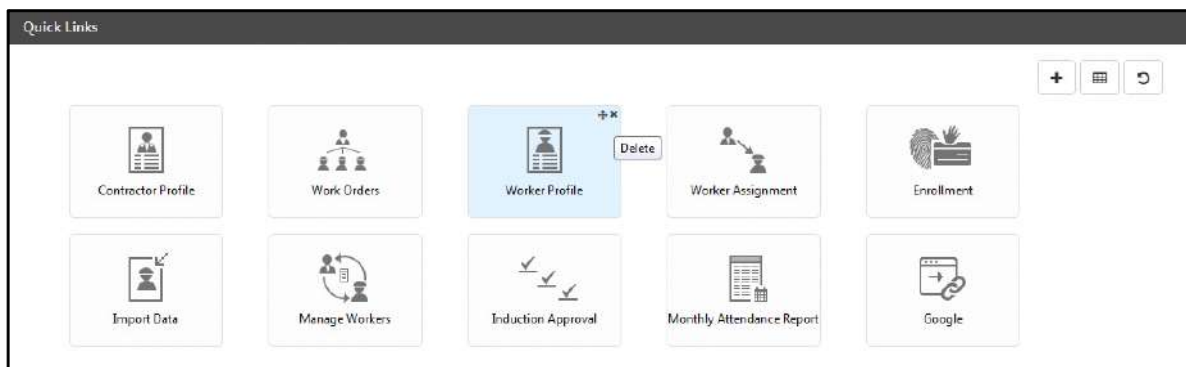

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

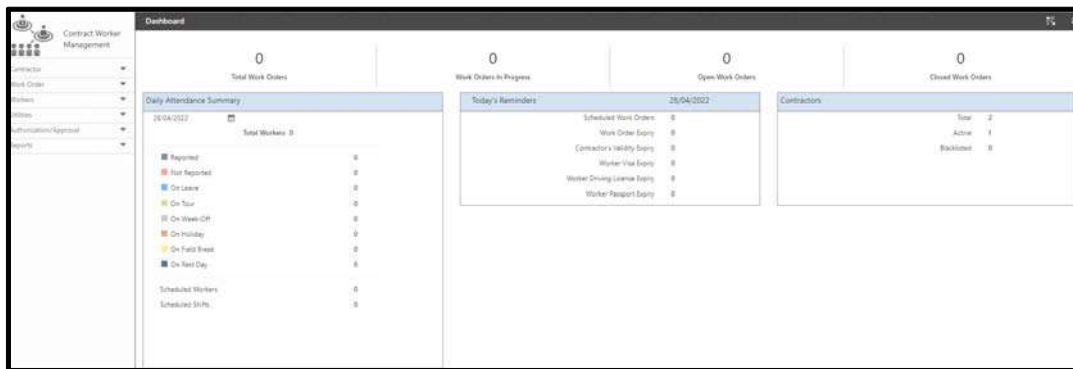

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

## Contract Worker Management Dashboard

To view the **Contract Worker Management** Dashboard, select Dashboard  on the **CWM** page. The Dashboard displays the basic information set and configured in CWM module under the following groups:

The Dashboard displays basic information related to work orders, contractors and workers:

- Total Work Orders- Total work orders created in COSEC.
- Work Orders In-Progress - Sum of all In Progress work orders.
- Open Work Orders- Sum of all work orders that haven't started yet.
- Closed Work Orders - Sum of all work orders that are already over.

### Daily Attendance Summary

*This section is displayed only if TAM license is available.*

- Reported- Total number of workers who have shifts scheduled today and have at least one punch on current day.
- Not Reported- Total of all unreported workers who have no punch for current day, though their shift is scheduled and are not on WO, PH or leave.
- On Leave - Total number of workers on leave on current day.
- On Tour - Total number of workers on tour on current day.
- On Week-Off- Total number of workers on week-off on current day.
- On Holiday- Total number of workers on holiday on current day.
- On Field Break - Total number of workers on Field on current day.
- On Rest Day - Total number of workers on rest day on current day.
- Scheduled Workers - Total number of workers who are scheduled to start work on current day.
- Scheduled Shifts - Total number of workers' shifts that are scheduled to start on current day.

### Today's Reminders

- Scheduled Work Orders - Total of all such active work orders starting on current day.
- Work Order Expiry- Total of all such active work orders whose validity is expiring on current day.
- Contractor's Validity Expiry- Total of all such active contractors whose validity is expiring on current day.
- Worker Visa Expiry- Total of all such active workers whose visa validity is expiring on current day.
- Worker's Driving License Expiry- Total of all such active workers whose driving license is expiring on current day.
- Worker's Passport Expiry- Total of all such active workers whose passport is expiring on current day.

### Contractors

- Total -Total contractors created in contractor master.
- Active - Contractor having: Current Date <= Validity Date.
- Blacklisted- Total contractors marked as Blacklisted by the administrator.

## Workers

- Total - Sum of all Active and Inactive workers. Click on  button. The Import Data page opens from where data can be imported in XLS and CSV format.

### Active

- Approved - All Active Workers, having assignment Status as Approved.
- Pending- All Active Workers, having assignment Status as Pending.
- Rejected- All Active Workers, having assignment Status as Rejected.
- Free- All Active Workers, having assignment Status as Free.
- Blacklisted- All Active Workers, having assignment Status as Blacklisted.

### Inactive

- Free- All Inactive Workers, having assignment Status as Free.
- Blacklisted- All Inactive Workers, having assignment Status as Blacklisted.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The

Latest values on Dashboard are updated on clicking the Refresh  button.

# Contractor Types

For execution of a big project, different types of contractors like civil contractor, mechanical contractor, IT contractor etc are required.

To create the type of contractors go to **Contract Worker Management > Contractor > Contractor Types**

The screenshot shows the 'Contractor Types' management window. It features a toolbar with icons for back, add, edit, delete, and search. Below the toolbar, there are input fields for 'Contractor Types' (with a dropdown arrow), 'ID' (highlighted with a blue border), and 'Name'. A 'Default' checkbox is also present. On the right, a table lists the existing contractor types.

ID	Name
1	Contractor Type-1

Click on **Add** button to add a contractor type.

Specify the **Name** of the contractor type.

Click on **Save**. The ID of contractor type is auto-generated and all the contractor types will be listed in the right grid.

Check the box to make the contractor type as **default**. There is always one default contractor type which cannot be deleted. Also any contractor type can be made as default.

This screenshot shows the 'Contractor Types' management window after adding a new entry. The 'Contractor Types' dropdown now shows '2'. The 'ID' field contains '2' and the 'Name' field contains 'Civil Contractor'. The 'Default' checkbox is still unchecked. The table on the right now lists two contractor types.

ID	Name
1	Contractor Type-1
2	Civil Contractor

# Contractor Profile

Contractor Profile is the detailed profile of the contractors belonging to one of the contractor type.

For example: TCE, HPCL, Hiranandani, Alps Engineers etc are configured as Contractor Profiles under the Civil Contractor.

To create the contractor profile go to **Contract Worker Management > Contractor > Contractor Profile**

The screenshot shows a web application window titled "Contractor Profile". It contains a form with the following fields: ID\* (text input with value "COL"), Name\* (text input with value "HPCL"), Type (dropdown menu with "Civil Contractor" selected), and Validity End Date\* (calendar icon). Below these fields are five expandable sections: Address, Contact Information, Details, License Information, and Account Information. On the right side of the window, there is a table with columns ID, Name, Type, and Validity End. The table is currently empty, displaying "No Data".

Click on **Add** button to add a contractor profile.

Specify the **ID** of the contractor profile. This ID would be the CSS login ID and should be different from employee's ID and worker's ID.

Specify the **Name** of the contractor profile. For eg: HPCL is a contractor profile.

Select the **Type** from the drop down list of contractor types. For Eg: HPCL is a profile of civil contractor type.

Select the **Validity End Date** from the calendar button which is the end date for the contractor validity. This date shall not be included in the validity period.

This screenshot shows the same "Contractor Profile" form, but with the "Validity End Date" field populated with the date "31/05/2017". The other fields (ID, Name, Type) remain the same as in the previous screenshot.

Specify the **Address, Contact Information, Details, License Information and Account Information** by clicking the respective collapsible panel.

## Address:

Address	
Address	421 GIDC, Makarpura

License No. *		↑
Description		

## Account Information:

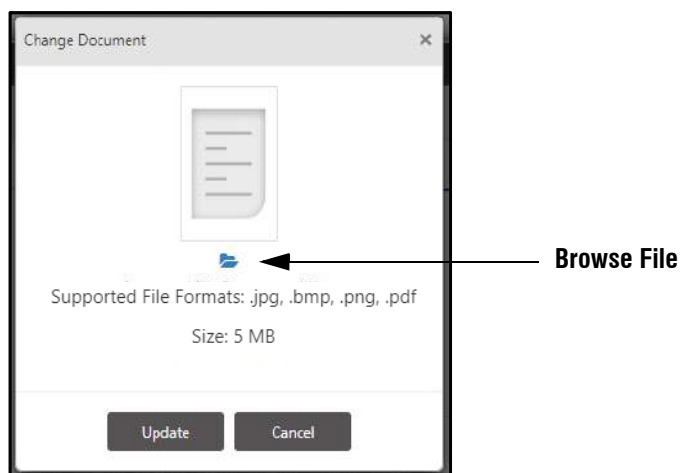

Account Information	
Enable Account	<input type="checkbox"/>
Edit Basic Details	<input type="checkbox"/>
Preferred Language	English

Enter the relevant information under each of the following collapsible panel:

- Address, Street, City, Pincode, State, Country and Phone under **Address** collapsible panel.
- Contact Person 1 and 2 and their Mobile and Email under **Contact Information** collapsible panel. The alerts —SMS, WhatsApp and Email are sent on the Mobile Number and Email ID configured here.
- Service Tax No., PAN, PF No., ESI No. under **Details** collapsible panel.
- License No. and Description under **License Information** collapsible panel.
- Select Enable Account and Edit Basic Details check boxes to enable the **CSS Account** of the contractor and enable him to edit the basic details. Select the Preferred language from the drop-down list under **Account Information** collapsible panel.

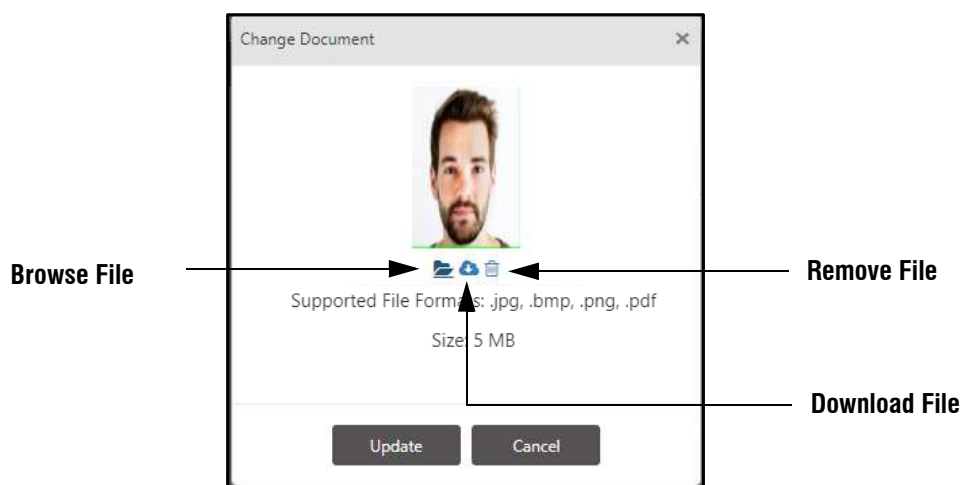

There are 10 additional fields in which you can enter the desired details of the Contractor as per your requirement. These are visible only after they are configured from **Admin> System Configuration> Global Policy> CWM**. For details refer [“Custom Fields For Contractors”](#). For example Security Number, ID Proof, Nominee Name, etc.

You can upload certain documents by clicking **Upload**  button. Then **Change Document** pop-up appears as shown below.

Click **Browse File**  .

To upload, select the desired file as per the supported formats and size (.jpg, .bmp, .png, pdf) from your local PC.

After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File**  .

To remove the uploaded file, click **Remove File**  .

Then click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

Click on **Save** button to save the profile details.

After these details are entered, work order can be assigned to the contractor.

Multiple work orders can be assigned to a single contractor but each worker must be associated with one and only one Contractor.

A Contractor has assignment rights for only those Work Orders that are assigned to him, and those workers that are associated with him.

# Induction Levels

Once assigned to a work order, a worker needs to go through levels of approval that may comprise background check, orientation, skill-based training, safety training etc. before the organization considers the worker fit for the work. These levels are defined in COSEC as *Induction Levels*. The HR administrator can create upto 7 induction levels for workers in COSEC.

Configuring the approval process for a worker involves the following:

- Defining Induction Levels
- Assigning Induction Levels to an Approval Stage
- Assigning Approving In-Charges to each Induction Level in an Approval Stage

To define a new Induction Level, go to: **Contract Worker Management > Work Order > Induction Levels**

The screenshot shows the 'Induction Level' form. The 'ID' field contains '1' and the 'Name' field contains 'Induction Level-1'. The 'Default' checkbox is checked. The 'Description' field contains 'IT Induction'. On the right, a table lists the existing induction levels.

ID	Name
1	Induction Level-1

*Induction Level-1* is a system-defined default Induction Level. Click **New** to add a new level.

Enter a suitable **name** for the level (e.g. Medical Checkup, Safety Training etc.)

Enable the **Default** checkbox to make this the default induction level.

Enter a description for the level.

Click **Save** button to save the induction level.

New Induction Levels will appear in the grid list as shown:

The screenshot shows the 'Induction Level' form after adding a new level. The 'ID' field contains '4' and the 'Name' field contains 'Induction Level-4'. The 'Default' checkbox is checked. The 'Description' field contains 'Medical Checkup'. On the right, a table lists the updated induction levels.

ID	Name
1	Induction Level-1
2	Induction Level-2
3	Induction Level-3
4	Induction Level-4

# Approval Stages

An Approval Stage is a sequence of Induction Levels that a worker must complete before finally being approved for a work order. Each Induction Level can be assigned an *Approving In-Charge* who shall be responsible for approving or rejecting a worker once the level is completed.

An *Approval Stage*, in turn, can be assigned to a *Work Order* and becomes subsequently applicable to all workers associated with this work order.

To create a new Approval Stage, go to: **Contract Worker Management > Work Order > Approval Stages**

Level	ID	Induction Level
Level 1	1	Induction Level-1
Approving In-Charge 1	3	Isha
Level 2	2	Induction Level-2
Approving In-Charge 2	2	Chirag
Level 3	3	Induction Level-3
Approving In-Charge 3	101	Khushbu
Level 4	4	Induction Level-4
Approving In-Charge 4	1678	Supriya
Level 5	ID	Name
Approving In-Charge 5	ID	Name
Level 6	ID	Name
Approving In-Charge 6	ID	Name
Level 7	ID	Name
Approving In-Charge 7	ID	Name

ID	Name	Assigned Induction Levels
1	Approval Stage-1	1

Click **New**.

Enter an appropriate name for the Approval Stage.

Select the **Induction Level Assignment** section. This section allows you to select upto 7 Induction Levels for this Approval Stage in the required sequence using the respective pick-lists.

For each level, select an **Approving In-Charge** using the respective user picklist.

Click **Save**. The new Approval Stage appears in the grid list as shown.

The screenshot shows a web application window titled 'Approval Stages'. At the top, there is a green status bar that says 'Saved Successfully'. Below this, there is a search bar and a dropdown menu for 'Approval Stage' set to '2'. The main area is divided into two sections. The left section, titled 'Induction Level Assignment', contains a table with columns for 'Level', 'ID', and 'Name'. The right section contains a table with columns for 'ID', 'Name', and 'Assigned Induction Levels'.

Level	ID	Name
Level 1	1	Induction Level-1
Approving In-Charge 1	3	Isha
Level 2	2	Induction Level-2
Approving In-Charge 2	2	Chirag
Level 3	3	Induction Level-3
Approving In-Charge 3	101	Khushbu
Level 4	4	Induction Level-4
Approving In-Charge 4	1678	Supriya
Level 5	ID	Name
Approving In-Charge 5	ID	Name
Level 6	ID	Name
Approving In-Charge 6	ID	Name
Level 7	ID	Name
Approving In-Charge 7	ID	Name

ID	Name	Assigned Induction Levels
1	Approval Stage-1	1
2	Approval Stage-Technical	4

A worker can successfully complete an Approval Stage only when he gets approved by all the designated Approving In-Charges. The worker approval request will get rejected if the worker gets rejected at any level of the approval stage.

*If no Approving In-Charge is assigned for a particular Induction Level, then the approval request for this level will be sent directly to the system administrator.*

## Worker Approval Process

An Approval Request is generated in the following instances:

- When a Contractor creates a new Worker from CSS
- When a Contractor assigns Work Order to an existing Worker from CSS

Approval Requests generated by the admin are pre-approved. Approval Requests generated by a Contractor (from the *Contractor Self Service* account) are sent to the concerned approving in-charges depending on the type of approval policy defined in the COSEC Global Policy.

Based on the Global Policy, Worker Approval can be of two types as illustrated below:

- Direct Approval
- Approval Stage

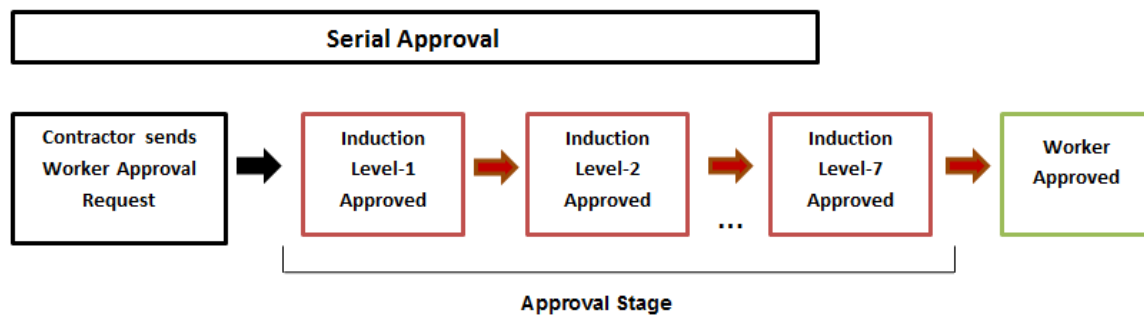

**Direct Approval:** In this type of approval, a worker approval request from CSS is sent directly to the system administrator, ignoring any Approval Stage that may be assigned to the Work Order.

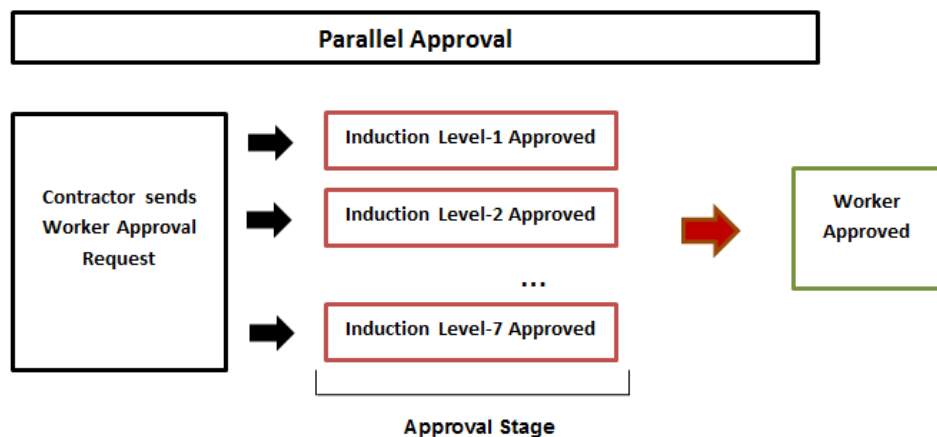

**Approval Stage:** In this type of approval, a worker approval request from CSS is sent to Approving In-Charges as per the *Approval Scheme* selected in Global Policy. There can be two types of Approval Scheme:

- Serial
- Parallel

In case of *Serial Approvals*, a worker must be approved serially by the designated Approving In-Charges, in the defined sequence of an Approval Stage.

In case of *Parallel Approvals*, worker approval requests are sent to all the Approving In-Charges at the same time and approvals may be performed in any sequence.

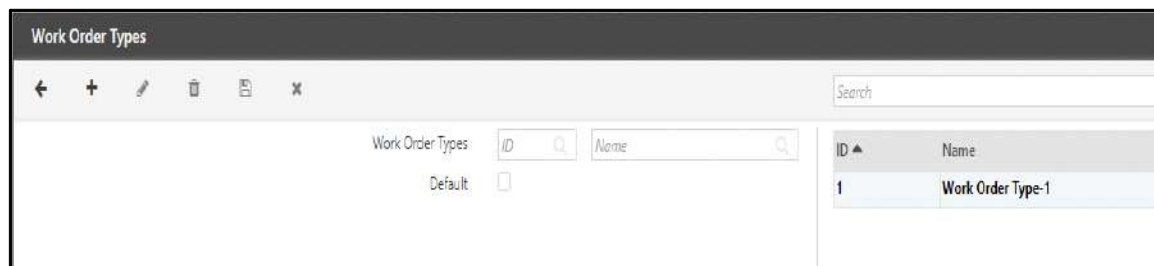

For more information on setting an approval type for the **Contract Worker Management** module, refer to Global Policy.

# Work Order Types

Work Orders of similar nature can be classified or grouped together as a **Work Order Type**. For e.g. Work Orders for mending broken machinery or repairing a pump can be grouped as “Repair”, while a Work Order for fitting a light bulb may be assigned the type “Installation”.

To define a Work Order Type, go to **Contract Worker Management > Work Order > Work Order Types**

The screenshot shows the 'Work Order Types' management interface. It includes a toolbar with icons for back, add, edit, delete, and search. Below the toolbar, there are input fields for 'Work Order Types' (ID and Name) and a 'Default' checkbox. A table on the right displays the current data:

ID	Name
1	Work Order Type-1

Click the **New** button to add a work order type.

Enter the **name** for the Work Order Type. The ID will be generated automatically.

Select the **Default** checkbox to make this Work Order Type as default.

Click the **Save** button.

The screenshot shows the 'Work Order Types' management interface after adding a new type. The 'Work Order Types' input field now contains '2' and the 'Name' field contains 'Constuction'. The 'Default' checkbox is still unchecked. The table on the right now displays two entries:

ID	Name
1	Work Order Type-1
2	Constuction

An arrow points to the second row (ID 2, Name Constuction) in the table.

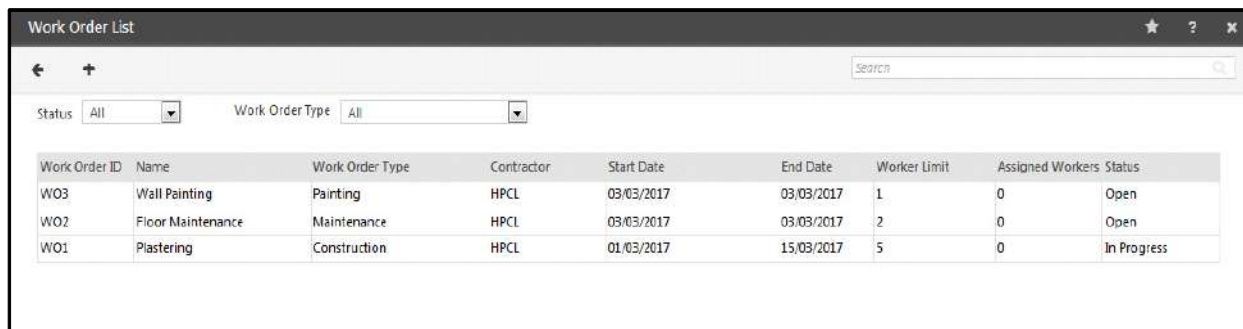

Once the Work Order type is created, you can create the work orders to be assigned to contractors by selecting the “type” created in Work Order type.

# Work Order List

This page shows a list of all the created Work Orders. The list can be viewed based on the filters. The work orders can be searched by entering the key word in the Search box.

To view a Work Order List, go to **Contract Worker Management > Work Order > Work Order List**

Work Order ID	Name	Work Order Type	Contractor	Start Date	End Date	Worker Limit	Assigned Workers	Status
WO3	Wall Painting	Painting	HPCL	03/03/2017	03/03/2017	1	0	Open
WO2	Floor Maintenance	Maintenance	HPCL	03/03/2017	03/03/2017	2	0	Open
WO1	Plastering	Construction	HPCL	01/03/2017	15/03/2017	5	0	In Progress

Use the following Status filters to view all or specific Work Orders:

- All
- Open
- In Progress
- Closed

Select any work order in the list to go to the corresponding **Work Order** page.

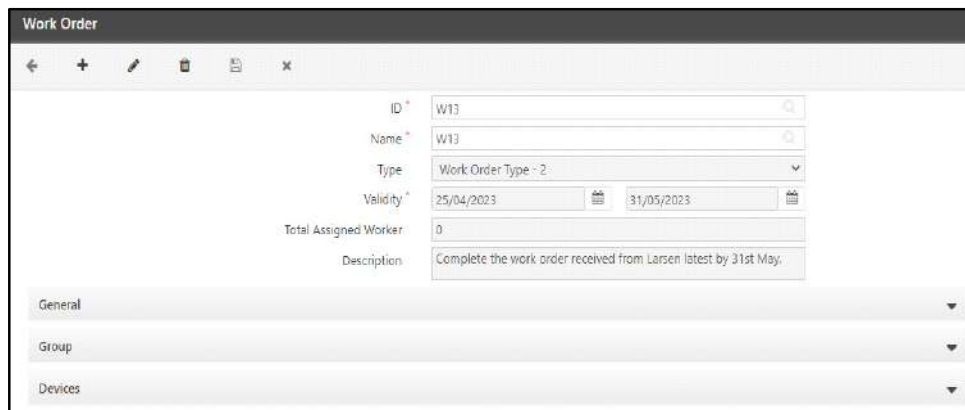

Also you can create the work orders from this page by clicking on **New** button.

# Work Order

---

Work Order is a work contract assigned to a Contractor to carry out a specific task within a stipulated time and cost. Hence a work order is always associated with a Contractor, who is responsible for completing the same by deploying suitable work force.

To create a new Work Order, go to: **Contract Worker Management > Work Order > Work Orders**

Click **New** button.

**ID:** Enter the Work Order **ID**

**Name:** Enter the Work Order **Name**.

**Type:** Select a Work Order **Type** from the drop down list.

The drop down list shows the Work order types created in Work Order Type section.

**Validity:** Select a Start and End date as the **Validity** period of the Work Order. The SA can also extended the date, provided if the work is **In Progress**.

**Description:** Enter a **Description** of the Work Order, if required.

## General

Select the **General** section to assign a *Contractor*, a *Site In-Charge* (Any ESS user), and an *Approval Stage* ([See "Approval Stages" on page 2699.](#)) to the Work Order.

Enter the maximum number of workers allowed for this Work Order (**Maximum Worker Limit**).

General

Associated Contractor *	CP12	Contractor Profile 12	⋮
Site In-Charge	Divya	Divya	⋮
Approval Stage *	1	Approval Stage-1	⋮
Maximum Worker Limit *	2		
Check Limit While Assigning Worker	<input checked="" type="checkbox"/>		

**Check Limit While Assigning Worker:** Enable the checkbox if maximum work order's limit & skill-wise limit for adding a worker needs to be checked.

When this checkbox is enabled, then while assigning the work order to a worker/workers, system will check the maximum worker limit provided for that particular work order.

If the no. of workers to whom particular work order is assigned in *CSS> Worker> Worker Profile* exceeds the maximum worker limit then the system will show error.

If disabled, then a contractor can assign a particular work order to more workers irrespective of the maximum worker limit provided.

#### Example:

*Work Order: Labeling work*

*Max Worker Limit: 12*

*Check Limit While Assigning Worker: Enabled*

*Now while assigning the work order, if 13 workers are assigned for this work order, then an error message will be displayed saying "Maximum Worker Limit exceeded" if Check Limit While Assigning Worker is enabled.*

### Skill-Wise Worker Limit

Click **Add** button. You can select the skill from the picklist and enter the worker limit for that particular skill. Then click OK to save skill wise worker limit.

Click **OK**.

The selected device groups appears in the grid.

The screenshot shows a web interface titled "Devices". Inside, there is a tab labeled "Assign". Below the tab, there is a "Device Group" section with two input fields: "ID" and "Name". Below these fields is a search bar with the placeholder text "Search". Below the search bar is a table with the following data:

DGID ▲	Device Group Name	
1	ACTA Devices	
2	RnD1Visitor	
3	Device Group 3	
4	Device Group 4	

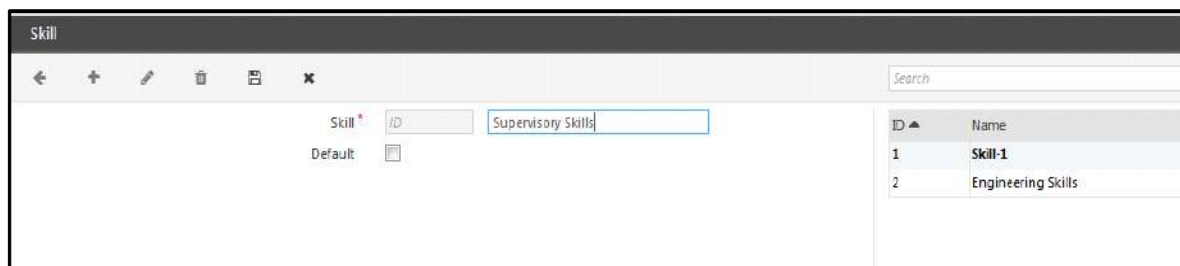

You can delete the desired device groups. To do so, click **Delete**  of the respective device group.

Click **Save** to save the Work Order.

# Skills

The skills are useful in assigning workers to work order based on their skill and also in defining worker limit in work order for different skills.

To create the skills of workers go to **Contract Worker Management >Workers > Skills**

The screenshot shows the 'Skill' management interface. On the left, there is a form with a 'Skill' field (marked with an asterisk) containing 'Supervisory Skills' and a 'Default' checkbox. Above the form is a toolbar with icons for back, add, edit, delete, and save. On the right, there is a table listing existing skills.

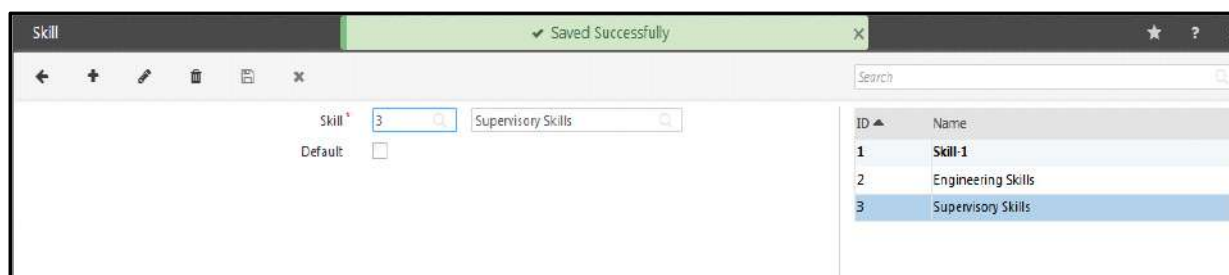

ID	Name
1	Skill-1
2	Engineering Skills

Click on **New** button to add a skill.

Specify the **Name** of the skill.

Click on **Save**.The ID of skill is auto-generated and all the skills will be listed in the right grid.

The skills can be searched by ID or Name from the search box on top right of the page.

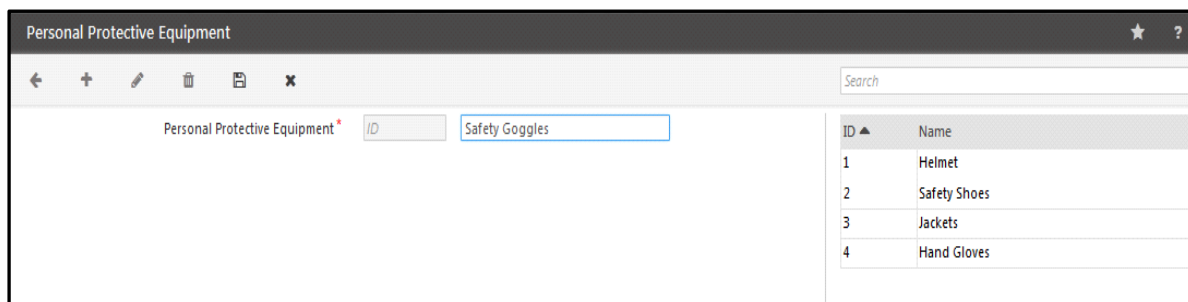

The screenshot shows the 'Skill' management interface after saving a new skill. A green banner at the top indicates 'Saved Successfully'. The 'Skill' field now contains '3' and the 'Supervisory Skills' name. The table on the right now includes three skills.

ID	Name
1	Skill-1
2	Engineering Skills
3	Supervisory Skills

# Personal Protective Equipment

Use this option to create a list of safety equipments that the organization issues to contract workers, for protection against hazards at work. Personal Protective Equipment (PPE) defined here can later be assigned to workers. This will help the administrator maintain records of the assigned equipments.

To define a new PPE, go to **Contract Worker Management > Workers > Personal Protective Equipment**

The screenshot shows the 'Personal Protective Equipment' form. On the left, there is a 'Personal Protective Equipment' label with a red asterisk, followed by an 'ID' input field and a 'Safety Goggles' input field. On the right, there is a table with two columns: 'ID' and 'Name'.

ID	Name
1	Helmet
2	Safety Shoes
3	Jackets
4	Hand Gloves

Click **New** button. Enter a **name** for the equipment (For e.g. Safety Shoes).

Click **Save**. The new equipment is successfully saved and appears on the grid list as shown.

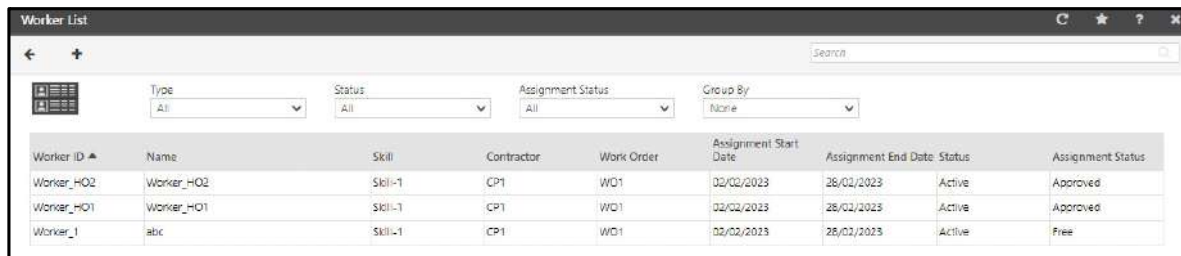

The screenshot shows the 'Personal Protective Equipment' form after a successful save. A green banner at the top indicates 'Saved Successfully'. The 'ID' input field now contains the number '5'. The 'Safety Goggles' input field is still present. The table on the right now includes a new row for 'Safety Goggles' with ID '5'.

ID	Name
1	Helmet
2	Safety Shoes
3	Jackets
4	Hand Gloves
5	Safety Goggles

# Worker List

To view the list of workers go to **Contract Worker Management > Workers > Worker List**.

The screenshot shows the 'Worker List' application window. It features a search bar at the top right and four filter dropdowns: Type (set to 'All'), Status (set to 'All'), Assignment Status (set to 'All'), and Group By (set to 'None'). Below the filters is a table with the following data:

Worker ID	Name	Skill	Contractor	Work Order	Assignment Start Date	Assignment End Date	Status	Assignment Status
Worker_HO2	Worker_HO2	Skill-1	CP1	WO1	02/02/2023	28/02/2023	Active	Approved
Worker_HO1	Worker_HO1	Skill-1	CP1	WO1	02/02/2023	28/02/2023	Active	Approved
Worker_1	abc	Skill-1	CP1	WO1	02/02/2023	28/02/2023	Active	Free

The Worker List will display only those workers/temporary workers for which rights are assigned to the SA, that is as per the enterprise groups assigned to the workers/temporary workers.

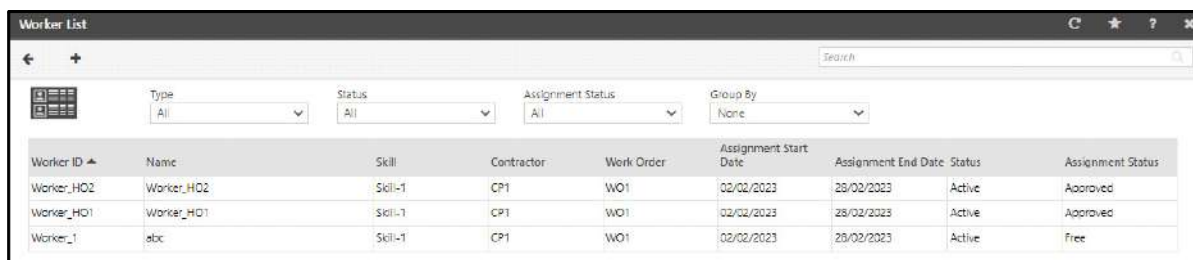

For example, if for Worker1 in Groups, Organization is ORG1 and if the rights for ORG1 are not assigned to the SA, then through the SA login the Worker List will not display Worker1.

For details, refer to [“Assigning Group-Wise Rights”](#) under [“System Accounts”](#) as well as [“Group”](#) under [“Worker Profile- Group”](#).

The workers list can be viewed in **Grid** and **Photo** View.

## Grid View

Click Worker List the Grid View appears. This view is the default view.

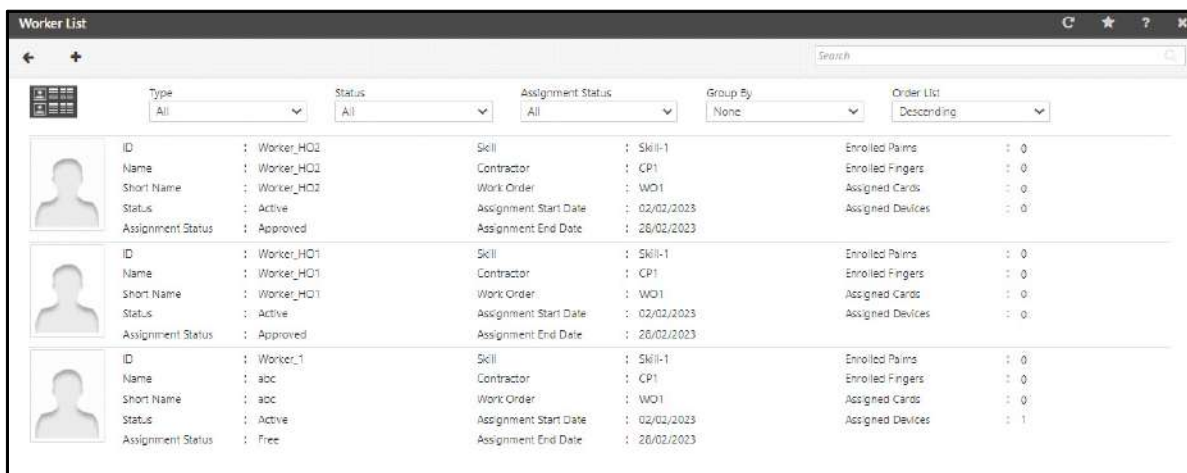

This screenshot is identical to the one above, showing the 'Worker List' application window in Grid View. It includes the same search bar, filters, and table of worker data.

The list can be filtered on the basis of **Type**, **Status**, **Assignment Status** and **Group By**.

- The Type options are All, Worker, Temporary Worker.
- The Status options are All, Active and Inactive.
- The Assignment Status options are All, Pending, Approved, Rejected, Free and Blacklisted.
- The Group By options are Work Order and Contractor.

## Photo View

Click **Photo View**  to view the workers in this view.

The screenshot shows the 'Worker List' application window. It features a search bar at the top right and five filter dropdowns: Type (All), Status (All), Assignment Status (All), Group By (None), and Order List (Descending). The main area displays a grid of worker profiles. Each profile includes a placeholder photo, a list of attributes (ID, Name, Short Name, Status, Assignment Status), and a list of details (Skill, Contractor, Work Order, Assignment Start Date, Assignment End Date). To the right of each profile, there are counts for Enrolled Pairs, Enrolled Fingers, Assigned Cards, and Assigned Devices.

ID	Name	Short Name	Status	Assignment Status	Skill	Contractor	Work Order	Assignment Start Date	Assignment End Date	Enrolled Pairs	Enrolled Fingers	Assigned Cards	Assigned Devices
Worker_HQ2	Worker_HQ2	Worker_HQ2	Active	Approved	Skill-1	CP1	WD1	02/02/2023	26/02/2023	0	0	0	0
Worker_HQ1	Worker_HQ1	Worker_HQ1	Active	Approved	Skill-1	CP1	WD1	02/02/2023	26/02/2023	0	0	0	0
Worker_1	abc	abc	Active	Free	Skill-1	CP1	WD1	02/02/2023	26/02/2023	0	0	0	1

The list can be filtered on the basis of **Type**, **Status**, **Assignment Status**, **Group By** and **Order List**.

- The Type options are All, Worker, Temporary Worker.
- The Status options are All, Active and Inactive.
- The Assignment Status options are All, Pending, Approved, Rejected, Free and Blacklisted.
- The Group By options are Work Order and Contractor.
- The Order List options are Ascending or Descending.

The worker can be searched by either ID, Name, Skill, contractor or work order from the search box on top right of the page.

Click on the worker's entry in the grid. The respective worker's profile page appears.

You can also add new worker's. To do so,

Click **New**  to add a new worker. The Worker Profile page appears. The new worker can be added from this page.

To know about the addition of workers See “Worker Profile” on page 2714.

# Worker Profile

Worker Profile enables to add new worker and edit/delete worker details. The worker details are displayed along with user details in the user configuration section of Users module.

*The new worker can be added from CWM or CSS module only.*

To add the worker select **Contract Worker Management > Workers > Worker Profile**.

## Profile

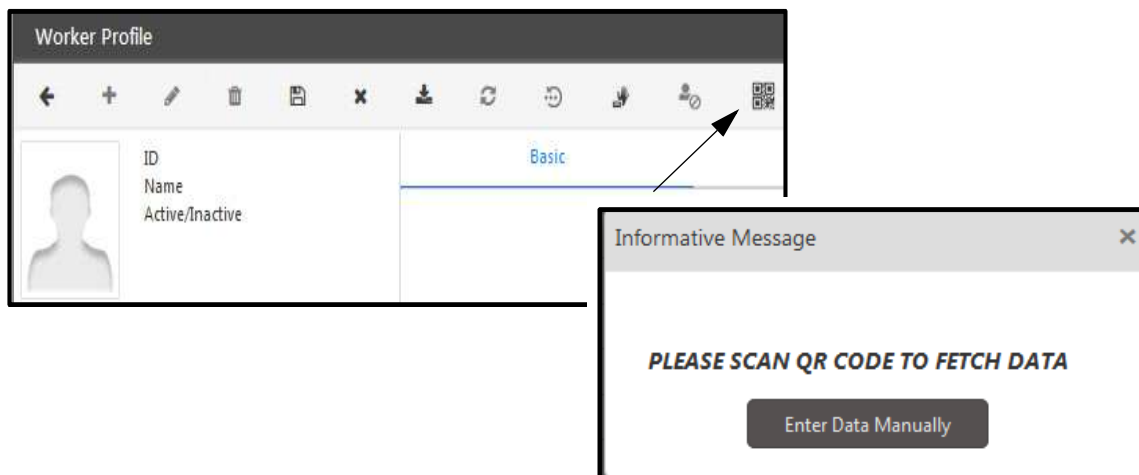

A screenshot of the 'Worker Profile' form in a web application. The form has a sidebar on the left with a list of menu items: Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, CWM, Job Costing, Field Visit Management, Face Recognition, Visitor Management, and Events. The main area is divided into four tabs: Basic, General, Personal, and Contact. The 'Basic' tab is active and shows fields for ID (15 chars), Name (45 chars), and Active (checkbox). Below these is an 'Optional' section with fields for Full Name (200 Chars), Short Name (15 Chars), Reference ID (8 chars), and Integration Reference (20 Chars). The top of the form has a search bar labeled 'Search Worker ID or Name' and a toolbar with various icons.

To configure a Worker Profile, configure the following tabs:.

- Basic
- General
- Personal
- Contact

The Worker details can also be fetched directly from Worker's Aadhar Card. By Scanning the QR Code of Aadhar Card through 'QR Code Scanner', the information like Name, Gender, DoB, Address etc. available in Aadhar Card will be automatically fetched, and filled into the respective fields of above mentioned sections.

From the Top menu Bar click on the **QR Code** button and the pop-up will open as shown below.

Scan the worker's Aadhaar Card QR through the QR Code scanner or click on the **Enter Data Manually** button to enter the details manually into a pop-up window.

Once the Aadhaar Card is scanned and information is received by COSEC Server, the fetched details including Aadhaar Number will display as shown below.

The image shows a 'Fetched User Data' pop-up window. It contains a form with the following fields: Aadhaar No. (702351944240), Name (Bindu Singh), Gender (Female), Date Of Birth (15/09/1987), Address (A2-92-Sanidhya Township, Behin), Street (d Dasalad, Ajwa Road, Vadodara), City-Pincode (Vadodara - 390019), State (Gujarat), Country (India), and Father/Spouse Name (Roopnarayan Singh). At the bottom are 'OK' and 'Cancel' buttons.

You can edit the details if required.

*The Aadhaar Number must be unique from existing workers to configure a new one.*

Click **OK** to save the details or **Cancel** to discard the configuration.

The fetched details will be placed into the fields of respective sections.

If the Admin has configured QR Code scanning optional then, the above step can be skipped and the details can be added manually.

Configure the following details of the Worker— **Basic**, **General**, **Personal** and **Contact**.

If the Date of Birth Mandatory check box is enabled in “[Minimum Age Requirement for Workers](#)” in “CWM”, then Date of Birth parameter will be mandatory. When the date is configured here, the age will be displayed in Years and Months. Any Worker Profile below the age configured in Minimum Age under “[Minimum Age Requirement for Workers](#)” in Global Policy will not be created.

Under **General** tab, there are 10 additional fields in which you can enter the desired details of the workers as per your requirement. These are visible only after they are customized from **Admin> System Configuration> Global Policy> CWM**. For details refer “[Custom Fields For Contractors](#)”. For example Security Number, ID Proof, Nominee Name.

The Worker Profile configuration is same as that of User Profile. For more details, refer to “[Profile](#)” under “[Configuring Users](#)”.

*The worker profile will be saved only if contractor is assigned to the worker from the **CWM** tab.*

### Temporary Worker

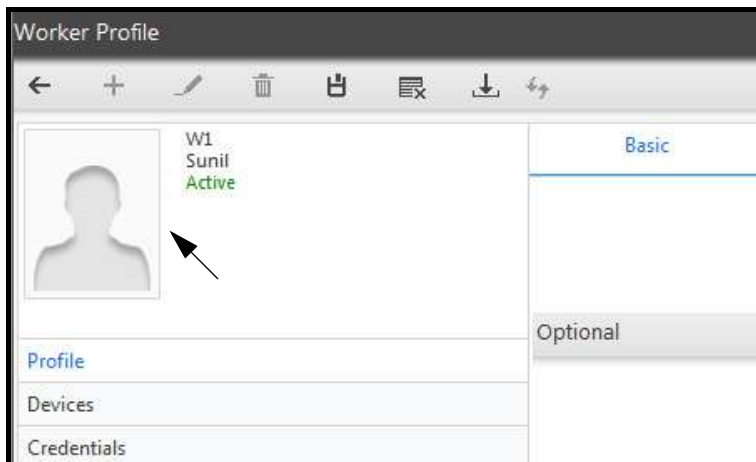

This panel will be visible only for Temporary Workers.

Temporary Worker	
Auto-Registered Date & Time	02/02/2023 10:05
Auto-Registered via Device	ARGO
Auto-Registered via Credential	Finger

- **Auto-Registered Date & Time:** Displays the date and time when the temporary worker is auto-registered.
- **Auto-Registered via Device:** Displays the name of the Device using which the temporary worker is auto-registered.
- **Auto-Registered via Credential:** Displays the credentials using which the temporary worker is auto-registered.

## Adding Worker Photo

The administrator can add a profile photograph for each worker defined on the COSEC system, from the **Worker Profile** page as shown below.

To add an image as the profile photograph for a worker,

1. On the **Worker Profile** page, click **Edit**  for the selected worker.
2. Click the **Change Photo** box.
3. On the **Change Photo** pop up window, click  to browse your computer for an image file. The Supported File Formats are \*.jpg, .bmp and .png.

4. Once the required image file is selected, click the **Update** button.
5. Click **Save**. The worker photo is successfully updated on the **Worker Profile** page as shown.

VEGA_PANEL	Panel200 Door	<input type="checkbox"/>	<input type="checkbox"/>	

You can also delete the desired device. To do so, click **Delete** of the respective devices.

Select the corresponding **Restrict Access** and **Restrict Attendance** check boxes to enable these restrictions for the selected worker on the selected device.

- If you select the **Restrict Access** check box, then worker will be restricted for access on that Door. The punches of the worker on this door will be considered for attendance only and the door will not open for access.
- If you select the **Restrict Attendance** check box, the punch of the worker on door will open the door for access but will not be considered for calculating the attendance.

If you wish to check the devices assigned against any Access Rule, click the **Click here** link at the bottom of the page. The **Access Rule List** pop-up appears.

The 'Access Rule List' pop-up window features a search bar at the top with a magnifying glass icon. Below it is a table with two columns: 'Access Rule ID' and 'Device Name'. The table contains one entry with '2' in the first column and 'Panel\_Argo\_1' in the second column.

Access Rule ID	Device Name
2	Panel_Argo_1

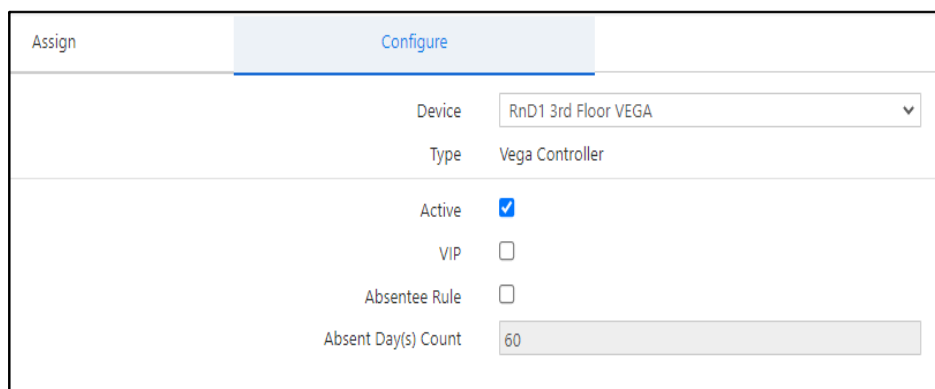

It displays the list of Devices along with the Access Rule ID against which they are assigned.

*If any device or a device belonging to any device group is un-assigned against any user or is selected for deletion but is a part of the Access Rule which is assigned to that user, then those door(s) will be retained against that user.*

Click the **Save** button to save the device selection for assigning to the user.

## Configure

The 'Configure' window has two tabs: 'Assign' and 'Configure'. The 'Configure' tab is active. It contains several settings: 'Device' is a dropdown menu showing 'RnD1 3rd Floor VEGA'; 'Type' is 'Vega Controller'; 'Active' is a checked checkbox; 'VIP' is an unchecked checkbox; 'Absentee Rule' is an unchecked checkbox; and 'Absent Day(s) Count' is a text input field with the value '60'.

Device	RnD1 3rd Floor VEGA
Type	Vega Controller
Active	<input checked="" type="checkbox"/>
VIP	<input type="checkbox"/>
Absentee Rule	<input type="checkbox"/>
Absent Day(s) Count	60

**Device:** Select a device from the **Device** drop down list. This list displays all devices on which the selected worker is assigned.

**Active:** The Active checkbox is selected by default to enable the worker credentials on the selected device.

**VIP:** Check the VIP box if the worker is to be given unrestricted access rights.

**Absentee rule:** Check this box to enable Absentee rule feature at worker level for Direct door. However, this option needs to be first enabled at the Direct door levels.

- **Absent Days Count:** Specify the days count ranging from 1 to 365 for which if the worker remains absent, he will be marked inactive.

- Check the **VIP** box if the user is to be given unrestricted access rights.
- Option is provided for enabling **Absentee rule** feature at worker level for each PANEL and DIRECT DOOR. However, this option needs to be first enabled at the PANEL and DOOR levels.
- Specify the day count for the Absentee rule ranging from 1 to 365.
- In the event of a PANEL controller select the **Access Profile** to be assigned to the user from the drop down list.
- Select the **Functional Group** in the event of a PANEL controller to be assigned to the user from the pull down list.
- In the event of a PANEL controller select the user's **Home Zone** and the **Visit Zone** from the respective drop down lists.
- In the event of a PANEL device the administrator can also assign a defined access route to the user. Select the access route from the drop down list if required. Select another device and configure the access control options as applicable.

*This option is only available with the **Access Control** add on module.*

# Worker Profile- Credentials

The **Credential** tab enables the configuration and enrollment of worker credentials in the COSEC system for the selected worker. On selection of the **Credentials** tab, the following page is displayed:

PIN	<input type="text"/>
Biometric Group No.	<input type="text"/>
Roaming User	<input type="checkbox"/>
Access Card 1	<input type="text"/>
Access Card 2	<input type="text"/>
Enrolled Fingers (Suprema Proprietary)	<input type="text"/>
Enrolled Fingers (Suprema ISO)	<input type="text"/>
Enrolled Fingers (Lumidigm ISO)	<input type="text"/>
Enrolled Fingers (Lumidigm Proprietary)	<input type="text"/>
Enrolled Palms	<input type="text" value="No. of Enrolled Palm"/>
Enrolled Faces	<input type="text"/>
Enable Self-Enrollment	<input type="checkbox"/>

The following parameters are available for configuration in the **Edit**  mode for the selected worker:

- **PIN:** Specify the PIN no. for the worker. PIN should be a numeric value ranging from 1 digit to a maximum of 15 digits. The value entered in this field will only be visible to the “sa” worker. For all other login workers the value in this field will be masked.
- **Biometric Group No.:** Specify the Biometric group number to be assigned to the worker if applicable. It is a number allotted to a group of workers assigned on a device. This enables the device to match a template against only those workers who are part of the same Biometric Group thus reducing processing time.

This value is used for Palm/Face Identification of worker on Identification Server in shorter time span considering worker first specifies Group No and then punches on the device.

Identification Server will be allocating templates to its child threads on the basis of this field.

- **Access Card 1:** Enter a Card Serial Number (CSN) or a Comma separated CSN which is to be assigned to the Worker Profile.

Format:

- **Card Serial Number** = 1343933547.
- **Comma separated CSN** = 12,345789

The maximum character limit for Card Serial Number (CSN) is 20 digits. While the maximum character limit for Comma separated CSN is 21 digits.

To configure a comma separated card value, make sure you configure a 26-bit card format in the system and then assign the same to the device. To know more, refer [“Card Formats”](#).

If there is any discrepancy while entering the Access Card number (CSN), the system will display an error.

This Access Card number will be synced with the devices to allow/deny access to workers.

COSEC accepts up to two cards per worker. So if required and available, enter the **Access Card 2** number.

Once you save the configurations, hover your mouse over the Comma separated CSN value of any Access Card, the system will display an encoded (converted) value of Comma separated CSN.

While importing the data of workers, make sure you enter the correct Access Card details in the desired format — Card Serial Number (CSN) or Comma separated CSN. To know more about importing workers, refer [“Import Workers”](#).

**Access Card 2**, can also be used to generate the QR Code. Workers can access the device using this QR Code.

*Access Via QR Code feature is not applicable for Temporary Workers.*

*Make sure you have saved the earlier configurations as QR Code can be generated in view mode only*

For QR Code functionality, make sure:

- you have enabled **Allow Access Via QR** in the desired ARGO FACE (Direct Door / Panel Door) device as well as configured the Image Setting parameters. For details refer to [“Face/Image Settings”](#).
- enabled the Alert, so that the generated/re-generated QR can be sent to the desired users/workers using SMS/Email/WhatsApp. Make sure you select the Alert Filter as **Users** and Event as **User Access - QR Credentials**. For details, refer to [“Configuring Alert Messages”](#).

If you add new devices and want **Allow Access Via QR** check box to be enabled by default, make sure you have enabled the same in Global Policy > Device. For details refer to [“Device”](#) in [“Defining Global Policies”](#).

QR Code can be generated in two ways:

- If a card is enrolled, then with the same details a QR Code can also be generated. In this case the worker will be able to use, both the Card as well as the QR Code to access the device.

To generate the QR Code:

Worker Profile

Worker1  
Worker1  
Active

Credentials

PIN

Biometric Group No 6

Roaming User ☐

Access Card 1

Access Card 2

Enrolled Fingers (Suprema Proprietary) 0

Enrolled Fingers (Suprema ISO) 0

Enrolled Fingers (Lumidigm ISO) 0

Enrolled Fingers (Lumidigm Proprietary) 0

Enrolled Palms 0

Enrolled Faces 0

Enable Self-Enrollment ☐

Click Here

**Generate** will be accessible in view mode only.

- Click **Generate** . This generated QR Code is sent to the desired users via User Access - QR Credentials Alert using SMS, Email or WhatsApp as per the configurations done. Now, this QR Code can be used as a credential to access the device.
- Click **Download** , to download the generated QR Code on the local PC.
- If a card is enrolled, but you do not wish to generate the QR Code using the same details, then the QR Code can be generated using Re-generate option. In this case the Card value will be overwritten with the QR Code value and the worker will be able to use only the QR Code.

You can also click Re-generate to generate a new QR Code after you have generated the QR Code once.

To generate the QR Code:

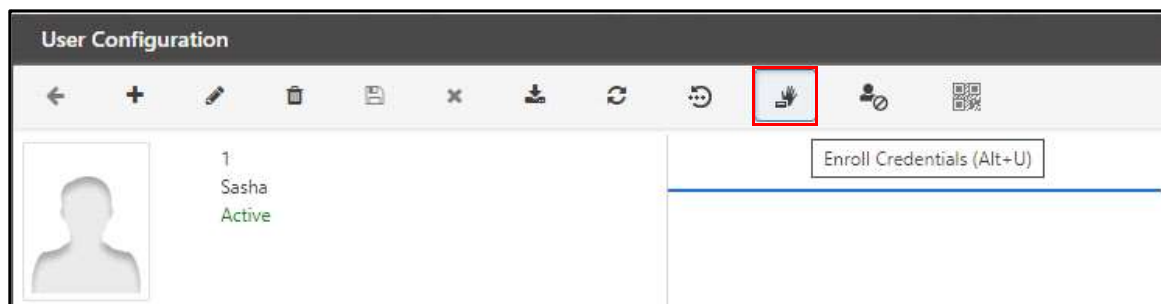

**Re-generate** will be accessible in view mode only.

- Click **Re-generate** . A warning pop-up appears as the existing value of the Access Card will be erased. Click Yes to confirm. The new QR Code is generated. This generated QR Code is sent to the desired users via User Access - QR Credentials Alert using SMS, Email or WhatsApp as per the configurations done. Now, this QR Code can be used as a credential to access the device.
- Click **Download** , to download the generated QR Code on the local PC.
- **Enrolled Fingers:** This option displays the number of fingerprint templates enrolled against the selected worker.
- **Enrolled Palm:** This option displays the number of palm vein templates enrolled against the selected worker.
- **Enrolled Face:** This option displays the number of Face templates enrolled against the selected worker.
- **Enable Self-Enrollment:** This option can be enabled to allow a worker to enroll himself/herself on COSEC using an already provided access card/PIN.

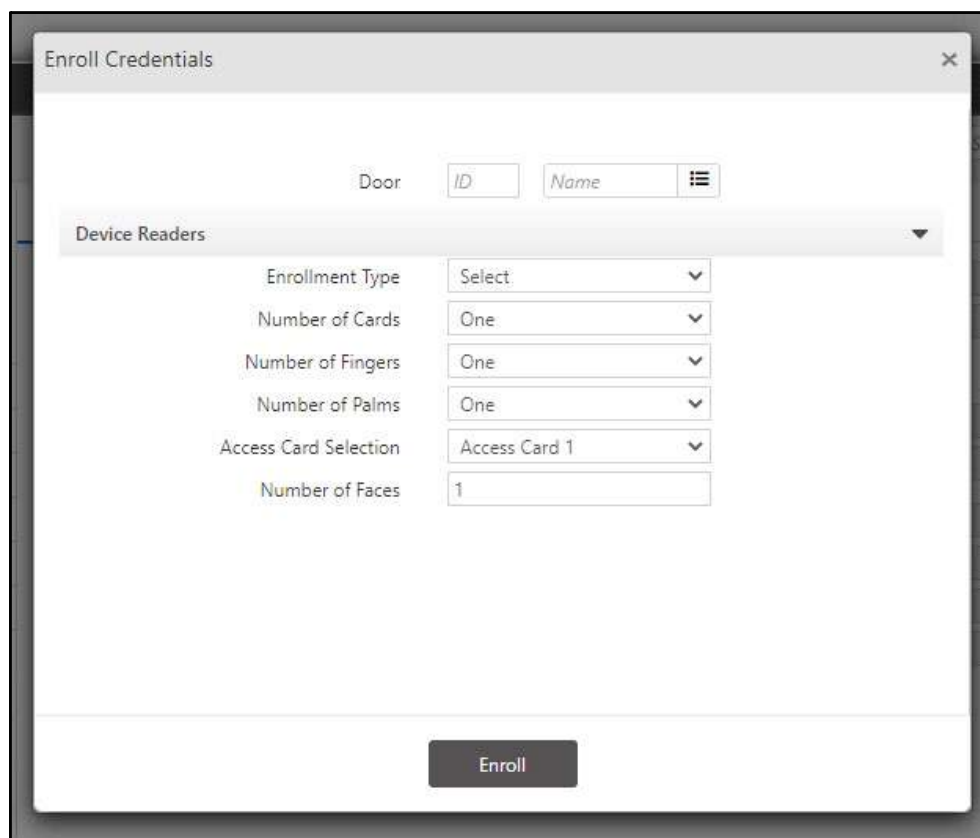

The administrator can also perform enrollment for the selected worker by clicking the **Enroll Credentials** button.

## Enroll Credentials

The Administrator can enroll credentials for the worker by clicking **Enroll Credentials** as shown below.

The **Enroll Credentials** window appears as shown below:

- **Door:** Select the desired door from the pick list on which the enrollment is to done.

#### **Device Readers**

Device Readers displays the information of the readers configured in the selected **Door**.

Enroll

- **Enrollment Type:** From the dropdown list, select the desired enrollment type — **Read Only Card, Smart Card, Biometrics, BiometricsThenCard, Face, Mobile** or **Duress Finger**.

Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

*When Enrollment Type selected is Smart card or BiometricThenCard, Duress Finger Templates will not be written in the Smart Card.*

*Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.*

**1. Enrollment Type = Read Only Card**

**Number of Cards:** Select the desired number of cards from the drop down list.

**2. Enrollment Type = Smart Card**

**Number of Cards:** Select the desired number of cards from the drop down list.

**Details on Smart Card**

Select the desired check boxes of the parameters — **Worker ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### **Additional Details on Smart Card**

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name, Branch, Department, Designation, Emergency Contact, Blood Group and Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

### **3. Enrollment Type = Face**

**Number of Faces:** Select the desired number of faces from the dropdown list.

The screenshot shows a window titled "Enroll Credentials". Inside, there are several fields: "Door" with the value "13", "Device Readers" with a dropdown menu showing "ARGO-Device", "Enrollment Type" with a dropdown menu showing "Face", and "Number of Faces" with a text input field containing "1". At the bottom center, there is a dark button labeled "Enroll".

### **4. Enrollment Type = Biometrics**

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

The image displays two screenshots of a configuration interface for door access control. The top screenshot shows a configuration for 'Door 3' with 'ARGO' device readers. The 'Enrollment Type' is set to 'Biometrics' and the 'Number of Fingers' is set to 'One'. The bottom screenshot shows a configuration for 'Door 1' with 'PVR' device readers. The 'Enrollment Type' is set to 'Biometrics' and the 'Number of Palms' is set to 'One'.

**5. Enrollment Type = BiometricsThenCard**

**Number of Cards:** Select the desired number of cards from the drop down list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

### Details on Smart Card

Select the desired check boxes of the parameters — **Worker ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name, Branch, Department, Designation, Emergency Contact, Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

#### 6. Enrollment Type = Mobile

To select **Enrollment Type** as **Mobile**, the particular device must have BLE support and ensure Bluetooth is ON in the mobile.

**Access Card Selection:** Select the desired Access Card from the drop down list.

Facility Code (FC): Select this check box to enroll the Facility Code (FC) against the worker.

Click **Enroll** to initiate the enrollment process.

## 7. Enrollment Type = Duress Finger

**Number of Fingers:** Select the desired number of fingers that you want to enroll as **Duress Finger** from the drop-down list— **One** or **Two**.

Click **Enroll** to initiate the enrollment process.

To know more about enrolling credentials of workers, refer [“Enrollment”](#).

# Worker Profile- Group

The Group section enables to assign the Enterprise groups, Reporting group, Approval Policy, Leave group and Week off group to the worker. On selection of the **Group** tab, the following page is displayed:

Field	Value	Picklist
Organization *	1	Organization-1
Branch *	1	Branch-1
Department *	1	Department-1
Section *	1	Section-1
Category *	1	Category-1
Grade *	1	Grade-1
Designation *	1	Designation-1
Custom Group 1 *	1	Custom Group 1
Custom Group 2 *	1	Custom Group 2
Custom Group 3 *	1	Custom Group 3
Reporting Group	ID	Name
Approval Policy	ID	Name
Leave Group *	1	Leave Group-1
Week Off Group	ID	Name

This page will be available with the Time & Attendance add on module.

The default groups will be shown in the respective fields. Click on the picklist buttons and select the appropriate enterprise groups (Organization, Branch, Department, Section, Category, Grade, Designation) to assign the worker.

*The Enterprise Groups changed from here will be effective from the current date only. For the changed group to be effective from previous date, change the group from User module> Utilities> Change Group.*

*The picklist options that appear in each enterprise group will be as per the rights assigned to the SA. For details, refer to "Assigning Group-Wise Rights" under "System Accounts".*

**Reporting Group:** Select the group from the picklist to be assigned as reporting group for the worker. The In-charge of the selected group will be the in-charge of the worker. The different applications of worker will require authorization of the in-charge of the group.

To create the Reporting group; go to *Users module> Reporting In-charge> Reporting Group*.

**Approval Policy:** When Reporting group is assigned to the worker only then you can select the approval policy from the pick-list to assign to the worker.

The Approval policy is created from *Users module> Reporting In-charge> Approval Policy*.

The Approval Policy set in Enterprise Structure> Master page will be set as default approval policy when new worker is created. Eg: Suppose Organization 1 is assigned Approval Policy1; when new worker is added in Organization1 then by default Approval policy1 will be assigned to the worker.

**Leave Group:** Select the leave group from the pick-list to assign a group of leaves to the worker.

To assign the new leave to the worker, add the leave to the Leave group and assign the leave group to the worker.

**Week Off Group:** Select the week off group from the picklist to assign the configured week offs to the worker.

To create the Week Off group, go to Shifts and Schedule module > Week Off Group

Group			
Organization *	<input type="text" value="1"/>	<input type="text" value="Organization-1"/>	
Branch *	<input type="text" value="1"/>	<input type="text" value="Branch-1"/>	
Department *	<input type="text" value="1"/>	<input type="text" value="Department-1"/>	
Section *	<input type="text" value="1"/>	<input type="text" value="Section-1"/>	
Category *	<input type="text" value="1"/>	<input type="text" value="Category-1"/>	
Grade *	<input type="text" value="1"/>	<input type="text" value="Grade-1"/>	
Designation *	<input type="text" value="1"/>	<input type="text" value="Designation-1"/>	
Custom Group 1 *	<input type="text" value="1"/>	<input type="text" value="Custom Group 1"/>	
Custom Group 2 *	<input type="text" value="1"/>	<input type="text" value="Custom Group 2"/>	
Custom Group 3 *	<input type="text" value="1"/>	<input type="text" value="Custom Group 3"/>	
Reporting Group	<input type="text" value="5"/>	<input type="text" value="Factory Group"/>	
Approval Policy	<input type="text" value="4"/>	<input type="text" value="Both Final-2"/>	
Leave Group *	<input type="text" value="1"/>	<input type="text" value="Leave Group-1"/>	
Week Off Group	<input type="text" value="ID"/>	<input type="text" value="Name"/>	

If 'Shift Based Access' flag is enabled in User Configuration, then effect of Week Off group assigned to worker differently won't be effective.

Also if flag of 'Deny Access On Week Off' is enabled in Shift Schedule assigned to worker, then worker won't be granted access though worker did not have week off based on Week Off group.

# Worker Profile- T&A

This tab will be available only for the *Time and Attendance license* Here, the administrator can enter the attendance and the working policy related information for the worker:

The screenshot shows the 'Worker Profile' window for a worker named 'W1 Sunil Active'. The left sidebar contains a list of tabs: Profile, Devices, Credentials, Group, T&A (selected), Access Control, ESS, Cafeteria, CWM, Job Costing, Field Visit Management, Face Recognition, and Events. The main area is divided into two sections: 'Attendance' and 'Policy'. The 'Attendance' section includes fields for 'Enable Attendance Calculation' (checked), 'Restrict Half Day Considerations' (unchecked), 'Attendance Marking Type' (Normal), 'Max Punches To Be Considered' (Select), and 'Bypass Finger/Palm/Face For Attendance' (unchecked). The 'Policy' section includes fields for 'Max Short Leaves Allowed' (None), 'OT/C-OFF Eligibility' (None), 'Authorize C-OFF On' (WO, PH, WO/PH, FB, RD, Normal Day), 'Bus Route' (ID, Name), 'Enable Site Based Auto Tour Application' (unchecked), 'Tour' (Select), 'Base Site Selection' (ID, Name), and 'Auto Authorize Site Based Tour Application' (unchecked).

This section shows the configuration for 'Location Based Auto Tour Application'. It includes fields for 'Enable Location Based Auto Tour Application' (checked), 'Tour' (T2 - Tour2), 'Base Location Assignment' (Selected), 'Location' (Code, Name), 'Location Group' (ID, Name), 'Auto Authorize Location Based Tour Application' (checked), and 'Show Attendance Details On Device' (checked). A message box indicates '1 Location(s) are selected'.

*If the Attendance Policy for the worker is configured then assign that policy to the worker. There is no need to configure same parameters i.e. "Max Punches to be considered" and "Max Short Leaves Allowed" here. Still If configured, then parameters configured here will be applicable for the worker.*

## Attendance

In the **Attendance** section, configure the following parameters:

- **Enable Attendance Calculation** - This field is checked by default. uncheck this box if you want to disable attendance calculation for this worker. This option has to be enabled for configuring any of the other parameters on this page.

Attendance Policy

Enable Attendance Calculation	<input checked="" type="checkbox"/>
Restrict Half Day Considerations	<input type="checkbox"/> ⓘ
Attendance Marking Type	Normal ▼
Max Punches To Be Considered	Normal
Bypass Finger/Palm/Face For Attendance	First Punch Only
Max Short Leaves Allowed	Executive
OT/C-OFF Eligibility	Flexible
	Present

- **Restrict Half Day Considerations** - Enabling this option will restrict the half day markings and will consider only the full day attendance calculations.

*For Example:*

If the worker has completed only the half of the required working hours, and **Restrict Half Day Considerations** is enabled for him, then his attendance will be considered as full day absent and the half day consideration will be restricted.

- **Attendance Marking Type** - In case the attendance calculation is enabled then the worker needs to select the attendance marking type from the drop down list.

The following options are available:

- **Normal:** type will be default for all workers.
- **First Punch Only:** type workers need only entry punch at the start of the shift. In this case the system will assume that the shift end time is the last out Punch for the day. All other calculations remain the same as for normal type workers.
- **Executive:** type workers will be marked full day present if at least one punch (entry/exit) is available in the day. There will not be any late/early & overtime calculation like it is done for normal and single punch type workers.
- **Present:** category workers do not require any punch for them to be marked full day present. All workers belonging to this category are marked present by default.
- **Flexible:** category workers' working will be checked against required minimum working and if it is more than required, full day attendance will be marked. In this case the minimum working hours required in a day for full day attendance and half day attendance can also be defined for each worker as explained below.

- **Minimum Working Hours Required** - In the event of selecting the Flexible type for a worker the administrator can also specify the minimum working hours required in a day to be marked **Full Day** or **Half Day** present. Specify the hours in hh:mm format.

- **Max Punches to be Considered** - This parameter specifies the maximum entry/exit events per worker to be considered in a day for attendance calculation.
- Specify a value in this field if the value defined at the global level is to be overridden for this worker. The options available are 2, 4, 6, 8, 10, 12 and N-Punch. N-Punch allows unlimited number of punches in IN/OUT pair.

- **Bypass Finger/Palm/Face For Attendance** - On checking this option, the worker can punch in or out using any of the assigned credentials and the same will be considered for attendance calculation. On selection of this option, finger/palm/face identification is not required for marking attendance. The worker can use pin or card to mark the attendance.
- **Max Short Leaves Allowed** - This parameter specifies the maximum number of short leaves (personal hours) to be allowed to selected workers in an attendance period. This parameter is also defined at the global system configuration level and can be overridden for specific workers using this option. The administrator can specify a value of a maximum two digits in this field.
- **OT/C-OFF Eligibility:** This parameter enables the administrator to determine whether the overtime authorization for this worker is to be done in one of the following ways:

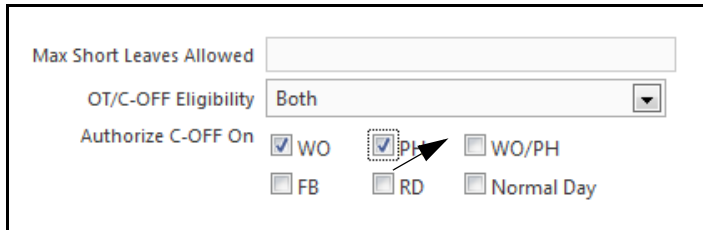

**None** - Extra work cannot be authorized as overtime or C-OFF for worker.

**Only Overtime** - Extra Work can only be authorized as overtime.

**Only C-OFF** - Extra Work can only be authorized as C-OFF.

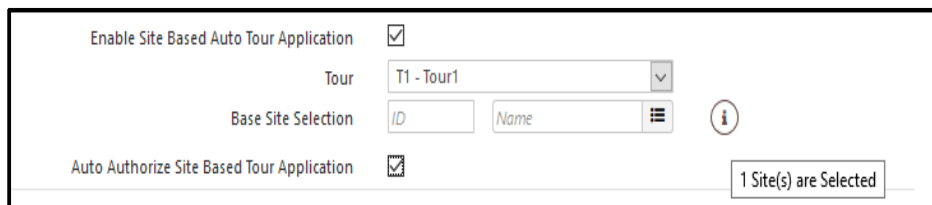

**Both** - Extra Work can be authorized both as overtime and C-OFF.

On selecting **Both**, worker can set the extra hours to be authorized as OT or C-OFF separately for Normal Day, WO, PH, WO/PH, FB and RD.

*If only Compensatory off is to be given to the worker, then you must select Only C-OFF option.*

- **Bus Route:** Click on the picklist and select the bus route to be assigned to the worker.
- **Enable Site Based Auto Tour Application:** Select this check box so that tour application will be automatically applied for a particular worker, if he punches from some site other than the Base Site.

- **Tour:** Select the tour application from the drop-down list which will be automatically applied.
- **Base Site Selection:** Select the base site to be assigned to the worker. You can select a particular site or can select all the sites.

To select particular sites, select the check boxes of the desired sites.

To select all the sites at once select the **Select All** check box. The sites on all the pages will be selected.

Click **OK**. Hover over the **Info**  icon. It displays the number of sites selected.

- **Auto Authorize Site Based Tour Application:** Select this check box to automatically authorize the tour application for a particular worker, if auto tour application feature is enabled.
- **Enable Location Based Auto Tour Application:** Select this check box so that tour application will be automatically applied for a particular worker, if he/she punches from some location other than the Base location.

If a worker goes for official activity to some location other than base location; then new location can be assigned to the worker and tour application will be automatically applied for that day when event is generated from the new location.

- **Tour:** Select the tour application from the drop-down list which will be automatically applied when worker goes to other location. The Tour application will be available in the drop-down only if it is added in the Leave Group assigned to the worker.
- **Base Location Assignment:** Select the base location to be assigned to the worker as **All** or **Selected**.

If you select **All**; all the locations configured in Location Master will be assigned to the worker. When new location is added to Location master then it will be automatically assigned to the worker.

If you select **Selected**; Location and Location Group will be enabled for the selection which is to be assigned to the worker.

- If you select **All**, all the locations configured in Location Master will be assigned to the user. When new location is added in the Location Master then it will be assigned to the user automatically.
- If you select **Selected**, you can assign Locations as well as Location Group/s to the user.
- **Location:** You can assign particular locations or assign all the locations at once.

Click the **Location** picklist. The **Picklist for Location** pop-up appears.

You can either select particular locations or can select all the location at once.

To select particular location, select the check boxes of the desired location.

The screenshot shows the 'Picklist For Location' dialog box. At the top, a green bar indicates 'Total Selected: 1 Records'. Below this is a search bar and a 'Show Selected' button. A 'Select All' checkbox is present and unchecked. The main table lists 14 records with columns 'Code' and 'Name'. The first record, 'RnDGPS' (RnD1 GPS), is selected with a blue checkmark. The other 13 records are not selected. At the bottom, it shows '1 - 10 of 14 records' and a pagination control with '1' selected. 'OK' and 'Cancel' buttons are at the bottom.

<input type="checkbox"/>	Code ▼	Name
<input checked="" type="checkbox"/>	RnDGPS	RnD1 GPS
<input type="checkbox"/>	RnD2GP	RnD2 GPS

- Click **OK**. Hover over the **Info**  icon. It displays the number of location groups selected.

You can see the example for Location Based Auto Tour in User module> T&A.

- Auto Authorize Location Based Tour Application:** Select this checkbox to automatically authorize the tour application for a particular worker, if auto tour application feature is enabled.
- Show Attendance Details on Device:** Select the checkbox to display the attendance summary of the worker on Vega and or FMX direct door. Hence the Vega/FMX direct doors assigned to the worker will display the current month's data (as per device time) when the worker is allowed access to the door.

See details in Device Configuration> Advanced > Settings (of Vega Door/ FMX Door).

## Policy

In the **Policy** section assign different Policies to the selected worker. This page will be available only with the **Time & Attendance** add on module.

Policy Name	ID	Assign Policy
Attendance Policy	1	Attendance Policy-1
Absentee Policy	1	Absentee Policy-1
Overtime Policy	1	OverTime Policy-1
Late-IN Policy	2	Late-In 2
Early-OUT Policy	1	Early Out Policy-1
C-OFF Policy	1	COFF Policy-1

The default policies will automatically be assigned to the new worker. It will be displayed in the respective fields as shown above.

To change the policies from current date, click the respective picklist and select the policy to be assigned to the worker. If the policies (other than Attendance Policy) are to be assigned from previous date, then go to *T&A > Utilities > Change Policy*.

*To configure the Policies go to T&A> Policies.*

# Worker Profile-Access Control

On selection of the **Access Control** tab, the following page is displayed:

The screenshot displays the 'Worker Profile' interface. On the left is a sidebar with a list of tabs: Profile, Devices, Credentials, Group, T&A, Access Control (highlighted), ESS, Cafeteria, and CWM. The main area is titled 'Worker Profile' and contains two sub-tabs: 'Basic' and 'Advance'. The 'Basic' tab is selected, showing the following configuration options:

- Bypass Finger:** A checkbox that is currently unchecked.
- Bypass Palm:** A checkbox that is currently unchecked.
- Access Validity:** A checkbox that is currently unchecked.
- Access Validity Date:** A date selection field with a calendar icon.
- Access Level:** A dropdown menu currently set to '8'.
- Shift Schedule:** A dropdown menu currently set to 'Schedule Group'.
- Start Shift:** A dropdown menu currently set to 'General Shift'.
- Holiday Schedule:** A dropdown menu currently set to 'Schedule 1'.
- Access Cluster Checking:** A checkbox that is currently unchecked.

## Basic

In the **Basic** section, the administrator can define access parameters for the selected worker. This tab offers the following sections for configuration:

**Bypass Finger** - This option can be enabled in the event of the Finger Print image not being in order and the system thus has problems identifying the worker. In such cases, the system administrator can disable the Finger Print check for the worker thus enabling the worker to gain access using either the assigned pin or card.

**Bypass Palm** - This option can be enabled in the event of the Palm Vein image not being in order and the system thus has problems identifying the worker. In such cases, the system administrator can disable the Palm vein check for the worker thus enabling the worker to gain access using either the assigned pin or card.

**Access Validity** - Enable this option if the worker credential is to be activated for a predefined period.

**Access Validity Date** - Specify the end date of the validity in this field.

**Access Level** - Specify the access level for which the Smart Identification feature will be applicable to the worker.

**Shift Schedule** - Assign a shift schedule to the selected worker from the dropdown list.

**Start Shift** - In case of multiple shifts in the schedule group, the starting shift needs to be selected from the drop down list.

**Holiday Schedule** - Select the Holiday schedule to be assigned to the worker from the drop down list.

**Access Cluster Checking** - Select this checkbox to enable checking for access cluster restrictions for the selected worker. It is available only with the Access Control add-on license.

## Advance

The **Advance** section is available only with the Access Control add-on module. Here, the administrator can define access parameters for the selected worker. The **Advance** page appears as follows:

ID	Name
1	AC1
2	AC2
3	AC3
4	AC4
5	AC5
6	AC6
7	AC7
8	AC8
9	AC9
10	AC10

**Enable Advance Access Control:** Check this box to enable the advance access control feature.

**Shift based Access:** This parameter allows the administrator to enable worker access based on the shift working time of the worker.

*In the event of not selecting the **Shift Based Access** option then the system will apply the **Default Access Settings** as defined on a Panel200 as the access settings for the worker.*

**Smart Access Route** - Select the Smart Access Route to be assigned to the worker from the Access Route picklist window.

**Maximum Route Level:** Select the route level up to which the worker is to be allowed access from the drop down list.

**Enable Elevator Access Control:** Check this box to enable the Elevator access control feature for the worker.

**Elevator Floor Group:** Click the picklist and select the Elevator floor group to be assigned to the worker. The worker can access the floors of the Elevators included in Elevator Floor Group.

The Elevator Floor group is created from Access Control> Elevator Access Control> Elevator floor group

*Certain parameters when configured for a specific worker may over-ride corresponding parameters pre-defined at the Global Policy level.*

**Access Rule List:** The table displays the Access Rule/s assigned to the worker.

# Worker Profile-ESS

The **ESS** tab is available only with the *ESS* module. This is used to enable and configure ESS account access for the selected worker. On selection of the **ESS** tab, the following page is displayed:

The screenshot displays the 'Worker Profile' window with the 'ESS' tab selected. The left sidebar contains a list of navigation options: Profile, Devices, Credentials, Group, T&A, Access Control, ESS (highlighted), Criteria, CWM, Job Costing, Field Visit Management, Face Recognition, Visitor Management, and Events. The main content area is titled 'Settings' and contains the following configuration sections:

- Enable Account:** ☒
- Edit Basic Details:** ☒
- Punch Marking Via ESS:** ☒
- ESS Role Rights:** 1 (Default Rights)
- Preferred Language:** English
- Login Via Active Directory:** ☐
  - Username: [Text Field]
  - Domain: [Text Field]
  - Default Domain: [Button]
- Auto Authorize IVEI Registration:** ☐
  - Mobile Identification Number: [Text Field]
- Punch Marking Via API:** ☒
  - Mark Punch As Per: Server Time Zone
- Auto-Punch Marking:** ☐
- Manual Punch Marking:** ☐
  - Face Mandatory for Punch: None
- APTA Face Anti-Spoofing:** ☐
  - Capture Photo: ☐
- Allow Offline Punch:** ☐
  - Location Mandatory for Punch: None
- Reason For Punching From Unassigned Location:** ☐
- Location Assignment:** All
  - Location: [Code: [Text Field], Name: [Text Field]]
  - Location Group: [ID: [Text Field], Name: [Text Field]]
- Allow Door Access Through API:** ☐
- PIN Authentication For Door Access:** ☐

## Settings

The **Settings** section under the **ESS** tab offers the following parameters for configuration:

**Enable Account** - Select this checkbox to enable ESS account access for the selected worker.

**Edit Basic Details** - Select this checkbox to enable the selected workers to edit basic details on their respective ESS accounts.

**Punch marking via ESS** - Select this checkbox to enable workers to mark their attendance punch manually from their respective ESS accounts.

**ESS Role Rights**- Select the Role Rights from the picklist to be assigned to the worker.

**Preferred Language**- Specifies the language preferred for the selected ESS Users as *English, Arabic, Spanish, Albanian, Turkish or Vietnamese*.

**Login via Active Directory** - Select this checkbox to enable the selected ESS user to login using his Active Directory credentials.

**User name** - Assign a user name to the selected ESS user for Active Directory login.

**Domain** - Specify the Active Directory domain name in this field for Active Directory login.

**Auto -Authorize IMEI Registration** -Select this checkbox to automatically authorize the user request through device with registered IMEI number in COSEC database. If the box is unchecked, the user request (attendance, leave application etc.) goes to the **IMEI Authorization** which can be then authorized by the administrator.

**Mobile Identification Number** - Specify the Mobile Identification Number which is the unique number of the mobile device from which the ESS application is to be used. This can consist of maximum 40 alphanumeric characters.

**Punch Marking Via API** - Select this checkbox to enable user to mark punches by firing API. Auto-Punch and Manual-Punch marking checkbox will be activated only if Punch marking via API is enabled.

**Mark Punch As Per-** Select the option of Time Zone which is to be applied for punch time (punch marked from API)

- **Server Time Zone-** The date- time of the punch will be as per the server time zone.
- **Local Time Zone-** The date-time of the punch will be as per the time zone of the place from where the punch is marked.

**Auto-Punch Marking** - Select this checkbox to enable the auto-attendance marking feature for the selected user from the COSEC APTA mobile application. On enabling this feature, if the user's current location matches any of the assigned locations; a punch will be marked automatically for the user from the mobile application.

Auto-Punch Marking	<input type="checkbox"/>	(i)
Manual Punch Marking	<input type="checkbox"/>	
Face Mandatory For Punch	None	(i)
Allow Offline Punch	<input type="checkbox"/>	
Location Mandatory For Punch	None	
Reason For Punching From Unassigned Location	<input type="checkbox"/>	
<b>Location Assignment</b>		
	All	
Location	Code	Name
Location Group	ID	Name
Allow Door Access Through API	<input type="checkbox"/>	
PIN Authentication For Door Access	<input type="checkbox"/>	(i)

**Manual Punch Marking** - Select this checkbox to enable manual punch marking from the COSEC APTA mobile application.

**Face Mandatory For Punch** - When Manual Punch Marking and Face Recognition feature is enabled for user then you can select the specific option for which face is to be made mandatory for the punch. The options are **Attendance, Access Control, Both** and **None**.

For Access Control and Both option; you must enable “Allow Door Access Through API” checkbox.

**APTA Face Anti-Spoofing** - When **Manual Punch Marking** is enabled and **Face Mandatory For Punch** is selected as — **Attendance, Access Control** or **Both** — then select **APTA Face Anti-Spoofing** checkbox to enable **Face Anti-Spoofing** feature via COSEC APTA Application to prevent false face verification by using a photo, video, mask or a different substitute for an unauthorized person's face.

**Allow Offline Punch** - This checkbox is activated only when “Punch marking via API” and “Manual Punch Marking” are enabled. This allows users to apply for offline punches.

In Mobile devices, when there is no connectivity between server and the Mobile device, the punches, with their timings can be stored through offline punch and send to server when connectivity is restored.

**Location Mandatory For Punch** - This field determines if information regarding the source location from where the punch has been marked should accompany a punch marking by user. Select None if location information should not accompany a punch. For *Manual Punch Marking*, select Any Location (locations need not be configured). For *Auto-Punch Marking* (auto-attendance feature), select Configured Locations Only (locations must be configured on “Location Master”).

**Reason For Punching From Unassigned Location:** This checkbox will be activated only when ‘Location Mandatory For Punch’ has either **None** or **Any Location** as values. By enabling this checkbox, the In-charge Users can know the reason for which the punch is made from unassigned location by the employee user.

**Location Assignment-** Select the desired option — **All**, **Selected** — for assigning location to user.

- If you select **All**; all the locations configured in Location Master will be assigned to the user. When new location is added to Location master then it will be automatically assigned to the user if “All” is selected.
- If you select **Selected**; Location and Location Group will be enabled for the selection which is to be assigned to the user.
- **Location:** Click the **Location** picklist. The **Picklist For Location** pop-up appears.

1 - 10 of 12 records

« < 1 2 > »

OK Cancel

Click **OK**. Hover over the **Info**  icon. It displays the number of location groups selected

*Locations can be configured from COSEC Web Application > Admin > System Configuration > Location Master.*

**Allow Door Access Through API-** Select this check-box to allow the access to device through API.

**PIN Authentication For Door Access-** Enable this check-box for Dual Authentication with PIN when Bluetooth or QR based access is used for Access control feature in COSEC APTA mobile application.

*Pin Authentication For Door Access can be enabled only when Allow Door Access Through API is enabled.*

# Worker Profile-Cafeteria

This **Cafeteria** tab is available only with the *Cafeteria* module. The Cafeteria tab displays the following page:

## Settings

**Enable Account** - Select this checkbox to enable Cafeteria account access for the selected worker.

**Enable Offline Transaction**- Select the desired option from the drop-down list for the Worker to perform the offline transaction

- Select **None**, if you do not want to allow transactions to be made by the Worker when the device is in offline mode.
- Select **Allow With Discount**, if you want to allow transactions with discount to be made by the Worker, when the device is in offline mode.
- Select **Allow Without Discount**, if you want to allow transactions without discount to be made by the Worker, when the device is in offline mode.

**Discount Level** - Select the appropriate discount level from the drop down list as shown.

Discount Level	None
Account Type	None Discount Level 1 Discount Level 2 Discount Level 3 Discount Level 4

**Account Type** - Specify the account type as **Pre-Paid** or **Post-Paid** by selecting from the drop down list.

#### ***Pre-paid Account***

- For **Pre-Paid** account type, specify whether the **Balance Management** should be **Device-based** or **Server-based**.
- When Balance Management is selected as **Server based**, then you can enable **Device-Server Balance Check**. This will allow Device to check Server-side balance before allowing transaction. For this, Device and Server must be connected.

#### ***Post-paid Account***

- For **Post-Paid** account type, enter the **Allowed Usage Per Month** based on which monthly dues for the worker can be calculated.

Enable Account	<input checked="" type="checkbox"/>	
Enable Offline Transaction	None	
Discount Level	None	
Account Type	Post-Paid	
Allowed Usage Per Month *	0.00	
Cafeteria Usage Policy	ID	Name

**Cafeteria Usage Policy**- Select the cafeteria usage policy to assign to the user based on which cafeteria transaction restrictions will be applied to the Worker.

# Worker Profile-CWM

This tab is available for configuration only for the *Contract Worker Management (CWM)* module worker when an existing worker is selected from the *Worker List*. This enables the administrator to assign Contractor, Work Order, Skills and PPE (Personal Protective Equipment) to the selected worker as well as add ID Proof and Address Proof.

The CWM tab for the worker is shown as below.

## Assignment

After the worker is added in the system from **profile** tab, the contractor and the work order is to be assigned to him from the **Assignment** tab of **CWM**.

For the assignment:

**Skill-** Select the skill from the picklist to be assigned to the worker.

**Contractor-** Select the contractor from the picklist under whom the worker is to be assigned.

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

**Work Order-** Select a work order from the picklist which shows the list of work orders of the selected contractor to be assigned to the worker.

**Assignment Period-** The work order assignment period is auto generated based on the work order selected. The induction levels grid appear as shown. The assignment period can be changed by clicking on Edit button and selecting the assignment period from calendar buttons.

**Assignment Status-** This is the auto generated field. When all the stages are approved, the status is marked as approved. If any of the stage is rejected, the status is marked as rejected.

**Approval Stage-** This is the auto generated field based on the work order selected.

Click on **Save** button to save the worker assignment. The worker profile will be saved and listed under **Worker List**.

An the grid with the assigned induction levels are shown as below. There are maximum seven stages of induction which needs to be approved before the worker is approved for the work order.

The screenshot shows the 'Worker Profile' window for CWM2 Mangesh Yadav (Active). The 'Assignment' tab is selected, displaying the following details:

- Skill: 3 (Electrician)
- Contractor: C101 (Samarth)
- Work Order: WO2 (Electrical Installation)
- Assignment Period: 31/08/2014 to 31/12/2014
- Assignment Status: Approved
- Approval Stage: 2 (Approval Stages-NonTechnical)

Below these details is a table of induction levels:

Level	Induction Level Name	Status	Detail
1	Personal Interview	Approved	(i)
2	Police Verification	Approved	(i)
3	Medical Checkup	Approved	(i)
4	Health Training	Approved	(i)

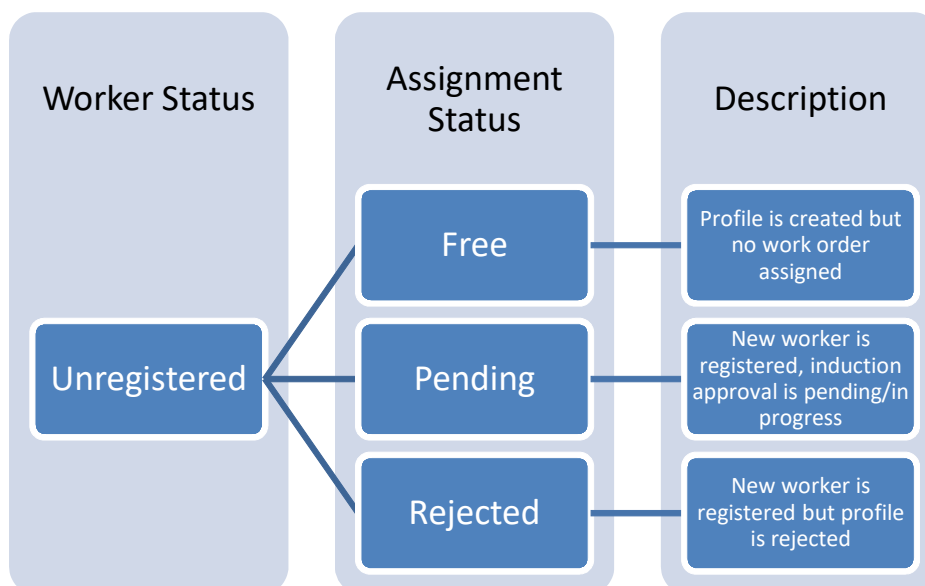

Click on **Details** (i) button to view the induction level details.

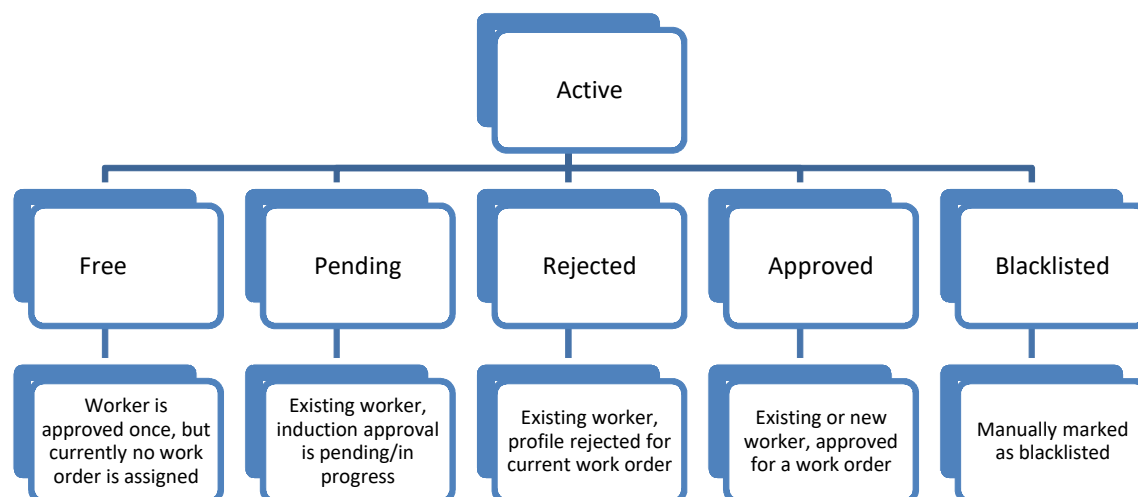

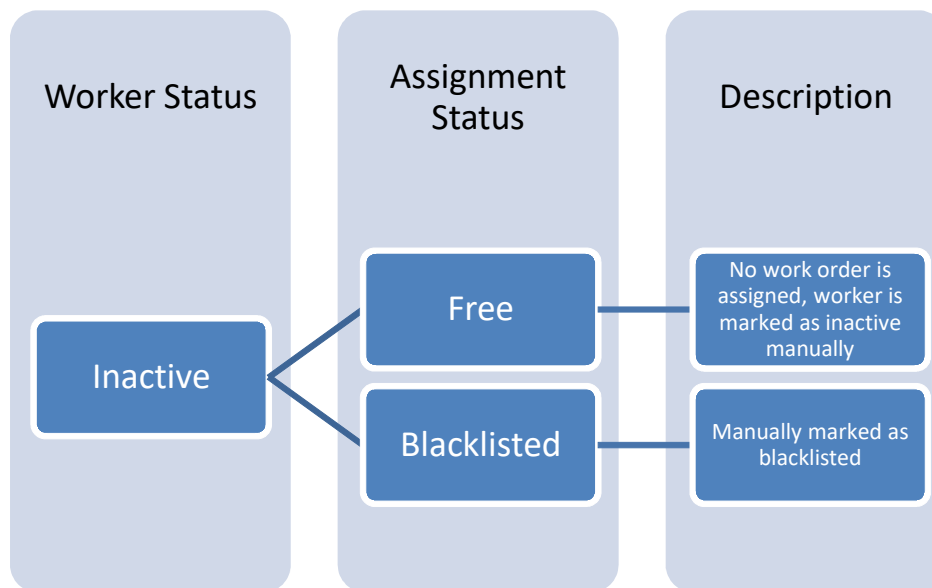

The 'Induction Level Detail' window shows the following information for level 1:

- Induction Level: 1 (Personal Interview)
- In-Charge: 1263 (AASHISH GANDHI)
- Status: Approved
- Remark: (empty field)

A 'Close' button is located at the bottom right.

The various worker status and the respective assignment status is shown in the below figures:

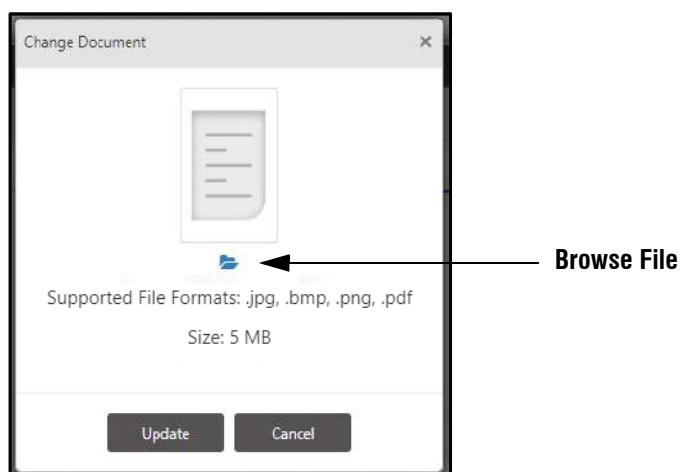

## Other Details

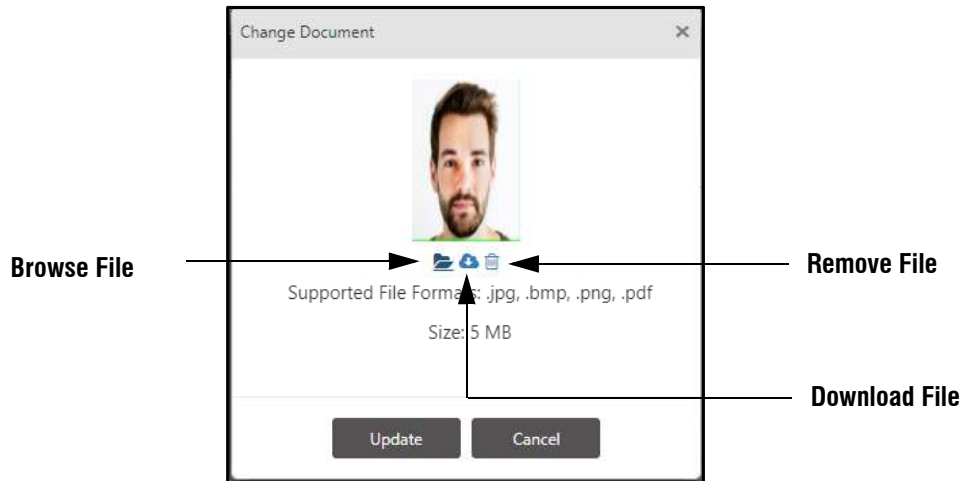

ID	Name
1	Helmet
2	Safety Shoes

**ID Proof-** Specify the name of the ID proof and upload the document. You can upload the documents by clicking **Upload**  button. Then **Change Document** pop-up appears as shown below.

Click **Browse File**  .

To upload, select the desired file as per the supported formats and size (.jpg, .bmp, .png, pdf) from your local PC.

After uploading the file, if you wish to upload a different file instead of the current uploaded file, click **Browse File**  again and select the desired file from your local PC. The previously uploaded file will get replaced with the new file.

To download the uploaded file, click **Download File** .

To remove the uploaded file, click **Remove File** .

Then click **Update**.

The document will be uploaded and can be previewed by clicking on **Preview**  button.

**Address Proof-** Specify the name of the Address proof and upload or change the document similar to ID proof.

The documents can be deleted by clicking **delete**  button.

The documents can be viewed by clicking Preview  button.

**PPE (Personal Protective Equipment)-** You can select particular PPE or can select all the PPE at once.

- Click the **PPE** picklist. The **Picklist For PPE** appears.

Picklist For PPE

[Show Selected](#)

☐ Select All

<input type="checkbox"/>	ID ▲	Name
<input type="checkbox"/>	1	PE1
<input type="checkbox"/>	2	PE2

OK Cancel

- To select particular PPE, select the check boxes of the desired PPE.

OR

- To select all the PPE, select the **Select All** check box. The PPE on all the pages will be selected.

The selected PPE appear in the grid.

You can delete the desired PPE. To do so, click **Delete** of the respective PPE.

Click **Save** to save the details.

# Worker Profile-Job Costing

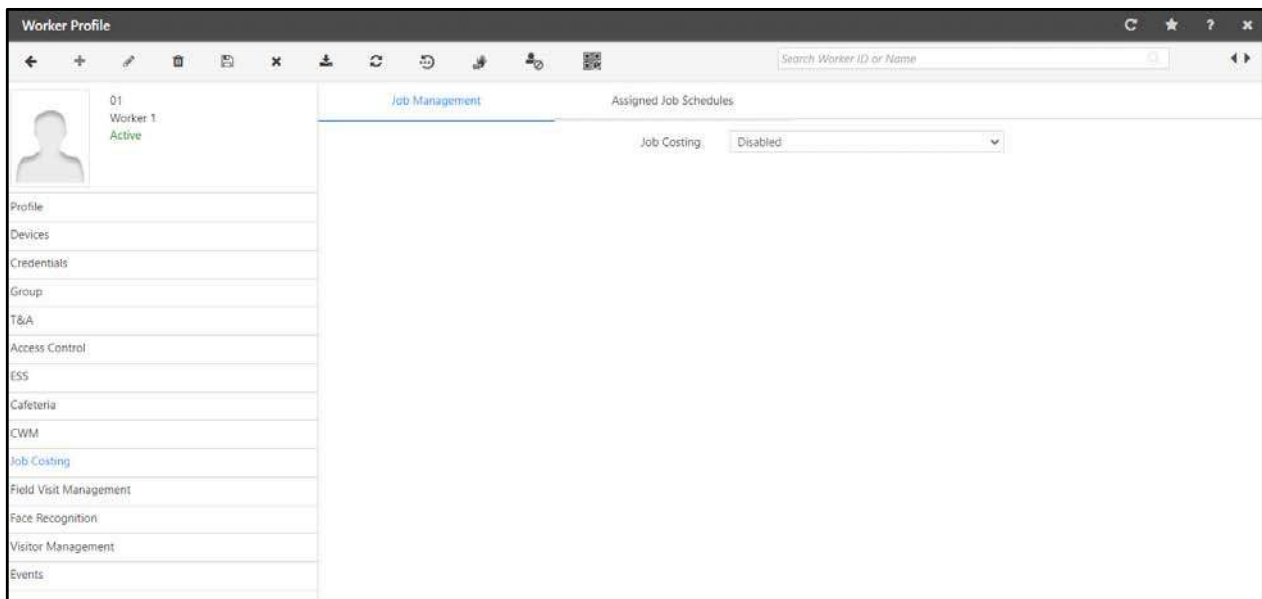

There are two tabs displayed namely:

- “Job Management”
- “Assigned Job Schedules”

## Job Management

To assign jobs to the worker,

- Click **Contract Worker Management > Workers > Worker Profile > Job Costing > Job Management**.

- **Job Costing:** Select the option **Enabled** from the drop down list to enable Job Costing feature for the worker.
- **Device based Job Assignment:** Select this check box to assign jobs to the worker based on the devices assigned to the worker.

If Job Costing is enabled and Device Based Job Assignment is selected, then the it will work in mixed mode.

When this check box is enabled, then the system will check for the Jobs configured on the assigned Device only and not to the workers. In this case worker can punch in the assigned Default Job or is displayed a list of jobs on the device display from which they can select the desired Job.They can also select few additional options like 'Continue Current Job' and 'Start Default Job'. For more details, refer to Device Configuration > Job Costing of the desired device.

If this check box is disabled, then the system will check for the Jobs assigned to the worker. For details refer to “Default Jobs”.

## Default Jobs

*Jobs are created from **Job Processing and Costing module > Project Management> Job**.*

Jobs can be assigned to the worker manually or via Job Scheduler.

- To assign jobs manually, refer to [“Manual Job Assignment”](#).
- To assign jobs via Job Scheduler, refer to [“Job Scheduler”](#).

*Default Jobs and Job Schedulers assigned from Enterprise Structure Module > Enterprise Groups > Association Mapping > Job Costing will appear here when the enterprise group is assigned to the worker.*

*Once the Job Scheduler assignment is done and If Job Costing is disabled and is enabled again, then all the Job Schedulers assigned to the user will be revoked. You need to re-assign the Job Schedulers to the user from the [“Job Scheduler”](#) page again.*

*Jobs assigned via Job Schedulers cannot be deleted. However, Job Schedulers assigned to workers can be deleted/changed. If jobs have already been assigned using Job Schedulers and then the Job Scheduler is deleted or the Enterprise Group assigned to the worker is changed, the jobs already assigned will not be deleted. However, new jobs will not be assigned to workers using the same Job Scheduler. New jobs will be assigned to the worker via the new Job Scheduler assigned to the workers via change of Enterprise Group.*

*Enterprise Group - Organization 1, has Job Scheduler J1 and J2*

*Enterprise Group - Organization 2, has Job Scheduler J3 and J4*

*Enterprise Group - Organization 3, has no Job Scheduler*

- *If the Enterprise Group of the user is Organization 1, then Job Schedulers J1 and J2 will be assigned to the user.*
- *If you change the Enterprise Group of the user to Organization 2, then Job Schedulers J3 and J4 will be assigned to the user and J1/J2 will be removed.*
- *If you change the Enterprise Group of the user to Organization 3, as there are no Job Schedulers in Organization 3, the assigned Job Schedulers J3 and J4 will be retained.*

The Default Jobs will display all the jobs assigned manually or via Job Scheduler.

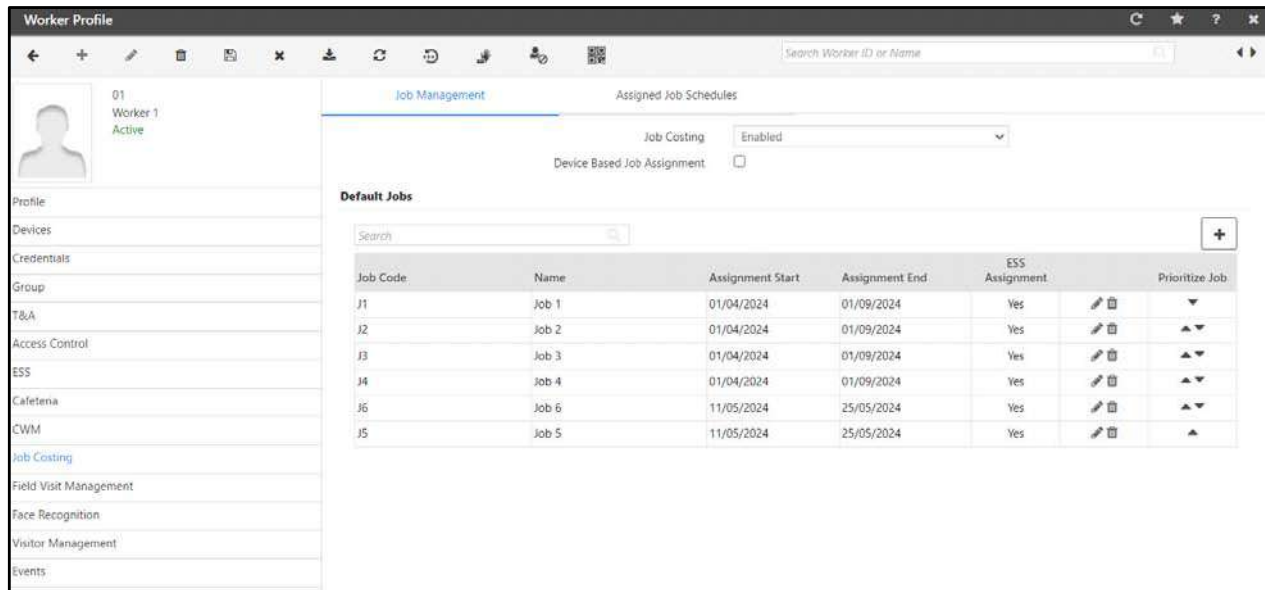

If you have added jobs manually and then run the Job Scheduler, in such cases, the jobs assigned via Job Scheduler will appear above manually assigned jobs in the same sequence as configured in the Job Scheduler.

Let us understand this with the help of an example,

Jobs assigned manually — J5 and J6.

Jobs assigned via Job Scheduler — J1, J2, J3 and J4.

Once the Job Scheduler is run, the jobs will appear under Default Jobs as shown below:

You can change the priority manually, if required.

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If there are overlapping dates in multiple jobs, then by default, the workers punch will be marked in the job with the highest priority. When Jobs are assigned via Job Scheduler then the Assignment Start / End Date will be the Start/ End Date of the Job as configured in the Job Scheduler. The ESS Assignment check box for the jobs assigned via Job Scheduler will be selected by default.

*If a Job is assigned manually to a worker and the same is assigned again via Job Scheduler, following scenarios are possible:*

- *Jobs may have different Job Codes but they have the same Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes but they have a different Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes and they have the same Start/End Date, then the system will not create a new job.*

## Manual Job Assignment

Multiple default jobs can be assigned with overlapping Assignment Date Ranges. You can also set the priority of the assigned jobs if required. If you have jobs with overlapping dates and you have set their priority as per your requirement, then the first job will be considered as the default job.

The screenshot shows the 'Worker Profile' window for 'Worker 2' (Active). The left sidebar contains a list of profile categories: Profile, Devices, Credentials, Group, T&A, Access Control, ESS, Cafeteria, CWM, Job Costing (highlighted), Field Visit Management, Face Recognition, Visitor Management, and Events. The main area is titled 'Job Management' and 'Assigned Job Schedules'. It includes a 'Job Costing' dropdown set to 'Enabled' and a 'Device Based Job Assignment' checkbox. Below this is a 'Default Jobs' section with a search bar and a table header. The table header has columns: Job Code, Name, Assignment Start, Assignment End, ESS Assignment, and Prioritize Job. The table currently displays 'No Data'. An 'Add' button (+) is located at the top right of the table area.

- Click **Add** . Click the picklist under **Job Code/Name** to select the desired Jobs.

The **Picklist For Job** appears.

The 'Picklist For Job' dialog box is shown. It has a search bar, a filter dropdown set to 'Active', and a table of jobs. The table has columns: Job Code, Name, Start, and End. The jobs listed are J1 through J7. A 'Cancel' button is at the bottom.

Job Code	Name	Start	End
J1	Job 1	01/04/2024	01/09/2024
J2	Job 2	01/04/2024	01/09/2024
J3	Job 3	01/04/2024	01/09/2024
J4	Job 4	01/04/2024	01/09/2024
J5	Job 5	11/05/2024	25/05/2024
J6	Job 6	11/05/2024	25/05/2024
J7	Job 7	01/04/2024	01/09/2024

By default, all the **Active** jobs are displayed. Click **Active** and select the desired option — **All**, **Active**, **Expired** — to filter the jobs. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

- **Assignment Start and Assignment End:** The selected Jobs Start and End dates are displayed. You can change the Assignment Start and Assignment End dates of the job if required. To do so, click the calendar and select the desired start and end dates.
- **ESS Assignment:** The check box is enabled by default. This Job will be displayed in the list of Jobs assigned to the user through the ESS login. If you do not want this job to be displayed, clear the check box.

The ESS Assignment column will not be displayed if the **Show All Jobs while Punching** check box is enabled. For details, refer to [“Job Costing”](#) in [“Defining Global Policies”](#).

The Jobs assigned here which are In-progress, Assigned and have the ESS Assignment check box enabled will be displayed in the **ESS login > Job** drop-down while Marking a Punch.

Job Code	Name	Assignment Start	Assignment End	ESS Assignment	Prioritize Job
J1	Job 1	01/04/2024	01/09/2024	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- Click **OK**  to save the details.

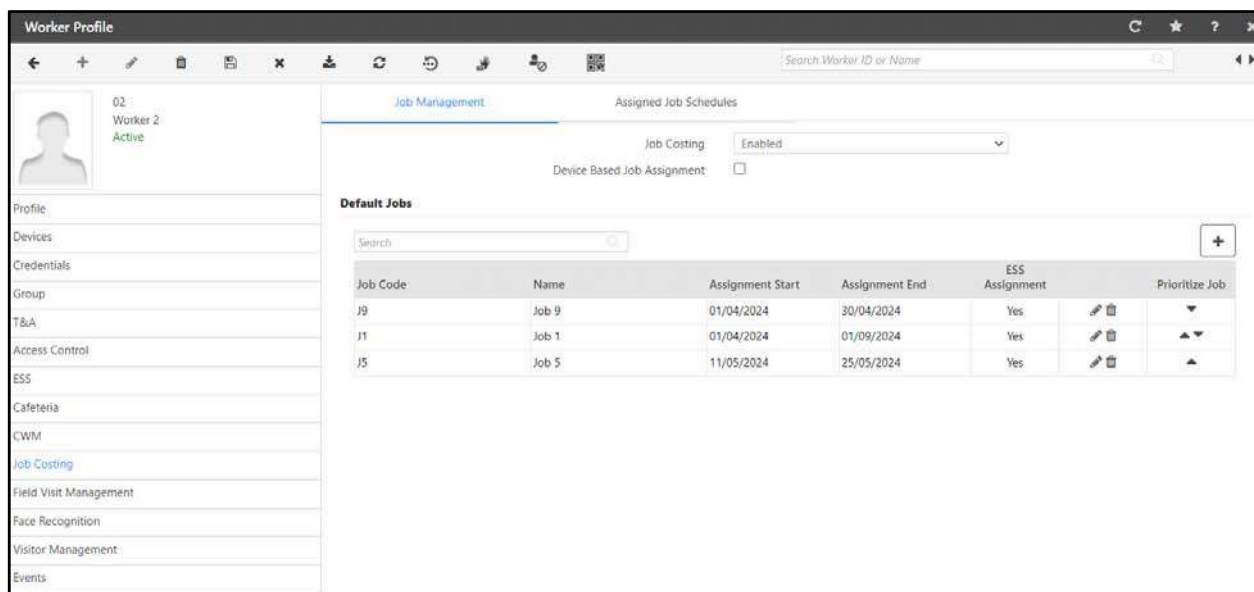

The **Default Jobs** grid will consist of all the jobs, that is, expired, in-progress as well as assigned.

It is recommended to set job priority only if overlapping dates are assigned to the jobs.

If a new job is assigned, by default it will appear at the highest priority. You can change the priority later, if required.

You can set the priority of the jobs as per your requirement. To do so,

- Under **Prioritize Job**, click the **Up** arrow button to move a job upwards in the list. Similarly, click the **Down** arrow button to move a job downwards in the list.

If you have overlapping dates assigned to Jobs, in such scenarios there will be multiple Jobs in which the punches are possible.

To resolve this set the Job with highest priority at the first position, so that when the system searches for the Job as per the date, the punch will be marked in the first Job in which the date is detected.

Let us understand this with the help of an example.

#### Example:

Worker 1 has been assigned the following jobs:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J1	Job 1	01/10/2023	10/10/2023	1
J2	Job 2	09/10/2023	15/10/2023	2
J3	Job 3	17/10/2023	25/10/2023	3
J4	Job 4	25/10/2023	31/10/2023	4

Now, Worker 1 changes the priority of the assigned jobs as follows:

Job Code	Job Name	Assignment Start	Assignment End	Prioritize Job
J2	Job 2	09/10/2023	15/10/2023	1
J1	Job 1	01/10/2023	10/10/2023	2
J4	Job 4	25/10/2023	31/10/2023	3
J3	Job 3	17/10/2023	25/10/2023	4

When Worker 1 will punch on 09/10/2023, the punch will be marked against Job 2 as it has been set at priority number 1. Similarly, when Worker 1 will punch on 25/10/2023, the punch will be marked against Job 4 as it is at a higher priority than Job 3.

*Make sure that the assigned jobs are prioritized correctly to ensure that the punches are in place.*

*Worker configuration will be resent to devices only when there is some change in Job Assignment.*

*When new worker is added or existing worker's Enterprise group is changed. Then if worker is assigned to the Enterprise group with which Job costing parameters are associated, then the configured job costing parameters will be reflected in Worker Configuration > Job Costing Tab.*

## Assigned Job Schedules

To view the Job Schedulers assigned to the worker,

- Click **Job Costing > Assigned Job Schedules**.

Scheduler ID	Scheduler Name	Scheduler Start Date	Scheduler End Date
1	Job Scheduler 1	13/05/2024	30/05/2024

- All the Job Schedulers assigned to the worker from the “[Job Scheduler](#)” and “[Association Mapping](#)” of the Enterprise Groups appear here. You can view the Scheduler Start and End Date from this page.

*Jobs assigned via Job Schedulers cannot be deleted. However, Job Schedulers assigned to workers can be deleted/changed. If jobs have already been assigned using Job Schedulers and then the Job Scheduler is deleted or the Enterprise Group assigned to the worker is changed, the jobs already assigned will not be deleted. However, new jobs will not be assigned to workers using the same Job Scheduler. New jobs will be assigned to the worker via the new Job Scheduler assigned to the workers via change of Enterprise Group.*

# Worker Profile-Field Visit Management

---

On selecting Field Visit Management tab, the following page appears.

The screenshot shows a web application window titled "Worker Profile". The interface is divided into a left sidebar and a main content area. The sidebar contains a list of tabs: Profile, Devices, Credentials, T&A, Access Control, ESS, Cafeteria, CWM, Job Costing, and Field Visit Management (which is highlighted in blue). Above the tabs is a section for worker information, including a placeholder for a profile picture and fields for ID, Name, and Active/Inactive status. The main content area is titled "Settings" and contains a single checkbox labeled "Enable FVM".

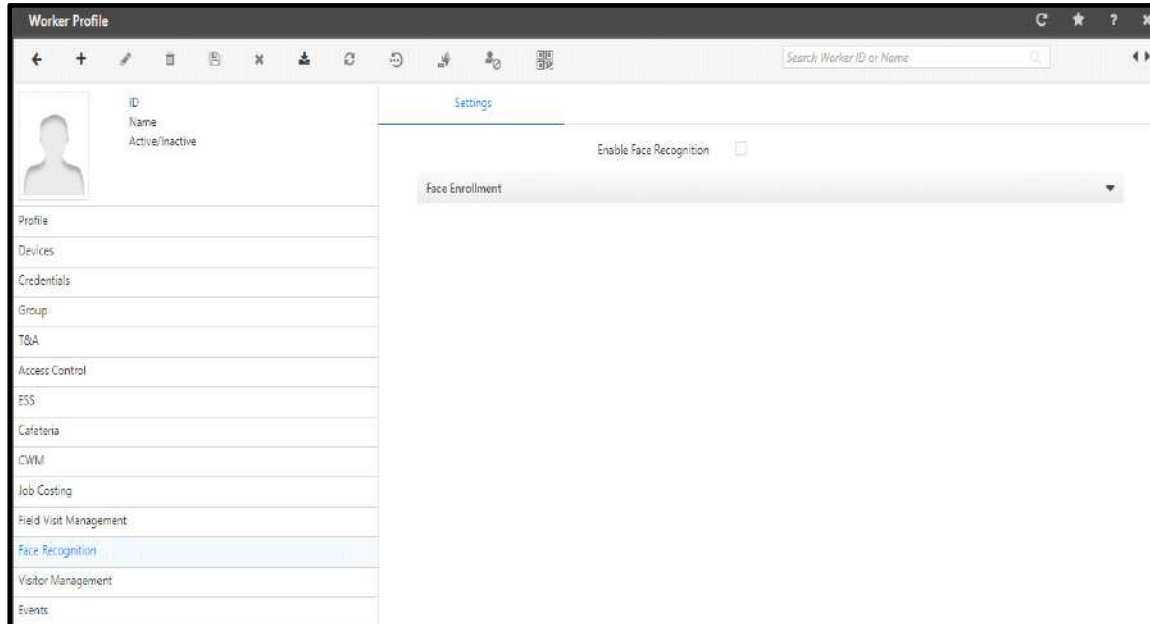

In this module, you can assign schedules to the workers and keep a track of their activities, while on site and also check if the assigned tasks are being fulfilled correctly or not.

In the **Settings** tab, check the **Enable FVM** box to consider the selected worker as FVM user.

# Worker Profile-Face Recognition

In this feature, worker can access the device or mark the attendance by verifying his Face as the credential. On selecting Face Recognition tab, the following page appears.

## Settings

**Enable Face Recognition:** Check this box to enable Face Recognition feature for the worker.

1. Create a Worker. Enable Face Recognition feature.
2. Assign Vega, FMX, ARGO or ARGO FACE door to the user.
3. Connect the FR module and IP Camera to the network. Ensure that COSEC Device, FR Module and IP Camera are in the same subnet.

If you are connecting the ARGO FACE device, it has an in-built FR Module and camera.

4. Configure IP camera to be used for capturing face credential. Select the Capturing device as IP Camera in Video Surveillance section of Device Configuration and configure the snapshot URL.
5. Configure FR settings on Device. Go to Identification Server of Device Configuration. Enable FR and select the Face capturing mode. Select the FR mode as Local/Server-Assisted. Enter the FR Server Address as the IP address of FR module. Enter FR Server Port as 12000 which is default port for Identification Service.
6. Now Tap on Device screen. The motion streaming of camera will appear on COSEC Device.
7. Now Enroll the worker for Face credential using Enroll Utility.
8. When you show your face in front of camera, the camera will capture your face and identify with the enrolled template. If it matches, you will be allowed access on the door.

## Face Enrollment via Web

This functionality enables the SA to enroll face/s against a worker. Face Enrollment can be done by either directly uploading the images of the desired worker or by capturing and then uploading the images.

*To use the capture functionality for images, make sure you have a secure login, that is you have logged in using HTTPS.*

Using Face Enrollment you can:

- Replace existing images (if any) with new images
- Add new images
- Remove enrolled images

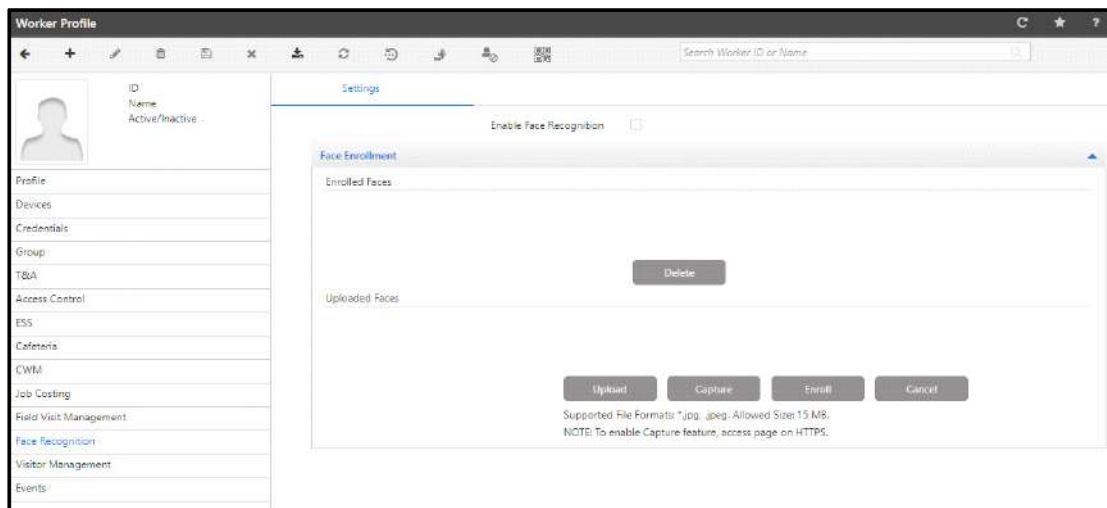

Click the **Face Enrollment** collapsible panel in order to enroll faces against a worker.

*For Face Enrollment via Web feature to work, ensure that Identification Service is defined in COSEC Admin > License and Service. For more details refer Admin Management Portal User Manual.*

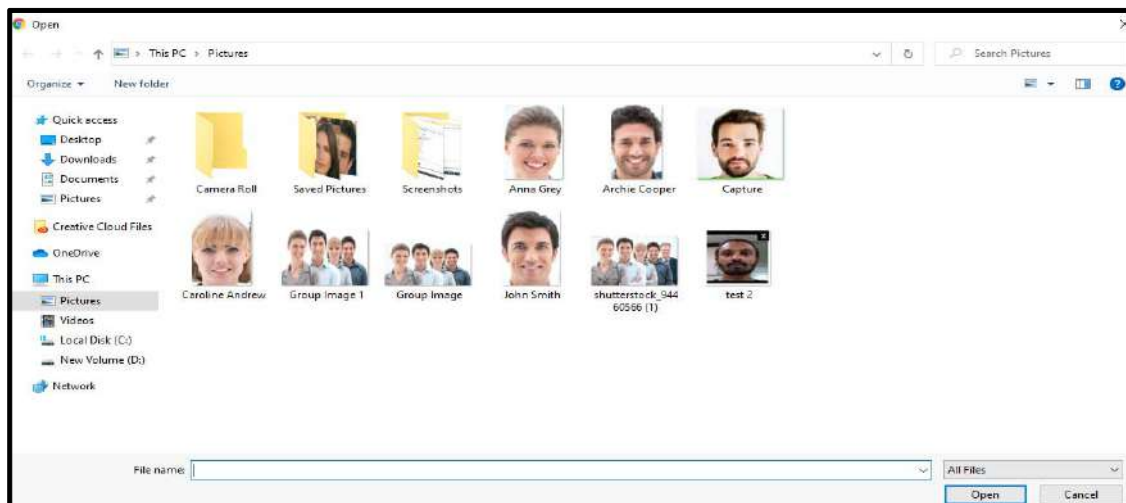

To Upload the images directly, refer **“Upload”**

To Capture and then upload the images, refer **“Capture”**

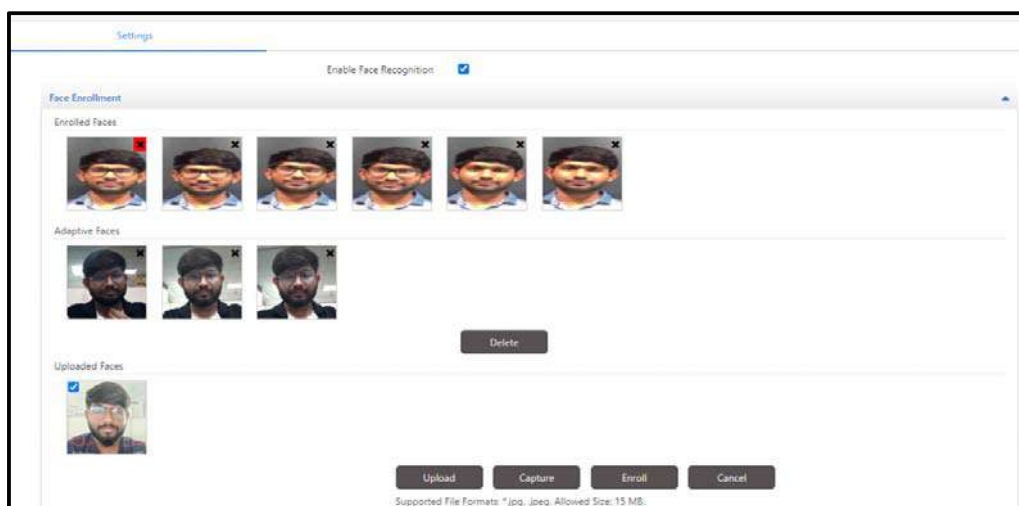

### Upload

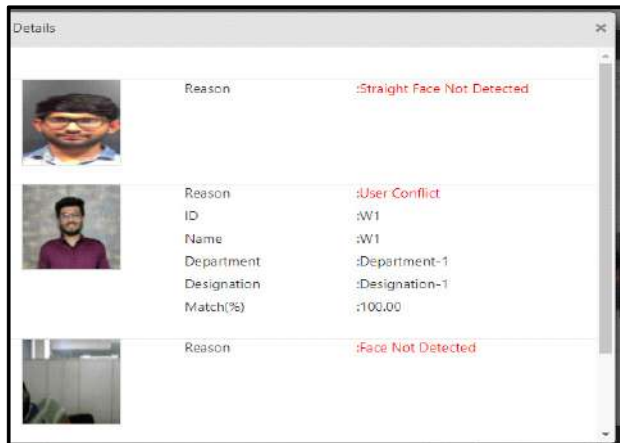

- In order to upload face/s against a worker click **Upload** in **Face Enrollment**.
- Browse to select the desired file from your local PC wherein the image is stored.
- Make sure the selected image is in the .jpg or .jpeg format.
- Click **Open**.

- All the faces that are uploaded will be reflected in **Uploaded Faces** Grid.
- Select the face/s that you want to enroll by clicking the checkbox provided on the top left corner of the uploaded face.

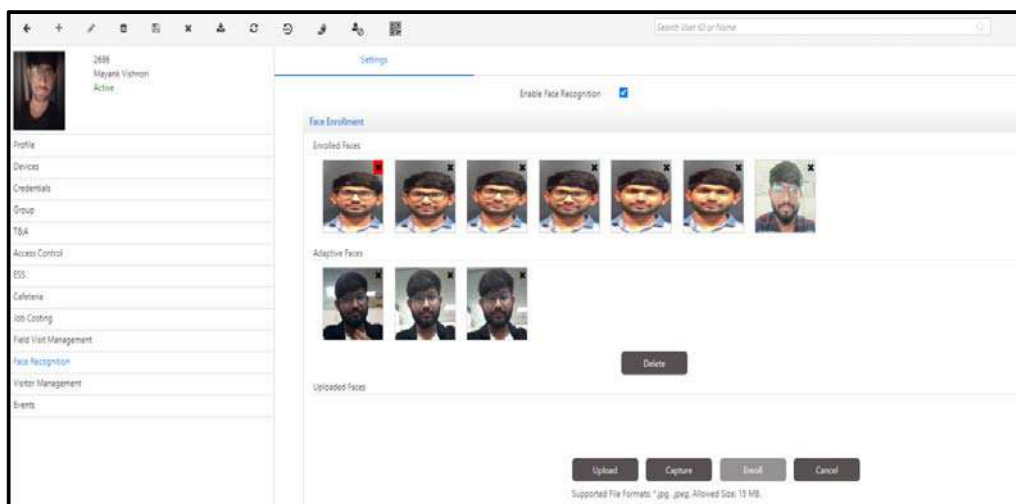

- While uploading a face if any error occurs, the **Info** icon will be displayed.
- On clicking the **Info** icon a pop up with the discarded face/s will be displayed along with the possible reason for discarding the image.

Let us understand this with the help of an example, you have uploaded 5 faces out of which 3 got discarded and then again you uploaded 5 more faces out of which 2 got discarded then the pop-up will display all the 5 discarded faces with the probable reasons for discarding.

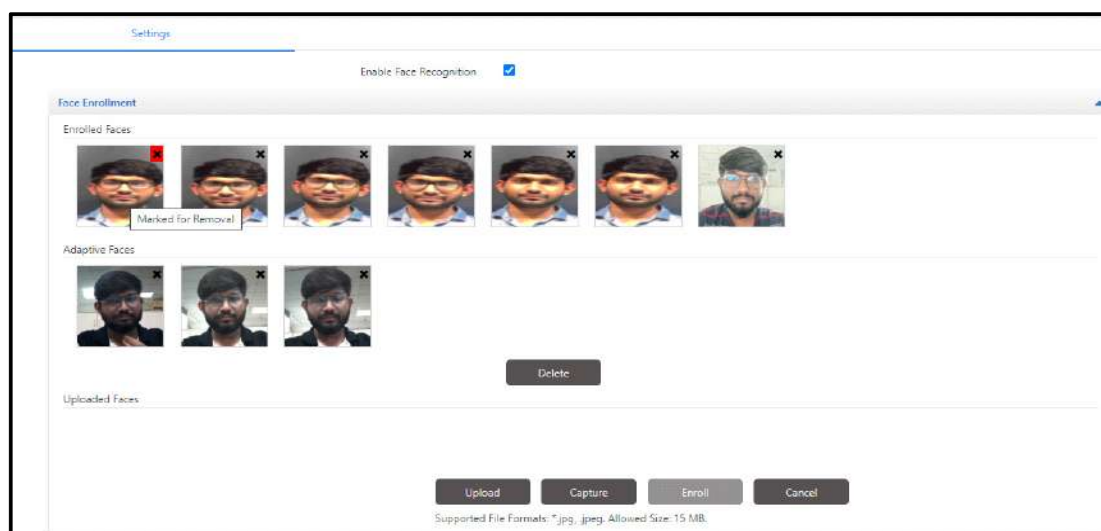

- To add the new image as the enrolled face,
- Select the check box of the desired image under **Uploaded Faces**.
- Click **Enroll** in order to enroll the selected face/s. The selected face/s will be reflected in the **Enrolled Faces** grid.

- To replace an existing enrolled faces,
- Click on the desired image, the red cross icon appears on the top right corner of the face under **Enrolled Faces**.
- Select the check box of the desired image under Uploaded Faces.
- Click **Enroll**.

- To remove an existing enrolled faces,
  - Click on the desired image, the red cross icon appears on the top right corner of the face under **Enrolled Faces**.
  - Click **Delete**.

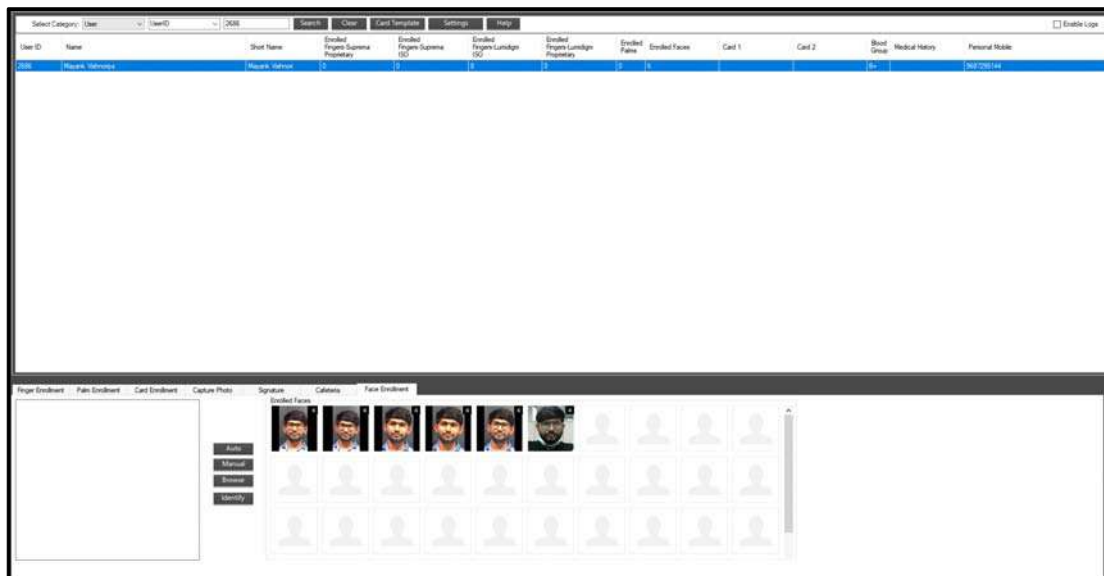

*Make sure the number of faces you consider for enrollment is lesser than or equal to the defined value in **Maximum No. of Faces** in Admin >System configuration> Global Policy >User.*

- If there is an occurrence of an adaptive face, it will be displayed under the **Adaptive Faces** grid, a sub-section under **Enrolled Faces** grid. If you desire, you may delete the image. To do so, follow the same instructions as mentioned above.
- Click the Save  in order to save all the enrolled faces. The faces will be successfully saved and considered for face recognition.

*The enrolled faces of the user will be successfully reflected in the Enroll Utility under **Face Enrollment**. Refer the COSEC Enroll User Manual for more details.*

## Capture

- In order to capture face/s, click **Capture** in Face Enrollment.
- The **Capture** pop-up will be displayed.

- Set the camera in a desired angle and capture the image.

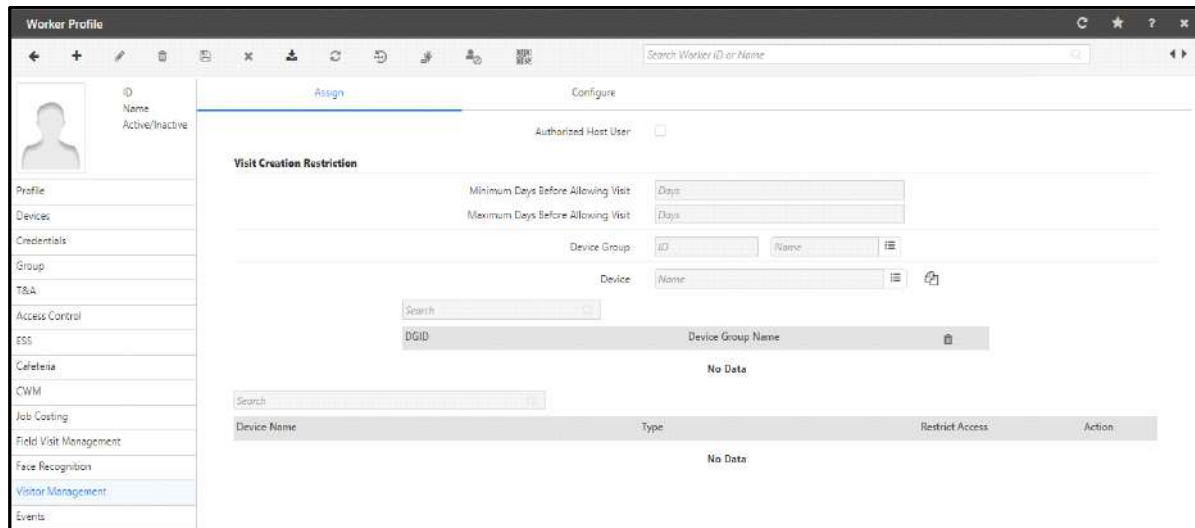

- If the image captured is appropriate click the icon . Now, you can again capture a new image if required.
- If the image clicked is not appropriate then click the icon  and a retake will be considered.

- After completing the capture, click **OK** to upload the image. Click **Cancel** if you desire to restart the **Capture**.
- The uploaded faces will be reflected in **Uploaded Faces** Grid.
- Now, refer to [“Upload”](#) for further instructions.

# Worker Profile-Visitor Management

In this page you can authorize a host user, restrict the visitor pre-registration on the basis of no.of days and assign device groups and devices to the visitors.

## Assign

- **Authorized Host User:** Select the checkbox to authorize a Host user. Once you authorize the host, the host user will be added in the list of Authorized Host Users in *Visitor Management > Utilities > Authorized Host Users*. For more information, refer [“Authorized Host Users”](#).

## Visit Creation Restriction

- **Minimum Days before Allowing Creation:** The minimum days configured in *Admin > System Configuration > Global Policy > Visitor Management* will be displayed here as the default value.

You can change the number of minimum days as per your requirement.

For more details, refer [“Visit Creation Restriction”](#) in *Admin > System Configuration > Global Policy > Visitor Management*.

- **Maximum Days Before Allowing Creation:** The maximum days configured in *Admin > System Configuration > Global Policy > Visitor Management* will be displayed here as the default value.

You can change the number of maximum days as per your requirement.

For more details, refer [“Visit Creation Restriction”](#) in *Admin > System Configuration > Global Policy > Visitor Management*.

You can assign Device Groups as well as Devices to the workers.

## Device Group

Click the **Device Group** picklist. The **Picklist for Device Group** pop-up appears.

The screenshot shows a window titled "Picklist For Device Group". At the top, a green bar displays "Total Selected: 0 Records". Below this is a search bar with the placeholder "Search" and a "Show Selected" button. A "Select All" checkbox is present. The main area contains a table with columns "DGID", "Name", and a checkbox. The table lists 12 records, with the first 10 visible. The first two records, "1 ACTA Devices" and "2 RnD1Visitor", are selected. The bottom of the window shows "1 - 10 of 12 records" and a pagination control with "1" selected. At the bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	DGID ▲	Name
<input checked="" type="checkbox"/>	1	ACTA Devices
<input checked="" type="checkbox"/>	2	RnD1Visitor
<input type="checkbox"/>	3	Device Group 3
<input type="checkbox"/>	4	Device Group 4
<input type="checkbox"/>	5	Device Group 5
<input type="checkbox"/>	6	Device Group 6
<input type="checkbox"/>	7	Device Group 7
<input type="checkbox"/>	8	Device Group 8
<input type="checkbox"/>	9	Device Group 9
<input type="checkbox"/>	10	Device Group 10

You can either select particular device group or can select all the device groups at once.

To select particular device group, select the check boxes of the desired device groups.

This screenshot shows the same "Picklist For Device Group" window, but now with "Total Selected: 2 Records". The checkboxes for the first two records, "1 ACTA Devices" and "2 RnD1Visitor", are checked. The rest of the interface, including the search bar, "Select All" checkbox, table, pagination, and "OK/Cancel" buttons, remains the same.

<input type="checkbox"/>	DGID ▲	Name
<input checked="" type="checkbox"/>	1	ACTA Devices
<input checked="" type="checkbox"/>	2	RnD1Visitor
<input type="checkbox"/>	3	Device Group 3

You can also delete the desired device group. To do so, click **Delete**  of the respective device group.

Click **Save**.

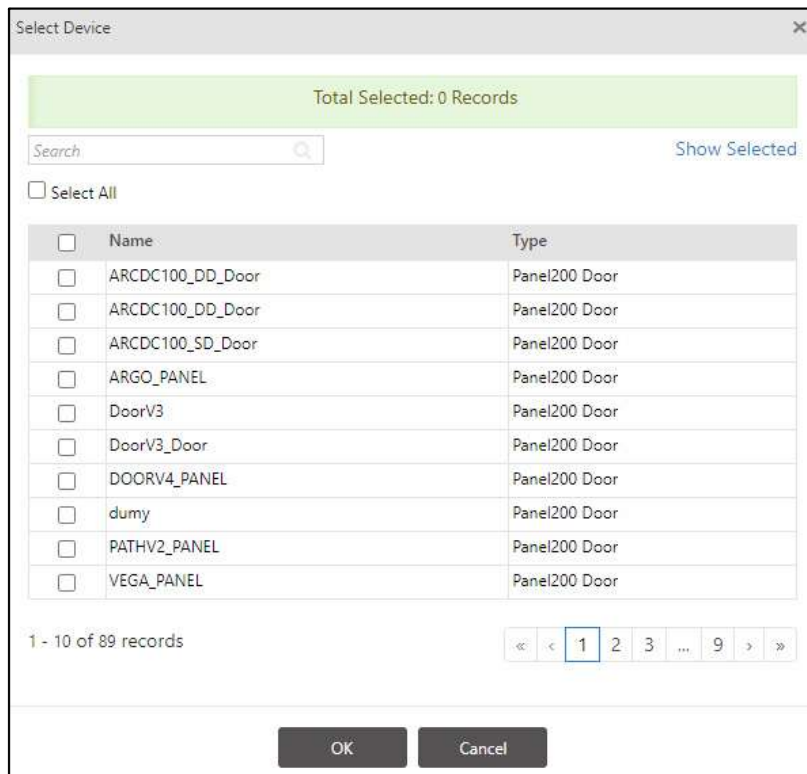

The devices that belong to the selected group/s appear in the grid.

Click **Edit**. You can un-assign the particular device from the assigned Device Group by clicking on  icon. Click on the  icon to assign the device again.

Select the corresponding **Restrict Access** check box to enable the restrictions for the selected worker on the selected device.

## Device

Click the **Device** picklist. The picklist for **Select Device** pop-up appears.

The 'Select Device' pop-up window displays a table of available devices. At the top, a green bar indicates 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is located above the table. The table lists 10 devices, all of type 'Panel200 Door'. At the bottom, there is a pagination control showing '1 - 10 of 89 records' and a set of navigation buttons. The 'OK' and 'Cancel' buttons are at the very bottom.

<input type="checkbox"/>	Name	Type
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door
<input type="checkbox"/>	ARCDC100_DD_Door	Panel200 Door

# Worker Profile-Events

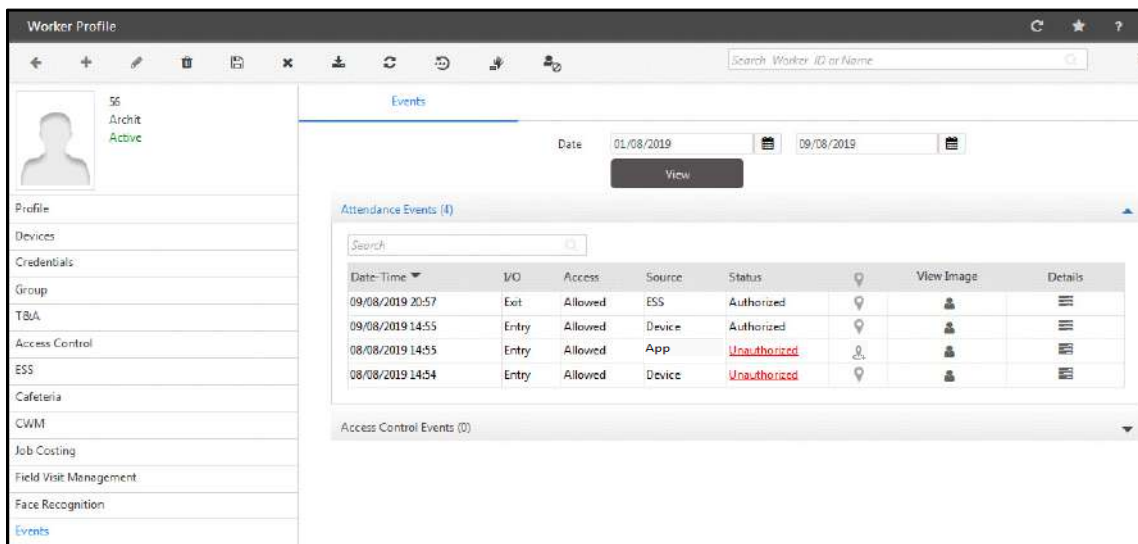

The Events tab is used for the security purpose by monitoring the workers in the organization. The Attendance Events and Access Control Events can be viewed by filtering the date range.

In cases of infringement or suspicion; the security supervisor can blacklist, delete or inactivate the worker creating problems in the organization. On selecting Events tab, the following page appears.

**Date:** Select the date range for which events are to be viewed.

Click on **View** button to view the Attendance events and Access Control events.

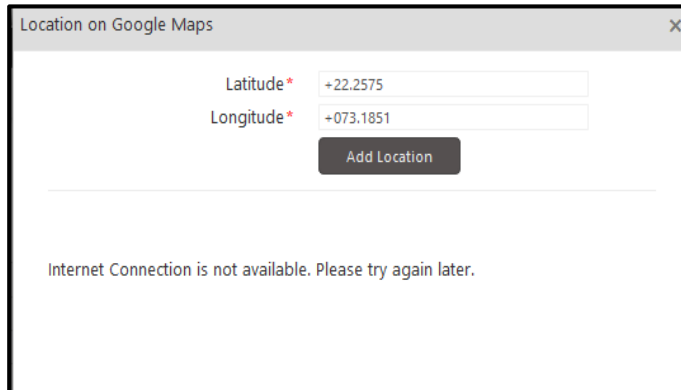

The Attendance Events shows the Date and time when the event is generated along with the I/O, Access, Source, Status and Location details. It also displays Image and Details of the punch.

The location details will display Latitude/Longitude or MAC address from where event has generated.

- You can view the location on Map if the GPS/GSM location is configured in Location Master by clicking on View Map icon.

- If the location is not configured in Location Master then you can add this location by clicking on **Add this Location**  icon shown in above figure.

Now click on **Add Location** button which will redirect to Location Master page from where you can add this location.

Location on Google Maps

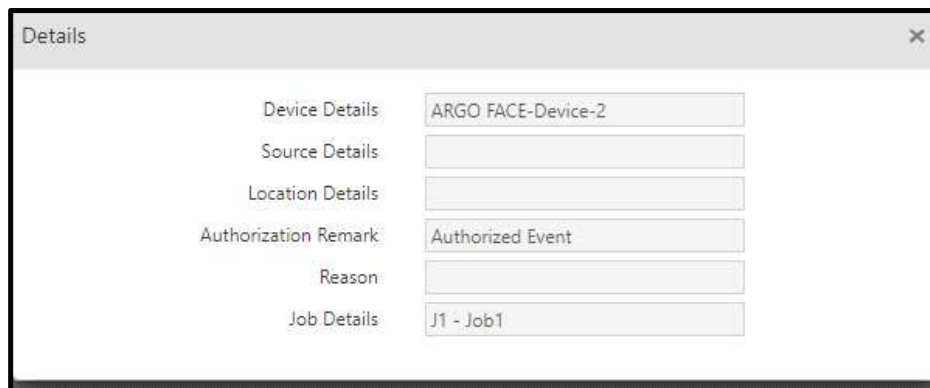

Latitude\* +22.2575

Longitude\* +073.1851

Add Location

Internet Connection is not available. Please try again later.

After the location is added, the location Name will be updated and map can be viewed by clicking **Details** as shown below.

Details

Device Details ARGO FACE-Device-2

Source Details

Location Details

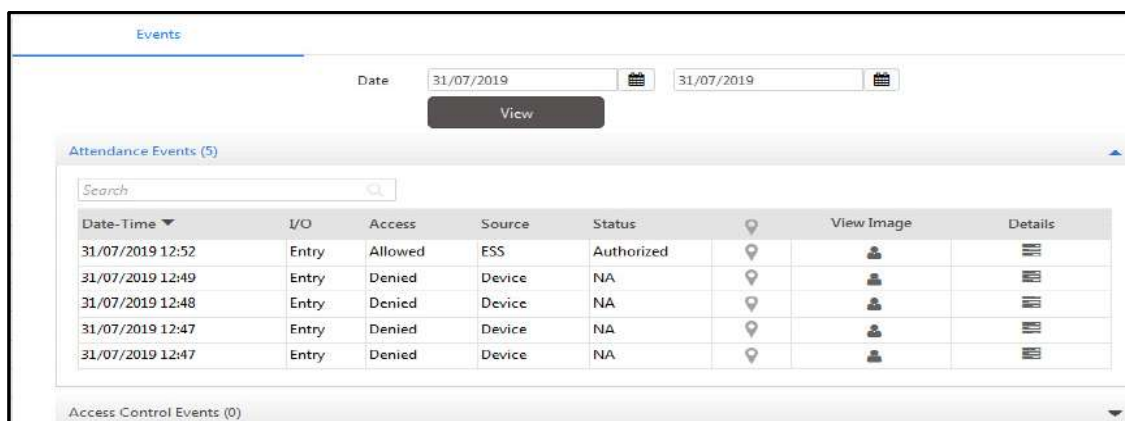

Authorization Remark Authorized Event

Reason

Job Details J1 - Job1

The Status of event, i.e. whether it is authorized or unauthorized is displayed under Status.

- If the status is Unauthorized, it will display a link which on clicking will be redirected to Events Authorization Page as per login user's rights.
- If the status is shown as NA, then Authorized status will be Null and the access will be shown as **Denied** as shown below:

Events

Date 31/07/2019 31/07/2019

View

Attendance Events (5)

Date-Time	I/O	Access	Source	Status		View Image	Details
31/07/2019 12:52	Entry	Allowed	ESS	Authorized			
31/07/2019 12:49	Entry	Denied	Device	NA			
31/07/2019 12:48	Entry	Denied	Device	NA			
31/07/2019 12:47	Entry	Denied	Device	NA			
31/07/2019 12:47	Entry	Denied	Device	NA			

Access Control Events (0)

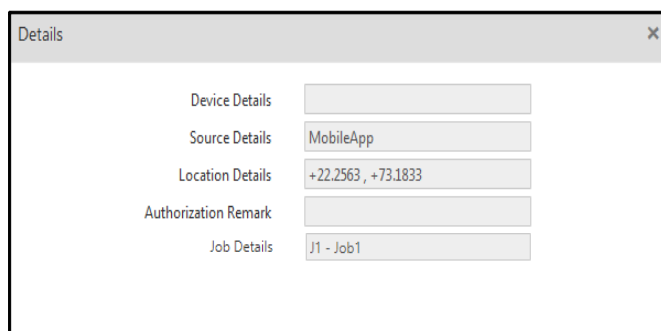

You can view the image captured by the Built-In Camera by clicking on **View Image** icon.

If there is camera to capture the image of the worker punching on door; then his image will be captured and can be viewed for that event by clicking on View Image icon.

*If the event is generated by API then there will not be any image popup window on clicking View Image icon.*

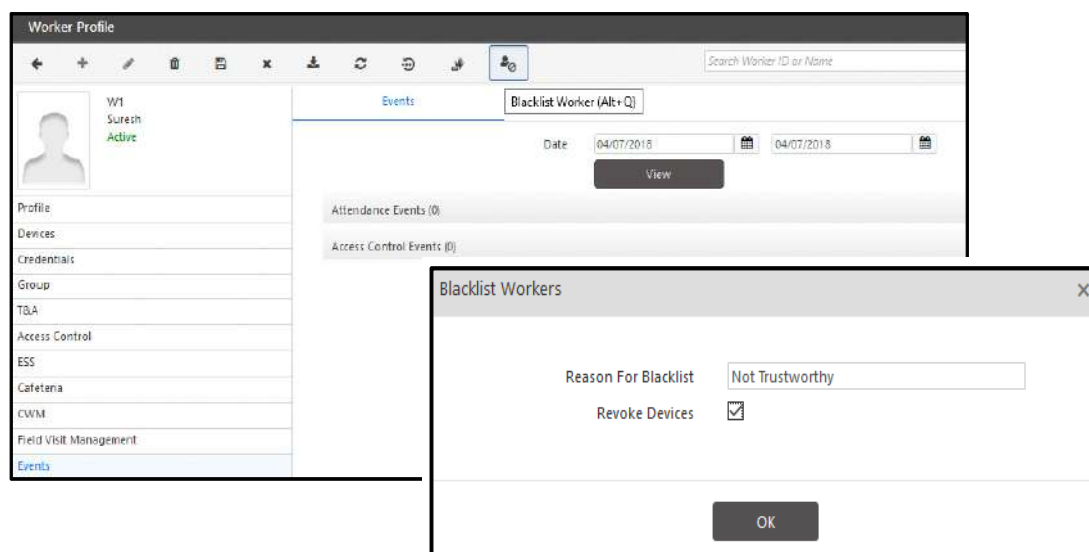

The Reason for punching from unassigned location can be known by clicking on Details icon  as shown in the figure below:

## Blacklist

Click on the **Blacklist Worker** button. The Blacklist Workers window appears.

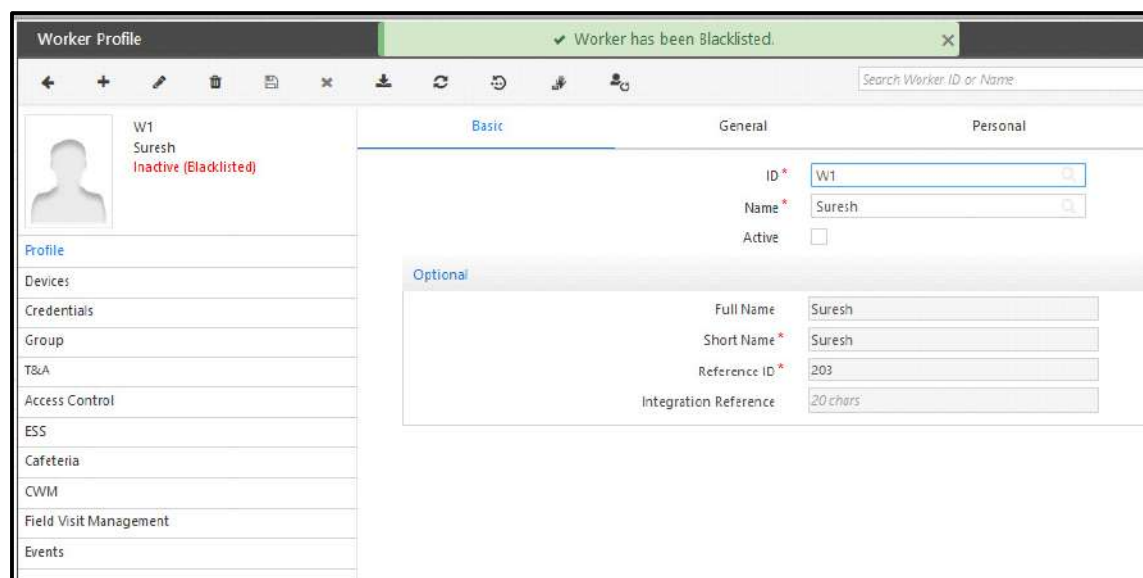

Enter the **Reason** for Blacklisting the worker.

Click on **Revoke Devices** to remove the assignment of devices from the worker.

Click **OK** and **Save** button to save the changes. The worker will be blacklisted and Inactive as shown below.

The blacklisted worker can be revoked by clicking **Restore and Activate Worker** button. It will make the worker active.

# Worker Assignment

Worker Assignment enables to assign worker to the work order and also view already assigned workers having assignment status as Approved and Pending. Workers can be assigned for as many number of days within the work order depending on the requirements of work order. Also workers can be un-assigned from the work order.

To assign the workers to the work order go to **Contract Worker Management > Workers > Worker Assignment**

The screenshot shows the 'Worker Assignment' form. On the left, there are input fields for 'Work Order' (ID, Name), 'Validity' (From, To), 'Contractor' (ID, Name), and 'Status'. Below these are tabs for 'Current Assignment', 'Unregistered Workers', and 'Past Assignments'. On the right, there is a search bar and a table with columns: ID, Work Order Name, Status, and Current Assignment. The table contains one row: WO6, Servicing, In Progress, 0.

**Work order:** Select the work order from the grid on the right or through the work order picklist.

The **Validity, Contractor ID, Name** and **Status** of the selected work order are displayed in the respective fields.

The screenshot shows the 'Worker Assignment' form with data populated. The 'Work Order' fields are filled with 'WO6' and 'Servicing'. The 'Validity' fields are filled with '04/27/2017' and '05/24/2017'. The 'Contractor' fields are filled with 'CO1' and 'HPC'. The 'Status' field is filled with 'In Progress'. The table on the right still contains the same row: WO6, Servicing, In Progress, 0.

## Current Assignment

It displays already assigned workers to the selected work order. Further new workers can be assigned to the work order.

To assign the new workers for the selected work order, select the **worker** from the picklist. The worker with the assignment details will appear in the grid.

The screenshot shows the 'Current Assignment' dialog box. It has input fields for 'Assignment Period' (From, To) and 'Worker' (ID, Name). Below these is a search bar and a table with columns: ID, Worker Name, From, To, Assigned Days, and Assignment Status. The table contains two rows: AP, Aakash, 04/27/2017, 04/28/2017, 2, Approved; and RG, Rutuja, 04/27/2017, 05/02/2017, 28, Free. Below the table are tabs for 'Unregistered Workers' and 'Past Assignments'. An 'OK' button is at the bottom right.

To change the assigned days click on **Edit** button. Then specify the from and to date. Then click on **OK** button.

Search						
ID ▲	Worker Name	From	To	Assigned Days	Assignment Status	
AP	Aakash	04/27/2017	04/28/2017	2	Approved	 
RG	Rutuja	04/27/2017	05/02/2017	6	Free	 

Click on **Save** button from the menu bar to save the assignment of worker to the work order.

Search						
ID ▲	Worker Name	From	To	Assigned Days	Assignment Status	
AP	Aakash	04/27/2017	04/28/2017	2	Approved	 
RG	Rutuja	04/27/2017	05/02/2017	6	Approved	 

### Unregistered Workers

It displays the total count of (Unregistered + pending) workers who were added by contractor and are in pending stage.

Current Assignment						
Unregistered Workers						
Search						
ID ▲	Worker Name	From	To	Assigned Days	Assignment Status	
2	Dinesh	04/27/2017	04/29/2017	3	Pending	
Past Assignments						

The **Past Assignments** tab shows the workers who were previously assigned the selected work order.

Past Assignments						
Search						
ID ▲	Worker Name	From	To	Assigned Days	Assignment Status	
AP	Aakash	04/27/2017	04/27/2017	1	Approved	

### Copy Workers

If some work order's validity is over and contractor or site in-charge forgot to extend its validity, in such cases it might be required to create a new work order and assign same workers to this work order. Also it can be required to assign same workers to some similar work order.

- Select the Work Order to which workers are to be copied.
- Click **Copy**  .The **Copy Worker From** pop-up appears.

You can either select particular workers or can select all the workers at once.

- To select particular workers, select the check boxes of the desired workers.

**OR**

- To select all the workers, select the **Select All** check box.

Click **OK**. The selected workers appear under the **Current Assignment** collapsible panel.

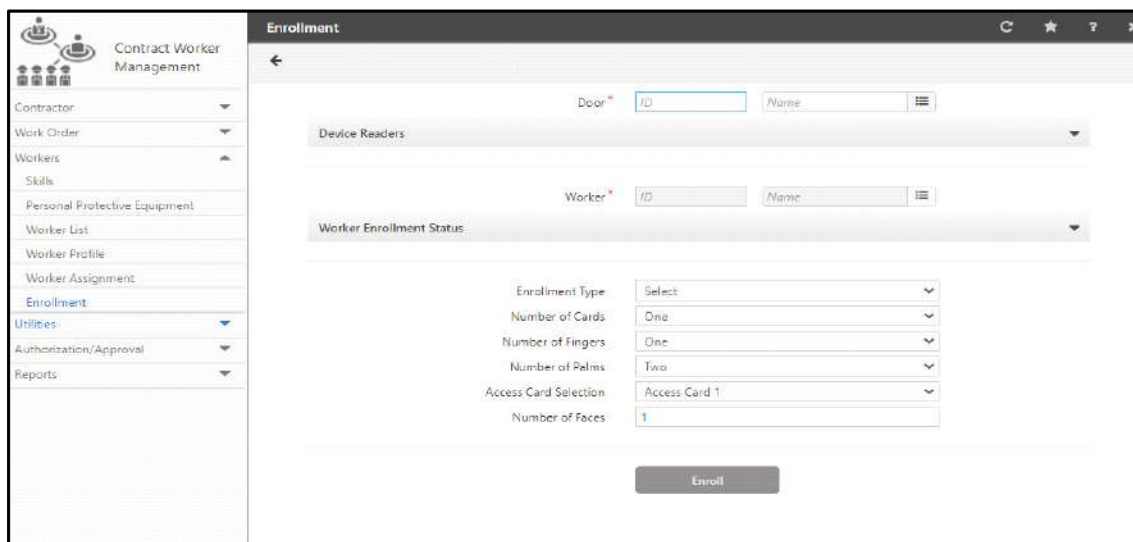

*Work Orders having status as “In Progress” or “Open” can be assigned workers from some “Closed” work order having same contractor.*

*While creating a work order, enable the **Check Limit While Assigning Worker**, so while assigning a work order to any of the worker, Max Worker Limit and Skill-Wise Worker Limit will be checked.*

# Enrollment

The COSEC Access Control System supports enrollment of worker cards, finger print templates, palm templates and special cards. The enrollment process can be initiated from the COSEC application or from the Door Controller by using special cards or Menu.

To enroll the worker credentials, select **Contract Worker Management > Workers > Enrollment**

- **Door:** Select the desired door from the pick list on which the enrollment is to be done.

## Device Readers

Device Readers displays the information of the readers configured in the selected **Door**.

Card Reader, Biometric Reader and External Reader information are displayed here.

- **Worker:** Select the desired worker from the picklist for whom the enrollment is to be done.

Worker Enrollment Status	
Enrolled Fingers (Suprema Proprietary)	0
Enrolled Fingers (Suprema ISO)	0
Enrolled Fingers (Lumidigm ISO)	0
Enrolled Fingers (Lumidigm Proprietary)	0
Enrolled Palms	0
Enrolled Card 1	
Enrolled Card 2	
Enrolled Faces	0

### Worker Enrollment Status

Worker Enrollment Status displays the information related to the number of already enrolled credentials of the worker like fingers, palms, cards and faces.

Details like — **Enrolled Fingers (Suprema Proprietary)**, **Enrolled Fingers (Suprema ISO)**, **Enrolled Fingers (Lumidigm ISO)**, **Enrolled Fingers (Lumidigm Proprietary)**, **Enrolled Palms**, **Enrolled Card 1**, **Enrolled Card 2** and **Enrolled Faces** — are displayed here.

- **Enrollment Type:** Select the desired enrollment type — **Read Only Card**, **Smart Card**, **Face**, **Biometrics**, **BiometricsThenCard**, **Mobile** or **Duress Finger** — from the drop down list.

Based on the selection of the **Door** and **Enrollment Type**, below parameters will be displayed for configuration.

*When Enrollment Type selected is Smart card or BiometricThenCard, Duress Finger Templates will not be written in the Smart Card.*

*Below parameters also depend on the Readers configured in the Door. To configure the desired Reader, refer Readers section under Devices > Device Configuration (of the desired Door) > Profile > Readers.*

#### 1. Enrollment Type = Read Only Card

**Number of Cards:** Select the desired number of cards from the drop down list.

Enrollment Type	Read Only Card	▼
Number of Cards	One	▼

#### 2. Enrollment Type = Smart Card

**Number of Cards:** Select the desired number of cards from the drop down list.

### Details on Smart Card

Select the desired check boxes of the parameters — **Worker ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store the palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name**, **Branch**, **Department**, **Designation**, **Emergency Contact**, **Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

### 3. Enrollment Type = Face

**Number of Faces:** Select the desired number of face from the dropdown list.

Enrollment Type	Face
Number of Faces	1

4. **Enrollment Type** = Biometrics

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

Enrollment Type	Biometrics
Number of Fingers	One

Enrollment Type	Biometrics
Number of Palms	One

5. **Enrollment Type** = BiometricsThenCard

**Number of Cards:** Select the desired number of cards from the drop down list.

**Number of Fingers/ Number of Palms:** Select the desired number of fingers or palms from the drop down list.

Enrollment Type: BiometricsThenCard

Number of Cards: One

Number of Fingers: One

**Details on Smart Card**

Worker ID: ☐

Facility Code (FC): ☐

Additional Security Code (ASC): ☐

Finger Templates: None

Duress Finger Templates will not be written in the Smart Card

**Additional Details On Smart Card**

Short Name: ☐

Branch: ☐

Department: ☐

Designation: ☐

Emergency Contact: ☐

Blood Group: ☐

Medical History: ☐

**Enroll**

### Details on Smart Card

Select the desired check boxes of the parameters — **Worker ID**, **Facility Code (FC)**, **Additional Security Code (ASC)** — which are to be displayed on the Smart Card.

Select the desired number of **Finger Templates** from the drop down list.

If the **Door** is selected as PVR Door, **Palm Templates** parameter will be visible. Select the check box of this parameter if you wish to display it on the Smart Card.

To store palm templates, MiFare 4k reader must be configured in the PVR Door.

*Door PVR must be set in the Adaptive mode (configure from Admin> System Configuration> Global Policy) for the palm templates to be saved into the Smart Card.*

### Additional Details on Smart Card

Other than the parameters mentioned in the Details on Smart Card, you can display additional details on Smart Card.

Select the desired check boxes of the parameters — **Short Name**, **Branch**, **Department**, **Designation**, **Emergency Contact**, **Blood Group** and **Medical History**— which are to be displayed on the Smart Card.

The values of these additional details are displayed as well. Make sure the values of these additional details are not blank for successful enrollment process.

## 6. Enrollment Type = Mobile

To select **Enrollment Type** as **Mobile**, the particular device must have BLE support and ensure Bluetooth is ON in the mobile.

**Access Card Selection:** Select the desired Access Card from the drop down list.

Enrollment Type: Mobile  
Access Card Selection: Access Card 1  
Facility Code (FC): ☐

**Facility Code (FC):** Select this check box to enroll the Facility Code (FC) against the worker.

## 7. Enrollment Type = Duress Finger

**Number of Fingers:** Select the desired number of fingers that you want to enroll as **Duress Finger** from the drop-down list— **One** or **Two**.

Enrollment Type: Duress Finger  
Number of Fingers: One  
Enroll

Click **Enroll** to initiate the enrollment process.

After the enrollment process, the worker must tap on **Tap to Register > Matrix Device** from the ACS Application installed on respective mobile phone and select the same configured Door from **Available Doors**. Thereafter, that worker can access the device through ACS application for Access Control purpose.

The value in Access Card selected will be consider as Access ID of the worker. If Access Card selected has no value i.e blank, then after the enrollment process, the system will auto-generate 18 digits number as worker Access ID and store the same value.

Click **Enroll** to initiate the enrollment process and the enrollment command is sent to the Door.

For Panel Door the command is sent to the Panel200 which will communicate further to the Door.

Once all the required credentials of an worker are enrolled, the number of credentials enrolled will be displayed in the Contract Worker Management > *Workers*> *Worker Profile* > *Credentials*.

# Temporary Worker

---

Temporary Workers are workers which can be auto-added from the desired devices connected with the system, with bare minimum parameters without the intervention of the Admin. Hence, this reduces the burden on the Admin to add as well as allow access to such workers. Temporary Workers can also be deleted/de-activated automatically after a desired time interval or converted into Normal Workers.

Devices that support Temporary Workers include the following Direct Doors and Panel Doors — ARGO, VEGA and ARGO FACE.

*The license consumption for Temporary Workers will be the same as for Normal Workers.*

*Temporary Worker is not applicable for Cafeteria mode of devices.*

*Make sure you enable the check box **Confirm before adding Temporary User** under **Temporary User** in the respective device, so that you get a confirmation message before enrolling a Temporary Worker.*

To add Temporary Workers, you need to:

- Enable Temporary Worker and configure its parameters. For details refer to [“Temporary User”](#) in [“ARGO Door”](#), [“Temporary User”](#) in [“VEGA Door”](#) and [“Temporary User”](#) in [“ARGO FACE Door”](#).
- For Panel Doors, configure the Temporary Workers parameters in the Panel as well as Panel Doors. For details refer to [“Temporary User”](#) in [“Panel200”](#), [“Temporary User”](#) in [“ARGO Door”](#), [“Temporary User”](#) in [“VEGA Door”](#) and [“Temporary User”](#) in [“ARGO FACE Door”](#).
- Make sure the credentials (Finger) of the unknown user are presented on the desired device 3 times consecutively for enrollment.
- For Direct Doors make sure the User Access Mode in Device Configuration (of the respective device) > Profile is selected as — Face, Biometrics or Card.
- For Panel Doors, you need to set the User Access Mode (Door) in Panel Configuration > Zones as — Face, Biometrics or Card.
- Configure the Auto Generate Worker ID in Global Policy, if required. For details refer to [“Generate Worker ID”](#)
- Configure the Alerts to receive notifications when the Temporary Worker is added, if required. To do so, click Admin > Alert Message Configuration, in *Alert Filter* select *System* and in *Event* select *Temporary User/Worker Added*. For details refer to [“Configuring Alert Messages”](#).
- Configure the Task Scheduler to delete/de-activate Temporary Workers automatically or convert Temporary Workers to Normal Workers automatically. For details refer to [“For Schedule Parameter: Temporary User/Worker”](#).
- When the Temporary Workers are deleted/de-activated or converted to Normal Workers using Task Schedulers the logs of these tasks can be seen in the Scheduler Log. For details, refer to [“Scheduler Log”](#).

After such workers are enrolled, to view the list of Temporary Workers, click **Contract Worker Management > Workers > Temporary Worker**.

*You can also view Temporary Workers from the Worker List as well as User List. For details, refer to [“Worker List”](#).*

The **Temporary Worker** page appears.

ID	Name	Photo	Status	Auto-Registered Date & Time	Auto-Registered via Device	Auto-Registered via Credential	Make Worker
Worker_2	Worker_2		Active	01/02/2023 14:56	ARGO	Finger	
Worker_1	Worker_1		Active	31/01/2023 17:02	ARGO	Finger	

## Setting the Filters

- **Date:** Select the desired date range to display the temporary workers created during that duration.
- **Filter:** Select the desired option — All, Device or Group Wise — as per which you wish to view the temporary workers.

Select **All**, if you wish to view all the temporary workers added during the selected date range.

Select **Device**, if you wish to view the temporary workers added using a particular device. Click the picklist to select the desired device.

Select **Group Wise**, if you wish to view the temporary workers as per the desired Enterprise Group. Click the picklist to select the desired group.

- Click **View**. The temporary workers will appear as per the set filters.

## Filtered Records

The grid displays the temporary workers with the following details:

- **ID:** Displays the ID assigned to the temporary worker. This can be auto-generated, if required. To auto-generate the ID, you must enable the **Auto Generate User ID** check box in Global Policy.

Only if you have enabled this check box the **Auto-Generate as per Global Policy**  icon appears here. For details refer to [“Generate Worker ID”](#) in Global Policy.

- **Name:** Displays the name of the temporary worker.
- **Photo:** Displays the image of the temporary worker.

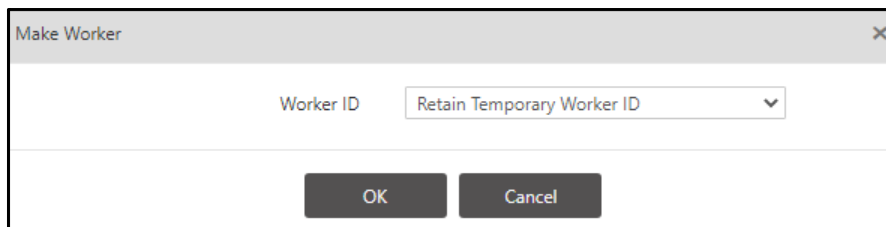

*If GDPR is enabled a dummy photo will be displayed as Photo. For details refer to [“GDPR Reflections”](#).*

- **Status:** Displays the Status of the temporary worker — Active, Inactive.
- **Auto-Registered Date & Time:** Displays the auto-registration date and time of the temporary worker.
- **Auto-Registered via Device:** Displays the name of the device via which the temporary worker is auto-registered.

- **Auto-Registered via Credential:** Displays the credential using which the temporary worker is auto-registered.
- **Make Worker:** You can convert a temporary worker to a normal worker, if required.

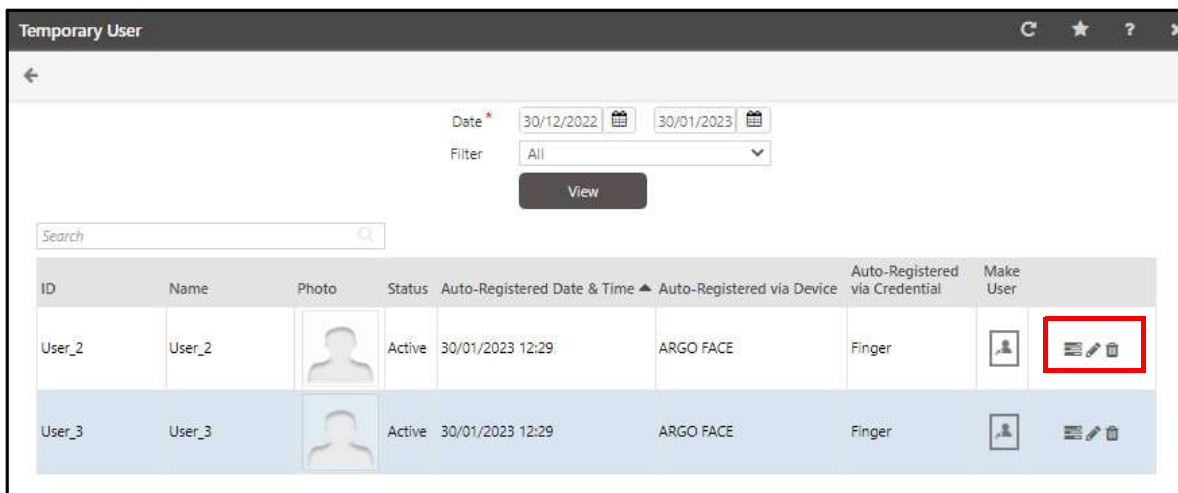

To do so, click **Make Worker** .

If you have enabled **Auto Generate User ID**, then the **Make Worker** pop-up appears.

The 'Make Worker' dialog box has a title bar with a close button. It contains a label 'Worker ID' and a dropdown menu currently showing 'Retain Temporary Worker ID'. At the bottom are 'OK' and 'Cancel' buttons.

- Select the desired **Worker ID** option — Retain Temporary Worker ID, Auto Generate as per Global Policy — from the drop-down list.
- Click **OK** to save the changes or click **Cancel**.
- The temporary worker is added as a normal worker and appears in the Workers List.
- You can also perform the following actions on each record — Details, Edit, Delete

The 'Temporary User' interface shows a search bar, date filters (30/12/2022 to 30/01/2023), a filter dropdown set to 'All', and a 'View' button. Below is a table with columns: ID, Name, Photo, Status, Auto-Registered Date & Time, Auto-Registered via Device, Auto-Registered via Credential, Make User, and a set of action icons (Details, Edit, Delete). The first two rows are visible, with the action icons for the first row highlighted by a red box.

ID	Name	Photo	Status	Auto-Registered Date & Time	Auto-Registered via Device	Auto-Registered via Credential	Make User	
User_2	User_2		Active	30/01/2023 12:29	ARGO FACE	Finger		
User_3	User_3		Active	30/01/2023 12:29	ARGO FACE	Finger		

- Click **Details** of the desired temporary worker, if you wish to edit various worker parameters. The Worker Profile page appears with the relevant details of temporary worker. You can edit the parameters as per your requirement.
- Click **Edit** of the desired temporary worker, if you wish to edit the:
  - Name
  - ID, that is, you can click **Auto-Generate as per Global Policy** , if required.
  - Click **OK**  to save the changes or click **Cancel**  to discard.
- Click **Delete**, if you wish to delete the temporary worker.

*You can also Edit the parameters of the Temporary Workers or Delete Temporary Workers from the Worker List. To do so, Click Contractor Worker Management > Workers > Worker List. Click on the desired entry. You can edit or delete it. For details, refer to [“Worker List”](#).*

# Import Workers

The *Import Workers* utility helps in manually sending information about workers to selected devices. The data is sent in Excel or CSV file formats. The information to be sent can be previewed before actually importing it to device. Also, there is a provision to make multiple entries of workers at once.

The parameter **Birth Date** will be mandatory in the Import sheet if set as mandatory in the “[Minimum Age Requirement for Workers](#)” in “CWM”.

To import worker’s information to devices go to **Contract Worker Management > Utilities > Import Workers**.

Configure the following parameters:

- **Import Data For** - Select the option from the drop-down list for which the data is to be imported.

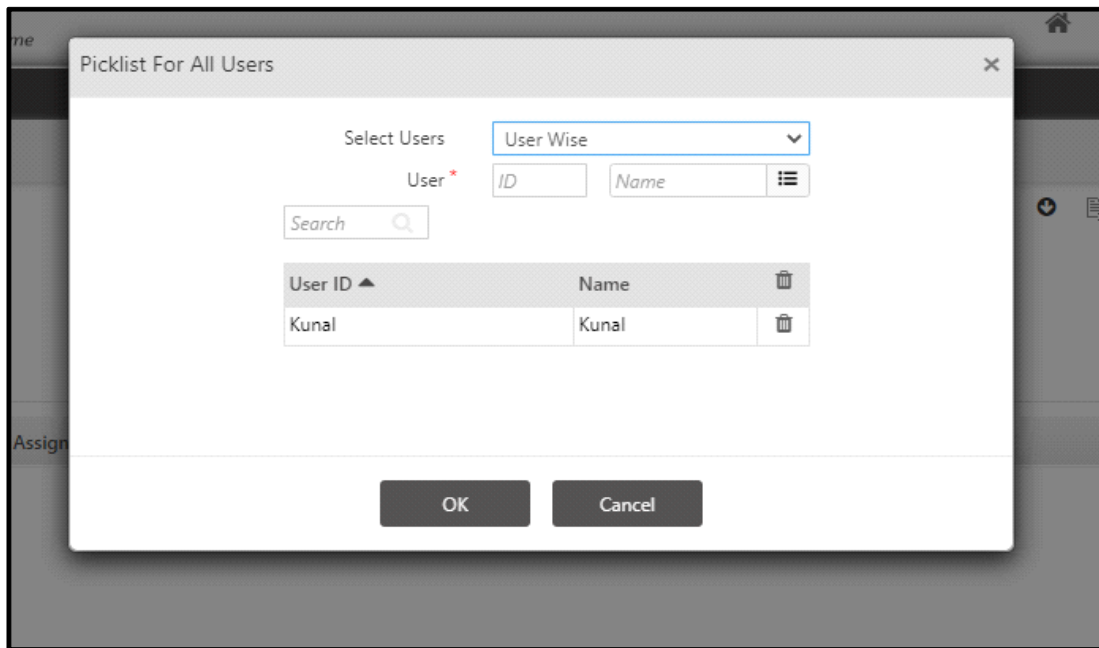

You can download sample import file by clicking on **Download Sample Import file** button. The import sheet displays the fields required for importing specific data.

The mandatory fields list is given in **Document guidelines** section of Import sheet.

	BG	BH	BI	BJ	BK	BL	BM	BN	BO	BP	BQ	BR	BS	BT	BU	BV
1	SkillID	ContractorID	WorkOrderID	StartDate	EndDate	WeekOffGroupID	Field1	Field2	Field3	Field4	Field5	Field6	Field7	Field8	Field9	Field10
2	11	45	1	21/1/2020	2/2/2020											
3	23	564	2	28/1/2020	3/2/2020											
4	32	6556	3	25/1/2020	5/2/2020											
5	34	56	4	11/1/2020	4/2/2020											

To download detailed sheet, click on **Download Detailed Data Sheet** button. On clicking this button, a pop-up will be displayed as shown below:

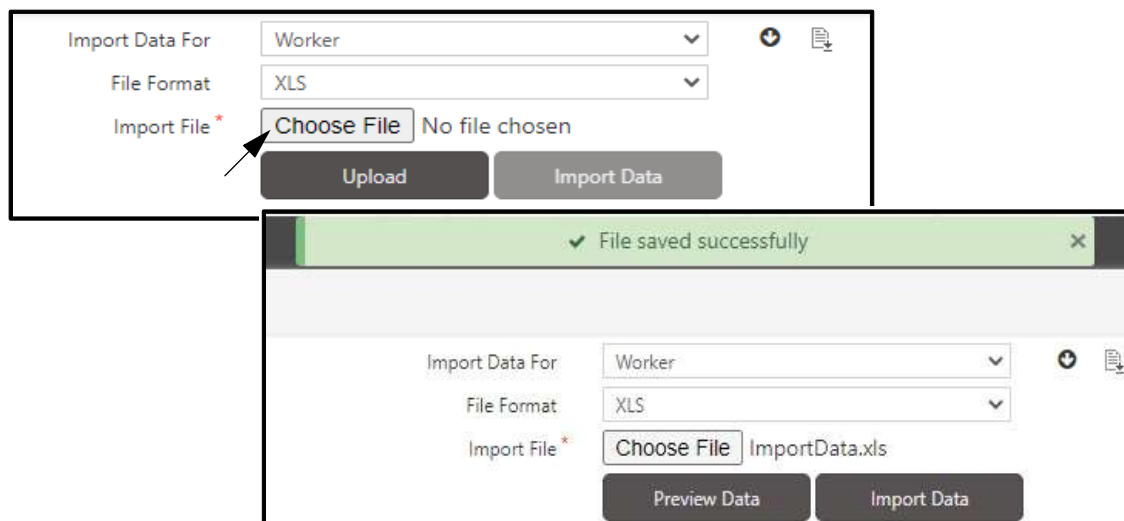

**Select Users:** Select the desired option — User Wise, Group Wise or All. If you select User Wise or Group Wise the select the desired users/groups from the picklist.

Click **OK** button to download the Data Sheet or click on **Cancel** button to abort the process.

The Detailed Data Sheet will be as per the selected option.

- **File Format** - Select the file format of the specific file from the drop-down list. The options available are XLS or CSV.
- **Import File** - Browse the path of the file from which the data is to be imported.

Click on **Upload** to save the file.

Click on **Preview Data** button to view the data in the respective worksheets to confirm that the data is in order prior to giving the import command.

Now click on **Import Data** to start importing the uploaded data. The result of import is shown as Success or Failure along with result description.

### Select Devices To Assign To WORKER

Click the **Select Devices To Assign To WORKER** collapsible panel.

You can assign particular devices or all the devices at once.

ID	Name	Type	
9	ARCDC100_DD_Door	Panel200 Door	<input type="checkbox"/>

To assign particular devices, select the check boxes of the desired devices.

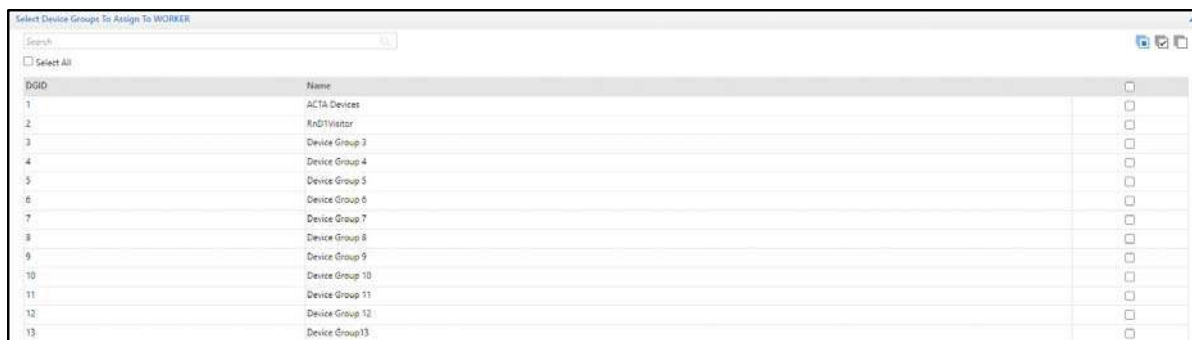

**OR**

To assign all the devices, select the **Select All** check box.

### Select Device Groups To Assign To WORKER

Click the **Select Device Groups To Assign To WORKER** collapsible panel.

You can assign particular device groups or all the device groups at once.

Dgid	Name	
1	ACTA Devices	<input type="checkbox"/>
2	AndTVistor	<input type="checkbox"/>
3	Device Group 3	<input type="checkbox"/>
4	Device Group 4	<input type="checkbox"/>
5	Device Group 5	<input type="checkbox"/>
6	Device Group 6	<input type="checkbox"/>
7	Device Group 7	<input type="checkbox"/>
8	Device Group 8	<input type="checkbox"/>
9	Device Group 9	<input type="checkbox"/>
10	Device Group 10	<input type="checkbox"/>
11	Device Group 11	<input type="checkbox"/>
12	Device Group 12	<input type="checkbox"/>
13	Device Group 13	<input type="checkbox"/>

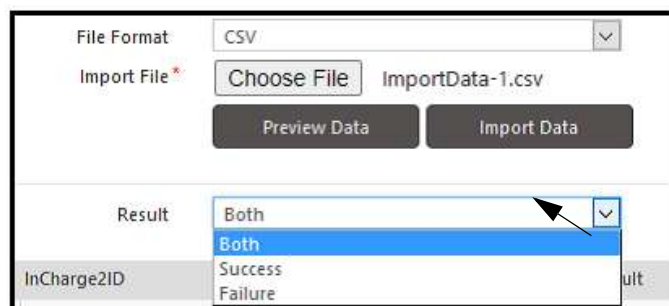

To assign particular device groups, select the check boxes of the desired device groups.

**OR**

To assign all the device groups, select the **Select All** check box.

Click **Upload**. The Devices/Device Groups will be assigned to the workers.

You can also filter import result records on the basis of their Success, Failure or Both using the **Result** drop-down options.

The screenshot displays a web interface for importing data. At the top, there is a 'File Format' dropdown set to 'CSV'. Below it, an 'Import File' section includes a 'Choose File' button and the filename 'ImportData-1.csv'. Two buttons, 'Preview Data' and 'Import Data', are positioned below the filename. A 'Result' dropdown menu is open, showing three options: 'Both' (highlighted in blue), 'Success', and 'Failure'. An arrow points to the 'Both' option. Below the dropdown, a table header is partially visible with the label 'InCharge2ID'.

InCharge2ID
-------------

Once the data is imported successfully, data will be added or updated in Worker Profile in COSEC Web.

# Blacklist

This feature is used to blacklist workers and contractors. Blacklisting will ensure that contractor/worker is not assigned any work order.

To blacklist the workers go to **Contract Worker Management >Utilities > Blacklist**

The screenshot shows the 'Blacklist' application window. At the top, there's a 'Blacklist' dropdown menu set to 'Worker'. Below it are input fields for 'Worker ID', 'Worker Name', and 'Reason' (with a '50 Char' limit). A 'Search' button is next to the 'Reason' field. Below these fields is a table with columns 'ID' and 'Name', and a 'No Data' message. A 'Add To Blacklist' button is positioned below the table. At the bottom, there are two sections: 'Blacklisted Workers (0)' and 'Restored Workers (0)'. The 'Blacklisted Workers' section has a search bar and a table with columns: 'Worker ID', 'Name', 'Blacklist Date-Time', 'Contractor', 'Reason For Blacklisting', and 'Restore'. It also shows a 'No Data' message.

**Blacklist:** Select the desired option — Workers, Contractors — to be blacklisted from drop-down list.

**Worker/Contractor:** If you have selected **Contractor** as the Blacklist option.

- Click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

The screenshot shows the 'Picklist For Contractor' pop-up window. At the top, it says 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' button. There's a 'Select All' checkbox. The main part of the window is a table with columns: 'ID', 'Name', and 'Type'. The table contains 11 records, each with a checkbox in the 'ID' column. The records are: cp1, cp10, cp11, cp2, cp3, cp4, cp5, cp6, cp7, cp8, and cp9. All 'Type' values are 'Contractor Type-1'. At the bottom, it says '1 - 10 of 11 records' and has a pagination control showing '1' as the current page. There are 'OK' and 'Cancel' buttons at the bottom.

You can either select particular contractors or can select all the contractors at once.

To select particular contractor select the check boxes of the desired contractors.

The screenshot shows a dialog box titled "Picklist For Contractor". At the top, a green bar indicates "Total Selected: 2 Records". Below this is a search bar with the placeholder text "Search" and a "Show Selected" button. A "Select All" checkbox is present and is currently unchecked. The main area contains a table with columns: ID (with a sort arrow), Name, and Type. The table lists 11 records, all of which are "Contractor Type-1". The first two records, "cp1" and "cp10", have their selection checkboxes checked. At the bottom left, it says "1 - 10 of 11 records". At the bottom right, there is a pagination control with buttons for first, previous, next, last, and a page number "1" which is highlighted. At the very bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input checked="" type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1
<input type="checkbox"/>	cp3	cp3	Contractor Type-1
<input type="checkbox"/>	cp4	cp5	Contractor Type-1
<input type="checkbox"/>	cp5	cp5	Contractor Type-1
<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

OR

To select all the contractors at once, select the **Select All** check box. The contractors on all the pages will be selected.

This screenshot shows the same "Picklist For Contractor" dialog box, but now the "Select All" checkbox is checked. Consequently, the "Total Selected" at the top has increased to "11 Records". In the table, all 11 records now have their selection checkboxes checked. The rest of the interface, including the search bar, pagination, and buttons, remains the same as in the previous screenshot.

<input checked="" type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input checked="" type="checkbox"/>	cp10	cp10	Contractor Type-1
<input checked="" type="checkbox"/>	cp11	cp11	Contractor Type-1
<input checked="" type="checkbox"/>	cp2	cp2	Contractor Type-1
<input checked="" type="checkbox"/>	cp3	cp3	Contractor Type-1
<input checked="" type="checkbox"/>	cp4	cp5	Contractor Type-1
<input checked="" type="checkbox"/>	cp5	cp5	Contractor Type-1
<input checked="" type="checkbox"/>	cp6	cp6	Contractor Type-1
<input checked="" type="checkbox"/>	cp7	cp7	Contractor Type-1
<input checked="" type="checkbox"/>	cp8	cp8	Contractor Type-1

- Click **OK**.

All the selected contractors appear in the grid.

The screenshot shows a 'Blacklist' window with a search bar and a table of contractors. The table has columns for ID and Name. Two contractors are listed: 'cp2' (Contractor Profile 2) and 'CP12' (Contractor Profile 12). Each row has a delete icon. Below the table is an 'Add To Blacklist' button.

ID	Name
cp2	Contractor Profile 2
CP12	Contractor Profile 12

You can also delete the desired contractor. To do so, click **Delete**  of the respective contractor.

**Reason:** Specify the reason for blacklisting the selected contractor.

Click **Add To Blacklist**.

*A Contractor cannot be blacklisted by the administrator in the following conditions:*

- Any worker associated with the Contractor has a Pending status for work order assignment.
- Any associated work order is still in Progress (i.e. All work orders must be terminated).

*Blacklisted Contractors will become inactive.*

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

All the selected contractors will be added to the blacklist. To view all the Blacklisted Contractors. Click the **Blacklisted Contractors** collapsible panel.

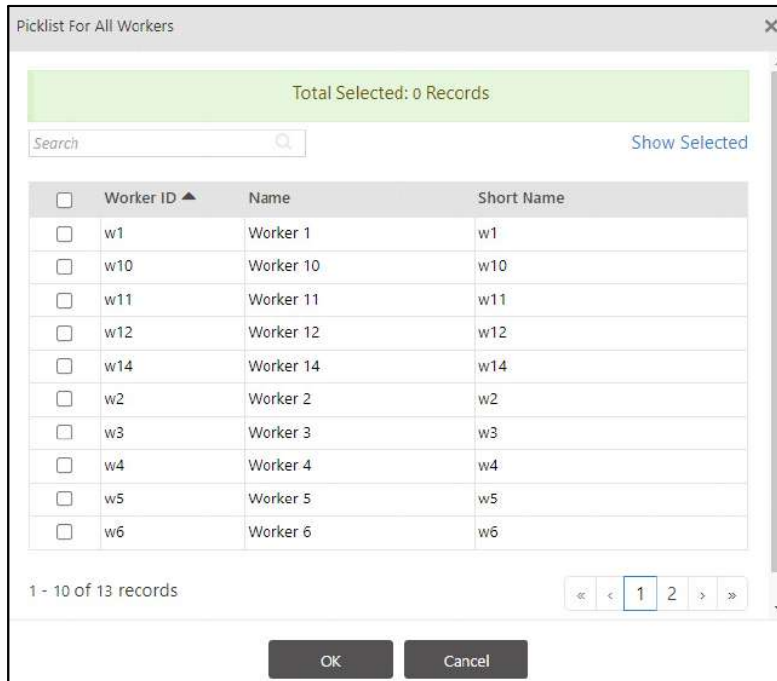

The screenshot shows the 'Blacklist' window with a search bar and a table of blacklisted contractors. The table has columns for Contractor ID, Name, Blacklist Date-Time, Reason for Blacklisting, and Restore. Three contractors are listed: 'cp11', 'cp1', and 'cp10'. Each row has a restore icon. Below the table is an 'Add To Blacklist' button.

Contractor ID	Name	Blacklist Date-Time	Reason for Blacklisting	Restore
cp11	Contractor Profile 11	06/12/2023 23:28:30		
cp1	Contractor Profile 1	04/17/2023 10:36:07		
cp10	Contractor Profile10	04/17/2023 10:36:07		

Click **Restore**  to remove the Contractor from the Blacklisted list. The Contractor appears under the Restored Contractors collapsible panel. Make sure to active the Contractor again.

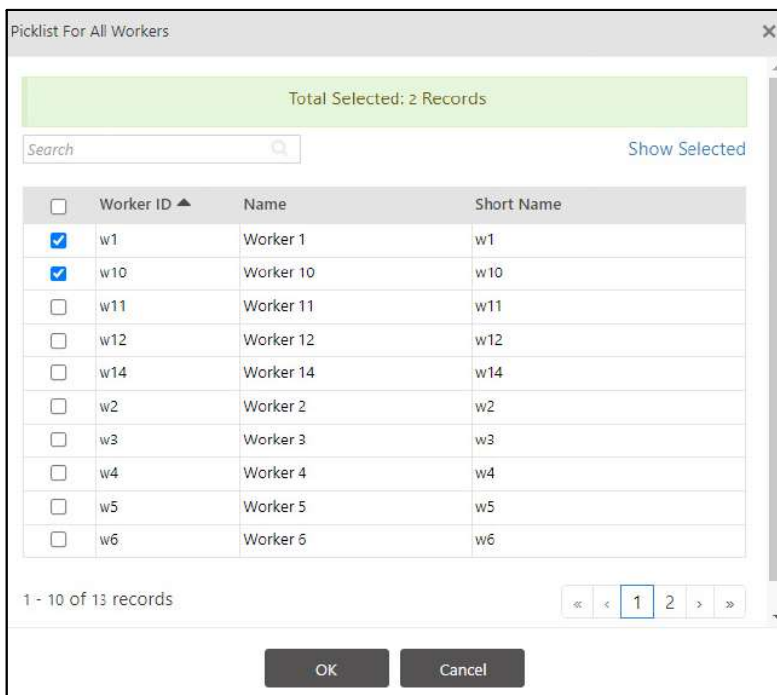

If you have selected **Worker** as the Blacklist option.

- Click the **Worker** picklist. The **Picklist For All Workers** pop-up appears.

<input type="checkbox"/>	Worker ID ▲	Name	Short Name
<input type="checkbox"/>	w1	Worker 1	w1
<input type="checkbox"/>	w10	Worker 10	w10
<input type="checkbox"/>	w11	Worker 11	w11
<input type="checkbox"/>	w12	Worker 12	w12
<input type="checkbox"/>	w14	Worker 14	w14
<input type="checkbox"/>	w2	Worker 2	w2
<input type="checkbox"/>	w3	Worker 3	w3
<input type="checkbox"/>	w4	Worker 4	w4
<input type="checkbox"/>	w5	Worker 5	w5
<input type="checkbox"/>	w6	Worker 6	w6

Select the check boxes of the desired workers.

<input type="checkbox"/>	Worker ID ▲	Name	Short Name
<input checked="" type="checkbox"/>	w1	Worker 1	w1
<input checked="" type="checkbox"/>	w10	Worker 10	w10
<input type="checkbox"/>	w11	Worker 11	w11
<input type="checkbox"/>	w12	Worker 12	w12
<input type="checkbox"/>	w14	Worker 14	w14
<input type="checkbox"/>	w2	Worker 2	w2
<input type="checkbox"/>	w3	Worker 3	w3
<input type="checkbox"/>	w4	Worker 4	w4
<input type="checkbox"/>	w5	Worker 5	w5
<input type="checkbox"/>	w6	Worker 6	w6

Click **OK**.

All the selected workers appears in the grid.

The screenshot shows the 'Blacklist' interface. At the top, there is a form with fields for 'Blacklist' (set to 'Worker'), 'Worker' (with 'ID' and 'Name' sub-fields), and 'Reason' (set to '30 Char'). Below the form is a search bar. A table displays two workers: 'w11' (Worker 11) and 'w10' (Worker 10), each with a delete icon. Below the table is an 'Add To Blacklist' button. At the bottom, there are two collapsible panels: 'Blacklisted Workers (2)' and 'Restored Workers (10)'.

You can also delete the desired workers. To do so, click **Delete**  of the respective worker.

Click **Add To Blacklist**. A **Warning** pop-up appears, to revoke the devices assigned to the selected worker.

The warning dialog has a title 'Warning' and a message: 'Would you like to revoke devices (as per device-wise rights)?'. At the bottom, there are two buttons: 'Yes' and 'No'.

If you select **Yes**, then worker will become inactive and worker's data will be removed from the devices.

If you select **No**, then worker will become inactive but worker's data will still be there on assigned devices.

All the selected workers will be added to the blacklist. To view all the Blacklisted Workers. Click the **Blacklisted Workers** collapsible panel.

The screenshot shows the 'Blacklist' interface with the 'Blacklisted Workers' panel expanded. The panel shows a search bar and a table with the following data:

Worker ID	Name	Blacklist Date-Time	Contractor	Reason for Blacklisting	Restore
w10	Worker 10	06/12/2023 23:52:18	Contractor Profile 10		
w11	Worker 11	06/12/2023 23:52:18	Contractor Profile 11		
w8	Worker 8	05/08/2023 15:50:13	Contractor Profile 2	Theft	
w1	Worker 1	04/20/2023 12:26:06	Contractor Profile 1		

Below the table, there is a 'Restored Workers (8)' panel. The 'Add To Blacklist' button is still visible above the expanded panel.

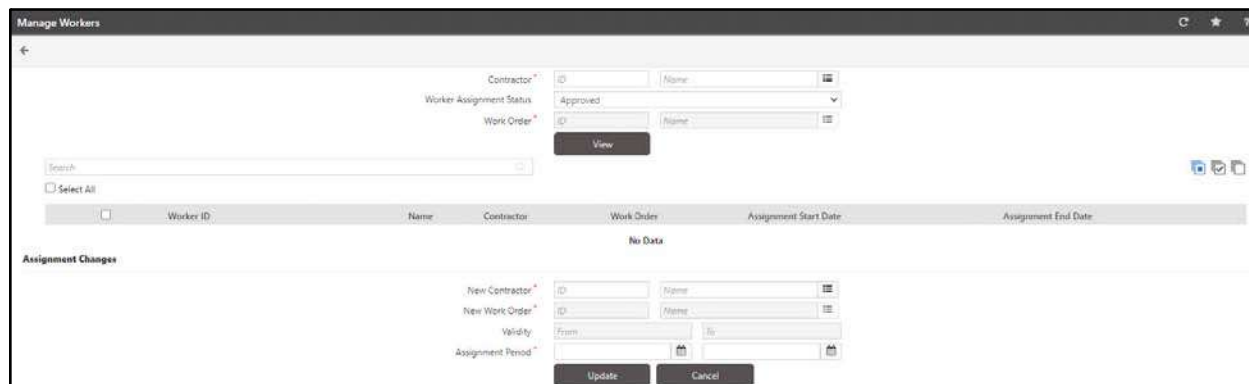

Click **Restore**  to remove the Worker from the Blacklisted list. The Worker appears under the Restored Workers collapsible panel. Make sure to active the Worker again.

Click **Save** button to save the changes.

# Manage Workers

The manage workers utility is used to change contractor, work order and assignment period for the selected workers.

To manage the workers go to **Contract Worker Management >Utilities >Manage Workers**

Configure the following parameters:

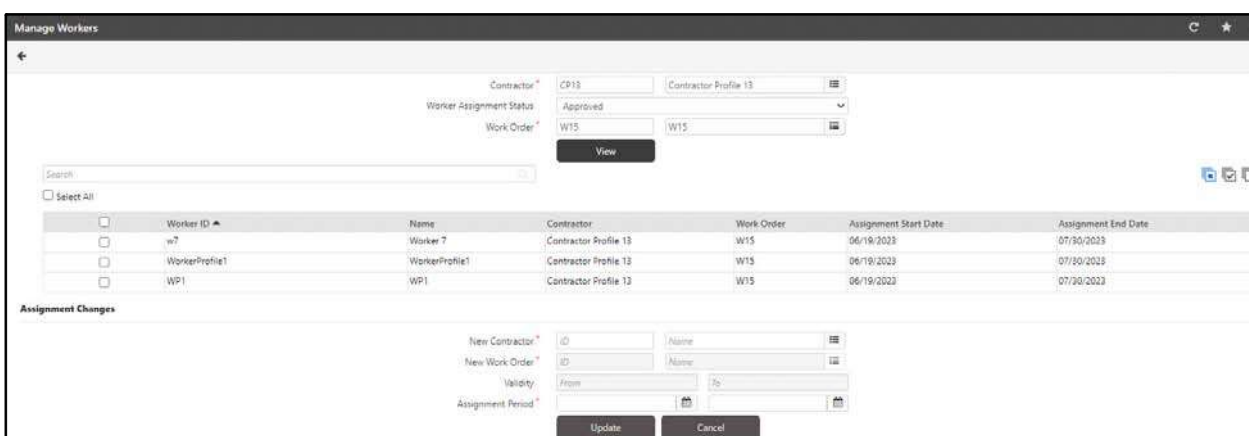

- **Contractor:** Click the picklist and click again to select the desired contractor.

If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".

- **Worker Assignment Status:** Select the desired assignment status from the dropdown list to filter the workers based on their assignment status.
- **Work Order:** Click the picklist and click again to select the desired work order.

Click **View** to view the list of all the associated workers. The list of workers appears in a grid.

Select the workers for which you wish to make the assignment changes.

You can select particular workers or select all the workers at once.

<input type="checkbox"/>	Worker ID	Name	Contractor	Work Order	Assignment Start Date	Assignment End Date
<input type="checkbox"/>	w7	Worker 7	Contractor Profile 13	W15	06/19/2023	07/30/2023
<input type="checkbox"/>	WorkerProfile1	WorkerProfile1	Contractor Profile 13	W15	06/19/2023	07/30/2023
<input type="checkbox"/>	WP1	WP1	Contractor Profile 13	W15	06/19/2023	07/30/2023

**Assignment Changes**

New Contractor: ID:  Name:

New Work Order: ID:  Name:

Validity: From:  To:

Assignment Period:

To select particular workers, select the check boxes of the desired workers.

**OR**

To select all the workers, select the **Select All** check box.

### Assignment Changes

- **New Contractor:** Click the picklist and click again to select the desired contractor.

*If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".*

- **New Work Order:** Click the picklist and click again to select the desired work order.
- **Validity:** The validity of the work order is displayed here once you select the work order.
- **Assignment Period:** Select the From and To dates for the assignment duration of the work order to the worker.

Click **Update** to update the assignment changes for the selected worker.

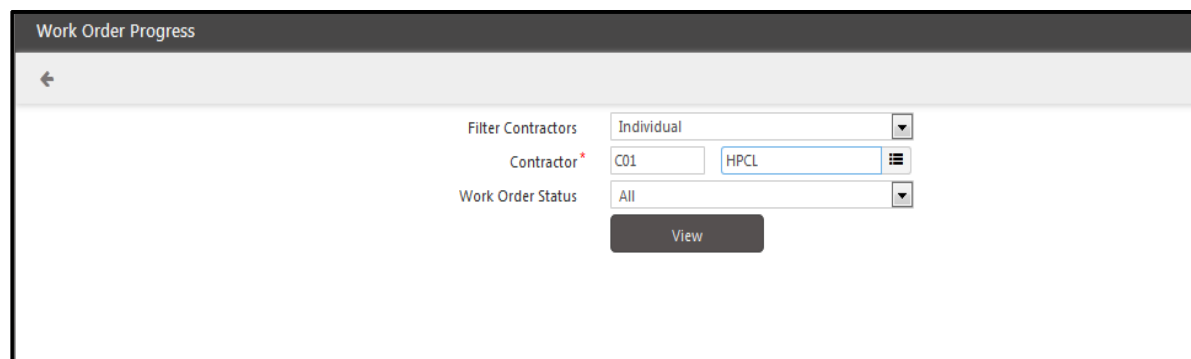

*To change only the assignment period for a worker, select the existing Contractor and Work Order in the **New Contractor** and **New Work Order** fields respectively.*

# Work Order Progress

This utility helps in viewing the progress of all work orders as well as work orders specific to a selected contractor. On selection of a contractor, associated work orders and their details can be filtered based on their progress status.

To view the work order progress go to **Contract Worker Management >Utilities >Work Order Progress**

The screenshot shows a web application window titled "Work Order Progress". It contains a filter section with the following controls:

- Filter Contractors:** A dropdown menu currently set to "Individual".
- Contractor:** A field with a red asterisk, containing "C01" and a picklist button. The picklist is open, showing "HPCL".
- Work Order Status:** A dropdown menu currently set to "All".
- View:** A dark button to execute the filter.

**Filter Contractors-** Select the contractors from the option of All and Individual.

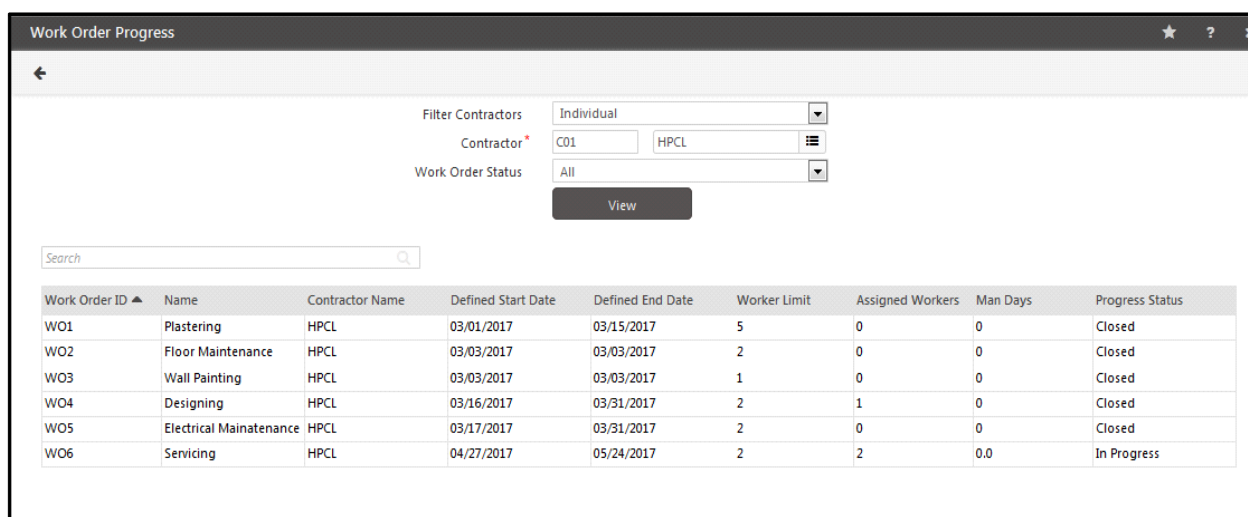

**Contractor-** The individual contractor can be selected from the picklist.

If the Contractor does not appear in the picklist, check the Contractor's **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to "[Contractor Profile](#)".

**Work Order Status-** Select the work order status from the options of All, Closed, In Progress and Open from the drop down list.

**View-** Click the **View** button. The details of work orders and their status are displayed in the grid as shown below.

The screenshot shows the same filter form as above, but with the "View" button clicked. Below the filter form is a search bar and a table displaying the work order details.

Work Order ID ▲	Name	Contractor Name	Defined Start Date	Defined End Date	Worker Limit	Assigned Workers	Man Days	Progress Status
WO1	Plastering	HPCL	03/01/2017	03/15/2017	5	0	0	Closed
WO2	Floor Maintenance	HPCL	03/03/2017	03/03/2017	2	0	0	Closed
WO3	Wall Painting	HPCL	03/03/2017	03/03/2017	1	0	0	Closed
WO4	Designing	HPCL	03/16/2017	03/31/2017	2	1	0	Closed
WO5	Electrical Mainatenance	HPCL	03/17/2017	03/31/2017	2	0	0	Closed
WO6	Servicing	HPCL	04/27/2017	05/24/2017	2	2	0.0	In Progress

## Work Order Progress Grid

- **Defined Start Date** reflects start date of work order.
- **Defined End Date** reflects end date of work order.
- **Worker Limit** reflects the maximum worker limit as defined in the Work Order section.

- **Assigned Workers** reflect the workers which are in approved or in pending state.
- **Man Days** reflects number of days spent by workers for the work order. Suppose 10 workers worked for 10 days each, Man Days=  $10 \times 10 = 100$  Man Days.
- **Progress Status** in grid reflects whether work order has started or not and if started then whether it has completed or not.
  - **In Progress** status reflects that work order has started but not completed yet.
  - **Closed** status reflects that work order has started and completed.
  - **Open** status reflects that work order has not started yet.

# Induction Approval

The Induction Approval is used to view all pending, approved and rejected applications sent for approval for each induction level assigned to worker for the assigned work order. SA has rights to approve or reject a pending application.

If some worker needs to complete 5 induction levels and is rejected in even 1 of them then worker's assignment status will turn into Rejected and approval in other induction level will no longer be required.

To authorize the workers go to **Contract Worker Management > Authorization/Approval > Induction Approval**

Worker ID	Name	Application Date	Induction Level	Contractor	Work Order	Approve	Reject	Remark	Details
1	Dinesh	04/07/2018	Induction Level-1	HPCL	Servicing	<input type="checkbox"/>	<input type="checkbox"/>		
2	Ramesh	04/07/2018	Induction Level-1	HPCL	Servicing	<input type="checkbox"/>	<input type="checkbox"/>		

If global policy is set to direct authorization, induction level for workers will remain blank in such cases.

**Filter Work Orders-** Select the work orders from the option of All and Individual.

**Work Order-** The individual work order can be selected from the picklist.

**View-** Click on View button. The pending, approved and rejected work orders are displayed in the respective grids along with the available counts.

The worker details from the grid can be viewed by clicking on the **Details** button. The worker details pop window is displayed as shown below:

Worker ID: 2

# CWM Reports

These reports can be obtained using the **Reports** section under the **Contract Worker Management** add-on module. The Reports can be categorized as follows:

[“Worker Details”](#)  
[“Contractor Details”](#)  
[“Work Order Details”](#)  
[“Blacklisted Workers”](#)  
[“Work Order Man Days”](#)  
[“Daily Head Count”](#)  
[“Daily Work Hours”](#)  
[“Status Summary”](#)  
[“Attendance Details”](#)

*If the Contractor does not appear in the picklist, check the Contractor’s **Validity End Date**. The Validity End Date shall not be included in the validity period of the Contractor. For details, refer to [“Contractor Profile”](#).*

## Worker Details

Worker Details Report provides the workers basic details against respective work order and contractor.

Set the report filters as per requirement.

## Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Custom Group1/2/3

**Organization Name in Header As Per:** Select the desired option from the drop down list—**User Selection** or **Customized Selection**.

If you select **Customized Selection**, click on Customize Report Header. You can select the desired option from the drop-down list or can also add a new header according to your choice.

## Worker Selection

Select the desired options for Contractors, Work Orders and Workers

**Select Contractor:** Select the desired option— **All** or **Randomly**

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

OR

To select all the contractors at once, select the **Select All** check box. The contractors on all the pages will be selected.

This screenshot shows the same "Picklist For Contractor" dialog box, but now the "Select All" checkbox is checked. The green bar at the top now indicates "Total Selected: 11 Records". In the table, all 11 records have their selection checkboxes checked. The rest of the interface, including the search bar, pagination, and buttons, remains the same.

<input checked="" type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input checked="" type="checkbox"/>	cp10	cp10	Contractor Type-1
<input checked="" type="checkbox"/>	cp11	cp11	Contractor Type-1
<input checked="" type="checkbox"/>	cp2	cp2	Contractor Type-1
<input checked="" type="checkbox"/>	cp3	cp3	Contractor Type-1
<input checked="" type="checkbox"/>	cp4	cp5	Contractor Type-1
<input checked="" type="checkbox"/>	cp5	cp5	Contractor Type-1
<input checked="" type="checkbox"/>	cp6	cp6	Contractor Type-1
<input checked="" type="checkbox"/>	cp7	cp7	Contractor Type-1
<input checked="" type="checkbox"/>	cp8	cp8	Contractor Type-1

Click **OK**.

The selected contractors appear in the grid.

ID	Name	
cp1	Contractor Profile 1	
cp10	Contractor Profile10	
cp11	Contractor Profile 11	
cp2	Contractor Profile 2	

You can also delete the desired contractor. To do so, click **Delete** of the respective contractor.

**Select Work Orders:** Similarly, follow the same steps as **Select Contractors**.

**Select Worker:** Select the desired option— All or Randomly.

If you select **All**, then all the workers will be selected.

If you select **Randomly**, click on **Worker** picklist. The **Picklist For All Worker** pop-up appears.

<input type="checkbox"/>	Worker ID	Name	Short Name
<input type="checkbox"/>	w1	Worker 1	w1
<input type="checkbox"/>	w10	Worker 10	w10
<input type="checkbox"/>	w11	Worker 11	w11
<input type="checkbox"/>	w12	Worker 12	w12
<input type="checkbox"/>	w14	Worker 14	w14
<input type="checkbox"/>	w2	Worker 2	w2
<input type="checkbox"/>	w3	Worker 3	w3
<input type="checkbox"/>	w4	Worker 4	w4
<input type="checkbox"/>	w5	Worker 5	w5
<input type="checkbox"/>	w6	Worker 6	w6

Select the check boxes of the desired workers. Click **OK**.

The selected workers appear in the grid.

ID ▲	Name	
w1	Worker 1	
w10	Worker 10	
w11	Worker 11	
w12	Worker 12	
w14	Worker 14	

You can also delete the desired worker. To do so, click **Delete** of the respective worker.

**Generate Report For:** Select the desired option — All Workers, Active Worker or Inactive Worker.

Click **Generate Report**.

## Contractor Details

This report provides the details of the Contractors.

Set the report filters as per requirement.

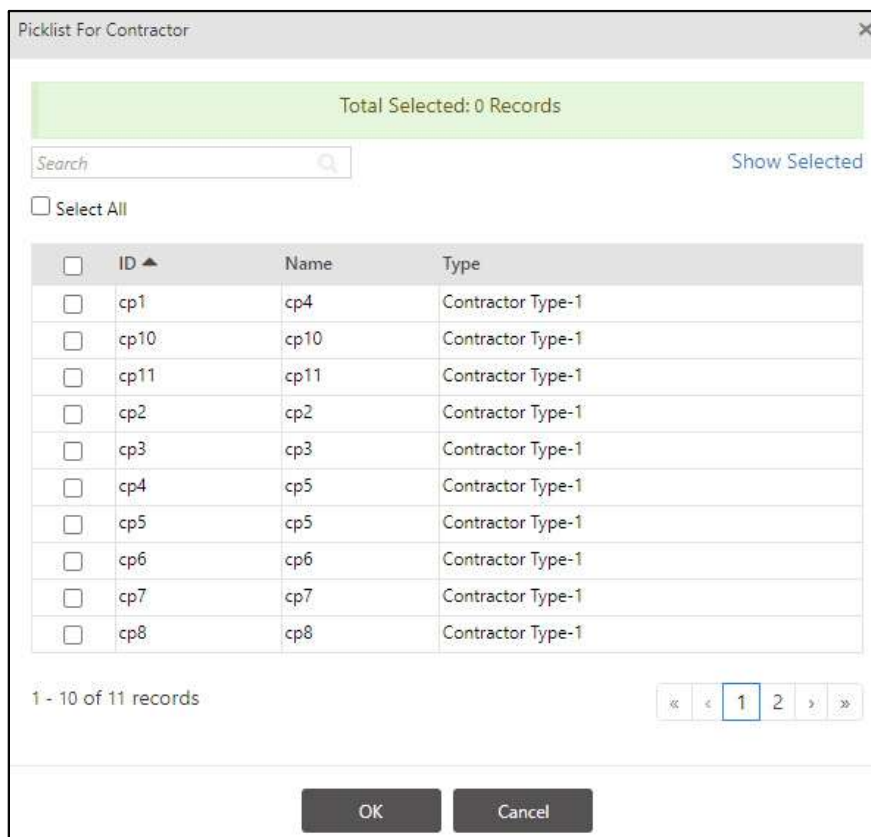

The Contractor Details window features a 'Contractor Selection' section. It includes a 'Select Contractors' dropdown menu currently set to 'Randomly'. Below this, there are input fields for 'Contractor ID' and 'Name', with a small icon to the right of the 'Name' field. A 'Generate Report' button is positioned at the bottom of this section.

## Contractor Selection

**Select contractor:** Select the desired option from the drop down list— **All** or **Randomly**.

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

The 'Picklist For Contractor' pop-up window displays a table of contractors. At the top, a green bar indicates 'Total Selected: 0 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is located above the table. The table has four columns: 'ID', 'Name', and 'Type'. It lists 11 contractors, with the first 10 visible on this page. At the bottom, there is a pagination control showing '1 - 10 of 11 records' and a page number '1' in a box, with navigation arrows. 'OK' and 'Cancel' buttons are at the bottom.

<input type="checkbox"/>	ID ▲	Name	Type
<input type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1

## Work Order Details

Work Order Details Report provides the basic details of respective worker order.

Set the report filters as per requirement.

The screenshot shows a web application window titled "Work Order Details". It features a navigation bar with a "Back" button and a toolbar with various icons. The main content area displays a form with two sections: "Optional Parameters" and "Work Order Selection". The "Optional Parameters" section has a "Group By" dropdown menu with "Organization" selected. The "Work Order Selection" section has two dropdown menus: "Select Contractors" with "Randomly" selected and "Select Work Orders" with "Randomly" selected. Below these dropdowns are two rows of input fields for "Contractor" and "Work Order", each with "ID" and "Name" columns. At the bottom of the form is a "Generate Report" button.

Worker: ID Name

Generate Report

**Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3

**Organization Name in Header as Per:** Select the desired option— **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click Customize Report Header.

You can select the desired option from the drop-down list or can also add a new header according to your choice.

## Worker Selection

**Select Contractors:** Select the desired option — **All** or **Randomly**.

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

## Status Summary

### Attendance Status Template

This page enables you to define the Output Code for Attendance Status.

Attendance Status Template

ID:

Output Status Length:

Attendance Status:

Output Code:

Description:

The Output Code for different Attendance Status combinations for first and second half can be created. The description for the status code can also be mentioned.

For example: Present for both 1st and 2nd half is given an output code of P.

*The output codes defined here will reflect accordingly in the User-defined Muster Roll reports in the Time & Attendance module.*

## Daily Summary

Daily Summary Report displays the workers Daily Attendance summary against respective work order for respective contractor for selected time period.

Set the filters as per your requirement.

The screenshot shows a web application window titled "Daily Summary". At the top, there is a date range selector with "Date" and two date pickers set to "06/21/2023". Below this is a section titled "Optional Parameters" which contains two dropdown menus: "Group By" (set to "Organization") and "Organization Name in Header As Per" (set to "User Selection"). Underneath is a section titled "Worker Selection" containing three rows of controls. Each row has a dropdown menu and two input fields labeled "ID" and "Name". The first row is for "Select Contractors" (dropdown: "Randomly"), the second for "Select Work Orders" (dropdown: "Randomly"), and the third for "Select Workers" (dropdown: "Randomly"). At the bottom of the form is a "Generate Report" button.

**Date:** Select the to and from date for which the report is to be generated.

### Optional Parameter

**Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3.

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click on Customize Report Header. You can select the desired option from the drop down list or can also add a new header according to your choice.

### Worker Selection

**Select Contractors:** Select the desired option — **All** or **Randomly**.

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor picklist**. The **Picklist For Contractor** pop-up appears.

The dialog box titled "Picklist For Contractor" has a close button (X) in the top right corner. Below the title bar is a green header bar displaying "Total Selected: 0 Records". Underneath is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" button. Below the search bar is a checkbox labeled "Select All". The main area contains a table with the following columns: "ID" (with a small upward arrow icon), "Name", and "Type". The table lists 11 records, all of which are "Contractor Type-1". The first record has ID "cp1" and Name "cp4". The last record has ID "cp8" and Name "cp8". Below the table, it says "1 - 10 of 11 records". To the right of this text is a pagination control with buttons for "«", "<", "1", "2", ">", and "»", where "1" is highlighted. At the bottom of the dialog are two buttons: "OK" and "Cancel".

<input type="checkbox"/>	ID ▲	Name	Type
<input type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1
<input type="checkbox"/>	cp3	cp3	Contractor Type-1
<input type="checkbox"/>	cp4	cp5	Contractor Type-1
<input type="checkbox"/>	cp5	cp5	Contractor Type-1
<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

You can either select particular contractor or can select all the contractors at once.

To select particular contractor select the check boxes of the desired contractors.

The dialog box titled "Picklist For Contractor" is shown in the same state as the previous screenshot, but with "Total Selected: 1 Records" in the green header bar. The "Select All" checkbox remains unchecked. In the table, the first record (ID "cp1", Name "cp4") now has its checkbox checked. All other records remain unchanged. The pagination control and "OK/Cancel" buttons are also present.

<input type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1

## Attendance Details

### Shift Schedule

This report displays the configured shifts of different workers under their respective contractors and work order types for each day of the specified month.

Set the report filters as per requirement.

For Month-Year: June, 2023

Optional Parameters: Organization Name in Header As Per: User Selection

Worker Selection:

- Select Contractors: Randomly
- Contractor: ID, Name
- Select Work Orders: Randomly
- Work Order: ID, Name
- Select Workers: Randomly
- Worker: ID, Name
- Generate Report For: All Workers

Generate Report

**For Month Year:** Select the month year for which report is to be generated.

### Optional Parameter

**Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.

If you select **Customized Selection**, click on Customize Report Header. You can select the desired option from the drop down list or can also add header according to your choice.

### Work Order Selection

**Select Contractors:** Select the desired option — **All** or **Randomly**.

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

The dialog box titled "Picklist For Contractor" has a close button (X) in the top right corner. At the top, a green bar displays "Total Selected: 0 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. A "Select All" checkbox is located below the search bar. The main area contains a table with four columns: "ID" (with an upward arrow), "Name", and "Type". The table lists 11 records, each with a checkbox in the "ID" column. The records are as follows:

<input type="checkbox"/>	ID ▲	Name	Type
<input type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1
<input type="checkbox"/>	cp3	cp3	Contractor Type-1
<input type="checkbox"/>	cp4	cp5	Contractor Type-1
<input type="checkbox"/>	cp5	cp5	Contractor Type-1
<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

Below the table, it says "1 - 10 of 11 records". To the right is a pagination control with buttons: "«", "<", "1" (highlighted), "2", ">", and "»". At the bottom are "OK" and "Cancel" buttons.

You can either select particular contractor or can select all the contractors at once.

To select particular contractor select the check boxes of the desired contractors.

The dialog box titled "Picklist For Contractor" is shown with "Total Selected: 1 Records" in the green bar at the top. The search bar and "Show Selected" link are present. The "Select All" checkbox is still unchecked. In the table, the checkbox for the first record (ID cp1) is now checked. The rest of the table data remains the same as in the previous screenshot.

<input type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1
<input type="checkbox"/>	cp3	cp3	Contractor Type-1
<input type="checkbox"/>	cp4	cp5	Contractor Type-1
<input type="checkbox"/>	cp5	cp5	Contractor Type-1
<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

The pagination control and "OK" / "Cancel" buttons at the bottom are also present.

OR

To select all the contractor at once, click on the **Select All** check box. The contractors on all the pages will be selected.

1 - 10 of 11 records

« < 1 2 > »

OK Cancel

You can either select particular contractor or can select all the contractors at once.

To select particular contractor select the check boxes of the desired contractors.

The screenshot shows a dialog box titled "Picklist For Contractor". At the top, a green bar indicates "Total Selected: 1 Records". Below this is a search bar with the text "Search" and a magnifying glass icon, and a "Show Selected" button. A "Select All" checkbox is present and is currently unchecked. The main area contains a table with the following data:

<input type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1
<input type="checkbox"/>	cp10	cp10	Contractor Type-1
<input type="checkbox"/>	cp11	cp11	Contractor Type-1
<input type="checkbox"/>	cp2	cp2	Contractor Type-1
<input type="checkbox"/>	cp3	cp3	Contractor Type-1
<input type="checkbox"/>	cp4	cp5	Contractor Type-1
<input type="checkbox"/>	cp5	cp5	Contractor Type-1
<input type="checkbox"/>	cp6	cp6	Contractor Type-1
<input type="checkbox"/>	cp7	cp7	Contractor Type-1
<input type="checkbox"/>	cp8	cp8	Contractor Type-1

Below the table, it says "1 - 10 of 11 records". To the right of this is a pagination control with buttons for "«", "<", "1", "2", ">", and "»". At the bottom are "OK" and "Cancel" buttons.

OR

To select all the contractor at once, click on the **Select All** check box. The contractors on all the pages will be selected.

The screenshot shows the same "Picklist For Contractor" dialog box, but now the "Select All" checkbox is checked. The green bar at the top now indicates "Total Selected: 11 Records". In the table, all the "ID" checkboxes are also checked. The rest of the interface, including the search bar, pagination, and buttons, remains the same.

Click **OK**.

The selected contractors appear in the grid.

## Continuous Absence/Presence

The continuous Absence/Presence report allow you to generate the attendance summary of workers, if he/she is absent or present continuously for many days/hours.

For the Configuration of parameters and related example, [See "Example: Continuous Absence/Presence" on page 416.](#)

Set the report filters as per requirement.

The screenshot shows a web application window titled "Continuous Absence/Presence". At the top, there are date pickers for "Date" with values "06/21/2023" and "06/21/2023". Below this is a section for "Optional Parameters". It includes a "Report Type" dropdown set to "Continuous Absence", a "Continuous Absent Days" input field with the value "1", and a checked checkbox for "Consider Half Day PR as Full Day PR". A "Days to consider as Absent" section contains a table with columns "Days", "Always", and "HRC/MH". The table lists options: AB, WO, PH, Leave, FB, RD, and IN. Each option has a checked checkbox and a dropdown menu set to "Always". At the bottom, there is a "Work Order Selection" section with dropdowns for "Select Contractors" (set to "Randomly"), "Select Work Orders" (set to "Randomly"), and "Generate Report For" (set to "All Workers"). A "Generate Report" button is at the bottom right.

**Date:** Select the to and from date for which the report is to be generated.

## Optional Parameter

**Report Type:** Select the desired option — Continuous Absence, Continuous Presence

If you select **Continuous Absence** set the following report filters as per requirement:

- **Continuous Absent Days:** Enter the number of days after which you wish to consider the user for Continuous Absence.
- **Consider half day PR as Full Day PR:** Select this check box, if you wish to consider any half day having status marked as PR to be marked as present for the full day.
- **Days To Consider as Absent:** Select the check boxes of the desired options — AB, WO, PH, Leave, FB, RD, IN.

For each option enabled, select the desired option from the drop-down list — Always, Skip, Shift-based, Custom Hours as per your requirement. The drop-down options may vary.

If you select **Continuous Presence** set the following report filters as per requirement:

- **Filter Based On:** Select the desired option — Days, Hours.

If you select **Days**, configure the **Continuous Present Days**. Enter the number of days after which you wish to consider the user for Continuous Presence.

If you select **Hours**, configure **Continuous Present Hours**. Enter the Hours in HH:MM format after which you wish to consider the user for Continuous Presence.

- **Consider Half Day PR as Full Day PR:** Select this check box, if you wish to consider any half day having status marked as PR to be marked as present for the full day.

- **Days To Consider as Present:** Select the check boxes of the desired options — AB, WO, PH, Leave, FB, RD, IN.

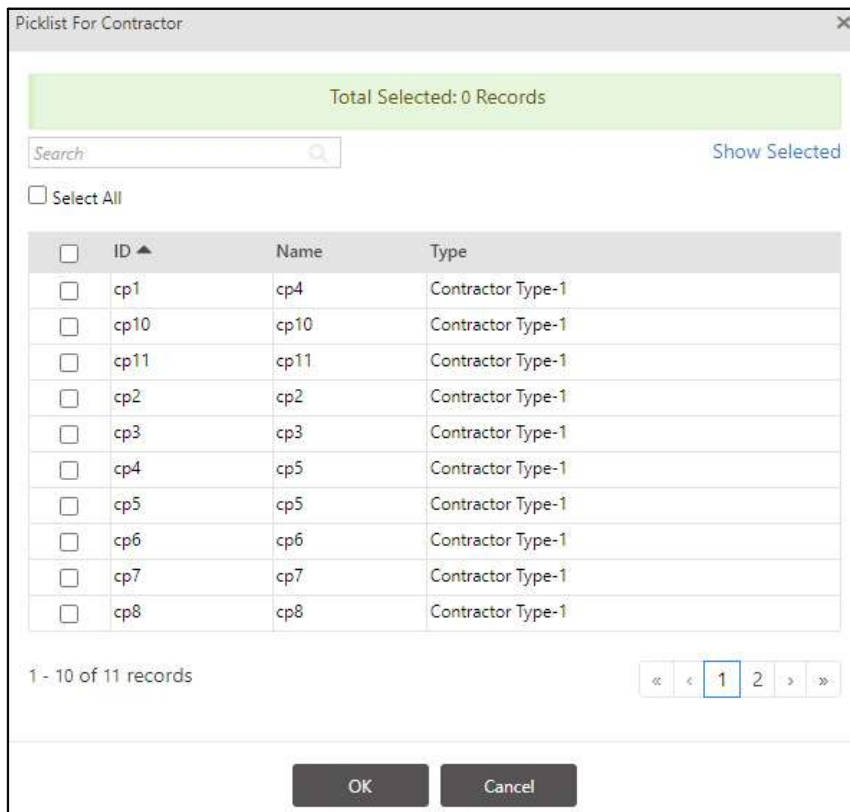

For each option enabled, select the desired option from the drop-down list — Always, Skip, Shift-based, Custom Hours as per your requirement. The drop-down options may vary.

## Work Order Selection

**Select Contractors:** Select the desired option — All or Randomly.

If you select **All**, the report will include all the contractors.

If you select **Randomly**, click the **Contractor** picklist. The **Picklist For Contractor** pop-up appears.

OK Cancel

You can either select particular contractor or can select all the contractors at once.

To select particular contractor select the check boxes of the desired contractors.

The screenshot shows a window titled "Picklist For Contractor" with a close button (X) in the top right corner. At the top, a green bar displays "Total Selected: 1 Records". Below this is a search bar with the placeholder text "Search" and a magnifying glass icon, followed by a "Show Selected" link. A checkbox labeled "Select All" is present. The main area contains a table with the following columns: a checkbox, "ID ▲", "Name", and "Type". The table lists 11 records, with the first record (ID: cp1, Name: cp4, Type: Contractor Type-1) selected. The last record (ID: cp8, Name: cp8, Type: Contractor Type-1) is also visible. Below the table, it says "1 - 10 of 11 records" and a pagination control showing "1" selected. At the bottom are "OK" and "Cancel" buttons.

<input type="checkbox"/>	ID ▲	Name	Type
<input checked="" type="checkbox"/>	cp1	cp4	Contractor Type-1

In large organizations, employees work on various jobs throughout the day and are paid on the basis of the job hours across the job's Cost Centre:

- Creating Projects, Phases, Jobs
- Planning Projects: Declaring hierarchy of phases and jobs under selected Project.
- Mapping Users to various Jobs.
- View invested job hours by users on various jobs/phases/projects.

This system will also be responsible for:

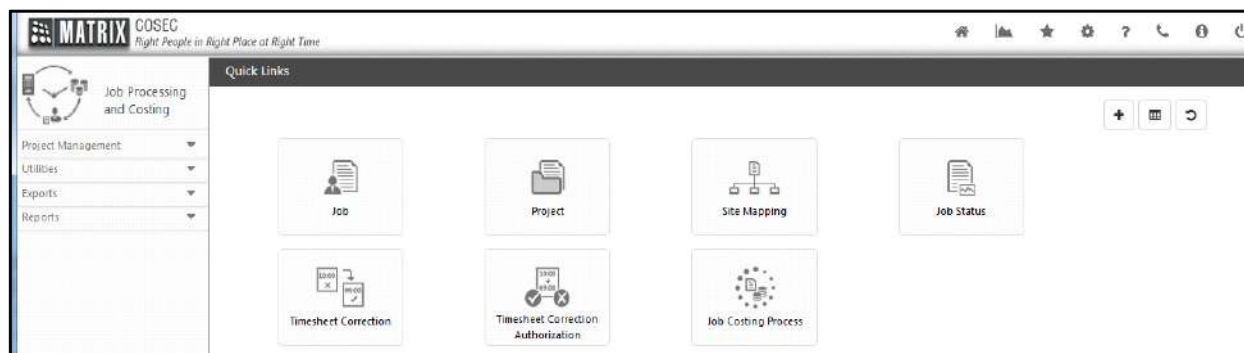

- Maintaining valid methods of mapping users to various jobs.
- Allow user to work on assigned jobs as per selection.
- Maintaining user's work records against different job codes.
- Allow correction/approval of daily Time Sheet.

A Project is divided into Phases. And Phase is divided into Jobs. The user is assigned the Job which he must complete within the estimated time. He can start the work by selecting the job from the assigned device.

*This functionality will be available only with the COSEC **Job Processing and Costing** license.*

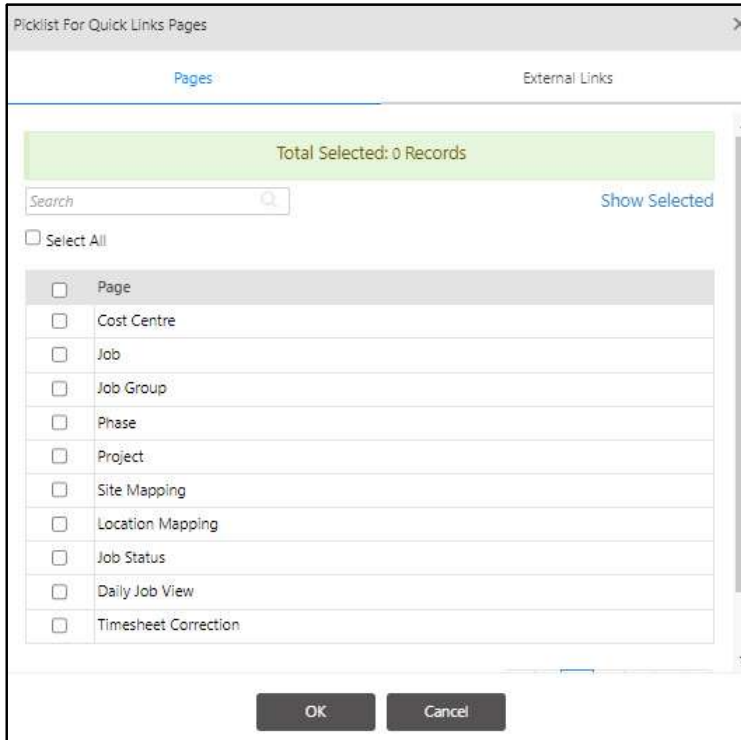

To access the JPC functionality with COSEC Web Application, click on the **JPC** Module on the module selection page. The **JPC** page will open on your screen.

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

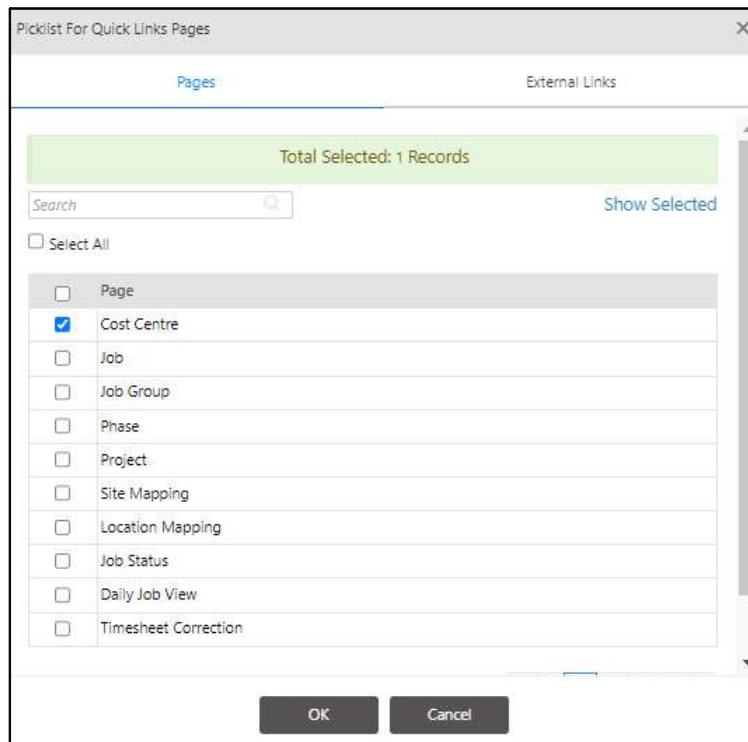

### Add Quick Links

- Click **Add**  . The **Picklist For Quick Links Pages** pop-up appears.

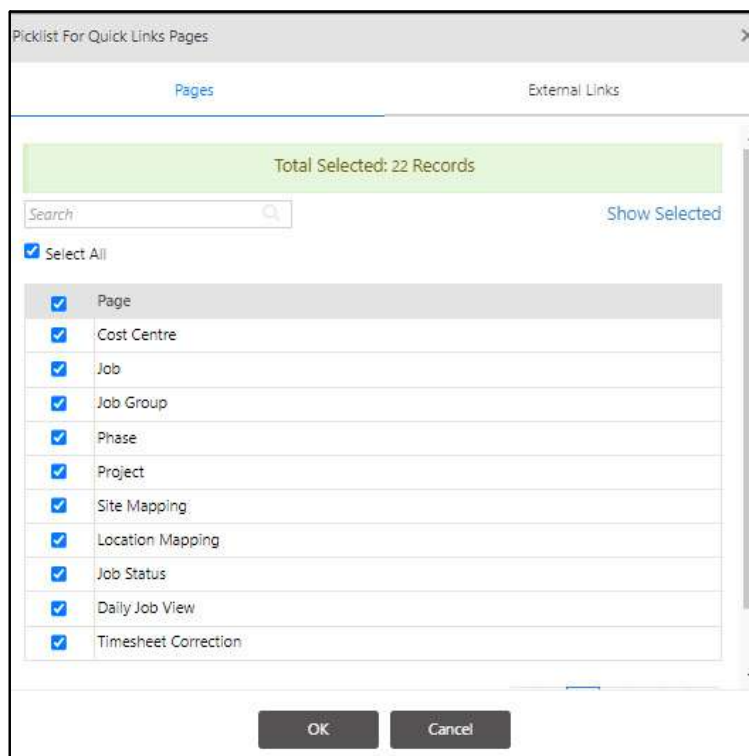

Page
<input type="checkbox"/> Cost Centre
<input type="checkbox"/> Job
<input type="checkbox"/> Job Group
<input type="checkbox"/> Phase
<input type="checkbox"/> Project
<input type="checkbox"/> Site Mapping
<input type="checkbox"/> Location Mapping
<input type="checkbox"/> Job Status
<input type="checkbox"/> Daily Job View
<input type="checkbox"/> Timesheet Correction

- You can either select particular page or can select all the pages at once. Maximum **20** quick links can be displayed.
- To select particular pages, select the check boxes of the desired pages.

OR

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

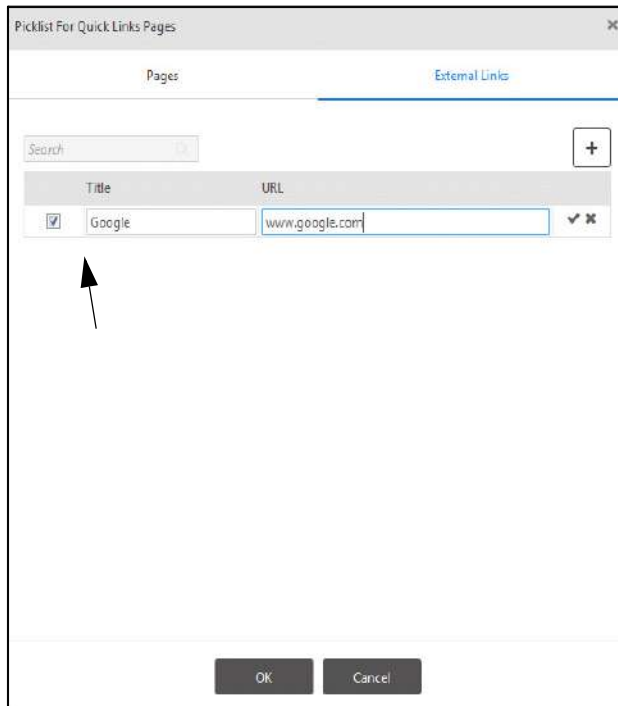

- Click **OK**.

- The Quick Links for selected pages appear on the Quick Link page.

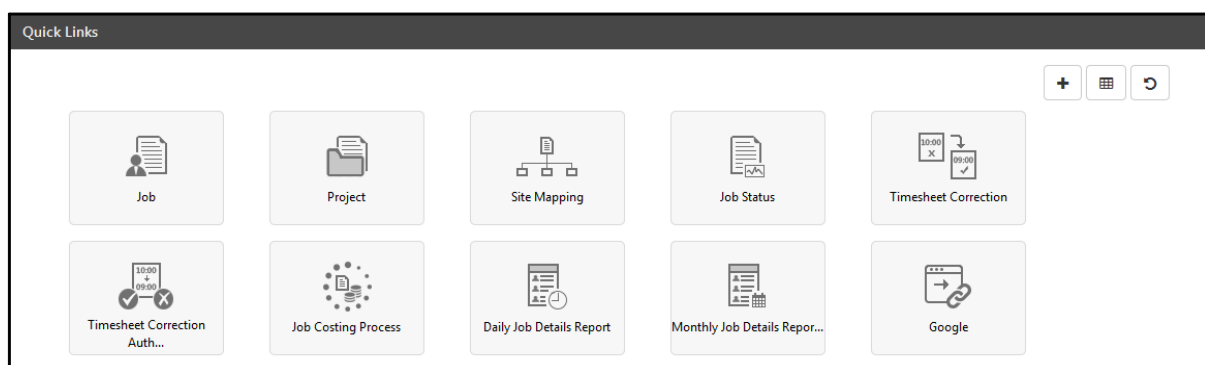

### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the checkbox to display the Quick Link for the configured link.

	Title	URL	
<input checked="" type="checkbox"/>	Google	www.google.com	<input checked="" type="checkbox"/>

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

### Select Layout

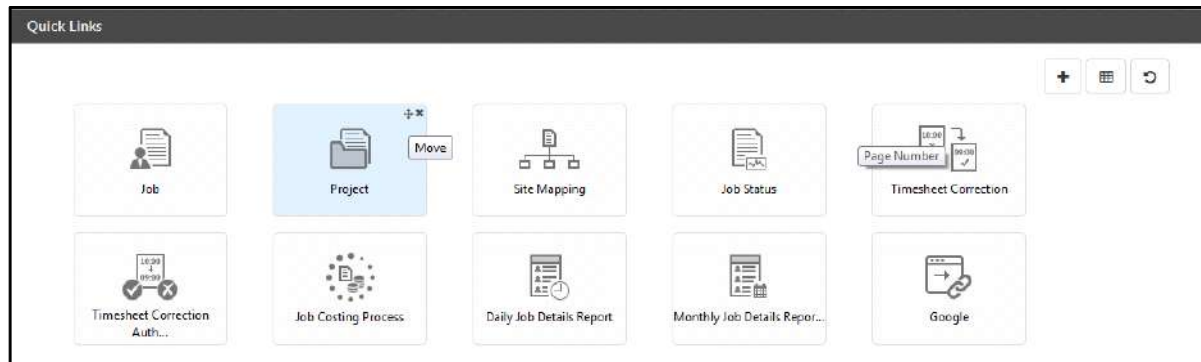

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

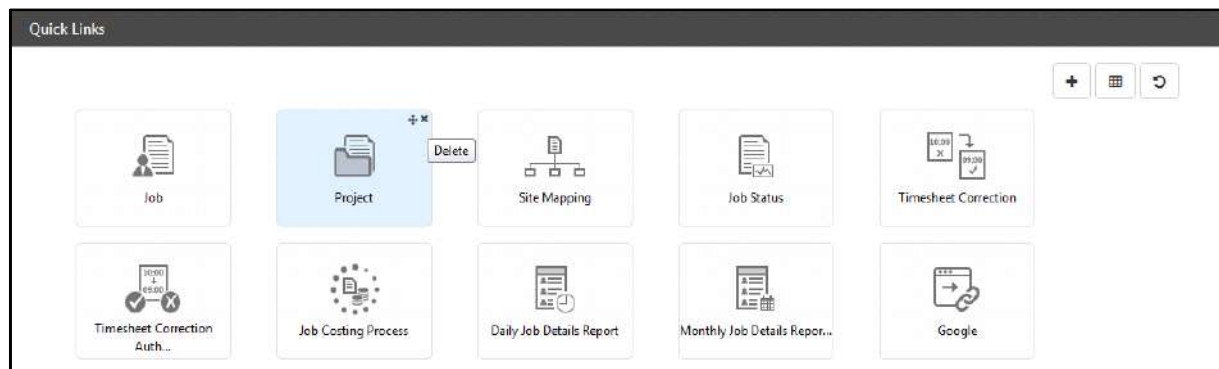

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

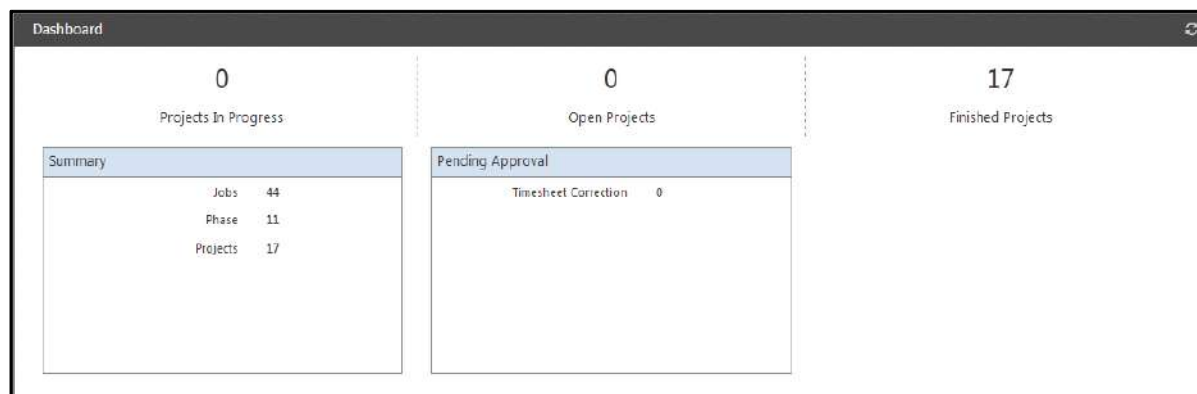

*Quick links are displayed as per rights given to System Account and ESS users.*

## JPC Dashboard

To view the JPC Dashboard, click the Dashboard button  on the **JPC** page.

It displays basic information of the module under the following categories:

The Dashboard displays basic information :

- Projects In Progress - Total number of projects with “In Progress” status.
- Open Projects - Total number of projects with “Open” status.
- Finished Projects - Total number of projects with “Finished” status.

### Summary

- Jobs - Total number of jobs configured in COSEC.
- Phase - Total number of phases configured in COSEC.
- Projects - Total number of projects configured in COSEC.

### Pending Approval

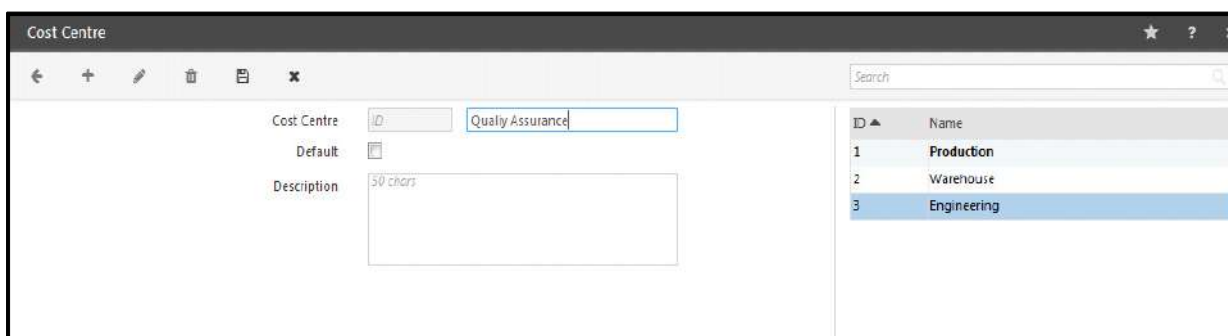

- Timesheet Correction - Total number of timesheet correction requests in pending state.

For more information on the above Dashboard options, click the respective information links on the Dashboard. The Latest values on Dashboard are updated on clicking the Refresh  button.

# Cost Centre

This page allows creating cost centre profiles to identify the man-days or man-hours against a particular project. A Cost Centre can be a defined task, department, division or any other unit in an organization for which costs are collected and reported. Creating cost centres and associating them with a project allows the management to calculate unit-wise investments on the project.

To create a new cost centre, go to **Job Processing and Costing > Project Management > Cost Centre**

The screenshot shows the 'Cost Centre' form. On the left, there are input fields: 'Cost Centre' with a value of 'Quality Assurance', 'Default' with an unchecked checkbox, and 'Description' with a text area containing '50 chars'. On the right, there is a table with columns 'ID' and 'Name'. The table contains three rows: '1 Production', '2 Warehouse', and '3 Engineering'. The '3 Engineering' row is highlighted in blue.

Click the **New** button to create a cost centre.

**Cost Centre:** Enter a user-friendly name for the new cost centre. The ID will be generated by the system automatically when the cost centre is saved.

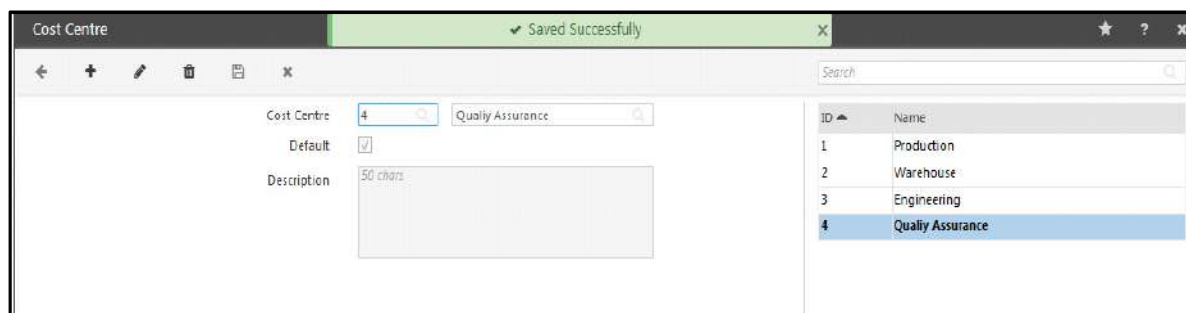

**Default:** To mark the new cost centre as default, enable the Default checkbox.

**Description:** You can also enter an optional description here.

Click **Save** button to save the cost centre. The new cost centre will appear on the grid list on the right hand side of the page.

*The **Cost Centre** entity can also be renamed as per user requirement. To do this, go to **Admin > System Configuration > Rename Group***

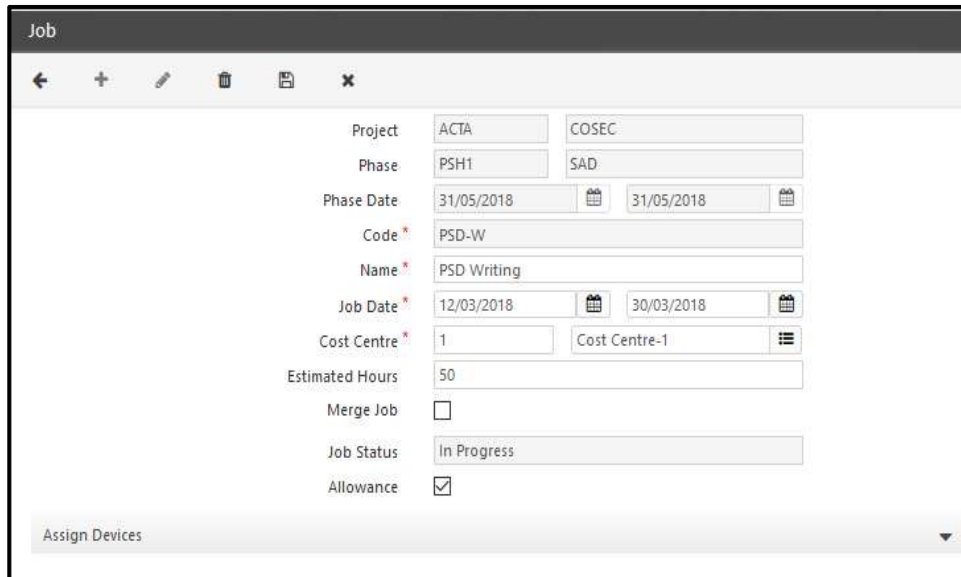

The screenshot shows the 'Cost Centre' form after a successful save. A green banner at the top says 'Saved Successfully'. The 'Cost Centre' field now has a value of '4'. The 'Default' checkbox is checked. The 'Description' field still contains '50 chars'. The table on the right now has four rows: '1 Production', '2 Warehouse', '3 Engineering', and '4 Quality Assurance'. The '4 Quality Assurance' row is highlighted in blue.

# Job

This page enables the user to create new independent jobs which can later be assigned to some phase under a project. This allows a job to be started even before a parent project has been decided. The user can define an estimated duration for the execution of the job and also can also assign the job on selected devices. A maximum of 4294967294 jobs can be created in COSEC. You can also create jobs using Import Data functionality. For details, refer to ["Importing Data"](#).

To create a new job, click **Job Processing and Costing > Project Management > Job**.

- Click the **New** button to create the job.
- Enter a **Job Code** and **Job Name** to identify the job. If the job already exists and has been assigned to a project, details of the corresponding project and phase will also appear.
- Select the Start and End **Job Date**. The Start date can be set to any past dates from the current date whereas the End date can be set to any future dates from the current date.

*The Job Date range cannot be changed once transactions (for example, Cafeteria) are done.*

- Select a **Cost Centre** to be assigned to the job.
- Specify the **Estimated Hours** required to complete the job.
- Check the **Merge Job** box to add the transition time of shifting job in the succeeding or preceding Job.

*The Merge Job option will appear here only if Merging option is selected from Global Policy. You can select the merging option as preceding or succeeding.*

- There can be three status types which denote the completion status of a Job:
  - **Open** - Indicates that the job is yet to be started (as per assigned start date).
  - **In Progress** - Indicates that the job has been started and is yet to end (as per assigned end date).
  - **Finished** - Indicates that the assigned job duration has ended.

- **Allowance:** Check this box if the Allowance is to be given for the selected job. Eg: If food allowance is to be given for a specific Job say PSD-W; then enable the Allowance check-box.

Consider 3 Jobs: JB1, JB2 and JB3 performed by user in a month. Among these jobs JB1 and JB2 have Allowance checkbox as checked.

**Case1:** If Multiple transactions are available for same Job, then Allowance is count once only for single Job.

**Example:** If there is only one Job JB1(Allowance enabled) done on 20/02/2018 & are total 20 transactions; then Allowance = 1.

**Case2:** If Multiple Jobs are available, then Allowance is to be added for those Job which are enabled for Allowance.

**Example:** If there are two Job JB1,JB2 (both enabled for Allowance) done on 20/02/2018 & are total 20 transactions(10 of JB1 & 10 of JB2); then Allowance = 2.

*To generate the Monthly data you must run the Monthly Attendance Process from T&A.*

Click **Save**  . The new job will appear on the grid list on the right hand side of the page.

- Under **Assign Devices**, select one or multiple devices to be assigned using the picklist.
- Click the **Device** picklist. The picklist **Select Device** pop-up appears.

The 'Select Device' dialog box has a title bar with a close button. Below the title bar is a green status bar that reads 'Total Selected: 0 Records'. Underneath is a search bar with the placeholder text 'Search' and a magnifying glass icon. To the right of the search bar is a blue link that says 'Show Selected'. Below the search bar is a checkbox labeled 'Select All'. The main area of the dialog contains a table with three columns: 'MID' (with a sort arrow), 'Name', and 'Type'. The table has three rows of data. At the bottom of the dialog are two buttons: 'OK' and 'Cancel'.

<input type="checkbox"/>	MID ▲	Name	Type
<input type="checkbox"/>	173	VEGA_DD	Vega Controller
<input type="checkbox"/>	169	Argoface_RD4	ARGO FACE
<input type="checkbox"/>	171	Argoface_RD6	ARGO FACE

- You can either select particular device or can select all the devices at once.
- To select particular devices, select the check boxes of the desired devices.

This screenshot shows the 'Select Device' dialog box after two devices have been selected. The green status bar now reads 'Total Selected: 2 Records'. The 'Select All' checkbox remains unchecked. In the table, the checkboxes for the first two rows (MID 173 and 169) are now checked, while the checkbox for the third row (MID 171) remains unchecked. The 'OK' and 'Cancel' buttons are still at the bottom.

<input type="checkbox"/>	MID ▲	Name	Type
<input checked="" type="checkbox"/>	173	VEGA_DD	Vega Controller
<input checked="" type="checkbox"/>	169	Argoface_RD4	ARGO FACE

You can also delete the desired devices. To do so, click **Delete**  of the respective device.

To assign a job on a device, ensure that the **Show Job Menu** check box is enabled on the **Devices > Device Configuration** page for the particular device.

*Jobs which are already in use cannot be deleted.*

# Job Group

This page allows the creation of job groups each of which can consist of multiple jobs. Once a job group has been defined, multiple jobs and devices can be assigned to the job group.

To create a new job group, go to **Job Processing and Costing > Project Management > Job Group**.

The screenshot shows the 'Job Group' window. At the top, there's a 'Job Group' label with a dropdown menu set to 'Project Management group'. Below this is the 'Assign Jobs' section, which includes a search bar and a table of jobs. The table has columns for 'Code' and 'Name'. The jobs listed are: ANA (Analysis), PSD-W (PSD Writing), and SW (Software). To the right of the main window, there's a sidebar with a search bar and a table showing a single record with ID 1 and Name 34.

- Click the **New** button to create new job group.
- Enter a suitable **name** for the job group.
- In the **Assign Jobs** section, you can select particular or multiple jobs from the picklist to be assigned to the job group. Only jobs in “Open” or “In Progress” state (i.e. unfinished jobs) can be assigned to a job group.
- Click the **Assign Job** picklist. The **Picklist for Job** pop-up appears.

The screenshot shows the 'Picklist For Job' pop-up window. It has a search bar at the top and a 'Show Selected' button. Below the search bar is a 'Select All' checkbox. The main part of the window is a table with columns: 'Job Code', 'Name', 'Start', and 'End'. The table contains 12 records, each with a checkbox in the 'Job Code' column. The records are: BOQ (Preparing BOQ), CCall (Conference Call with Customer), CusMeeting (Customer Meeting), Demo (Remote Demo), IntMeeting (Internal Meeting), Onsite (Onsite Demo), OnsitePOC (Onsite POC), RemotePOC (Remote POC), SolDia (Preparing a Solution Diagram), and TenderComp (Tender Compliances). At the bottom of the window, there's a pagination bar showing '1 - 10 of 12 records' and a set of navigation buttons (first, previous, 1, 2, next, last). Below the pagination bar are 'OK' and 'Cancel' buttons.

- You can either select particular jobs or can select all the jobs at once.
- To select particular jobs, select the check boxes of the desired jobs.

The screenshot shows the 'Picklist For Job' dialog box. At the top, a green bar indicates 'Total Selected: 1 Records'. Below this is a search bar and a 'Show Selected' link. A 'Select All' checkbox is unchecked. The main table lists 12 jobs, with the first job, 'BOQ', selected. The table has columns for Job Code, Name, Start, and End. At the bottom, there are 'OK' and 'Cancel' buttons.

<input type="checkbox"/>	Job Code ▲	Name	Start	End

- Click the **Device** picklist. The picklist for **Select Device** pop-up appears.

The 'Select Device' dialog box has a title bar with a close button. Below the title bar is a green status bar that reads 'Total Selected: 0 Records'. Underneath is a search bar with the placeholder text 'Search' and a magnifying glass icon. To the right of the search bar is a blue link labeled 'Show Selected'. Below the search bar is a checkbox labeled 'Select All'. The main area contains a table with the following data:

<input type="checkbox"/>	MID ▲	Name	Type
<input type="checkbox"/>	173	VEGA_DD	Vega Controller
<input type="checkbox"/>	169	Argoface_RD4	ARGO FACE
<input type="checkbox"/>	171	Argoface_RD6	ARGO FACE

At the bottom of the dialog are two buttons: 'OK' and 'Cancel'.

- You can either select particular devices or can select all the devices at once.
- To select particular devices, select the check boxes of the desired devices.

The 'Select Device' dialog box is shown with the same layout as the first screenshot, but with two records selected. The green status bar now reads 'Total Selected: 2 Records'. The checkboxes for the first two rows are checked.

<input type="checkbox"/>	MID ▲	Name	Type
<input checked="" type="checkbox"/>	173	VEGA_DD	Vega Controller
<input checked="" type="checkbox"/>	169	Argoface_RD4	ARGO FACE
<input type="checkbox"/>	171	Argoface_RD6	ARGO FACE

The 'OK' and 'Cancel' buttons remain at the bottom.

**OR**

- To select all the devices at once, select the **Select All** check box. The devices on all the pages will be selected.

Select Device

Total Selected: 3 Records

Search  [Show Selected](#)

☒ Select All

<input checked="" type="checkbox"/>	MID ▲	Name	Type
<input checked="" type="checkbox"/>	169	Argoface_RD4	ARGO FACE
<input checked="" type="checkbox"/>	171	Argoface_RD6	ARGO FACE
<input checked="" type="checkbox"/>	173	VEGA_DD	Vega Controller

OK Cancel

- Click **OK**.
- The selected devices appears in the grid.

Assign Devices

Device  ID  Name

Search

MID	Name	Type	
173	VEGA_DD	Vega Controller	
169	Argoface_RD4	ARGO FACE	

- You can also delete the desired devices. To do so, click **Delete**  of the respective device.

To assign a job group on a device, ensure that the **Show Job Menu** checkbox is enabled on the **Devices > Device Configuration** page for the particular device.

- Click **Save** button. The new job group will appear on the grid list on the right hand side of the page.

# Phase

A large project may often be divided into multiple phases for better time and resource management. Hence a stage or section of a project may be defined as a Phase, say for example “Production”, which may in turn involve several jobs or tasks such as “Welding”, “Assembly” etc.

To create a new phase, go to **Job Processing and Costing > Project Management > Phase**.

ID	Name
No Data	

- Click the **New** button to create a phase.
- Enter a user-friendly name for the new phase. Example: PMT
- You can also enter an optional description here. Example: Project Management Team
- Click **Save** button. The new phase will appear on the grid list on the right side of the page.

ID	Name
1	PMT

*New Phases can also be created while Project is created from **Job Processing and Costing > Project Management > Project**. Here, a time duration can also be assigned to a phase, based on the project timeline.*

# Project

This page enables the user to add new projects and edit existing ones. A complete project can be designed creating a hierarchy of underlying phases and jobs. This can be done either by adding existing phases and jobs to the new project or by creating new phases and jobs from this page.

To create a new project,

- Click **Job Processing and Costing > Project Management > Project**.

The screenshot shows the 'Project' management interface. On the left, there is a form for creating a new project with fields for ID (PRJ1), Name (COSEC Server), Date (2017/02/24 to 2017/05/31), and Status (6 char Code). Below this is a 'Phase Configuration' section with a table that has columns for Code, Phase, Start Date, and End Date. The table currently shows 'No Data'. To the right of the form is a search bar and a table with columns for Project Code, Name, and Status, also showing 'No Data'. A '+' button is located next to the Phase Configuration table header.

- Click **Add**  to add a new project.
- Enter the **ID** as Project Code and **Name** of the project to identify the project.
- Select a start and end **Date** for the project duration. The Start date can be set to any past dates from the current date whereas the End date can be set to any future dates from the current date.

*If you have Jobs and Phases assigned to a Project, then you can change the Project Date Range such that the Job and Phase Date Ranges fall within the Project Date Range.*

*For Example, Job1 (01/01/2024-05/01/2024) and Phase 1 (01/01/2024-10/01/2024) are assigned to a Project 1 (01/01/2024-31/01/2024), then the Project Start Date can be updated to 01/01/2024 or earlier and the Project End Date can be updated to 31/01/2024 or later.*

- There can be three status types which denote the completion status of a project:
  - **Open** - Indicates that the project is yet to be started (as per assigned start date).
  - **In Progress** - Indicates that the project has been started and is yet to end (as per assigned end date).
  - **Finished** - Indicates that the assigned project duration has ended.

## Phase Configuration

- You can add phase under the project to split the project into multiple phases. To add the phase click **Add** button.
- Select an existing Phase using the picklist icon as shown below.

Code	Phase	Start Date	End Date
Code	ID	2017/02/24	2017/03/31

Phase ID	Name
1	PMT

- If the phase is not available in picklist or if new phase is to be added in the project; then click on **Add** to add New Phases as shown below. The **Add New Phases** window appears from where new phase can be added as described above.

Code	Phase	Start Date	End Date
Code	ID	2017/02/24	2017/03/31

Code	Phase	Start Date	End Date
Code	Name	2017/02/24	2017/03/31

- Once a Phase is selected, assign a Phase **Code** to it. For eg: PMT phase is assigned code as PHS1.
- Select a **Start Date** and **End Date** for the phase within the project time duration.

Code	Phase	Start Date	End Date
PHS1	1	2017/02/24	2017/02/28

- Click **OK** to assign the selected phase to the project. Then click on **Save** button to save the Project as shown below.

*You can change the Phase Start Date and End Date multiple times such that it falls within the Project Date Range.*

If you have Jobs within a Phase, then you can change the Phase Date Range such that the Job Date Ranges fall within the Phase Date Range.

For Example, Job1 (01/01/2024-05/01/2024) and Job 2 (05/01/2024-10/01/2024) are assigned to a Phase 1 (01/01/2024-10/01/2024), then the Phase Start Date can be updated to 01/01/2024 or earlier and the Phase End Date can be updated to 10/01/2024 or later.

Code	Phase	Start Date	End Date
PH51	PMT	2017/02/24	2017/02/28
PH52	SAD	2017/02/27	2017/03/06

Project Code	Name	Status
PRJ1	COSEC Server	In Progress

## Phase

- After selecting the configured Project from the right grid, click the **Phase** tab to view different phases assigned to the project and assign job in the particular phase.

Job	Start Date	End Date	Cost Centre	Estimated Hours
Feasibility	12/02/2018	02/03/2018	COSEC	100

Phase Code	Name
SDT-F	Feasibility
SRS	SRS Phase
UI	UI Phase

- Select a phase from the grid list to which jobs are to be assigned.
- In the **Job Configuration** section, user can add jobs under the phase by clicking Add button. Select an existing job using the picklist.

Job	Start Date	End Date	Cost Centre	Estimated Hours
Feasibility	12/02/2018	02/03/2018	COSEC	100

- You can also create a new job by clicking **Add** button. The **Add New Jobs** window appears as shown below.

Code	Name	Start Date	End Date	Cost Centre	Estimated Hours	Merge Job	Allowance
ANA	Analysis	08/03/2018	12/03/2018	1	COSEC	20	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/>

Add To Phase

- Enter the **Code** and **Name** of Job.
- Select the **Start Date** and **End Date** of job within the phase time duration.
- Select the **Cost Center** applicable for the Job.
- Specify the **Estimated Hours** for job completion.
- Enable the **Merge Job** checkbox to add the transition time of shifting job in the succeeding or preceding Job. The merging into succeeding or preceding is selected from Global policy.
- Enable the **Allowance** checkbox if the Allowance is to be given for the selected job.
- Click **OK** and **Add to Phase** to assign the selected job to the selected phase.

Project: COSCLD COSEC ACTA  
Phase: SDT-F Feasibility  
Phase Date: 12/02/2018 13/03/2018

**Job Configuration**

Job	Start Date	End Date	Cost Centre	Estimated Hours
Analysis	08/03/2018	12/03/2018	COSEC	20
Feasibility	12/02/2018	02/03/2018	COSEC	100

Phase Code Name  
SDT-F Feasibility  
SRS SRS Phase  
UI UI Phase

Once all phases and jobs have been configured under the new project, click **Save** button. The new project will appear in the grid list on the right side of the page.

# Site Mapping

Site mapping refers to the assignment of multiple jobs as default jobs for a site. Default jobs can also be assigned to any specific enterprise group (i.e. organization, department, designation etc.) within the site. Setting a default job ensures that, for a certain day, the day's default job will be assigned to the user, based on the current date.

When a user's *Job Assignment Type* is **Device-based** (*Users module > User Configuration > Job Costing*), the default job for a user for a certain day is decided based on one of the following (in order of priority):

1. Default Job set on Device (*Devices module> Device Configuration > Job Costing*)
2. Default Job set for an Enterprise Group in a Site
3. Default Job set for a Site

Only jobs with status **Open** or **In Progress** can be assigned.

To set default jobs for a site, go to **Job Processing and Costing > Project Management > Site Mapping**.

Job Code	Name	Assignment Start	Assignment End
ANA	Analysis	2017/02/24	2017/02/28

- Select a **Site** using the picklist button. The Site is created from *Devices> Masters> Site*.
- Click the **Edit** button.
- Under **Default Jobs**, Click **Add** button and select a **Job** from the picklist. Then set the **Assignment Date** of the job as required. Multiple default jobs can be assigned with non-overlapping Assignment Date ranges.
- Click **OK**. All added jobs will appear in the Default Jobs grid list.

## Department Specific Jobs

On the **Site Mapping** page, select the **<Enterprise Group> Specific Jobs** tab. The Enterprise Group available for mapping will be decided as per *Global Policy> User> Job Costing* in Admin module.

Default Jobs

Job Code ▲	Name	Assignment Start	Assignment End	
ANA	Analysis	2017/02/24	2017/02/28	

Department Specific Jobs

Department ID	Name	Job Code ▲	Name	Assignment Start	Assignment End	
1	Department-1	PSD-W	PSD Writing	2017/02/24	2017/02/28	

Previous Job Assignment

- Select an <Enterprise Group> (e.g. Department, Designation etc.) using the picklist button. The above example shows a “Department” specific jobs assignment.
- Select a **Job** and set the **Assignment Date** as required. Multiple default jobs can be assigned with non-overlapping *Assignment Date* ranges.
- Click **OK** to save the Department specific jobs assignment.

Click **Save** button to apply the Site Mapping. Once the Assignment Date range for a job expires, the job will be moved to the **Previous Job Assignment** section as shown below.

Department Specific Jobs

Previous Job Assignment

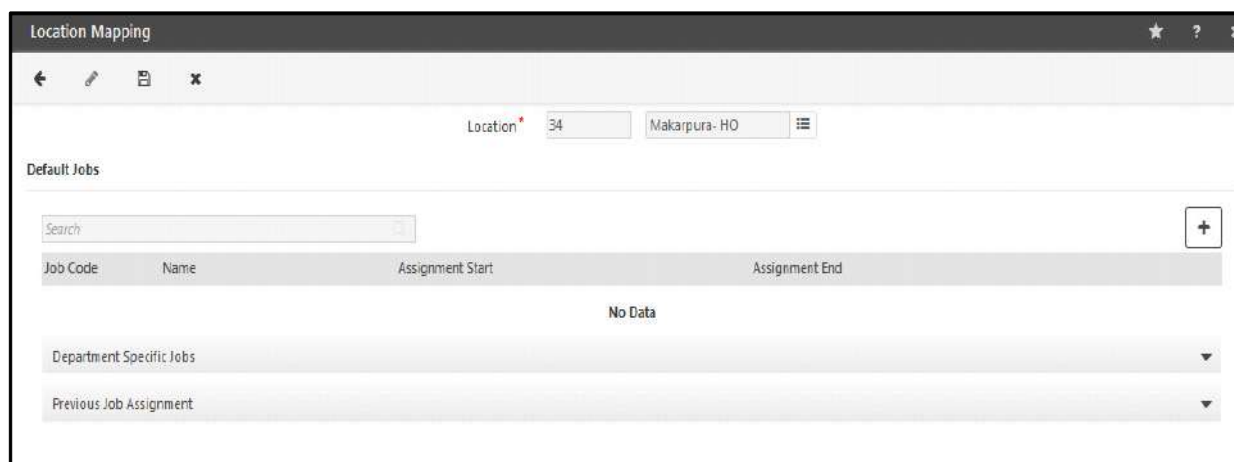

Department ID	Name	Job Code ▲	Name	Assignment Start	Assignment End
1	Department-1	PSD-W	PSD Writing	24/02/2017	24/02/2017

# Location Mapping

Location mapping refers to the assignment of multiple jobs as default jobs for a location. Default jobs can also be assigned to any specific enterprise group (i.e. organization, department, designation etc.) within the location. Setting a default job ensures that, for a certain day, the day's default job will be assigned to the user, based on the current date.

In Location Mapping feature, user will punch using COSEC APTA and on the basis of available location details system will map punch to assigned job code for that configured location.

To set default jobs for a location, go to **Job Processing and Costing > Project Management > Location Mapping**.

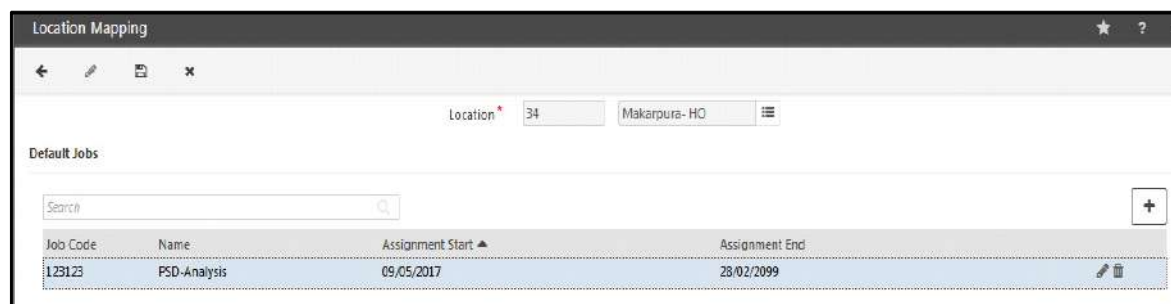

The screenshot shows the 'Location Mapping' window. At the top, there's a header bar with a title and navigation icons. Below the header, there's a section for 'Location' with a dropdown menu showing '34' and a text field with 'Makarpura- HO'. Underneath, the 'Default Jobs' section is visible. It contains a search bar with the placeholder text 'Search' and a '+' button. Below the search bar is a table with the following columns: 'Job Code', 'Name', 'Assignment Start', and 'Assignment End'. The table currently displays 'No Data'. At the bottom of the 'Default Jobs' section, there are two dropdown menus: 'Department Specific Jobs' and 'Previous Job Assignment'.

**Location:** Select the location from the picklist. The location can be based on Bluetooth i.e. BLE- Beacon, BLE- Device, GPS and Wi-Fi as configured from Admin> System Configuration> Location Master.

## Default Jobs

Select the Default Jobs section. Click Add button to select the default job for the selected location.

Select the job from the picklist. This will be the default job assigned to the selected location. The **Assignment Date** will be auto-loaded in the field. You can change the assignment date as required.

The screenshot shows the 'Location Mapping' window. At the top, there's a header bar with a title and navigation icons. Below the header, there's a section for 'Location' with a dropdown menu showing '34' and a text field with 'Makarpura- HO'. Underneath, the 'Default Jobs' section is visible. It contains a search bar with the placeholder text 'Search' and a '+' button. Below the search bar is a table with the following columns: 'Job Code', 'Name', 'Assignment Start', and 'Assignment End'. The table contains one entry: '123123', 'PSD-Analysis', '09/05/2017', and '28/02/2099'. At the bottom of the 'Default Jobs' section, there are two dropdown menus: 'Department Specific Jobs' and 'Previous Job Assignment'.

Click on **Save** button to save the location mapping.

## Department Specific Jobs

Job Code	Name	Assignment Start	Assignment End	
123123	PSD-Analysis	09/05/2017	28/02/2099	

**Department Specific Jobs**

Department ID	Name	Job Code	Name	Assignment Start	Assignment End	
5	PMT Dept	123123	PSD-Analysis	09/05/2017	28/02/2018	

Previous Job Assignment

Select the **Department** and select the **Job** to assign the default job to the department.

# Job Scheduler

Job Scheduler enables you to assign multiple jobs to users using Daily, Weekly or Monthly Schedule at once, easily. When a Job Scheduler is run for the selected jobs, these jobs are assigned automatically to all the selected users according to the set schedule. This saves a lot of time and hassle of individual job assignment to a large number of users.

*Make sure the users are active and Job Costing is enabled for the users to whom you wish to assign Job Schedulers.*

To create a Job Scheduler,

- Click **Job Processing and Costing > Job Scheduler > Job Scheduler**.

- Click **Add**  to add a new Job Scheduler. Maximum 99999 Job Schedulers can be created.

*If the Job Scheduler creation limit is reached, then you need to delete such Schedulers which are not in use or expired.*

- **Job Scheduler:** Configure the desired name you wish to assign to the Job Scheduler. The ID is auto-generated.
- **Active:** Select the check box to activate the Schedule. If disabled, the Job Scheduler will not run at the scheduled date and time.

## Schedule Parameters

- **Schedule Range:** Configure the Start Date and End Date for the schedule. Only those jobs which have their date range within the Schedule Range will be assigned to the users.
- **Schedule Type:** Select the desired Schedule Type from the options — Daily, Weekly, Monthly. The jobs will be assigned based on the selected Schedule Type for the set Schedule Range. For example, the Schedule Range is from 25/03/2024 to 30/03/2024 and the Schedule Type is selected as Weekly. Then the selected jobs will be assigned to the users on the selected days of the selected weeks of a month.
- **Every (Day Of the Month):** Select the desired day of the month when the Job Scheduler should run. For example, if the Day Of the Month is selected as 6, then the Job Scheduler will run from 6th of the month.
- **Schedule Run Time:** Configure the Start Time when the Job Scheduler should run.

*Make sure the Every (Day Of the Month) and Schedule Run Time are a current/future date and time. For example, if the current date is 13/05/2024 and we are configuring Every (Day Of the Month) as 1, then the Scheduler will not run as it is a past date. You need to configure Every (Day Of the Month) either as 13 or any other later date.*

- **Processing Period:** Select the desired Processing Period from the options — Current, Next. The Job Scheduler will run based on the selected Processing Period. If the Processing Period is selected as Current, the Scheduler will run for the current month and if the option is selected as Next, the Scheduler will run for the next month.

Click [“Preview Schedule”](#) once all the schedule configurations are done and the jobs are assigned.

## Job Parameters

*Make sure you add the job with the highest priority first. The priority of the Jobs will be in descending order. For example, when you configure J1, first then J2, followed by J3. In this case J1, will have the highest priority then J2 followed by J3 which has the lowest priority.*

*Make sure the jobs you wish to assign using the Job Scheduler have already been created.*

- Click **Add**  to add a new Job. Maximum 99999 Jobs can be added.

The screenshot shows the 'Job Parameters' window. At the top is a search bar. Below it is a table with three columns: 'Job', 'Repeat Days', and 'Active'. The 'Job' column contains a picklist with 'J1' selected. The 'Repeat Days' column contains a text input with '1-99'. The 'Active' column contains a checkbox that is checked. To the right of the table is an 'Add' button with a plus icon.

- **Job Name:** Click the picklist under **Job Name** to select the desired Jobs. The **Picklist For Job** pop-up appears.

Picklist For Job

Total Selected: 0 Records

Search  Ended Days (1-999)  Active

☐ Select All

<input type="checkbox"/>	Job Code ▲	Name	Start	End
<input type="checkbox"/>	J1	Job 1	24/04/2024	30/04/2024
<input type="checkbox"/>	J2	Job 2	30/04/2024	10/05/2024
<input type="checkbox"/>	J4	Job 4	10/05/2024	30/05/2024

OK Cancel

By default, all the **Active** jobs are displayed. To filter the jobs, click **Active** and select the desired option — **All**, **Active**, **Expired**. The jobs appear as per the set filter.

If you select **Expired**, you can set another filter.

Configure the number of days in Ended Days (1-999). The system will display the expired jobs, derived using the following: Current Date minus Number of days configured in Ended Days.

For example:

Ended Days configured = 2

Current Date= April 25, 2024

All the jobs expired between April 23, 2024 to April 25, 2024 (midnight), will be displayed.

Click to select the desired job from the list. You can also search for the desired job using the search bar.

The selected job appears in the grid.

You can either select particular jobs or can select all the jobs at once.

To select particular jobs, select the check boxes of the desired jobs.

OR

To select all the jobs, select the **Select All** check box. The jobs on all the pages will be selected.

Click **OK**. Hover-over the **Info**  icon to view the number of selected jobs.

Job Parameters

Search

Job		Repeat Days	Active
ID	Name	1-99	<input checked="" type="checkbox"/>

3 Job(s) are selected

Select Users

If you have selected Schedule Type as **Daily**, configure the following parameter:

- **Repeat Days:** Configure the number of days for which the selected job should be repeated in the schedule. For more details, refer to the [“Example for Schedule Type- Daily”](#).

If you have selected Schedule Type as **Weekly**, configure the following parameters:

- **Week of Month:** Select the desired weeks of the month for which you wish the jobs should be assigned. To select all the weeks, select **Check All**. The weeks which are not selected will be denoted by '-' in the grid.
- **Days of Week:** Select the desired days of the week for which you wish the jobs should be assigned. To select all the days, select **Check All**. The days which are not selected will be denoted by '-' in the grid.

For more details, refer to the [“Example for Schedule Type- Weekly”](#).

*If the 4th/5th/6th week of a month is also the Last week of the month and both — 4th/5th/6th week and Last week are selected, then the jobs will be assigned only once for that week.*

Job Parameters

Search

Job		Week of Month	Days of Week	Active
J1	Job 1	Select	Select	<input checked="" type="checkbox"/>

3 Job(s) are selected

Select Users

If you have selected Schedule Type as **Monthly**, configure the following parameters:

- **Month of Year:** Select the desired months of the year for which you wish the jobs should be assigned. To select all the months, select **Check All**. The months which are not selected will be denoted by '-' in the grid.
- **Days of Month:** Configure the From Date and To Date within which the jobs should be assigned within a month.

For more details, refer to the [“Example for Schedule Type- Monthly”](#).

- **Active:** Select the check box to activate the job in the schedule.
- Click **Save** to save the configuration or click **Cancel** to discard. The selected Job appears in the grid.

Job	Repeat Days	Active
J1 - Job 1	1	Yes
J2 - Job 2	1	Yes
J3 - Job 3	1	Yes
J4 - Job 4	1	Yes

- You can also edit the desired Job. To do so, click **Edit** of the respective Job.
- You can also delete the desired Job. To do so, click **Delete** of the respective Job.

If a Job selected in a Job Scheduler expires before the Schedule End Date, then the dates on which the Job is to be assigned according to the **Job Parameters** configuration will be left blank once the job expires. However, the other jobs in the Scheduler will be assigned as per the **Job Parameters** configuration.

For Example, 2 jobs — J1 (01/04/2024-05/04/2024) and J2 (01/04/2024-10/04/2024) are added to the Scheduler for Schedule Type= Daily with Repeat Days= 2 for both jobs. Then, no job will be assigned on 06/04/2024 as J1 expires on 05/04/2024.

If a Job selected in a Job Scheduler has Start Date later than Schedule Start Date and expires before Schedule End Date, then that job will be assigned according to the Job Start and End Dates only.

## Select Users

- **Select Users:** Select the desired option — User Wise, Group Wise, All.

Users include — Users, Workers, Temporary Users and Temporary Workers.

Make sure the users are active and Job Costing is enabled for the users to whom you wish to assign Job Schedulers.

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

Picklist For All Users

Total Selected: 0 Records

1	User 1	
2	User 2	

Now you can view the Job Schedule with the selected jobs.

## Preview Schedule

- Click **Preview Schedule**. The **Job Schedule Preview** pop-up appears.

The assigned jobs will appear in the calendar view according to the selected Schedule Type.

- Click **Save** to save the configuration. The new Job Scheduler will appear in the right grid.

Once the Job Scheduler is run, the assigned jobs appear under:

- ["Default Jobs"](#) in ["Job Costing"](#) tab in ["Configuring Users"](#).
- ["Default Jobs"](#) in ["Worker Profile-Job Costing"](#).

If you have added jobs manually and then you run the Job Scheduler, in such cases, the jobs assigned via Job Scheduler will appear above manually assigned jobs in the same sequence as configured in the Job Scheduler.

*Make sure the Alert Service is running for the Job Scheduler to run.*

*If multiple Job Schedulers are scheduled at the same time or if a Job Scheduler and Job Assignment Process is run in parallel, then the Job Schedulers will run in a sequential manner. In this case, the last run Job Scheduler will have the highest priority and the selected jobs in the Scheduler will be at highest priority.*

*If a Job is assigned manually to a user/worker and the same is assigned again via Job Scheduler, following scenarios are possible:*

- *Jobs may have different Job Codes but they have the same Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes but they have a different Start/End Date, then the system will create a new job.*
- *Jobs may have same Job Codes and they have the same Start/End Date, then the system will not create a new job.*

*When multiple jobs are assigned for the same date and time, then the job with the highest priority will be displayed in the Preview.*

*Any changes done in the Job Scheduler configurations after the Job Scheduler is run will be applicable only from the next time the Job Scheduler runs.*

If you have assigned different Job Schedulers to different Enterprise Groups, then the Job Scheduler assignment will automatically change if you change the Enterprise Group assigned to the user. Enterprise Groups can be assigned to a user/worker from:

- API - User & Worker
- Multi-Users option
- Import
- Integrate
- Association Mapping

Jobs assigned via Job Schedulers cannot be deleted. However, Job Schedulers assigned to users can be deleted/changed. If jobs have already been assigned using Job Schedulers and then the Job Scheduler is deleted or the Enterprise Group assigned to the user is changed, the jobs already assigned will not be deleted. However, new jobs will not be assigned to users using the same Job Scheduler. New jobs will be assigned to the user via the new Job Scheduler assigned to the users via change of Enterprise Group.

For example,

Enterprise Group - Organization 1, has Job Scheduler J1 and J2

Enterprise Group - Organization 2, has Job Scheduler J3 and J4

Enterprise Group - Organization 3, has no Job Scheduler

- If the Enterprise Group of the user is Organization 1, then Job Schedulers J1 and J2 will be assigned to the user.
- If you change the Enterprise Group of the user to Organization 2, then Job Schedulers J3 and J4 will be assigned to the user and J1/J2 will be removed.
- If you change the Enterprise Group of the user to Organization 3, as there are no Job Schedulers in Organization 3, the assigned Job Schedulers J3 and J4 will be retained.

## Examples for Different Schedule Types

The assignment of Job depends on the selected Schedule Type, the number of jobs selected and the Job Parameters configuration. Let us understand this with the help of examples for each Schedule Type:

- [“Example for Schedule Type- Daily”](#)
- [“Example for Schedule Type- Weekly”](#)
- [“Example for Schedule Type- Monthly”](#)

### Example for Schedule Type- Daily

#### Example 1

Consider a Factory Manager who needs to assign 4 jobs — J1, J2, J3 and J4 to his staff — U1, U2, U3 and U4 on a daily basis for 20 days, starting from 01/04/2024. The configurations for the same will be as follows:

#### Schedule Parameters

- Schedule Range: 01/04/2024 to 20/04/2024.
- Schedule Type: Daily
- Every (Day Of the Month): 1

## Job Parameters

- J1, Repeat Days= 1
- J2, Repeat Days= 1

- J4, Repeat Days= 1

Save the Job Scheduler. Click **Preview**. The Preview displays the Job Schedule.

Sun	Mon	Tue	Wed	Thu	Fri	Sat
	1 J1	2 J2	3 J3	4 J4	5 J1	6 J2
7 J3	8 J4	9 J1	10 J2	11 J3	12 J4	13 J1
14 J2	15 J3	16 J4	17 J1	18 J2	19 J3	20 J4
21	22	23	24	25	26	27
28	29	30				

When the Job Scheduler runs as per the defined date and time, the jobs will be assigned to the users. These jobs will appear under the **Default Jobs** section in the User Profile. Refer to, “[Default Jobs](#)” under “[Job Costing](#)” in “[Configuring Users](#)”.

User Configuration

<

Similarly, these jobs will appear under “[Default Jobs](#)” in “[Worker Profile-Job Costing](#)” if these jobs are assigned to the workers.

## Example 2

Consider a Factory Manager who needs to assign 4 jobs — J1, J2, J3 and J4 to his staff — U1, U2, U3 and U4 on a daily basis for 1 day on 01/04/2024. The configurations for the same will be as follows:

### Schedule Parameters

- Schedule Range: 01/04/2024 to 01/04/2024.
- Schedule Type: Daily
- Every (Day Of the Month): 1

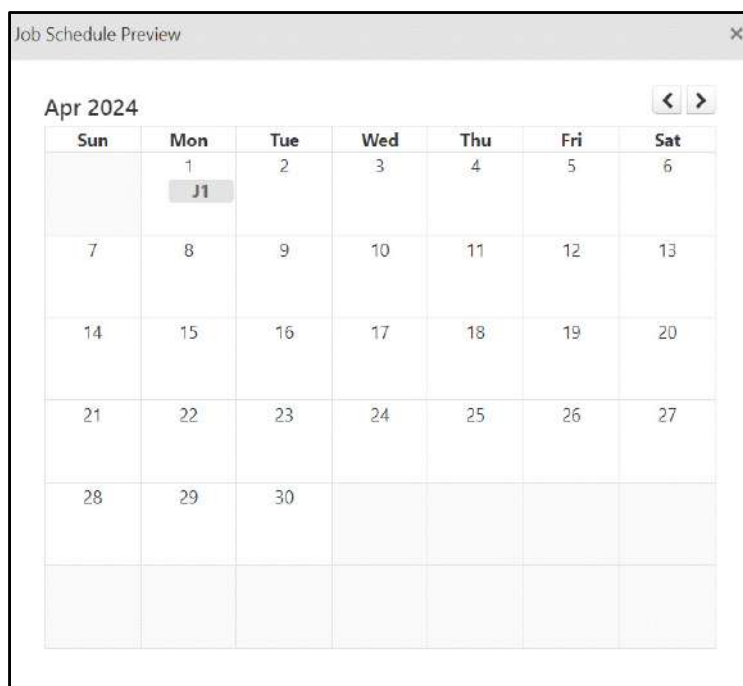

### Job Parameters

- J1, Repeat Days= 1
- J2, Repeat Days= 1
- J3, Repeat Days= 1
- J4, Repeat Days= 1

In this case J1 will be displayed by the system. The system will check for the date range, then will check the first configured Job and will only consider this job.

The other Jobs — J2, J3, J4— configured will be ignored by the system as the Job Scheduler Range is set for one day only that is, 01/04/2024.

Save the Job Scheduler. Click **Preview**. The Preview displays the Job Schedule.

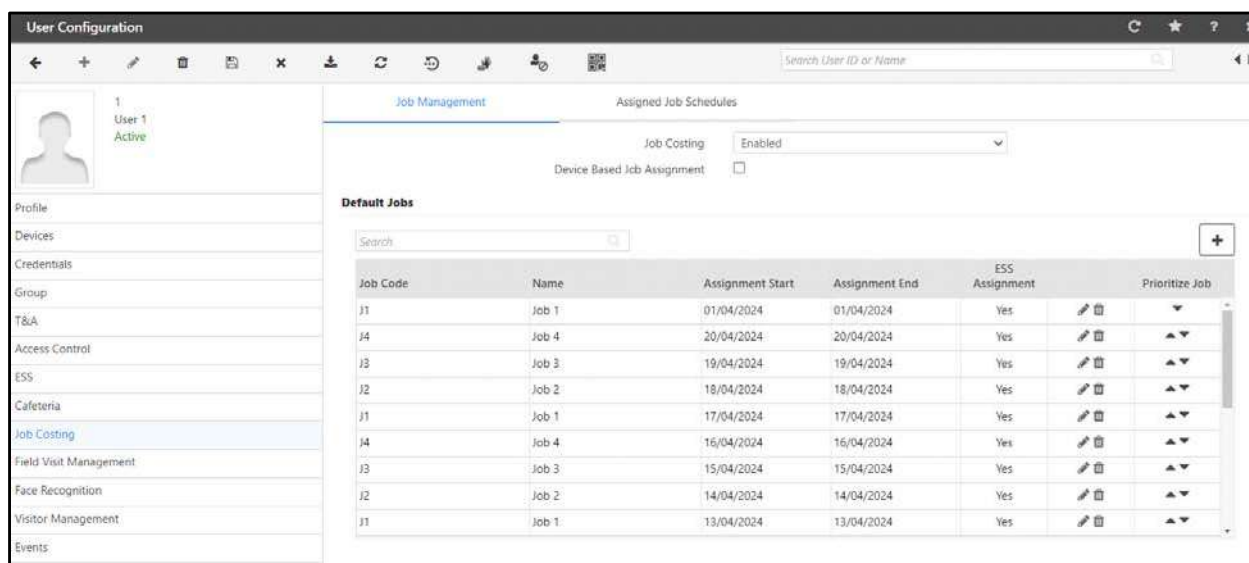

Job Schedule Preview

Apr 2024

Sun	Mon	Tue	Wed	Thu	Fri	Sat
	1 J1	2	3	4	5	6

14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30				

When the Job Scheduler runs as per the defined date and time, the jobs will be assigned to the users. These jobs will appear under the **Default Jobs** section in the User Profile. Refer to, [“Default Jobs”](#) under [“Job Costing”](#) in [“Configuring Users”](#).

Similarly, these jobs will appear under “Default Jobs” in “Worker Profile-Job Costing” if these jobs are assigned to the workers.

## Example for Schedule Type- Weekly

### Example 1

Consider a Hotel Manager who needs to assign 3 jobs — J1 (Catering), J2 (Laundry) and J3 (Housekeeping) to his staff — U1 and U2 on a weekly basis for 6 months, starting from 01/04/2024. These jobs need to be assigned only for the last week of every month, distributed in a week as follows:

- Monday and Wednesday- J1 (Catering)
- Tuesday and Thursday- J2 (Laundry)
- Friday, Saturday and Sunday- J3 (Housekeeping)

The configurations for the same will be as follows:

### Schedule Parameters

- Schedule Range: 01/04/2024 to 01/10/2024.
- Schedule Type: Weekly
- Every (Day Of the Month): 1

### Job Parameters

- J1, Week of Month= Last, Days of Week= Mon and Wed
- J2, Week of Month= Last, Days of Week= Tue and Thur
- J3, Week of Month= Last, Days of Week= Fri, Sat and Sun

Save the Job Scheduler. Click **Preview**. The Preview displays the Job Schedule.

Similarly, these jobs will appear under “Default Jobs” in “Worker Profile-Job Costing” if these jobs are assigned to the workers.

# Job Assignment Process

Job Assignment Process enables you to manually assign multiple jobs to multiple users based on the configured Job Schedulers at once. When a Job Assignment Process is done for the selected users, the jobs configured in the Job Scheduler are assigned automatically to all the selected users according to the set schedule. This saves a lot of time and hassle of individual job assignment to a large number of users.

If multiple Job Schedulers are scheduled at the same time or if a Job Scheduler and Job Assignment Process is run in parallel, then the Job Schedulers will run in a sequential manner. In this case, the last run Job Scheduler will have the highest priority and the jobs in the scheduler will be at highest priority.

The status of the Job Scheduler Assignment can be viewed from "[Scheduler Logs](#)".

*Make sure Job Costing is enabled for the users to run the Job Scheduler.*

To execute the Job Assignment Process,

- Click **Job Processing and Costing > Job Scheduler > Job Assignment Process**.

- **Month-Year:** Select the desired month and year for which the Job Scheduler should run. All the Job Schedulers that fall within the selected month and year will run in a sequential manner.
- **Select Users:** Select the desired option — User Wise, Group Wise, All.

*All the active Job Schedulers assigned to the selected user will be executed. Hence, jobs will be assigned as configured in each Job Scheduler.*

- If you select **User Wise**, click the **User** picklist. The **Picklist for All Users** pop-up appears.

Picklist For All Users

Month-Year: April 2024

User Selection

Select Users: All

Process

- Click **Process**. The Job Schedulers will run and the jobs will be assigned to the users.

The jobs will appear under the **Default Jobs** section in the User Profile. Refer to, [“Default Jobs”](#) under [“Job Costing”](#) in [“Configuring Users”](#).

Similarly, the jobs will appear under [“Default Jobs”](#) in [“Worker Profile-Job Costing”](#) if the jobs are assigned to the workers.

*Make sure the Alert Service is running for the Job Scheduler to run.*

*If a Job Scheduler is run after the Scheduler Start Date then also the jobs will be assigned according to the configured Job Parameters in Job Scheduler.*

# Scheduler Logs

Scheduler Logs enables you to view the details of all the Job Scheduler Assignments for a defined date range. These details include the completion status of all the Job Scheduler Assignments.

*Scheduler Logs will display logs of the Job Schedulers that are run as per the set schedule and not manually.*

To view the Scheduler Logs,

- Click **Job Processing and Costing > Job Scheduler > Scheduler Logs**.

The screenshot shows the 'Scheduler Logs' window with the following filters: Date (03/05/2024 to 10/05/2024), Scheduler (All), and Status (Both). A 'View' button is at the bottom.

- Date:** Configure the Start Date and End Date for which you wish to view the logs.
- Scheduler:** Select the desired Job Scheduler whose logs you wish to view or select All to view logs of all the Schedulers.
- Status:** Select the desired option — Succeed, Failed, Both — according to which you wish to filter the logs.
- Click **View** to view the logs. All the logs appear in the grid below.

The screenshot shows the 'Scheduler Logs' window with the same filters as above. Below the filters is a search bar and a table with the following data:

Scheduler Name	Scheduled Date-Time	Completion Date-Time	Status
Job Scheduler 8	11/05/2024 16:54	11/05/2024 16:54	Succeed

- You can also export the logs if required. Click **Export**  to export the logs.

# Job Status

This page enables the user to view and monitor Jobs based on their current status. To view a job status, go to **Job Processing and Costing > Utilities > Job Status**.

The Job status page appears.

The screenshot shows the 'Job Status' page. At the top, there's a header bar with a back arrow, a star, and a question mark. Below the header, there are four filter sections: 'Project' with 'ID' and 'Name' input fields and a picklist icon; 'Phase' with 'ID' and 'Name' input fields, a picklist icon, and a status '0 Phase(s) selected'; 'Job' with 'ID' and 'Name' input fields, a picklist icon, and a status '0 Job(s) selected'; and 'Job Status' with a dropdown menu set to 'All'. A 'View' button is positioned below these filters. To the left of the filters is a search bar labeled 'Search'. Below the filters and search bar is a table with columns: 'Job', 'Start Date', 'End Date', 'User Count', 'Job Hours', 'Estimated Hours', and 'Job Status'. The table currently displays 'No Data'.

Configure the parameters as per your requirement:

**Project:** Click the **Project** picklist. The **Picklist For Project** pop-up appears. Select the desired Project.

**Phase:** Click the **Phase** picklist. The **Picklist For Phase** pop-up appears.

- You can select particular or multiple Phases of the Project for which records are to be viewed.

# Daily Job View

This page displays information on total number of jobs performed on a day, number of users performing these jobs, details of Total Jobs, User Count, Job Hours, Un-Assigned Hours, OUT Time and Break Hours for a selected date range. User can view data for a date range of maximum 60 days.

To view daily job details, go to **Job Processing and Costing > Utilities > Daily Job View**.

Date	Total Jobs	User Count	Job Hours	Un-Assigned Hours	Out Time	Break Hours
22/05/2017	4	5	22:54	06:01	00:50	00:24

**Date:** Select a start and end Date using the date selection buttons.

Click the **View** button to view daily job details for the selected date range.

**Total Jobs:** It displays total number of jobs done on the selected date.

**User Count:** It displays the number of users performing the job on selected date.

**Job Hours:** It displays the total hours spent in doing the assigned job.

**Un- Assigned Hours:** It displays the total hours spent on the selected date on un-assigned work.

Example: The user is doing job from 09:01 to 09:20 hrs. At 09:20 hrs user punches IN with Job code None. Then at 09:40 hrs user punches OUT with job code Continue. So the time between 09:20 to 09:40 is marked as Un-assigned hours.

Again at 09:50, user punches OUT with code None. And punches IN with code None. Hence this transaction is marked as Un-assigned hours.

Job Code	Phase Code	Project Code	Start Date	Start Time	End Date	End Time	Transaction Type	Hours	Job Count
PSD-R	PSD-A	CLD	22/05/2017	09:01	22/05/2017	09:15	Job Hours	00:14	1
PSD-R	PSD-A	CLD	22/05/2017	09:15	22/05/2017	09:20	Job Hours	00:05	1
			22/05/2017	09:20	22/05/2017	09:40	Un-Assigned Hours	00:20	
SAD			22/05/2017	09:40	22/05/2017	09:50	Job Hours	00:10	1
			22/05/2017	09:50	22/05/2017	09:55	Un-Assigned Hours	00:05	

**Out Time:** It displays the total hours for which users working on the job went outside.

You can enable the “OUT punch from Exit reader” in Attendance Policy of user to consider the punch for Out Time.

**Break hours:** It displays the total hours for which the users working on the job availed as break. It will be calculated based on the punches for Break Start and Break End.

The configuration for break hours is done from the Shift configuration assigned to the user.

# Time Sheet Correction

Time Sheet Correction helps in modifying job codes and split the transactions. So SA with appropriate rights can split the transactions by adding new punches between the transactions and apply job code to them if required.

The Time Sheet Correction can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module (For more details refer COSEC Employee Self Service User Manual)

COSEC Web enables all *System Account users* with appropriate page rights to make Time Sheet Correction using the *Job Processing and Costing* module. All applications made by the System Account user are *pre-approved* by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Time Sheet Correction using the *Job Processing and Costing* module. All applications made by the On Behalf System Account User are *pre-approved* by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to “[On Behalf System Account User](#)”.

To do the Time Sheet Correction, go to **Job Processing and Costing > Utilities > Time Sheet Correction**

The screenshot shows the 'Timesheet Correction' web application. At the top, there's a title bar with a star icon and a question mark. Below it, a navigation bar contains a back arrow, a pencil icon, a folder icon, and a close 'x' icon. The main form area has two input fields: 'User' with a dropdown menu showing 'ID' and 'Name', and 'Date' with a calendar icon and the value '22/05/2017'. Below these is a section titled 'Timesheet Correction' with a search bar. Underneath is a table with columns: Job Code, Phase Code, Project Code, Start Date, Start Time, End Date, End Time, Transaction Type, Hours, and Count. The table currently displays 'No Data'. At the bottom, there is a 'Job Summary' section with a dropdown arrow.

**User:** Select the User from the picklist. Ensure that the users are enabled for Job costing from the User module.

**Date:** Select the date from the calendar for which correction is to be done.

The transactions will be displayed as shown below.

## Corrections

- The **Job code** can be changed by selecting the option from the drop down list. If Job code is selected as **None**, then transaction type will be set as **Un-assigned**.
- The **Start Date** can be edited for only 1st transaction of the day by using left-right arrows.
- The **Start Time** can be edited for only 1st transaction of the day by specifying the time in hh:mm format.
- The **End Date** and **End Time** can be edited for all the transactions.
- The **Transaction type** can also be corrected. If some transaction is of **Un-assigned** type, then assigning some job code to the transaction will change the transaction type to **Job Hours** as shown below. Similarly if None is selected for any Job type transaction then its transaction type will get convert from Job to Unassigned.

Timesheet Correction

Job Code	Phase Code	Project Code	Start Date ▲	Start Time	End Date	End Time	Transaction Type	Hours	Split	
COSCLD			03/09/2017	10:55	03/09/2017	14:55	Job Hours	04:00	P	

- The **Job Count** can be changed by editing the existing value.

## Adjustment

Adjustment

Adjustment Type: Award

Hours: 00:10

Remark: 50 chars

OK Cancel

Adjustment icon is visible against all transactions except the ones of 'Un-Assigned', 'Break Hours' and 'Out Time' transaction.

Click on **Adjustment**  button to assign either award or penalty. Both cannot be assigned simultaneously. Adjustment Hours (Penalty) should be less than or equal to corresponding Job Hours.

*If some adjustment has been done against some transaction and user wishes to revert it back then he/she should enter 00:00 value in 'Hours' and click 'OK'.*

## Overtime

Click on Overtime  button to view the overtime details between start punch date time and end punch date time.

Overtime Within 22/05/2017 17:30:49 and 22/05/2017 19:30:27

## Merged Jobs

Click on **Merged Jobs** to view the Merged transactions.

Code	Project Code	Start Date	Start Time	End Date	End Time	Transaction Type	Hours	Job Count	Edit	Adjustment	Overtime	Merged Jobs	Split
	V9r5	2016/04/11	09:00	2016/04/11	11:00	Job Hours	02:00	1					
		2016/04/11	11:00	2016/04/11	11:30	Job Hours	00:30	1					
		2016/04/11	11:30	2016/04/11	13:00	Job Hours	01:30	1					

**Actual Transaction** details show the transactions that are to be merged. **Merged Transaction** shows the resultant transaction after merging.

Merged Transaction Details (Succeeding)													
Actual Transactions													
Job code	Phase Code	Project Code	Start Date	Start Time	End Date	End Time	Transaction Type	Hours	Job Count	Adjustment Type	Adjustment Time	Overtime	
004	344	V9r5	2016/04/11	09:00	2016/04/11	11:00	Job Hours	02:00	1				
0029			2016/04/11	11:00	2016/04/11	11:30	Job Hours	00:30	1				
Merged Transactions													
Job code	Phase Code	Project Code	Start Date	Start Time	End Date	End Time	Transaction Type	Hours	Job Count	Adjustment Type	Adjustment Time	Overtime	
0029			2016/04/11	09:00	2016/04/11	11:30	Job Hours	02:30	2				

1) Say, an X transaction has to be merged in a destination transaction Y (Succeeding/Preceding) which is not a "Job Hours" type transaction, in such a case, the Merged Jobs icon for X transaction should be visible but disabled to be clicked.

2) An X transaction has to be merged (Succeeding/Preceding) in a destination transaction Y, which does not have Job Code.

In such a case, icon should be visible in front of X transaction, but disabled to be clicked.

3) An X transaction has to be merged in a Succeeding/Preceding transaction, but, there is no, next/previous transaction available, respectively. In such a case, the icon should be visible but disabled in front of X transaction.

## Split

Click on Split button to split the transaction and add new punches between the transaction. Split will be disabled if the transaction type is of "Out Time" and "Break". The Split Timesheet will appear as shown below:

Job Code	Phase Code	Project Code	Start Date	Start Time	End Date	End Time	Transaction Type	Hours	Job Count	
PSD-R	PSD-A	CLD	22/05/2017	09:05	22/05/2017	13:05	Job Hours	04:00	1	

OK Cancel

Click on **Edit** button and specify the new End time between existing start and end time to insert the new transaction as shown below:

Split Timesheet

# Timesheet Correction Authorization

Timesheet Correction Authorization helps in approving or rejecting an application of “Timesheet Correction” of ESS user.

To authorize Time Sheet Correction, click **Job Processing and Costing > Utilities > Timesheet Correction Authorization**.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

You can either:

- view all the pending Timesheet Correction Authorizations
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Application”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the From and To date from the calendar to view the pending applications of time sheet correction.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click on **View** to view the Pending, Approved and Rejected applications.

## Pending Application

Click the **Pending** collapsible panel. The Pending Application with Job Hours, Un-Assigned Hours and Reason while applying for correction will be shown in the grid.

User ID	Name	Attendance Date	Job Hours	Un-Assigned Hours	Reason	Approve	Reject	Remark	Details
apjpc	apjpc	15/11/2017	14:30	00:00		<input checked="" type="checkbox"/>	<input type="checkbox"/>	Authorized Timesheet Corredt	

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject check box in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

To view the details of the time sheet correction application, click **Details** . The **All Job Costing Punches** window appears as shown below.

All Job Costing Punches window displays the time sheet correction details.

Transaction Values has the following options:

- **On Application:** The transaction values shown are the values at the time of the application being done.
- **Applied:** The transaction values after the correction is being made.
- **Current:** The current transaction values are same as On Application values.

It also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer ["Approval Policy"](#).

**Remark** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

*The pending applications can not be authorized if the attendance period is closed while doing monthly attendance process and "Attendance Correction in Closed Period" checkbox is disabled from Time and Attendance > Policies > Attendance Policy > Event Authorization.*

*Even though; the period is closed but if "Attendance Correction in Closed Period" check-box in Policy is enabled then authorization can be made.*

## Approved Applications

Click the **Approved** collapsible panel. The **Approved** section displays all the applications that have been approved by the RIC or the System Administrator.

The following screen displays the **Approved** section with approved Award Penalty applications:

# Job Costing Process

This page helps in processing attendance punches to generate accurate Job Costing data of users for a specified date range. Any changes in configuration made for a user on the *Job Processing and Costing* module requires the administrator to process the user's data first using this functionality.

“Job Costing Process” maps job code to the event on the basis of user/ device/ site/ location mapping configuration.

To process job costing data, go to **Job Processing and Costing > Utilities > Job Costing Process**

The screenshot shows the 'Job Costing Process' interface. At the top, there's a title bar and a back arrow. Below that, the 'Date' field is set to 2017/04/03. The 'Reprocess Events' checkbox is unchecked. Under 'User Selection', the 'Select Users' dropdown is set to 'User Wise'. The 'User' field has 'ID' and 'Name' sub-fields. A 'Process' button is located at the bottom.

Select a date range for which data is to be processed.

Select the **Reprocess Events** checkbox to enable the system to do the following:

- Reprocess all attendance events based on any new policy settings.
- Revert all attendance event related changes made through manual correction.

*When job code is not assigned to user and user punches with that job code using Special function from door; then Reprocess Events should be enabled during Job Costing process.*

Select the **Users** from the filter options of User Wise, Group Wise or all for whom the data is to be processed.

Click the **Process** button to start processing job data for all selected users.

# Importing Data

The COSEC application has an inbuilt utility for enabling users to import job data from excel files with predefined format. This would thus save the end user a lot of time and effort in having to make individual job data entries at the application level.

*Make sure you have **View** and **Edit** rights for the Import Data page to import the jobs.*

To import jobs,

Click **Job Processing and Costing > Utilities > Import Data**.

Configure the following parameters:

- **Import Data For:** To download sample import file, click **Download Sample Import file** . The downloaded import sheet displays the details required for importing data. Enter the details to be imported in the **Job** sheet in this sample file and save the file at the desired location.
- **File Format:** Select the desired option from the drop-down list options — XLS or CSV.
- **Import File:** Browse the saved file path from where you wish to import the file. Click **Choose File**. It displays all folders which are in the drive. Select the desired file from the folder.
- Click **Upload** to upload the data. The file will be saved and you can preview the data.

- Click **Preview Data** to preview the data before importing. The data in the uploaded file is displayed as follows.

Import Data

Import Data For: Job

File Format: XLS

Import File: Choose File | Import Data (1).xls

Preview Data | Import Data

Code	Name	Start Date	End Date	Cost Centre ID	Estimated Hours	Merge Job	Allowance
J1	Job 1	25/12/2023	31/12/2023	1	23:59	0	0
J2	Job 2	25/12/2023	31/12/2023	1	23:59	0	0
J3	Job 3	25/12/2023	31/12/2023	1	23:59	0	0
J4	Job 4	25/12/2023	31/12/2023	1	23:59	0	0
J5	Job 5	25/12/2023	31/12/2023	1	23:59	0	0
J6	Job 6	25/12/2023	31/12/2023	1	23:59	0	0
J7	Job 7	25/12/2023	31/12/2023	1	23:59	0	0
J8	Job 8	25/12/2023	31/12/2023	1	23:59	0	0
J9	Job 9	25/12/2023	31/12/2023	1	23:59	0	0
J#S#	Job31	04/01/2024	08/01/2024	1	23:59	0	0
J16	J16	07/01/2024	07/01/2024	1	0:00	0	0
J17	J17	07/01/2024	07/01/2024	1	99999:60	0	0

Administrator needs to ensure that the user has full rights on the folder containing the Excel or CSV file for the import data operation.

- Click **Import Data** to import the Jobs. The result of import is shown as Success or Failure along with Result Description.

You can also filter the result records.

- Result:** Select the desired option from the drop-down list — Both, Success or Failure— to view the import result.

Import Data

Import Data For: Job

File Format: XLS

Import File: Choose File | Import Data (1).xls

Preview Data | Import Data

Result: Both

Code	Name	Start Date	End Date	Cost Centre ID	Estimated Hours	Merge Job	Allowance	Result	Result Description

J9	Job 9	25/12/2023	31/12/2023	1	23:59	0	0	Success	
J#S#	Job31	04/01/2024	08/01/2024	1	23:59	0	0	Failure	Enter Valid Job Code
J16	J16	07/01/2024	07/01/2024	1	0:00	0	0	Failure	Enter Valid Estimated Hours
J17	J17	07/01/2024	07/01/2024	1	99999:60	0	0	Failure	Enter Valid Estimated Hours

Once the data is imported successfully, data will be added or updated in “Job”.

# Daily Timesheet

To export Daily Timesheet, go to **Job Processing and Costing > Export > Daily Timesheet**.

The Daily Timesheet page appears as shown below:

The screenshot shows the 'Daily Timesheet' export configuration interface. On the left, there is a sidebar with 'Export' (highlighted in blue) and 'Configuration' options. The main area contains the following fields:

- Date \***: Two date pickers showing '09/05/2017'.
- File Name \***: A text input field.
- Select Users**: A dropdown menu set to 'User Wise'.
- User \***: Two input fields for 'ID' and 'Name'.
- Generate Export For**: A dropdown menu set to 'All Users'.
- Export**: A dark button at the bottom right.

Before exporting the Daily Timesheet data, you must do the ["Configuration"](#).

## Export

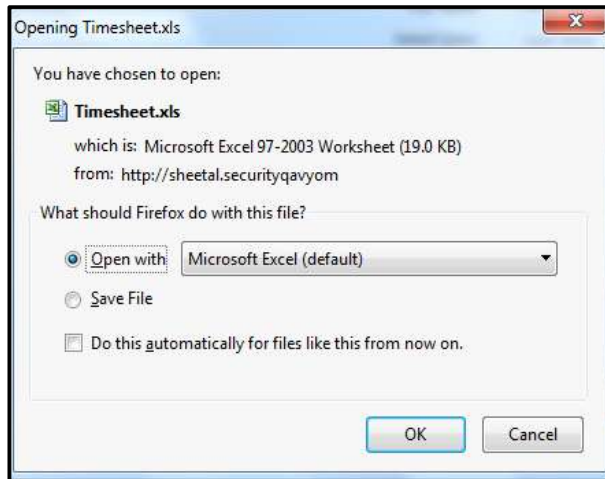

- Select the **date** range for which daily timesheet is to be exported.
- Specify the **filename** and the **file format** as Excel.
- You can filter the users by selecting users based on **User Wise, Group Wise or All**.
- You can **Generate Export for All Users, Active Users or Inactive Users**.

This screenshot shows the 'Daily Timesheet' export configuration page with an additional user list. The fields are similar to the previous screenshot, but with the following updates:

- Date \***: Date range from '22/05/2017' to '28/05/2017'.
- File Name \***: Set to 'Timesheet'.
- Select Users**: Still 'User Wise'.
- User \***: 'ID' and 'Name' fields.
- Generate Export For**: Still 'All Users'.
- Export**: A dark button at the bottom right.
- User List**: A table below the 'User' fields showing a list of users with their IDs and names, and a search bar above it.

User ID	Name
JCP1	Vinit
JCP2	Piyush
JCP3	Rahul
JCP4	Hiren
JCP5	Nitin

Click on **Export** button. The daily timesheet can be opened or saved at desired location.

The export timesheet file will be generated as per the configuration as shown below:

Sr No	User ID	User Name	Attendance Date	Start Date-Time	End Date-Time	Project Code	Project Name	Phase Code	Job Code	Job Name	Job Hours	Actual OT1	Actual OT2	Actual OT3	Job Count

# Job Processing and Costing Reports

These reports can be obtained using the **Reports** section under the **Job Processing and Costing** add-on module. The Reports can be categorized as follows:

- “Daily Job Details”
- “Monthly Job Details”
- “Job Transactions”
- “User Job Details”
- “Transaction-Wise Hours Summary”
- “Work Summary”

## Daily Job Details

This report displays the selected users' daily work details against various jobs and across multiple projects.

The screenshot shows the 'Daily Job Details' report configuration window. At the top, there are date pickers for 'Date' with values '06/21/2023' and '06/21/2023'. Below this is the 'Optional Parameters' section, which includes a 'Group By' dropdown set to 'Organization' and a 'Organization Name in Header As Per' dropdown set to 'User Selection'. The 'User Selection' section contains a 'Select Users' dropdown set to 'User Wise', a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is located at the bottom center.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Association Maps, Custom 2/3.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
  - If you select **User Wise**,
    - Click the **User** picklist. The **Picklist for All Users** pop-up appears.

Picklist For All Users

## Monthly Job Details

This report displays the selected users' monthly attendance summary against their jobs under the respective projects.

The screenshot shows the 'Monthly Job Details' report configuration window. At the top, there's a title bar with standard window controls. Below it, the 'For Month-Year' is set to 'June' and '2023'. The 'Optional Parameters' section includes 'Group By' set to 'Organization' and 'Organization Name in Header As Per' set to 'User Selection'. The 'User Selection' section shows 'Select Users' set to 'User Wise', with input fields for 'ID' and 'Name'. The 'Generate Report For' dropdown is set to 'All Users'. A 'Generate Report' button is at the bottom.

Configure the following parameters:

- **For Month-Year:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
  - If you select **User Wise**,

- Click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Job Transactions

This report displays the transaction details of selected users against their respective jobs.

The screenshot shows a web application window titled "Job Transactions". At the top, there is a "Date" field with two date pickers, both set to "06/19/2023". Below this is a section titled "Optional Parameters" which contains three dropdown menus: "Group By" (set to "Organization"), "Group By" (set to "Date"), and "Organization Name in Header As Per" (set to "User Selection"). To the right of these dropdowns is a checkbox labeled "Group Needed in Report". Below the "Optional Parameters" section is a section titled "User Selection" which contains a "Select Users" dropdown (set to "User Wise"), a "User" field with a search icon, and a "Generate Report For" dropdown (set to "All Users"). At the bottom center of the "User Selection" section is a "Generate Report" button.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Group By:** You can sort the Job Transaction report by selecting the desired option— **User** or **Date**.
- **Group Needed in Report:** Select the check box to display the name of the selected group in the generated report.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
  - If you select **User Wise**,

- Click the **User** picklist. The **Picklist for All Users** pop-up appears.

## User Job Details

This report displays the users' work details based on their enterprise group, project, job, phase and cost center.

The screenshot shows the 'User Job Details' report configuration window. It includes a date range selector at the top with 'To' and 'From' dates set to 06/19/2023. Below this is the 'Optional Parameters' section with three dropdown menus: 'Group By' (set to Organization), 'Group By' (set to Project), and 'Organization Name in Header As Per' (set to User Selection). There is also a checkbox for 'Group Needed in Report'. The 'User Selection' section includes a 'Select Users' dropdown (set to User Wise), a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown (set to All Users). A 'Generate Report' button is located at the bottom center.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Group Needed in Report:** Select the check box to display the name of the selected group in the generated report.
- **Group By:** Select the desired option from the drop-down list— **Project, Phase, Job, Cost Center, User**.
- **Organization Name in Header As Per:** Select the desired option — **User Selection or Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise, Group Wise, or All**.
  - If you select **User Wise**,

## Transaction-Wise Hours Summary

This report displays the user's time sheet transactions on daily basis. Also, the report displays transaction wise overtime or adjustments. It is applicable only if you have selected Daily2 as the Daily Overtime option in the Overtime Policy.

The screenshot shows the 'Transaction-Wise Hours Summary' configuration window. At the top, there are date pickers for 'Date' (06/19/2023) and 'To' (06/19/2023), and a checkbox for 'Show As Per Merged Transactions'. Below this is the 'Optional Parameters' section. It includes a 'Group By' dropdown set to 'Organization', a 'Group Needed in Report' checkbox, a 'New Page For Each User' checkbox, and an 'Include Overtime' section with checkboxes for OT1, OT2, OT3, OT4, and OT5 (all checked). There are also checkboxes for 'Include Adjustment Section' and 'Add Custom Footer'. A text field for 'Organization Name in Header As Per' is followed by a 'User Selection' dropdown. The 'User Selection' section at the bottom has a 'Select Users' dropdown set to 'User Wise', a 'User' field with 'ID' and 'Name' sub-fields, and a 'Generate Report For' dropdown set to 'All Users'. A 'Generate Report' button is at the bottom center.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.
- **Show As Per Merged Transactions:** Select the check box if you wish the details of transactions to be displayed as merged with overtime and adjustments.

### Optional Parameters

- **Group By:** Select the desired enterprise group from the drop-down list — Organization, Branch, Department, Section, Category, Grade, Designation, Custom group 1 (Association Maps), Custom Group 2/3.
- **Group Needed in Report:** Select the check box to display the name of the selected group in the generated report.
- **New Page For Each User:** Select this check box if you wish the report to start from a new page for every user.
- **Include Overtime:** There are five Overtime options available—OT1, OT2, OT3, OT4, and OT5. By default, all the options are selected. Clear the check box to disable.
- **Include Adjustment Section:** Select this check box if you wish to include adjustment section to overtime.
- **Add Custom Footer:** Select this check box if you wish to add a customized footer and specify the desired footer text.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click on **Customize Report Header**.

You can select the desired option from the drop-down list or can also add header according to your choice.

## User Selection

- **Select User:** Select the desired option — **User Wise, Group Wise, or All.**
- If you select **User Wise**,
  - Click the **User** picklist. The **Picklist for All Users** pop-up appears.

## Work Summary

The Work Summary reports display the detailed job costing summary for selected jobs, phases or projects.

## Project Summary

This report displays the detailed project summary with phase count, user count, job hours and job count details.

The screenshot shows a web application window titled "Project Summary". At the top, there are date pickers for "Date" with values "06/19/2023" and "06/19/2023". Below this is a "Project Selection" section. It contains a "Select Projects" label, a dropdown menu currently set to "Project Wise", and a table with columns "ID" and "Name". At the bottom of the form is a "Generate Report" button.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Project Selection

- **Select Project:** Select the desired option from the drop-down list— **All** or **Project Wise**.
- If you select **All**, then click on **Generate Report**.

The Project Summary report will be generated for all the Projects.

- If you select **Project Wise**,

- Click the **Project** picklist. The **Picklist For Project** pop-up appears.

Picklist For Project

The Field Visit Management (FVM) involves management of user's activities working on field. It allows management of Field Tasks done by users under various Field Schedules. The module shall facilitate viewing of locations and time of visit for the user and ease of punch marking for schedules (as per the rights assigned to them).

With this Module, you can:

- Assign Daily Field Schedules and Add Locations and Tasks to it.
- Monitor User's Field activities across assigned Field Schedule.

To use the Field Visit Management functions, select the **FVM** module  icon. The **FVM** page appears as shown below.

The page displays a menu and **Quick Links** to go to the required page in just one click. Quick Links are shortcuts to reach to a specific page easily. You can configure these options for Quick Links — **Add Quick Link**, **Select Layout** and **Reset to Default**.

#### **Add Quick Links**

- Click **Add** . The **Picklist For Quick Links Pages** pop-up appears.

Picklist For Quick Links Pages

<input type="checkbox"/>	Schedule Status Summary Report
<input type="checkbox"/>	Field Visit Summary Report

OK Cancel

OR

- To select all the pages at once, select the **Select All** check box. All the pages will be selected.

- Click **OK**.
- The Quick Links for selected pages appear on the Quick Link page.

#### Adding External Links,

- Select **External Link** tab and click on  button to add new external link.
- Configure the **Title** and **URL** of the external link under the respective fields. Select the check box to display the Quick Link for the configured link.

- Click **Save**  to save the configuration.
- Once you have saved the configuration, you can edit it. Click **Edit**  to edit the saved configuration.
- Click **OK** to save the configuration of the external link. The Quick Link for the external link appears on the Quick Link page.

## Select Layout

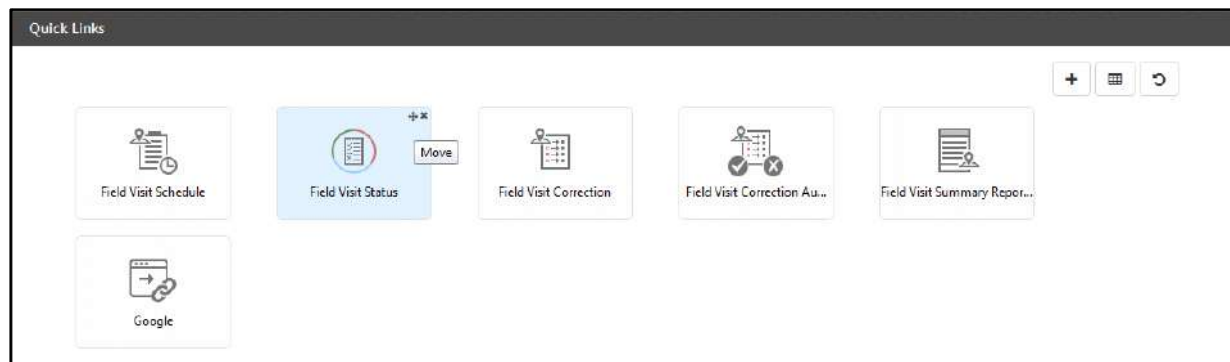

Click **Select Layout**  to select a layout for the quick links. You can select 5x4 or 4x5 layout to manage the quick links.

## Reset To Default

Click **Reset To Default**  to reset the quick links to the default quick links.

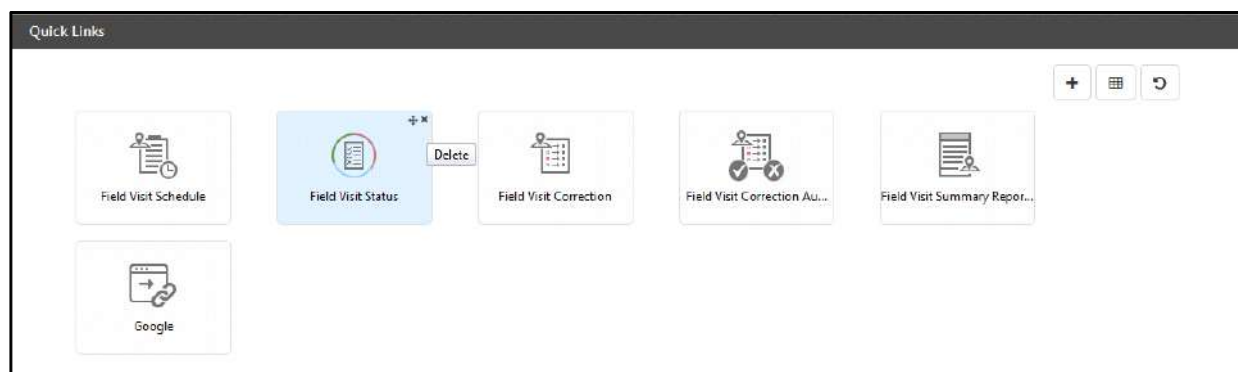

## Move the Link

To move the link from one place to another, hover on the link on top right corner and click **Move** icon as shown below. Then drag the quick link to the desired place. It will be placed at the desired location on the quick links page.

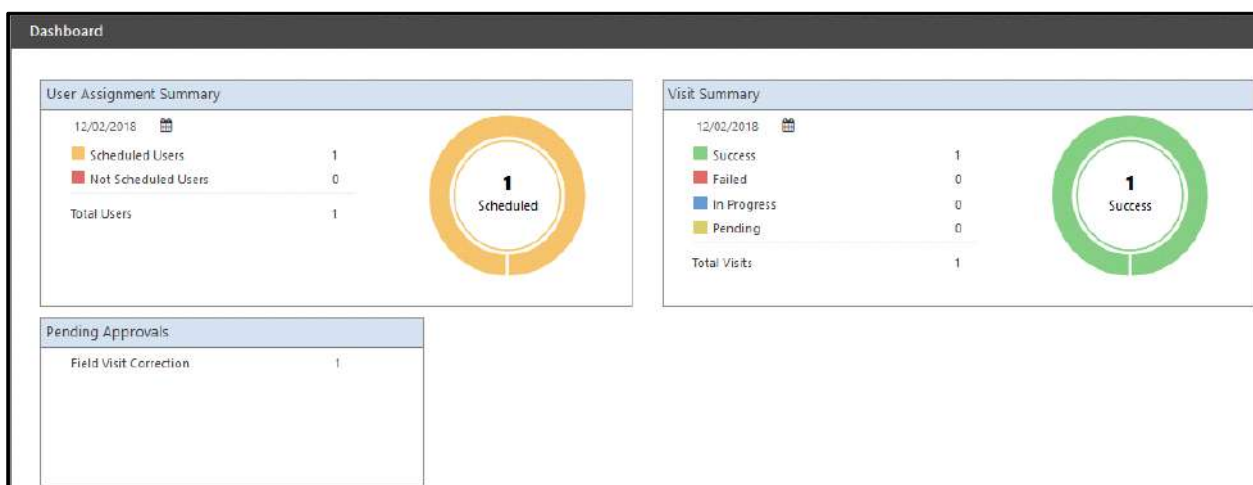

## Delete the Link

To delete a particular link, hover on the link on top right corner and click **Delete** icon as shown below.

## Field Visit Management Dashboard

To view the **FVM** Dashboard, click the Dashboard button  on the **FVM** page and the following screen appears.

The Dashboard displays the basic information on Field Visit Management module relating to the COSEC Software under the following groups:

#### **User Assignment Summary**

- Scheduled Users - Total number of FVM enabled users having schedules assigned to them on the current date.
- Not Scheduled Users - Total number of FVM users without any assigned schedules on the current date.

#### **Visit Summary**

- Success- Shows the count of the FVM users with successfully completed schedules for the current date.
- Failed- Shows the count of the FVM users with the failed schedules for the current date.
- In Progress- Shows the count of the FVM users with the schedules in progress for the current date.
- Pending- Shows the count of the FVM users with pending schedules for the current date.

#### **Pending Approvals**

- Field Visit Correction - Shows the count of pending Field Visit Correction requests between current date and the previous year of all the users with login rights.

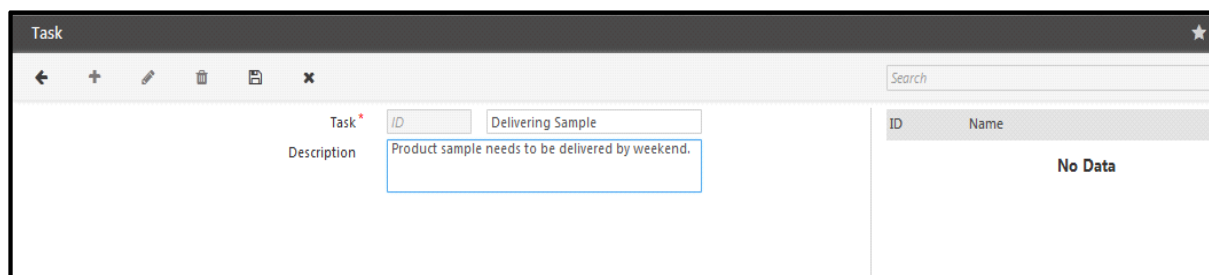

For more information on the above Dashboard options, click the respective information links on the Dashboard. The latest values on Dashboard are updated on clicking the Refresh  button.

# Task

Task page enables to create a list of tasks to be performed by the user. Once the task is created, it is then assigned to the Schedule. Schedule assigned to the user includes various tasks along with the respective locations and time durations.

To create a Task, click **Field Visit Management module >Task**.

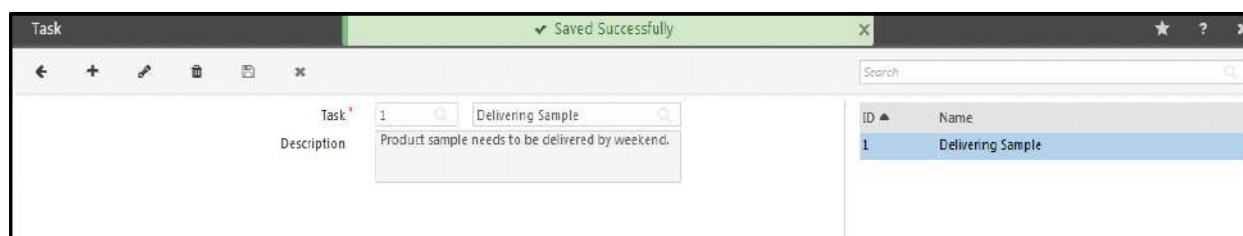

ID	Name
No Data	

Click **New** button to create a new task.

**Task:** Specify the name of a task to be done by the user. The ID will be auto-generated by the system after the task is saved.

**Description:** You can give a description for the task that allows the user to know the activities to be performed in the schedule for the day.

Click on **Save** button. The task will be listed in the grid with auto-generated ID.

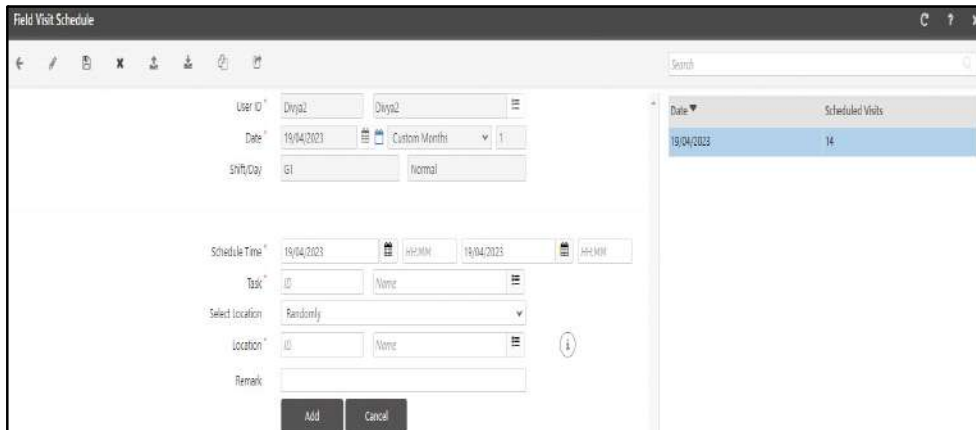

ID	Name
1	Delivering Sample

The tasks which are created here, will be assigned in the **"Field Visit Schedule"** of the user.

# Field Visit Schedule

Field Visit Schedule is the daily activity of assigning field tasks to each user. The users in return are supposed to accomplish the task as per their field schedule.

- Click **Field Visit Management module > Field Visit Schedule**. The Field Visit Schedule page appears as shown below:

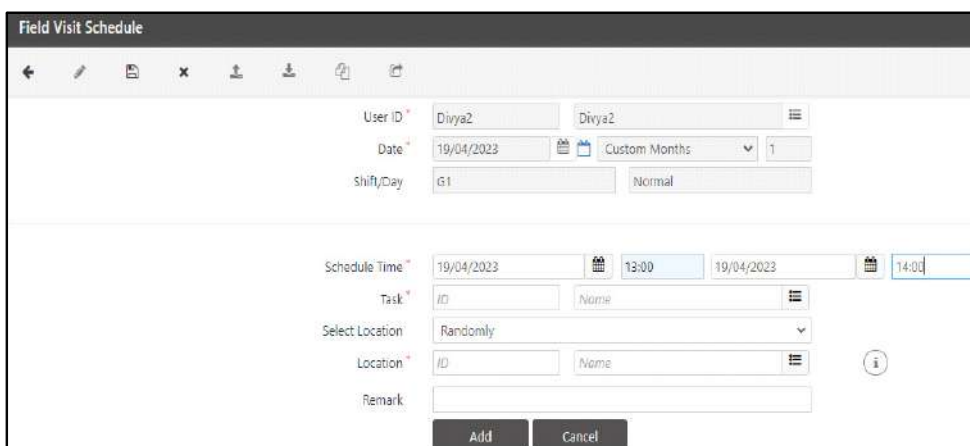

- User:** Select the user from the picklist for whom the field visit is to be scheduled. Only the active users for whom the FVM is enabled from User Configuration, appears here in the picklist.
- Date:** Select the attendance date on which the field schedule is to be configured. The selection can be done in view mode only. You can also customize the selection by selecting the weekly or monthly option from drop down list.

*Before assigning the field schedule, you must process the shift schedule of the FVM user.*

- Shift/Day:** It displays the user's Working Shift on Schedule Date and Assigned Day on Schedule Date. The assigned day can be either Normal, WO, PH or WO/PH.
- Schedule Time:** Select the From- Date, Time and To-Date, Time to assign the schedule. Time is in HH:MM format.

Eg: In below schedule; 13:00 to 14:00 hours is set as schedule time.

- **Task:** Select the task from the picklist which is to be assigned to the selected user.
- **Select Location:** Select the desired option from the drop-down list—**Randomly** or **Location Group**.
  - If you select **Randomly**, click the **Location** picklist. The **Picklist For location** pop-up appears.

Location and Location groups can be configured from Admin module > System Configuration > Location Master & Location Group.

You must ensure that the location being assigned for the task is already assigned to the user from User Configuration > ESS > Settings > Location Assignment.

**Remark:** You can specify the Remark while assigning the schedule.

Click **Add** to add the Field Visit Schedule. The schedule will be listed in the grid on the right.

Click **Save** to save the configured schedule.

If **Blue tooth** based location is selected then it will appear as shown below:

The screenshot shows the 'Field Visit Schedule' form. The 'User' field is set to '2192' and 'chirag Shah'. The 'Date' is '2017/09/01' with a 'Custom Month' dropdown set to '1'. The 'Shift/Day' is 'GS' and 'Normal'. The 'Schedule Time' is from '2017/09/01 18:00' to '2017/09/01 19:00'. The 'Task' is '1' and 'task 1'. The 'Select Location' is 'Randomly'. The 'Location' is 'BLE' and 'BLE'. The 'Remark' field is empty. There are 'Update' and 'Cancel' buttons. Below the form is a search bar and a table with the following data:

Schedule Time	Task	Location/Location Group
2017/09/01 18:00 - 2017/09/01 19:00	task 1	BLE

## Export

You can export the field schedule of selected user.

The screenshot shows the 'Field Visit Schedule' form with the 'Export' button highlighted. The 'Date' is '04/27/2017' with a 'Custom Months' dropdown set to '1'. The 'Shift/Day' is 'GS' and 'Normal'. The 'Schedule Time' is from '04/27/2017 HH:MM' to '04/27/2017 HH:MM'. The 'Task' is 'ID' and 'Name'. The 'Select Location' is 'Randomly'. The 'Location' is 'ID' and 'Name'. The 'Remark' field is empty. There are 'Add' and 'Cancel' buttons. Below the form is a search bar and a table with the following data:

Schedule Time	Task	Location/Location Group
04/27/2017 13:00 - 04/27/2017 14:00	Delivering Sample	Head Office

Select the Field Schedule from the right side which is to be exported.

Then click on **Export** button as shown above. Open or Save the Schedule by specifying the location on your computer.

The exported field schedule is shown as below:

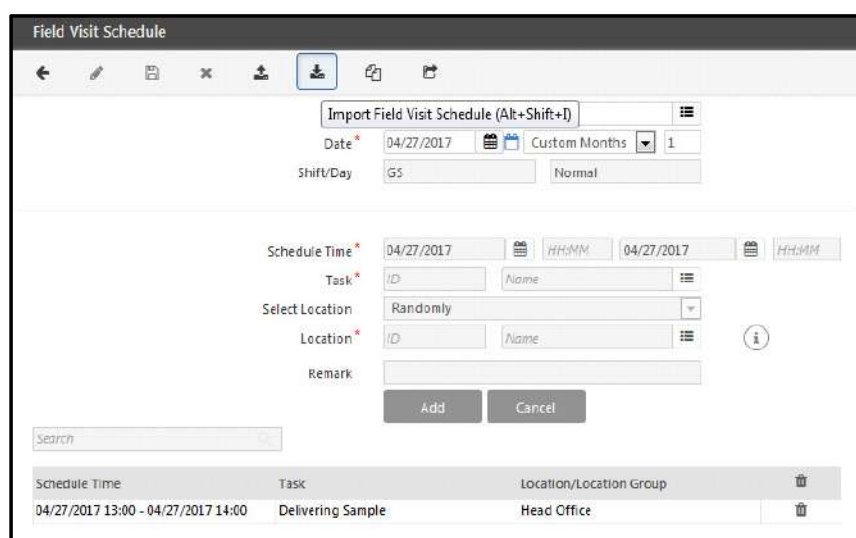

FieldSchedule [Read-Only] [Compatibility Mode] - Microsoft Excel

	A	B	C	D	E	F	G	H
	User ID	Schedule Date	Start Date Time	End Date Time	Task ID	Location/Location	Location Code/Location Group ID	Remark

## Copy Field Schedule

You can copy/transfer field schedule from one user to multiple users using Copy Field Schedule.

The screenshot shows the 'Field Visit Schedule' window with a 'Copy Field Visit Schedule (Alt+ Shift+W)' dialog box open. The dialog includes fields for User, Date (05/04/2017), Shift/Day (GS), Schedule Time (05/04/2017 09:00 - 05/04/2017 10:00), Task (Pickup Enclosure), and Location (Head Office). A table on the right shows scheduled visits for various dates. The main window also displays a table of scheduled visits.

Date	Scheduled Visits
05/05/2017	1
05/04/2017	1
05/03/2017	1
04/27/2017	1

Schedule Time	Task	Location/Location Group
05/04/2017 09:00 - 05/04/2017 10:00	Pickup Enclosure	Head Office

- Select the Field Visit Schedule to be copied.
- Click **Copy** . The **Copy Task** pop-up appears. The name of the pop-up varies according to the User ID of the Field Visit Schedule.

The screenshot shows the 'Copy Task of 1' window. It includes a search bar, a date field (15/06/2023), and a table of tasks. Below the table is a 'Copy To' section with fields for Date, User ID, and a table for selecting the target user and date range. A 'Process' button is at the bottom.

Process

Whenever any change is made in Field Schedule records then Tx\_Schedule status, 1st IN and Last OUT punch should be reset to NULL. They will be updated once user executes daily process for the date after making changes in field schedule.

# Field Visit Status

The users are supposed to accomplish the task as per their field schedule on daily basis. According to the punches from field, user's field records are considered as completed or not completed.

You can use COSEC APTA, ESS Module or Device for marking punch.

Field Visit Status page enables admin or reporting in-charge to view field status of selected user in a calendar view.

Click **Field Visit Management module > Utilities> Field Visit Status**. The Field Visit Status page appears as shown below:

The screenshot shows the 'Field Visit Status' page. On the left is a sidebar with 'Field Visit Management' and a 'Task' section containing 'Field Visit Schedule', 'Utilities' (with 'Field Visit Status' selected), 'Field Visit Correction', 'Field Visit Correction Authorization', and 'Reports'. The main area has a header 'Field Visit Status' with a search icon. Below the header are fields for 'User' (with a dropdown showing 'Jinu') and 'Attendance Period' (with dropdowns for 'May' and '2017'). The main content is a calendar grid with columns for days of the week (MON to SUN) and rows for dates (1 to 31). The calendar is currently empty.

Select the **User** from the picklist whose field visit status is to be viewed.

Select the **Attendance period** as Month and Year for which field visit status is to be viewed.

You can select the option to view as **Schedule Status** or **Visited Location**.

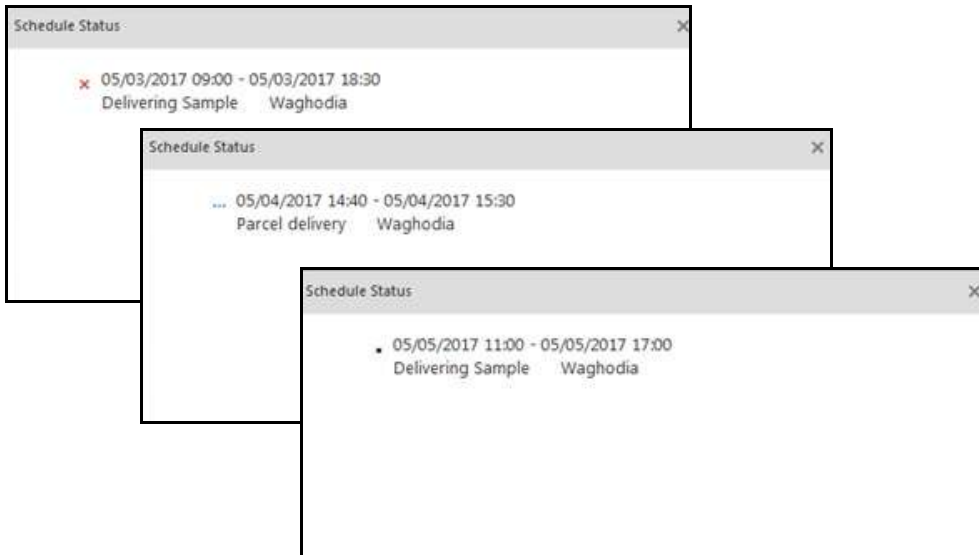

The screenshot shows the 'Field Visit Status' page with the same sidebar and header as the previous image. The 'Attendance Period' is set to 'May' and '2017'. The calendar grid shows dates from 1 to 31. A 'Schedule Status' dropdown is visible in the top right corner of the calendar area. The calendar displays task status indicators: 'G5' for completed tasks, 'G1' for not completed tasks, 'PR-PROG' for on-going tasks, and 'WD' for future tasks. An arrow points to the 'Future task' label, which is positioned over the 'G5' indicator for the date 1st of May.

**Schedule Status:** The status of completed, not completed, on-going and future task is shown in the calendar.

**Visited Location:** The visited location count will be shown for the respective date in the calendar.

- The green circular ring shows that task is completed.
- Partial green and remaining red shows partially completed task.
- Full red shows incomplete task.
- A number in the grid of future date shows future days task count.

Clicking on the window will show the task details. Tick displays completed task and Cross displays incomplete task. On going task are displayed by dotted. 2/3 shows that 2 task out of 3 are completed.

Once the user completes the field visit schedule and punches into COSEC APTA from the scheduled location then the field visit status will be marked as green as shown below.

User: VP Vivek		Attendance Period: May 2017		Schedule Status: [Settings] [Dropdown]		
MON	TUE	WED	THU	FRI	SAT	SUN
	2	3	4	5	6	7
	GS	GS	PR-PRGS	PR-PRGS	GS	WO
	9	10	11	12	13	14

If the user has visited the location, then the number will be shown on that date. In below figure 1 indicates that user Vivek has visited 1 location on 4th May 2017.

User: VP Vivek		Attendance Period: May 2017		Visited Locations: [Settings] [Dropdown]		
	WED	THU	FRI	SAT		
	3	4	5	6	7	
	GS	PR-PRGS	PR-PRGS	GS	WO	
	10	11	12	13	14	

You can use COSEC API to mark the user punches from the desired location.

The schedule based on **Bluetooth based location** is shown as below.

MON	TUE	WED	THU	FRI	SAT	SUN
				1 GS 1/1	2	3
4 GS	5 WO	6 GS	7 GS	8 GS	9 GS	10 WO
11 IWO	12 GS	13 WO	14 GS	15 GS	16 GS	17 GS

To know the status of the schedule click on the circle shown above and the schedule status appears as shown below.

Schedule Status		
<b>User:</b> 2192	<b>Date:</b> 2017/09/01	<b>Shift:</b> GS
<p>✓ 2017/09/01 18:00 - 2017/09/01 19:00 - task 1 - BLE</p>		

# Field Visit Correction

The punches marked from COSEC APTA may require correction in some cases.

Suppose If user was scheduled for some task at some location and couldn't go because of any reason. So changing punch date-time and adding or modifying its comment would be possible from the Field Visit Correction page. Also the Location can be added or updated from this page.

The Field Visit Correction can be made by:

- System Account User
- On Behalf System Account User
- Using the ESS Self Service Module (For more details refer COSEC Employee Self Service User Manual)

COSEC Web enables all System Account users with appropriate page rights to make Field Visit Correction using the Field Visit Management module. All applications made by the System Account user are pre-approved by default.

COSEC Web also enables all On Behalf System Account User with appropriate page rights to make Field Visit Correction using the Field Visit Management module. All applications made by the On Behalf System Account User are pre-approved by default. For creating and assigning the roles and rights to the On Behalf System Account User. Refer to ["On Behalf System Account User"](#).

Click **Field Visit Management module > Utilities > Field Visit Correction**. The Field Visit Correction page appears as shown below:

**User:** Select the User from the picklist for whom field visit correction is to be applied.

**Attendance Date:** Select the **Date** from the grid for which attendance correction is to be done or select the date from the calendar button. You can also select week or month filter to view the punches accordingly.

You can edit the punches by clicking on **Edit** button in the attendance details row where the correction is to be done.

Click **Event** if you desire viewing events of the respective user.

To add the new punches click **Add** button.

Enter the **Time** and select the **Location** from the pick-list. The Bluetooth based location is selected in following example.

You can mention the **comment**. Then click on OK and Save to save the correction.

If Map is not loaded; check the network connection of your PC or check the value of Google API Key from Admin Module > System Configuration > Global Policy > Basic tab.

The Field Visit Correction application will be authorized by the Reporting In-charge or Administrator.

See [“Field Visit Correction Authorization” on page 2994.](#)

The Schedule Status will show **Success** when the scheduled task is complete.

Date	Shift	1st Half	2nd Half	Work Hours	Schedule Status
2016/10/18	GS				
2016/10/17	GS				
2016/10/16	GS	AB	AB		
2016/10/15	GS	IN			Success
2016/10/14	GS	AB	AB		Success
2016/10/13	GS	IN			Success
2016/10/12	GS	AB	AB		
2016/10/11	GS	AB	AB		
2016/10/10	GS	AB	AB		

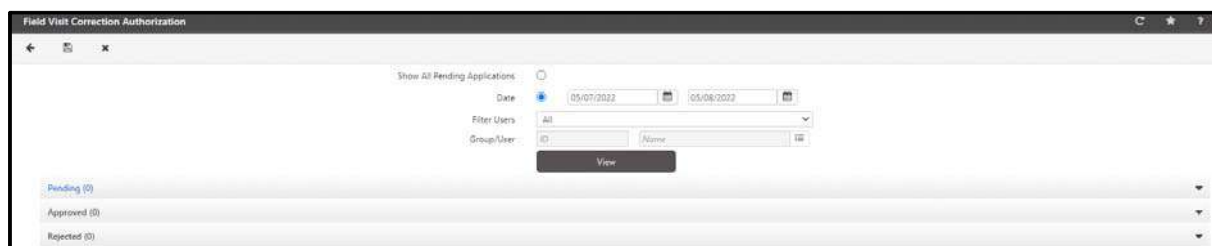

The FVM user punches within shift can also be viewed from Daily Attendance View of T&A module.

# Field Visit Correction Authorization

ESS user have provision to add/edit punch date, time, IO type, location and add comment for each of the punches. Such corrections are required to be authorized. So the administrator can approve/reject field visit correction applications.

The authorization is dependent on the number of Reporting In-charge in the Reporting Group, the Authorization Mode as well as the Approval Policy assigned by the system administrator. For details refer to [“Reporting In-Charge”](#), [“Approval Policy”](#) and [“Configuring Users”](#).

To authorize field visit correction application, click **Field Visit Management > Utilities > Field Visit Correction Authorization**. The Field Visit Correction Authorization page appears as shown below:

You can either:

- view all the pending Field Visit Correction Authorizations
- set the filters — Date, Filter Users — to view the desired applications

## All Pending Applications

To view only Pending Applications,

- **Show All Pending Applications:** Select this option to enable the pending application filter.
- Click the **Pending** collapsible panel. All the applications in pending state appear.

To approve the application, select the **Approve** check box of the desired entry.

To reject the application, select the **Reject** check box of the desired entry.

To know more, refer to [“Pending Application”](#).

*The population on this page depends on the server's database. It might take time to load all pending applications.*

## Applications according to Set Filters

To Set the Filters,

- **Date:** Select this option to enable the date filter. Select the date range for which the Field Visit Correction Applications are to be viewed.
- **Filter Users:** You can filter records according to the desired Enterprise Group, All or for an Individual.

Select **All**, to view authorization status of the applications of all the active users on the system.

Select **Individual**, to view authorization status of the applications of a single user. Click the picklist to select the desired User ID/Name.

Select the desired Enterprise Group — Organization, Branch, Department, Section, Category, Grade, Designation, Custom Group1/2/3 and then click the picklist to select the desired group's ID/Name, to view authorization status of these applications.

Click on **View** to view the Pending, Approved and Rejected applications.

## Pending Application

Click the **Pending** collapsible panel. The **Pending** section displays all the applications that yet to be authorized by the RIC or the System Administrator.

The following screen displays the **Pending** section.

User ID ▲	Name	Application Date	Attendance Date	Reason	Approve	Reject	Remark	Details
U1	User1	22/06/2021	21/06/2021	Applied Field Visit Correction	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>	

When any application is in the Pending state it can be authorized by the Admin or RIC.

- To approve/reject applications selectively, click the respective application check box against the user.
- To approve/reject all the applications simultaneously, click the Approve /Reject check box in the header column.

Once the Admin approves/ rejects the application, the record will be moved from the **Pending** section to the **Approved/ Rejected** section respectively.

The default **Remark** for the Approved and Rejected application will appear in the respective fields. You can enter any customized Remark while authorizing the application.

To view the details of the application, click **Details** . The **All Field Punches** window appears as shown below.

The screenshot shows a window titled "All Field Punches" with a close button (X) in the top right corner. The window contains the following fields and sections:

- User:** Two input fields containing "U1" and "User1".
- Attendance Date:** A date picker showing "21/06/2021".
- Shift/Day:** Two dropdown menus. The first shows "GS" and the second shows "Normal".
- Attendance Status:** Two dropdown menus. The first shows "TO" and the second shows "TO".
- Attendance Values:** A dropdown menu showing "On Application".
- Schedule Status:** An empty dropdown menu.
- Reason:** A text input field containing "Applied Field Visit Correction".
- Search:** A search bar with a magnifying glass icon.
- Table:** A table with 5 columns: Date, Time, IO Type, Location, and Comment. It contains one row with the following data:
 

Date	Time	IO Type	Location	Comment
11/06/2021	11:14	In		
- Approval Details:** A section header with a clock icon.
- Table:** A table with 3 columns: Incharge, Status, and Remark. It contains one row with the following data:
 

Incharge	Status	Remark
SA - System Admin		

**All Field Punches** window displays the attendance details.

**Attendance Values** has the following options:

- **On Application:** The transaction values shown are the values at the time of the application being done.
- **Applied:** The transaction values after the correction is being made.
- **Current:** The current transaction values are same as On Application values.

It also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

**Remark** displays the comments provided by the Admin/ RIC/ System.

Click **Save** to save the authorization.

## Approved Applications

Click the **Approved** collapsible panel. The **Approved** section displays all the applications that have been approved by the RIC or the System Administrator.

The following screen displays the **Approved** section with approved applications:

Approved (5)								
Search

Date	Time	IO Type	Location	Comment
21/06/2021	09:00	In	HO	

Below the table is the 'Approval Details' section, which includes a table with the following data:

Incharge	Status	Remark
SA - System Admin	⊗ (22/06/2021 10:58)	Rejected Field Visit Correction

**All Field Punches** window displays the attendance details.

**Attendance Values** has the following options:

- **On Application:** The transaction values shown are the values at the time of the application being done.
- **Applied:** The transaction values after the correction is being made.
- **Current:** The current transaction values are same as On Application values.

It also displays the status of the user's application under **Approval Details**. The application's status is displayed in the **Status** column.

System can auto approve / reject an application if the Reporting In-charge or SA fails to authorize it as per the Approval Policy assigned to the Reporting Groups. To know more about the Approval Policy, refer "[Approval Policy](#)".

**Remarks** displays the comments provided by the Admin / RIC / System.

Click **Save** button to save the changes.

# Field Visit Management Reports

These reports can be obtained using the **Reports** section under the **Field Visit Management** add-on module. The Reports can be categorized as follows:

[“Schedule Status Summary”](#)

[“Field Visit Summary Report”](#)

## Schedule Status Summary

This report displays the status of field visit schedules of the selected users.

*Daily Attendance Process must be done to get correct information in the report.*

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired option — **User** or **Device**.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header as per your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
  - If you select **User Wise**,
    - Click the **User** picklist. The **Picklist For All Users** pop-up appears.

## Field Visit Summary Report

This report displays the field visit summary of the selected users.

The screenshot shows a web application window titled "Field Visit Summary". It features a date range selector at the top with "To" and "From" fields, both set to "06/18/2022". Below this is a section titled "Optional Parameters" containing two dropdown menus: "Group By" (set to "Organization") and "Organization Name in Header As Per" (set to "User Selection"). Underneath is a "User Selection" section with a "Select Users" dropdown (set to "User-Wise"), a "User\*" field with "ID" and "Name" input options, and a "Generate Report For" dropdown (set to "All Users"). A "Generate Report" button is located at the bottom center.

Configure the following parameters:

- **Date:** Select the **To** and **From** date for which the report is to be generated.

### Optional Parameters

- **Group By:** Select the desired option — **User** or **Device**.
- **Organization Name in Header As Per:** Select the desired option — **User Selection** or **Customized Selection**.
  - If you select **Customized Selection**, click **Customize Report Header**.

You can select the desired option from the drop-down list or can also add a new header as per your choice.

### User Selection

- **Select User:** Select the desired option — **User Wise**, **Group Wise**, or **All**.
  - If you select **User Wise**,
    - Click the **User** picklist. The **Picklist For All Users** pop-up appears.

Report Builder helps the users to design their own report template, format the fields as per their expectations and generate reports as and when required.

After designing the Reports; it can be deployed in desired module.

With this Module, you can:

- Design new reports
- Define Calculated fields
- Enrich reports with various formatting styles
- Import/Export report templates

To use the Report Builder, select the **Report Builder** module . The **Report Builder** page appears as shown below.

*Multi-language is not supported in Reports generated via Report Builder.*

To configure the report parameters, refer to [“Report Configuration”](#).

After configuring the report parameters you can design the report as per your requirements, refer to [“Designing Report”](#).

The reports you create and design appear in the respective modules as per your requirement. For details refer to [“Customized Report Page”](#).

# Report Configuration

The Report Configuration page appear. There are two tabs — Customized Reports and Sample Templates.

The screenshot shows the 'Report Builder' application window. The 'Report Configurations' section on the left contains the following fields: 'Report' with sub-fields 'ID' and 'Name', 'Report Type' set to 'Events', and 'Filtering Range' set to 'Date'. A 'Design Report' button is located below these fields. On the right, there are two tabs: 'Customized Reports' and 'Sample Templates'. Below the tabs is a table with columns 'ID' and 'Report', which currently displays 'No Data'.

You can create new reports using the Sample Templates or using the Add option.

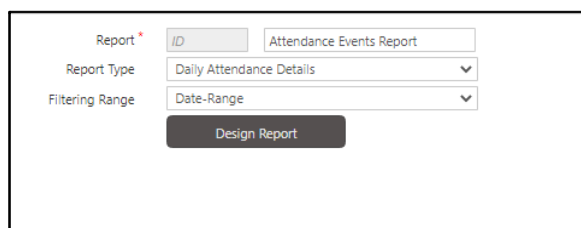

For creating reports using the Sample Templates, refer to [“Sample Templates and Creating Reports from Sample Templates”](#)

For creating reports using the **Add** option, refer to [“Add New Customized Report”](#).

## Add New Customized Report

To add a new report format, click **New**  and configure the following:

- **Report:** Enter the Name you wish to assign to the report template. The ID is auto-generated by the system when the report is saved.

This screenshot shows the 'Report Configuration' form with the following values: 'Report' ID is empty, 'Name' is 'Attendance Events Report', 'Report Type' is 'Daily Attendance Details', and 'Filtering Range' is 'Date-Range'. The 'Design Report' button is at the bottom.

- **Report Type:** Select the type of Report from the options — Events, Daily Attendance Details, Monthly Summary, Monthly Details and Custom.

*Report Type depends on available license. Daily Attendance Details, Monthly Summary & Monthly Details will be available only if T&A license is available.*

If you select **Report Type** as **Events, Daily Attendance Details, Monthly Summary, Monthly Details** — configure the Filtering Range.

If you select the **Report Type** as **Custom**, for details refer to [“Custom”](#).

- **Filtering Range:** The Filtering Range for report depends on the selected Report Type.

If you have selected Report Type as **Events/Daily Attendance** then you can select **Filtering Range** as **Date** or **Date-Range**.

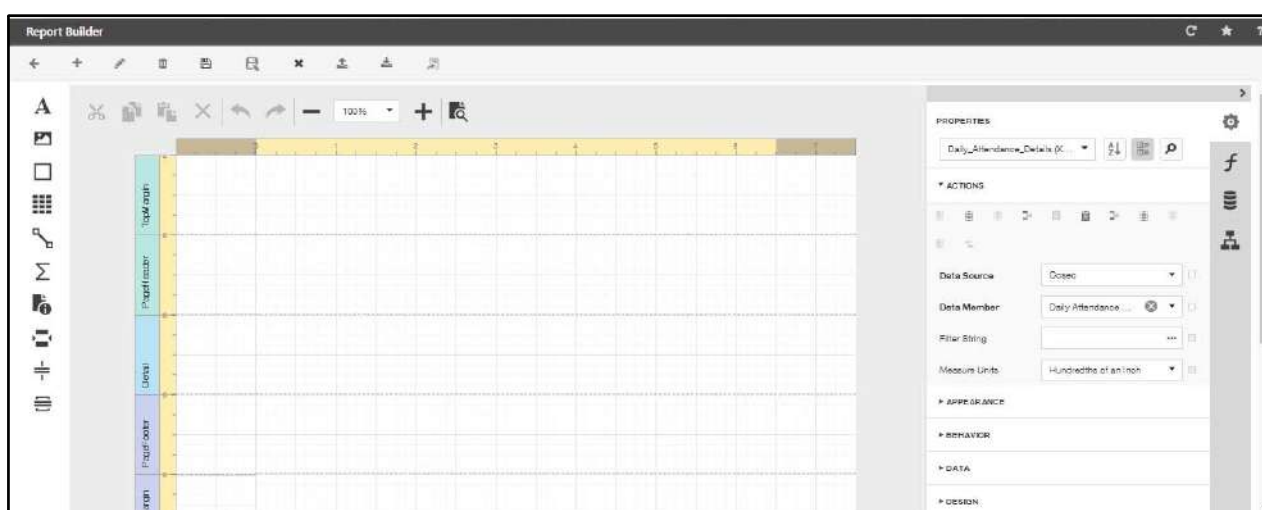

If you have selected Report Type as **Monthly Summary/Monthly Details** then you can select **Filtering Range** as **Month** or **Month-Range**.

If **Date** is selected; then only single date selection will appear in report. If **Date-Range** is selected; then From-To Date range selection will appear in the report.

If **Month** is selected; then only single date selection will appear in report. If **Month-Range** is selected; then From-To Month range selection will appear in the report.

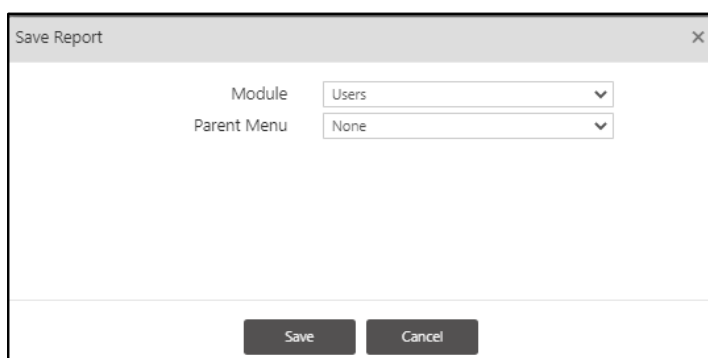

Select the desired options as per your requirement.

- Click **Design Report**. The report Designer window appears from where you can design the report.

For details regarding designing the report, refer to [“Designing Report”](#).

- After designing the report, click **Save**. The **Save Report** pop-up appears. You can select the Module and the Parent Menu wherein this new report should appear.

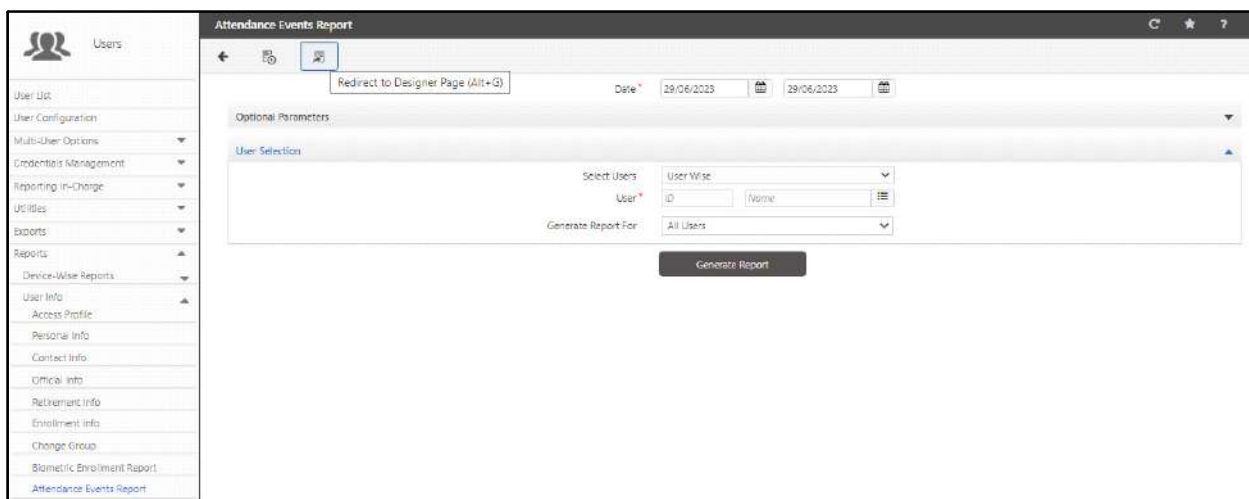

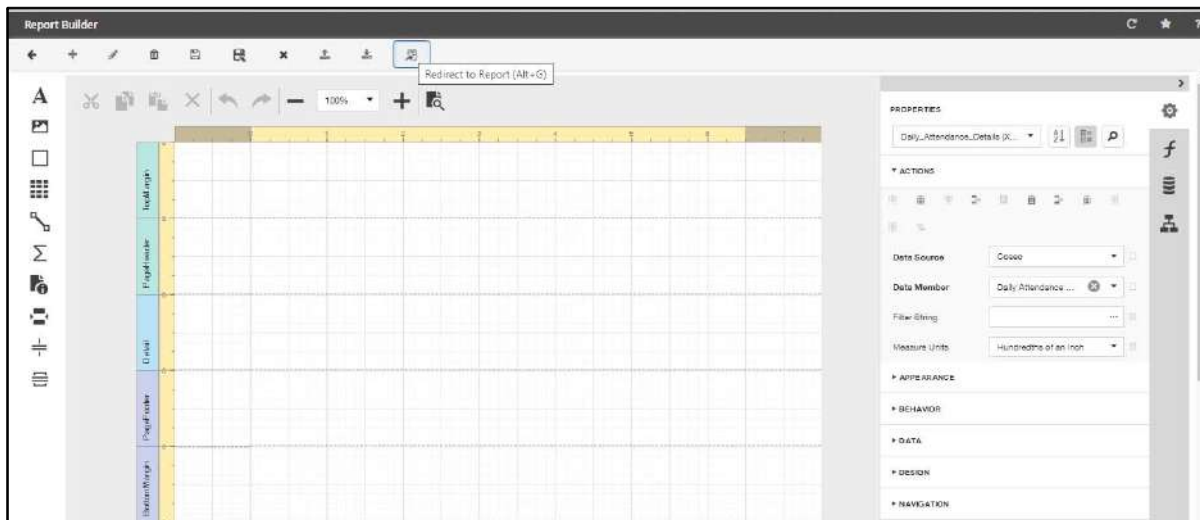

- **Module:** Select the desired COSEC Module — Access Control, Cafeteria Management, Contract Worker Management, Devices, Enterprise Structure, Filed Visit Management, Job Processing and Costing, Leave Management, Shifts and Schedules, Time and Attendance, Users, Visitor Management. The report will be placed under the selected Module. For example Users is selected.

- **Parent Menu:** Select the desired Parent Menu. The report will be placed under the selected Parent Menu in the selected Module. For example, the report will be placed under User Events in the User module.

If you wish that the report should be placed under a new Parent Menu in the selected module, then select **Customized Reports**.

- Click **Save**. The report Designer page appears.
- Click **Redirect to Report** , you will directly reach the module page where the report is placed.

You can click **Redirect to Designer Page**  to switch back to Designer page. For more details refer to [“Customized Report Page”](#).

The created reports appears on the **Report Builder** page under **Customized Reports** tab on the right.

You can click **Redirect to Report** ,

- from the **Designer** page.

OR

- from the **Report Builder** page. To do so, click  on the report **Designer** page and you return to the **Report Builder** page.

On the Report Builder page, select the desired report from the list under **Customized Reports** tab on the right. Click **Redirect to Report** .

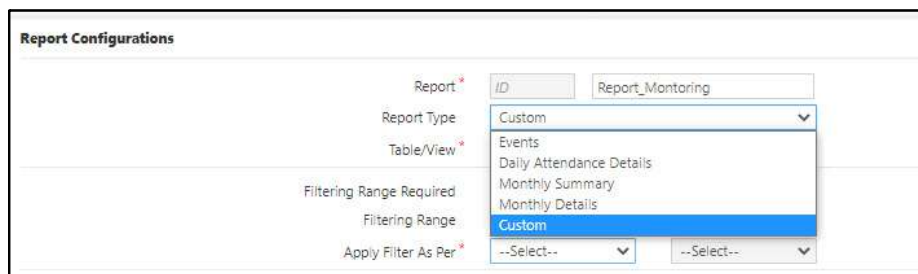

You can also edit the created reports. To do so, on the **Report Builder** page select the desired report from the list under **Customized Reports** tab on the right.

The Report parameters appear on the left. Click **Edit Report**.

The report Designer page appears. Now you can edit the design as per your requirement. For details regarding designing, refer to [“Designing Report”](#).

## Custom

- Report Type:** If you wish to design the report as per your requirement, select **Custom**.

- Table/View:** Select the desired (database) Table from the drop-down list as per your requirement. For example: Mx\_AtdHoliday, Mx\_AppNotificationLog, Mx\_HolidaySchDet etc.

The below mentioned History tables have been removed from the system. If you have used these tables in your report configurations, then those reports will not work. You must re-configure these reports.

Removed History tables: Mx\_ADVVSTRTrnHistory, Mx\_AtdCorrectionHistory, Mx\_ATDEventAuthHistory, Mx\_DATDAuthHistory, Mx\_DATDShtLVOclHistory, Mx\_FVMFieldCorrHistory, Mx\_JPCAwrdPenHistory, Mx\_JPCTimeSheetCorrHistory, Mx\_LeaveTrnHistory and Mx\_OTAdvanceHistory.

- **Filtering Range Required:** Select the check box to enable and configure Filtering Range and Apply Filter As Per.

- **Filtering Range:** Select the desired option — Date, Date-Range, Month, Month-Range — from the drop-down list.

If **Date** is selected; then only single date selection will appear in report. If **Date-Range** is selected; then From-To Date range selection will appear in the report.

If **Month** is selected; then only single date selection will appear in report. If **Month-Range** is selected; then From-To Month range selection will appear in the report.

- Click **Design Report**. For details regarding designing the report, refer to [“Designing Report”](#).
- After designing the report, click **Save**. The **Save Report** pop-up appears. You can select the Module and the Parent Menu wherein this new report will be placed.

- **Module:** Select the desired COSEC Module — Access Control, Cafeteria Management, Contract Worker Management, Devices, Enterprise Structure, Filed Visit Management, Job Processing and Costing, Leave Management, Shifts and Schedules, Time and Attendance, Users, Visitor Management. It is the selection of the COSEC Module where the report will be placed. For example Users is selected.
- **Parent Menu:** Select the desired Parent Menu. The report will be placed under the selected parent menu. For example, the report will appear under User Events in the User module. If you wish that the report should appear under a new Parent Menu in the selected module, then select **Customized Reports**.
- Click **Save**. The report Designer page appears.
- Click **Redirect to Report** , you will directly reach the module page where the report is placed.

You can click **Redirect to Designer Page**  to switch back to Designer page. For more details refer to [“Customized Report Page”](#).

The created reports appears on the **Report Builder** page under **Customized Reports** tab on the right.

You can click **Redirect to Report** ,

- from the **Designer** page.

**OR**

- from the **Report Builder** page. To do so, click  on the report **Designer** page and you return to the **Report Builder** page.

On the Report Builder page, select the desired report from the list under **Customized Reports** tab on the right. Click **Redirect to Report** .

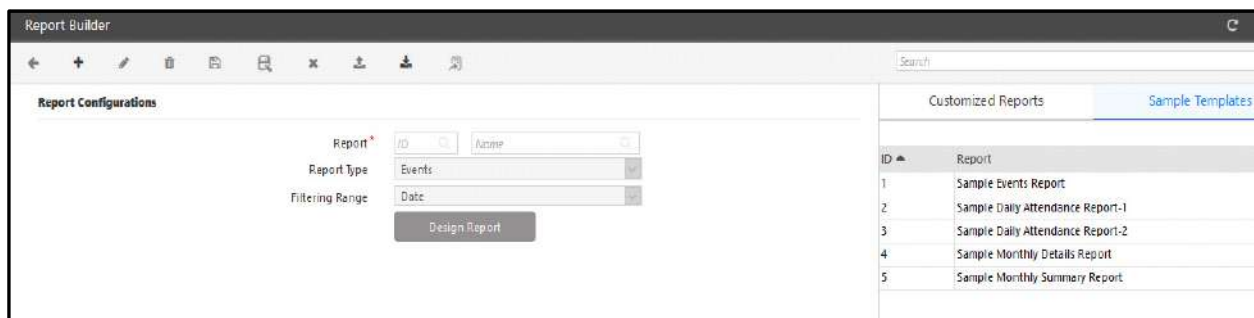

You can also edit the created reports. To do so, on the **Report Builder** page select the desired report from the list under **Customized Reports** tab on the right.

The Report parameters appear on the left. Click **Edit Report**.

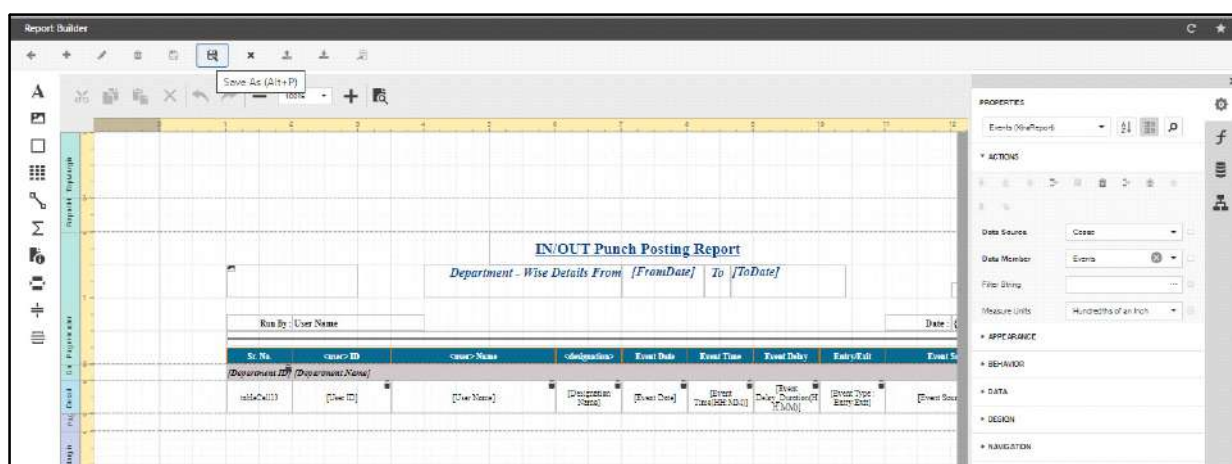

The report Designer page appears. Now you can edit the design as per your requirement. For details regarding designing, refer to [“Designing Report”](#).

## Sample Templates and Creating Reports from Sample Templates

Click the **Sample Templates** tab to view the sample report templates.

- Click on the desired sample template. The report Designer page appears.

- You can save a copy of the sample template. To do so, click **Save As**.
- The **Save As Report** pop-up appears.

The screenshot shows a 'Save As Report' dialog box. It has a title bar with the text 'Save As Report' and a close button (X). The dialog contains four input fields: 'Report Name' with the text 'Report Monitoring', 'Filtering Range' with a dropdown menu showing 'Date', 'Module' with a dropdown menu showing 'Users', and 'Parent Menu' with a dropdown menu showing 'Others'. At the bottom are 'Save' and 'Cancel' buttons.

- **Report Name:** Enter the desired name of the report.
- **Filtering Range:** Select the option — Date or Date-Range

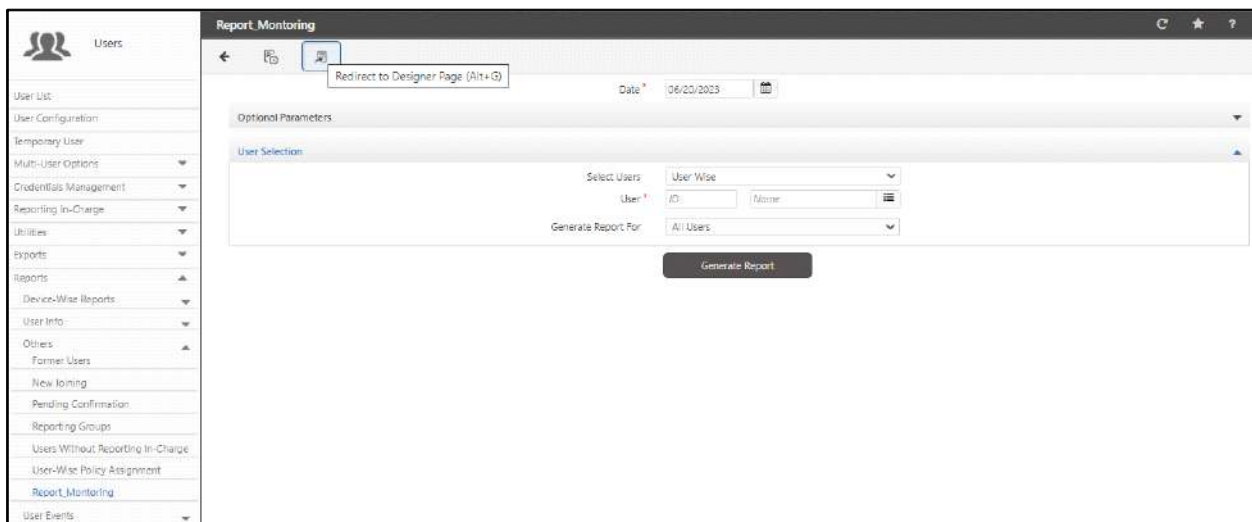

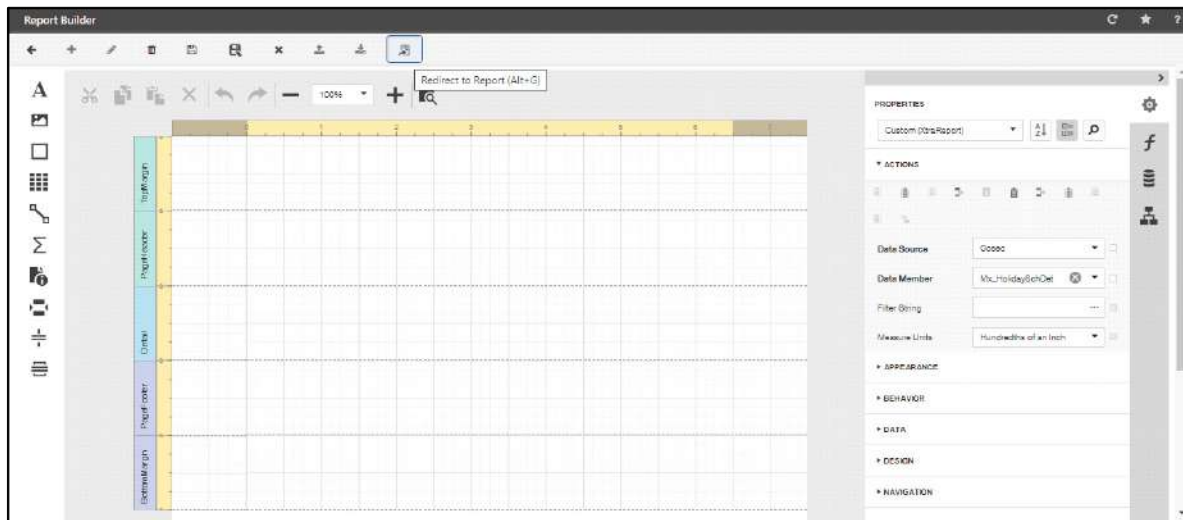

If **Date** is selected; then only single date selection will appear in report. If **Date-Range** is selected; then From-To Date range selection will appear in the report.

If **Month** is selected; then only single date selection will appear in report. If **Month-Range** is selected; then From-To Month range selection will appear in the report.

- **Module:** Select the desired COSEC Module — Access Control, Cafeteria Management, Contract Worker Management, Devices, Enterprise Structure, Filed Visit Management, Job Processing and Costing, Leave Management, Shifts and Schedules, Time and Attendance, Users, Visitor Management. It is the selection of the COSEC module where the report is to be placed. For example Users is selected.
- **Parent Menu:** Select the desired Parent Menu. The report will be placed under the selected parent menu. For example, the report will appear under User Events in the User module. If you wish that the report should appear under a new Parent Menu in the selected module, then select **Customized Reports**.
- Click **Save**. The report Designer page appears.

You can make changes in the design if required. For details, refer to [“Designing Report”](#).

- Click **Redirect to Report**  , you will directly reach the module page where the report is placed.

- You can click **Redirect to Designer Page**  to switch back to Designer page. For more details refer to [“Customized Report Page”](#).

The created reports appears on the **Report Builder** page under **Customized Reports** tab on the right.

You can click **Redirect to Report**  ,

- from the **Designer** page.

**OR**

- from the **Report Builder** page. To do so, click  on the **Designer** page and you return to the **Report Builder** page.

On the Report Builder page, select the desired report from the list under **Customized Reports** tab on the right. Click **Redirect to Report**  .

You can also edit the created reports. To do so, on the **Report Builder** page select the desired report from the list under **Customized Reports** tab on the right.

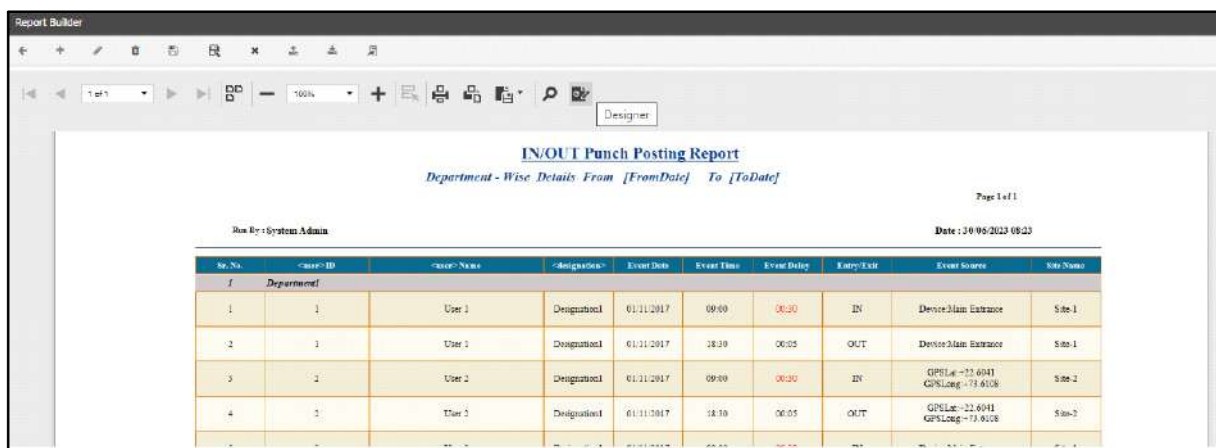

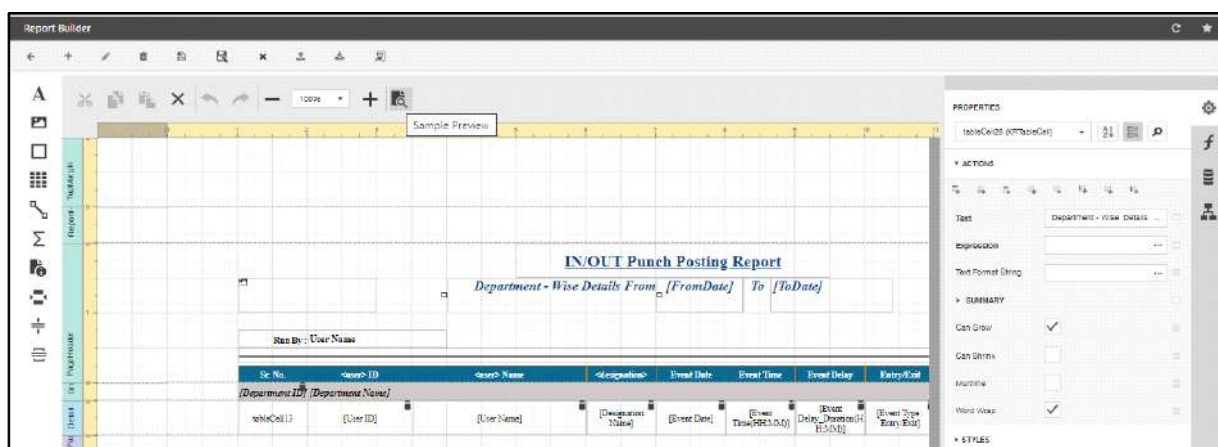

The Report parameters appear on the left. Click **Edit Report**.

The report Designer page appears. Now you can edit the design as per your requirement. For details regarding designing, refer to ["Designing Report"](#).

## Sample Preview

If the report template is modified, to view the report preview, click **Sample Preview** .

To go back to the report Designer page click **Designer** .

## Export To

While viewing the preview; if you wish to export the report preview then you can click **Export To** . The different export format options will be displayed. You can select the desired option.

If the check-box in Global Policy > Reports > Report Export Output in PDF only is enabled; then here only PDF option will visible for export.

## Import

It enables you to import a new report design template format and add the report template to the specified location in the particular module.

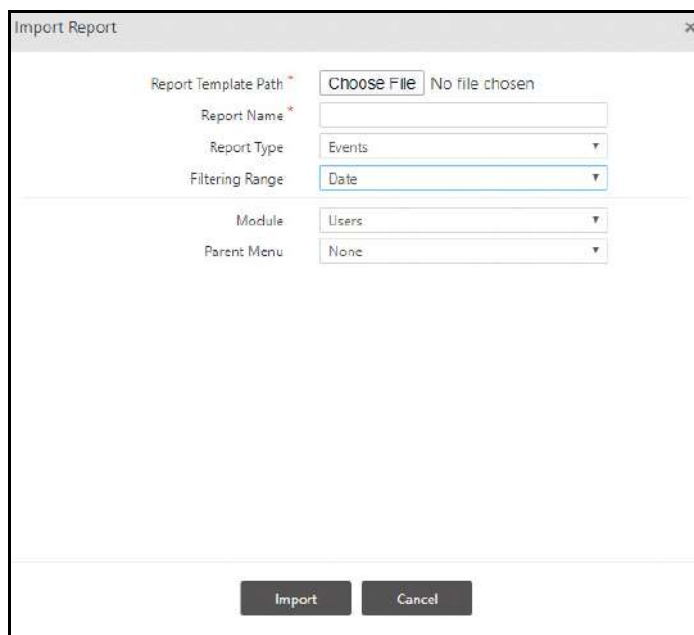

- Click **Import** .

- The **Import Report** pop-up appears. Configure the following parameters:

*The type of Repx file imported and Report Type selected must always match.*

- **Report Template Path:** Browse and select the template file (.repx file) for importing.
- **Report Name:** Configure the name you wish to assign to the report. The report will be appear with this name.
- **Report Type:** Select the desired option — Events, Daily Attendance Details, Monthly Summary, Monthly Details and Custom.

If you select **Report Type** as **Events, Daily Attendance Details, Monthly Summary, Monthly Details** — configure the Filtering Range.

- **Filtering Range:** The Filtering Range for report depends on the selected Report Type.

If you have selected Report Type as **Events/Daily Attendance** then you can select **Filtering Range** as **Date** or **Date-Range**.

If you have selected Report Type as **Monthly Summary/Monthly Details** then you can select **Filtering Range** as **Month** or **Month-Range**.

If **Date** is selected; then only single date selection will appear in report. If **Date-Range** is selected; then From-To Date range selection will appear in the report.

If **Month** is selected; then only single date selection will appear in report. If **Month-Range** is selected; then From-To Month range selection will appear in the report.

If you select the **Report Type** as **Custom**,

Field	Select Column
User	--Select--
Organization	--Select--
Branch	--Select--
Department	--Select--

- **Table/View:** Select the desired (database) Table from the drop-down list as per your requirement. For example: 'Mx\_AtdHoliday', Mx\_AppNotificationLog, Mx\_HolidaySchDet etc.

The below mentioned History tables have been removed from the system. If you have used these tables in your report configurations, then those reports will not work. You must re-configure these reports.

Removed History tables: Mx\_ADVSTRTTrnHistory, Mx\_AtdCorrectionHistory, Mx\_ATDEventAuthHistory, Mx\_DATDAuthHistory, Mx\_DATDShrtLVOclHistory, Mx\_FVMFieldCorrHistory, Mx\_JPCAwrdPenHistory, Mx\_JPCTimeSheetCorrHistory, Mx\_LeaveTrnHistory and Mx\_OTAdvanceHistory.

- **Filtering Range Required:** Select the check box to enable and configure Filtering Range and Apply Filter As Per.

Filtering Range Required ☐

- **Module:** Select the desired COSEC Module — Access Control, Cafeteria Management, Contract Worker Management, Devices, Enterprise Structure, Filed Visit Management, Job Processing and Costing, Leave Management, Shifts and Schedules, Time and Attendance, Users, Visitor Management. It is the selection of the COSEC Module where the report is to be placed. For example Users is selected.
- **Parent Menu:** Select the desired Parent Menu. The report will be placed under the selected parent menu. For example, the report will be placed under User Events in the User module. If you wish that the report should appear under a new Parent Menu in the selected module, then select **Customized Reports**.
- Click **Import**. The report appears on the **Report Builder** page under **Customized Reports** tab on the right.
- You can also edit the imported report. To do so, on the Report Builder page select the report you imported from the list under **Customized Reports** tab on the right.

The Report parameters appear on the left. Click **Edit Report**. The report Designer page appears. For details, refer to [“Designing Report”](#).

- To view the page where the report will be placed, on the Report Builder page, select the report you imported from the list under **Customized Reports** tab on the right. Click **Redirect to Report** .you will directly reach the module page where the report is placed.

You can click **Redirect to Designer** to switch back to Designer page. For more details refer to [“Customized Report Page”](#).

## Export

It enables to export the selected report template format. The file will be exported in .repx format. You can check the Downloads folder in your computer to view the exported file. This file can be used for importing in some other COSEC Server.

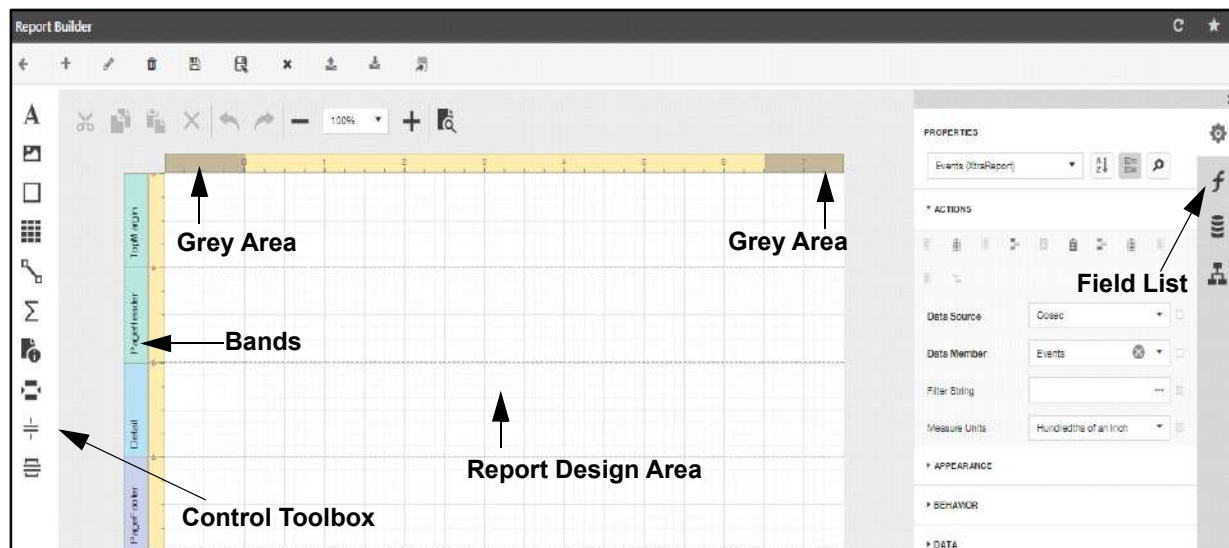

Click **Export** .

The report is downloaded.

# Designing Report

The Report Designer page has the Control Toolbox on the left, Properties and Field List on the right and Report Design section in center.

To understand how you can design the report, refer to the following:

["Binding Report Elements to Data"](#)

["Filter String \(Filter Editor\)"](#)

["Table Report"](#)

- ["Styles"](#)
- ["Conditional Appearance \(Conditional formatting\)"](#)

["Multi-Column Report"](#)

["Cross-tab Report \(Pivot Grid\)"](#)

["Calculated field"](#)

["Adding Page Numbers and System information to Report"](#)

["Page Setting"](#)

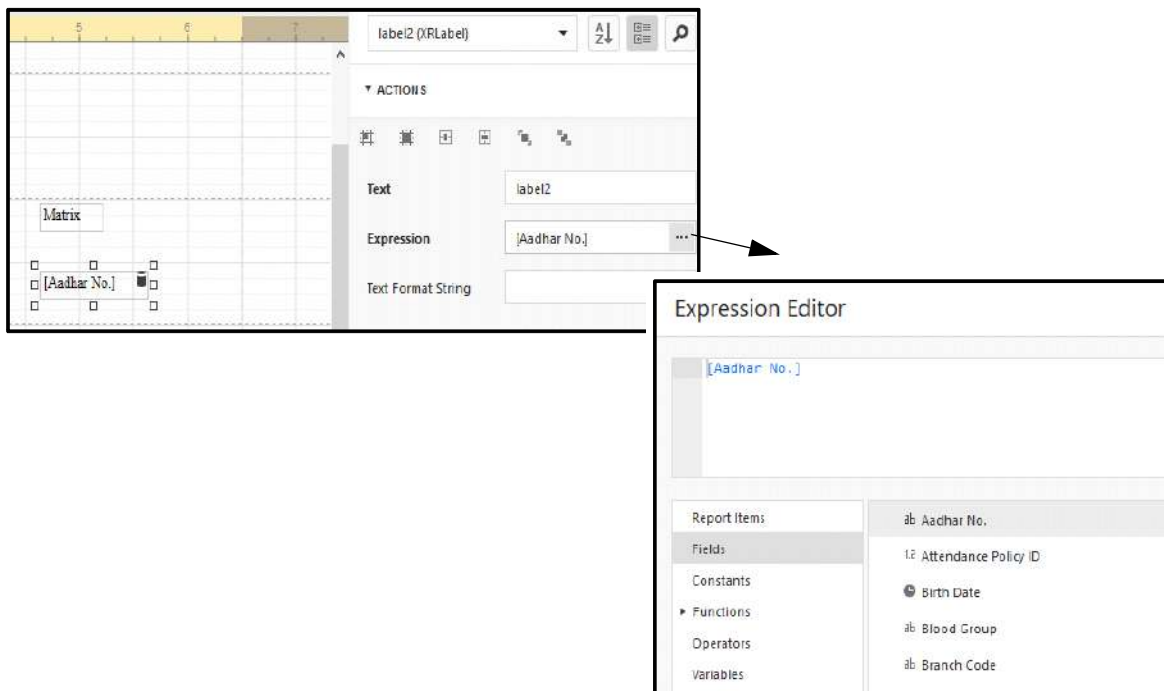

## Red Color Indication

The red color of the control is the warning that the control is outside the page margin, and this will cause extra pages to be printed. So you must align the controls in the Report Design Area excluding the Grey Area. Also this warning appear when the controls are overlapping. So place the controls accordingly.

## Create/Insert Report Control

To add a control to the current report, drag and drop the control from the Control Toolbox on the appropriate report band. For example: Custom Field control is placed on Detail band as shown below.

Following are the different controls which can be added to the report from the Control Toolbox:

1. **Custom Field**  : It is used to display text. For example: Text can be entered that will remain fixed such as name of the company. You can also bind custom field with the database field from Expression, to display the actual data. Example: Aadhaar No. field is bound to display actual Aadhaar Number of the user as shown in above screenshot.

### Static and Dynamic Elements

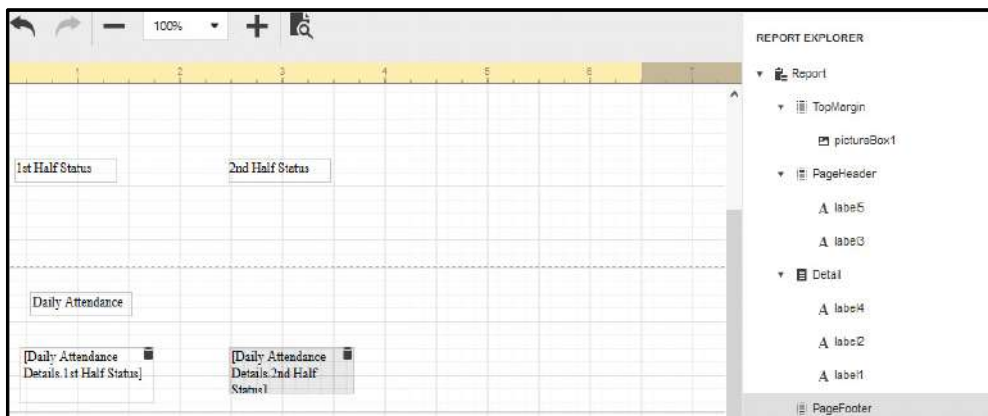

In a report, static and dynamic information is displayed using appropriate controls.

**Dynamic information** changes through a report, such as values from a database (which comprise the main report data) or service information (such as current user name or page numbers).

**Static information** is text or images that are not obtained from a data source, and therefore do not change through the report, and do not depend on the current computer. Static information can be printed only once (for example: Report Header) or can repeated on each page (for example, in a Page Header) or can repeat with every entry in your report's data source (a data-bound label, which is placed onto the Detail band).

Data-bound controls are indicated by a database icon in their top-right corner, both in the Design Panel and Report Explorer.

2. **Image**  : To display image in the report. An image can be selected from an external file or from a web location using the specified Image URL.
3. **Panel**  : It is a box that includes separate controls to allow them to be easily moved, copied and pasted, and visually unite them in the report's preview. (with borders or a uniform color background).
4. **Table**  : It is used for tabular based report. It consist of rows comprised of individual cells. Both rows and cells can be selected and customized individually.
5. **Line**  : It is used for drawing a line of a specified direction, style, width and color. It can be used for both decoration and visual separation of report sections within report bands.
6. **Pivot Grid**  : It represents dynamic data obtained from a data source in cross-tab form. Column headers display unique values from one data field, and row headers from another field. Each cell displays a summary for the corresponding row and column values. By specifying different data fields, you can see different totals. This allows you to get a compact layout for a complex data analysis.
7. **Page Info**  : It is intended to add page numbers and system information (the current date and time or the current user name) into your report.
8. **Page Break**  : Its purpose is to insert a page delimiter at any point within a report.
9. **Cross Band Line**  : It allows you to draw a line through several report bands.
10. **Cross Band Box**  : It allows you to draw a rectangle through several report bands.

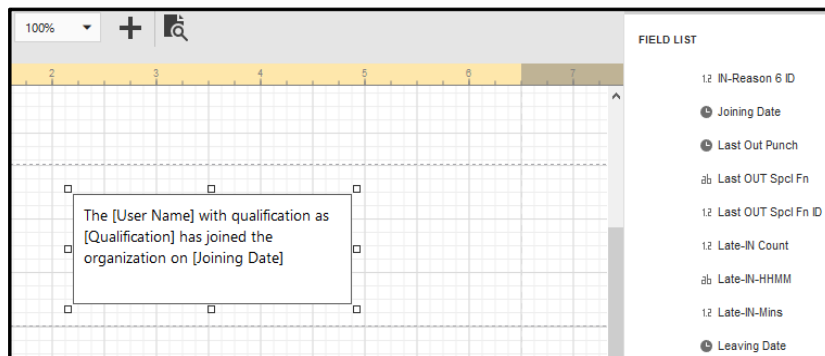

Report controls of appropriate types are created automatically, after you drag items from the **Field List** on the report surface.

After creating a report element, you can bind it to data, customize element layout and appearance.

## Merging of Static and Dynamic field

Static and Dynamic content can be combined within the same control (for example: append some text prefix or postfix to a value obtained from a database), or even a control can be bound to multiple data fields at one time.

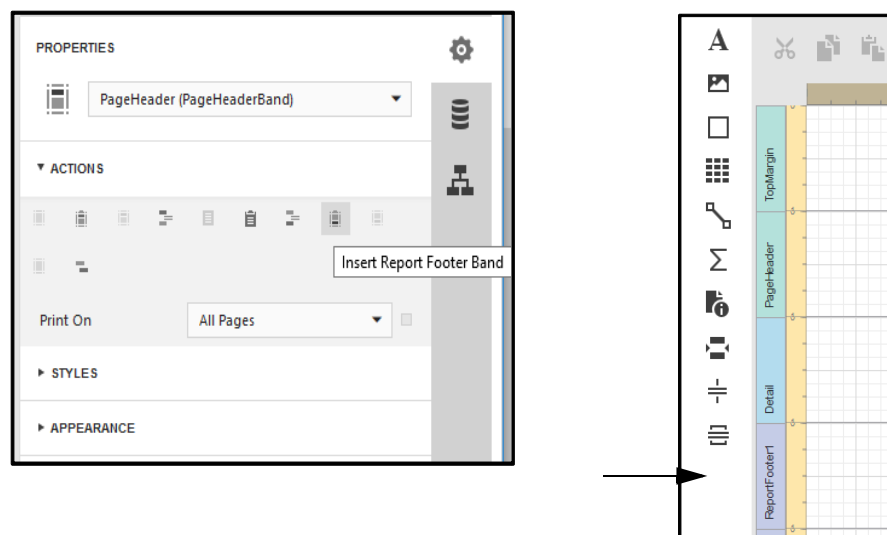

To embed dynamic data into a control's static content, type in the data field names surrounded by [square brackets] as shown below.

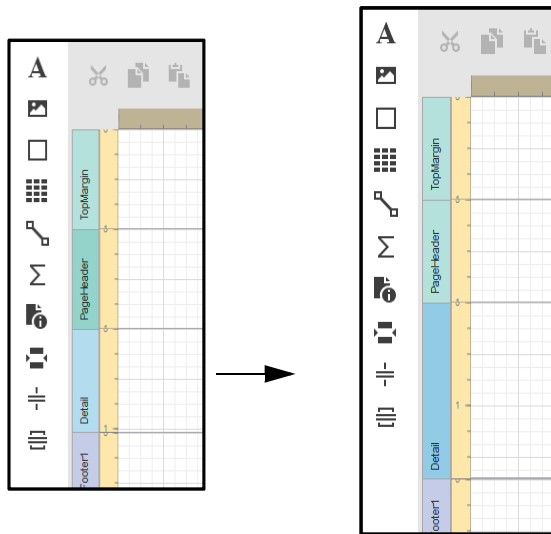

## Create/Insert Report Band

To insert the Report bands; under **Properties** section on right side, click the **Action** collapsible panel and select the desired report band.

For example: select **Insert Report Footer Band** as shown below. The Report Footer band will appear in the bands as shown below.

To resize a band, drag its header strip.

Select the **Custom Field**  from the Control Toolbox. Under **Properties** section on right side, click the **Data** collapsible panel and enter the **Tag**. You need to take care of the following while entering values in the Tag for different functions:

- Rename Group can be applied to Custom Field/Table Cell by enclosing Text within '<' and '>'.
- Rename Group can be applied to Pivot Grid field by enclosing Caption within '<' and '>'.
- Avoid use of Backspace, when not editing any content. Browser may load previous page without saving changes.
- Mention following values of Tag in Data Section, if you wish to include them:
  - **Company\_Logo**: to include Company Logo in "Insert Image"
  - **Date**: to include selected Date in "Custom Field/Table Cell"
  - **From\_Date**: to include selected Start Date in "Custom Field/Table Cell"
  - **To\_Date**: to include selected End Date in "Custom Field/Table Cell"
  - **Month**: to include selected Month-Year in "Custom Field/Table Cell"
  - **From\_Month**: to include selected Start Month-Year in "Custom Field /Table Cell"
  - **To\_Month**: to include selected End month-year in "Custom Field /Table Cell"

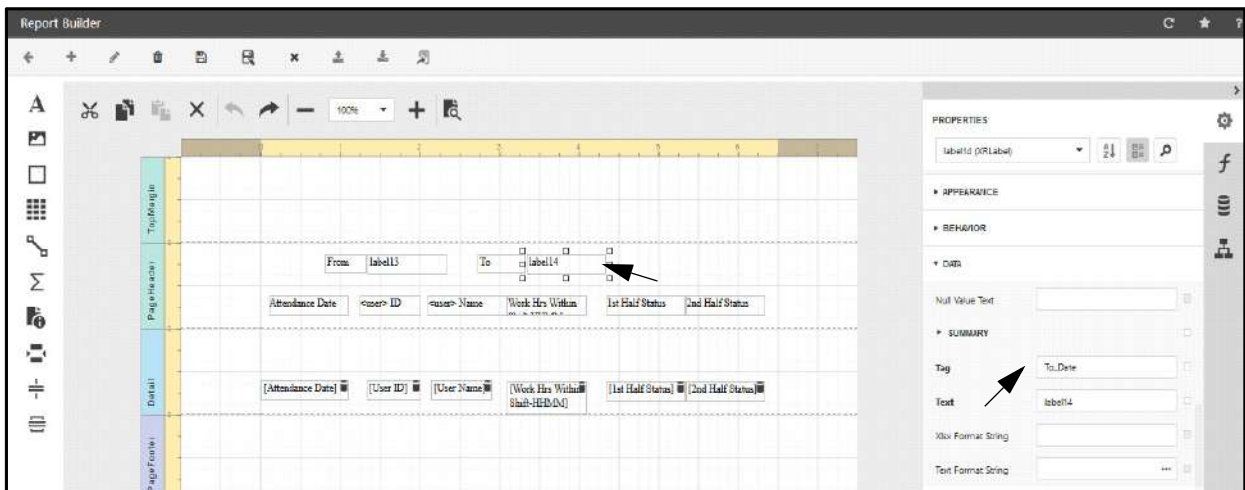

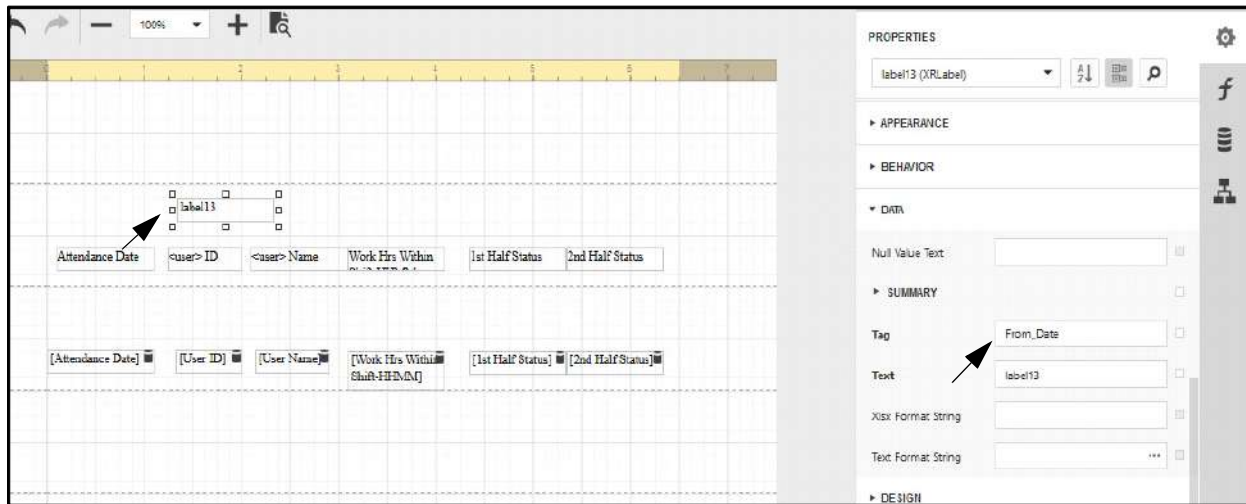

**Example:** Consider a report whose filtering range is selected as Date-Range as shown below.

Now the custom field is selected. The label13 is given the Tag **From\_Date** and label14 as Tag **To\_Date** as shown in below screen-shots.

*If Filtering range is selected as Date; then the custom field should be tagged as **Date**. So in the generated report selected Date will be displayed.*

*Similarly for Report type as Monthly Summary and Monthly details you can select the filtering range as Month or Month-Range. Depending on this you can give **From\_Month**, **To\_Month** or **Month** tag to the custom fields.*

These labels with Tag will display the actual From Date and To Date as selected from the filtering range in the report.

In Sample Preview the tagged label will be displayed as label only.

Attendance Date	<user> ID	<user> Name	Work Hrs Within Shift-HEB(M)	1st Half Status	2nd Half Status
01/11/2017 00:00:00	1	User 1	08:00	PR	PR
02/11/2017 00:00:00	1	User 1	09:00	PR	PR
03/12/2017 00:00:00	1	User 1	00:00	WO	WO

Attendance Details

Date \* 01/01/2018 02/01/2018

Optional Parameters

User Selection

Select Users All

Generate Report For All Users

Generate Report

When the report is re-directed to report page in module and From Date and To Date are selected as shown above. Then the report will be generated as shown below. The tagged label displays the selected date. You can select the format of the date in report Designer page.

Attendance Details

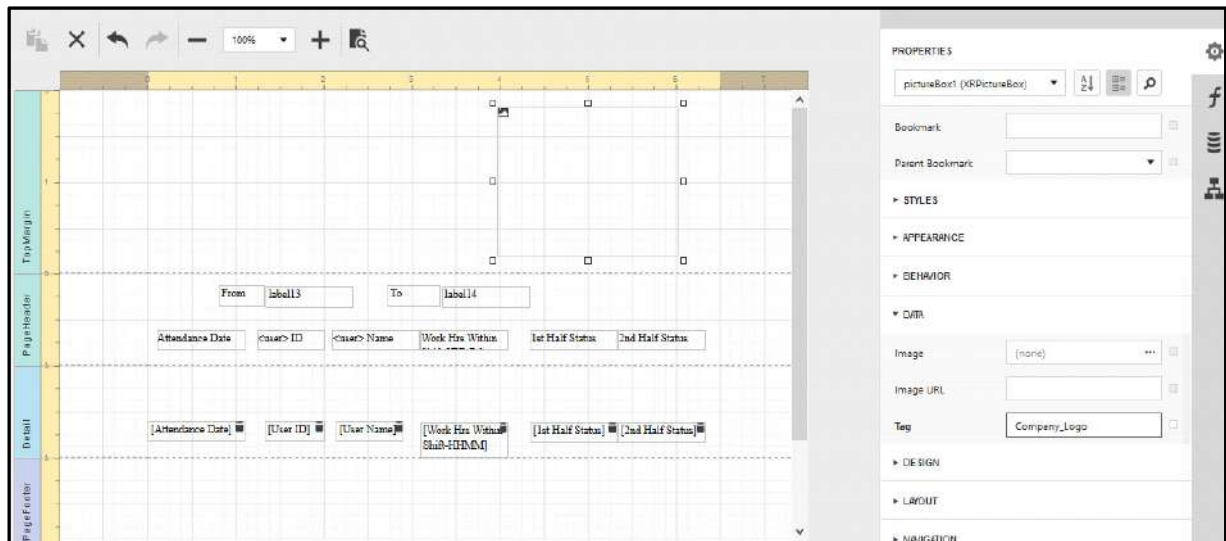

Back

1 of 1 100%

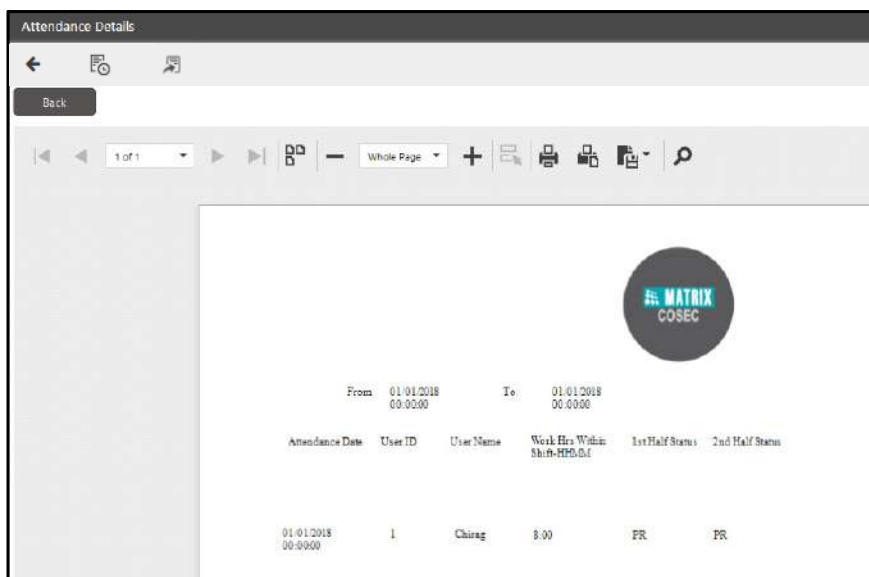

Attendance Date	User ID	User Name	Work Hrs Within Shift-HH:MM	1st Half Status	2nd Half Status
01/01/2018 00:00:00	1	Chirag	8:00	PR	PR
02/01/2018 00:00:00	1	Chirag	7:45	PR	PR
01/01/2018 00:00:00	101	Khushbu	0:00	AB	AB

## For Company Logo

For displaying the Company Logo in the report, select the **Insert Image**  control and give the tag as **Company\_Logo**

This will display the logo image as uploaded in Admin module> System Configuration> Enterprise Profile.

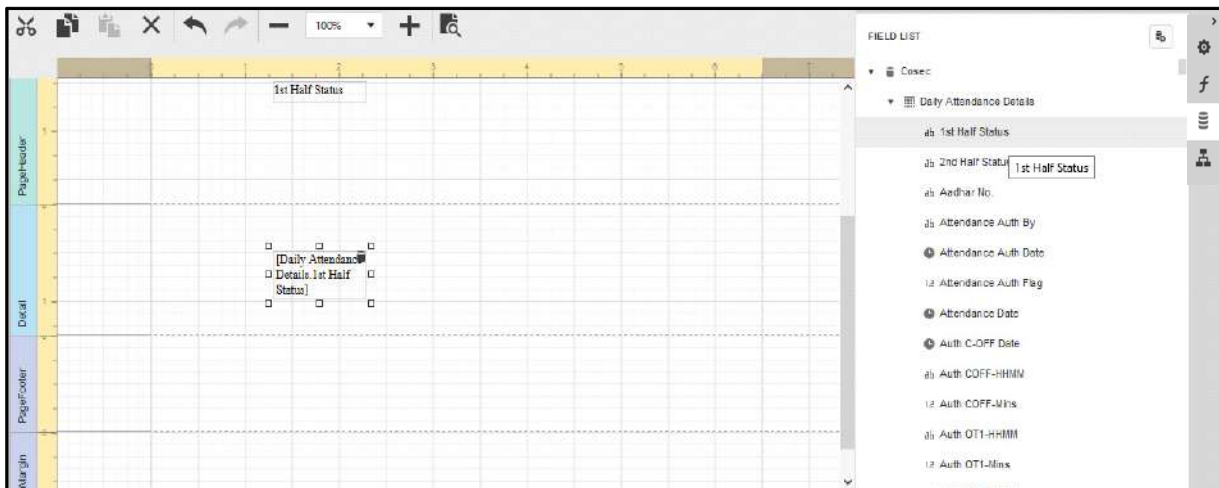

## Binding Report Elements to Data

To embed dynamic information into the report, if this information is contained in the report's data source, this can easily be done using one of the following approaches.

### 1. Using the Field List

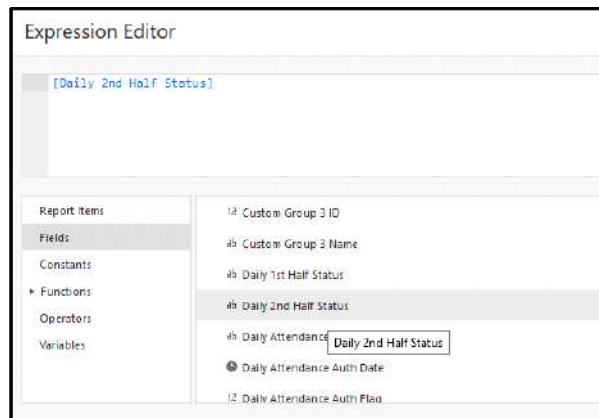

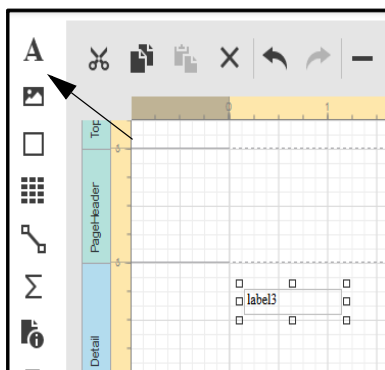

To bind an existing report control to a data field, click the required field item in the Field List, and then drag and drop it onto the control. The database icon inside it will indicate that it is successfully bound.

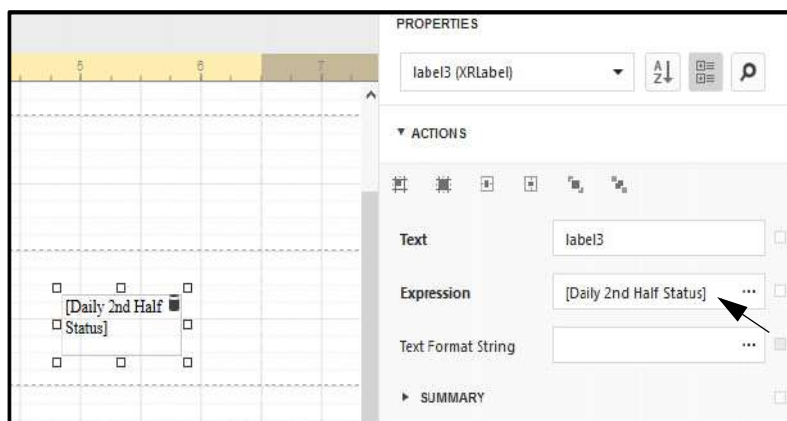

Example: 1st Half Status field from the Field list is dropped in Details band as shown above. Its associated header “1st Half Status” will automatically appear in the header which will remain a static label in the generated report and the dropped field will change as per the database values.

## 2. Using the Property Grid

Select a control from left side. under the **Properties** section at right, click **Actions** collapsible panel and click **...**. In the **Expression Editor**, select the field to be mapped for control.

The selected field for example: Daily 2nd Half Status will appear in Expression as shown below.

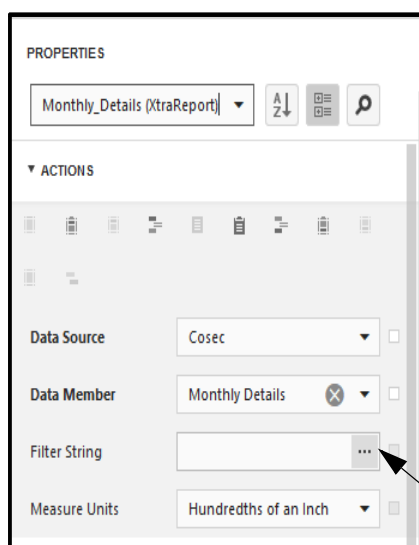

## Filter String (Filter Editor)

You can apply filter to the report based on which report preview will be generated. If a condition is always to be applied before generating the report then that condition can be set in the report builder filter string.

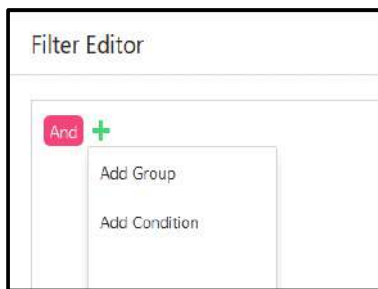

For Example: If data of users between User ID 1000 to 2000 is required then this condition can be set in the filter string. Based on this filter, sample preview will be displayed.

Then in Report page, if data (for example: attendance details) of users belonging to specific department (for example: QA Dept) is required then again filters can be set for the ID of the users.

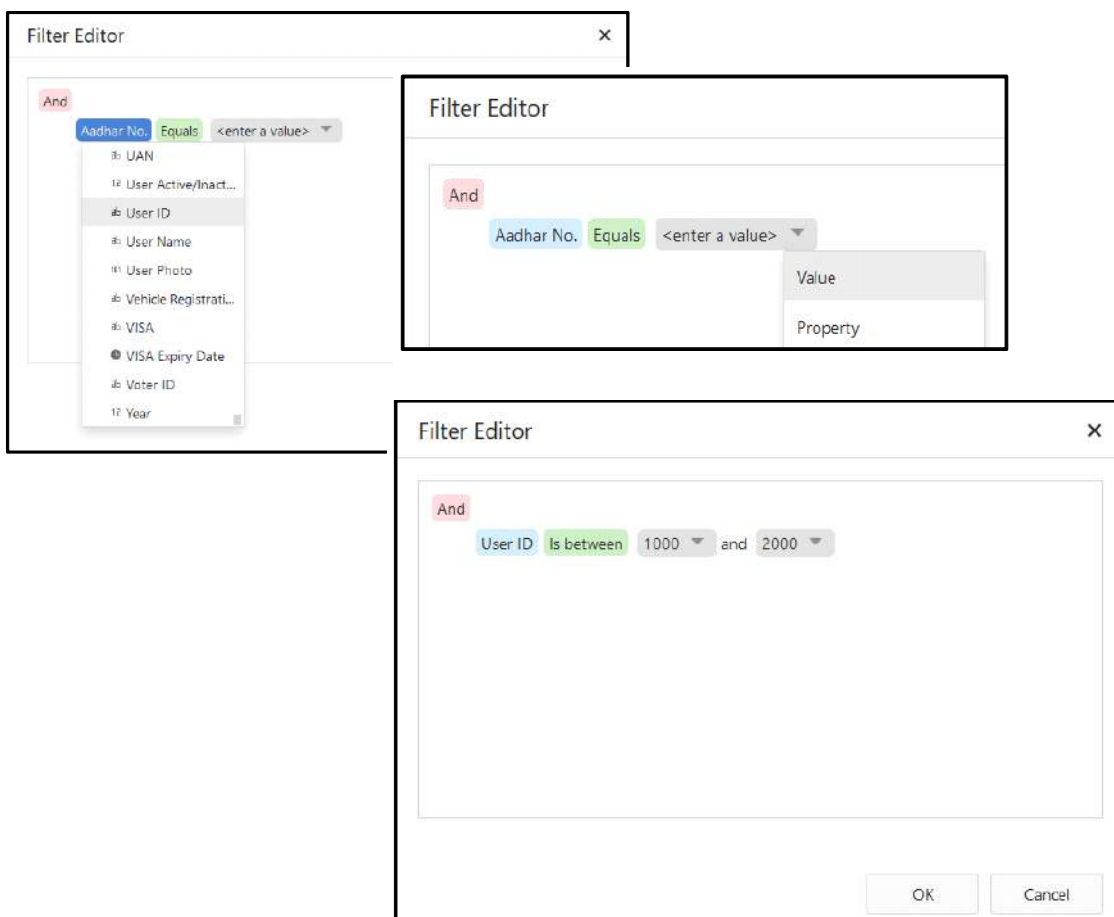

Select the Report under Properties section on the right. Click Filter String \*\*\*. The Filter Editor page will appear as shown above. Place the cursor on **And**. The + sign will appear. Then click on + to add **Group** or **Condition**. You can click on **And** to change the group to **Or**, **Not And**, **Not Or**.

**Add Group:** This will add the logical groups **Add**, **Or**, **Not And**, **Not Or**.

**Add Condition:** This will add the condition to be applied in the filter.

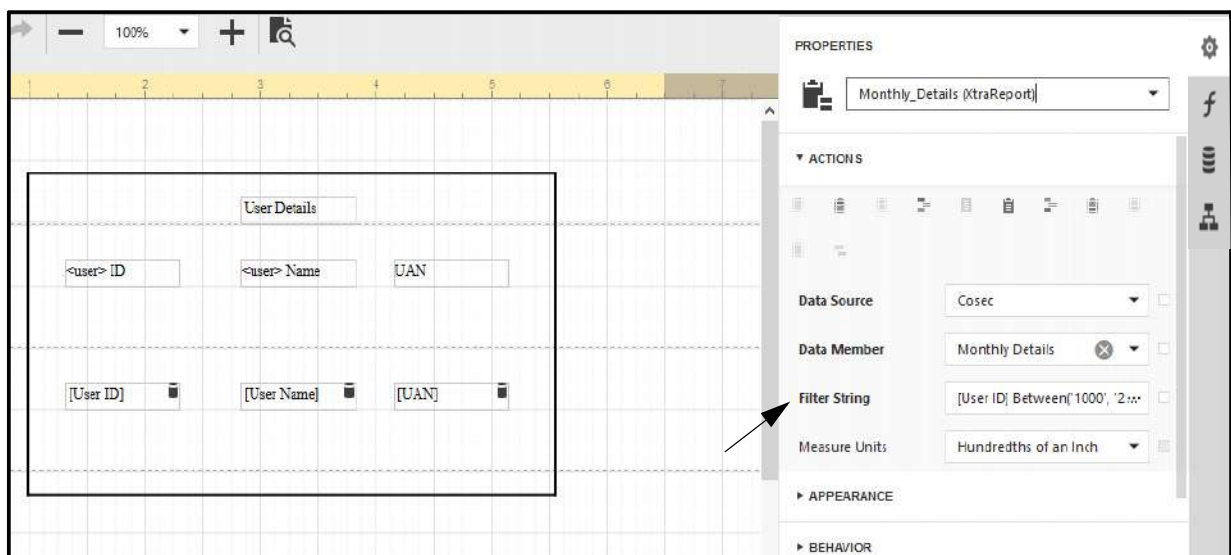

You can select **Value** or **Property** for comparing in the condition. The field will be compared to value or property in the condition to hold true.

If 2 conditions are required, then click **+** and specify condition again.

So Filter will be applied when Condition1 **And** Condition2 are satisfied.

The filter string will be updated with the expression as shown below.

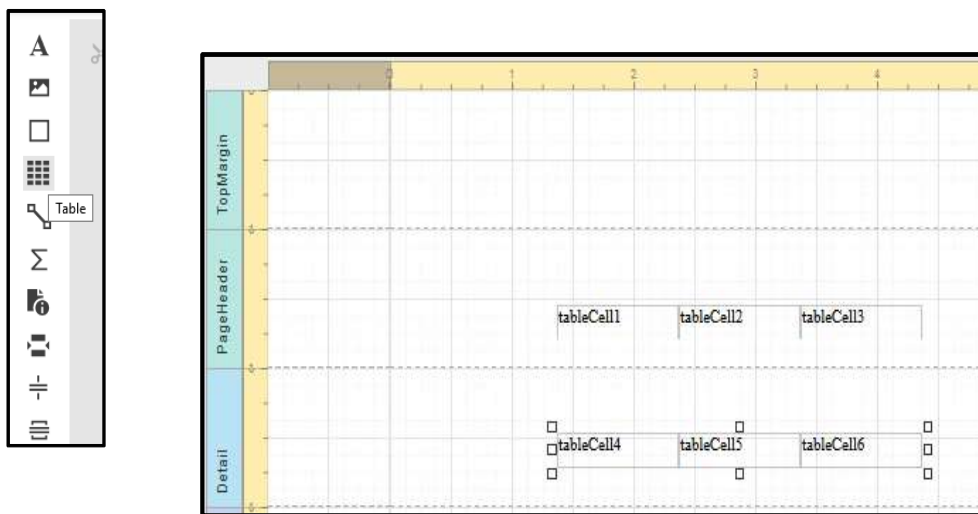

The Sample Preview will display the data after applying the conditions.

User Details		
<user> ID	<user> Name	UAN
2	User 2	99876543211
2	User 2	99876543211

## Table Report

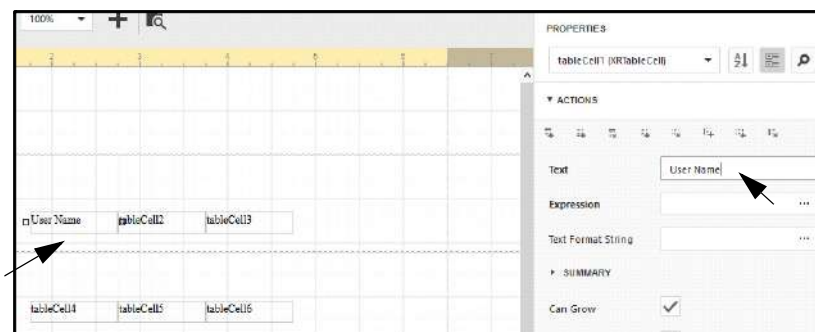

For creating Table Report drag the Table Report  from the Control Toolbox and drop it on the report Designer page.

Place two Table controls to the report's Page Header and Detail band as shown below.

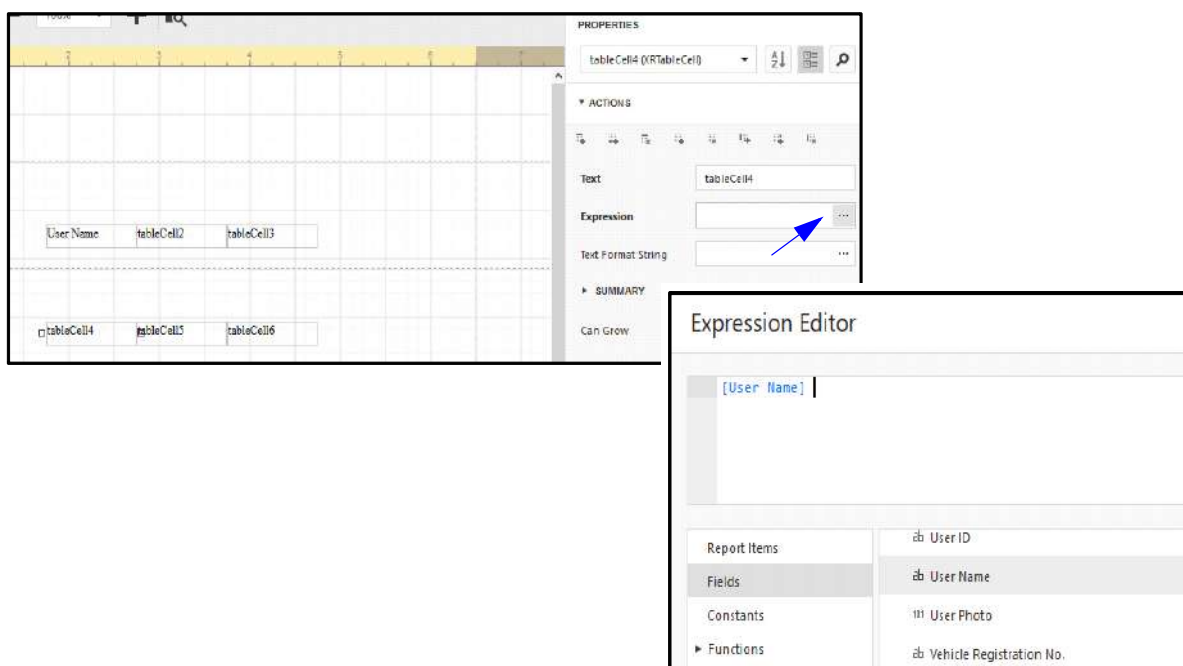

One table will be used as a header, and the other one for the report's detail information.

Type the headers into the upper table's cells. for example: tableCell1 is edited with text User Name. You can also enter the text in Properties grid which will be reflected in the cells in Design Area.

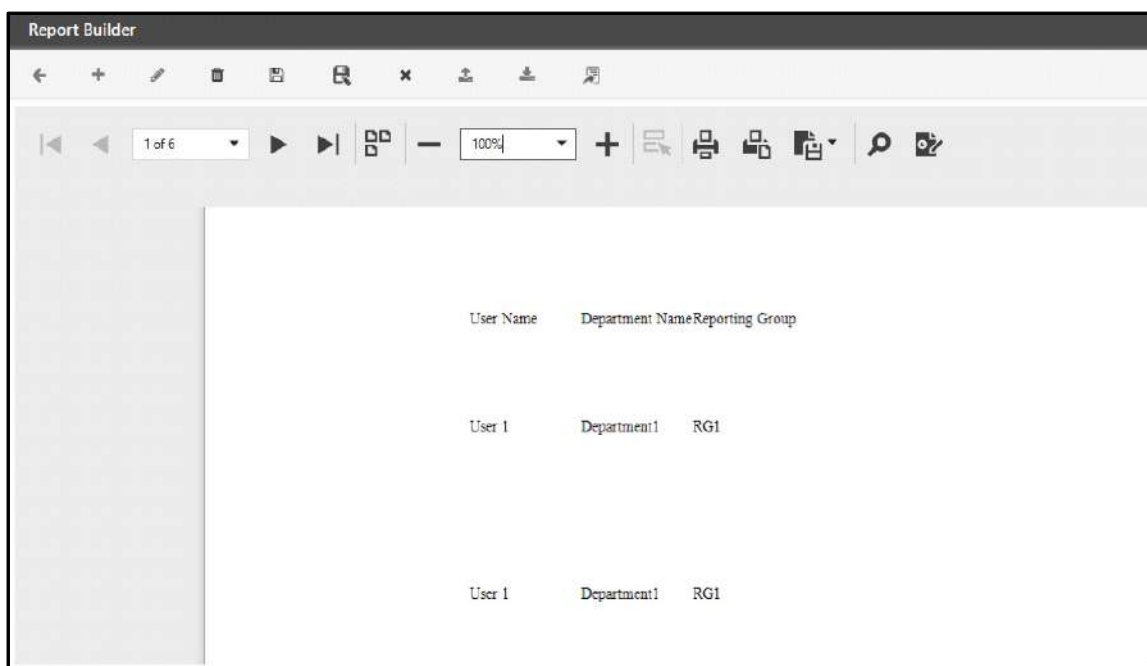

Then bind the corresponding cells in the detail section to the appropriate data fields. To do this, select a table cell and set its Data Field in the Expression as shown below.

Example: Cell4 is bound with User Name; Cell5 with Department Name, Cell6 with Reporting Group Name.

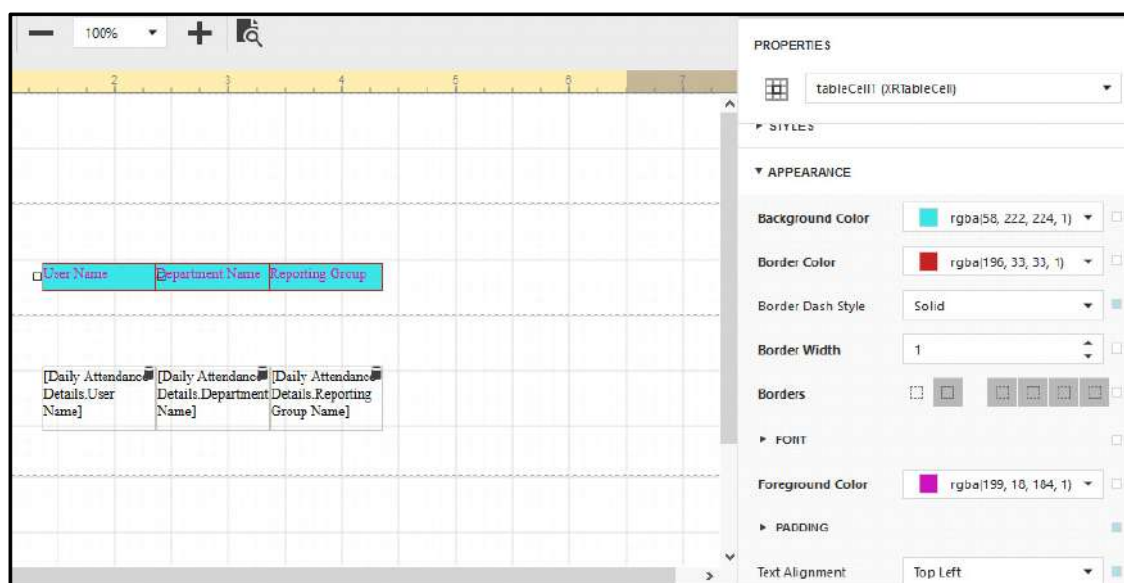

Now you can view the preview of the designed report by clicking **Sample Preview** .

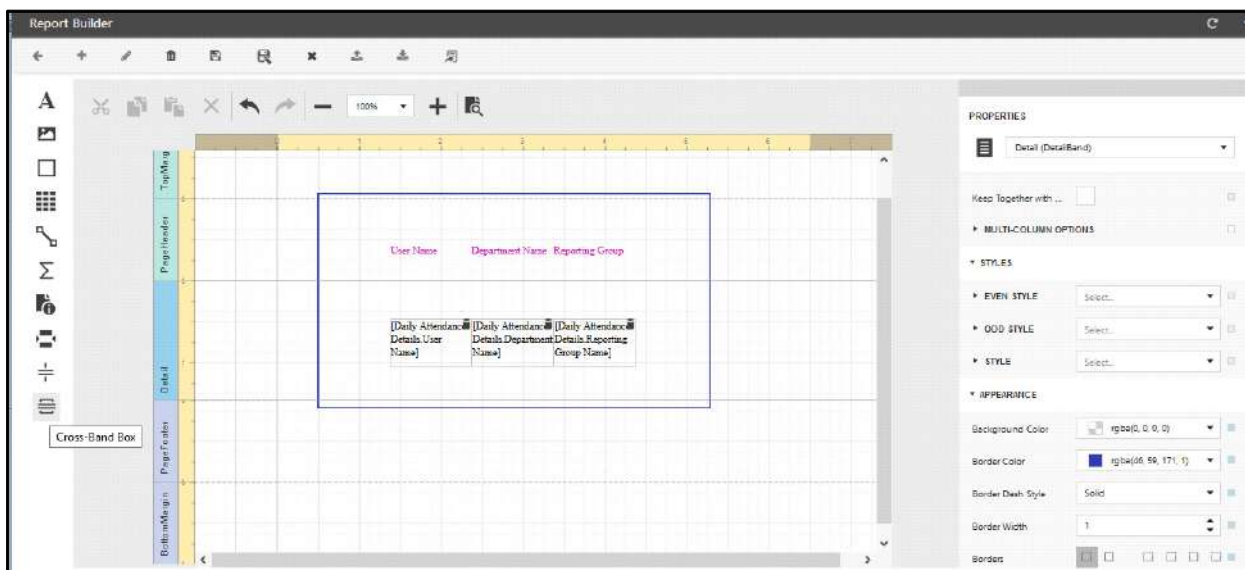

To switch back to the Designer page, click **Designer** .

Finally, you can customize various properties of the tables to improve their appearance. For example, click the **Appearance** collapsible panel under **Properties**, to define the Border property as well as the Background Color property. To customize cell text options, specify the **Font** Property. You can also specify **odd-even** styles for the detail table.

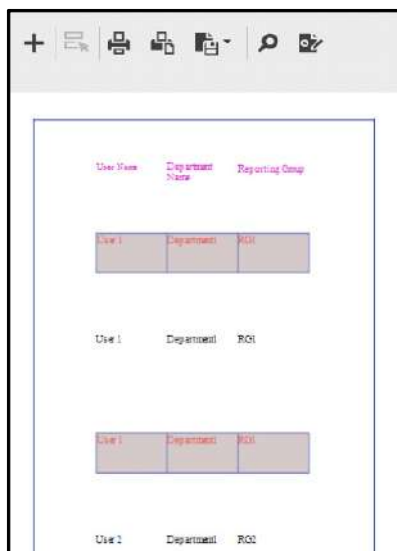

## Cross-Band Box

The Cross-band Box control allows you to draw a rectangle through several bands of report. This is useful if border is required in a report.

For this drag the Cross-Band Box  from the Control Toolbox on the report Designer page. Stretch the corners of the box through the bands to make it a border of the report. You can also change the color of the border from **Appearance**.

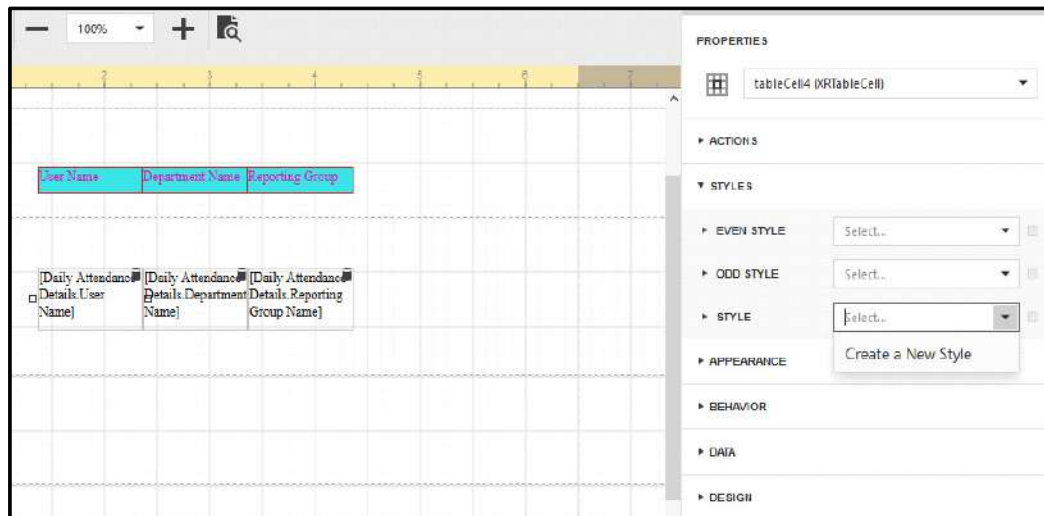

Then click **Sample Preview**  to view the report preview.

## Styles

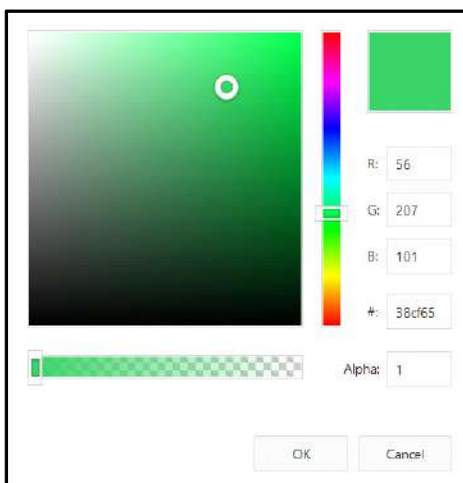

A style that is assigned to a band applies to all controls in that band.

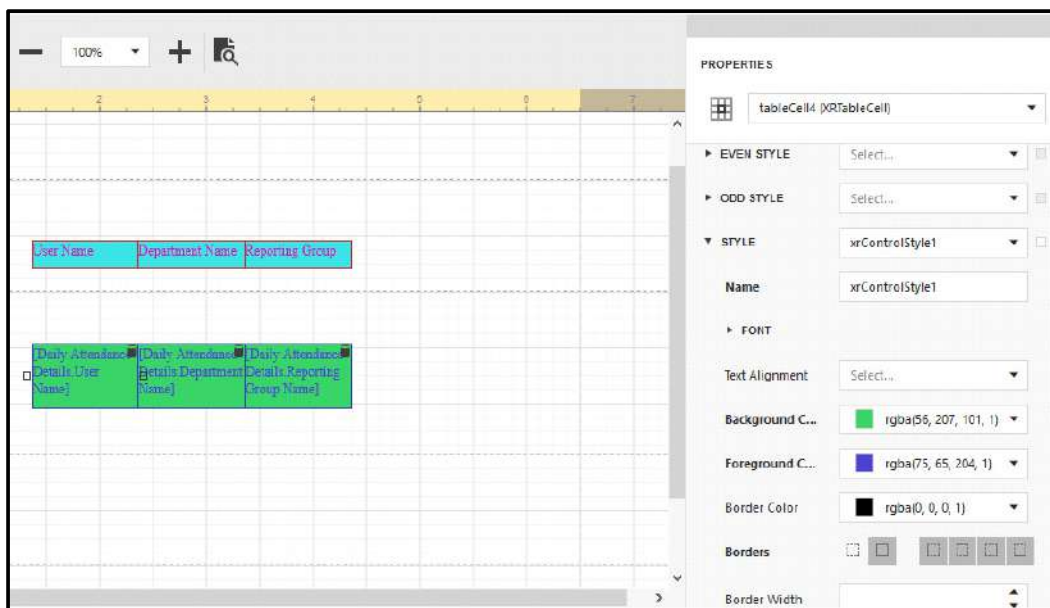

To assign a particular style to a control, select the desired control and click **Styles** collapsible panel under **Properties**.

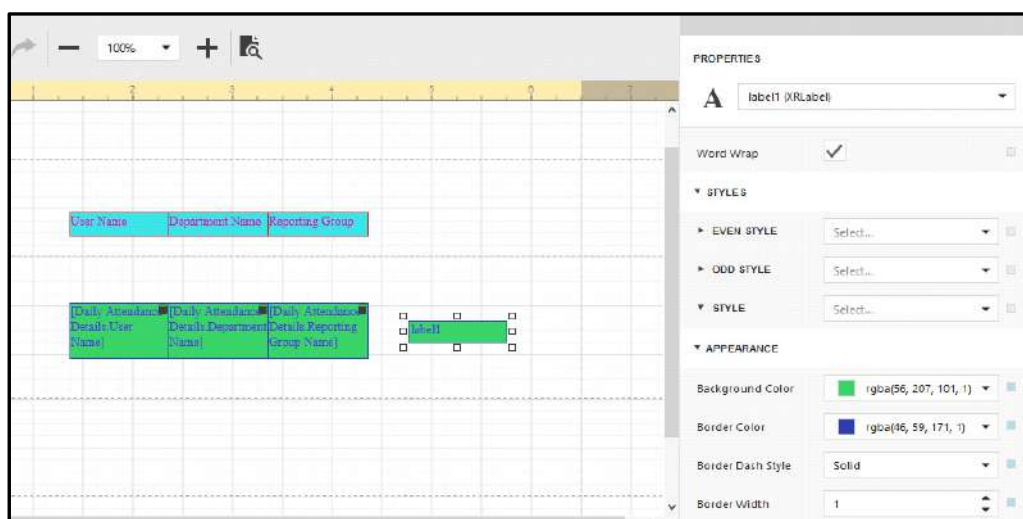

Click the drop-down list for the **Style** property and click **Create New Style** or select an existing style.

Select the desired Background Color. The foreground color, that is the color for the text can be selected in the same way. You can configure other style parameters like Font, Borders, Padding etc.

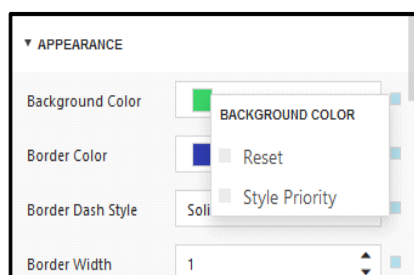

The configuration of style will be reflected in Appearance. If the new control is placed in the band configured with style; then the new label will also get the same style.

When both Styles and individual Appearance settings are assigned to an element, the Style's appearance property has a higher priority than an element's Appearance property.

To assign a higher priority to an element's Appearance property, click Advanced ☐ and then click **Style Priority**.

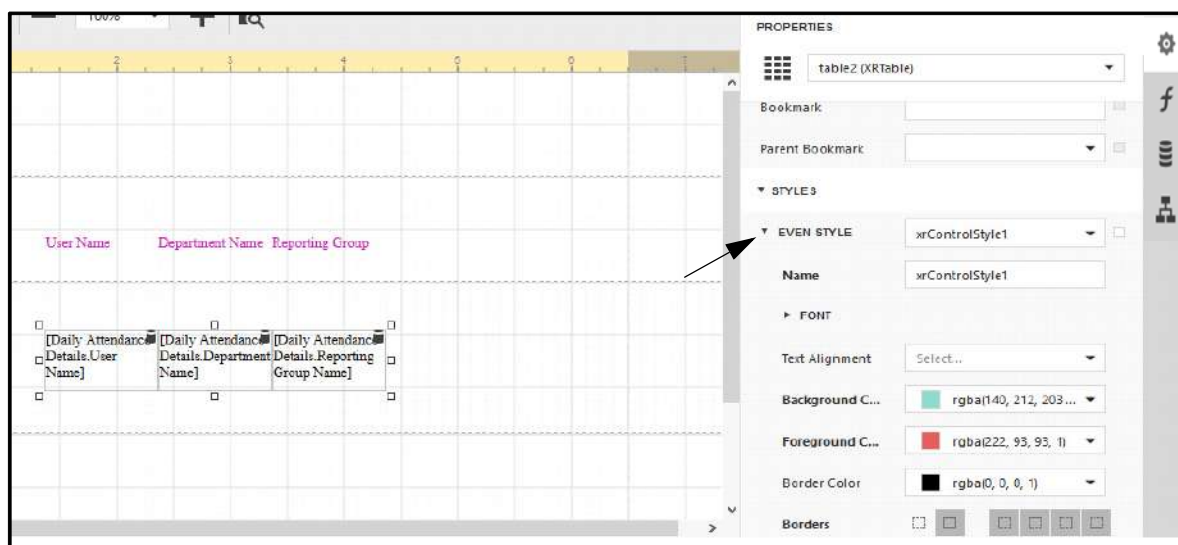

## Odd and Even Style

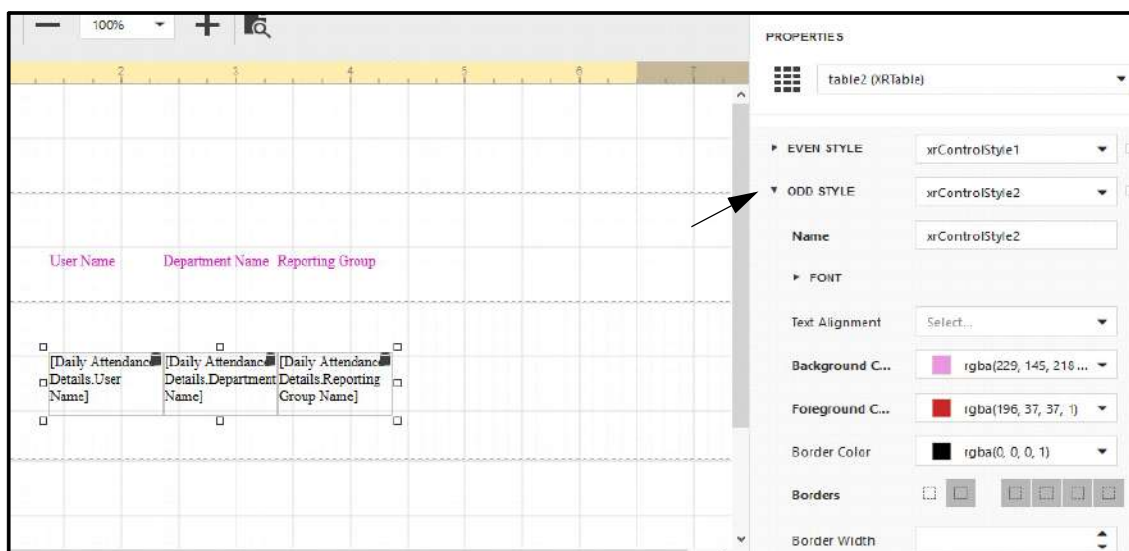

This is mostly used if you wish to assign alternate background color for the records.

Select the Detail table (table in Details band). Click **Styles** collapsible panel under **Properties**.

Click the drop-down of **Even Style**. Select **Create a New Style**. Now for created style; you can select the Background Color, Foreground Color, Border, Font etc. After creating a style; assign the same by selected it as the Even Style.

Similarly create another style and assign as the **Odd style**.

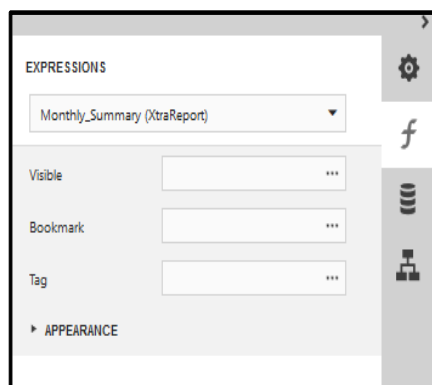

To view the preview of Report; click **Sample Preview**  b. The report preview will be displayed as below with odd and even background colors in different rows.

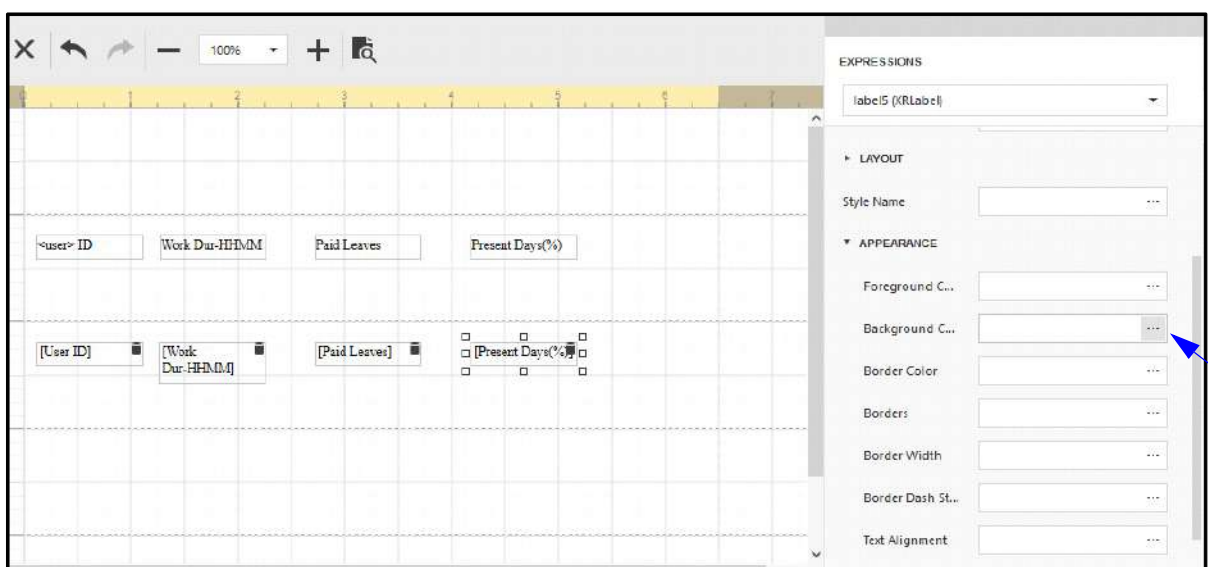

User Name	Department Name	Reporting Group
User 1	Department1	RG1
User 1	Department1	RG1
User 1	Department1	RG1
User 2	Department1	RG2

### Conditional Appearance (Conditional formatting)

Create a report and bind it to a data source. Select the **Expression** Panel, click the **Appearance** collapsible panel.

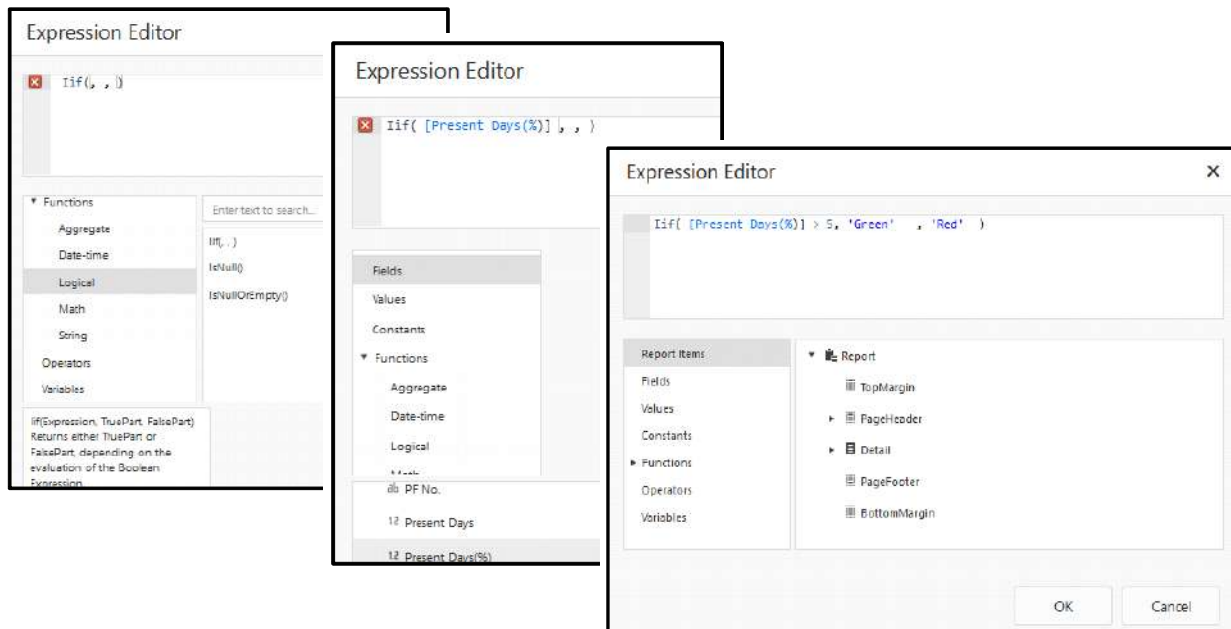

To configure conditional appearance for a control, select the required report control.

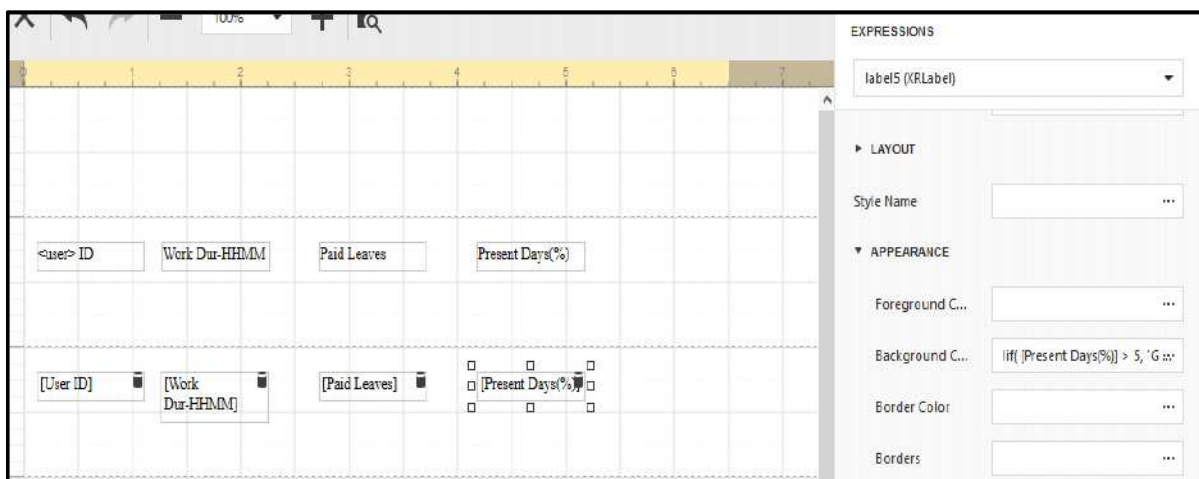

Click **...** to configure the appearance settings based on condition for **Foreground Color**, **Background Color**, **Text Alignment** and **Border related** options. When the conditions defined in the Expression are fulfilled then report control will appear as per the configured conditional appearance.

The Expression Editor will appear. You can create the required Boolean condition based on which appearance formatting will be applied to the report control. Here the Expression for Background Color is defined.

This means when Present Days percentage is greater than 5, then the associated control will display background as green or else will display red color.

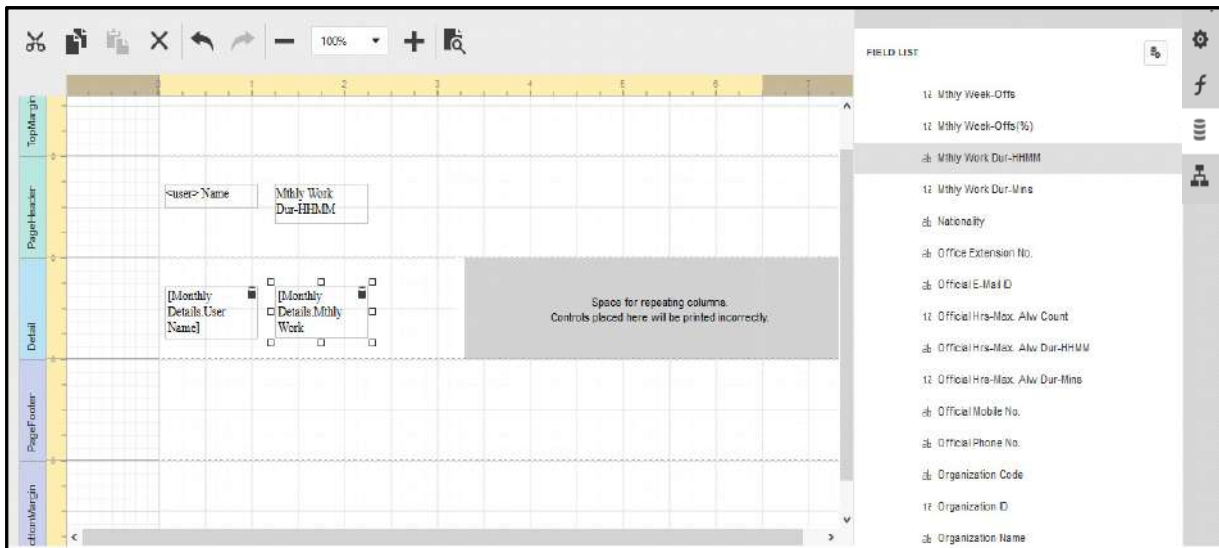

The report preview displays the background color as green for which Present Days percentage is greater than 5.

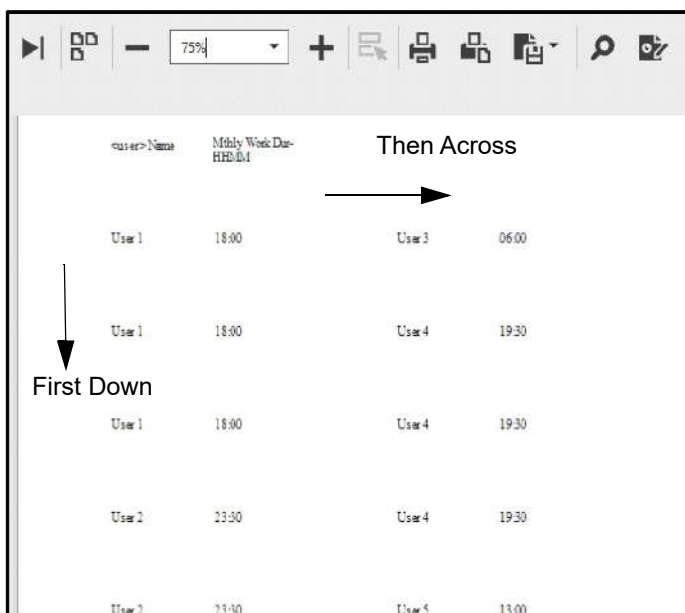

**Layout** determines the order in which records of the same group are processed. Select the desired option — First Down, then Across or First Across, then Down.

Now, on the Detail band's surface, a Grey Area appears, delimiting the available column's width.

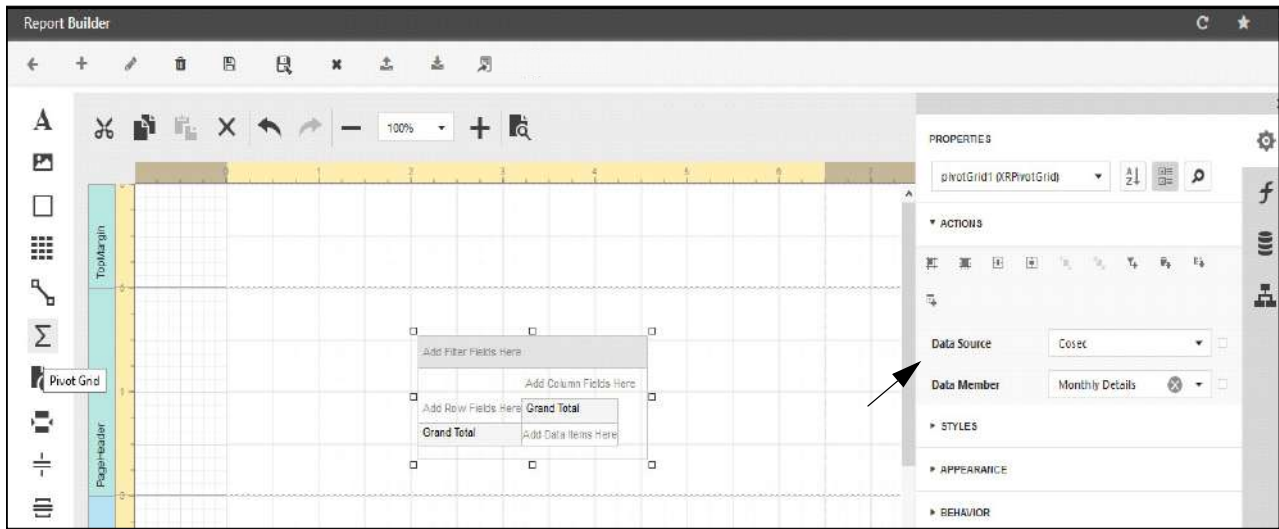

Place the field list elements and adjust the controls width, so that they fit within the effective borders. The preview of the report is displayed below.

## Cross-tab Report (Pivot Grid)

This is the cross-tab report using a **Pivot Grid** that calculates automatic summaries and grand totals across a large number of grouped rows and columns.

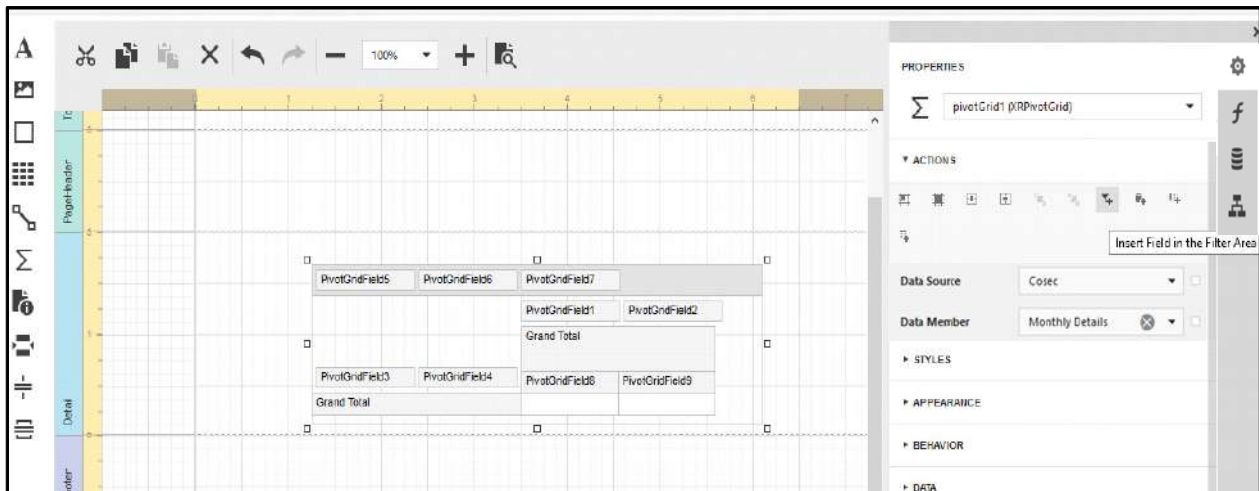

Place **Pivot Grid**  from the Control Toolbox on the report's Detail band as shown above.

The Pivot Grid will get bound to **Data Source** and **Data Member** as shown above. The Data Member property defines from which table or view of your dataset the grid obtains its data.

To add a field to the particular grid area, click the Actions collapsible panel and click one of the following buttons.

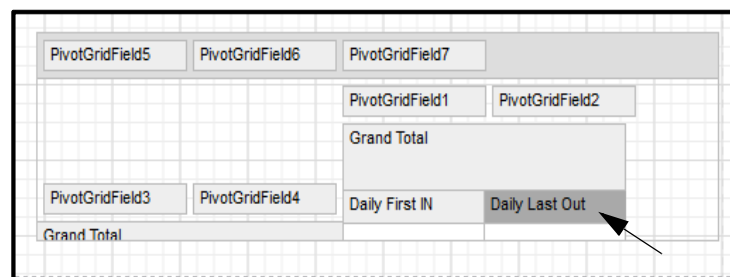

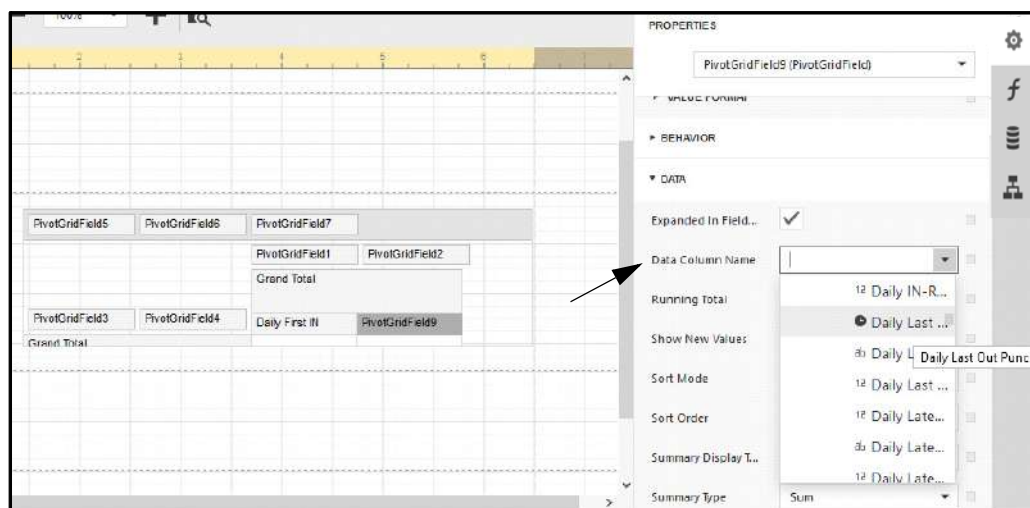

1. **Insert Field in the Filter Area**  : It adds a field to the Filter Header area. This field is available for further customizations.
2. **Insert Field in the Data Area**  : It adds a field to the Data Header area. The summaries will be calculated for all the cells, each cell is identified by a specific column and row.
3. **Insert Field in the Column Area**  : It adds a field to the Column Header area. This field's values will represent column headers.
4. **Insert Field in the Row Area**  : It adds a field to the Row Header area. This field's values will represent row headers.

Add two column fields, two row fields and two data fields, by clicking the above described buttons. You can also add several filter fields.

The Data binding of PivotGridField9 is displayed below. For this click the **Data** collapsible panel and the click the **Fields** collapsible panel. Select the **PivotGridField9**. Now click the drop-down arrow and select the desired field for **Data Column Name**.

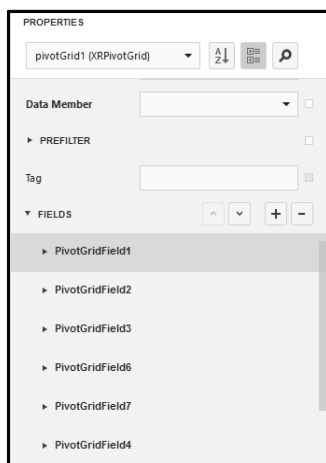

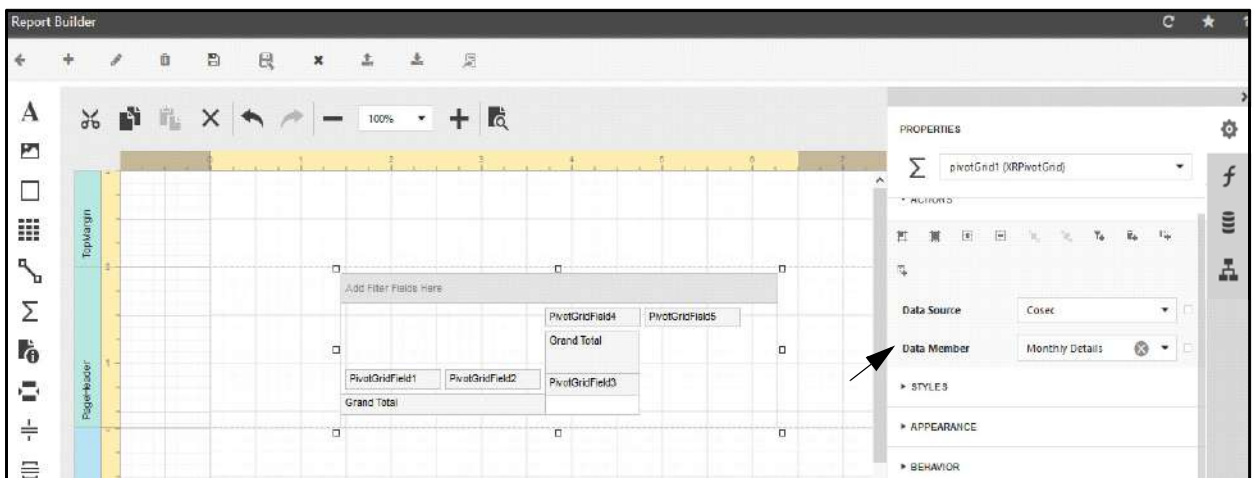

For example: **Daily Last Out Punch** is selected as shown below.

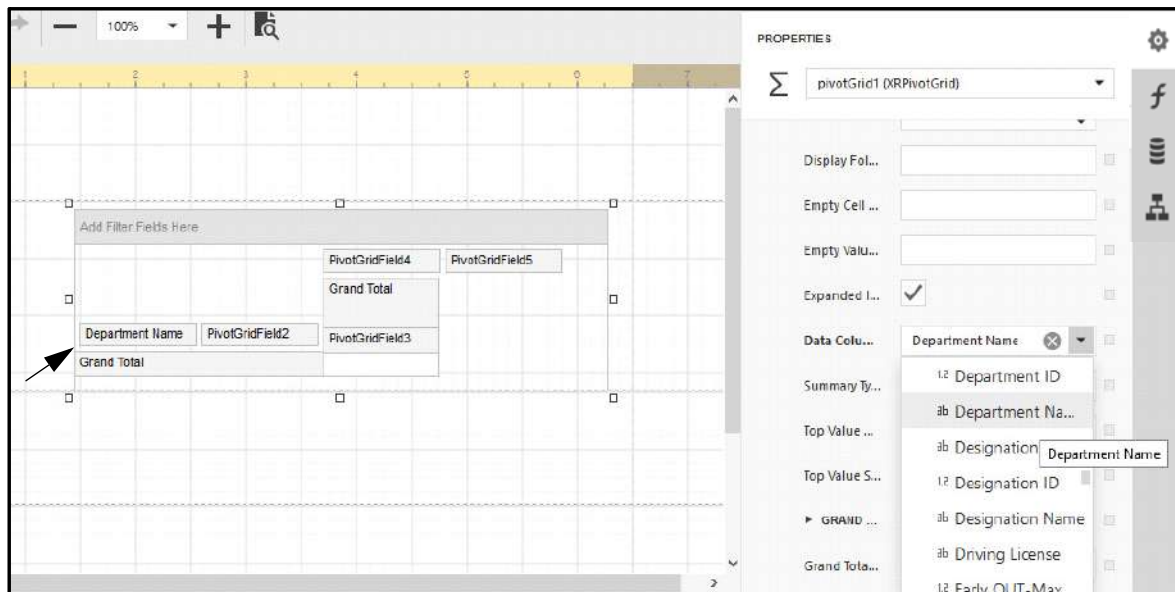

The other pivot grid fields can be updated in the similar manner.

Report Group ID	1st Half Status	2nd Half Status		
		Daily Attendanc...	Daily Schdule Sh...	
		Grand Total		
User ID	User Name	Daily First IN	Daily Last Out	
Grand Total				

### Example: Pivot Grid based Report

All the fields are mapped as displayed below.

Daily Site ID			
		Month	
Department Name	User ID	Work Duration	Late- IN Count
Grand Total			

The report preview is displayed below:

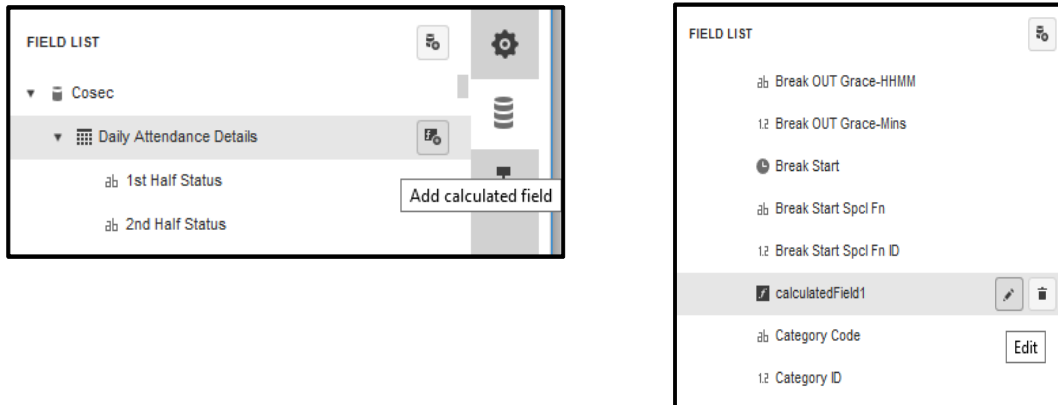

Daily Site ID			
Work Duration	Late- IN Count	Month	
11			
Department Name	User ID	Work Duration	Late- IN Count
Department1	1	0	£0.00
	2	0	£0.00
	3	0	£0.00
	4	0	£0.00
	5	0	£0.00
	6	0	£0.00
	7	0	£3.00
Department1 Total		0	£3.00
Department2	10	0	£0.00
	8	0	£0.00
	9	0	£0.00
Department2 Total		0	£0.00
Grand Total		0	£3.00

## Calculated field

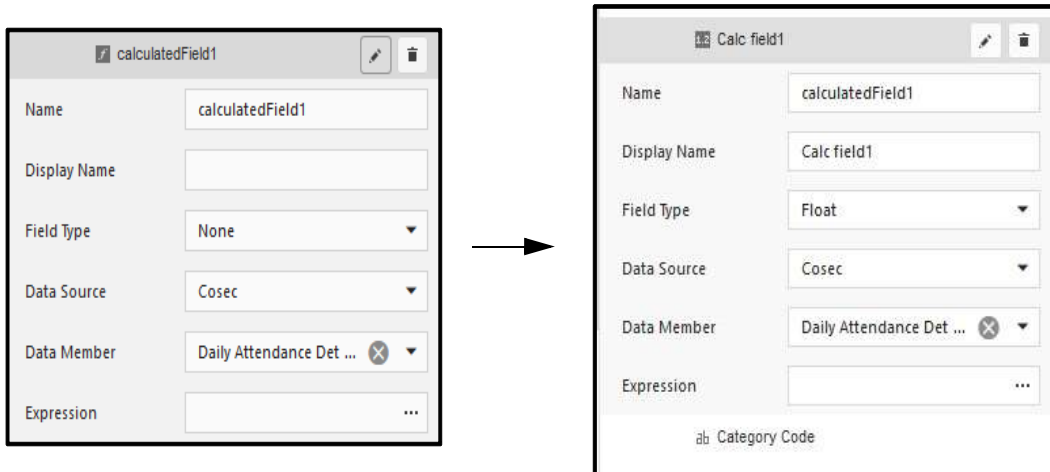

If there is a requirement, wherein you need to perform some pre-calculations over the data field to which a control is bound, this can be done by creating a calculated field, and binding the control to it.

The main purpose of calculated fields is to perform pre-calculations over data fields based on a specific expression.

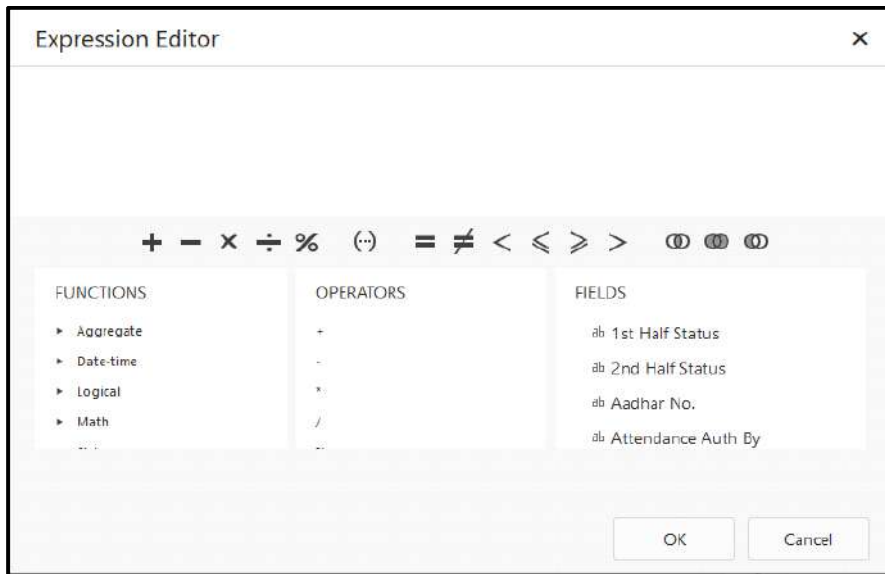

To create a calculated field, in the Field List, Click Data Source. The Add Calculated field icon appears as displayed below. Click **Add Calculated Field**. The field will be created in the field list as displayed below.

Click **Edit** to configure the calculated field and specify the values of different attributes such as **Display Name**, **Field Type**, **Data Source**, **Data Member** and **Expression**. You can change the **Field Type** property in which the result of calculated field is required.

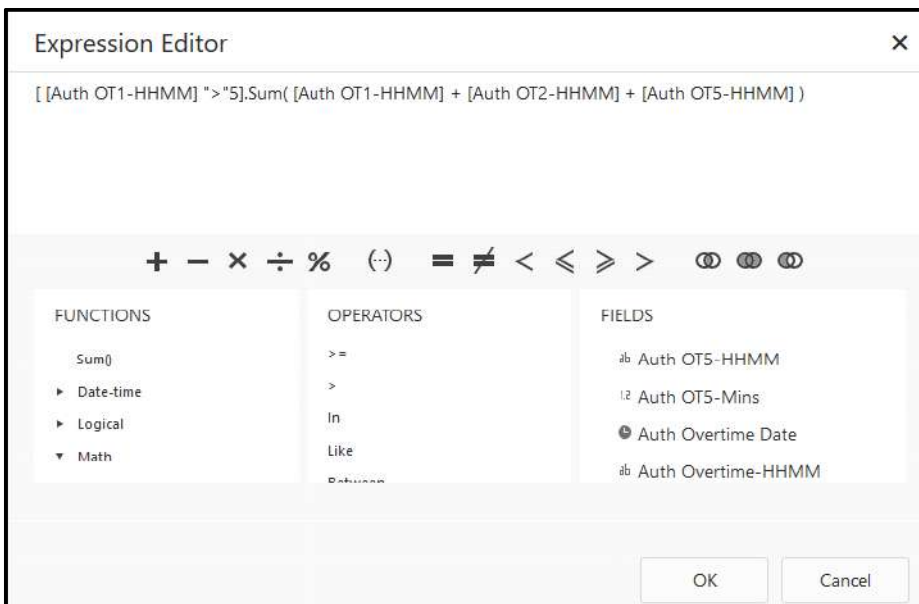

Now, create an Expression for the calculated field. Click **...** in the Expression section. The Expression Editor window appears as displayed below.

To perform different string, date-time, logical, and math operations over data, use standard functions from the **Functions** list. To add a data field or report parameter to this expression, double-click the required name in the **Fields** list. A data field is inserted into the expression's text using its name in [square brackets]. To add **Operators** between field names, use the toolbar or Operators list.

Select and double-click on the function. for example: Sum(). Then double-click on the fields to move them to the expression string. for example: Select Authorized OT1, OT2 and OT5 and click the operator( for example: +) between fields from the tool-bar as shown below.

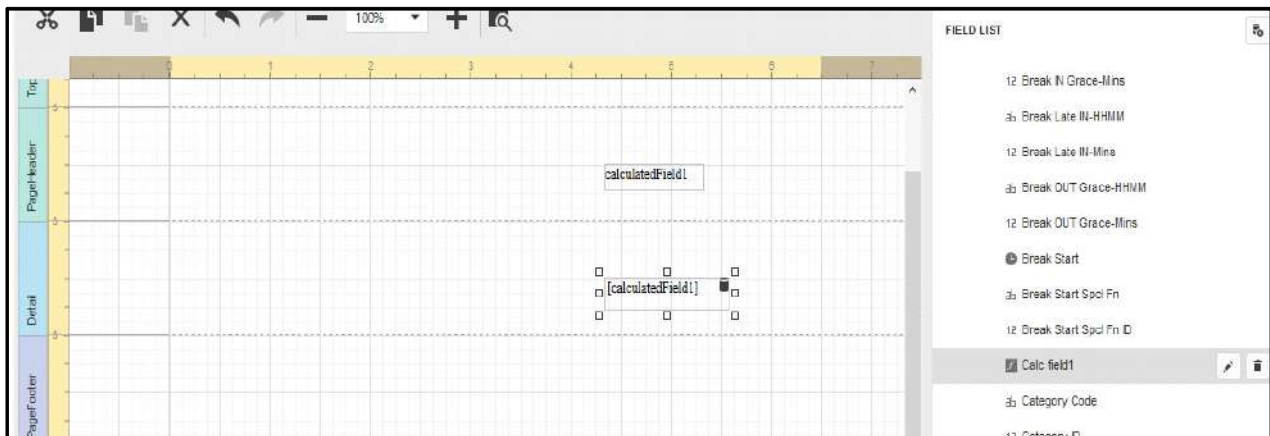

The function [sum() implies that if some condition is true then sum of defined fields will be done. For example: If Authorized OT1 is greater than 5 then sum of OT1, OT2 and OT5 will be done.

Then click **OK** to save the expression.

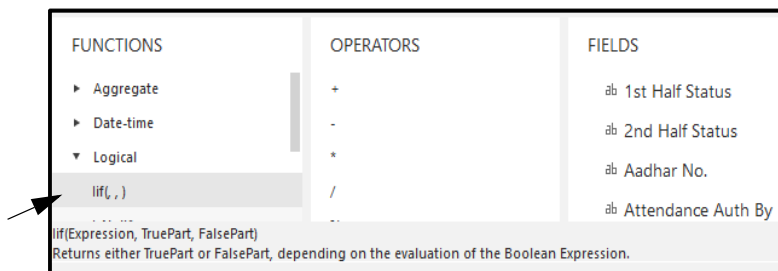

This expression will calculate the sum of all OT1,OT2 & OT5 of all records and will return the overall sum. For calculating sum of individual record, you have to simply specify OT1+OT2+OT5.

Finally, drag the calculated field from the Field List onto the required band, just like an ordinary data field.

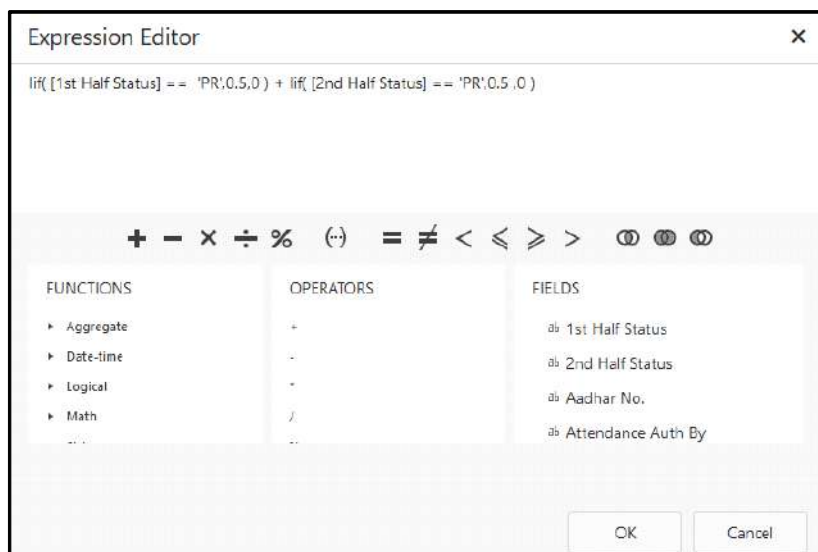

### Example1- Logical function

For conditional based sum; **lif(,,)** can be used. For this select the function **lif(,,)** from logical functions.

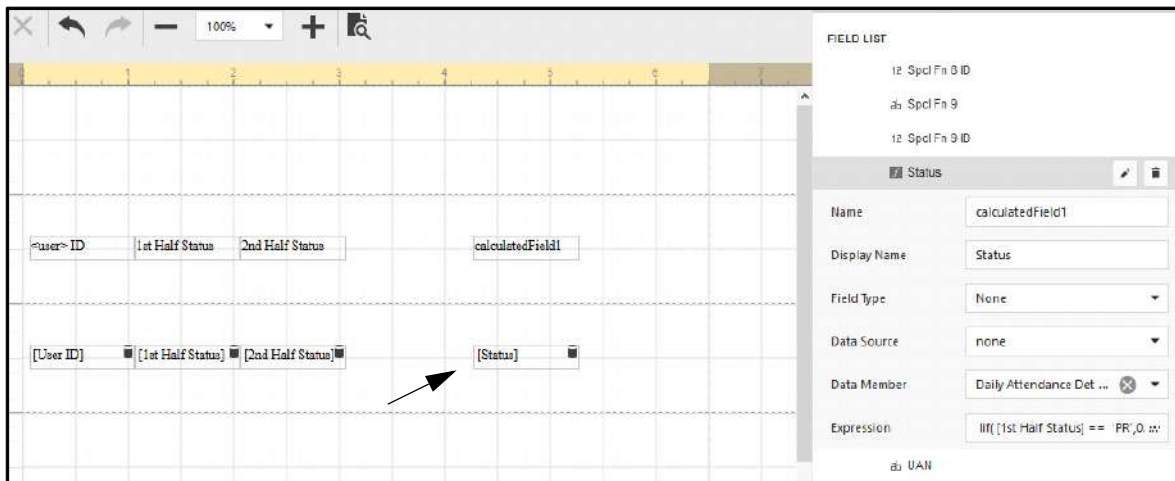

Then select the field to create the expression, that is, If 1st Half Status is equal to PR then display true value as 0.5 or else display 0. The **equal to** operator can be selected from the operators list.

Another expression can also be added to this expression by using **+** operator. Then create expression as If 2nd Half Status is equal to PR then display true value as 0.5 or else display 0. If both 1st half and 2nd half status is PR, PR then resultant will be displayed as 1.

Now this calculated field can be dropped onto the Report Detail band as displayed below.

The Report Preview page appears as displayed below:

<user> ID	1st Half Status	2nd Half Status	calculatedField1
1	PR	PR	1
1	PR	PR	1
1	WO	WO	0
2	PR	PR	1
2	PR	PR	1

## Example2- Date-time function

Select the **GetHour()** function from the Date-time function.

Then select the field- Work Hrs within shift-HHMM.

This calculated field when placed in Report will get the value in hours from value in HHMM.

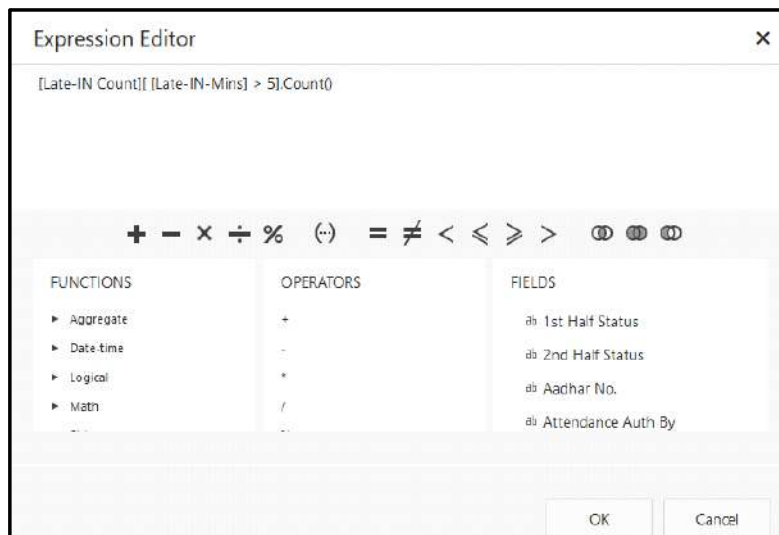

<user> ID	1st Half Status	2nd Half Status	Work Hrs Within Shift-HH:MM	calculatedField2	calculatedField1
1	PR	PR	08:00	8	1
1	PR	PR	09:00	9	1
1	WO	WO	00:00	0	0
2	PR	PR	09:00	9	1
2	PR	PR	09:00	9	1

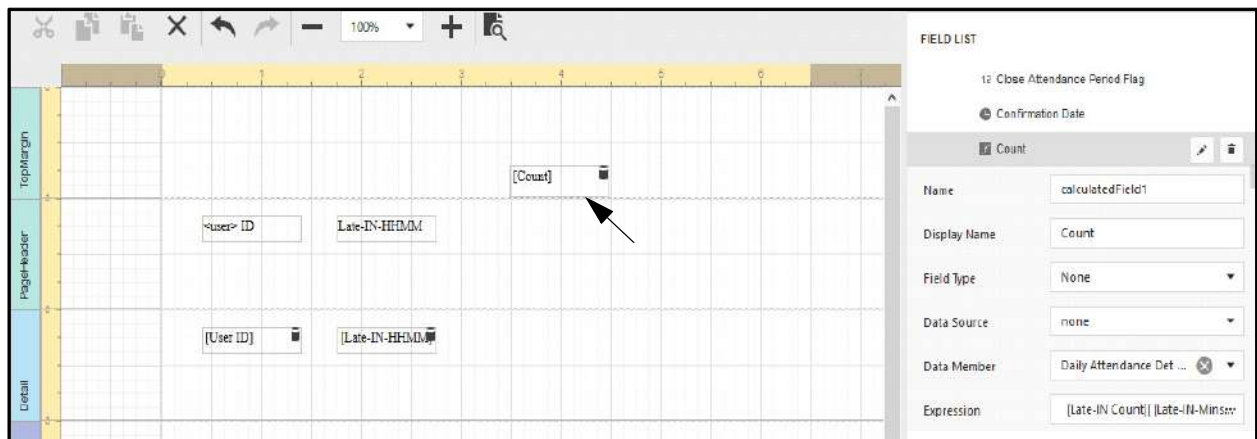

### Example3- Aggregate function- Count

The syntax for Aggregate function is **[Collection] [Condition].Function([Field])**. Count Aggregate function does not require field values to count records so leave round brackets empty.

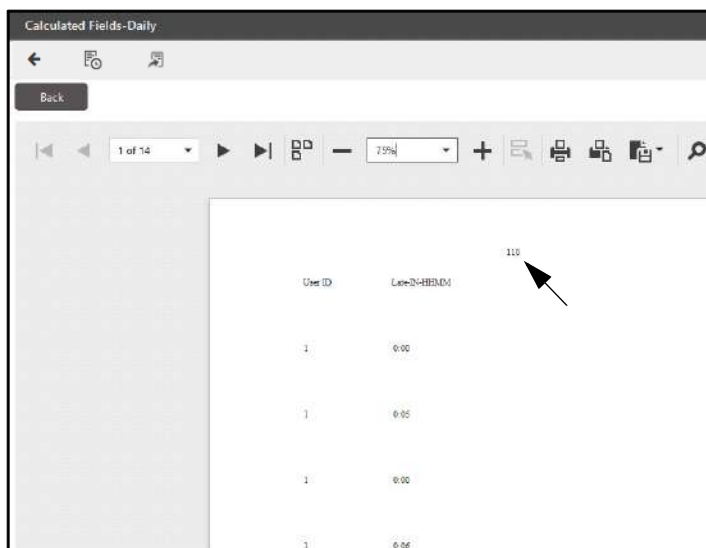

Select the Aggregate function **[Count()]**. Then specify Collection as **Late- IN Count**. And condition (optional) as **Late- IN Mins >5**. It returns number of entries in collection based on specified condition.

Here If Late-IN Mins is greater than 5 then Late-IN count will be displayed.

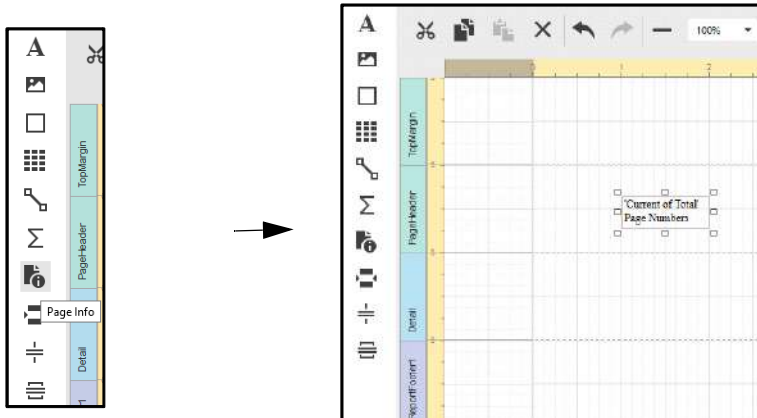

In actual report the calculated field will be displayed as below.

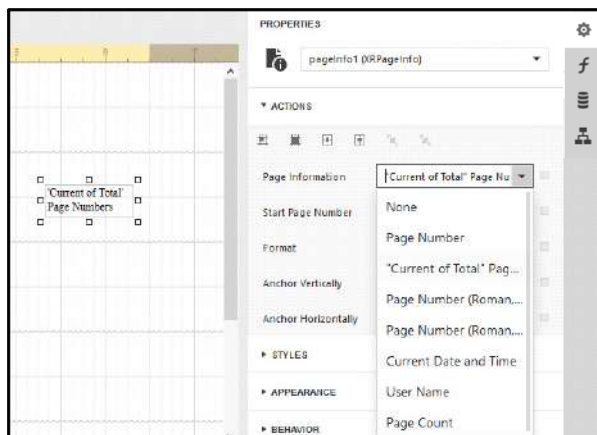

## Adding Page Numbers and System information to Report

To add page numbers or system information to a report, drag and drop **Page Info**  from the Control Toolbox to the Page Header band as displayed below.

### 1. For Page Number

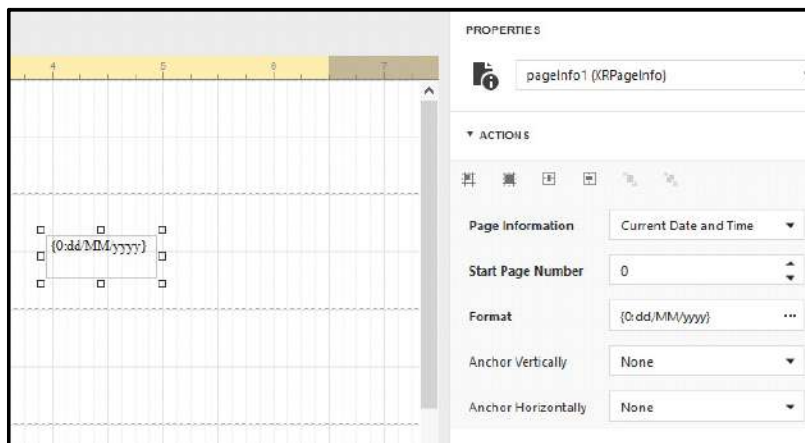

a. Under Properties, click the Action collapsible panel. Select whether to display only the page number (Latin or Roman - uppercase or lowercase), or the current page number with total pages.

b. To format the control's text, specify the required format (for example: Page {0} of {1}). You can also specify the starting page number, and the running band (for example: this option is available when there are groups in a report, and it is required to apply independent page numbering for them).

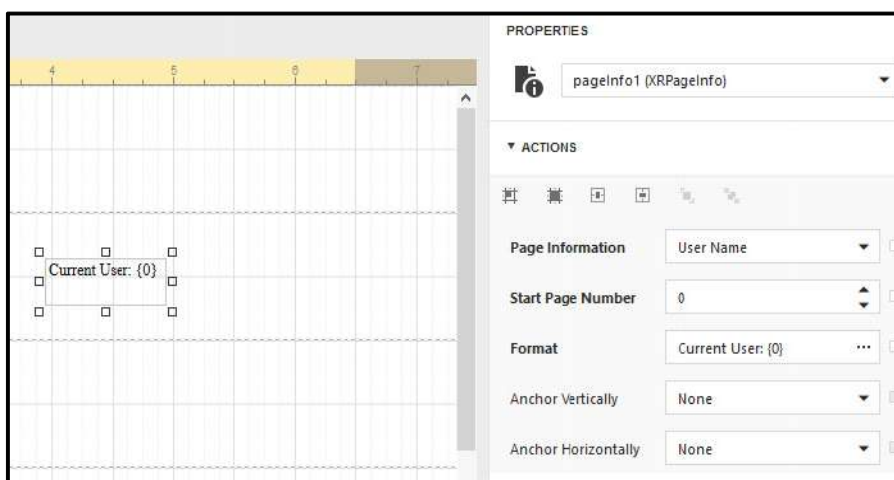

### 2. For Date and Time

a. Under Properties, click the Action collapsible panel. Select Page Information as **Current Date and Time** to display the date and time. Select the required format eg: dd/MM/yyyy Eg: date-time can be used to mention datetime of report generation.

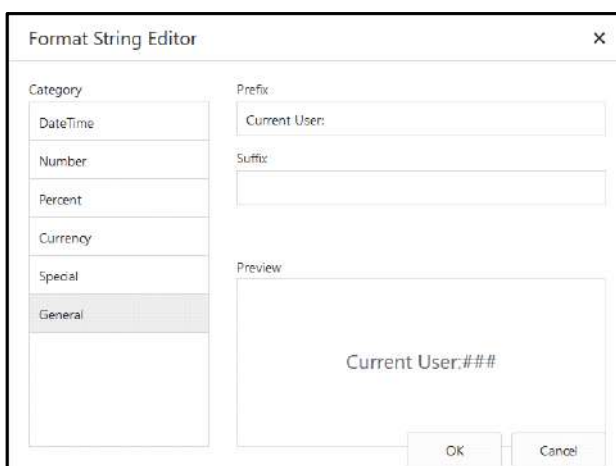

### 3. For User Name

a. Under Properties, click the Actions collapsible panel. Select Page Information as **User Name** to display the name of current user. for example: UserName can be used to mention logged in username. Specify the required format by selecting it from Format (for example: Current User: {0}).

The Format String Editor enables to set Prefix and Suffix as displayed below.

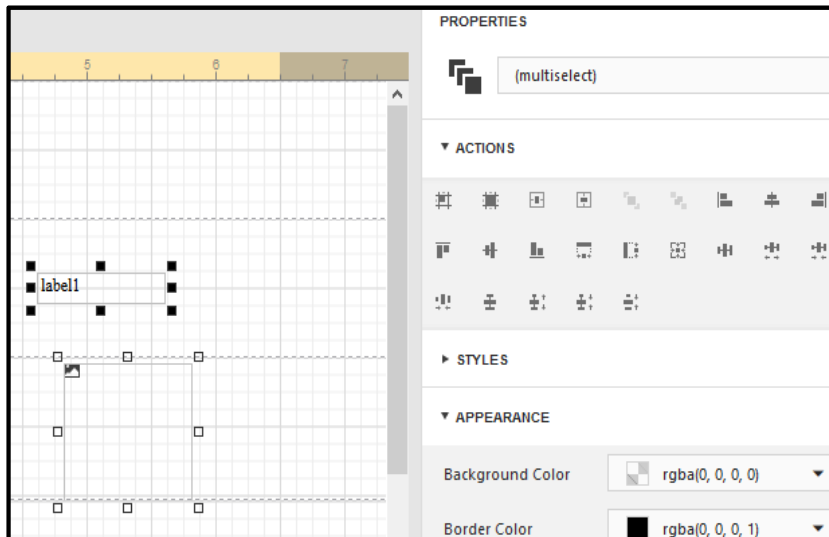

If nothing is specified; then only User Name will be displayed

## Controls Positioning

When a control is selected then its related Actions will be activated.

When multiple controls are selected by pressing CTRL and selecting the controls, then Actions related to both the controls are activated as shown for Custom Field and Insert Image controls.

By pressing **Align to Grid**; the control will get aligned to the nearest grid cell. You can select **Center Horizontally** for moving the control in the horizontal center of the report or **Center Vertically** to move the control in the vertical center of the report.

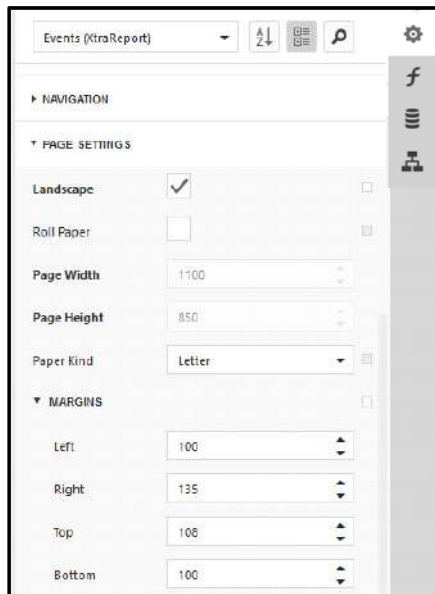

## Page Setting

In the report Designer, you can change page layout settings before you print a report.

To specify the report's page settings, under **Properties**, from the Report Controls drop-down list, select the report. Click the **Page Settings** collapsible panel and adjust the required page settings.

To create your own paper size, set the Paper Kind property to Custom, and then specify the Page Width and Page Height properties.

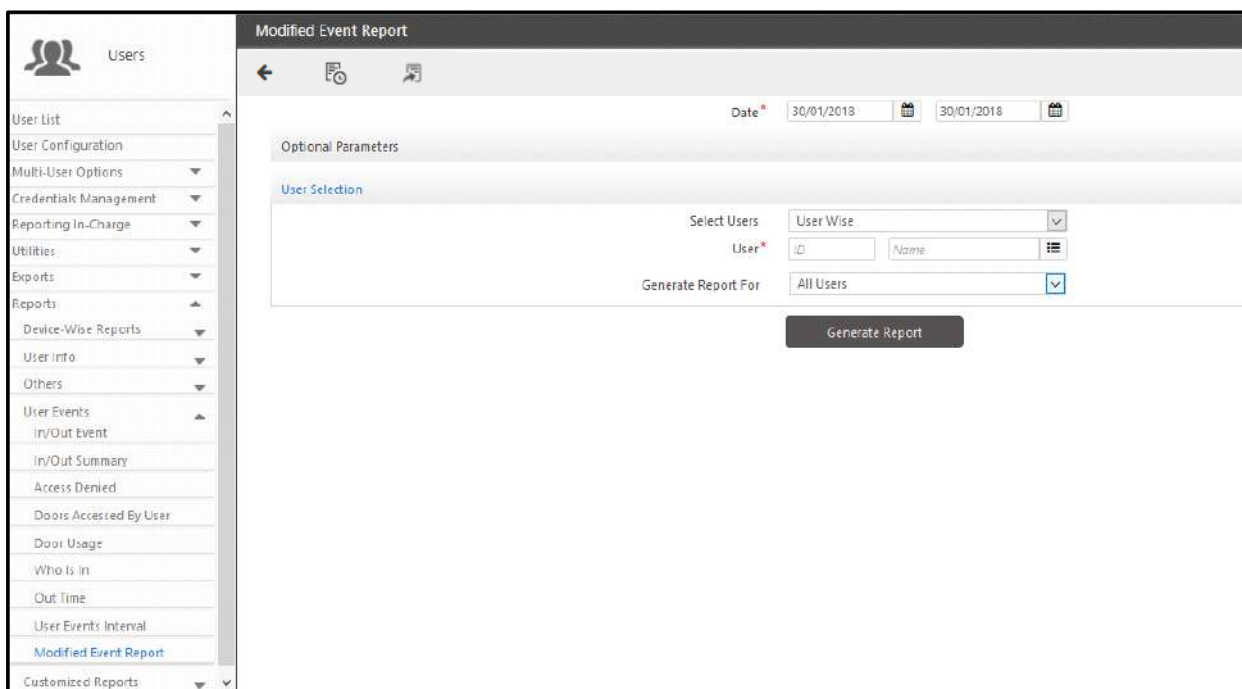

When you enable Landscape then page orientation will be landscape or else it will be portrait.

When you enable Roll Paper then document will be printed on a roll of paper, that is, as a single uninterrupted page.

# Customized Report Page

The Customized Report Page is the user created report as designed from Report builder module. In the report page user can specify the conditions in filter while generating reports.

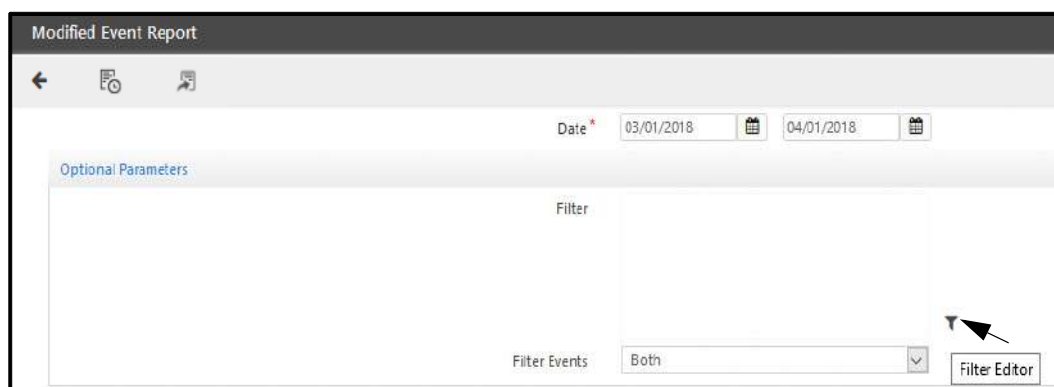

## Example: Events Report Template placed in User module

The screenshot shows the 'Modified Event Report' page within the 'Users' module. On the left is a sidebar menu with options like 'User List', 'User Configuration', 'Multi-User Options', 'Credentials Management', 'Reporting In-Charge', 'Utilities', 'Exports', 'Reports', 'Device-Wise Reports', 'User Info', 'Others', 'User Events', 'In/Out Event', 'In/Out Summary', 'Access Denied', 'Doors Accessed By User', 'Door Usage', 'Who Is In', 'Out Time', 'User Events Interval', 'Modified Event Report', and 'Customized Reports'. The main area is titled 'Modified Event Report' and contains a 'Date' range selector (30/01/2018 to 30/01/2018), an 'Optional Parameters' section with a 'User Selection' sub-section, and a 'Generate Report' button. The 'User Selection' section includes a 'Select Users' dropdown (set to 'User Wise'), a 'User' field with a search icon, a 'Name' field, and a 'Generate Report For' dropdown (set to 'All Users').

You can click on **Redirect To Designer Page**  button to switch back to report Designer for modifying the report design.

Click on **Optional Parameters** panel. In this you can design your own filter to be applied for generating the report.

The screenshot shows the 'Optional Parameters' panel in the 'Modified Event Report' page. It features a 'Date' range selector (03/01/2018 to 04/01/2018), a 'Filter' section, and a 'Filter Events' dropdown (set to 'Both'). A 'Filter Editor' button is located at the bottom right of the panel, with a mouse cursor pointing to it.

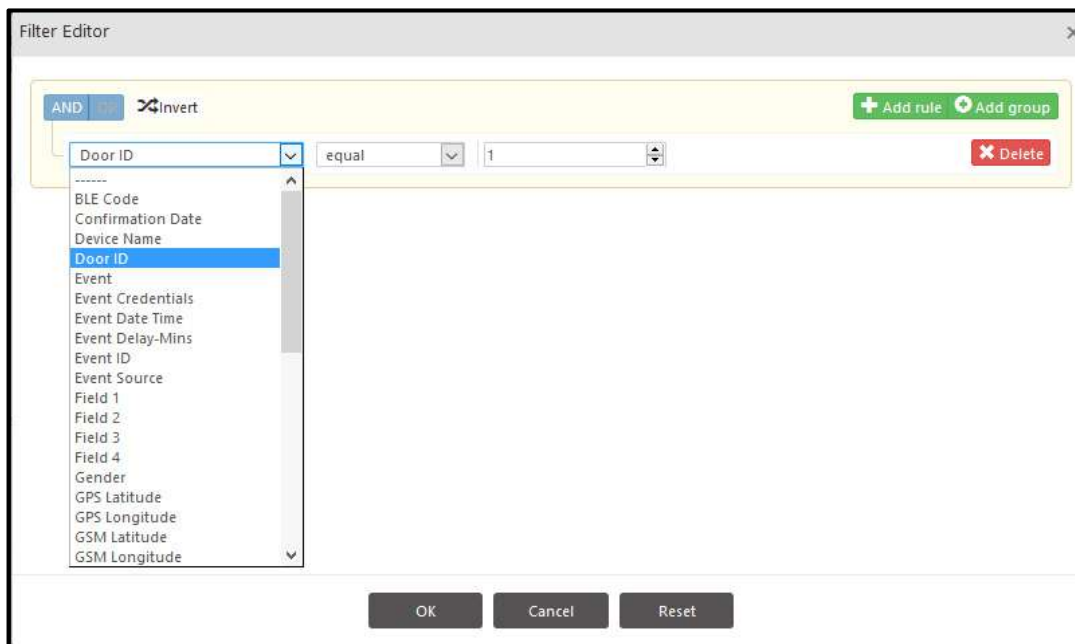

Click **Filter Editor**. The Filter Editor window appears.

The Invalid characters for filter editor controls are ~ # % ^ \* = { } | \ ; " ' < > ?

The **Invert** option changes the group from **AND** to **OR** and vice versa. It also changes values of function from **not equal** to **equal** and vice versa. Select the logical group.

Now click the drop-down list and select the field for defining the rule/condition. for example: Door ID is set equal to 1.

Then click **Add rule** to define another rule/condition.

The Filter Editor interface shows a list of rules. At the top, there are buttons for 'AND', 'OR', and 'Invert'. Below these, there are two rules defined:

- Rule 1: Door ID (dropdown) equal (dropdown) 1 (text input). A red 'Delete' button is next to it.
- Rule 2: Event Date Time (dropdown) less or equal (dropdown) 15/01/2018 18:30 (text input). A red 'Delete' button is next to it.

At the top right, there are buttons for '+ Add rule' and '+ Add group'.

Now when Rule1 AND Rule2 are true, that is, when both the conditions are satisfied then report will be generated based on the set filter.

Click **OK**. This filter rule will be reflected in the filter expression as displayed below.

Example: Here Event Report will be generated for Door ID=1 and for the events whose generation date-time is before 15/01/2018 18:30.

The Modified Event Report interface shows the following fields and options:

- Date:** 02/01/2018 to 31/01/2018.
- Optional Parameters:**
  - Filter:** [Door ID] = 1 AND [Event Date Time] <= '15/01/2018 18:30' (indicated by an arrow).
  - Filter Events:** Both (dropdown).
- User Selection:**
  - Select Users:** All (dropdown).
  - Generate Report For:** All Users (dropdown).
- Generate Report** button.

*For Event based report, you can filter events based on Attendance Events, Access Control events or Both.*

You can select the users and click on Generate Report.

The Event Report is displayed below.

### Glossary of Terms

**2-Person Groups:** The 2-person rule feature can be used to require that two people enter valid access codes to access a secure area. This is typically used in high security areas or in areas where industrial safety is an issue.

**Absentee Rule:** This rule sets the maximum number of days for non-use of an ID. On expiration (no ID usage - for the maximum number of days set) the User will be automatically disabled or deleted.

**Access Groups:** Access Group can be defined as group of users having similar roles and need equal access privileges throughout the day. The access may be restricted to certain times by the use of a time profile.

**Access Zones:** ACCESS ZONE can be defined as an area with well defined boundaries and access to this area can be controlled using single or multiple doors.

**Additional Security:** In order to keep Additional level of security check other than Facility code and card number check, smart cards can be written with additional security code that takes security to the next higher level.

**Anti-Pass-Back (APB):** The Anti Pass Back or APB feature is used to require users to pass through an entry reader followed by passing through an exit reader before their ID will be accepted a second time at another designated entry reader. Hard APB restricts the entry/exit of a person in case of an APB violation while Soft APB does not restrict the person from re-entering/leaving on an APB Violation but reports the same and maintains a log.

**Anti-Tamper:** A means of detecting unauthorized removal of covers from security equipment.

**AWG:** American Wire Gauge, denotes the size of wire conductors used in a system.

**Badge:** To use an access card at a reader to gain access to secure areas.

**Blocked User:** Blocked Users are users whose credentials have been temporarily blocked due to inactivity, as defined in the Absentee Rule.

**Dead Man Timer:** This condition allows the system to track the safety and security of a user while a specific task is being performed, by requiring the user to badge his card within the pre-defined dead man time period.

**Debounce Time:** It defines the minimum time an input interface must be in a given state i.e. up or down, before being reported.

**Degraded Mode:** Degraded mode allows a valid user to access the facility even if the door controller is not communicating with the master.

**DND Zones:** DND feature allows the user to declare that a particular zone is not to be accessed by other users for a specific period of time thereby ensuring that the users inside the zone are not disturbed by others.

**Door Force Open:** A door forced open condition results from a state wherein the door is sensed to be in an open state without an associated valid credential transaction or an associated REX signal.

**Door Sense:** Contact switch activated whenever a door is opened. This switch monitors the door status (open or closed).

**Door Relay:** This relay is used to control the locking and unlocking functions of door hardware in an access control system.

**Duress detection:** Duress detection enables the card holder to trigger an alarm or output device in the event of threats or being forced to grant access to an unauthorized person. The Duress Digit is added at the end of a User's normal Code.

**Electric Door Strike:** An electric door locking device that unlocks the door when electrical power is applied to it and is thus a fail secure locking device.

**Electromagnetic Lock (EM Lock):** An electro-magnet must be powered at all times to keep the door locked. It is a fail safe locking device that will automatically unlock if power is removed.

**Enrollment:** It is defined as the process where in the controller is accepting and storing the user credential inputs against that particular user in any of the modes available viz. Fingerprint, Card, Fingerprint + Card, Smartcard.

**Facility Code:** Facility code is unique 8 or 16 bits of every HID Prox card number specific to a site and is encoded in to the card by the manufacturer.

**First-In Users:** First in users are users defined in the system whose card or fingerprint is used to unlock the Access to a particular zone.

**Form C Relay:** A type of relay which has contacts including a common, a normally open and a normally closed.

**Functional Groups:** Functional Group can be defined as cluster of individuals formed to organize them in hierarchical manner and their roles.

**Guard Tour:** A guard tour is defined as a series of checkpoints where the guard has to badge his credential within a given amount of time.

**Home Zone:** Home zone is a pre-defined valid access Zone assigned to the user during working and break hours. In other words it can be defined as the assigned work place of the user/employee. User is allowed to access Home zone during working and break hours without checking the access levels and the event is recorded.

**Inter Digit Wait Timer:** It is the time period between two digits for which the system waits before considering the user input to be complete.

**Mantrap:** Mantrap, also known as security interlock system provides safety, security and environmental control between two or more rooms by ensuring that opening any door causes all other doors to lock until the opened door returns to the closed position.

**Multi Access Wait Timer:** Specifies the period within which user needs to present the next credential when Zone access modes are defined for more than one credentials to be used to grant access.

**Occupancy Control:** Occupancy Control is a feature that monitors and controls the number of users permitted within a secured area or controlled zone. Occupancy controls require entry and exit readers on the controlled area.

**Pulse Time:** It is the time for which the relay will be energized for a valid credential or input.

**REX:** REX means Request-To-Exit. A REX device can be used to mask an alarmed Door for authorized exit and to unlock magnetic locks for exit. REX devices can be push-button or motion sensors. A REX Push-button can be installed at a receptionist's desk to manually grant access at an intercom controlled visitor's entry door.

**Software Override:** The override function allows user to change the current status of a system temporarily from the Software application.

**Supervised Inputs:** Passive, non-current supplying inputs capable of 4 state monitoring with end of line resistors are supervised inputs.

**Time Zones:** Time Zones are used to manage the use of IDs and the scheduling of automatic events. Time Zones are made up of a start time, an end time, and a set of valid days.

**Use Count Control:** Use count control sets a maximum number of times an authorized user can use their credential in order to enter/exit a controlled area after which the credential is blocked.

**Visit Zone:** Visit zone like the Home Zone is again another predefined valid access zone assigned to the user. Here again the user is allowed to access visit zone during working and break hours without checking the access levels and the event should be recorded.

**Visitor Escort Rule:** This rule requires all Visitors to be accompanied by an escort and the credential of the visitor has to be followed by the credential of the Escort within the stipulated time period.

**Wiegand:** A communication protocol widely accepted as an industry standard in the manufacturing of access control equipment. Wiegand data is typically the protocol used between the reader and the host controller.

**Zone Access Mode:** Zone Access Mode defines the type and number of credentials required to identify and validate a user. Once defined it is assigned to access zones.

# GDPR Reflections

General Data Protection Regulation basically ensures security for the users personal data. If you desire implicating with GDPR norms, select the **Personal Data Protection** checkbox in Admin > System Configuration > Global Policy > Basic. To know more refer [“General Data Protection Regulation”](#).

Enabling GDPR will result in data masking and encryption. Set of defined fields revealing users personal data from the respective modules will be considered for masking on the server end, at the same time this data will be encrypted in the database.

The general fields considered for masking and encryption irrespective of the modules are tabulated below:

Profile Photo	Passport Expiry	UAN No	Blood Group	Medical History
Date of Birth	PAN	Voter Id	Height	Marital Status
Driving License No.	Aadhar No	Visa	Weight	Father / Spouse Name
Driving License Expiry	ESI No.	Visa Expiry	Qualification	Official - Mobile, Phone, Email
Passport No.	PF No.	Gender	Experience	Personal - Mobile, Phone , Email
Local - Address, Street, City - Pincode, State, Country	Permanent - Address, Street, City - Pincode, State, Country	PIN	Document File	IMEI number
Mobile Identification Number	Custom Fields	Nationality	Cards (Access cards and Enrolled Cards)	CardCsv (Access cards and Enrolled Cards)
Address Proof	ID Proof 1 ID Proof 2	Signature	Service Tax No.	License No.

Further for detailed reflections, refer to the respective links of the modules as mentioned below:

- [“User Module”](#)
- [“Contract Worker Management”](#)
- [“Time and Attendance”](#)
- [“Visitor Management Module”](#)

*Masking will not be applicable for modules other than the above mentioned modules, only relevant data will be encrypted.*

Depending on the roles and rights provided to the respective users in Admin> System Accounts > Roles And Rights Configuration, the user data will be considered for masking.

- For all user defined System Account Users or system defined System Engineer/Operator having the roles and rights as **View**, the data will be displayed in masked form.

- For all user defined System Account Users or system defined System Engineer/Operator having the roles and rights as **View**, **Edit** and **Add**, the data will be displayed in unmasked form. These users can edit data for the desired module as existing.

For the Visitor Management Module, you need to make sure the rights for relevant pages are provided. Refer to "[Visitor Management Module](#)" for details.

To know more about Roles and Rights, refer "[Roles and Rights Configuration](#)"

- Make sure while assigning rights for the respective module, provide **View** as well as **Edit** / **Add** right to the parent entity or else you will not be able to edit any field of the child entity. Despite providing necessary rights, the data displayed will be in masked form.

For example: If you have provided all the rights for **Invite User** page (child entity) and assigned only **View** right to the **User Configuration** page (parent entity) then you will not be able to edit any field in the **Invite User** page and data will be displayed in masked form.

# Features Not Supported in Panel SDK1

When Panel Doors are added to a Panel200 (Server Mode) with SDK1, the following will not be supported:

Sr. No	Feature	Whether supported in SDK1	Remarks
1	First IN User Rule (Configurable via Panel)	Yes	99 Users per First IN Group can be configured.
2	Elevator Floor Group (Configurable via Panel)	Yes	64 Floors per Elevator Floor Group can be configured.
3	Temporary Addition of Unknown User (Configurable via Panel and Panel Door)	No	
4	Face Mask Compulsion Alarm (Configurable via Panel and Panel Door)	No	
5	Bluetooth Range in Internal/External Readers (Configurable via Panel Door)	Yes	Custom option for Bluetooth Range is not supported.
6	Allowed/Denied Acknowledgment Display Duration (ms) (Configurable via Panel and Panel Door)	Yes	Display Duration range 500-3000 ms is supported.
7	Allowed/Denied Acknowledgment LED-Buzzer Duration (Configurable via Panel and Panel Door)	Yes	LED Buzzer Duration options — Long, Medium and Short are supported.
8	Pulse Time (sec) (Configurable via Panel Door)	Yes	Pulse Time (sec) range 1-65535 is supported.
9	Shift Configuration*	Yes	Maximum 999 Shifts can be configured.
10	OSDP Parameters	No	
11	Duplicate Access Time Interval (Sec)	No	

*You can add ARGO FACE as Panel Door with Panel SDK1, but the door will not be active. Hence all related features of ARGO FACE will not be functional.*

*\* Shift Schedule with Shift ID (as configured in Shift Configuration) more than 999 is created and then assigned to users, then these shifts will not be assigned to users as SDK1 supports only 999 shifts.*

# Supported OSDP Commands and Responses

---

## Terminologies Used

Abbreviations	Description
PD	Peripheral Devices
CP	Control Panel
ACU	Access Control Unit
APDU	Application Protocol Data Unit
SCS	Secure Channel Session
SPE	Secure PIN Entry
AES	Advanced Encryption Standard
CBC	Cypher Block Chaining
cUID	Client's Unique Identifier
ICV	Initial Chaining Vector
MK	Master Key
PGM	Portable Grey Map
SCBK	Secure Channel Base Key
MAC	Message Authentication Code
S-ENC	Session Key for ensuring data confidentiality (message encryption)
S-MAC1	Session Key for Message Authentication, key 1
S-MAC2	Session Key for Message Authentication, key 2
C-MAC	Command MAC (for packets from ACU to PD)
R-MAC	Reply MAC (for packets from PD to ACU)

Given below is the list of supported [“Commands”](#) and [“Responses”](#).

## Commands

- [“Poll \(osdp\\_POLL\)”](#)
- [“ID Report Request \(osdp\\_ID\)”](#)
- [“Peripheral Device Capabilities Request \(osdp\\_CAP\)”](#)
- [“Local Status Report Request \(osdp\\_LSTAT\)”](#)
- [“Reader LED Control Command \(osdp\\_LED\)”](#)
- [“Reader Buzzer Control Command \(osdp\\_BUZ\)”](#)
- [“Communication Configuration Command \(osdp\\_COMSET\)”](#)
- [“Encryption Key Set Command \(osdp\\_KEYSET\)”](#)
- [“Challenge and Secure Session Initialization Request \(osdp\\_CHLNG\)”](#)
- [“Server's Random Number and Server Cryptogram \(osdp\\_SCRIPT\)”](#)

## Poll (osdp\_POLL)

This command serves as a general inquiry. The PD may return any reply that is marked as a possible "poll response". Normally, the PD will return any unreported input data or status change information as a poll response.

Packet Format Field	Code	Name
CMND	0x60	osdp_POLL
DATA	Omitted	

## ID Report Request (osdp\_ID)

This command requests the return of the PD ID Report. The id request code parameter may request the extended form of the PD ID block.

Packet Format Field	Code	Name
CMND	0x61	osdp_ID
DATA	0x00	Send Standard PD ID Block

For response refer to ["Device Identification Report \(osdp\\_PDID\)"](#).

## Peripheral Device Capabilities Request (osdp\_CAP)

This command requests the PD to return a list of its functional capabilities, such as the type and number of input points, outputs points, reader ports, etc.

Packet Format Field	Code	Name
CMND	0x62	osdp_CAP
DATA	0x00	Send Standard Reply

For response refer to ["Device Capabilities Report \(osdp\\_PDCAP\)"](#)

## Local Status Report Request (osdp\_LSTAT)

This command instructs the PD to reply with a local status report.

Packet Format Field	Code	Name
CMND	0x64	osdp_LSTAT
DATA	Omitted	

For response refer to ["Local Status Report \(osdp\\_LSTATR\)"](#).

## Reader LED Control Command (osdp\_LED)

This command controls the LEDs associated with one or more readers.

Once the temporary command's timer expires the LED will revert to the last permanent state set.

The permanent command is volatile (does not transcend power cycles).

The LED will flash, alternating between the color specified for ON and color specified for OFF at the rate specified by the corresponding timers. Setting both color codes to the same value will produce a steady (non-flashing) output.

The 16-bit timer applies to the temporary LED commands only.

The LED Control Command message packet may contain multiple 14-byte records. The PD should use the total message length to determine the number of records present. The number of records should not exceed the number of LEDs as reported in ["Function Code 4 – Reader LED Control"](#); however the upper limit should not exceed the receive buffer size of the PD as reported in ["Function Code 10 – Receive BufferSize"](#).

Records containing an invalid Reader/LED number will result in a 0x09 error reply.

If the ACU sets a Temporary Setting and tries to establish another Temporary Setting, then a new Temporary Command should override a currently active temporary command.

The ON Time OFF Time values cannot both be set to zero.

Packet Format Field	Code	Name	Meaning
CMND	0x69	osdp_LED	
DATA 14 bytes repeated 1 or more times.	0x00 = First Reader 0x01 = Second Reader etc.	Reader Number	
	0x00 = first LED 0x01 = second LED etc.	LED Number	
	<b>Temporary Settings</b>		
	Refer to <a href="#">"Temporary Control Code Values"</a>	Control Code	The mode to enter temporarily
	0x00 – 0xFF	ON time	An 8 bit ON duration of the flash, in units of 100 ms  A zero value means no duration
	0x00 – 0xFF	OFF time	An 8 bit OFF duration of the flash, in units of 100 ms  A zero value means no duration
	Refer to <a href="#">"Color Values"</a>	ON color	The color to set during the ON time

Packet Format Field	Code	Name	Meaning
DATA 14 bytes repeated 1 or more times.	Refer to “Color Values”	OFF color	The color to set during the OFF time
	Refer to details mentioned under “Reader LED Control Command (osdp_LED)”	Timer (LSB)	A 16 bit timer value, in units of 100 ms A zero value means “forever”
		Timer (MSB)	
	Permanent Settings		
	Refer to “Permanent Control Code Values”	Control Code	The mode to return to after the timer expires,
	0x00 – 0xFF	ON time	An 8 bit ON duration of the flash, in units of 100 ms  A zero value means no duration
	0x00 – 0xFF	OFF time	An 8 bit OFF duration of the flash, in units of 100 ms  A zero value means no duration
	Refer to “Color Values”	ON color	The color to set during the ON time.
	Refer to “Color Values”	OFF color	The color to set during the OFF time

### Temporary Control Code Values

Temporary Control Code Value	Meaning
0x00	NOP – do not alter this LED's temporary settings. The remaining values of the temporary settings record are ignored.
0x01	Cancel any temporary operation and display this LED's permanent state immediately
0x02	Set the temporary state as given and start timer immediately.

### Permanent Control Code Values

Permanent Control Code Value	Meaning
0x00	NOP – do not alter this LED's permanent settings. The remaining values of the temporary settings record are ignored.
0x01	Set the permanent state as given.

## Color Values

Color Value	Meaning
0	Black (off/unlit)
1	Red
2	Green
3	Amber
4	Blue
5	Magenta
6	Cyan
7	White
The reply can be any of the following: <ul style="list-style-type: none"><li>osdp_ACK as described in <a href="#">“Positive Acknowledgment (osdp_ACK)”</a></li><li>osdp_NAK as described in <a href="#">“Negative Acknowledgment (osdp_NAK)”</a></li></ul>	

Examples:

To cause the first LED on the first Reader to flash red (100 ms) / black (200 ms) for 3 seconds, then resume its current display mode:

0, 0, 2, 1, 2, 1, 0, 30, 0, 0, 0, 0, 0, 0

To set the reader's second LED to display a steady green output

0, 1, 1, 0, 0, 0, 0, 0, 0, 1, 1, 1, 2, 2

## Reader Buzzer Control Command (osdp\_BUZ)

This command defines commands to a single, monotone audible annunciator (beeper or buzzer) that may be associated with a reader.

The permanent command is volatile (does not transcend power cycles).

A record that contains an invalid Reader Number will result in a 0x09 error reply.

Packet Format Field	Code	Name	Meaning
CMND	0x6A	osdp_BUZ	

Packet Format Field	Code	Name	Meaning
DATA 5 bytes repeated 1 or more times.	0x00 = First Reader 0x01 = Second Reader etc.	Reader Number	
	0x00 = no tone (off) – use of this value is deprecated. 0x01 = off 0x02 = default tone 0x03-0xff = Reserved for future use	Tone Code	Requested Tone State
	0x00 – 0xFF	On Time	The ON duration of the sound, in units of 100 ms. Must be nonzero unless the tone code is 0x01 (off.)
	0x00 – 0xFF	OFF Time	The OFF duration of the sound, in units of 100 ms
	0x00 – 0xFF	Count	The number of times to repeat the ON/OFF cycle. 0 = tone continues until another tone command is received

## Communication Configuration Command (osdp\_COMSET)

This command sets the PD's communication parameters. The settings will take effect AFTER the PD has completed its response to this command. It is recommended that communication parameters set by this command (address, baud rate) are non-volatile.

If the PD is unable to comply, it will return the values that it will use after the completion of this reply.

Packet Format Field	Code	Name	Meaning
CMND	0x6E	osdp_COMSET	
DATA 5 bytes	0x00 – 0x7E	Address	Unit ID to which this PD will respond after the change takes effect.
	0x00 – 0xFF	Baud Rate LSB	The baud rate is expressed as a 32-bit integer holding the actual value of the baud rate to use, such as 9600, 38400, etc.
	0x00 – 0xFF	Baud Rate	
	0x00 – 0xFF	Baud Rate	
	0x00 – 0xFF	Baud Rate MSB	

For response, refer to [“Communication Configuration Report \(osdp\\_COM\)”](#).

## Encryption Key Set Command (osdp\_KEYSET)

This command transfers an encryption key from the ACU to a PD.

Byte	Name	Meaning	Value
0	Key_Type	Encryption method to use with this key	0x01 – Secure Channel Base Key

Byte	Name	Meaning	Value
10	Length	Number of bytes of key data	(Key Length in bits + 7) / 8
2- (2+Length)	Data	Key data	Any
Reply: osdp_ACK, osdp_NAK			

**Note:**

The following notes apply to Key\_Type = 0x01:

The Length indicates the number of bytes containing key data in the array Data[]. It is computed as the integer value of the quantity of Key Length in bits plus 7 divided by 8. For example, the Length shall be 16, and the Data[] array shall contain the 128-bit Secure Channel base key (SCBK).

This command shall be sent by the ACU and accepted by the PD only while the connection is “secure”. The “secure” connection in this context shall mean that either:

- a) the current connection is encrypted, and the session keys are based on the current SCBK (or SCBK-D), or
- b) that the connection is inherently secure via physical security, such as ACU/PD are connected via simple short cable. The “inherently secure” connection shall be asserted to the ACU and to the PD by setting the devices into a special installation setup mode. The devices should exit the setup mode automatically after a successful completion of this osdp\_KEYSET command.

## Challenge and Secure Session Initialization Request (osdp\_CHLNG)

This command is the first in the Secure Channel Session Connection Sequence (SCS-CS). It delivers a random challenge to the PD and it requests the PD to initialize for the secure session. It's SCS connection sequence value is SCS\_11.

Byte	Name	Meaning	Value
0 -7	Random Number	Random number generated by the ACU (RND.A)	Any
Command structure: none Reply: osdp_NAK, osdp_CCrypt			

## Server's Random Number and Server Cryptogram (osdp\_SCRIPT)

This command transfers a block of data used for encryption synchronization. It's SCS connection sequence value is SCS\_12.

Byte	Name	Meaning	Value
0 - 15	Cryptogram	16-byte Server Cryptogram array	Any. Refer to the Server Cryptogram paragraph below.
Reply: osdp_NAK, osdp_RMAC_I			

## Server Cryptogram

The Server Cryptogram is computed by encrypting the concatenated RND.B[8] and RND.A[8] using key S-ENC. RND.A[8] is generated by the ACU (server) and RND.B[8] is generated by the PD (client).

ServerCryptogram = ENC( RND.B[8] || RND.A[8], S-ENC )

## Responses

- “Positive Acknowledgment (osdp\_ACK)”
- “Negative Acknowledgment (osdp\_NAK)”
- “Device Identification Report (osdp\_PDID)”
- “Device Capabilities Report (osdp\_PDCAP)”
- “Local Status Report (osdp\_LSTATR)”
- “Card Data Report, Raw Bit Array (osdp\_RAW)”
- “Keypad Data Report (osdp\_KEYPAD)”
- “Communication Configuration Report (osdp\_COM)”
- “Client’s ID and Client’s Random Number (osdp\_CCRYPT)”

### Positive Acknowledgment (osdp\_ACK)

There is no reply structure associated with this reply. Sent in response to all valid commands that do not require a specific response or will not receive an immediate response.

Packet Format Field	Code	Name	Meaning
CMND	0x40	osdp_ACK	
DATA	Omitted		

### Negative Acknowledgment (osdp\_NAK)

The optional completion code array may be omitted if none of the command records were processed either because the command had only one record, or because none of the records were processed due to invalid record sizing.

Bytes 1-N are present only for error codes that define its use. The optional completion code array may be omitted if none of the command records were processed either because the command had only one record, or because none of the records were processed due to invalid record sizing.

Packet Format Field	Code	Name	Meaning
CMND	0x41	osdp_NAK	
DATA	Refer to “Error Codes”	Error Code	Refer to “Error Codes”
	0x00 – 0xFF	Data	Error Code dependent, 1 – N

### Error Codes

Error Code Value	Meaning
0x00	No error

Error Code Value	Meaning
0x01	Message check character(s) error (bad cksum/crc)
0x02	Command length error
0x03	Unknown Command Code – Command not implemented by PD
0x04	Unexpected sequence number detected in the header
0x05	This PD does not support the security block that was received
0x06	Encrypted communication is required to process this command
0x07	BIO_TYPE not supported
0x08	BIO_FORMAT not supported
0x09	<p>Unable to process command record</p> <p>0x09 indicates that one or more command records had invalid parameters and was not processed which can be followed by an optional array, where each byte represents the completion code of the corresponding command record. A zero value indicates no error, and the value 0xFF indicates a generic error.</p>

## Device Identification Report (osdp\_PDID)

Sent in response to an osdp\_ID command. Note also that the “cUID”, used in certain Secure Channel operations, is the first 8 bytes of the PDID response.

Reply Structure: 12-byte fixed record.

Packet Format Field	Code	Name	Meaning
CMND	0x45	osdp_PDID	

Packet Format Field	Code	Name	Meaning
DATA 12 Bytes	0x00 – 0xFF	Vendor Code 1st	IEEE assigned OUI The Vendor Code is a 24-bit identifier of the manufacturer. It is recommended that each manufacturer use its IEEE assigned Organizationally Unique Identifier, the same 24 bits it uses to form the MAC addresses of its Ethernet-based products.
	0x00 – 0xFF	Vendor Code 2nd	
	0x00 – 0xFF	Vendor Code 3rd	
	0x00 – 0xFF	Model Number	Manufacturer's model number The Model field is assigned by and managed by the Vendor.
	0x00 – 0xFF	Version	Manufacturer's version of this product The Version Number field is assigned by and managed by the Vendor.
	0x00 – 0xFF	Serial Number (LSB)	4-byte serial number The 32-bit Serial Number field is assigned and managed by the Vendor.
	0x00 – 0xFF	Serial Number	
	0x00 – 0xFF	Serial Number	
	0x00 – 0xFF	Serial Number (MSB)	
	0x00 – 0xFF	Firmware Major	Firmware revision code The Firmware Revision fields are assigned and managed by the Vendor.
	0x00 – 0xFF	Firmware Minor	
	0x00 – 0xFF	Firmware Build	

## Device Capabilities Report (osdp\_PDCAP)

Sent in response to an osdp\_CAP command. The Device Capabilities report message may contain multiple records of this form (3 bytes per record). Use the total message length to determine the number of records present.

The records may be in any order. If a function code is omitted from the list, The ACU may assume that the PD has no support for that function code. A list of Function Codes and their definition, and the corresponding compliance levels is incorporated as Annex B of this Document.

Reply Structure: 3-byte element, repeated one or more times.

Packet Format Field	Code	Name	Meaning
CMND	0x46	osdp_PDCAP	
DATA 3 Bytes	0x00 – 0xFF	Function Code	Repeated once per capability. Refer to <a href="#">“Function Codes”</a> .
	0x00 – 0xFF	Compliance	
	0x00 – 0xFF	Number of	

## Function Codes

Byte	Name	Meaning	Value
0	Function Code	Function/feature code	Refer to Function Codes mentioned below.
1	Compliance	Level of compliance with above function	Refer to the compliance levels mentioned in the respective Function Codes
2	Number of	Number of objects of this type	Refer to Number of Objects in the respective Function Code.

### Function Code 1 – Contact Status Monitoring

This function indicates the ability to monitor the status of a switch using a two-wire electrical connection between the PD and the switch. The on/off position of the switch indicates the state of an external device.

The PD may simply resolve all circuit states to an open/closed status, or it may implement supervision of the monitoring circuit. A supervised circuit is able to indicate circuit fault status in addition to open/closed status.

#### **Compliance Levels:**

01 – PD monitors and reports the state of the circuit without any supervision. The PD encodes the circuit status per its default interpretation of contact state to active/inactive status.

02 – Like 01, plus: The PD accepts configuration of the encoding of the open/closed circuit status to the reported active/inactive status. (User may configure each circuit as "normally closed" or "normally open".)

03 – Like 02, plus: PD supports supervised monitoring. The operating mode for each circuit is determined by configuration settings.

04 – Like 03, plus: the PD supports custom End-Of-Line settings within the Manufacturer's guidelines.

The End-Of-Line circuit parameters are defined by the manufacturer of the PD.

**Number Of:** The number of Inputs.

### Function Code 2 – Output Control

This function provides a switched output, typically in the form of a relay. The Output has two states: active or inactive. The ACU can directly set the Output's state, or, if the PD supports timed operations, the ACU can specify a time period for the activation of the Output.

#### **Compliance Levels:**

01 – The PD is able to activate and deactivate the Output per direct command from the ACU.

02 – Like 01, plus: The PD is able to accept configuration of the Output driver to set the inactive state of the Output. The typical state of an inactive Output is the state of the Output when no power is applied to the PD and the Output device (relay) is not energized. The inverted drive setting causes the PD to energize the Output during the inactive state and de-energize the Output during the active state.

This feature allows the support of "fail-safe/fail-secure" operating modes.

03 – Like 01, plus: The PD is able to accept timed commands to the Output. A timed command specifies the state of the Output for the specified duration.

04 – Like 02 and 03 – normal/inverted drive and timed operation.

**Number Of:** The number of Outputs.

### **Function Code 3 – Card Data Format**

This capability indicates the form of the card data is presented to the Control Panel.

#### ***Compliance Levels:***

01 – the PD sends card data to the ACU as array of bits, not exceeding 1024 bits.

02 – the PD sends card data to the ACU as array of BCD characters, not exceeding 256 characters.

03 – the PD can send card data to the ACU as array of bits, or as an array of BCD characters.

**Number Of:** N/A, set to 0.

### **Function Code 4 – Reader LED Control**

This capability indicates the presence of and type of LEDs.

#### ***Compliance Levels:***

01 – the PD support on/off control only

02 – the PD supports timed commands

03 – like 02, plus bi-color LEDs

04 – like 02, plus tri-color LEDs

**Number Of:** The number of LEDs per reader.

### **Function Code 5 – Reader Audible Output**

This capability indicates the presence of and type of an Audible Annunciator (buzzer or similar tone generator).

#### ***Compliance Levels:***

01 – the PD supports on/off control only

02 – the PD supports timed commands

**Number Of:** This field is ignored. Per 6.11 there is only one audible output per PD.

### **Function Code 6 – Reader Text Output**

This capability indicates that the PD supports a text display emulating character-based display terminals.

#### ***Compliance Levels:***

00 – The PD has no text display support

01 – The PD supports 1 row of 16 characters

02 – the PD supports 2 rows of 16 characters

03 – the PD supports 4 rows of 16 characters

04 – FF Reserved for future use

80 – FF Reserved for private use

**Number Of:** Number of textual displays per reader.

### **Function Code 7 – Time Keeping**

This capability indicates that the type of date and time awareness or time keeping ability of the PD. This function has been deprecated.

#### ***Compliance Levels:***

00 – The PD does not support time/date functionality  
0x01-0xff – reserved for future use

**Number Of:** N/A, set to 0.

### **Function Code 8 – Check Character Support**

All PDs shall be able to support the checksum mode. This capability indicates if the PD is capable of supporting CRC mode.

#### ***Compliance Levels:***

00 – The PD does not support CRC-16, only checksum mode.  
01 – The PD supports the 16-bit CRC-16 mode.

**Number Of:** N/A, set to 0.

### **Function Code 9 – Communication Security**

This capability indicates the extent to which the PD supports communication security as defined in Annex D.

#### ***Compliance Levels:***

This field is a bit map of the supported encryption algorithms:  
0x01 – (Bit-0) AES128 support  
(Bits 1-7) Must be zero

**Number of:** This field is encoded to represent the key exchange capabilities:  
0x01 – (Bit-0) default AES128 key  
(Bits 1-7) Must be zero

### **Function Code 10 – Receive BufferSize**

This capability indicates the maximum size single message the PD can receive.

#### ***Compliance Levels:***

This field is the LSB of the buffer size

**Number of:** This field is the MSB of the buffer size

### **Function Code 11 – Largest Combined Message Size**

This capability indicates the maximum size multi-part message which the PD can handle.

#### ***Compliance Levels:***

This field is the LSB of the combined buffer size

**Number of:** This field is the MSB of the combined buffer size

### **Function Code 12 – Smart Card Support**

This capability indicates what kind of smartcard support is available for communicating directly with a smart card.

#### ***Compliance Levels:***

Bit 0 (mask 0x01) – PD supports transparent reader mode

Bit 1 (mask 0x02) – PD supports extended packet mode.

Either one or both modes may be supported.

### **Function Code 13 – Readers**

This capability indicates the number of credential reader devices present. Compliance levels are bit fields to be assigned as needed.

#### ***Compliance Level:***

Must be zero

**Number of:** Indicates the number of attached downstream readers.

### **Function Code 14 – Biometrics**

This capability indicates the ability of the reader to handle biometric input

#### ***Compliance Levels:***

0 – No Biometric

1 – Fingerprint, Template 1

2 – Fingerprint, Template 2

3 – Iris, Template 1

### **Function Code 15 – Secure PIN Entry support**

This capability indicates if the reader is capable of supporting Secure PIN Entry (SPE) for smart cards. Secure PIN Entry is used with ISO 7816 (Smartcards). It is assumed the osdp\_KEYPAD message will be used if the keypad is to be read by the ACU.

#### ***Compliance Levels:***

0 = does not support SPE

1 = supports SPE

### **Function Code 16 – OSDP Version**

This capability indicates the version of OSDP this PD supports.

#### ***Compliance Levels:***

0 = unspecified (also used for pre-IEC 60839-11-5 implementations)

1 = IEC 60839-11-5

2 = SIA OSDP 2.2

3-0x7F = Reserved for future use

0x80-0xFF = reserved for private use

## Local Status Report (osdp\_LSTATR)

Sent in response to an osdp\_LSTAT command or as a "poll response"

The local status report applies to conditions directly monitored by the PD. Tamper status is detected by the PD by monitoring the enclosure tamper mechanism. Power monitor status can be derived from the status of the power supply. Normally this reply is sent in response to an osdp\_POLL command if either status has changed since the last POLL..

Reply Structure: 2 status bytes.

Packet Format Field	Code	Name	Meaning
CMND	0x48	osdp_LSTATR	
DATA 2 Bytes	0x00 – normal 0x01 – tamper	Tamper Status	Status of tamper circuit
	0x00 – normal 0x01 – power failure	Power Status	Status of power

## Card Data Report, Raw Bit Array (osdp\_RAW)

Sent as a "poll response"

This reply is sent in response to an osdp\_POLL command after a card was read but the raw data was not decoded into a character array. Unreported card data is deleted in case of, or during, a communication loss.

Reply structure: 4-byte header, variable-length data.

Packet Format Field	Code	Name	Meaning
CMND	0x50	osdp_RAW	
DATA	0x00 – 0xFF	Reader Number	0=First Reader 1=Second Reader
	0x00 = not specified, raw bit array 0x01 = P/data/P (wiegand)	Format Code	Format of included data
	0x00 – 0xFF	Bit Count (LSB)	2-byte size (in bits) of the data at the end of the record
	0x00 – 0xFF	Bit Count (MSB)	
	0x00 – 0xFF	Data	8 bits of card data per data byte MSB to LSB (left justified)

## Keypad Data Report (osdp\_KEYPAD)

Sent as a "poll response"

This reply is sent in response to an osdp\_POLL if there is any data in the keypad buffer. It is applied when the keypad is in default operating mode. Unreported keypad data is deleted in case of, or during, a communication loss.

Reply Structure: 2-byte header, variable-length data.

Packet Format Field	Code	Name	Meaning
CMND	0x53	osdp_KEYPAD	
DATA	0x00 – 0xFF	Reader Number	0=First Reader 1=Second Reader
	0x00 – 0xFF	Digit Count	Number of keypad digits to follow.
	0x00 – 0xFF	Data	Keypad data represented as ASCII characters.
<p>The key encoding uses the following data representation:</p> <ul style="list-style-type: none"> <li>• Digits 0 through 9 are reported as ASCII characters 0x30 through 0x39</li> <li>• The clear/delete/'*' key is reported as ASCII DELETE, 0x7F</li> <li>• The enter/'#' key is reported as ASCII return, 0x0D</li> </ul> <p>Special/function keys are reported as upper case ASCII:</p> <ul style="list-style-type: none"> <li>• A or F1 = 0x41, B or F2 = 0x42, C or F3 = 0x43, D or F4 = 0x44</li> <li>• F1 &amp; F2 = 0x45, F2 &amp; F3 = 0x46, F3 &amp; F4 = 0x47, F1 &amp; F4 = 0x48</li> </ul>			

## Communication Configuration Report (osdp\_COM)

Sent in response to an osdp\_COMSET command. This reply returns the communication parameters the PD will use after sending this reply.

Reply Structure: 5-byte record

Packet Format Field	Code	Name	Meaning
CMND	0x54	osdp_COM	
DATA 5 Bytes	0x00 – 0x7E	Address	Unit ID for this PD to respond to
	0x00 – 0xFF	Baud Rate (LSB)	4 Byte Baud rate value
	0x00 – 0xFF	Baud Rate	
	0x00 – 0xFF	Baud Rate	
	0x00 – 0xFF	Baud Rate (MSB)	

## Client's ID and Client's Random Number (osdp\_CCrypt)

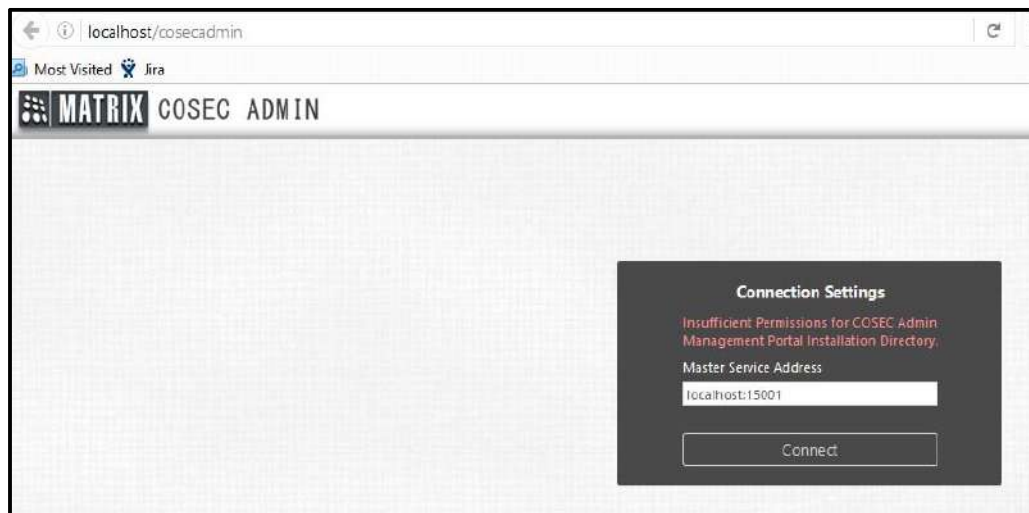

This reply sends a block of data used for encryption synchronization, sent in response to osdp\_CHLNG command. It's SCS connection sequence value is SCS\_13.

Byte	Name	Meaning	Value
0 - 7	Client ID	Client's Unique Identifier (cUID)	Any
8 -15	Random Number	PD's random number generated, (RND.B)	Any

Byte	Name	Meaning	Value
16 - 31	Cryptogram	16-byte Client Cryptogram array	Any

# Troubleshooting

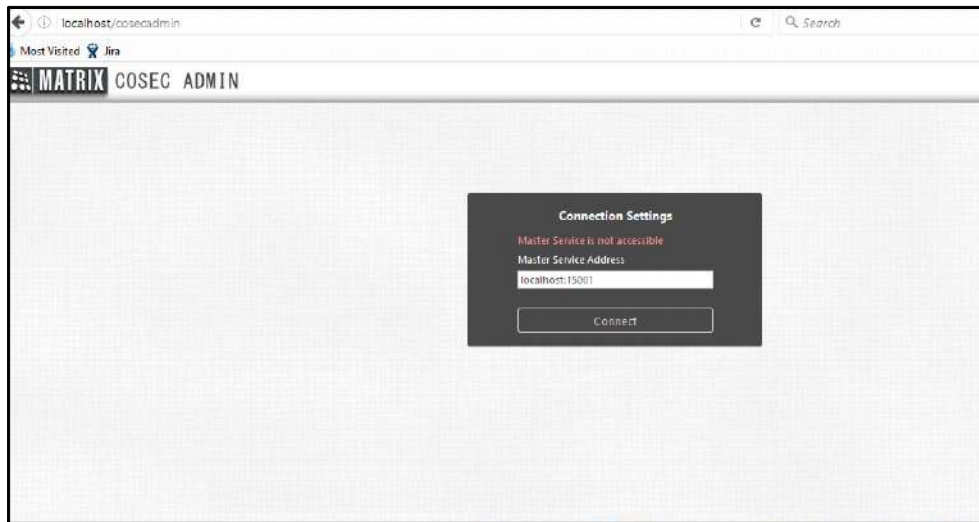

1. *When I login to Admin Portal, and permissions are insufficient to access the portal; then*

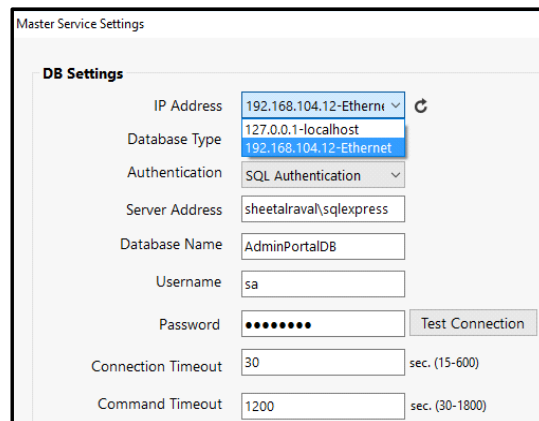

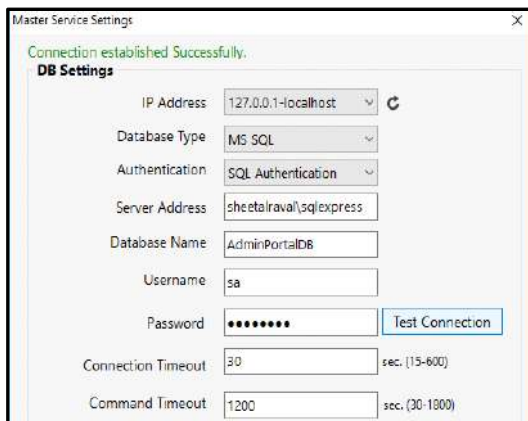

- Check the rights on COSECADMIN folder. For this go to path C:\inetpub\wwwroot. The IIS user must be given full control rights. So click Edit and enable Full control checkbox. Then apply the changes. Now you can login to Admin Portal.

## 2. *When I login to Admin Portal and Master Service is not accessible; then*

- Check the database settings. Ensure that connection of Admin Portal database is established with database server.
- Check that the IP address at which Master service is running is correctly selected. If the IP address has gone to 127.0.0.1 - Localhost; then you must manually select the IP address from the drop down list at which master service would be running.
- Then start the Master service from the service tray. Once the Admin portal database is upgraded then Master service will be started.

## 3. *When Admin Portal is running and error comes on Monitor configuration page; then*

- Ensure that Admin Portal's database and Tenant's database are different. If same database is kept, conflict in columns may occur.
- You must upgrade the existing database of tenant when new setup is installed. You can create new database of Tenant from Tenants > Database Configuration.

## 4. *When License voucher invalid/does not exist in COSEC VYOM; then*

- Check the Matrix Licensing Server URL in General Settings. Ensure that the license key and voucher is available on the specified licensing server.

- Ensure that the PC where Admin Portal is installed can access the Licensing server IP.

Enter the Matrix licensing Server URL in System Configuration > General Settings before creating a tenant.

License Voucher Activation

! License Voucher Invalid/does not exist

Tenant ^ 1 Sheetal

License Voucher ^ 7124915979208111

User Days ^ 10000

Product ^ VYOM PLATFORM

CWM: 0	

5. **When you login to COSEC Web and following error comes, then ensure that License voucher of COSEC is activated.**

6. **When Client Data is not available; then check that Client URL is available in the Web config file at path C:\inetpub\wwwroot\COSEC**

Client Data not available. Invalid URL. Please try again...

## 7. *How to configure Device Based License Verification Mode.*

Connect the Dongle to the Device (for example Panel200)

Make the tenant/company as Device Based for license verification mode. Save the settings.

**MATRIX COSEC ADMIN**

Company Configuration

- Profile
- License and Services
- Monitor Configuration
- COSEC Services
- Manage Database

**Profile**

ID: 1

Name: sheetal

Active: ☒

Time Zone: (UTC+05:30) Chennai, Kolkata, Mumbai, New Delhi

License Verification Mode: Device Based

MAC Address: [Field] [Reset]

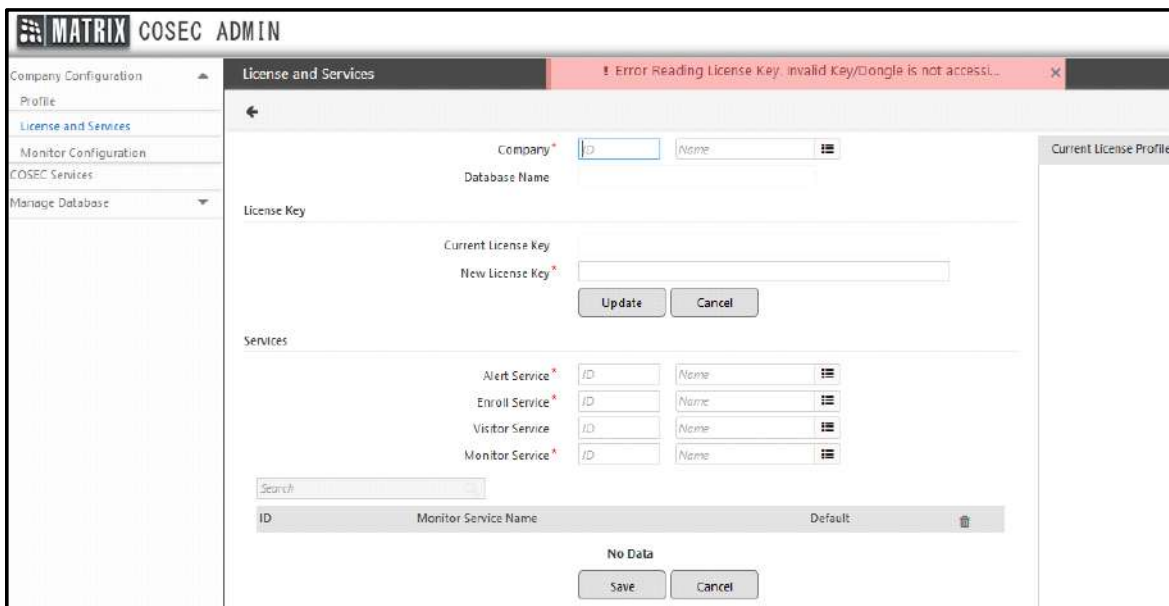

Contact Details

Address Details

Database Configuration

ID	Name	Status
1	sheetal	Active

Now check the License and Services page.

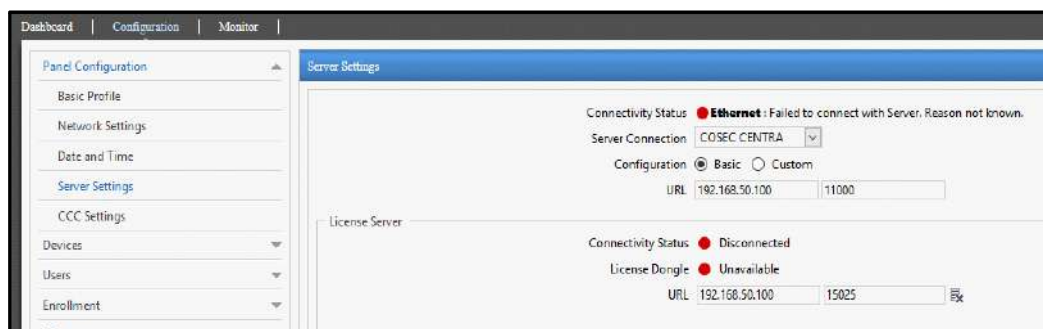

If there is Error in reading license key, then check the Device settings.

Now login to the webpage of Panel200. Ensure that Panel200 is in Server Mode. If it is in Standalone Mode, change the mode to Server Mode from Configuration > Panel Configuration> Basic Profile> Panel Mode.

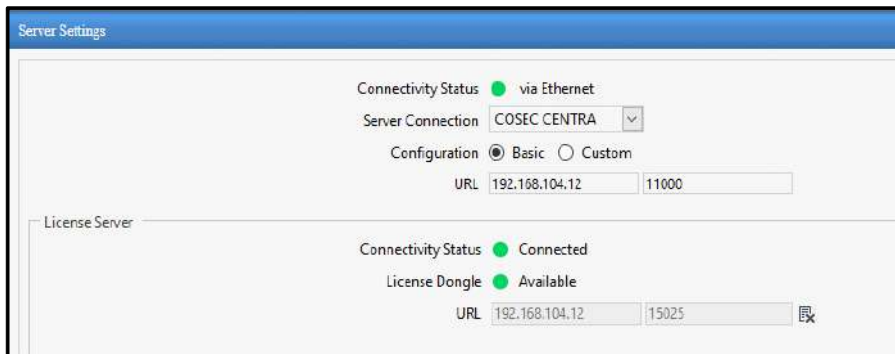

Now click Panel Configuration> Server Settings. The default settings are shown.

The URL for COSEC Centra Server is the IP Address of the computer where Monitor Service is running.

The License Server URL is the IP Address of the computer where Master Service is running.

If Monitor Service and Master Service are in the same computer then enter the same IP Address with the respective port as shown below.

**8. I have re-installed the setup; when I login to COSEC Web, license key is not found.**

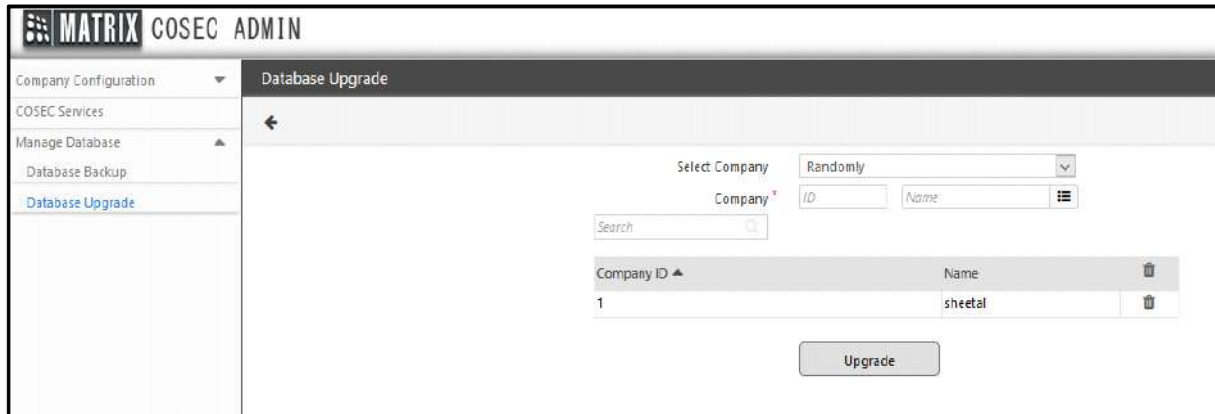

- Login to Admin Portal. Check the license verification mode in the Profile.
- If it is Server Based then make sure the dongle is connected to the USB Port of the CPU where Master Service is installed.
- If it is Device Based then make sure the dongle is connected to the USB port of Panel200/VEGA/ARGO/ARGO FACE with which it is configured or you can also Reset to use another device.

**9. When I login to COSEC Web and database is required to be upgraded.**

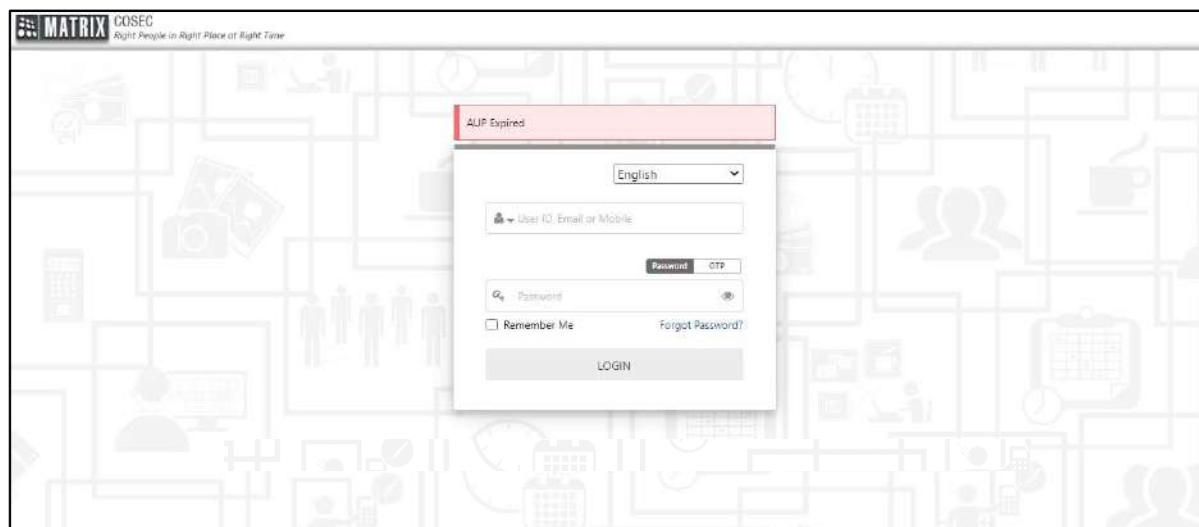

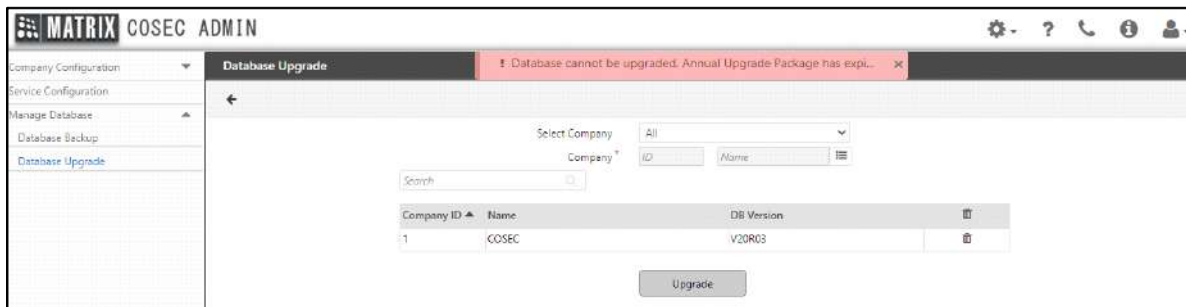

- Login to Admin Portal. Go to Manage Database> Database Upgrade.
- Select the company and click on Upgrade.
- Then click on Refresh. Once database is upgraded, status will be updated to Success. Now you can login to COSEC web.

**10. I have to change the database of COSEC Web. How can I do?**

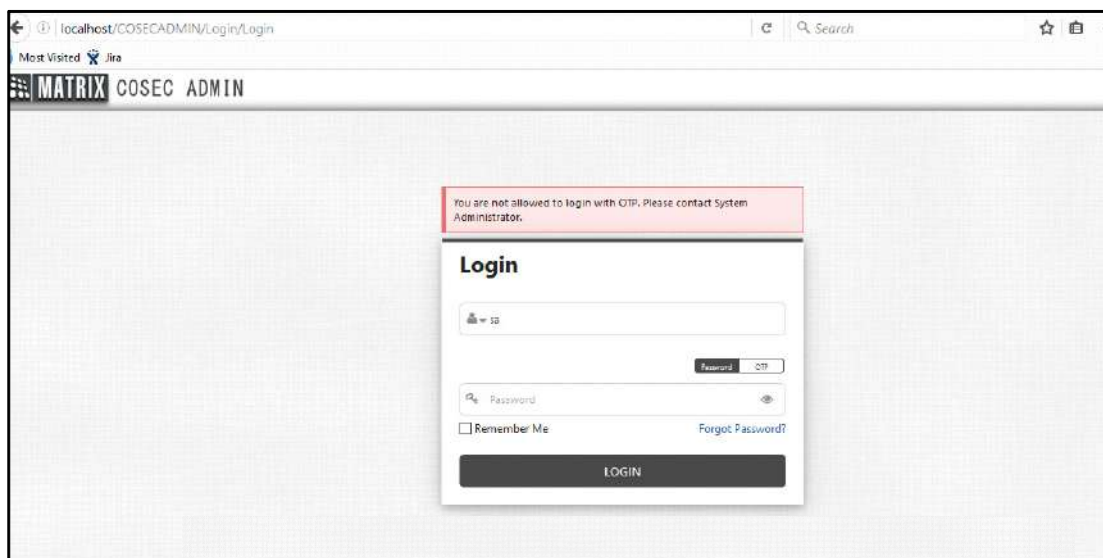

- Login to Admin Portal. Go to Profile> Database Configuration.
- You can change the type of database or different database of the current type. Then click Test Connection to test the connection with database and click Save to save the changed database.
- Now you can login to COSEC web with changed database.

**11. When I am trying to upgrade database; Annual Upgrade Package has expired and I am not able to login into COSEC. What to do?**

You have to upgrade the Annual package of License. For this contact Matrix channel partner.

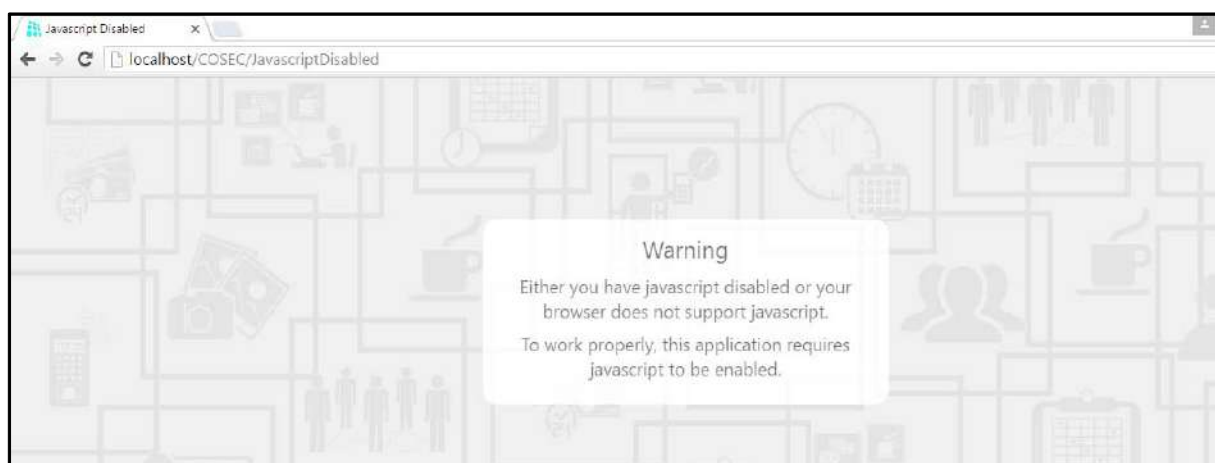

12. *I am not allowed to login into COSEC Admin Portal using OTP. What to do?*

- Login into Admin Portal with password. Then go to System Configuration> Login Policy and verify that the login policy is set as **Password OR OTP**.
- Ensure that SMS Configuration/Email Configuration are done.
- The Email ID and Contact number must be available on the System Accounts page so that OTP can be sent to the configured number and or Email ID.

Similarly you can select **Password Then OTP** option to enable 2 step authentication during login.

13. *I am not allowed to login into COSEC Web and COSEC Admin Portal due to disabled Javascript. What to do?*

You must enable Javascript on the browser.

- For this open the browser. Go to the Settings section.
- Go to the JavaScript section. Also you can search by keyword.
- Enable the option "Allow all Sites to run JavaScript".

# Technical Specifications

## Technical Specifications - Devices

### ARGO FACE

TECHNICAL SPECIFICATIONS	
<b>CREDENTIAL</b>	
Human Face	Yes
PIN	Yes
BLE - Mobile	Yes
<b>CAPACITY</b>	
User Profiles	50,000
Face Templates	2,00,000
Max. Templates Per User	30
Event Logs	5,00,000
<b>FACE RECOGNITION</b>	
Algorithm	Deep Learning-based Face Recognition
Fake Face Detection	Yes
Face Identification	1:200,000 in < 1 sec
	1:1 in < 0.5 sec
Face Enrolment	Enrolment Station
	Upload Images
Recognition Distance	30cm - 120cm (0.3m - 1.2m)
Recognition Height	140cm - 198cm (1.4m - 1.98m)
<b>GENERAL SPECIFICATIONS</b>	
Dimensions (HxWxD)	186mm x 74 mm x 50mm
	(7.3" x 3" x 2 ")
Weight	650gms (1.433 lbs)
Display	3.5" IPS LCD (Touch Screen)
Display Resolution	480 x 320 Pixel
Gorilla Glass	Yes (Gorilla Glass 3)
CPU	Quad-Core ARM Cortex-A7 @ 1.5 GHz
GPU	Built-in 2 TOPS Neural Network Computing Performance
RAM	2 GB DDR4
Flash Memory	16 GB eMMC
SD Card	No
Tamper Detection	Yes
Buzzer	Yes
IR LEDs	Yes
Ingress Protection	IP65
Vandal Proof	IK06
Certificate	CE, FCC, BIS, UL, RoHS
Operating Temperature	0°C to 50°C
Storage Temperature	-20°C to 60°C
Humidity	5% to 95 % RH Non-Condensing
<b>CAMERA</b>	
RGB Camera	2MP Surveillance Grade, IR Blocked
Infrared Camera	2MP Surveillance Grade, IR Band Pass
Camera Sensors	SONY IMX 307, EXMOR Technology, STARVIS Series
<b>COMMUNICATION</b>	
Ethernet	Yes (10/100 Mbps - 1 port)
PoE	Yes (IEEE 802.3 af)
WiFi	Yes (802.11 b/g/n)
3G/4G/LTE	Yes (Additional USB Modem)
BLE	Yes (8m Range)
USB	Yes (USB 2.0)
	Micro USB-Type B

INTERFACE	
Exit Switch Interface	Yes
External Reader Support	Yes (MATRIX and 3rd Party)
External Reader	Interface
	RS232
	Wiegand
	Power
	12VDC @ 0.5A
Wiegand	LED and Buzzer Control
	Allowed - GREEN LED
	Yes (Selectable IN/OUT)
	IN: 26 Bit format OUT: Configurable
Door Lock Relay	Yes (30VDC @ 2A, Dry Contacts NO/NC/COM)
Door Lock Power	Internal PoE Power: 12VDC @ 0.250 A
	Internal Adapter Power 12VDC @ 0.5 A
	External Power 12VDC @ 2A
INSTALLATION	
Wall Mount	Yes - Plastic Back Cover with Screws
Flush Mount	Yes - Metal Bracket with Screws
Power Adapter	12VDC @ 2A (CE, FCC, UL, BIS)
Card	
Smart Cards	MIFARE Classic® and NFC Tag and HID iCLASS
Proximity Cards	EM Prox and HID Prox
	(Separate variant for each card type. HID PROX requires HID iCLASS type)
<b>Note:</b> MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## COSEC ARGO FOE/COSEC ARGO FOM/COSEC ARGO FOI

TECHNICAL SPECIFICATIONS	
GENERAL	
Credential Support	Bluetooth® (BLE), Fingerprint, RFID Card, PIN, Face (with Compatible Hardware)
IP Rating	IP65 (With wall mounting installation condition and flush mounting with recommended installation surface)
RF Option	Smart Cards - MIFARE Classic® and NFC Tag and HID iCLASS
	Proximity Cards - EM Prox and HID Prox
	(Separate variant for each card type. HID PROX requires HID iCLASS type)
CAPACITY	
Maximum Users	50,000
Maximum Templates	25,000 in 1: N Mode and 100,000 in 1:1 Mode (Optical sensing technology)
Event Buffer	5,00,000

Templates per User	Up to 10 (Single template per finger mode)
	Up to 5 (Dual template per finger mode)
Cards per User	Up to 2
<b>COMMUNICATION</b>	
Wi-Fi	Yes (802.11 b/g/n)
Bluetooth®	Built-in Bluetooth® (8m Range - For Mobile Applications)
Ethernet	Yes (10/100 Mbps)
PoE	Yes (IEEE 802.3 af)
RS-232	Yes
Mobile Broadband	Yes
Wiegand	Wiegand IN/OUT Available
USB	1 Micro-USB Port (Data transfer and 2G-3G dongle)
<b>INTERFACE</b>	
Exit Switch Port	Yes
Door Status Sense	Programmable NO, NC, Supervised
Door Lock Relay	30V DC @ 2 A, Form C, DPDT Relay
Door Lock Power	12V DC @ 0.5A (Power to external Lock from Device)
	30V DC @2 A (Power to lock from External power source)
Aux-In	No
Aux-Out	No
Reader Interface Types	RS-232 and Wiegand IN/OUT
Micro SD Card	Yes (Inbuilt 8GB)
<b>HARDWARE</b>	
CPU	800 MHz ARM Cortex A8 based Processor
Memory	512 MB Flash + 512 MB DDR3 RAM
Display	3.5" IPS Display with Capacitive Touch Panel with Gorilla Glass
Display Resolution	320 x 480 Pixel
Buzzer	Yes
Operating Temperature	0°C to +50°C
Humidity	5% to 95% RH Non-Condensing
Tamper Detection	Yes

Power	12V DC @ 2A
Power to Door Lock	12V DC @ 0.5A (Power to external Lock from Device)
Dimensions (W x H x D)	74mm x 186mm x 50mm
Weight	0.549Kgs (1.21Lbs)
<b>COMPATIBILITY</b>	
System Integration	API for Software Integration
Operational Modes	Direct Door with COSEC CENTRA Server
	Panel Door with COSEC PANEL200P
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## COSEC ARGO CAM/COSEC ARGO CAE/COSEC ARGO CAI

TECHNICAL SPECIFICATIONS	
<b>Credential Support</b>	
PIN	Yes
Card	<b>ARGO CAE:</b> EM Prox.
	<b>ARGO CAM:</b> MIFARE Classic, DESFire EV1 and EV2(Read/Write)
	<b>ARGO CAI:</b> HID iClass Card Support (Read/Write) HID Prox,
	EM Prox, Desfire EV1 & EV2 (CSN Read) and Mifare Classic (CSN Read)
BLE - Mobile	Yes
<b>Capacity</b>	
User Profiles	50,000
Event Logs	5,00,000
<b>General Specification</b>	
Weight	550gms (1.12 lbs)
Display	3.5" IPS LCD (Touch Screen)
Display Resolution	480 x 320 Pixel
Gorilla Glass	Yes (Gorilla Glass 3)
CPU	800 MHz ARM cortex A8 based processor
RAM	512 MB DDR3
Flash Memory	512 MB
SD Card	Yes (16 GB)
Tamper Detection	Yes
Speaker	No
Buzzer	Yes
Ingress Protection	IP65
Vandal Proof	IK06
Certificate	CE, FCC, BIS, RoHS
Operating Temperature	0°C to 50°C
Storage Temperature	-20°C to 60°C
Humidity	5% to 95 % RH Non-Condensing
<b>Communication</b>	
Ethernet	Yes (10/100 Mbps - 1 port)
PoE	Yes (IEEE 802.3 af)
WiFi	Yes (802.11 b/g/n)

External Reader	<b>Interface</b>
	RS232
	Wiegand
	<b>Power</b>
	12VDC @ 0.5A
	<b>LED and Buzzer Control</b>
	Allowed - GREEN LED
	Buzzer
Wiegand	Yes (Selectable IN/OUT)
	<b>IN:</b> 26 Bit format
Door Lock Relay	<b>OUT:</b> Configurable
	Yes (30VDC @ 2A, Dry Contacts NO/NC/COM)
	Internal PoE Power: 12VDC @ 0.250 A
Door Lock Power	Internal Adapter Power 12VDC @ 0.5 A
	External Power 12VDC @ 2A
AUX IN / AUX OUT	NO
<b>Installation</b>	
Wall Mount	Yes
Flush Mount	Yes
<b>Accessories</b>	
Power Adapter	12VDC @ 2A (CE, FCC, BIS)
Mounting Options	<b>Flush Mount:</b> Metal Bracket with Screws
	<b>Surface Mount:</b> Plastic Back Cover with Screws
Battery Backup	No
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## VEGA FAX/VEGA FAXQ

TECHNICAL SPECIFICATIONS		
Variants	COSEC VEGA FAX	COSEC VEGA FAXQ
<b>Credential Support</b>	Bluetooth® (BLE), Fingerprint, RFID Card, PIN, Face (with Compatible Hardware)	Fingerprint, RFID Card and PIN
<b>Fingerprint Sensor</b>	Optical	Optical
<b>Templates Capacity</b>	9600 (1: N mode), and 1,00,000 (1:1 mode)	9600 (1: N mode), and 1,00,000 (1:1 mode)
<b>Templates Per User</b>	Up to Ten	Up to Ten
<b>Cards Per User</b>	Up to Two	Up to Two
<b>Type of Card</b>	EM Prox, MIFARE Classic®, and HID iCLASS (Card Module is required)	EM Prox, MIFARE Classic®, and HID iCLASS (Card Module is required)
<b>User Capacity</b>	50,000	50,000
<b>Display</b>	3.5" TFT Display with Capacitive Touch Panel	3.5" TFT Display with Capacitive Touch Panel
<b>Communication Port</b>	Ethernet, Wi-Fi, Mobile Broadband (3G/4G Using USB Dongle), Built-in Bluetooth® (8m Range - For Mobile Applications)	Ethernet, Wi-Fi, Mobile Broadband (3G/4G Using USB Dongle)
<b>Built-in PoE</b>	Yes	Yes

<b>Built-in Wi-Fi</b>	Yes	Yes
<b>USB</b>	One USB Port (for Data Transfer and Mobile Broadband)	One USB Port (for Data Transfer and Mobile Broadband)

## Door FMX

TECHNICAL SPECIFICATIONS	
<b>Credential Support</b>	Fingerprint, RFID Card, PIN and Face (with Compatible Hardware)
<b>Display</b>	4.3" Capacitive Touch Screen
<b>User Capacity</b>	1000 (1:N) and 50,000 (1:1)*
<b>Template Capacity</b>	1000 (1:N) and 100,000 (1:1)
<b>Cards Per User</b>	Up to 2
<b>Types of Cards Support</b>	EM Prox, HID Prox, HID iClass and MIFARE Classic® (COSEC CPM Module Required)
<b>Event Buffer</b>	5,00,000
<b>Communication</b>	Ethernet, PoE, Wi-Fi and Mobile Broadband (3G/4G)
<b>Exit Switch</b>	Yes
<b>Door Status Sense</b>	Programmable NO, NC and Supervised
<b>Door Lock Relay</b>	Form C and SPDT Relay (Max 2A@30 VDC)
<b>Door Lock Power</b>	12VDC @ 1A (for Adaptor Supply Mode) 12VDC @ 0.5A (For PoE Supply Mode)
<b>Aux-IN</b>	Programmable NO, NC and Supervised
<b>Aux-OUT</b>	Form C and SPDT Relay (Max 2A@30 VDC)
<b>Reader Interface types</b>	RS 232 and Wiegand In Only
<b>USB</b>	2 (1 for Data Transfer and 1 for Broadband Dongle)
<b>CPU</b>	800 MHz ARM Cortex A8 based Processor
<b>Flash Memory</b>	256MB Flash
<b>RAM Memory</b>	512 MB DDR3 RAM
<b>Micro SD Card</b>	Yes (Inbuilt 4 GB)
<b>Input Power</b>	12VDC @ 2A
<b>Battery Backup</b>	No Internal Battery Backup and External through Power Supply Battery Backup (PSBB)
<b>Dimensions (WxHxD)</b>	100mm x 220mm x 56mm (3.9" x 8.7" x 2.2")
<b>Weight</b>	0.6kg (1.32 lbs)
<b>Humidity</b>	5% to 85% RH Non-condensing
<b>Operating Temperature</b>	0°C to + 50°C (32°F to 122°F)
<b>System Integration</b>	API for Software Integration
<b>Operational Mode</b>	Direct Door with COSEC CENTRA Server
<b>Tamper Detection</b>	Yes
<b>Sensor Technology</b>	Multispectral Lumidigm Sensor with LFD
<b>Sensing Area</b>	27mm x 30mm x 41mm

MIFARE and MIFARE Classic are trademarks of NXP B.V.

## Door FOP

TECHNICAL SPECIFICATIONS	
Credential Support	Fingerprint, RFID Card, PIN and Face (with Compatible Hardware)
Display	4.3" Capacitive Touch Screen
User Capacity	1000 (1:N) and 50,000 (1:1)*
Template Capacity	1000 (1:N) and 100,000 (1:1)
Cards Per User	Up to 2
Types of Cards Support	EM Prox, HID Prox, HID iClass and MIFARE Classic® (COSEC CPM Module Required)
Event Buffer	5,00,000
Communication	Ethernet, PoE, Wi-Fi and Mobile Broadband (3G/4G)
Exit Switch	Yes
Door Status Sense	Programmable NO, NC and Supervised
Door Lock Relay	Form C and SPDT Relay (Max 2A@30 VDC)
Door Lock Power	12VDC @ 1A (for Adaptor Supply Mode) 12VDC @ 0.5A (For PoE Supply Mode)
Aux-IN	Programmable NO, NC and Supervised
Aux-OUT	Form C and SPDT Relay (Max 2A@30 VDC)
Reader Interface types	RS 232 and Wiegand In Only
USB	2 (1 for Data Transfer and 1 for Broadband Dongle)
CPU	800 MHz ARM Cortex A8 based Processor
Flash Memory	256MB Flash
RAM Memory	512 MB DDR3 RAM
Micro SD Card	Yes (Inbuilt 4 GB)
Input Power	12VDC @ 2A
Battery Backup	No Internal Battery Backup and External through Power Supply Battery Backup (PSBB)
Dimensions (WxHxD)	100mm x 220mm x 56mm (3.9" x 8.7" x 2.2")
Weight	0.6kg (1.32 lbs)
Humidity	5% to 85% RH Non-condensing
Operating Temperature	0°C to + 50°C (32°F to 122°F)
System Integration	API for Software Integration
Operational Mode	Direct Door with COSEC CENTRA Server
Tamper Detection	Yes
Sensor Technology	Multispectral Lumidigm Sensor with LFD
Sensing Area	27mm x 30mm x 41mm
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## Door FOT

TECHNICAL SPECIFICATIONS	
Variants	COSEC DOOR FOT
Credential Support	Fingerprint, RFID Card and PIN
Display	128 x 64 Dot Matrix Display
Keypad	16 Touch Sense Keys
User Capacity	50,000 (Max. 9600 in 1:N Mode)
Template Per User	Up to Ten (Single Template per Finger Mode) or Up to Five (Dual Template per Finger Mode)
Template Storage Capacity	9600 in 1:N Mode and 1 lac in 1:1 Mode

<b>Cards Per User</b>	Up to Two
<b>Event Buffer</b>	5,00,000
<b>Types of Cards Support</b>	Proximity Card (EM Prox and HID Prox)
<b>Mobile Broadband</b>	Yes (3G/4G Support)
<b>RS-485</b>	Yes (115.2Kbps)
<b>Ethernet</b>	Yes (10 Mbps / 100Mbps on Ethernet)
<b>USB</b>	2 USB Ports (1 for Data Transfer and 1 for 3G/4G Dongle)
<b>Buzzer</b>	Yes
<b>LED</b>	4 LEDs (Status, Alarm, Allowed, Denied)
<b>CPU</b>	400MHz ARM 9 based Processor
<b>Flash Memory</b>	256MB
<b>RAM Memory</b>	128MB DDR2
<b>Input Power</b>	12VDC @ 2A
<b>Battery Backup</b>	No
<b>Humidity</b>	5% to 85% RH Noncondensing
<b>Operating Temperature</b>	0°C to + 50°C (32°F to 122°F)
<b>Tamper detection</b>	Yes
<b>Certification</b>	CE and RoHS
<b>STQC Certified</b>	No
<b>Dimensions (mm)</b>	100 x 220 x 56
<b>Weight (kgs)</b>	0.65

## COSEC PATH DCFE/COSEC PATH DCFI/COSEC PATH DCFM

TECHNICAL SPECIFICATIONS	
<b>Credential Support</b>	BLE, Fingerprint and RFID Card
<b>Template Per User</b>	Up to Ten (Single Template per Finger Mode) or
	Up to Five (Dual Template per Finger Mode)
<b>Card Type</b>	EM Prox (COSEC PATH DCFE)
	MIFARE Classic® Smart (COSEC PATH DCFM)
	HID iCLASS, HID Prox (COSEC PATH DCFI)
<b>Template Storage Capacity</b>	SFM 6030: 25,000 (1:N) And 100,000 ( 1:1)
<b>Cards Per User</b>	Two
<b>Events Buffer</b>	5,00,000
<b>Max. Users</b>	50,000
<b>RS-485</b>	Yes (115.2Kbps)
<b>Battery Backup</b>	No
<b>Ethernet</b>	Yes (10/100Mbps)
<b>PoE</b>	Yes (IEEE 802.3 af)
<b>Exit Switch</b>	Yes
<b>Door Status Sense</b>	Yes (2 State)
<b>Door Lock Relay</b>	Dry Contacts NO/NC/COM (Max 1A@30 VDC)

<b>Door Lock Power</b>	Internal 12V DC @ 0.5 A
<b>Reader Interface types</b>	RS-232 and Wiegand IN/OUT
<b>Buzzer</b>	Yes
<b>LED</b>	Single LED (TriColor )
<b>CPU</b>	Cortex A8 800 MHz
<b>Flash Memory</b>	512 MB
<b>RAM Memory</b>	512 MB
<b>Input Power</b>	12V DC @ 2A
<b>Humidity</b>	5% to 95% RH Non – Condensing
<b>Operating Temperature</b>	0°C to +50°C (32°F to 122°F) For Variants supporting EM Proximity Card and MiFare Classic® Card
	0°C to +45°C (32°F to 113°F) For Variant Support HiD iClass Card
<b>Tamper Detection</b>	Yes
<b>IP65</b>	Verified
<b>Certification</b>	CE and BIS
<b>Dimension (mm)</b>	50x159x42
<b>Weight (kgs)</b>	0.27
<b>Wi-Fi</b>	Yes (802.11 b/g/n)
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## COSEC PATH DCCE/COSEC PATH DCCI/COSEC PATH DCCM

TECHNICAL SPECIFICATIONS	
<b>Credential Support</b>	BLE and RFID Card
<b>Card Type</b>	EM Prox (COSEC PATH DCCE)
	MIFARE Classic® Smart (COSEC PATH DCCM)
	HID iCLASS, HID Prox (COSEC PATH DCCI)
<b>User Capacity</b>	10,000
<b>Cards Per User</b>	Two
<b>Events Buffer</b>	5,00,000
<b>Max. Users</b>	50,000
<b>Battery Backup</b>	No
<b>Ethernet</b>	Yes (10/100Mbps)
<b>PoE</b>	Yes (IEEE 802.3 af)
<b>Exit Switch</b>	Yes
<b>Door Status Sense</b>	Yes (2 State)
<b>Door Lock Relay</b>	Form C and SPDT Relay (Max 1A@30 VDC)
<b>Door Lock Power</b>	Internal 12V DC @ 0.5 Amp
<b>Reader Interface types</b>	RS-232 & Wiegand IN/OUT

<b>Buzzer</b>	Yes
<b>LED</b>	Single LED (TriColor)
<b>CPU</b>	Cortex A8 800 MHz
<b>Flash Memory</b>	512 MB
<b>RAM Memory</b>	512 MB
<b>Input Power</b>	12V DC @ 2A
<b>Humidity</b>	5% to 95% RH Non – Condensing
<b>Operating Temperature</b>	0°C to +50°C (32°F to 122°F) For Variants supporting EM Proximity Card and MiFare Classic® Card
	0°C to +45°C (32°F to 113°F) For Variant Support HiD iClass Card
<b>Tamper Detection</b>	Yes
<b>IP65</b>	Verified
<b>Certification</b>	CE and BIS
<b>Dimension (mm)</b>	50.5X137X34
<b>Weight (kgs)</b>	0.18
<b>Wi-Fi</b>	Yes (802.11 b/g/n)
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## ARC DC200

TECHNICAL SPECIFICATIONS	
<b>Credential Support</b>	BLE and RFID Card
<b>Card Type</b>	EM Prox (COSEC PATH DCCE)
	MIFARE Classic® Smart (COSEC PATH DCCM)
	HID iCLASS, HID Prox (COSEC PATH DCCI)
<b>User Capacity</b>	10,000
<b>Cards Per User</b>	Two
<b>Events Buffer</b>	5,00,000
<b>Max. Users</b>	50,000
<b>Battery Backup</b>	No
<b>Ethernet</b>	Yes (10/100Mbps)
<b>PoE</b>	Yes (IEEE 802.3 af)
<b>Exit Switch</b>	Yes
<b>Door Status Sense</b>	Yes (2 State)
<b>Door Lock Relay</b>	Form C and SPDT Relay (Max 1A@30 VDC)
<b>Door Lock Power</b>	Internal 12V DC @ 0.5 Amp
<b>Reader Interface types</b>	RS-232 & Wiegand IN/OUT
<b>Buzzer</b>	Yes
<b>LED</b>	Single LED (TriColor)

<b>CPU</b>	Cortex A8 800 MHz
<b>Flash Memory</b>	512 MB
<b>RAM Memory</b>	512 MB
<b>Input Power</b>	12V DC @ 2A
<b>Humidity</b>	5% to 95% RH Non – Condensing
<b>Operating Temperature</b>	0°C to +50°C (32°F to 122°F) For Variants supporting EM Proximity Card and MiFare Classic® Card
	0°C to +45°C (32°F to 113°F) For Variant Support HiD iClass Card
<b>Tamper Detection</b>	Yes
<b>IP65</b>	Verified
<b>Certification</b>	CE and BIS
<b>Dimension (mm)</b>	50.5X137X34
<b>Weight (kgs)</b>	0.18
<b>Wi-Fi</b>	Yes (802.11 b/g/n)
MIFARE and MIFARE Classic are trademarks of NXP B.V.	

## ARC IO800

TECHNICAL SPECIFICATIONS	
<b>GENERAL</b>	
Input Power	PoE (IEEE 802.3 af) OR 12V DC @ 2A Power Adaptor
Communication Mode	Ethernet and RS-485
Ethernet	10/100 Mbps
LED	One
<b>IN/OUT</b>	
IN Ports	Eight Input Ports
OUT Ports	Eight Output Ports
INPUT Type	Four Stare Supervised
OUTPUT Type	28V DC @ 2A, Relay SPDT, Form C
<b>PHYSICAL</b>	
Standalone Mode	With Built-in Software in COSEC PANEL200P
CENTRA Mode	With COSEC CENTRA (with or without COSEC PANEL200P)
<b>PHYSICAL</b>	
Dimensions (W x H x D) (mm3)	107 x 125.5 x 55
Weight	260 g (Approx.)
<b>ENVIRONMENTAL</b>	
Humidity	5% to 95% RH Non-Condensing
Operating Temperature	0°C to + 50°C (32°F to 122°F)

## ATOM RD300SF

Specifications	ATOM RD300SF
<b>GENERAL</b>	
PIN	Yes
Card	Yes
Fingerprint	Yes
BLE - Mobile	Yes
User capacity	Depends on the master device
Template Capacity	25,000(1:N Mode)
Event Logs	Depends on the master device
Sensor Name	SFM6030-OC6
Sensor Surface	Scratch Free
Resolution	500 DPI
Sensing Area	16.0mm X 18.0mm
Dimensions (H X W X D)	Wall Mount:153mm X 56 mm X 37mm
	Flush Mount: 183mm X 71 mm X 37mm
Weight	330grms (0.72 lbs)
Display	2" Touch screen Display
Display Resolution	320 x 240 Pixel
Gorilla Glass	Yes (Gorilla Glass 3)
Keypad	Yes (In-Display Keypad)
CPU	AM3352
RAM	256 MB
Flash	256 MB
USB	No
SD Card	No
Tamper Detection	Yes
Speaker	No
Buzzer	Yes (12V Magnetic buzzer)
LEDs	No
Ingress Protection (IP65)	Yes
Vandal Proof (IK06)	Yes

Certificate	CE, FCC, ROHS, BIS
Operating Temperature	-20°C to + 55 °C
Humidity	5% to 95 % RH Non-Condensing
Ethernet	No
PoE	No
WiFi	Yes (802.11 b/g/n)
BLE	Yes
Wiegand	Yes

RAM Memory	256 MB
	(DDR3 SDRAM @ 800Mhz)
Operating system	Linux based OS
Communication Port	Ethernet & RS-485
Tamper Detection	Yes
RTC	Yes
AUDIO VISUAL	
LED	Tricolor LED
	(Power, Status and Alarm)
Buzzer	Yes(12V)
ENVIRONMENTAL	
Operating Temperature	-10°C to 55°C
	(14°F to 131°F)
Humidity	5% to 95% RH Non-condensing
POWER	
Input Power	External Power Adapter 12VDC @ 2A
MECHANICAL	
Dimensions (L x H x D)	125.25mm X 81.5mm X 30.5mm
	(4.93" x 3.20" x 1.20")
Weight	140gm (0.308 Lbs)
Encloser materia	ABS V0 grade
CERTIFICATES	
Certificates	FCC, CE, and RoHS
COMPATIBILITY	
System Integration	API For Software Integration
Architecture	1. Network Architecture - With COSEC CENTRA/VYOM
	2. Standalone Architecture
OTHER DETAIL	
Mounting	Wall Mounting or Table Top
Packaging Content	1. Main unit
	2. Adaptor (12VDC, 2A)
	3. SD Card (8GB)

## PSBB Specifications

Mains Supply Rating	100-265 VAC, 47-63Hz, 60W max.
Mains supply fuse	1A fast blow, glass fuse 5 x 20mm
Output ratings: "Output Voltage "Output Current	13.8 VDC 2A
Max. Ripple Voltage	< 100mV
Battery Type	12V sealed lead acid (3.2Ah)
Output ratings - Charger Battery Charge Voltage Battery Charge current	13.8V 1A

<b>Battery Dimensions (H x W x D) in mm and inches</b>	67mm x 134mm x 67 mm (2.64" x 5.28" x 2.64") - Vision model <b>cp 1232</b> or equivalent
--	--

## Cable Specifications

Cable Type	Length	Specification
Ethernet	328 feet (100 m)	Cat5, Cat5E, and Cat6
RS-485 *	1000 m to host	Use Belden 3105A, 22AWG twisted pair, shielded 100Ω cable, or equivalent.
External Readers (Serial)	15 feet (4.57 m) for RS232 reader to COSEC Door Controller	ALPHA 1299C 22AWG, 13 conductor, stranded, overall shield (Fewer conductors needed if all control lines are not used)
External Readers (Wiegand)	500 feet (150 m) to reader	ALPHA 1299C 22AWG, 13 conductor, stranded, overall shield (Fewer conductors needed if all control lines are not used)
Input Circuits *	500 feet (150 m)	2-conductor, shielded, using ALPHA 1292C (22AWG), or equivalent.
Output Circuits *	500 feet (150 m)	2-conductor, using ALPHA 1172C (22AWG) or equivalent.

\* Minimum wire gauge depends on cable length and current requirements.

## Card Compatibility Matrix

Reader	Type	Function	Support
EM Prox Card Reader	125 Khz	Read Only	All EM Prox Cards
HID Prox Reader	125 Khz	Read Only	HID Prox Cards: 26 Bit format with FC (Base P/N H10301) 37 Bit format without FC (Base P/N H10302) 37 Bit format with FC (Base P/N H10304)
Mifare Card Reader	13.56 Mhz	Read & Write	Mifare Smart Cards: Mifare 1k Card Mifare 4k Card Mifare Ultralight (only CSN read)
HID iClass Reader	13.56 Mhz	Read & write	HID iClass Smart Cards (26 and 37 bit format) 2K/2 Card (base P/N 2000 series) 16K/2 Card (base P/N 2001 series) 16K/16 Card (base P/N 2002 series) All types of Mifare Cards (only CSN read)
Fingerprint Reader	Optical	Enroll & scan	9600 FP templates
Fingerprint Reader	Capacitive	Enroll & scan	9600 FP templates
Palm Vein Reader	Infrared	Enroll & scan	20,000 palm templates

# Disposal of Products/Components after End-Of-Life

---

Main components of Matrix products are given below:

- **Soldered Boards:** At the end-of-life of the product, the soldered boards must be disposed through e-waste recyclers. If there is any legal obligation for disposal, you must check with the local authorities to locate approved e-waste recyclers in your area. It is recommended not to dispose-off soldered boards along with other waste or municipal solid waste.
- **Batteries:** At the end-of-life of the product, batteries must be disposed through battery recyclers. If there is any legal obligation for disposal, you may check with local authorities to locate approved batteries recyclers in your area. It is recommended not to dispose off batteries along with other waste or municipal solid waste.
- **Metal Components:** At the end-of-life of the product, Metal Components like Aluminum or MS enclosures and copper cables may be retained for some other suitable use or it may be given away as scrap to metal industries.
- **Plastic Components:** At the end-of-life of the product, plastic components must be disposed through plastic recyclers. If there is any legal obligation for disposal, you may check with local authorities to locate approved plastic recyclers in your area.

After end-of-life of the Matrix products, if you are unable to dispose-off the products or unable to locate e-waste recyclers, you may return the products to Matrix Return Material Authorization (RMA) designation.

Make sure these are returned with:

- proper documentation and RMA number
- proper packing
- pre-payment of the freight and logistic costs.

Such products will be disposed-off by Matrix.

**"SAVE ENVIRONMENT SAVE EARTH"**

# Open Source Licensing Terms and Conditions

---

*These licensing terms and conditions are applicable only for the 'COSEC Jeeves' onboard web application.*

- The firmware of this product also includes some of the Open-Source software released under GNU General Public License (GPL) Version 2. Terms of this license is printed in full below.
- The source of the open source software used in this product is available on CD, upon written request from:

R&D Team  
MATRIX COMSEC PVT. LTD.  
394, Makarpura GIDC,  
Vadodara - 390 010  
Gujarat  
India.

Customer shall bear the shipping and handling charges.

## GNU GENERAL PUBLIC LICENSE Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,  
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA  
Everyone is permitted to copy and distribute verbatim copies  
of this license document, but changing it is not allowed.

### Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE  
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any

part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include

anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that

system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

#### NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

#### END OF TERMS AND CONDITIONS

#### How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>
```

```
This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.
```

```
You should have received a copy of the GNU General Public License along
with this program; if not, write to the Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.
```

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.
